'After a burial a block of wood is brought from the forest, and first roughly hewn and then furnished with eyes, nose, ears, and mouth, usually by the village magician, all amid much feasting and dancing, which is kept up for several days. When the supplies, mostly sago and palm-wine, run out, more is sent for. Meanwhile the soul of the departed is still flitting about, and every effort is now made to entice him into the finished image. A tremendous uproar is raised with shouting, yelling, and drum-beating in all the houses and neighbouring hamlets, and this is continued for several evenings, a wizard all the time holding the block in his hands with much contortion of face until he falls down—a sign that the soul has entered its future abode, from which it can no longer escape and go about working mischief. Henceforth much homage is paid to the idol, which is carefully put away under the best mats in a corner of the house, and hidden from the eyes of any uninvited guests. It is consulted and invoked on all occasions by the near relatives, its intercession being sought by offerings of tobacco, by adorning it with shreds of bright cloth, and holding it in the hand till it moves, that is, till it answers. It accompanies travellers on long journeys to guard them from harm, until at last, having lost its virtue [its *mana* ?], it is thrown aside as so much lumber, or otherwise disposed of, for this point still remains obscure. But there is no doubt that 'the Mafors worship the departed spirits. This belief in the immortality of the soul is the main principle of their religion, and with it are associated many rites and usages' (*Glauben u. Sitten der Papúas*, etc., *passim*).

In recent times the upper reaches of the Fly River, about the Anglo-Dutch frontiers, have been depopulated by the incessant razzias of the ferocious west coast tribes, especially the *Tugare* or *Tugers* cannibals, whose extreme savagery and cruelty may be taken as representing the lowest state of human culture in New Guinea, if not in the whole world. Little is known about their religious views, if they have any; but we have now *official* information regarding the almost incredible horrors accompanying their slave-raiding expeditions. 'They are a cannibal tribe of pirates,' writes the Rev. S. MacFarlane, 'who make periodical raids upon the villages along the eastern coast. They break the arms and legs of the prisoners, so as to prevent their fighting or running away, and then keep them as fresh meat until required, cooking one or two bodies at a time' (*Cannibals of New Guinea*, London, 1888, p. 106). Or else the captives' palms are pierced, a string passed through the holes, and the arms tied together at the back. When the flotilla arrives they are thrown into the water, and fished out by those on the beach sticking barbed spears into the fleshy parts. Then they are put on mats, a rope secured to a tree is passed round their necks to make them sit up, and after much slow torture they are wrapped in dry coconut leaves, hoisted some six feet from the ground, and slowly roasted with fire-sticks. 'When the rope is burnt, and the body falls to the ground, the wildest and most savage scene takes place. The natives rush with knives in their hands, each slashing a piece of the body, which may be still alive, in the midst of diabolical noise and yells of rejoicing' (L. Loria, *Official Report*, 1895, Appendix S, p. 44 f.).

In British New Guinea, witchcraft causes much trouble, and everywhere presents the same general features. A sorcerer, paid for the purpose, prepares a parcel of rubbish containing a hair or something taken from the person to be operated upon. The parcel then acquires diabolical powers and frightens people, who sometimes sicken and die through fear. Thus the sorcerers cause great trouble, and 'the people generally would gladly see them put down, but fear keeps them from reporting their threats and swindles' (*Report* for 1892–4, p. 37).

Various forms of tabu are met everywhere, but in the British districts 'it has never been grounded on any deep religious sentiment, consequently has never taken deep root. So far as is known at present, it is used only in order to store up food for a coming feast. It is most frequently applied to coco-nut and betel-nut trees. In some places the prohibition is announced by a syren of wood on a string wielded by a fishing-rod. From the Fly River to the far east, branches, usually of sago, are tied on the prohibited trees. Sometimes strings are put round gardens; branches are tied into the door of a house that is not to be entered, or are laid across a road that is not to be traversed' (*ib.* p. 38). With the statement about storing up food should be compared the practice in New Caledonia at the other end of Papuasia. Here *tapu* has no religious significance, and is associated exclusively with the question of food—that is, the question which most interested primitive man. It is much the same in the Marshall Islands, where Mr. F. J. Moss tells us that recently the despotic king of Majuro speared a man for picking a green coconut 'when the tapu had been placed upon them' (*Through Atolls and Islands*, p. 126). The reservation and safeguarding of food, particularly in times of scarcity, would thus appear to be the original purpose of the institution, the religious sanction being a later development, as amongst the more advanced Indonesians of New Zealand, where 'tapu and its observances, in a sense, took the place of religion' (A. Hamilton, *Art Workmanship of N. Z. Maori Race*, 1898, p. 370).

Both in British and German New Guinea ancestor-worship is a prominent feature of the religious systems, and here the moral sense is scarcely yet awakened, so that little or no provision is made for saints and sinners in the after life. Thus in Murua (Woodlark Island), at the east end of New Guinea, 'all people, whether good or bad, when snatched away by death, go like the wind to the small island of Watum; there they enjoy the full pleasures of life, the women cultivating and cooking food for their lords and masters' (J. P. Thomson, *British New Guinea*, p. 184).

A far higher plane of thought has been reached by the kindred *Melanesians*, though not in the ethical order. They are still mostly inveterate head-hunters and cannibals, as is clearly shown by the very latest observers, such as Dr. H. Schnee and Carl Ribbe. The treacherous and sanguinary head-hunters of the Solomon Islands are referred to by Ribbe as 'von Natur lügnerisch, verräterisch, räuberisch, hinterlistig, diebisch, und grausam angelegten Kannibalen' (*Zwei Jahre unter den Kannibalen der Salomo-Inseln*, 1903). They appear to have even deteriorated since their first contact with Europeans; and, if not devil-worshippers in the strict sense of the term, they certainly betray great fear of the surrounding demons, in many places setting up scarecrows to drive them away. An equally dark picture is drawn by Dr. Schnee of the Bismarck and Admiralty natives, amongst whom cannibalism with all its attendant horrors, such as the lingering death of the victims and the bartering of dead bodies in the local 'markets,' is far more prevalent than had hitherto been sus-

pected (*Bilder aus der Südsee*, 1904, *passim*). Yet the strictly religious views of these undoubted savages may be called 'respectable,' in some instances almost elevated—a phenomenon obviously due, perhaps like their language, to the proximity of the Indonesians of the Eastern Pacific. Although the English word 'devil' is common enough, adopted by the natives in ignorance of its meaning, there is very little true demonolatry. Dr. Codrington says none at all: 'It may be asserted with confidence that a belief in a devil, that is, of an evil spirit, has no place whatever in the native Melanesian mind' (*The Melanesians*, p. 117). This seems to be stated rather too forcibly; but the writer is our very best authority on the religious beliefs of these aborigines. Even gods are little in evidence; at least, there is not a Supreme Being nor are there any very powerful subordinate deities, nor yet true fetishes, that is, natural objects, such as a tree, rock, storm, or waterfall animated by an indwelling spirit; nor professional shamans, or hereditary priests. 'There is no priestly order, and no persons who can properly be called priests,' but any one may undertake the priestly functions who can gain access to some object of worship, and such a man 'is in a way their priest and sacrifices for them all' (*ib.* p. 127).

The quintessence of the Melanesian system appears to be a belief in spirits and in the subtle power called *mana*, which is common also to Polynesia, and presents analogies with the *wakanda* of the Dakotans (see art. AMERICA, i. 382[a]) and with the Augustinian *grace*.

For Maoriland, Hamilton defines *mana* as 'power, authority, influence, prestige' (*op. cit.* p. 396). The same definition would also apply to the *orenda* of the Iroquoians, 'which exactly expresses this potentiality, this atmosphere, which they believe inheres in and surrounds every personality. . . . Anything reputed to have been instrumental in obtaining some good or accomplishing some end is said to possess *orenda*' (Sidney Hartland, *Address*, 1906, p. 5).

With regard to spiritual beings, the essential point to note is the distinction clearly drawn by the natives between two classes of spirits, the *bodiless* and the *disembodied*—that is, pure spirits that never were men, and the ghosts of the departed. Both are worshipped, the homage paid to the first being pure psycholatry, to the second ancestor-cult, so that the two primitive forms of animism have been evolved in Melanesia. In general, all pure spirits, most ghosts, and some men have *mana*, and after death those souls alone are worshipped who are supposed to possess it. These are, of course, mainly the chiefs; hence the remark of the Fijian chief that after death he would be a *kalou*, that is, would be invoked and worshipped; while common people, having no *mana* in this life, would have none in the next, and so would be neglected and soon forgotten. There are numerous minor deities—gods of the sea, land, mountains, valleys; and these may apparently be either pure spirits or ghosts, the natives themselves getting confused when it comes to particulars. For details and accessories (magic, witchcraft, weather-doctoring, sacrifices, Hades, and the like), see art. MELANESIA.

For *Micronesia*, where both Papuasian and Polynesian elements are represented, one of our best guides is J. Kubary, who has made a thorough study especially of the *Mortlock Islanders* on the south-central fringe of the Caroline Archipelago. Here the influence of the Indonesian myth-mongers already begins to be felt, while the dominant ancestor-worship presents some peculiar features, its main purpose being to uphold the prestige of the chiefs both in this and in the next world. In some places the headmen have both a temporal and a divine aspect, being at once the supreme rulers, the supreme gods (*die Hauptgottheiten*), and the priests of their several tribes. At the same time, the officials honour the spirits of their own forefathers, invoking them on all ordinary occasions before the somewhat costly appeal in the last resort to the supreme god—that is, to the tribal chief. In theory this chief is absolute, but does not receive divine honours till after his death, and, as the souls of all the departed are also supposed to be deified, the number of the *anu* (spirits, minor gods) would be legion, but for the provision that practically only those are honoured who were distinguished by some special qualities when alive. They do not communicate directly with mortals, but only through the *au-ua-ro-ar*, a kind of shaman, whose office is not hereditary, each deity choosing one for himself without monopolizing his services, since he is still free to act on behalf of any other god willing to employ him. Besides the tribal (ancestral) gods there are several others, such as the war-god *Arong*, honoured in the form of a fish, and *Anu-set*, the sea-god. Arong represents a famous hero, Rassau, who was slain in the island of Lukunor and buried in the sea; hence all warriors who fall in battle are now also buried in the sea, so that they may join the brave Rassau, the mythical god of the sea. Whether the myth was invented to explain the practice, or is a local tradition coloured by the surroundings, is uncertain, but it shows how 'religion, like all other institutions, has been profoundly influenced by physical environment, and cannot be understood without some appreciation of those aspects of external nature which stamp themselves indelibly on the thoughts, the habits, the whole life of a people' (J. G. Frazer, *Adonis, Attis, Osiris*).

Besides the ancestral and other gods, there is no lack of demons, one of whom infests the large trees, but is dangerous only to young girls and children. Apparitions and other supernatural phenomena are much dreaded, and no Micronesian would venture from home alone after nightfall. They also believe in divination, and 'have two ways of foretelling the future, one by means of knotted cocoa leaves, the other more complicated, but known only to the professional soothsayers' (Kubary, *Die Bewohner der Mortlock Inseln*, p. 259). Tabu is universal, and there is a 'mourning tabu' for the great chiefs, which is exceedingly burdensome to their bereaved subjects. Other forms are concerned with the food question, as in New Guinea and New Caledonia.

Polynesia (see Table, p. 236[a], No. IV.) is a region of surprising, almost monotonous, uniformity in the physical and mental characters, the speech, social and religious institutions, and oral literature of its Indonesian inhabitants. The oral literature is partly historical and traditional, but mainly sacred and religious—cosmogonies and theogonies merging into semi-divine dynastic genealogies, all based on an underlying system of primitive religious notions, without some knowledge of which it is impossible to understand them. Despite the labours of Sir G. Grey, G. Turner, W. W. Gill, A. Fornander, Percy Smith, and some other Indonesian students, only a few of these legends have yet been rescued from oblivion, and so great are their volume and variety that Adolph Bastian, their chief interpreter, ventures to say that 'the Polynesian range of thought is next to or beside the Buddhist the most extensive in the world, stretching through the length and breadth of the Pacific Ocean, and even farther if Micronesia and Melanesia as far as Malaya be included'; and he adds that the mythologies are meaningless without a knowledge of the religious substratum on which they are

raised (*Die heilige Sage der Polynesier*, p. ix.). In this work Bastian himself has published three priceless documents with valuable commentaries: a very old creation myth from New Zealand (*Die Schöpfungssage der Maori*); from Hawaii a complete theogony, beginning, like all Polynesian myths, with Chaos and Night; and *The History of Ancient Hawaii* in the Hawaiian language, by David Malo, a converted native.

Apart from their great variety and the sublime cosmic concepts often embodied in the texts, students are puzzled to understand how such voluminous unwritten records could be accurately handed down from very remote times, as many of them certainly have been. On this point Mr. Percy Smith remarks that 'it is difficult for a civilized people which habitually uses writing in recording events to conceive of the powers of memory possessed by people who have nothing but the memory to trust to. Some few instances of this may be mentioned. A Maori and his wife dictated to Mr. Elsdon Best over 400 songs, and could generally tell the names of the composers and the incidents alluded to in them. Another dictated to the writer 164 songs, and these were so impressed on his memory that the quotation of one line was sufficient to recall the whole of the song at once. Another has written eleven volumes of MS. treating of the traditions, songs, customs, etc., of the Maoris, and this at a very advanced age, all of this matter having been retained in his mind, and including hundreds of proper names' (Smith, *Hawaiiki*, p. 20). It is to be remembered that most of the documents are of a sacred character, hence jealously guarded by the priests, who were mostly hereditary, so that 'it was the duty of the father, and very often the grandfather, to educate their offspring in the tribal lore. This teaching was accompanied with many ceremonies and *karakias*, or incantations, invocations, etc., in order to impress the pupil with the importance of the matter. There was a special sanctity attached to many things taught; deviation from the accepted doctrines was supposed to bring on the offender the wrath of the gods' (*ib.* p. 19). The statement may thus be accepted that the Maori cosmogony is of immense antiquity, having been transmitted *verbatim* from priest to priest for thousands of years.

In this as in many other such records the distinction is not always clearly drawn between the divine and the human elements. Sometimes gods become men and men gods, while the theogonies are called genealogies, and often merge imperceptibly in the human genealogies, as if the 'inspired singers,' after deriving the deities from mortals, had redressed the balance by reversing the process. Thus *Maui*, who looms so largely in Polynesian romance, appears to be at first human, and then through his exploits becomes clothed by later generations with divine attributes, and in another place we are told that one Maui (for there are several) is the son of *Tangaroa*, and becomes man, Tangaroa himself being both god and man. The renowned chief Tu-tarangi also, who in Rarotonga is only an eponymous hero, or at most a demigod, is known to the Niuĕ islanders as a deified ancestor. Now Turner, a great authority, tells us that 'the Savage [Niuĕ] islanders worshipped the spirits of their ancestors' (*Samoa a Hundred Years Ago*, p. 306). Here perhaps we have an explanation of the apparent confusion. The all-pervading ancestor-cult evidently underlies the whole mythological superstructure, and from this source were derived the gods of the Polynesian Olympus. But the living chiefs are the direct heirs of these Olympians, consequently their genealogies are mere continuations of the theogonies, and to the native mind there is no real confusion at all. Thus it is that, as above remarked (by Bastian), everything becomes clear when we grasp the root ideas out of which flourish these wonderful efflorescences of Indonesian thought.

At times the Polynesian singers appear to soar into the ethereal spaces and to realize the concept of a Supreme Being, as when out of the transformed body of Tangaroa (Taaroa and other variants) the lesser gods, the demiurges, fabricate the universe, and Taaroa himself is spoken of as *Toivi*, the 'Eternal,' or else, like the Hindu Brahma, or the Dodonian Zeus that 'was, is, and shall be,' is described in the loftiest language as dwelling 'in the limitless void of space, when the World was not yet, nor the Heavens, nor the Sea, nor Man; from on high he calleth, changing to fresh forms, root of the earth, under-prop of the rocks, Taaroa as the Sea-sands in the broad expanse, bursts into Light, cometh down as Wisdom, born the Hawaii land, Hawaii the Great, the Holy.' Similar elevated language pervades the Mangaian cosmogony, which begins with *Te-aka-ia-Roe*, the 'Root of all Being,' and is logically developed in harmony with those of the other Polynesian systems (Gill, *Myths and Songs*, *passim*). Here, too, the genealogies of the gods pass gradually, as in Hawaii, and with scarcely a break, to those of mortals, all in the interest of the living rulers of the land. Such sublime conceptions, such subtle theosophies, such personifications of Chaos, Immensity, Gloomy Night, and other pure abstractions, in these children of nature, excite wonder and remain inexplicable in their present fragmentary state. Everywhere we find Heaven, Earth, the Universe, the After-World, recurring under diverse names and forms, personified by language, embodied in theocratic and anthropomorphic philosophies — echoes, as it were, of the Vedic hymns reverberating from isle to isle over the broad Pacific waters. The question arises, Have there been Vedic contacts? It is a chronological question which cannot be answered until the date is approximately determined of the eastward migration of the Indonesians from Malaysia. Did the migration precede or follow the arrival of the Hindu missionaries in that region? This vital point has engaged the attention of Mr. R. Studholme Thompson, whose 'Origin of the Maori' appeared in *The Maori Record* for 1906–1907.

Some light is thrown on the origin of a whole class of bird-omens by what Dr. Turner tells us of a superstition prevalent in Savaii (Samoa group), where '*Sepo Malosi* ("Sepo the Strong") was worshipped as a war-god, and incarnate in the large bat, or flying-fox. While the bat flew before the warriors all was right, but if it turned round and shut up the way it was a sign of defeat and a warning to go back' (*op. cit.* p. 51). And again: 'The bat was also an incarnation [of Taisumalie, "Tide gently Rising"]. One flying ahead of the troops was always a good omen' (p. 57). We are at once reminded of the flights of the eagles seen by Romulus and Remus at the foundation of Rome, although at that time the Western Aryans may have ceased to believe in any spirits incorporated in the birds. We also learn something about the origin of ordeals from the statement that in the Samoan temples were kept conchs, stones, coconut shells, and other such objects of superstitious veneration, which were used as aids in the administration of justice. In the presence of such ordeals 'the truth was rarely concealed. They firmly believed that it would be death to touch the cup [coco-nut shell] and tell a lie' (*ib.*). And when these things became discredited, as having lost their hidden virtue—their *mana*, so to say—they were replaced by more efficacious processes: the poison-cup, hot iron bars, stones to be fished out

of boiling water, duelling, and the like. But the principle was the same, a steadfast belief in a supernatural power regulating the application of the tests in the interests of justice. For other Indonesian beliefs and religious observances, see art. POLYNESIA.

Owing perhaps to the difficulty of distinguishing between the purely social and the religious institutions of primitive peoples, a great diversity of opinion prevails even amongst the best observers regarding the religious views of the *Australian aborigines*. Some hold with Ernest Giles that they have no beliefs on the subject of gods or an after-life, and that those who credit them with such notions 'have been imposed upon, and that until they had learned something of Christianity from missionaries and others, the blacks had no beliefs or practices of the sort' (*Australia Twice Traversed*, Lond. i., 1889, 45). This may be taken as the extreme view on the negative side, and with it Carl Lumholtz so far agrees as to assert that 'at all events it is certain that neither idolatry nor sacrifices are to be found in Australia. Nor have the natives, so far as I know, ever been seen to pray' (*Among Cannibals*, p. 284). Elsewhere we read that 'it is a well-known fact that the Australian natives are almost wholly devoid of religious susceptibilities' (p. 339), and that to deposit food or other things with the dead 'was an idea which they could not comprehend' (p. 275), implying disbelief in an after-life. And the remarks of George Angas are quoted (p. 284) on the Murray River tribes, who 'appear to have no religious observances whatever. They acknowledge no Supreme Being, worship no idols, and believe only in the existence of a spirit, whom they consider as the author of ill, and regard with superstitious dread. They are in perpetual fear of malignant spirits, or bad men, who, they say, go abroad at night; and they seldom venture from the encampment after dusk . . . without carrying a fire-stick in their hands, which they consider has the property of repelling these evil spirits.'

This belief in an evil spirit is already something; but Lumholtz himself goes much further, and after referring inconsistently to 'their fear of *the spirits of the departed*' (p. 277), admits 'a wide-spread belief in the soul's existence independently of matter, the Kulin tribe (Victoria) believing that every man and animal has a *Muurup* (spirit) which can pass into other bodies, leave a person in his lifetime, and visit other people in their dreams. After death it may appear again, visit the grave of its former possessor, eat remnants of food lying near the camp, and warm itself by their night fires. A similar belief has been observed among the blacks of Lower Guinea' (p. 279; here read 'Upper Guinea,' and cf. the *kra* described in art. ETHNOLOGY, § 9). Then a native woman is mentioned who 'repeatedly brought food to the grave of her deceased husband' (p. 282); and 'definite religious notions' are credited to the southern tribes, while 'some very interesting information in regard to the idea of a God . . . has been furnished by Mr. Manning, who in 1845 discovered among some tribes of New South Wales a doctrine of the Trinity (*sic*), which bears so striking a resemblance to that of the Christian religion that we are tempted to take it to be the result of the influence of missionaries. But according to the author, the missionaries did not visit these tribes until many years later' (p. 283). They recognize a supreme, benevolent, omnipotent Being, *Boyma*, with an omniscient son, *Grogoragally*, mediator between Boyma and mortals, and a third person, half human, half divine, *Moogeegally*, the great law-giver to men, and lastly 'a hell with everlasting fire, and a heaven where the blessed dance and amuse themselves' (*ib.*). After this the passage quoted in *Primitive Culture*[3] (i. 418) by Tylor, that they have no idea of a supreme divinity, creator, and judge—that, 'in short, they have nothing whatever of the character of religion, or of religious observance, to distinguish them from the beasts that perish'—will appear extravagant to all competent observers of these aborigines.

The extreme view on the positive side of the question, that is, the belief in 'a tribal All-Father,' is perhaps most clearly emphasized by Dr. A. W. Howitt, who finds this belief wide-spread in 'the whole of Victoria and of New South Wales, up to the eastern boundaries of the tribes of the Darling River' (*Tribes of South-East Australia*, p. 500). Amongst those of New South Wales are the *Euahlayi*, whom Mrs. Langloh Parker (*Euahlayi Tribe*, Lond. 1905) describes as having a more advanced theology and a more developed worship than any other Australian tribe. These now eat their hereditary totems without scruple—a sure sign that the totemic system is dying out, although still outwardly in full force. Amongst the Aruntas, Kaitish, and the other Central and Northern tribes studied by Spencer and Gillen, the system still survives, and totems are even assigned to the mysterious *Iruntarinia* entities, vague and invisible incarnations of the ghosts of ancestors who lived in the *Alcheringa* (*q.v.*) time, the dim remote past, the beginning of everything. They are far more powerful than living men, because their spirit part is associated with the so-called *churinga*, stocks, stones, or any other object which is deemed sacred as possessing a kind of *mana* which makes the yams and grass to grow, enables a man to capture game, and so forth. That the *churinga* are simply objects endowed with *mana* is the happy suggestion of Sidney Hartland, whose explanation has dispelled the dense fog of mystification hitherto enveloping the strange beliefs and observances of these Central and Northern tribes.

'They are mysterious objects in the closest association with the tribal ancestors, the outward and visible sign, if not the embodiment, of the ancestral souls or invisible portions, and as such regarded with veneration. They are endowed with *mana*, emanating from the ancestors whom they represent—*mana*, which not merely heals wounds, but when the churinga are brought ceremonially in contact with the body, produces other physical, mental, and even moral effects. . . . The churinga is intimately associated with the ancestor, and has "feelings" just as human beings have, which can be soothed by the rubbing in the same way in which those of living men can be' (Address at Brit. Assoc., York, 1906).

Hence a man, as he sings and rubs it with his hand, 'gradually comes to feel that there is some special association between him and the sacred object—that a virtue of some kind passes from it to him, and also from him to it' (Spencer-Gillen, *Northern Tribes*, ch. viii. p. 278 f.). By whatever name it be called, this is obviously *arungquiltha*, the Australian *mana*, and it is equally obvious that the primitive Australian religions are still interwoven with magic (see above).

About the religious and ethical views of the extinct *Tasmanians* a good deal of information has been gathered from various sources by Brough Smyth (*Aborigines of Victoria*), J. Bonwick (*Daily Life*, etc., *of the Tasmanians*), and Tylor (*JAI* xxiii. 141, Nov. 1893). Socially they appear 'to have remained to our day living representatives of the early Stone Age, left behind in industrial development even by the ancient tribes of the Somme and the Ouse. . . . The life of these savages proves to be of undeveloped type alike in arts and institutions, so much so that the distinction of being the lowest of normal tribes may be claimed for them' (Tylor, *loc. cit.* 148, 152). Yet the religious sense had certainly been awakened. They feared to move about after dark, believing that their deceased relatives might be hovering about, and

there was a god who presided over the day and an evil spirit or demon over the night, and to the god the women addressed songs or prayers to secure the safe return of their absent husbands (Smyth, ii. 390). Bonwick, however, doubts this, while admitting that 'the Tasmanians had some dim apprehension of a future state' (p. 167), and refers to the case of a native who put a spear in a tree beside a dead body, 'to fight with when he sleep' (p. 174). The evidence is altogether very conflicting, although on the whole rather against the belief in a beneficent deity, and Dr. Nixon, first bishop of Tasmania, is quoted as saying that 'no trace can be found of the existence of any religious usage, or even sentiment, amongst them, unless, indeed, we may call by that name the dread of a malignant and destructive spirit, which seems to have been their predominant, if not their only, feeling on the subject' (p. 172). And there the matter must rest, since the last of the race died about 1890.

A. H. KEANE.

AUSTRALIA. — **1. Introduction.** — Linguistic research shows that Australia is occupied by three distinct groups of languages, of which two are related to each other, while the third is independent of them in vocabulary and grammar, and shows little internal cohesion. The last group, named 'northern' by Schmidt, occupies the north of Australia and descends beyond 20° S. only in the centre, where it is found as far as 27° S. (the Aruntas). The other two groups, 'old' and 'new' Australian, distinguished by the way in which they form the genitive, occupy the remainder of the continent. By far the greater area falls to the 'new' group, split into nine sub-groups. The main 'old' Australian area is in Victoria with traces along the east coast; it seems to be related to the Tasmanian languages. The two Australian groups are related to each other in syntax and vocabulary, but less intimately than are the component parts of each group among themselves (*Man*, 1908). The grouping of tribes arrived at on this philological basis does not correspond very closely to those given by any other mode of classification, for material culture, social organization, initiation ceremonies, and burial customs give somewhat conflicting results; but on the whole the three last are distributed in a way which may be harmonized with the linguistic data, if we allow for a certain amount of lateral transmission. Thus, the eight-class tribes are wholly within the 'northern' area; they reckon descent in the male line, and though there are other districts in Australia—notably parts of Victoria and the coast of Queensland—where there is patrilineal descent of the classes or phratries, both these and the no-class areas belong to the old Australian speech-groups or are contiguous to them.

The same holds good with regard to the initiation ceremonies. The rites of circumcision and sub-incision are unknown in Victoria, New South Wales, the greater part of Queensland, and the coastal portions of West Australia; but we may readily explain their penetration into the Neo-Australian south-central area as the result of transmission, though, of course, some amount of infusion of foreign blood may have contributed to the result. Simple burial is, as a rule, characteristic of both the Australian groups, and in the old group it is accompanied by the practice of building a hut upon the grave—a custom which they shared with their neighbours, the Tasmanians. The grave seems to be looked upon as the abode of the soul, though we find sporadically the belief that the spirits of the dead travel to the west, or, where there is a belief in a god, to reside with him. In the 'Northern' area, on the other hand, and certain adjacent districts, the body is submitted to various processes, and the essential funerary rite seems to be the disposal of the bones, which marks the time at which the spirit of the dead is believed to go to its own place. It may be noted that special treatment of the bones is a well-marked feature of funeral rites in parts of New Guinea.

When we come to deal with the more intangible sphere of beliefs, we are on more uncertain ground; it is indisputable that belief in a tribal All-Father prevailed in Victoria, New South Wales, and parts of South Australia; that it has been recorded but rarely outside this area does not necessarily mean more than that the recorder has not penetrated very far into the ideas of the natives with whom he was familiar. So far, however, as our evidence goes, it seems that the All-Father belief is pre-eminently characteristic of the old Australian group; it is found among important tribes of the Neo-Australian group, such as the Wiradjuri and the Kamilaroi, but there is no record of it among the Darling tribes and in the greater part of Queensland. So far as we have evidence for it, the totemism of the northern area seems to differ widely from that which is found elsewhere in Australia, and save among the Dieri and other contiguous tribes there is no record of *Intichiuma* ceremonies except in this part of the continent.

2. Religion.—There has been a good deal of controversy as to the genuine aboriginal character, and, this being conceded, the real status of the Australian All-Father. There is, however, satisfactory evidence that Baiame, about whom the controversy has turned in the main, was recognized in the Wellington valley before the advent of the Church of England Mission in 1832 (*Man*, 1905, No. 28); and, though a Wesleyan mission existed there in 1828, before Henderson collected his facts, there is no reason to suppose that it could have exerted any great influence, certainly not enough to introduce such a figure as Baiame into the initiation rites of the aborigines, as it must have done if the theory of the missionary origin of these anthropomorphic beings is to be maintained.

There is naturally more doubt as to the precise position occupied in the aboriginal view of the universe by Baiame and his congeners; some authors have denied that the term 'god' can properly be applied to them (*Folklore*, ix. 290–329), while others have maintained that they are eternal, omniscient, all-powerful creators. Probably the truth lies nearer the latter than the former view. At the initiation ceremonies of the Euahlayi tribe, according to Mrs. Langloh Parker, an excellent

authority, Baiame is proclaimed as 'Father of All, whose laws the tribes are now obeying.' He established the rule that tribes at the fishing ground should keep peace; he gives rain to the orphan who cries for it; he is prayed to at the *bora* ('initiation ceremonies') and at funerals, and his name means 'great'; his figure is made in earth on the *bora* ground (Parker, *Euahlayi Tribe*, 7 f.). Some of the difficulties which surround the question of the status of the Australian All-Father have arisen, however, because the disputants have overlooked the fact that the beliefs of the various tribes show not only different degrees of development, but actual differences in kind. Schmidt has pointed out (*Anthropos*, 1908) that we seem to have three strata: (1) the belief in an All-Father pure and simple; (2) the belief in an All-Father who has taken over features of a tribal ancestor; (3) the belief in a being of this kind who is also the creator, has wives and children, and (in the case of Baiame) is sometimes depicted as ruling the world through a subordinate. As examples of these three classes of belief may be cited: (1) the Kurnai view of Mungan-ngaua; (2) the Theddora, Wolgal, Ngarego, and Yuin view of Daramulun; and (3) the Wiradjuri, Kamilaroi, and Euahlayi view of Baiame. Bunjil also, the All-Father of the Central Victorian tribes, belongs to the third category. This theory depends on complicated considerations connected with the distribution (*a*) of phratries, (*b*) of totems, and (*c*) of sex-totems, from which Schmidt has produced evidence in favour of a primary dark race, represented by the crow, upon which two successive waves of migration, represented by the eaglehawk and the emu, have descended. He argues that both Daramulun and Baiame were not indigenous, but originally tribal heroes of the invaders, the former of the eaglehawk race, the latter of the emu race; or, at any rate, that Baiame, if he were the All-Father of the indigenous tribes, combined therewith the character of tribal ancestor of the invading tribes. On this point there is not much evidence on either side, but, such as it is, it tells in favour of the view that Baiame was introduced by the invaders; for it is reported (*Australian Anthropological Journal*, i. 14) that the Minkins, on the Lower Leichardt, south of the Gulf of Carpentaria, believe in a god Gooaree who lives in Warnoo; Baiamai came from Warderah and taught them initiation ceremonies. So, too, the Mikadoons in the same neighbourhood believe in Gumboo, and say that Baiamai, who taught them initiation ceremonies, came from an island beyond Australia. Howitt has already called attention (*Native Tribes*, p. 498) to the fact that the evil spirit, Coen, at Sydney, had a namesake Kohin on the Herbert River; and if, as it seems, we are entitled to regard these as identical, there is no reason for mistrusting the evidence for a belief in Baiame just south of the Gulf on the score of its distance from the seat of the Baiame-cult in N. S. Wales. In this connexion it may be noted that precisely at this point south of the Gulf the Neo-Australian languages stretch northwards into the territory of the northern group. In this account Baiame figures as tribal hero, not as creator or All-Father, precisely as Schmidt's theory requires.

The following tribes are mentioned by Howitt (*op. cit.* 488 ff.) as having the All-Father belief: Narrinyeri (Nurrundere or Martummere); Wiimbaio (Nurelli); S. W. Victoria (Pirnmeheal); Wotjobaluk, Kulin, and Woëworung (Bunjil, Mamingorak, or Mamingata); Kurnai (Mungan-ngaua); Wathiwathi (Tha-tha-puli); Tatathi (Tulong); Theddora, Ngarego, and Yuin (Daramulun, Papang, or Biamban); Kamilaroi and Wiradjuri (Baiame); Port Stephens and Herbert River (Coen); S. Queensland (Maamba and Birral). About some of these, however, *e.g.* Birral, we have no information, and it is mere guesswork to include them among the All-Fathers. Birral may well be identical with Bedall (Thorne, *Queen of the Colonies*, 317), who is said to have made the world long ago, when he floated on the water, in form like a huge turtle two miles across the back. In this being we see few or none of the traits of the All-Father. In the Moreton Bay district, however, Buddai seems to have been the equivalent of Baiame (Lang, *Cooksland*, 1847, 459).

There is therefore good *prima facie* evidence for the existence of the belief in an All-Father south-east of the line from the mouth of the Murray to Moreton Bay. Beyond this area we have certain evidence only from the west coast between Geraldton and Albany, where Mamma Gnara, Father of All, is reverenced (*Trans. Roy. Soc. S. Aust.* xvi. 488). Captain Bradshaw has informed the present writer that on the Victoria River a being is recognized who watches over the morals of the tribes, and the same is reported of Kohin on the Herbert River; but in neither case is the epithet 'Father of All' reported, and there is no evidence even of moral influence on the part of the beings reported from the Larrakia of Port Darwin by Foelsche (Curr, *Australian Race*, i. 253). The Cape River tribes are said (*ib.* iii. 146) to believe in a being in the sky, to whom good men go when they die.

In the central area some tribes seem to believe in a being not unlike Baiame; but the evidence as to the beliefs of these peoples is hardly satisfactory. Spencer and Gillen (*Northern Tribes*, 502 f.) say that Twanyirika of the Aruntas and Unmatjeras, and Katajalina of the Binbingas are bugbears, pure and simple, whose function is to keep the women and children in subjection; Tumana of the Kaitish and Murtu-murtu of the Warramungas are simply Alcheringa (*q.v.*) ancestors. Atnatu of the Kaitish stands by himself; he made the Alcheringa and stands in a real relation to the initiation ceremonies; for he is pleased when the operators sound the bull-roarer, and angry when they do not; but he does not trouble himself about morality.

In this account, however, there is no mention of the being known as Altjira, whom Strehlow reports as known to the Aruntas (*Veröffentlichungen aus dem Völker-Museum Frankfurt*, i. 1), and who seems to have been mentioned by Gillen in the *Report of the Horn Expedition* (1896) under the name of Ulthaana ('spirit'). It is therefore open to question how far the account given by Spencer and Gillen in *Northern Tribes* can be regarded as exhaustive.

For the Dieri our evidence is equally uncertain. Gason reported that they believed in a good spirit Mura-mura; but subsequently the Mura-mura were ascertained to be mythical ancestors, like the Muk-Kurnai and the Alcheringa ancestors generally (Howitt, *op. cit.* 487). Recently, however, it has been asserted that the Dieri believe in Mura, a good spirit, distinct from the Mura-mura.

Associated with the All-Father of the south-eastern area is often an evil being, sometimes described as his son, sometimes independent. Thus Henderson (*Notes*, 147) says:

'Mudgegong is an evil spirit, who, after having derived his existence from Piame (= Baiame), declared war upon him and now endeavours with all his power to frustrate his undertakings. The offspring of Piame were numerous, but the whole with the exception of two were destroyed by Mudgegong, who converted them into different wild animals. . . . The evil spirit seemed to be described under the form of the eaglehawk. . . . Certain dramatic representations appear to be performed; the principal one is emblematic of the destruction of the eaglehawk by Piame.'

Another account (Macarthur, *N. S. Wales*, 1837, ii. 301) makes Wandong—one of the sons of Baiame mentioned by Henderson—the author of evil; and a third makes Daramulun himself the opponent (on these myths and their explanation see Schmidt,

in *Anthropos*, iii.). The same antithesis is made between Bunjil and Palyan, Coen and Potoyan, etc. Schmidt's view is that these myths date from the racial conflicts: where the crow race gained the day, Bunjil ('eaglehawk') is the defeated; elsewhere Mudgegong ('eaglehawk') is also defeated, but not by the crow.

It should be noted that there is a certain amount of confusion in the various reports; thus Coen, whom Howitt regards as equivalent to Daramulun, is depicted as an evil being (see Howitt, *op. cit.* 486). Other evil beings are Brewin among the Kurnai (*JAI* xiii. 191, xiv. 321, note 2), Tou in South Australia, Koochie among the Dieri, Jingi in West Australia.

It has, however, frequently happened that an evil being has been reported, who, on examination, turns out to be simply the spirit of a dead man. Thus among the Wiradjuri *buggeen* is not a proper name; in Western Victoria Nisbet (*Colonial Tramp*, 1891, 99) reports an evil deity Muurup, who comes in the lightning to destroy them, eats children, etc.; the owl is his messenger; he lives under ground and commands the evil spirits. But we learn from Howitt that *Muurup* is the soul of a dead man; hence the name can hardly be of any specific deity, but must apply to the dead in general, who are especially feared in the south of Australia.

Female deities are unknown in Australia, but in a certain number of cases the evil being is believed to be of the female sex; thus Kurriwilban, wife of Kogorowen, is described as an enemy of mankind (Threlkeld, *Aust. Language*, 1892, 48).

3. **Burial.**—From the point of view of burial customs, the Australian tribes fall into two groups. (1) In New South Wales, Victoria, South Australia, and the coastal portions of West Australia, simple burial without alternative rites, such as cremation, is the rule, save in an enclave near the mouth of the Murray River. (2) In Northern Territory and Queensland, simple burial without alternative rites is also found, though how far the absence of alternative rites means that our information is defective is an open question; but, as a rule, the body is exposed on a platform, or the flesh is eaten, or the body is buried and the bones subsequently exhumed. The main funeral ceremony is connected with the disposal of the bones. This rite, however, is often reserved, as is cannibalism, for specially favoured individuals, such as warriors, magicians, etc. Alternative rites are used where the subject was unimportant, owing to old age or youth.

Corresponding to these two classes—simple burial and complex rites—there seem to be different views as to the destiny of the soul. In the south the grave seems to be regarded in many cases as its abode; in the north it remains with the body or the bones till the latter are finally disposed of, and then goes to its own place. Fear of the dead seems to be more prominent in the south.

In Victoria and the south of N. S. Wales a hut was frequently built upon the grave, in which the widow or another relative sat during the time of mourning. This is also a Tasmanian custom, and strengthens the evidence for the intimate connexion of the Victorian tribes with the Tasmanian (see *Folklore*, vol. xix. [1908] p. 388).

4. **Future life.**—Australian beliefs as to a future life are generally vague, and our information is defective. At Port Lincoln (*Trans. Philosophical Institute of Victoria*, v. 188) it was believed that the soul was so small as to be able to pass through a chink; after death it went to an island, and could dispense with further nourishment; a redbill accompanied the soul on its journey. Near Adelaide, however (Gerstäcker, *Reisen*, 1854, iv. 364), it was held that the soul lived in trees during the day, and came down at night to eat caterpillars, frogs, etc.; concurrently with this (?), it was believed that the soul went west to an abyss at death. The Euahlayi believe that the spirit of a dead man goes with the spirits of dead relatives to Oobi Oobi, a sacred mountain, from which he is hoisted to Bullimah, Baiame's residence, by certain spirits called *Mooroobeaigunnil* (Parker, *Euahlayi Tribe*, 90 f.).

According to Spencer-Gillen[b] (145, 174), re-incarnation is everywhere the creed. This has been questioned by Strehlow (*Globus*, xci. 285, xcii. 123; *Veröffentlichungen aus dem Völker-Museum Frankfurt*, i., Introduction), and the real facts are not yet ascertained. Strehlow, however, reports two Aranda beliefs. According to one, there is an island of the dead, from which a spirit returns for temporary re-incarnation, lasting for a year or two, and is finally annihilated; the other affirms that the good dead live with Altjira, the sky-being. In the place of the re-incarnation doctrine, Strehlow finds the belief that the germ (*ratapa*) of a child issues from the body of a totemic ancestor, or that an ancestor throws a small bull-roarer at a woman, in whose body it changes to a child.

5. **Cult of the dead.**—Although totemic ancestors figure largely in myth in some parts, there is nothing in the nature of a cult of ancestors. The dead are feared; certain powers are ascribed to them, such as raising storms, sending rain, procuring a good catch of fish, and appeals of various sorts are made to them (Collins, *Eng. Colony in N. S. Wales*, 1798–1802, i. 601; J. S. Lang, *Aborigines*, 31; Lumholtz, *Among Cannibals*, 1889, 282; Ogle, *Colony of West Aust.*, 1839, 58; Salvado, *Mémoires historiques*, 1854, 276; Stephens, *Hist. of S. Aust.*, 1838, 78, etc.), but not specially as ancestors. Near Adelaide the spirits of enemies were kept quiet by magic spells (*Verh. d. Gesell. f. Erdkunde*, i. 194). Sleeping on the grave of a dead man was one of the methods of becoming a magician (Mauss, *Pouvoirs*, 17, etc.). There is a wide-spread belief that natives, when they die, return as white men (Roth, *Bull.* 5, p. 16). There are also traces of a belief in transmigration (*Man*, 1905, No. 28).

6. **Soul.**—All natives of Australia seem to have held an animistic view of man, though the sky-beings are regarded as corporeal. But as to their view of the soul, etc., we have only scanty information. Mrs. K. L. Parker records that the Euahlayi attributed to each person three spirits: Yowee, the soul which leaves the body only at death; Dowee, a dream spirit; Mulloowil, a shadow spirit; and, sometimes, Yunbeai, or tutelary animal ([?] spirit) (*Euahlayi Tribe*, 35).

On the Tully R., Qu., the soul is associated with the shadow and the breath; the *koi* goes away during sleep; after death it goes into the bush. On the Bloomfield R. the *wau-wu* is associated with the breath, but is independent of the ghost. At Cape Bedford it is part and parcel of a man's spiritual part. On the Pennefather R. the *ngai* and the *choi* are distinguished; the latter leaves the corpse at death and wanders in the bush; the former passes into the body of son, daughter, or sister. Both are associated with the heart and afterbirth (Roth, *Bull.* 5. 17–19).

7. **Magic.**—With regard to magical practices, there are well-marked differences between the northern group and the remainder of Australia. Among the central tribes magic is practised by both men and women without special initiation, save in the Anula tribe, where the magician is the producer of evil, not the doctor. The initiated medicine-man has the duty of protecting the community or individual members against the magic of others. Among the south-eastern tribes, however, the medicine-man is both worker of magic and doctor indifferently; and, so far as can be seen,

the practice of magic is usually confined to initiated men, though Mrs. Parker mentions a witch-woman among the Euahlayi.

In some tribes the magician is so by birth; among the Anulas only one kin performs these functions; among the Tongarankas a boy inherits his powers from his father (Mauss, *op. cit.* 10; Howitt, 404). More often, however, initiation is by revelation from the dead, from spirits, or from the All-Father, or else knowledge is communicated by other magicians. Occasionally a man who has escaped miraculously from a violent death is reputed a magician.

It is commonly believed that at their initiation medicine-men have introduced into their bodies certain stones, usually fragments of quartz, upon which their magic powers depend, and which may be caused to leave their bodies if they partake of alcohol, hot drinks, etc., or are bitten by ants. The Euahlayi believe that all magicians have a *nagual* ('individual totem'), which is forbidden food to them, which they can cause to appear to others, and whose shape they can themselves assume.

The commonest form of magic, practised all over Australia, is 'pointing'; hair, etc., are used in the south and east; spells are common; in Queensland a man's lifeblood is said to be withdrawn by the *mangani*; and magic may be worked by an effigy of the victim (Roth, 5. 28; Howitt, 354; Spencer-Gillen[b], 455; Mauss, *Pouvoirs*, *passim*, etc.).

In connexion with magic, mention must be made of rain-making. The office of rain-maker was often distinct from that of medicine-man, especially among the Dieri, where all participated in the rites; the ceremonies may almost be termed religious. The same remark applies to the totemic ceremonies of the centre and north.

8. Totemism.—The *nagual*, associated with the magician among the Euahlayi and elsewhere, is probably rare in most parts of Australia (for possible cases see *Aust. Assoc. for the Advancement of Science Reports*, iii. 515, v. 638; *Science of Man*, vii. 91; cf. *Man*, 1904, No. 53). Of kin totemism in the S. and E. we know little beyond the names of the animals. In some cases the killing of the animal is forbidden, but among the Euahlayi there is no restriction. It is the *nagual* that is sacrosanct, but it is forbidden to mimic or speak ill of a totem. The totem also helps the human being (Howitt, 400; Parker, 21).

The totemism of the north and centre appears to be generically different from that on the south and east. The local grouping, the great number of totems, and their connexion with *Intichiuma* ceremonies, are all important differentia. Still more important perhaps is the fact that in the south-east totems are animals; in the south, centre, and in South Queensland, animals and plants, the latter fewer than the former; among the Aruntas both in fairly equal numbers; and in North Australia, as in New Guinea, the plant totems outnumber the animals (see Schmidt, in *Anthropos*, iii.).

A progressive change is also noticeable with regard to the eating of the totem, which is permitted among the Arandas alone; in both the Aranda and the Kaitish tribes the totem must be eaten at the *Intichiuma* ceremonies. Among the Warramungas it is offered to men of the totem by others, but not eaten. Finally, in the Binbinga and other tribes it is neither eaten nor offered. It has been mentioned above that the *yunbeai* ('nagual') may be regarded as a fourth soul. There are traces of a similar animistic view of ordinary totemism. Among both the Euahlayi and the Warramungas one of the divinatory ceremonies to discover a murderer consists in observing the tracks near the body; the track of a snake indicates that a man of the snake totem is the culprit (Spencer-Gillen[b], 519, 526; K. L. Parker, *op. cit.* 89).

So-called 'sex-totemism' is found in South Australia, Victoria, and New South Wales, mainly on the coast. Each sex has a 'brother' or 'sister,' whom they respect and regard as the creator of their sex. The sacrosanct animals are usually small birds (wren, nightjar, etc.) or the bat.

9. Initiation ceremonies.—The initiation ceremonies fall into two main groups: (1) the central tribes west of a line from near Adelaide to the south end of the Gulf of Carpentaria practise circumcision, and, with the exception of a small area near Adelaide, sub-incision also; knocking out of teeth is known and practised in this part of Australia, but has no special significance; and (2) along the west coast and in Victoria and New South Wales the initiation ceremony consists in the knocking out of the boy's tooth. North of the Queensland border even this feature is wanting, and combats, real, not simulated, with spears, clubs, etc., test the manhood of the youths. Whereas in the central area the ceremonies are performed by successive stages, so that a youth attains his privileges gradually, the initiation customs of the eastern tribes admit him at once to all the privileges of manhood, though, of course, his share in the government of the tribe is naturally small until he has attained riper years (Howitt, 509–677; Curr, *op. cit.*, *passim*; Spencer-Gillen[b], *passim*).

In connexion with the initiation ceremonies, mention must be made of the system of food prohibitions, which perhaps attains a greater development in Australia than in any other part of the world. Eyre (*Journal*, 1845, ii. 293) records particulars of South Australian customs. Up to the age of nine or ten, boys were free to eat any food; then twenty or thirty different animals and birds were forbidden them; ten years later some of these restrictions were relaxed, but new ones were imposed; married men up to the age of thirty-five were forbidden eight or ten articles of diet; old men were, again, free to follow their inclinations. There were similar lists of prohibited foods for girls and women.

10. Bull-roarer.—There are well-marked variations with regard to the bull-roarer. In the south-east of New South Wales it is associated with Daramulun; elsewhere in the colony and in Central and North Australia it is associated with a spirit or spirits in the exoteric doctrine; but the young men are taught its real nature at initiation. Both in New South Wales and in South Australia two bull-roarers were used, one large, the other small, which were sometimes said to be male and female. Among the west coast tribes of the Gulf the bull-roarer is rare, but here too the women are told that it is the voice of an evil spirit. On the Georgina River a large sacred bull-roarer is found, and side by side with it a small one, which is simply a toy. In some parts of North Queensland children of both sexes use it as a toy, in others only boys. On the Bloomfield River the boys are taught the use of it at the initiation ceremonies; but they are permitted to use it in the presence of women, so that it partakes more of the character of a toy. See BULL-ROARER.

N. W. THOMAS.

AUTHORITY.—*Definition and scope.*—The word 'authority,' as used in ordinary language, always implies a certain amount of coerciveness. The most common meaning is that of a power to enforce obedience. But the sense varies according to the sphere in which the authoritative power is exercised. As regards action, it is the power which enforces obedience. Authority and obedience are correlative terms, supremacy being implied on the part of authority, and dependence on the part of those who have to obey. Authority has the right and the power to say the last word, and to give a decision from which there is no appeal. Its judgment is final. But there is also a use of the word which reveals it as operative in the sphere of opinion, belief, and action. The final test of belief and of opinion is action, and authority in this regard is the power which is held to have the right to influence opinion, to induce belief, and so to lead to action. That is to say, this view really is a phase of the view which looks on authority as the power that enforces obedience, for it shows authority at work in that sphere which ultimately issues in obedience. It reveals the process by which obedience is won. The right to influence opinion, to induce belief, to persuade a man to take a certain course of conduct, which belongs to authority, is thus the way to command obedience. Yet there is a shade of difference in the two aspects of authority set forth above. In that view which regards authority as the power that commands obedience, we abstract from the way and means by which it persuades the man to obey, and fix our attention on the categorical command which must be obeyed. In the other case, authority is presented as rational, as proving its right to command, as presenting itself in an attitude of persuasion, as leading the object of authority to lend his own assent to the demand made on him. The power to create opinion, to influence belief, and to constrain to action is exercised with a view to enforce obedience. This power may be exercised in many ways, varying according to the sphere of operation, the means available, and the end in view. In the intellectual sphere it may take the form of authoritative opinion, the view of a man who has the expert knowledge which few others have at command. It may take the form of testimony as to matters of fact of which he is or has been the only witness. In short, it may take a thousand forms; but the outcome in every case is to win assent, to constrain belief, and to influence action.

The common element in all forms of authority is ultimately to enforce opinion, and to constrain belief. Without this element of coerciveness, authority has no real meaning. All authority inhibits, forces, or pains. It is of its very nature so to act. But, on the other hand, authority must be prepared to justify itself, and to show that it has the right to command, and the power to enforce its behests. It is not an end in itself; it is a means to an end. What that end may be it is not necessary here to determine. It may be that Höffding is correct when he says:

'Authority can never be anything but a means, and the principle of authority is subordinate to the principle of personality, as mediate value must always be subordinate to immediate value. The burden of proof must always lie with those who wish to inhibit, limit, force, or pain. Authority pleads as its justification that it is the necessary condition for the complete carrying out of the principle of personality' (*The Philosophy of Religion*, p. 279).

To Höffding the principle of authority, while it has its own place and function, is subordinate to the principle of personality. This is a different contrast from the familiar one of the antithesis of authority and reason, with which literature is so well acquainted. Höffding is concerned with the principle of the Conservation of Values, and for the right estimate of values the principle of Personality, he holds, is of supreme worth. It is not necessary to enter into his theory, or to discuss it. The main thing is that for him the principle of authority is not ultimate. It must justify itself. There is another view which we may take from Mr. Arthur Balfour.

'Authority, as I have been using the term, is in all cases contrasted with Reason, and stands for that group of non-rational causes, moral, social, and educational, which produces its results by psychic processes other than reasoning' (*The Foundations of Belief*, p. 219). 'If we are to judge with equity between these rival claimants, we must not forget that it is Authority rather than Reason to which, in the main, we owe not religion only, but ethics and politics; that it is Authority which supplies us with essential elements in the premises of science; that it is Authority rather than Reason which lays deep the foundations of social life; that it is Authority rather than Reason which cements its superstructure. And though it may seem to savour of paradox, it is yet no exaggeration to say that, if we would find the quality in which we most notably excel the brute creation, we should look for it not so much in our faculty of convincing and being convinced by the exercise of reasoning, as in our capacity for influencing and being influenced through the action of Authority' (*ib.* p. 229 f.).

In drawing out the contrast between authority and reason, Mr. Balfour dwells with delight on customary opinion, habit, and on that 'group of non-rational causes—moral, social, and educational—which produces its results by psychic processes other than reasoning.' He has forgotten to observe that in all these processes reason is, at all events, implicit. For the customs, traditions, and social, moral, and educational influences in the midst of which we live, have been the products of rational beings, of beings, in short, who have been implicitly rational from the beginning. All the causes which he claims for authority may be better assigned to reason. He refuses to let reason possess authority, for, he says, 'Authority as such is, from the nature of the case, dumb in the presence of argument.' It is instructive to read why it should be so. But we may not linger over his ingenious argumentation. Our contention is that authority need not fear argument, when it insists on its legitimate claim to influence or coerce men. But then its claim must, like all claims, submit to criticism; and, when it does so, it need not take refuge in groups of non-rational causes, or in that dim mysterious region of instinct to which Mr. Balfour consigns it. For there are many voices which speak to us with authority, and to none of them can we turn a deaf ear without paying an appropriate penalty. That penalty may be stated, and the sanction of any true authority may be vindicated, to the satisfaction of reason.

It may be broadly stated that in every sphere of human activity, and in every sphere of human thought, there is something which may rightly be called authority. The sanctions by which authority vindicates its attitude may vary with each sphere, but in all of them there is authority with its appropriate sanctions. It is not our purpose to make an exhaustive enumeration of the spheres in which authority has its appropriate place and function. To do so would be to enumerate all the sciences, all the arts, all the philosophies, and, in short, all those achievements of the human mind which are embodied in the literature of the world. But we may ask—

1. Is there an authority in science? And if so, what are its functions, and what are its sanctions? Waiving the question as to the abstract nature of science, and as to the depreciation of it on that account, may we not say that it is through the achievements of science that we have won control over the external world, and subdued it to the uses of man? It may be quite true that nature is more complex and more subtle than our sciences, and that, while we speak of heat, light, electricity, gravitation, and dwell on these in our abstract fashion, every particle of matter is at the same

time in some state of temperature, in some electric condition, and so on. Yet so far science has read the meaning of nature, and has subjected itself to the authority of nature. The external world has been controlled by man, and subdued to his uses only because he has submitted himself to its authority. It is possible for a man to strive to ignore the law of gravitation, but, if he does so, he will never build a house. Practical work in the external world is possible only if a man submits to the authority placed on him by the nature of that world. We do not mean only that he must recognize those great and universal characteristics of nature which science has expressed under such generalizations as the law of gravitation, the law of the conservation of energy, and such like,—he must have regard to the particular nature of every natural object with which he has to do. He must deal with stones according to the qualities of stones, with timber according to the qualities of timber, and with other things after their kind. These dictate to science and to men generally the conditions under which work must be done. In building his bridges man must make allowance for the contraction of iron under cold and for its expansion under heat. The nature of his material and the laws of physics speak to him with an authoritative voice, and if he ventures to disregard that authority, he must pay the price. He will find it sanctioned by tumbling houses, falling bridges, and general wreck and ruin. Nature will do anything for one who knows how to make her work, but she will do nothing for one who does not know her way and her limitations. We take from the sciences our first example of authority, and we have begun here because we find that the authority of nature can be justified, and that reason quite recognizes the validity of the claim which nature presents to man in the system in which he lives.

Reason can recognize the processes and methods of nature. Indeed, the possibility of science depends on the presupposition of the rationality of nature. Acting on that supposition, science has questioned nature, has experimented with her, has come to know her, has summed up its knowledge of nature in the special sciences, and has succeeded in this venture just because it has recognized the order of nature as real, objective, authoritative. The value of the generalizations of science lies in the fact that they represent nature, and that they may be verified in the processes and in the facts of nature. This means that the order of nature is recognized by man as authoritative, and science has taken it as such. No doubt, there is a correspondence between the order of nature and the constitution of the human mind. The correspondence exists, whatever the explanation of it may be. It would lead us too far afield to inquire into the origin and character of the correspondence. Nor is it necessary; for, whether we hold that mind gives laws to nature or the converse, the correspondence stands. Mind and nature are related the one to the other. So, whether we inquire into the order of nature or into the constitution of mind, we are led to something common to both. For nature is rational, is a system, and mind finds that the rationality in nature is akin to the rationality of which it is conscious in itself.

2. **Authority of the laws of reason.**—When we inquire, therefore, into the constitution of mind, we start with the presupposition that we shall find it rational, just as we have found nature to be rational. One of the chief characteristics of mind is that it has the power of transcending particular experiences, and of making universal and necessary propositions, which it believes to be true always and everywhere. These judgments are disclosed to it on reflexion, but from their very nature they lie at the foundation of all experience, and without them experience would not be possible. They are of such a kind that the mind recognizes their truth and validity as soon as it understands them. They bear on the face of them their own irresistible evidence. It is impossible for us to think of an event happening without a cause. The law of causation rules our thinking, and of an unrelated event we are unable to conceive. Axioms are axiomatic. We cannot think without them. It makes no difference whether we call them 'axioms,' or designate them 'postulates'; in either case they are there as the foundation of all our thinking. Without them we should fall into contradiction, and lapse into confusion. Thought must be consistent with itself, that is, it must not be self-contradictory, and thought must be consistent with reality. On the other hand, these universal and necessary judgments must be prepared to vindicate their validity. They must submit to criticism, and show themselves in their universal and necessary character. They must show themselves in all the glory of their self-evidence; they must be prepared to prove that the opposite of them is inconceivable; and they must prove that, unless we accept them, our thinking will be self-contradictory. It is not necessary to enumerate these axioms. Two and two make four, a thing cannot be and not be at the same time—on such axioms as these all are agreed, whatever the explanation of their validity may be. All thinking must assume the law of non-contradiction, as all fruitful thinking must recognize the validity of the laws of logic.

These axioms are authoritative, and are authoritative in the ordinary meaning of the term. They enforce obedience to them under the sanction that, if they are disregarded, thinking will be inept, unfruitful, nonsensical. In this sphere the antinomy between authority and freedom, between authority and reason, between the principle of authority and the principle of personality, does not emerge. For the principle of authority here is the very principle of reason itself, and these necessary and universal judgments are those which make freedom, personality, and reason possible. For reason can be exercised only on the basis of universality and necessity. Because there is a fixed order of nature, and necessary laws of reason, freedom is possible, and ideals may be conceived and realized. If there were no axioms, if there were no universal and necessary judgments, no fixed properties of things, it would not be possible for mind to conceive ends and adopt means for their realization. Nor would it be possible for man to maintain a rational relation to a random world. The main thing, however, to insist on here is that these universal and necessary judgments speak to us with authority, coerce our opinions and beliefs, and constrain us to action consistent with them. They have thus the note of authority, and enforce themselves on us with very drastic sanctions. Our thinking, our action, and even our feeling must be consistent with them, and must proceed with a due regard to their supremacy.

3. **Authority in the sphere of civil life.**—We have seen that authority is rightly exercised over us by the external order of the world, and by the laws of mind itself, and that the sanctions are of the most real and emphatic order. Can we find a legitimate sphere for authority, with appropriate sanctions, in the sphere of civil life, in the sphere of morals, and in the sphere of religion? It is impossible to say that in these spheres a denial of authority involves self-contradiction. Disloyalty,

disobedience, and anarchy are possible, as history abundantly shows. Take the case of government, and ask, What is the place of authority in it? Here clearly we must bring in a number of considerations which were not needed in relation to the authoritativeness of laws of nature and laws of mind. With his usual insight and sagacity, Bishop Butler sets forth the essential note of government when he says:

'The annexing pleasure to some actions, and pain to others, in our power to do or forbear, and giving notice of this appointment beforehand to those whom it concerns, is the proper formal notion of government. . . . If civil magistrates could make the sanctions of their laws take place, without interposing at all, after they had passed them, without a trial and the formalities of an execution; if they were able to make their laws execute themselves, or every offender to execute them upon himself—we should be just in the same sense under their government then as we are now; but in a much higher degree, and more perfect manner' (*Analogy*, pt. 1, ch. ii.).

Attaching pleasure to some actions and pains to others, and giving notice of the appointment beforehand, is the proper notion of government. Let us take this conception with us, as we seek to investigate the function of authority in civil government. The State is the source of authority within its dominions. It is the maker of laws: in its judicial function it is the administrator, and in its executive function it is the active agency in enforcing obedience. All local authorities are derived from the State. These may be administrative, like town and county authorities, authorities dealing with public health, and so on; they may be judicial; or they may be commercial; yet each delegated authority derives its power from the State, and is responsible to the State for its exercise. The authority of each independent State is supreme within its own dominion. It might be asked, What is the State, and from what source is its authority derived? That is too large a question to be discussed here (see art. GOVERNMENT). But it may be well to learn from competent authority what is meant by law, by sovereignty, and by subjection and obedience. Austin tells us that—

'Laws set by God to men, laws established by political superiors, and laws set by men to men (though not by political superiors) are distinguished by numerous and important differences, but agree in this, that all of them are set by rational and intelligent beings to intelligent and rational beings' (*Lectures on Jurisprudence*, vol. i. p. 3 [3-vol. ed. 1861]). Again, 'Of the laws set by men to men, some are established by political superiors, sovereign and subject; by persons exercising supreme and subordinate government, in independent nations, or independent political societies' (p. 2). As to the source of law, it is thus stated: 'Every positive law, or every law simply and strictly so called, is set by a sovereign person, or a sovereign body of persons, to a member or members of the independent political society wherein that person or body is sovereign or supreme. Or, changing the expression, it is set by a monarch or sovereign member to a person or persons in a state of subjection to its author' (p. 169). Again, 'The notions of sovereignty and independent political society may be expressed concisely thus: if a determinate human superior, not in a habit of obedience to a like superior, receive habitual obedience from the bulk of a given society, that determinate superior is sovereign in that society, and the society (including the superior) is a society political and independent' (p. 170).

It may be well to refer in this connexion to Maine's *The Early History of Institutions*, p. 349 f., for an independent contribution to Austin's theory of sovereignty and subjection. As to the theory itself, it is very abstract, and the great political facts are reduced and attenuated to abstractions, in which the fact of sovereign service and the loyalty of subjects have disappeared. It is well to have a description of abstract sovereignty and abstract obedience attenuated to the uttermost. Yet, after all, it does not help us much in our inquiry. It may be desirable for the student to read more modern contributions to the theory of the State, especially those which have been influenced by the philosophy of Kant, and by the great idealist school more or less dominated in this regard by Hegel. Reference may be made to Green's 'Principles of Political Obligation' (*Collected Works*, vol. ii. p. 445):

'It is a mistake to think of the State as an aggregation of individuals under a sovereign—equally so whether we suppose the individuals as such, or apart from what they derive from society, to possess natural rights, or suppose them to depend on the sovereign for the possession of rights. A State presupposes other forms of community, with the rights which arise out of them, and exists only as sustaining, securing, and completing them. In order to make a State, there must have been families of which the members recognised rights in each other (recognised in each other powers capable of direction by reference to a common Good): there must further have been intercourse between families, or between tribes that have grown out of families, of which each in the same sense recognised rights in the other. The recognition of a right being very far short of the definition, the admission of a right in each other by two parties, whether individuals, families, or tribes, being very different from agreement as to what the right consists in —what it is a right to do or acquire—the rights recognized require definition and reconciliation in a general law. When such a general law has been arrived at, regulating the position of members of a family towards each other and the dealings of families or tribes with each other; when it is voluntarily recognised by a community of families or tribes, and maintained by a power strong enough at once to enforce it within the community and to defend the integrity of the community against attacks from without, then the elementary State has been formed.'

For the vindication of the exercise of authority in a State, it is not sufficient to dwell on the abstract relationship of sovereign and subject or on the independence of a State; the authority must be vindicated on other grounds. Green has shown that a State is not an assemblage of mere individuals under a common government. Individuals are already united by moral bonds; they are in families, in tribes, and as such are in mutual recognition of rights and duties. Those in authority must do service, and must justify their action on the ground of recognized worth or good achieved; or even on the lower ground of utility. Authority must justify its existence. Aristotle has well recognized and insisted on the obligation to service which attaches to those who exercise authority. He shows that a State is not an association formed exclusively for the acquisition of wealth, or for military strength, or for the encouragement of commerce. The object of the State is the promotion of the higher life. When men are associated together in a State, 'the object of their association is to live well—not merely to live.'

'Virtue and vice are matters of earnest consideration to all whose hearts are set upon good and orderly government. And from this fact it is evident that a State which is not merely nominally, but in the true sense of the word a State, should devote its attention to virtue. To neglect virtue is to convert the political association into an alliance differing in nothing except in the local contiguity of its members from the alliance formed between distant States, to convert the law into a mere covenant, or, as the sophist Lycophron said, a mere surety for the mutual respect of rights, without any qualification for producing goodness or justice in the citizens. But it is clear that this is the true view of the State, *i.e.* that it promotes the virtue of its citizens' (Aristotle's *Politics*, bk. iii. ch. 9, Welldon's tr. p. 124 f.).

The authority of a State is not justified by the mere fact of sovereignty; the sovereignty must be of a certain character. According to Aristotle, it must be an institution in which goodness, virtue, and justice are produced in the citizens. The State, in more modern phraseology, must be an institution in which a man can find himself, realize himself, and by its means be able to live a rich, full, and gracious life. It must be the home in which his ideals are so far realized, which in the history of the past and in the situation of the present affords ideals worthy of imitation to the citizen in all the variety of his manifold endeavour. The authority of a nation over its citizens is thus justified by the tradition of the nation, by its achievement in former ages, by the ideal it sets before them at the present hour, and by its promise for the future. The authority of a State can neither be measured nor justified by the material force which it has at its command to enforce obedience. Force is no remedy, nor can it win

the loyalty of the governed. Without loyalty the exercise of authority is hindered, confined, rendered ineffective. It makes no difference in the final issue whether power is exercised by a king or by the citizens themselves; for, if it is exercised unworthily, it casts a blight on the flower of loyalty, which is essential to the full exercise of authority. Briefly, it may be said that the State is an ethical institution, and while material force is needed, yet the exercise of that force is conditioned by the fact that it must always be exercised for the good of the community, and in the interests of the higher values. Authority and loyalty must go hand in hand in every State which is worthy of the name. Of the manifold relations of governor and governed, of the claims which the State has a right to make on its citizens, of the freedom of the individual over against the State, and of the limits of civil obedience it is not possible to speak here. Nor is it necessary, for the due exercise of authority in this sphere must always be in such ways as to carry with it the consent of the citizen, to arouse his loyalty, to deepen his sense of obligation to the State, and to quicken him to do the State enthusiastic service. In this sphere, too, authority has to justify itself by its fruits.

4. **Authority in morals.**—We have passed insensibly to the exercise of authority in the sphere of moral life. Is there a Categorical Imperative? Is there an Ought, a law binding on us, which we must obey unconditionally, and cannot disobey except at our direst peril? To these questions it is not possible to give an exhaustive answer within our limits. The facts of the moral life are so various, the explanations of them so numerous, and the theories of ethics so manifold, that it is difficult to isolate the voice of authority, and to give here a distinct and categorical answer. Yet the ordinary moral consciousness speaks of virtue and vice, of good and evil, and of right and wrong, and it has definite meanings when it uses these ethical contrasts. It has a notion that virtue and vice relate to character, that good and evil relate to the end of life, and that right and wrong refer to a standard. It is conscious, also, that they all relate somehow to an ideal of conduct. When it speaks of right and wrong, it sets up a standard of conduct; when it speaks of good and evil, it passes a judgment on the end and purpose of life; and when it speaks of virtue and vice, it recognizes an ideal of character which it feels ought to be realized in practical life.

Students of ethics will remember Kant's treatment of the ordinary moral consciousness, which in his *Metaphysic of Ethic* he analyzes, on the way towards his theoretical exposition of ethic. Kant lays stress on the Good Will as the absolute example of Good. He insists that the aim of the practical reason is to produce an absolutely good will, not a will which is good only as a means to happiness. A good will is the supreme good, though it may not have attained to completeness. Inasmuch, however, as a perfectly goodwill is not attainable in its fullness here, Kant proceeds to set forth the notion of duty. He assumes that the good will in its completeness is wholly rational, and obeys without question or hesitation the law of reason. But in a being like man, who has passions and desires as well as reason, the good will is not wholly good. Hence the need of the conception of Duty. Kant insists that duty excludes not only all direct violation of morality but all acts the motive of which is inclination, even when these are not in themselves opposed to duty. In the second place, he shows that the moral value of an action is determined by the maxim or subjective principle of will which it manifests, not in relation to the object which acts upon desire. And he concludes, in the third place, that duty may be defined as the obligation to act from reverence for law (cf. J. Watson, *The Philosophy of Kant Explained* [1901], to which the present writer is deeply indebted). Man, however, is a being whose desires are not invariably in harmony with reason. But a good will cannot be determined by natural inclination; it must be determined solely by the principle of duty for duty's sake. There is thus a dualism in human nature, there are wants and desires which demand satisfaction, and there is reason, which prescribes conformity to duty. What is the relation of duty to desire? In answering this question, Kant passes from the analysis of the moral consciousness to the problem of moral philosophy. And among other questions he asks this one, What is the nature of the supreme good? He derives it from the idea of moral perfection, which reason forms *a priori* and connects inseparably with the conception of a free will. The principle of morality is, and must be, independent of experience, and derives its authority solely from reason. As Dr. Watson says:

'We learn three things: firstly, that all moral conceptions proceed from reason entirely *a priori*; secondly, that it is of supreme importance to set the conceptions of morality before the mind in their purity, and not merely in the interest of a true theory of morality, but also as an aid in practical life; and thirdly, that the principles of pure practical reason, unlike those of theoretical reason, do not depend in a sense upon the peculiar nature of man, but are derived from the very conception of a rational being, and therefore apply to all rational beings' (*op. cit.* p. 317).

Following out these assumptions, Kant proceeds to set forth the metaphysic of morality. The Categorical Imperative is expounded, and in pursuance of it he sets forth the laws of the universal imperative of duty. 'Act as if the maxim from which you act were to become through your will a universal law of nature.' Another law reached by him after a prolonged discussion, into which we cannot enter, is, 'Act so as to use humanity, whether in your own person or in the person of another, always as an end, never as merely a means.' And a third law arises to complete the series: 'Act in conformity with the idea of the will of every rational being as a will which lays down universal laws of action.' [We use the translation of Dr. Watson.] Enthusiastic Kantians have compared these with Newton's three laws of motion. There need be no hesitation in recognizing their abiding worth. Nor need there be any hesitation in acknowledging the indebtedness of mankind to Kant for his lofty teaching regarding the conception of Duty. It is a permanent gain that he has shown the impossibility of deriving the Categorical Imperative from what he calls the Hypothetical Imperative. It is the practice in some schools of thought to derive the binding character of obligation from the fact that, if we are to gain an end, we must use the appropriate means. This is quite true. If I am to become a teacher, I must qualify myself for the office. And so with regard to the use of any other means by which an end is gained. I may decline to be a teacher, and so be discharged from the training needed for a teacher. But I may not decline to be moral. The demand of morality on me is absolute. For this demonstration the world is indebted to Kant.

The severely abstract character of Kant's ethic has given rise to difficulties. It is hard for the student of his ethic to find a point of contact with this working-day world. It is also severely intellectual, and seems to disregard the real nature of man. A common prayer of religious men, both in the congregation and in solitude, is, 'Incline my heart to keep Thy law.' If this prayer is answered,

and the heart is inclined to keep the law, immediately the act is removed from the sphere of duty, for inclination has nothing to do with duty. To touch morality with emotion would seem to destroy its character. Yet on some occasions Kant seems himself to be filled with emotion. This is specially the case in his commanding and striking address to Duty, and when he contemplates the majesty of the starry heavens above and the moral law within. Are we to say that in these moments Kant is lifted out of the sphere of morality? The truth seems to be that Kant in his analysis of the moral consciousness has forgotten the feelings and emotions and desires. Or, when he remembers them, he thinks of them only as disturbing elements, as hindrances to the working of the Categorical Imperative. He has not apparently contemplated the possibility of a man doing his duty because he likes to do it. If statutes may become songs, if a man may learn to love the law, how does it stand with him? Is he moral or is he outside of morality? Apparently in his analysis Kant has left out this possibility. It is curious to reflect that Herbert Spencer also comes to a similar conclusion, for he thinks that in a perfectly evolved State the sense of obligation will cease, as duty will become pleasure, and the strain will no longer be needed (*Data of Ethics*, § 47). In his exposition Dr. Watson says:

'A perfectly good will agrees with the rational will of man in conforming to objective laws, but it differs in not being under an obligation to conform to them. An imperative has no meaning as applied to the Divine will or any other holy will, such a will being by its very nature in harmony with the law of reason. Imperatives are therefore limited to beings whose will is imperfect, such as the will of man, expressing as they do the relation of objective law to an imperfect will' (*op. cit.* p. 318).

It seems a somewhat curious outcome. Is an Imperative less imperative when I consent to its rationality, and consent with my whole nature so completely that all its impulses, desires, and longings are constrained so thoroughly that all opposition to it passes away? Is the imperativeness of the Imperative less than before? Does an Imperative ever become real and operative until I lay it on myself, and make it binding on myself? Does it cease when I am able to make it wholly operative? It would seem, therefore, that there is something lacking in the analysis of the moral consciousness instituted by Kant. It neglects feeling. It forgets that the moral appeal is directed not to the intellect alone; to the will alone. It commands that the inclinations, the passions, and the desires shall be yoked to duty, and that man as a whole and as a community shall become moral. Moral authority does not cease when the will of man becomes wholly the good will, nor does obligation cease when man is wholly moralized. The statute does not cease to be a statute when it becomes a song, nor does the law vanish when the heart of man is inclined to keep it. We may not inquire further, in this place, into the nature of moral obligation, nor need we discuss the various views of it which have appeared in the history of ethics. It is sufficient for us to have indicated that morality has authority, from whatsoever source it may be conceived to flow. Man feels that he is bound to attain a certain character, to live up to a certain standard, and to attain to that ideal of life which can be described as good. The inward moral feeling must agree with an objective reality, and his judgment of values must be rooted in reality. The objective worth must be realized in the inward life. Here, however, we pass beyond the bounds of ethics, and enter into the sphere of religion.

5. **Authority in religion.**—In the sphere of religion, authority takes on a new form, speaks to us with a new voice, and passes from the sphere of the impersonal into that of the personal life. As Hegel finely says:

'All the various peoples feel that it is in the religious consciousness they possess truth, and they have always regarded religion as constituting their true dignity and the Sabbath of their lives. Whatever awakens in us doubt and fear, all sorrow, all care, . . . we leave behind on the shores of time; and as from the highest peak of a mountain, far away from all definite view of what is earthly, we look down calmly on all the limitations of the landscape and of the world, so with the spiritual eye man, lifted out of the hard realities of this actual world, contemplates it as something having only the semblance of existence, which, seen from this pure region, bathed in the beams of the spiritual sun, merely reflects back its shades of colour, its varied tints and lights, softened away into eternal rest' (*Philosophy of Religion*, Eng. tr., vol. i. p. 3).

It is in the sphere of religion that all the authorities referred to above are harmonized, unified, and made effective in a grander manner. For it is here that we can gather them into a unity, and see them to be one, for they reflect the absolute, central unity of the universe. When we speak of the unity of nature and the authoritative character of its system, we really mean the unity which is given to the universe by the mind which informs it, and by the presence enshrined in it. It is the primary revelation of God, and speaks to us with a Divine meaning; and when we read its meaning we are thinking the thoughts of God. So, also, when we read and decipher the laws of reason, think out the first principles of reason, and act on its axioms, we are dealing with reason which is not merely ours, but is also objective and authoritative. So, also, when we read history, dwell on the life of man organized into communities, and realize what in this sphere authority and subjection mean, here too we are in a Divine presence, and the powers which be have been ordained of God. All authority is thus ultimately Divine authority. This is true whether we regard the world from the theistic or from the pantheistic point of view. In the latter case authority comes from the perfect whole, in the former case it comes from the living God who has made, sustains, and rules the world. So, too, the binding power of morality flows from God. It is for this reason mainly that we are dissatisfied with the analysis of Kant, and regard it as imperfect. For religion comes to ethics and seeks to deliver it from the dry abstractions on which it delights to dwell, and strives to bring it into the warm relation of personal affection. It would relate moral feeling, moral aspiration, and moral obligation not to an impersonal law or to abstract truth, but to a Living Presence, to a Holy Person, to a Loving Will. Religion would not distinguish minutely between a Divine nature and a Divine will, nor would it seek to derive the Divine authority from a Divine will as distinguished from a Divine nature, for to religion the Divine will is only the expression of the Divine character.

As to the authority of nature, of truth, of civil society, of moral law, religion regards it as valid in its own place and way. They are expressions of the Divine nature, and express it as far as they can. But nature is an imperfect expression of the Divine nature. It may show forth certain aspects of the Divine nature, but the full meaning of God cannot be expressed in nature, or in human reason, or even in man as yet. God has really put a meaning into His works, and that meaning we are bound to read. Science is our interpretation of that meaning so far as we have been able to read it. There is a wider, deeper meaning in history, and in the nature of man, for here we deal with a world of persons, each of whom has or may have a meaning in himself. But even here the language of human life and destiny which God has had to use to express His meaning is not adequate to its work. For man is imperfect, man has been so far non-rational and

non-moral, and the meaning of an absolutely moral and rational Personality cannot be expressed by these imperfect means. Yet nature and history do in some measure reveal God, and their value for religion consists in the fact that they reveal the living, personal God. It is for this reason that they speak with an authoritative voice. They reveal God. But the source of all authority is God, and the motive to obedience is love to God, who has thus revealed Himself to man through nature, reason, and history. The ultimate sanction of this authority is transformed from the old mode of coercion, and has become something new. No longer is man impelled by the fear of consequences, or by the dread of an external penalty somehow connected with disobedience. The strongest sanction is that he dreads with unspeakable terror the possibility of estrangement from God, and of losing that fellowship which is his very life.

This, then, is the nature of authority in religion. And it sums up in itself all other authorities. It deepens the sources of authority, it transforms its sanctions, and in so doing makes them more than ever coercive. It is also to be observed that this authority is wielded by God Himself and by Him alone. God alone is Lord of the conscience, and He alone can command the conscience. Any other authority is at best ministerial, and is authoritative only in so far as it can produce and substantiate its credentials from Him. Laws of nature, laws of reason, laws of civil authority, laws of morals, are binding on men so far as they are laws of God, and no further. This seems to be what authority is from the religious point of view.

Again, from the religious point of view all things and agencies have their value in this, that they express God's meaning, and are of worth just so far as they are able to express that meaning. Thus they have to be supplemented and added to by those other ways of Divine expression which are to be found in the history of man and in the fullest revelations of God. This is not the place for a lengthy discussion of revelation, or of that form of it which Christians believe to be the highest and fullest, viz. the revelation of God given to man in Christ. Nor can we even indicate how in the revelation of God in Christ there is a complete expression of the Divine nature, and the manifestation of authority binding on all. Truth for the intelligence, life for the heart, and energy for the will are summed up in Him who is the Way, the Truth, and the Life.

Leaving these topics for adequate treatment in their proper places, we may note here that the authority of God vindicates itself on every ground on which it could be vindicated. We instinctively bow down in obedience to the highest and the best, to the wisest and the most pure, to the mightiest and the greatest. We bow down to this authority and regard its behests as binding, not merely because we recognize its right to command, but because we find also that its service is perfect freedom, because we are persuaded that it can guide, strengthen, comfort, and console. Here also authority appears finally in its strongest and most persuasive form. Perhaps the most picturesque, as it is also the strongest form of authority, is that exerted by a person upon persons. Think of the loyalty of soldiers to the general in whom they trust, think of the devotion of disciples to a master, think of the loyalty of men to a great political leader; they will work for him, serve him, live for him, die for him; his word will send them forth to fulfil his will or die. This element of personal devotion appears in religion in the very form which religion in its highest flights takes. From this point of view natural laws, laws of reason, laws of morals, become ways by which we acquaint ourselves with God; but these do not satisfy, they simply impel us on to acquaint ourselves with God and be at peace.

From this point of view certain discussions regarding the ways by which God makes Himself known simply become irrelevant. There is no need to inquire into infallibility, or inerrancy, or any other categories of the same kind. These are categories which men cannot use. Nor are they needed. For the ways by which God makes Himself known are simply means to an end, and we need not spend time on their characteristics. We only ask, Do they lead to God? However good and sure the ways may be, their ultimate value lies in this—that they lead to God. Yet men may linger in them, admire them, speculate about them, their beauty, inerrancy, and so on, till they place them in a position which belongs to God alone. It is time that men should use them as they are meant to be used, and cease to attribute to them qualities which belong to God alone.

Authority then is real, is ever present with men, is indispensable for the training and education of man. It is exercised in many ways and in many degrees. It has to justify itself not merely by the exercise of power, and by the ruder kinds of penalty; it has to meet the demands of human reason, to satisfy the requirements of the human conscience, and to prove itself the guide, the counsellor, the friend of man. The will must find in it purpose, guidance, and energy; the heart must find in it something to stir the emotions, to win the affections, and to arouse the higher passions of love and desire. And the intelligence must find in it truth, principle, and reality. When we trace all authority up to God, we have named that name which at once satisfies all the demands that men have a right to make on the authority which confronts them with an absolute claim to loyalty and obedience.

JAMES IVERACH.

AUTOMATISM.—Originally the 'automatic' meant that which happens of itself and without any visible external cause, and the uses of the word in the various sciences may all be traced back to this etymological signification.

1. The first of these is the *physiological*. When motions are observed in an organism which are not apparently initiated by any external stimulation, the action is described as automatic, and this automatism is one of the chief marks of a living body. Physiologists, however, generally hold that such spontaneity is only apparent, being really a secondary rearrangement and interaction of the chemical and physical forces which have been taken into the organism.* All physiological activity is thus taken as continuous with and included in the general scheme of physical interactions.

* See, however, art. ATTENTION, p. 213[a], and H. Driesch, *The Science and Philosophy of the Organism*, London, 1908.

2. When this point of view is extended to the *psychological* plane and confronted with the fact of consciousness, it may engender that form of psycho-physical parallelism known as psycho-physical automatism, or the Automaton Theory. As the various physical energies are taken to form a closed system with a fixed amount of energy and incapable of being affected by anything alien or extraneous (such as consciousness), it must on this theory be denied that consciousness has any efficacy, *i.e.* that its presence in any way alters the course of physical change. Why it should exist at all becomes a problem; but it may be regarded as an *epi-phenomenon*, a sort of unsubstantial reflexion which accompanies, and is probably in some unexplained way produced by, the flux of physical changes, or as a series of changes running parallel to, and somehow corresponding with, the physical changes, but of a fundamentally different order. The scientific aim of the doctrine of psycho-physical parallelism is to distinguish sharply between psychical and physical process, and it has the methodological advantage of freeing the consideration of the latter from the perplexing influence of the former. It may assume a double form, according as the automatism is supposed to be conscious or not. If the automatism is unconscious, the motions of the organism merely simulate the phenomena of feeling and consciousness. According to Descartes, animals are unconscious automata of this kind. But inasmuch as the only consciousness of which any one has direct experience is his own, this argument may, and indeed must, be extended also to human actions. Another's consciousness is always an inference by analogy drawn from his actions. We assume our fellow-men to be conscious, because they behave as we do, who are. But though in our own case we have direct experience of the existence of consciousness, we have not even here direct experience of its *efficacy*, if (with, *e.g.*, Hume) we choose to set aside the testimony of the direct experience of agency as a proof of 'causation.' The theory of psycho-physical automatism, then, fits in well enough with the assumptions of physics; but it comes into conflict with the biological presumption of the survival-value of any characteristic of life which has been progressively developed. For, unless consciousness possessed efficacy and altered the course of physical change, it is hard to see how it could have had survival-value. A complete refutation of psycho-physical automatism, however, can be achieved only by displaying the methodological nature of its fundamental assumptions.

3. *In psychology proper*, action is said to be automatic wherever the organism functions without the voluntary control (and in extreme cases even without the knowledge) of consciousness. Thus functions which are 'automatic' in the first sense may or may not be 'automatic' also in this; while, if the second sense of 'automatism' is adopted, it follows that *all* bodily motions are 'automatic' also, in this third sense. In practice, however, psychologists do not work with this theory, but are wont to distinguish between voluntary and automatic psychic processes. Automatism in this sense is closely related to the phenomena of Volition (*q.v.*) and Habit (*q.v.*). Fully conscious volition occupies an extreme position on a continuous scale, the other end of which is steeped in complete automatism. Such volition appears to be the condition of organic response only to relatively *new* situations, and, as involving effort, strain, thought, and time, is too expensive a process biologically not to be economized as much as possible. Accordingly, the volitional character of an action recedes more and more into the background as a function becomes established. As actions become familiar and habitual by repetition, volition and consciousness both tend to fade from the experience which accompanies the action, though for a long time the continuance of these factors as powers kept in reserve is suggested by their re-appearance in emergencies. In this way what was originally a highly conscious, difficult, and volitional act (*e.g.* walking or reading) may become degraded into almost any degree of facile automatism, though it should always be remembered that this psychological declension means a biological gain. Hence it may even be maintained that the distinction between the *secondary* automatism which is acquired, and the *primary* automatism of all the organic functions which are not (normally) under the control of the will or within the cognizance of consciousness, may ultimately be abolished. The difference between them may be reduced to one between acquisitions of a newer and of an older date, and primary automatism may be regarded as that part of vital functioning which has become so regular and certain as no longer to require conscious supervision. This interpretation is evidently attractive from an evolutionary standpoint, but as evidently it needs to be combined with some biologically acceptable theory of the transmission (or apparent transmission) of habits.

The philosophic importance of this secondary automatism is considerable. For it enables the moralist to include within the sphere of his competence many acts and processes which *as experienced* are no longer voluntary or even conscious, and so facilitates the evolutionary treatment of ethical data. It plainly suggests, moreover, a definite theory of the origin, function, and future of consciousness. If it is a law of function to tend from the conscious and volitional towards the habitual, involuntary, and unconscious, it would seem that any perfectly adjusted functioning must be unconscious, that consciousness itself was essentially a concomitant of a disturbance of habit, and that unconscious functioning was both the beginning and the end of conscious life. Thus consciousness would be essentially evanescent and transitory. This inference can be avoided only by denying that the growth of automatism is to be conceived as a mechanical process. It must be conceived as teleologically conditioned throughout, *i.e.* as a device for the facilitation of reactions upon stimulation, and for the economizing of a consciousness which always has more work than it can properly attend to, and so attends to the calls upon it in the order of their urgency. A good deal of evidence may be adduced, from the actual distribution of consciousness and automatism in the performance of organic functions of the same antiquity, to show that the lapsing into automatism does in point of fact occur in this teleological way.

4. In addition, however, to the actions which are removed from conscious control after having once been conscious, other automatisms are found to occur which seem never to have formed part of the conscious personality. They seem to be initiated outside the normal course of experience, and to intrude upon it as aliens. They may assist it, or more frequently disturb it, whence they are usually regarded as *pathological*. Such automatisms are usually sporadic and discontinuous, but may attain to a considerable degree of coherence and persistence in cases of 'multiple' and 'alternating' personality (*q.v.*). They have been classified as *sensory* (*e.g.* dreams [*q.v.*] and visual and auditory hallucinations [*q.v.*]) and *motor* (automatic speaking and writing), and their interpretation raises the important question of *sub-*

conscious mental life (see SUBCONSCIOUSNESS) and its relation to consciousness. It is also thought by some that in such automatisms traces of supernormal knowledge and powers may be detected, and these have been claimed as evidence of the possibility of communications from the departed. Their biological value for the guidance of conduct is not as a rule great, and this is precisely the reason why they are usually treated as pathological. But the whole subject has not yet been adequately studied. It is clear, however, that historically these automatisms have contributed greatly to the belief in possession, inspiration, and in the supernatural generally.

F. C. S. SCHILLER.

AUTONOMY.—The term 'autonomy,' as employed by very early writers, is distinctly political, signifying civil or national independence. Some authors of the 17th and 18th cents. use it to denote the freedom of the religious conscience. Kant is the only one who introduces it into the language of moral philosophy, in a truly characteristic sense ('Grundlegung zur Metaphysik der Sitten,' *Sämmtliche Werke*, ed. Rosenkranz, Leipzig, 1838–1842, viii. 71 ff.; 'Kritik der praktischen Vernunft,' *ib.* p. 145 ff.). By autonomy of the will, Kant means the faculty that the will possesses of being its own lawgiver, of being itself, by its own nature, the source and substance of the moral law, the moral law itself.

Under what conditions can the will be autonomous? When it is determined by its own form, not by its object. This condition is fulfilled if the will obeys only general laws, if it admits only of those maxims (*i.e.* motives) which can be transformed into general laws. The will which always acts with regard to the universal, as such, provides its own laws: it is autonomous; it is free. For to be free is to obey absolute imperatives, and imperatives of this kind are not the outcome of experience, but solely of reason as practical reason.

The opposite of autonomy is heteronomy. It is simply the subjection of the will to some object or other, *i.e.* ultimately, to the desire of being happy. Heteronomous imperatives are never absolute, because they imply empirical conditions in the subject and object, which do not exist everywhere and at all times. They therefore cannot submit to that moral position which consists in the unconditional surrender of the free will to absolute laws (*i.e.* of the will to itself, for nothing is absolute in the practical order of things except liberty itself); or, in other words, of the empirical will to the pure will. One form of heteronomy is theonomy. It consists in obeying God, because He has sanctioned certain laws, arbitrarily imposed by Him, by means of punishments and rewards.

The ethics of autonomy, therefore, is the ethics of the pure will or of liberty. This pure will naturally has an object, but it is not the matter of this object that determines it; it is its form only, or rather the quality that makes it worthy of being sought after by a will which aims at realizing the universal, *i.e.* general, laws. Thus general happiness can be sought after by a free will; yet not always so far as to embrace the well-being of humanity, which is of interest to our human sensibilities, but only in so far as it can form the contents of a general law, which concerns the understanding of all rational beings.

Autonomy is a kind of summary, forming the kernel, of Kantian ethics. Before it can be thoroughly appreciated and criticized, a general examination of the ethics must be made. We shall confine ourselves to a few brief remarks. In particular, notice that in Kant the idea of an autonomous will has two motives. (1) The first is the conception of liberty that it has within it. According to Kant, the will ceases to be free when it is determined by the attraction which any object other than itself may exercise over it. This is what might be called the ascetic element of Kant's ethics. In all love, of whatever kind it is, he perceives only motives that are governed by the passions and self. (2) We must desire the universal, for only the universal is presented to us as an element of pure reason; all that is empirical is contingent. Here we find ourselves in the presence of the rational and social element of Kant's ethics. These two arguments, which in Kant are blended in one, are in reality of very different kinds. The submission of the empirical will to the pure will is not connected with the idea of the universal, which Kant identifies elsewhere with the social; on the other hand, this notion of the universal affects the will only when it becomes the object of an attraction, the contents of a feeling. Kant's ideal is a will which is identical with reason, but experience does not bear out the inference, and it is not conclusively proved, that the man whose will has become 'pure,' in the sense implied by Kant, is the moral man *par excellence*. It seems, indeed, that he would lack what constitutes the soul of all complete and profound morality. The Kantian idea of autonomy is an abstract idea stripped of all psychological basis. It expresses an ideal of liberty indeed, but Kant was quite unable to deduce from it practical rules for human conduct.

Of present-day philosophers, the chief to revive the idea of autonomy is Cohen ('Die Ethik des reinen Willens,' *System der Philosophie*[2], 1907, pt. ii.). But, inspired by Fichte's ideas, Cohen conceives autonomy, not as the faculty of practical reason, producing laws freely for human conduct, but as the faculty of man, making the human individual the supreme end of all his actions. Under this conception, autonomy becomes, in a direct and positive manner, a social principle, which it is in Kant only indirectly or rather negatively.

LITERATURE.—F. Jodl, *Geschichte der Ethik in der neueren Philosophie*, Stuttgart, 1882–89; F. Paulsen, *Kant*, Stuttgart, 1898; V. Delbos, *La philosophie pratique de Kant*, Paris, 1904.

EUGÈNE EHRHARDT.

AVALOKITEŚVARA.—1. *The name.**—(*a*) Iśvara, which, among *naiyāyikas* (philosophers) and *bhāktas* (devotees) alike, refers to the personal and supreme god, means etymologically 'king,' 'monarch.' It is an epithet common to the Bodhisattvas, or at least—for that name includes every individual who seeks to attain the Bodhi, even although he is still a 'natural man' (*pṛthagjana*)—to all the Bodhisattvas who are in complete possession of the qualifications of Bodhisattvas, viz. those who are 'great Bodhisattvas' (Bodhisattva-Mahāsattva), 'masters of the ten stages of Bodhisattva-ship' (*daśabhūmi-īśvara*) (see *Mahāvyutpatti*, 22, 15). But, when speaking of Avalokita, who is not only a 'great god' but a 'god-providence,' we cannot forget that Śiva is called the 'great lord' (Maheśvara) or simply, 'the lord' (Iśvara).

(*b*) The meaning of the compound 'Avalokiteśvara' is not at all clear. Scholars do not agree as to its signification. It may mean either 'the lord of what we see,' *i.e.* 'of the present world,' or 'of

* These numbers refer to the paragraphs of the article.

* See Kern, *Gesch.* i. 324, *Inscr. uit Battambang*, 76; Burnouf, *Introduction*, 226; Minayeff, *Grammaire palie*, p. 7: 'le souverain qui voit tout'; Grünwedel, *Lamaism*, p. 130; Rhys Davids, *Buddhism* (1880), p. 200 ff.; Waddell, *Lamaism*, p. 40, and *JRAS*, 1894; Watters, *Yuan-Chwang*, i. 343: 'the beholding lord.'

the view,' or 'the lord whom we see,' 'the lord revealed,' 'the master who is or was seen.'*

But the Tibetans, and no doubt their Indian authorities also, took it to mean 'the lord who looks'; for their translation 'Spyan-ras-gzigs' seems to dispense with the idea of 'visible lord.'† Some modern interpreters have understood the Sanskrit name to signify: 'lord who looks down from on high.' This meaning is not quite satisfactory, for Avalokita, like all Bodhisattvas, looks both at the Buddha ('*Bhagavanmukhāvalokana-para*') and at the creatures with a look of compassion ('*karuṇāsnigdhāvalokana*').‡

This interpretation makes Avalokita an active present participle, which, as M. Kern remarks, is bad grammar; but Burnouf failed to see in this inaccuracy a decisive argument against the current interpretation, and we may agree with him.§ Further, from the grammatical point of view, Avalokiteśvara, 'lord of compassionate glances' =Avalokana, 'lord of special mercies,' 'lord with compassionate glances.'‖ Avalokita is the god whose face is turned in every direction in order to see everything and to save everybody; he is called 'the all-sided one,' '*samantamukha*.'¶

(*c*) One of the most notable names of Avalokita, and certainly the one which gives us the best idea of the character which had been ascribed to him for a very long time, is *Lokeśvara*, *Lokanātha*, 'Lord, Protector of the world.' M. Kern expresses it very well when he says that he is the 'god of the present,' 'he who bears the world,' 'son of a Buddha (Amitābha), as the present is the son of the past,' the concrete counterpart of the 'Body of Law' (*Dharmakāya*), the present form of the Buddha, 'the god of daylight and of the living, as Amitābha, who dwells in the setting sun, is the god of Paradise.'** The texts clearly show that

* See Kern, *Inscr. uit Battambang*: 'lord contemplated'= Avalokita iśvara=vyakta iśvara, *i.e.* a name of Śiva; 'lord of the view *or* of that which is seen'=dṛṣṭi-guru, *i.e.* another name of Śiva.

† *Spyan-ras=chakṣus*, 'eye.' It is a lofty expression, We have, *e.g.*, 'thugs-rjei spyan-ras-kyis gzigs-pa: karuṇāchakṣuṣā avalokayan' (Sarat Chandra, *Dict.*). *Gzigs* also is a word of elevated style, meaning 'to see,' and, owing to the influence of the name of Avalokita, meaning 'to give,' 'compassion.' If the Tibetan translation caused any doubt, the following quotation from the versified Kāraṇḍa (Burnouf, *Introd.* p. 226) would dispel it: 'He is so called because he regards with compassion beings suffering from the evils of existence.' The Mongol has *niduber uichektchi*, 'who beholds,' from *niduber uichego*, 'to see,' from *nidun*, 'eye.'

‡ *Sādhana* (text of incantation), quoted by Foucher, *Icon.* ii. pp. 16, 18. Waddell explains 'look down from on high' by the fact that the usual dwelling-place of Avalokita is on mountains. This information is correct, and establishes a point of contact between Avalokita and Śiva. But the prefix *ava* has no such precise meaning. The *vyavalokana*, 'glance,' like the smile (*smita*) and the beam (*raśmi*), is a mode of communication.

§ Burnouf, *Introd.* p. 226, note. *Parijita* (*Mahāvyutpatti*, 126, 65) seems quite clearly to mean *parijitavān*, and it is possible that there are other examples.

‖ See Böthlinck-Roth, *s.v.* *lok* with *ava* (§ 2). Further, *avalokita* means 'a person to whom good-bye has been said,' 'one who has been seen for the last time' (see indexes to *Divyāvadāna* and *Mahāvastu*). Avalokiteśvara is indeed the lord of the departed and the help of the dying. The present writer owes these valuable observations to Mr. F. W. Thomas.

¶ *Lotus*, ch. xxiv.; Kern, ii. 171; Beal, *Catena*, 384. Like *samantachandra* and *samantāloka*, it is an epithet common to all the Bodhisattvas (*Lalitavistara*, 550, 11).

** See Kern, *op. cit.* With regard to the solar character of Amitābha and Avalokita, the first of the meditations on Amitābha, as it is described in the *Amitāyurdhyāna*, is full of information: 'all beings . . . see the setting sun' (see § 9). Amitābha is Śiva unrevealed; Avalokita is Śiva revealed. The infinite indivisible light which characterizes the former (*amita-ābhā*) is contrasted with the finite light (*mita*) of the latter: 'Brilliant is Lokeśvara, who bears on his head Amitābha, brilliant with, as it were, the appearance of the sun and the moon with their finite splendour.' Elsewhere Avalokita is represented as having the sun as his body (*dinakaravapus*). The Paradise of Amitābha is closely connected with the town of Varuna in the West, the city of the sunset, which is usually called Sukhā (Max Müller, *SBE* xlix. p. 22). It may also have some connexion with the city of Kuśāvatī, where the 'great King of Glory' reigns (*Mahāsudassanasutta*, *SBE* xi. p. 247).

Avalokita is the sun; and, in fact, Padmapāṇi, 'lotus-bearer,' which is a name of Avalokita, is also a name of Sūrya ('sun'). Avalokita is the Viṣṇu of the Buddhists.

2. If Avalokiteśvara signified originally 'the lord who is seen,' 'de geopenbaarde Herr,' 'the revealed god,' it looks as if we ought to trace back this conception to the very origin of the personage under discussion. This would present difficulties.* However that may be, as it is very difficult to arrange our literary and iconographic material historically, we shall content ourselves with placing it in logical order. There will be good reason to doubt whether this plan gives an accurate idea of the evolution of Avalokita, because popular religion and religion as described by the sources are two very different things.

3. Although the *Mahāvastu* gives a sketch of the theory of the *bhūmis* ('spiritual stages') of the Bodhisattvas, although it abounds with 'areas' or 'fields of Buddhas' (*Buddhakṣetra*), there are no Great Bodhisattvas in it, playing the part of protector of creatures and patron of Buddhas, and there is not a trace of Avalokita.

In the *Lalita*, among the 32,000 Bodhisattvas, who listen to Buddha, the author mentions Maitreya, Dharaṇīśvara,† several others, and particularly a *Mahākaruṇāchandrin*. Dr. Waddell remarks that, in the Tibetan translation, this last name is replaced by *Mahākaruṇasattva* ('Sñin-rje chen-po sems-dpa'); now *Mahākaruṇa*, 'the great and merciful one,' is one of the innumerable synonyms of Avalokita. We leave it to the reader to judge whether this information is sufficient to contradict the popular opinion that there is no mention of Avalokita in the *Lalita*.‡

4. A great many authorities§ do not give Avalokita unrivalled supremacy, but place him along with a certain number of companions, five or eight, apart from the crowd of Bodhisattvas, and accord him a kind of pre-eminence: 'the sons of Buddha, with Avalokita and Mañjughoṣa at their head . . .,' 'Avalokita, Samantabhadra ('the wholly auspicious'), Mañjughoṣa ('lovely voice' = Mañjuśrī'), Kṣitigarbha ('earth-womb'), and Vajrin ('thunderbolt-holder' = Vajrapāṇi),' whose special task is the struggle against the demons.

In these texts we are confronted with a great superhuman saint, the chief of that noble group of Bodhisattvas who, according to the Great Vehicle, constitute 'the congregation' (*Saṅgha*) or third jewel. Avalokita plays a most important part in some of the sūtras, *e.g.* in the *Dharmasaṅgīti*, where he extols charity, 'the great compassion,' the only function of the Bodhisattvas, to which one must give oneself up entirely without fear of committing sin; if the exercise of charity involves wrong-doing, it is yet better to suffer the pains of hell than to deprive a creature of the hope he has

* The present writer thinks that M. Kern gives a perfect explanation of the nature of Avalokiteśvara, who is a Buddhist Śiva in visible form, while Amitābha is the Śiva Brahman. The former is characterized by the 'measured' light of the sun and the moon, the latter is ethereal and infinite light (*amita*). The Battambang inscription is very clear. But the present writer thinks that before becoming Śiva, Avalokiteśvara was a Bodhisattva, and, as such, was named Avalokita.

† 'Lord of the earth,' one of Śiva's names, a 'dhyānibuddha' in the *Suvarṇaprabhāsa*; according to Waddell, 'a common title for Mañjuśrī' (*JRAS*, 1894, p. 55).

‡ Lunar names (*chandra*) are frequent among the Bodhisattvas (cf. *Mahāvyutpatti*, 23).

§ *e.g.* *Bodhicharyāvatāra* (ch. ii. 1, 48). In *Mahāvyutpatti* (published A.D. 816–838) 23, we find the following order: Avalokiteśvara, Maitreya, Ākāśagarbha, Samantabhadra, Vajrapāṇi, Mañjuśrīkumārabhūta, Sarvanivaraṇaviṣkambhin, Kṣitigarbha, Mahāsthāmaprāpta, Ratnaketu, Ratnapāṇi, etc. It must be observed that Ratnapāṇi (a future so-called Dhyānibodhisattva) is not the first of the Bodhisattvas 'beginning with Ratna,' and also that Mañjuśrī holds quite a subordinate place. Cf. *Dharmasaṅgraha*, xii., where among the eight Bodhisattvas there is no mention of Avalokita.

placed in you.* Avalokita is a Great Bodhisattva, but he is not the only one, nor is he unquestionably the first.

It is probably this stage in the history of Avalokita that is represented in the very old reliefs, where a 'Lotus-bearer' Padmapāṇi (afterwards the equivalent of Avalokita) appears with four or seven other Bodhisattvas, surrounding a Buddha or below a Buddha.†

There is reason to believe that Maitreya (the future Buddha), for example, whose doctrinal position is better established, must originally have taken precedence of him,‡ and there are noteworthy and well-authenticated writings, such as the Sanskrit-Tibetan Lexicon (*Mahāvyutpatti*) and the Chinese records, which lead us to believe that Maitreya was able to maintain his position. In any case, it must be noticed that the rôle of 'Good Bodhisattva,' helpful and divine, the very noble (*paramārya*), the giver of security (*abhayandada*), etc., was divided among Kṣitigarbha and his companions, before it became the more or less exclusive designation of Avalokita.§ Now it must be borne in mind that the preceding remarks are very hypothetical; for, from the dawn of the Christian era, in certain circles at least, Avalokita became an important personage and a jealous god.

5. *Lotus of the True Law, Sukhāvatīvyūha, Amitāyurdhyānasūtra*.—(*a*) Avalokita is not the protagonist of the *Lotus*, but there is a whole chapter on his ἀριστεία, his 'gesta,' in Skr. his *māhātmya*.‖ He is far superior to the other Great Bodhisattvas (Akṣayamati, etc.), who along with him listen to Śākyamuni, with the single exception of Mañjuśrī, who is probably his equal. He is the 'saviour'; it is better to think of him than to do honour to thousands of Buddhas. He assumes the form¶ of Buddha, Bodhisattva, Maheśvara, Kuvera, Vajrapāṇi,** as the case may be, the more easily to fulfil his task of mercy. Akṣayamati ('undecaying intelligence') presents him with flowers; he divides them between Śākya and the stūpa of an 'extinct' Buddha. According to the versified text, his real dwelling-place is in the 'Sukhākara,' the paradise of Amitābha, where he sits sometimes on the right and sometimes on the left of Buddha.

(*b*) The *Sukhāvatī* and the *Amitāyurdhyānasūtra** supply us with a very fine theology of Amitābha and Avalokita, a theology which has the twofold distinction of being almost orthodox, while seeking to present a rational account of all the exaggerations of *bhakti*, or devotion.

Amitābha or Lokanātha was in ancient times a *bhikṣu* called Dharmākara,† 'mine of the law'; it is now ten ages (*kalpas*) since he became Buddha, and it will be a very long time before he is extinct. In principle all the Buddhas are equal; they possess the same intrinsic perfections, the same knowledge.‡ But it is very probable that they are differentiated in the exercise of their Buddhahood, according to the vow that they have made. Now Dharmākara, the future Amitābha, under the Buddha Lokeśvararāja,§ vowed that, when he reached Buddhahood, he would have a 'Buddha field,' wondrously blessed, the happy land (*Sukhāvatī*),‖ and that is why there flock to him from all the 'Buddha fields' the beings appointed to *nirvāṇa*, either as future arhats or as Buddhas.¶ It is with Amitābha that those who are guilty but possess the promise and potency of deliverance spend their period of probation in lotus-flowers; with him also the Bodhisattvas become prepared for their last birth, by having good opportunities of going to visit, to honour, and to listen to the Buddhas of all the worlds.** After this period these Bodhisattvas will become Buddhas, and will have in their turn spheres of their own. As regards Avalokita, it is at the end of our age that he will appear as the thousandth and last Buddha of the age.††

The Bodhisattvas are not equal among themselves. In the heaven of Amitābha there are two, Avalokita and Mahāsthāmaprāpta,‡‡ almost as great and luminous as Buddha, who sit on thrones equal to his. Avalokita is the more majestic; this is due to his vow to bring all beings, without exception, into the 'happy land.' And while his glorious body illumines a great many worlds, he traverses them all in different forms, sometimes real and sometimes magical; like Amitābha himself, he has parts of himself incarnated here and there; he never forgets for a moment his rôle as provider of the Sukhāvatī. And it is he, rather

* See *Śikṣās*, p. 286; *Bodhicharyāvatāra*, p. 314.

† See Grünwedel, *Buddh. Art in India*, pp. 196, 201 ff.

‡ Maitreya is the only Bodhisattva acknowledged in the Little Vehicle. He is the second in *Mahāvyutpatti*, 23, the first in *Dharmasaṅgraha*, xii; and plays the chief part in the foundation of the Great Vehicle. Grünwedel (*Buddhistische Kunst*) has some hesitation in recognizing Avalokita in the Gāndhāra sculptures, and is certain only of the identification of Maitreya (*Buddh. Art in India*, p. 192 n.). Nevertheless, the view which, following his example, we express on the chronological and dogmatic priority of Maitreya is supported not only by the fact that Maitreya alone is recognized by the Little Vehicle (Beal, *Buddhist Records*, ii. 61), but also by certain statements of the Chinese pilgrims, who were more interested in the heaven of Maitreya than in that of Amitābha, more interested in the coming of Maitreya than in the present living Avalokita (see especially *ib.* ii. 223, i. 227).

§ More or less exclusive, according to Wassilieff, as is proved by the collections of the one hundred and eight names, of divinities in Kandjur, *Rgyu*, xiv.: Avalokita, Maitreya, Ākāśagarbha (Khagarbha), Samantabhadra, Vajrapāṇi, Mañjuśrī, Sarvanivaraṇaviṣkambhin and Kṣitigarbha (Wass., 175), the eight Bodhisattvas of the *Dharmasaṅgraha*, with the addition of Avalokita and the omission of Gaganagañja.

‖ See the translations of Burnouf and Kern. The *Māhātmya* forms ch. xxv. of the Chinese edition. In China it is one of the official texts of the religion of Avalokita (see I-tsing, in Takakusu, 162; Beal's tr., *Catena*, p. 389).

¶ The *Śikṣās* ascribes to every Bodhisattva this power of transformation. Even the wish of all the Bodhisattvas to become food and drink (*pānabhojana*) in times of famine is taken literally.

** The association of Vajrapāṇi with divinities who are anything but Buddhist is worthy of note. In the hundred and eight names of Tārā (ed. de Blonay) Vajrapāṇi begs for mystical recipes from Avalokita. See E. Senart, *Congrès d'Alger*, 'Vajrapāṇi'; and below, p. 259ᵇ n. ‖.

* *Sukhāvatīvyūha* (Chinese tr. 147–186), in two redactions, edited by Max Müller, *Anecd. Oxoniensia*, and also in fac-simile Musée Guimet, II., translated in *SBE* xlix, with the *Amitāyus*, the Skr. original of which seems to be lost (translated into Chinese in 424). On this text cf. also *JBTS*, 1894, 2, 1.

† On the human antecedents of Amita and Avalokita, cf. also Rémusat, *Fo-koue-ki*.

‡ There are two things which have no limit, the brilliance of Amitābha and the *prajñāpratibhāna* of every Buddha. The light of Amitābha illumines all the fields of Buddha, owing to the 'special vow' of this Buddha to lighten his own field and an infinite number of other fields. Although Amitābha is praised, glorified, and preached by all the Buddhas, he cannot lay claim to any kind of monarchy. A fairly just idea of the system may be formed by regarding the Buddhas as saints (in the Roman Catholic sense of the word), who are all saints for the same reason, but among whom piety distinguishes more or less powerful saints. Cf. *Mahāvastu*, iii. 330. 15.

§ A name of Avalokita.

‖ More refined in charity is the wish expressed in *Karuṇapuṇḍarīka* 'to have a Buddha field' inhabited by inferior beings overwhelmed by calamities, in order to have a more worthy object of pity.

¶ In the kingdom of Amitābha all the Bodhisattvas are in their last birth, and live there without limit, owing to their special wish (*praṇidhānaviśeṣa*) to save others. It is noteworthy that our text admits the existence of arhats, saints according to the Little Vehicle, *i.e.* beings appointed to attain to *nirvāṇa* without passing through the stage of Buddhahood. The Great Vehicle believes that all beings will become Buddhas, but this was not the belief of Hiuen Tsiang.

** They do not even have to move in order to worship and listen to the Buddhas of all the worlds.

†† Schmidt, *Über die tausend Buddhas* (p. 106); and Rémusat, *Cosmogonie, Mélanges Posthumes*.

‡‡ In modern (Tibetan) pictures of the Sukhāvatī, Vajrapāṇi takes the place of Mahāsthāma (Foucher, *Catalogue*, p. 33). The Japanese representation of the Sukhāvatī is nearer the original text. Maitreya, Avalokita, and Mahāsthāma often have stūpas on their heads (Grünwedel, *Buddh. Kunst*, p. 193 and fig. 83).

than Amitābha himself, who is the lord of the Sukhāvatī.*

This ostentatious and short-sighted glorification of Amitābha and Avalokita corresponds, in our opinion, to a doctrine of salvation, very different from the ordinary doctrine of the Great Vehicle. According to the Little Vehicle, the Buddhas were only instructors; in the 'rationalist' Great Vehicle they have become models, and the Bodhisattvas appear as friends, counsellors, protectors;† their presence does not in any way lessen the necessity for personal effort. In the Sukhāvatī, Amitābha and Avalokita save the faithful almost in spite of themselves, as the cat saves her young by taking them in her mouth (a Kṛṣṇavite metaphor). There is, however, one reservation: beings guilty of 'mortal sins' are excluded from the Sukhāvatī. The *Amitāyurdhyāna* does away with this restriction: the parricide is saved if he pronounces the name of Amita. In a word, our theologians, as well as those of the *Viṣṇupurāṇa*, have to distinguish between ordinary people who are liable to hell, etc., and devotees who are naturally exempt.

(c) It is to this period that the iconographic monuments seem to belong, about which the Chinese pilgrims had given us their testimony, before the archæologists examined them; and we are quite justified in referring to them here, as the *Amitāyurdhyāna* speaks of statues in which the characteristics of the god are reproduced. We find isolated statues of Avalokita, among which the giant statues deserve mention, and groups in which he is facing Maitreya, Tārā, and Mañjuśrī, and probably also Mahāsthāma—wonderful statues, recurring throughout the whole Buddhist world from the extreme North-West to Ceylon.‡ They give us a sculptured representation of the texts, which describe in detail the attitude, colour, and qualities of the gods. The *Amitāyurdhyānasūtra* places a 'magical' Buddha, twenty-five leagues high, on the head of the glorious body of Avalokita, seated on the left of Amitābha; this is clearly represented in the icons (to which attention has already been drawn by Hiuen Tsiang), where Avalokita wears in his head-dress a seated statue of a Buddha, who, at a very early date, if not from the very beginning, was identified with Amitābha.§

The Chinese pilgrims seem to have recognised a characteristic of the Great Vehicle in the fact that worship was bestowed on the Bodhisattvas, Mañjuśrī and Avalokita, and on the Prajñā. Hiuen Tsiang mentions that a statue of Maitreya was worshipped in a district which is quite 'hīnayānistic' (*Buddh. Records*, ii. 61)—the same thing happened with the statues of Avalokita in Ceylon—but he tells the curious story of Guṇaprabha, who, when he was transferred to the heaven of Maitreya, refused to worship him, because an 'ordained bhikṣu' is superior to a Bodhisattva (i. 192).‖

* He is called Sukhāvatīśvara (*Triśāṅkuśatapa*).

† See the 'Code du Mahāyāna en Chine,' where Avalokita does not play any part at all (J. J. M. de Groot, p. 98).

‡ The information of the Buddhist pilgrims on this point is confirmed and explained by the miniatures published by M. Foucher. The last inscription devoted to Avalokita is dated 1229 (Oudh). On Avalokita in Ceylon, cf. Foucher, *Icon.* 110; Beal, *Buddhist Records*, ii. 247; *JRAS*, 1900, p. 42. Some authors think that Mount Potala, to the east of the Malay Mountains, is perhaps the original home of Avalokita. It is well known that this Potala has been transported to China and to Tibet (*Tāranātha*, 144, 206; Foucher, *Icon.*, 28; Waddell, *Lhasa*, 1905, pp. 364, 388).

§ The relation between 'Dhyānibuddhas' and their Bodhisattvas is explained in the art. ADIBUDDHA. Wassilieff mentions Vairochana as the father of Avalokita. Cf. Grünwedel, *Buddh. Art in India*, p. 196 f.

‖ For a study of this problem the reader is referred to art. MAHĀYĀNA. To avoid any misunderstanding, let us merely point out that the *Avalokitavrata* and the *Bhadracharīpraṇidhāna* (Nanjio, 1142), which corresponds closely to it, are looked upon as sacred texts by the Sautrāntikas, who are supposed to belong to the Little Vehicle.

6. Avalokita rises still higher in the *Kāraṇḍavyūha** and in the *Sūraṅgama*;† but here the theology seems to be extremely involved; we have now to deal not with a sūtra, but with Purāṇic literature. On the other hand, the iconography and the manuals on incantation demonstrate that, on account of the above-described notion of the providential polymorphism of Avalokita, that god is identified with all the Hindu deities, both mild and cruel. Avalokita is a Buddhist Śiva, an ascetic and a magician.

(a) In some of its features the *Kāraṇḍavyūha*‡ recalls the *Lotus* and the *Amitāyurdhyāna*: Avalokita learns the law from Amitābha, he comes to worship Śākyamuni, and brings him flowers and Amitābha's compliments; he is therefore in some way inferior to the Buddhas. But, on the other hand, he is far superior to the Buddhas and also to Samantabhadra: no Buddha possesses clairvoyance (*pratibhāna*) equal to his, all the Buddhas together could not estimate his worth. No other being besides him has a marvellous body, which the Buddhas have difficulty in seeing, and each pore of which contains thousands of Buddhas, saints of all kinds, and entire worlds. And it is from the body of Avalokita (Foucher, *Cat.* p. 25), regarded from another point of view, that the inferior gods issue: the sun and the moon come out of his eyes;§ Maheśvara, who will be called Mahādeva, and receives the promise of Buddhahood, comes from his forehead; Brahmā from his shoulder, etc. We have said that, in addition to being demiurge, Avalokita is also a saviour; from his fingers flow rivers which cool the hells and feed the *pretas* ('ghosts'); he terrifies all the demons and puts Vajrapāṇi to flight.‖

There is no need for astonishment at this extraordinary mastery over men and things. Avalokita is the great yogin, the great magician (*vidyādhipati, anekamantraśatāvakīrṇa*); he is in possession of the formulæ (in which he glories in the *Amitāyurdhyāna*); but, above all, he possesses the only, the true, formula *ōṁ maṇi padme hūṁ*.¶

* See the Calcutta edition, 1873; Csoma-Feer, p. 246; Hodgson, *Extracts*; the summary of Rajendralāla (*Buddh. Lit.* pp. 95, 101); the masterly exposition of Burnouf (*Introd.* p. 221). The Tibetan translation probably belongs to A.D. 616 (Schlagintweit, p. 84; Rockhill, p. 212), but the original is supposed to have been in existence from the time of the mythical king Lha-tho-tho-ri (A.D. 427); see Grünwedel, *Myth.* 451, 247. On the *Maṇi-bka-ḥbum*, 'the hundred thousand precious commandments,' a glorification of Avalokita, which is wrongly supposed to belong to this time, see Rockhill, 212, and Schlagintweit, 84. For the history of the Rākṣasīs, cf. Beal, *Buddhist Records*, ii. 241.

† Ch. vi. See Beal, *Catena*, 39. 284; Nanjio, 399 (tr. A.D. 384–417); Wass., 175; Csoma-Feer, 249; and the quotations from the *Śikṣāsamuchchaya*. Enumerating the innumerable, we distinguish 32 manifestations of the god, 14 cases in which he provides safety, etc. For the worship of Avalokita and Amitābha the reader is referred also to the Chinese sources.

‡ Śākyamuni speaks to Maitreya, Sarvanivaraṇaviṣkambhin and Ratnapāṇi. Avalokita receives 61 designations. Are the lists of 108 names later?

§ *Sūryāvalokanakara* (see Foucher, *loc. cit.*); cf. the name Avalokita.

‖ *Vajrapāṇividrāvaṇakara*. In the *Bodhicharyāvatāra*, Vajrapāṇi is *par excellence* the demon-dispeller, and the charitable visitor of hells; but from most ancient times Avalokita too has been engaged in the salvation of infernal beings.

¶ It is this famous formula that is in view in the *Divyāvadāna* (foot of p. 613) which makes no mention of Avalokita. Śākyamuni imparts it to Ānanda; it was preached by the six Buddhas, it is known to Śakra, Indra, etc.; it constitutes a talisman of the first rank (see Burnouf, *Introd.* p. 541; Kern, *Gesch.* i. 400). The Tibetans claim that it fell down to them from heaven about A.D. 400. So far as the present writer knows, it is neither mentioned nor contemplated in Nanjio, No. 326 (tr. A.D. 420), which contains two *dhāraṇis* and two *bījas*. A great deal has been written about the 'formula of six syllables.' We may mention Klaproth, *JA*, March 1831; Rémusat, *Mélanges*, p. 99, *Fo-koue-ki*, p. 118; Schlagintweit, pp. 54 and 55; Grünwedel, *Lamaism*, p. 82.

There is no doubt that the tantrik literature gives it an obscene interpretation. *Maṇi* and *padme* in this jargon have a very distinct value. On the other hand, Rémusat's cosmological explanation does not seem altogether improbable. See F. W. Thomas, *JRAS*, 1906, p. 464.

Is there a Buddha who possesses this 'hexasyllabic (*ṣaḍakṣarī*) knowledge (*vidyā*)'? No. Is there a being who possesses it? No. It belongs to Avalokita alone, and he reveals it to whomsoever he pleases. This magical omnipotence has its other side: whoever knows the formula does away with the god, whose 'heart,' *i.e.* 'mystery,' the formula is, and in his way is another Avalokita.*

Further, the single word 'Adored one' (*vandita*) is a sufficient description of him. He is the refuge, Buddha, Dharma, and Saṅgha all in one. Whosoever pronounces or traces on his body the magical syllables receives a body which participates in the body of the thunderbolt (*vajrakāyaśarīra*), the apex of knowledge of the Buddhas (*Tathāgatajñānakoṭi*), and becomes like a *dhātustūpa*, a stūpa with relics.†

(*b*) Iconography and the manuals of incantation,‡ which illustrate and supplement each other in a marvellous way, prove that this deification of Avalokita is not merely verbal, but that it is in close connexion with worship and daily idolatry.§ All the Tibetan forms of Avalokita are replicas of the Hindu cults, which are attested as early as the 10th and 11th cents., but are undoubtedly much more ancient. In fact, our literary evidences (*sādhanas*) prove that the foreigner had had an influence on the mother-country, for there are representations of Avalokita, as well as of other gods, after the fashion of Udyāna, of China and other places.

It would be impossible to describe the whole iconography of Avalokita; that task has quite recently been performed extremely well.‖ We shall merely notice a few characteristic features.

Avalokita is polymorphous; but, in many cases and until the more degenerate times, he retains the human form, two arms and a head. There is usually on his head a small figure of the Jina Amitābha.¶ In one hand he bears the lotus (*padma*),** with the other he makes the gesture of the 'bestower of favour,' and a ghost (*preta*) is represented holding up its thin lips towards the ambrosia which flows from his fingers. As satellites Avalokita has Tārā (sometimes in two forms, calm and angry), Hayagrīva ('horse-necked'), the guardian of the 30,500,000 magical formulæ, and Sudhana, who is also a friend of Maitreya. When Avalokita has four arms, two of them are joined in *añjali* (the hands forming a cup) as a sign of respect; the other two hold the lotus and the rosary. But the ascetic attributes are the antelope's skin and the water-pot. And then, when the god receives the names of Śiva, Amoghapāśa, Hālāhala, Nīlakaṇṭha, Padmanarteśvara, etc., his arms, his faces, and his eyes become multiplied, and he carries tridents encircled with serpents, skulls filled with flowers, bows, arrows, etc.

Among the curious figures, besides those which clearly show the identification with Śiva, the following are noteworthy: (1) the figure of Siṁhanāda ('lion's cry'). This was the name given to the solemn declarations of Śākyamuni; Mañjuśrī, who in Buddhism is the personification of wisdom, is mounted on a lion. Avalokita becomes confused with Mañjuśrī, is seated on the lion, carries the book and the sword of Mañjuśrī, but all the time retains his own attributes as well. (2) The figure with the thousand arms, in which the arms, arranged in the form of a peacock's tail, give a graphic representation of the metaphor;* this is a sculptured interpretation of the universality of the god. (3) The figure with eleven heads (three, three, three, one, one, the last one being the head of Amitābha) and a thousand arms is the translation, as it were, of his former name Samantamukha.† It corresponds to a legend which shows very clearly the character of Avalokita: 'May my head split asunder,' the god had said, 'if I fail in my vow to save beings!'—an old Buddhist expression. As a matter of fact, he did give way for an instant to discouragement, on seeing the inefficacy of his efforts; his head split into a thousand pieces, and Amitābha put it together again. There are several forms of this story, in which the old is mixed with the new.

We shall also quote a modern Nepalese inscription which gives a good account of the dignity and the physiognomy of our hero: 'The chiefs of the Yogins call him the King of the Fishes (*Matsyendra*), the devotees of the female deities (*śāktas*) call him *Śakti*, the Buddhists call him *Lokeśvara*. All honour to this being, whose true form is Brahman.'‡ This identification of Avalokita with the Śakti *par excellence*, *i.e.* with the personification of the cosmic female energy, shows, in a more striking way than the coupling of the god with the twenty-one Tāras,§ that the Chinese transformation of Avalokita into a woman had probably been already effected in India.‖

7. We need not say very much about the Tibetan doctrine of incarnations, according to which all

* This magician (*māyāvin*) with eleven heads—this shows the best and truest form of his polymorphism—is incomprehensible. He appears and disappears like a meteor (*jvalann ivāgnipiṇḍaḥ*). He has a hundred thousand arms and a hundred thousand times ten million eyes. He exists in the past, the present, and the future (*trikāla*). He was at work when Śākyamuni was merely a worshipper. There is no limit put upon his activity except when all beings have entered nirvāṇa. The Buddhas, in fact, are only some of the saints whom he has 'matured,' and who owe everything to him; there is deliverance only in the hexasyllabic formula.

† Let us recall the fact that the *Kāraṇḍavyūha* in verse adds some details in the 'Ādibuddhistic' sense (see art. ĀDIBUDDHA). But note that there is nothing to indicate the generation of Avalokita by Amitābha (in the *Maṇi-bka-hbum*, Avalokita is born from a white ray from Amitābha's left eye, or he issues from a lotus as a young man of sixteen years of age); nor is there any trace to be found of the system of the 'Dhyānibuddhas' and their 'sons'; Vajrapāṇi is a malevolent being, Ratnapāṇi is a personage of secondary rank. Avalokita is nowhere, so far as we can see, called Padmapāṇi.

‡ The *bīja* of Avalokita seems always to be *hrīḥ*; his *mantra* is the hexasyllabic formula (see the beautiful plate, Schlagintweit, p. 55), but sometimes we find *ōṁ vajradharma hrīḥ*.

§ There are representations of Avalokita after the style of the *Kāraṇḍavyūha* and of the *Māyājālābhisambodhi*.

‖ Foucher, *Iconographie*, i. and ii.

¶ *Trikāṇḍaśeṣa*, which gets its information from Vyāḍi (Vindhyavāsin?) gives the names Lokeśvara, Amitābhaśekhara, Padmapāṇi, and also Khasarpana, Kāraṇḍavyūha, Sukhāvatīśvara. Tārā is the daughter of Avalokita.

** Already at Sāñchi the 'lotus' is represented in the hand of a great many personages, as an offering intended for Buddha. Those who carry lotuses are not all Avalokitas, for Maitreya is among them (see Grünwedel, *Buddh. Kunst*, p. 167). It is worthy of notice that neither the *Lotus of the True Law* nor the *Sukhāvatī* nor the *Amitāyus* nor the *Kāraṇḍa* seems to know Padmapāṇi.

* 'With an eye in the palm of each hand' (Sandberg, *Colloquial Tibetan*, p. 197). Sometimes *only* sixty-six arms are represented (Foucher, *Catal.* 15).

† See Schlagintweit, p. 54; Schmidt, *Forschungen*, p. 202 (the head is broken into ten pieces). This number *eleven* recalls the eleven Rudras, and shows us Avalokita as a disguised Śiva. [Being Vāgīśvara, he is none the less Brahmā when he becomes Śiva.] It may be useful to mention that the *Avalokitaekadaśamukhadhāraṇīs* (Nanjio, 327, 328) were translated into Chinese in 557–581. Among the other *Samanta°* (*Mahāvyutpatti*, 23, 31, 36, 38, 63) the most famous is Samantabhadra (*Lotus*, xxvi.; Kern, p. 437, note), a double of Śiva, and the only one of the 'Dhyānibodhisattvas' who is not a *pāṇi* (*vajra*, *ratna*, *padma*, *viśvapāṇi*).

‡ Inscription dated 792; see *Ind. Antiquary*, ix. 192, Kern, *Vermenging*, p. 14; on Matsyendra, see Wilson, ii. 30, and i. 214; Kern, *op. cit.*, 42, and Lévi, *Népal*, i. 349 ff. He belongs to the mysterious line of 'Siddhas,' masters of the Haṭhayoga, civilizers (?) of Nepal. Sometimes he is the son of Ādinātha, and is placed five spiritual generations previous to Gorakhnāth; sometimes he is Gorakhnāth's disciple. There may be concealed under his name a historical personage identified with Abjapāṇi = Padmapāṇi. But although the mythical explanation finds very little favour, euhemerism in such a subject seems almost chimerical. An important iconographic detail is that Avalokita is white, except in Nepal, where he is red (Foucher, *Cat.* 15, etc.).

§ *JBTS*, 1894, 2. 1.

‖ On the Chinese Avalokita, see Eitel, *Handbook*, p. 22.

the monastic dignitaries are *nirmāṇas* (sprul-pa = khoubilgan) of the chief deities; it will be sufficient to refer the reader to the article LĀMAISM and to the sources. We shall merely say that Avalokiteśvara, the patron of the Tibetan Church, is incarnated in the person of the Great Lāma (rgyal-ba rgya-mtsho), while Amitābha dwells in the Great Paṇḍit (Pan-chen) of the rival monastery. Waddell, though without adequately setting forth his proofs, maintains that the theory is a recent invention (1640). There is no doubt that Lāmaic hierarchy is peculiarly Tibetan; but it is quite as certain that many Hindu Siddhas or Yogins have, by their magic, succeeded in identifying themselves with gods.

Rep. of Western India*, No. 9, Bombay, 1879, and No. 5, 1883; Pander, *Panthéon des Tschangtscha Hutuktu*, Berlin, 1890.

L. DE LA VALLÉE POUSSIN.

AVARICE.—Avarice may be defined as an absorbing passion for earthly possessions and a selfish gratification in their retention. It includes both the getting and the keeping of wealth. In the getting the avaricious man is tempted to put aside all considerations that stand between him and his object, and in the retention he looks less to the beneficial use to which any possession can be put than to his own luxury in possessing it. In ordinary language, avarice is largely restricted to this second feature, while the passionate desire that begets the avaricious character is described as covetousness (wh. see). Avarice is thus applied more frequently to parsimony in the storing of wealth, and covetousness to rapacity in seeking after wealth. Covetousness stirs up the discontented to clutch at what other people have; avarice begets the miser who hoards greedily all that he has.

The avaricious mind seems almost to make money or possessions ends in themselves, and yet it may be doubted whether money is not always thought of as a means of gratifying the love of pleasure or the love of power in some of their many forms. The miser gloats over his gold, but even in his most debased state he probably sees in it the possibility of acquiring ease or satisfying ambition. He probably pictures in his imagination the splendour with which he might surround himself, the security he has against poverty, or the greatness of the one who will inherit all as his heir. Certainly, at first, avarice leads men to amass money because of the command it gives over the conveniences and luxuries of life, and because of its efficacy as an instrument of ambition (cf. Martineau, *Types of Ethical Theory*[2], 1886, ii. 172).

Avarice springs, therefore, from two of the strongest human passions, the love of pleasure and the love of power; although it may continue even when pleasure and power seem no longer likely to be gratified. In its last stage it becomes repellent to all, as its selfish absorption reveals the degradation and folly of the mammon-worshipper.

The degradation of avarice is graphically described by Dante, who represents the miser as cleaving to the dust, in *Purgatory* (Longfellow's tr. xix. 120 ff.)—

'Even as our eye did not uplift itself
Aloft, being fastened upon earthly things,
So justice here has merged it in the earth.'

A similar conception is found in Milton's description of Mammon (*Par. Lost*, i. 680 ff.), whose looks and thoughts even in heaven were always downward bent—

'admiring more
The riches of heav'n's pavement, trodden gold,
Than aught, divine or holy, else enjoy'd,
In vision beatific.'

Cf. also Bunyan's account of the man with the muck-rake, who was so intent upon the things of earth that he had no eye for the crown of glory. It is little wonder that the folly of the miser in giving up his life to the hoarding of earthly possessions is keenly felt by the noblest writers. Dante (*Inferno*, vii. 64) expresses the thought of all spiritual minds when he depicts the ignorance and folly of avarice—

'For all the gold that is beneath the moon,
Or ever has been, of these weary souls
Could never make a single one repose.'

The miser is represented frequently in literature, as in Molière's *L'Avare* and in Plautus's *Aulularia*, on which Molière's play was founded. The unhappiness of the avaricious is well summed up in the closing words of Euclio, the miser in the *Aulularia*: 'Nec noctu, nec diu, quietus unquam eram: nunc dormiam.' He has bestowed his treasure upon his son-in-law, and has thus divested himself of all future cares. *Now* he hopes to sleep quietly, while formerly he had no rest by day or night.

The petty meannesses of the miser are illustrated in the *Characters* of Theophrastus (ed. Ussing): 'If he gives a dinner, he does not serve up as much food as is necessary. . . . When sent out . . . on a public commission, he leaves the provisions for the journey to his family, and lives at the expense of his fellow-travellers. . . . If one of his friends is to have a wedding, or is about to have his daughter married, he speedily undertakes a journey to spare the marriage present.'

Restraints may be put upon avarice by the laws of a country. Thus, certain methods of increasing wealth may be declared illegal. Stealing, fraudulent practices in trade, adulteration to make extra profit, the exaction of exorbitant interest, may all be declared punishable offences. Law may also deal with the misuse of wealth, *e.g.* money may not be hoarded by any one in such a way that his functions as a citizen are not performed. A man is not allowed to be dependent on the State for support while he has money at his command. A father is bound to use his wealth to support his children. Children are bound to support their parents. In these and other ways law may put limits to the right of a citizen to hoard possessions.

A further extension of these social restraints is bound up with all theories of socialism or communism. Under these all private capital would be almost, if not altogether, abolished. Rent might still be paid to the community, but interest would cease. Each individual would be remunerated in proportion to the services he had rendered. Thus socialism would seek, by abolishing the present system of competing capitalists, served by competitive wage-labour, to strike at the system that encourages the avaricious nature.

In the individual life an effort may be made to check avarice by one great act, as by the vow of poverty, depriving the subject of all personal interest in property and all power over it. This vow, along with the vow of chastity and obedience, was adopted by the Dominicans and Franciscans to complete the irrevocable surrender of those who entered the religious state.

For the most part avarice has been restrained by the application of general ethical and Christian truths to the personal life, and in particular to the earning, saving, and spending of wealth. Christianity teaches that selfishness is a deadly sin which must give place to a supreme love for God, and to the love of neighbour as well as self. Wealth is to be looked upon not as an end in itself, but only as a means towards attaining higher ends in life. When a man earns money, he should not be taken possession of by worldly things, but possess them as if he possessed them not. He should not hoard wealth uselessly in fear of want, for he should believe that, if he seeks first the kingdom of God, all things needful for life will be added by God.

In using wealth, he is not to allow himself to be dominated by the selfish love of pleasure or of power, but, regarding himself as a steward of God, he is to use it as a means of procuring a free and independent human existence and development for himself and those around him.

D. MACRAE TOD.

AVERROËS, AVERROISM.—**1. Life.**—'Averroës' is a corruption of the Arabic name Ibn Rushd. Abu 'l-Walīd Muḥammad ibn Aḥmad ibn Muḥammad ibn Rushd was born at Cordova in the year A.H. 520 (A.D. 1126), of a family of standing. His grandfather, who was kādi of Cordova, wrote some important works on law. His father also, and afterwards Averroës himself, held the post of kādi. He studied law in his native town, and medicine under the guidance of Abū Jafar Hārūn of Truxillo. He enjoyed the friendship of Ibn Zuhr, a famous physician, and the acquaintance of the celebrated theosophist Ibn 'Arabī. In 548 we find him at Marrakesh (Morocco), being presented by Ibn Ṭufail to the Amir of the Faithful, the Almohad Abū Ya'qūb Yusūf. His account of this introduction has been communicated as follows:

'When I came into the presence of the Amir of the Faithful,' he says, 'I found him alone with Ibn Ṭufail, who began to eulogise me. . . . After asking my own, my father's, and my family name, the Amir opened the conversation with the question: "What is the opinion of philosophers on the sky? Is it an eternal substance, or did it have a beginning?" A sudden fear seized me, and rendered me speechless.' The Amir, however, soon put him at ease by himself treating the question with a knowledge unlooked for in a prince, and sent him away laden with presents.

It was Ibn Ṭufail too who advised Averroës to write a commentary on Aristotle. He told him that the Amir often complained about the obscurity of the Greek philosophers, and of the translations then existing, and said that he ought to undertake the explaining and arranging of them. There is a passage in Ibn Ṭufail's philosophical romance, *Ḥay ben Yakẓān*, that is supposed to be an allusion to Averroës, who was just then beginning to write.

In A.H. 565 Averroës was appointed a kādi at Seville, and, about 567, was installed at Cordova. From this time onwards he devoted himself to the composition of his greatest works, although he felt burdened all the time with public duties. He travelled a great deal. In 574 he was at Marrakesh, in 575 at Seville, and in 578 back again at Marrakesh, where Yusūf appointed him his chief physician, a post that had been held by Ibn Ṭufail. When Yusūf sent him back to Cordova, he bore the title of 'Grand Kādi.'

Averroës continued in favour during the beginning of the reign of Ya'qūb al-Manṣūr, Yusūf's successor; then he fell into disgrace. This was the result of the opposition his writings encountered from the theologians, and it bears witness to the influence that his philosophy was beginning to exercise. They accused him of various heresies (see below, § 3); and even went the length of trying to make him pass for a Jew. After undergoing an examination on the subject of his orthodoxy, he was banished to Lucena, near Cordova. The Amir also ordered (*c.* 1195 A.D.) all the works of the philosophers to be burned except treatises on Medicine, Arithmetic, and elementary Astronomy.

These decrees were afterwards reversed, and Averroës was recalled to Marrakesh; but he did not long enjoy his return to favour, dying on the 9th of Safar, A.H. 595 (11th Dec. A.D. 1198). His tomb is at Marrakesh, outside the Tagazūt gate.

2. Works.—Averroës' great claim to glory lies in his being pre-eminently Aristotle's commentator. To this he owes his renown and popularity in the West in the Middle Ages. His philosophy proper has been fiercely attacked, and, in the present writer's opinion, often misunderstood. But the care with which he composed his commentaries, their compass, their abundance, and their ingenuity, have caused them to be used as a basis for the study of philosophy in schools.

In accordance with a custom which still prevails in Musalmān teaching, these commentaries are of three kinds: short, medium, and long. These three degrees correspond to the three years or three periods into which philosophical instruction was divided. It is in this way too that the Qur'ān or the '*aḳāid*' ('articles of faith') is commented on in the universities of Islām, recourse being had to more and more comprehensive glosses, according to the progress of the pupils.

In Latin or Hebrew we have the three kinds of Averroistic commentaries for the *Second Analytics*, the *Physics*, the treatises on the *Sky* and the *Soul*, and the *Metaphysics*; but no long commentaries for the other works, and none at all for the *History of Animals*, and the *Politics*. In Arabic we have the medium commentaries on *Politics* and *Rhetoric*, a treatise on four books of Aristotle on *Logic*, and a translation of fragments of Alexander's commentary on *Metaphysics*. H. Derenbourg has brought into evidence the existence of an Arabic collection of short commentaries or compendiums (*jawāmi'*) in the library of the Escurial. This work has almost exactly the same contents as that mentioned by the author of the *History of the Almohads* (Fagnan's tr. p. 211).

Besides this great work, his commentaries, we have a somewhat important work on Polemics, the *Tahāfut al-Tahāfut* ('Vanity of Vanities'), which was levelled against the theologians. It is in the Arabic text. There are also a few fragments in Arabic which are not so important. Among the works that Renan mentions as having been written by Averroës besides his commentaries, but which are perhaps not all clearly distinct from them, are: commentary on Plato's *Republic*, opinions on al-Fārābī's *Logic* and on his manner of comprehending Aristotle, discussions on a few of Avicenna's theories, commentary on Nicolaus's *Metaphysics*, treatises on the abstract intellect and its relation to man's, and a commentary on the Profession of Faith ('*Aḳīdah*) of the Mahdī Ibn Tūmart. Averroës was the author also of works on Jurisprudence, Astronomy, and Medicine. Of the last named, we possess the text of a treatise which, in the Middle Ages, enjoyed a somewhat wide-spread reputation, the *Kulliyāt* (*i.e.* 'Generalities').

3. Doctrine.—It is by no means certain that the Western writings which we possess on Averroës give us a very true idea of his doctrine. His philosophy was fiercely attacked by the theologians, who represented it in the light most favourable for their own ends. With the intention of pointing out the dangers that it presented to the faith, they forced assertions out of it, they drew overstrained inferences from it, they told whither, according to them, this doctrine led rather than what it really was. We know this method of procedure well from the work of al-Ghazālī entitled *Tahāfut* ('Destruction,' or 'Vanity of Philosophers'), where he applies it to al-Fārābī and Avicenna. This work has now been carefully studied. It is clear that al-Ghazālī reproaches 'philosophers,' not so much for explicitly professing anti-religious doctrines, as for holding opinions and hypotheses which are not likely to be useful for proving religious truth, but from which conclusions contrary to the faith would rather be

inferred. This does not mean that al-Fārābī and Avicenna did not seek sincerely to establish a philosophy compatible with dogma.

Now the same thing happened in the case of Averroës. He was opposed by theologians, not only by Musalmāns, but by Christians as well; and we see his system not from his own point of view, but through the distorting criticism of these theologians. Some of these authors are, indeed, more accessible than Averroës, whose ideas have to be sought either in the rare Arabic texts or in the Latin translations, whose style is very obscure and difficult.

It seems that even Renan, in spite of all his intelligence, his facility, and his perspicacity, has not absolutely guarded against this fundamental injustice; and too often, in his slightly wavering explanation of Averroës' philosophy, he presents not so much the authentic doctrine of Averroës as that which has been attributed to him. The following is, very briefly, Averroës' doctrine according to Renan:

> It had a very evolutionary character. Eternal matter, the evolution of the germ by its latent power, an undetermined God, the impersonality of the intelligence, the emersion and re-absorption of the individual, constitute its essential points. He further represents Averroës as a downright determinist, whose God does not recognise individuals, but can recognise only the general laws of the universe. He says, moreover, in several places that Averroës denies resurrection. Not firmly enough impressed with the great influence of Neo-Platonism in Islām—an influence brought into evidence by Dieterici—he tries to trace the ideas of the Arabic philosopher to Aristotle, which he sometimes finds rather difficult, and is surprised that the theories to which the Arabs give preference are precisely those that appear in Aristotle only in an obscure and secondary manner.

We cannot quite agree with these different ways of looking at Averroës. We believe that he must be studied as belonging to the school called *al-falāsifa* ('Philosophers'), of which we shall hear more in connexion with al-Fārābī and Avicenna; that the doctrine of this school is more Neo-Platonic than Peripatetic; that Averroës' doctrine is precisely the same in principle, differing from it only in unessentials; and this is exactly what appears from a perusal of the work entitled *Tahāfut al-Tahāfut* ('Vanity of Vanities') which Averroës wrote in reply to al-Ghazālī's *Tahāfut*. Al-Ghazālī attacked al-Fārābī and Avicenna. Now it frequently happens that Averroës finds al-Ghazālī's criticism justified, and he reproaches his predecessors for giving him this advantage. Then he modifies something in their system; but these modifications deal only with details, or with the manner of exhibiting the doctrines; they are not really essential.

Is there any need, as has been suggested, to regard these modifications of Averroës on the doctrines of the school of 'Philosophers' as an approximation to the system of the Peripatetics? This, again, is by no means certain. It is doubtful whether there is much less Neo-Platonism in Averroës than in his predecessors. His opponents in the Middle Ages accused him of having often misunderstood Aristotle, and sometimes their criticism seems well founded.

Let us now exhibit some of the chief points in Averroës' philosophy by comparing them with the corresponding points in Avicenna's philosophy. This is not a very easy task; for Averroës himself seems, more than Avicenna, to feel the difficulties of the philosophical problems. He is less confident, less systematic, more analytic; he disputes more, is more troubled about the opinions of others, and seems to have less firmness about his own conclusions.

(1) *Eternity of the world.*—The doctrine of the eternity of the world had early partisans in Islām in the *Mu'tazilites*, such as Abu'l-Hudail and Tumāmah. The former considered the creation as simply the act of putting the universe in motion. We have a fragment of Averroës, published by Dr. Worms, which is very clear on this question. He recognizes that there is a creation, and that the world needs a motive power; but he interprets these two ideas in a different manner from the theologians. He believes in a creation that is being renewed every instant in a constantly changing world, always taking its new form from the preceding; but he does not admit creation *ex nihilo*. According to him, this continuous and incessant creation is more worthy of the name of creation than that which is accomplished once for all. Averroës claims that fundamentally this idea does not differ from that of the theologians. The fact remains, however, that in his system infinity can be reached in time—a point which the orthodox doctrine does not admit. But for him, as well as for the theologians, creation does not take place in time: it is produced for all eternity; and time is produced and created at the same moment as the world, according to the doctrine of the orthodox school. Time, for all these Musalmān thinkers, is the result of the existence of the world, and is manifested in the movement of the spheres.

The world then, although it is eternal, has a 'mover' or 'agent.' On this point Averroës rectifies a proof of Avicenna's which does not seem conclusive to him. The mover or agent is that cause of the world, eternal, like it, which produces it each instant and moves it. Celestial bodies, indeed, do not have a perfected existence except through movement; that which gives them this movement is their 'agent.' In this way Averroës distinguishes between eternity with cause and eternity without cause (*æternitas secundum tempus, æternitas secundum essentiam*). God alone is eternal without cause and without mover or agent. The world is eternal, but has an agent.

(2) *Origin of multiplicity.*—Renan remarks that the problem which engrossed Averroës most was that of the origin of beings; we might say, with more precision, the origin of multiplicity. Indeed, it engrossed the whole Arabic school. God being one, how does multiplicity emerge from Him? Avicenna recognized the principle that 'out of one only one can spring'; consequently, he thought that first of all there came from God a primary being, one alone, called the 'first cause,' from whom then evolved the multiplicity of beings. Averroës does not absolutely maintain this principle. The opinion he professes is neither so clear nor so absolute, although he meant it to be more supple and synthetic.

He admits, like all his school, the succession of the celestial spheres, considered as incorruptible, animated, and moved by intelligences. He makes a few changes in the details of their procession. He holds that multiplicity exists, not only in the different aspects of knowledge that they have of one another, but also in their mutual distances and in the 'dispositions' that they have in them. Averroës, moreover, does not admit that the celestial bodies are composed of matter and form, as Avicenna admitted—an opinion which leads to the conclusion that the existence of these bodies is not necessary, for matter and form depend on one another for subsistence. By rejecting this opinion, Averroës continues to diminish the importance of the rôle of creator.

A single power, he holds, comes from the first principle. The whole world results from it, and all its parts are so ordered and connected that the whole, moved by this single energy, acts in concert. Thus, in animals, the different faculties, the members, and the actions, are united in a single body; and each animal is judged a single being, having at its disposal a single power. It is because of this diffusion of power, intellect, and soul, in the

heavens and in the sublunary sphere, that it can be said that God created, maintains, and preserves the world, as we read in the Qur'ān. It does not necessarily follow that, because this power penetrates into manifold beings, it is itself manifold. There flows then from the unit, *i.e.* from the first principle, a power, single itself, which becomes manifold in the beings that participate in it.

This system certainly shows how the lives of the different beings that compose the world harmonize. But Averroës seems to have avoided explaining the origin of these beings.

(3) *Knowledge in God.*—Averroës gives us his idea of the philosophic argument that 'the first principle comprehends only its own essence.' He does not agree with the theologians that we are then driven to the conclusion that God is ignorant of the whole world, and does not know His own creation. The meaning of this assertion is that God comprehends in His essence beings in their most exalted state of existence; and when the philosophers say that He does not comprehend the beings that are below Him, it signifies that He does not know them in the way in which we know them, but in a certain manner that is peculiar to Him. For if any other being existed who possessed a knowledge similar to God's, God would have an 'associate' in His knowledge, and He would no longer be unique. This is why it is impossible to say that Divine knowledge is general, or that it is particular; these are modes of human knowledge, and they refer to beings, who are the causes of human knowledge, but who cannot be the cause of God's knowledge.

To sum up: we cannot, according to Averroës, admit that the knowledge of God depends on beings, for then the less perfect would be necessary to the more perfect; nor that God does not comprehend in His essence things and their order, for then He would not be intelligent. It stands to reason, therefore, that He conceives things in a higher order of existence than that in which we know them.

This theory of the different orders of existence is, nevertheless, a little obscure. Averroës tries to explain it by comparing it to colour, which is one in its essence but has different degrees of existence, according as it is in bodies, or in our sight, or our imagination, or our other faculties in their order. In view of this explanation it would be unjust to claim that Averroës' system denies Providence.

(4) *The soul and the intellect.*—We may take it that Averroës' psychology is, as a whole, constructed like that of Avicenna. But there is one point in this system which we must not forget, the distinction between the soul and the intellect.

This distinction is especially important in its bearing on the question of the survival of the soul and its 'unity.' It has often been said that Averroës taught the 'unity of the soul' and the unity of the intellect in the universe, and that he denied the immortality of the individual soul. The present writer does not believe that this latter assertion is correct; the former, about the universal unity of the soul or of the intellect, undoubtedly is. But still we must try to discover the exact meaning of this expression.

According to the school of 'Philosophers,' the intellect and the soul are not merely distinct in degree; that is to say, the intellect is not merely the most elevated kind of soul. We feel that there is a more profound difference between these two ideas, a real difference in their nature. The intellect alone seems absolutely free from all matter; it is essentially that which is opposed to the common idea of matter; it represents the higher domain of general or abstract; it is pure thought. The same can by no means be said of the soul. The idea of soul, in Musalmān philosophy, is closely allied to our modern ideas of power and energy. The soul is the energy that animates matter; and as such, far from being absolutely opposed to matter, it is, on the contrary, profoundly mixed up with and involved in it. At times we are inclined to believe that the Arabic philosophers have an idea of this power similar to that of the modern psychical schools, and that they believe that it depends on some subtle matter, which is more delicate than ordinary matter, and is not usually apprehended by the senses. That is the impression given by reading passages like the following:—

'There are some who say that the soul resides in a subtle thing called celestial heat, in which are the souls that form the bodies. No philosopher will deny that there is a celestial heat in the elements which serve as support for the faculties of animals and plants. Some call this heat the "natural celestial faculty." Galen calls it the "informing faculty." These souls form bodies; this is the reason why Plato says that the soul is separate from the body; for if it depended on it, it would not create it. The soul is something that is added to the innate celestial heat. Each species has its soul, intermediary between those of the celestial bodies and the souls that are here below in the visible bodies. It has therefore been said: "At the death of the bodies, the souls return to their spiritual condition and to those subtle bodies which none can see."' (*Tahāfut*, p. 138).

It follows, then, that if the intellect exists perfectly and actually only when general and freed from the conditions of individuality, the soul, on the contrary, though belonging to the universal power that circulates in the world, may be individual and remain so. That is what Averroës points out after a passage in which he has been speaking of the unity of the intelligence: 'This argument,' he says, 'is of value for the intelligence, for there is nothing in the intelligence of the nature of individuality; but it is a different thing with the soul; for even if it is despoiled of the accidents by which individuals are multiplied, the most celebrated of the sages say: "It is not exempt from the condition of individuality"' (*op. cit.* p. 137).

The soul, therefore, according to this doctrine, may remain individualized after the death of the body. It *may* do so. Arguments of a purely philosophical order do not force us to believe that this individuality really exists, but they show that it is possible. Such seems to be Averroës' point of view on the question of the immortality of the soul. In the end, he leaves it to revelation to settle this question. 'It is a very difficult problem,' he says. The philosophical introduction to the problem is pushed to the point we have just seen—the knowledge that the soul forms the body, and that, since it forms it, it cannot depend upon it. We cannot therefore deduce the destruction of the soul from that of the body. This agrees with what we find in Avicenna.

Belief in the survival of individual souls, combined with belief in the eternity of the world, brings up a difficulty with regard to infinite number. Since the number of souls produced at the beginning of the world is without end, there would be an infinite number of individuals existing at one and the same time. Now, most of the Arabic philosophers, Avicenna excepted, refused to admit infinite number. Averroës agrees with the majority. He seems to solve the difficulty by counting only a single soul as a principle; he does not apply number to the particular souls that are bound to it. There is but one soul, just as there is but one light; its multiplication to infinity in individuals is only a secondary matter. In short, Averroës refuses to admit infinite number in the case of objects that are quite detached from one another; but he does admit it, in a secondary manner, in the case of objects previously bound to a general unity.

Such is, as nearly as we can judge, the real import of Averroës' system on the problem of the unity and the survival of the soul. It is also evident that it is quite impossible to admit the contrary opinion, which is that Averroës denied the survival of the soul. For there is no doubt that Averroës claimed to remain one of the faithful. Now it is an absolute impossibility that he could believe himself a Musalmān and at the same time deny the immortality of the soul. His thought must have been, like that of the whole school of Philosophers, that the former philosophy was true in the main, and that the Muhammadan faith was also true; that consequently there should be no essential point of contradiction between them,

but that, on the contrary, the one should complete and explain the other.

As for the question of 'the unity of the intellect,' it is by no means the same as that of 'the unity of the soul.' It is, moreover, a question that presents no difficulty if it is made quite clear what the author means by the terms in question.

The unity of the intellect signifies merely the universality of general ideas. Averroës explains this universality of rational knowledge at the same time as its perpetuity: 'Ghazālī,' he says, 'has taken this argument from the Philosophers: the intelligence, starting with the individuals of any species, lays hold on a single conception, which is the quiddity of this species, and which is not divided with the persons that are multiplied through origin, position, or constituent. This conception, therefore, cannot be subjected to birth and destruction, like the individuals to which it pertains. This is why the sciences are eternal; neither are they born nor do they die except by accident, that is to say, by their relation to such and such an individual. They are not perishable in themselves.'

General ideas, according to the school of Philosophers, exist really in the active intellect, *i.e.* in the world of celestial intelligences. This world is eternal, and is harmoniously arranged under the First Principle, which is God. The human intelligence perceives general ideas only in so far as they succeed in entering into relation with the active intellect, in which these ideas reside. These exist actually. Whenever man's intellect perceives them, this intellect itself becomes perfect; it is completely developed and actual. Before this, it was incomplete, unfinished; it was not yet the intelligence but only a prelude to the intelligence, a general possibility of understanding, what the Philosophers call the 'material,' or passive, intellect. We see in the works of al-Kindī, al-Fārābī, and Avicenna the different degrees through which the intelligence passes in order to become actual instead of 'material,' as it originally was, *i.e.* to pass from the potentiality to the fact.

This system is quite clear. It is very evident that the material intelligence, which is a mere possibility, is not persistent in itself. The only persistent intellect is the realized, 'acquired,' or 'perfected' intellect, as the Philosophers call it. It is, therefore, a grave error to deduce, as Munk has done, from the non-immortality of this material intellect, the non-immortality of the human soul.

From this point of view, then, it can easily be understood why the Philosophers considered the question of individual survival in connexion with the unity of the soul, but not in connexion with the unity of the intellect.

(5) *Resurrection.*—Al-Ghazālī accused the school of Philosophers of denying resurrection. The accusation was grave, considering the importance of this dogma in the Qur'ān. Averroës denies the charge, and gives his views on this subject at the end of his *Tahāfut*. Renan gives a somewhat free translation of a few lines of this passage (*Aver.* p. 158). Averroës says that the theory that denies resurrection is nowhere found among the Philosophers. He remarks that the religious law, prior to philosophy, always taught resurrection, and that this dogma is useful for leading people to seek after the happiness of the beyond. 'Philosophers,' he says, 'teach happiness only to a few well-educated men, while religions make it their aim to teach the crowd; but this special class of philosophers arrive at complete existence and perfect happiness only by associating with the multitude' (*Tahāfut*, p. 139). They must therefore accept the teaching that suits the people, interpreting it as best they can.

Averroës interpreted this doctrine thus: the body which we shall have in the other life will not be the same as that of this life; 'that which will be resuscitated will be a representation of what is seen in this world; it will not be that very thing *in essentia*. For what has perished cannot be born again, except in so far as it is individualized; and existence can be bestowed only on the semblance of what has perished, not on the object that has perished in its identity.' To strengthen his argument, he uses the words of Ibn 'Abbās, a traditionist who had great authority in Islām: 'There is of the other world nothing but names in this world.' 'That proves,' says Averroës, 'that the future existence has a kind of generation more elevated than that of actual existence, and constitutes a more excellent order than the order of this world' (*op. cit.* p. 140).

Here again it is clearly a question of interpretation, not a denial of the doctrine. In the same way, we must not understand in a dogmatical sense passages such as Renan quotes (pp. 156, 157), in which Averroës disapproves of the use of myths regarding the state of souls after death, or says that it is not the sanctions of the other life that must press men on towards virtue in this life. That simply means that too precise a representation of the other world may be false and dangerous, and that virtue may have nobler motives than fear of punishment or promise of reward.

(6) *Truth and law.*—In politics, Averroës, like al-Fārābī, follows in the footsteps of Plato, whose *Republic* he commented on; and, according to the custom of Oriental thinkers of his school, he does not criticize the text he comments on. He accepts it as truth, almost as religious truth. He accepts, therefore, that political ideal, half socialistic, half mystic, which on many points, such as the status of woman, does not at all agree with the customs of Islām.

We must not lose sight of the part played by syncretism, which dominated the whole philosophy of the Oriental Middle Ages. Ancient philosophy was considered true as a whole; and all its documents, even the most diverse, could be brought into accord, the commentator having the settled conviction that they could neither contradict one another nor contradict religious truth. There are two important treatises of Averroës in which he tries to point out this conformity between religious truth and philosophical truth. This work required some 'interpreting' of the Qur'ān and a slight changing of its meaning. We get used to efforts of this kind in the study of the philosophers previous to Averroës, and certain more or less heterodox sects in Islām, like those of the Faithful Brothers of Baṣra or the Brothers of Purity. We find, too, in Averroës the extreme form of this conception, which, admitting *a priori* the two truths, philosophical and prophetic, ends in assimilating the philosopher and the prophet. Just as there must always be prophets here on earth, or at least great mystics, who bring the human world into relation with the world beyond, so also must there be philosophers. And here the idea takes a distinct turn that makes it still more unusual. As the human intelligence exists in actuality only by its union with the active intellect, there must always be in the human race, if this intelligence is really to exist and subsist, a few men of great intellectual gifts, a few great philosophers whose spirit participates in eternal truth.

In this passage, Averroës is no longer Peripatetic; but neither is he original; he is merely in accord with his world and his time. He is a syncretist; he is combining mysticism with a system that, from many points of view, is somewhat antagonistic to it. He is placing a kind of illuminative

system at the end and summit of his philosophy, just as his predecessors did, although he himself did not give the impression of being naturally much drawn to considerations of that kind.

4. Short history of Averroism.—Averroës' influence was felt in Jewish philosophy and Christian scholasticism. His commentaries were translated into Rabbinic Hebrew and into Latin. The Jews translated them during the 13th and the first half of the 14th century. In the 13th cent., Jacob, son of Rabbi Anatoli, of Naples, and Moses ben Tibbon, of Lunel, edited versions of several treatises; in the 14th, Kalonymus translated some others. Samuel b. Tibbon and Juda b. Solomon Cohen, of Toledo, compiled philosophical encyclopædias in which, we might say, they transcribe Averroës' works. The Spaniard Shem-Ṭob b. Joseph b. Falaquera inserted several long passages from Averroës in his own works. Towards the middle of the 14th cent. Averroism reached its zenith in Jewish schools, and Levi b. Gerson of Bagnols commented on Averroës, just as Averroës had commented on Aristotle. This great influence on the Jews lasted until the 15th century. At this period, we still find Pico della Mirandola following the teaching of Elias del Medigo, professor at Padua, the last representative of Averroism among the Jews.

Avicenna was translated into Latin before Averroës. The first translators were Dominico Gondisalvus, Archdeacon of Toledo, and the Jew, Juan Avendeath of Seville; they worked under the direction of Raymond, Archbishop of Toledo. Their translations were made from 1130 to 1150. The Jews had cut down the work; the translators put into form the version prepared by the Jews.

A few years later, translations of al-Kindi and al-Fārābī were edited by Gerard of Cremona and Alfred of Morlay. In 1230, Michael Scot, a courtier of Frederick of Hohenstaufen, began to translate Averroës. Of most importance are his interpretations of the commentary on *de Cœlo et Mundo* and of the treatise *On the Soul*. Hermann, a German, likewise attached to the house of Hohenstaufen, translated, from Averroës, the *Ethics* in 1240 and the *Poetics* in 1256. Alfonso X. and Frederick II. were the patrons of these works. It is well known that in 1240 Frederick addressed a series of philosophical questions to the Musalmān scholars, to which he received only very vague answers.

Is it really owing to these versions, executed from the Arabic, that Aristotle's works have passed into the West; or have the Latin versions, taken directly from the Greek, played the principal part in this transmission? M. Forget, who, a few years ago, again took up this question, concluded that the priority cannot be given comprehensively either to the one or to the other group of versions. It depends upon the treatise. The Arabic was the first to make known the eight books of *Physics*, the nineteen books on *History of Animals*, the treatises *On the Sky and the World*, *On Plants*, *On Meteors*, and summaries of the *Rhetoric*, and the *Poetics*. The first complete version of the *Ethics* was from the Arabic. The treatise on *The Soul* and a part at least of the *Metaphysics* were first known from the versions made directly from the Greek.

At the end of the 15th and the beginning of the 16th cent., when Averroism reached its zenith in North Italy, Niphus and Zimara made some corrections on the old versions of the commentaries of Averroës. Then new versions were written, based on the Hebrew translations. These new translations were, for the most part, very obscure. Among the translators may be mentioned Jacob Mantino of Tortosa, a Jew, physician to Paul III., Abraham of Balmes, also a Jew, and Giovanni Francesco Burana of Verona, a Christian.

Averroism encountered the same opposition from the theologians in the Christian world as it had met with from the Musalmāns. Later, because of its unusual form, it was opposed by the Humanists, who loved to philosophize in a freer manner and a more elegant style. The Hellenistic scholars criticized Averroës' interpretation of Aristotle, and the Platonists, having Marsilio Ficino in their mind, placed the doctrine of the Academy in all the freshness of its renaissance in opposition to Aristotle and his commentator.

In the Middle Ages, Albert the Great, Thomas Aquinas, and Gilles of Rome wrote against Averroism. Raymond Lully attacked it fiercely. Petrarch declared his dislike towards it, and intended to refute it. Formal condemnations of Averroism were passed at different periods: by the provincial council of Paris in 1209; by Robert de Courson in 1215; by William, bishop of Paris, in 1240; by Etienne Tempier, also bishop of Paris, in 1270 and 1277. Shortly after, these censures were ratified by the theologians of Oxford, over whom Robert of Kilwardeby, Archbishop of Canterbury, presided.

Averroism, which, through the Jews, had held sway in the centre of France until the 14th cent., continued in vogue in the schools of Northern Italy until the 16th century. In the school of Padua it raised the famous disputes in which Achillini and Pomponazzi took part. Its reign extends down to the appearance of modern experimental science, that is, to the time of Galileo.

LITERATURE.—I. *EDITIONS OF AVERROËS' WORKS.*—The two most important Latin editions of Averroës are those of Niphus, 1495–97, and of Junta, 1553. Arabic or Hebrew texts: *Tahāfut al-Tahāfut*, Cairo, A.H. 1303; J. Müller, *Philosophy and Theology of Averroës*, Munich, 1859 (Germ. tr. 1875); *Il commento medio di Averros alla Poetica di Aristotile*, edited in Arabic and in Hebrew by Lasinio, with Ital. tr., 1872; *Il testo arabo del commento medio di Averros alla Rettorica di Aristotile*, by the same editor; Freudenthal and Fränkel, 'Die durch Averroes erhaltenen Fragmente Alexanders zur Metaphysik des Aristoteles,' with translation into German, in *MBAW*, 1884; M. Worms, 'Die Lehre von der Anfangslosigkeit der Welt bei den mittelalterlichen arabischen Philosophen,' in Baeumker and von Hertling's *Beiträge*, Münster, 1900.

II. *WORKS ON AVERROISM.*—Renan, *Averroès et l'Averroïsme*[3], Paris, 1869; Munk, *Mélanges de philosophie juive et arabe*, Paris, 1857, also art. in Franck's *Dictionnaire des Sciences philosophiques*; F. Lasinio, 'Studi sopra Averroe,' *Annuario della società italiana per gli studii or.*, 1872–73; A. F. Mehren, 'Et sur la philosophie d'Averroès, concernant ses rapports avec celle d' Avicenne et de Gazzāli,' *Muséon*, vii. 613; Forget, 'Les philosophes arabes et la philosophie scolastique,' *Compte rendu du troisième congrès scientifique international des catholiques*, Brussels, 1895; P. Mandonnet, *Siger de Brabant l'Averroïsme latin au xiiie siècle*, 1899; T. J. de Boer, *The History of Philosophy in Islam*, London, 1903.

B^ON^ CARRA DE VAUX.

AVESTA.—The Avesta, the sacred book of ancient Iran, contains the teachings of the prophet Zarathushtra, or Zoroaster, and serves at the present day as the holy scriptures of the Parsis of India and the so-called Gabars of Persia (see artt. GABARS, PARSIS). Although fragmentary in its present form, the Avesta is one of the great religious monuments of antiquity, and preserves the records of a faith that was once among the greatest in the Orient, and that might well have spread through Europe in early ages, but for the victories of the Greeks over the Persians at Marathon, Platæa, and Salamis, and for the triumphal incursion of Alexander into the East.

1. Name.—The designation 'Avesta' is derived from the Pazand *avastā*, Pahlavi *āpastāk*, or *avistāk*, a word of uncertain meaning and derivation. Possibly this term, like the Sanskrit *veda*, may signify 'wisdom,' 'knowledge'; more probably, however, it is derived from a presumable Av. form *upastā*, and denotes 'the original text,' 'the scriptures,' as opposed to the term *zand* (cf. Av. *āzainti*), 'commentary,' 'explanation.' In the exegetical and religious works of the Middle

Persian period these two words occur together constantly in the phrase *āpastāk va zand*, which refers to the original Avestan text and its Pahlavi paraphrase and commentary, and it is the erroneous inversion of these words that gave rise to the name *Zend-Avesta*, which was used by Hyde (1700) and by Anquetil du Perron (1771), and was adopted from the latter by the earliest succeeding translators.

2. Original form.—The Avesta in its present form is only a small remnant of a sacred literature of considerable extent. Pahlavi tradition tells of scriptures in 1200 chapters, the Arab historians Ṭabarī (*Annales*, i. 675) and Mas'ūdī (ed. Barbier de Meynard, ii. 123) refer to a copy inscribed on 12,000 cowhides, various Syriac writers allude to an extensive sacred book, and Pliny the Elder (*HN* xxx. 1. 2) mentions 2,000,000 verses composed by Zoroaster. Such direct references to the extent of the original Avestan writings are in agreement with the frequent insistence in Pahlavi literature on the loss of texts during the dark centuries after Alexander, and they are further confirmed by the fragmentary character of the Avesta as now extant. All doubts as to the existence of that larger literature, however, are removed by the Pahlavi *Dīnkarṭ* and the later Persian *Rivāyats*, which give a detailed account of the early scriptures and a summary of their contents.

According to these works, there were originally 21 Nasks (Nosks), or books, each of which was considered to correspond with one of the 21 words of the Ahuna-Vairya (*q.v.*) prayer, and comprised both the Avestan text and the Pahlavi commentary. These 21 Nasks were divided into three groups of seven books each, the first (called *gāsān*, or Gāthā group, and consisting of Nasks 21, 1, 2, 3, 11, 20, 13) containing the spiritual and moral teachings, the second (called *dāṭīk*, or legal group, and consisting of Nasks 15–19, 12, 14) containing laws and prescriptions, and the third (called *hāṭak-mānsarīk*, or Hadha-manthra group, and consisting of Nasks 4–10) containing matters belonging partly to the first and partly to the second group. The number of sections in each Nask varied from 22 to 65, but many of these sections were no longer extant at the time of the composition of the *Dīnkarṭ*. Of Nasks 8, 9, and 10, for example, each of which had originally 60 sections, only 12, 15, and 10 sections respectively are said to have existed 'after Alexander.' The subjects treated in the Nasks may be briefly summed up as follows: Nask 1, virtue and piety; 2, religious observances; 3, exegetical—the three chief prayers of the religion being explained in it; 4, cosmogony; 5, astronomy and astrology; 6, performance of the ritual, and the benefit to be derived therefrom; 7, qualifications and duties of the priesthood; 8, ethical considerations and various aspects of human life; 9, directions for various ceremonies; 10, conversion and instruction of King Gushtāsp (Vishtāspa) and his wars with Arjāsp; 11, various religious and worldly duties; 12, an account of mankind from the creation of the primeval man to the advent of Zoroaster, and various genealogical information; 13, account of Zoroaster and the Saviour that is to come; 14, worship of Ormazd and the archangels; 15, dispensing of justice and various laws; 16, criminal, civil, and military law; 17, priestly and ritual code, general regulations; 18, law of property and family relations; 19, the Vīdēvdād, or Vendīdād, pollution and purification; 20, religious duties, good attributes and qualities; 21, praise of Ormazd and the archangels. From this summary it appears that the original work was not purely religious, but was somewhat encyclopaedic in character.

3. History.—According to traditions, the substance of which there is no good reason to doubt, the Zoroastrian scriptures were preserved with great care in the early centuries of the faith, especially under the later Achaemenians. Ṭabarī states that King Vishtāspa, Zoroaster's patron, sent the original copy of the Avesta, written in letters of gold, to the 'Stronghold of Records' at Stakhra (Persepolis)—a tradition which is in substantial agreement with the Pahlavi account in the *Dīnkarṭ* (III. 3, VII. vii. 3 n., V. iii. 4) of a sumptuous copy that was preserved in the 'treasury of Shapīgān' at Persepolis (cf. Jackson, *Persia Past and Present*, p. 306 f.). According to the Pahlavi treatise *Shatrōīhā-ī Airān*, another copy, containing 1200 chapters inscribed on gilded tablets, was kept in the 'treasury' of the fire-temple at Samarkand (cf. Modi, *Aiyādgār-i Zarīrān, Shatrōihā-i Airān*, Bombay, 1899, pp. 133–136, and *JRASBo* xx, No. 54; and Jackson, *Nöldeke Studien*, Strassburg, 1906, pp. 1031–1033). These two archetype copies, hitherto preserved with zealous care, were destroyed in the invasion of 'the accursed Iskandar' (Alexander) in B.C. 330, when he burned the palace of the Achaemenians at Persepolis, and when his conquering hosts took possession of Samarkand.

The ravages of Alexander broke the power of the Zoroastrian faith, and the Seleucid and Parthian rule in the five following centuries forms a period of depression and darkness in its history, entailing a loss of extensive portions of the original scriptures. Despite the consequent neglect, considerable portions of the texts were preserved in scattered works and in the memory of the priests. Under the last of the Arsacids, early in the 3rd cent. A.D., an attempt was made to collect such parts of the Avesta as had survived. According to a proclamation of Khusru Anūshirvān (A.D. 531–579), King Valkhash, who is generally identified with Vologeses I., ordered that all sacred writings should be searched for, and that such portions as were preserved only in oral tradition should again be written down. This work was eagerly continued by the founder of the Sasanian dynasty, Artakhshīr* Pāpakān (A.D. 226–240), who commissioned the high priest Tansar to collect the scattered fragments, and by his son, Shāhpūhr I. (A.D. 241–272). In the reign of Shāhpūhr II. (A.D. 309–380) a final revision of the Avestan texts was made by his prime minister, Ādarbād Māraspand, and this collection, consisting of a fixed number of books, was then declared canonical (see Darmesteter, *Le Zend-Avesta*, iii. Introd. pp. xx–xxxvi, 'Zend-Avesta,' *SBE* iv. pp. xxx–xlvii, and *JA*, new series, iii., Paris, 1894, pp. 185–250, 502–555; consult also the discussion of Darmesteter's article, in two papers, by the Parsi High Priest Darab Dastur Peshotan Sanjana, *Tansar's Alleged Letter*, Leipzig, 1898, and the same author's *Observations on Darmesteter's Theory*, Leipzig, 1898; and Mills, *Zarathushtra, Philo, the Achæmenids, and Israel*, Chicago, 1906, pp. 21–76).

Far more serious even than the ravages of Alexander and the centuries of neglect, were the results of the Muhammadan conquest of Persia and the inroads of the Qur'ān. Through religious persecutions and civic disabilities the worshippers of Ormazd were compelled to abandon their faith or go into exile, and as many Zoroastrian books as could be found were ordered to be burned. The small body of texts that escaped destruction and loss was preserved by the few Zoroastrians who remained in Persia and by the Parsis, their co-religionists who had taken refuge in India; and the books contained in these manuscripts, recopied from time to time, constitute the Avesta as we now have it. The oldest Indian manuscripts date from the 13th and 14th centuries; the Persian are not older than the 17th. No single manuscript contains all the extant texts.

4. Present contents.—The Avesta in its present form consists of the following divisions: (*a*) *Yasna*, including (*b*) the *Gāthās*, (*c*) *Visparad*, (*d*) *Yashts*, (*e*) Minor Texts, such as *Nyaishes*, *Gāhs*, etc., (*f*) *Vendīdād*, (*g*) *Fragments*. These divisions fall naturally into two groups. (1) The first group comprises the Vendīdād, Vīsparad, and Yasna, which are classed together for liturgical purposes. In the ritual these are not recited as separate books, but are intermingled with one another, and the manuscripts often present them in the order in which they are to be used in the service. In this case the Pahlavi translation is omitted, and the collection is called *Vendīdād Sādah*, 'Vendīdād Pure,' that is, without commentary. On the other hand, these books also appear in some manuscripts

* See art. ARDASHIR I. vol. i. p. 774.

as separate entities, and in that case each part is usually accompanied by a rendering in Pahlavi. (2) The second group comprises the Minor Prayers and the Yashts, which are often included with these in the manuscripts, and is called *Khordah Avesta*, 'Abridged Avesta,' or 'Small Avesta.' This forms a species of prayer-book for the laity.

(*a*) *Yasna.*—The Yasna is the chief liturgical work of the canon. It is recited in its entirety in the Yasna ceremony, which, apart from a number of subordinate rites, is devoted chiefly to the preparation and offering of the *parāhōm* (the juice of the Haoma plant, mingled with milk and aromatic ingredients). Parts of the book, however, deal only indirectly with the ritual. The Yasna is composed of 72 chapters, called *Hāiti*, *Hā*, which are symbolized in the girdle of the Parsis (*kusti*), woven of 72 strands. Several of these chapters are mere repetitions to swell the apparent number. Chapters v. and xviii. are substantially identical with chapters xxxvii. and xlvii., and chapters lxiii., lxiv., lxvi., lxvii., and lxxii. are composed of texts occurring elsewhere. The book falls into three nearly equal divisions (i.–xxvii., xxviii.–lv., lvi.–lxxii.). The first part begins with an invocation of Ormazd and the other divinities in order of rank (i.–ii.), and the dedication of the oblation (*myazda*) and other offerings with similar formulas (iii. 1–8, iv.). After a short prayer (viii. 5–8) there follows the *Hom Yasht* (ix.–xi.), in which Haoma, the branch from whose twigs, like the Soma of the Hindus, a sacred drink was prepared, is personified and worshipped both as plant and as divinity. This section is in turn succeeded by the Zoroastrian creed (xii.) and by other formulas (xiii.). With chapter xiv. begin the so-called *Staota Yesnya*, chapters of the *Stōt-Yasht*, or twenty-first Nask, of the earlier Avesta, which continue, with interruptions, as far as chapter lviii. In the early chapters of the *Staota Yesnya* are found invocations of the spirits of the day (xvi.), of the periods of day and year, and of the various forms of fire (xvii.). Chapters xix.–xxi. contain commentaries on the three most sacred prayers, the *Ahuna Vairya*, *Ashem Vohū*, and *Yenghē Hātām*, and represent part of the third original Nask, called the Bak Nask. The succeeding chapters (xxii.–xxvii.) make up a further liturgical sequence, called *Hōmāst Yasht*, which accompanies the second preparation of the Haoma juice in the ceremony. The five *Gāthās*, which together with the *Yasna Haptanghāiti* form chapters xxviii.–liii. (excepting lii.), stand out in marked contrast with the other parts of the Yasna, and are described in the next paragraph below. Chapter liii. is a brief interpolation between the fourth and fifth Gāthās. Chapter liv. consists of but a single verse, aside from the introductory formulas, and forms the *Airyaman Ishya* prayer, with which the Saoshyants are to restore the dead to life at the day of resurrection. After a brief poetical summary of the Gāthās (lv.) comes the *Srōsh Yasht* (lvii.), a long and detailed glorification of the angel Sraosha, preceded by a briefer chapter in the same vein (lvi.) by way of introduction. Chapter lviii. is in praise of prayer in general, and especially of the prayer to be recited at the Last Judgment. The following chapter (lix.), with its renewed invocations, leads over to a formula of blessing on the house of a pious worshipper (lx.), a formula of exorcism (lxi.), and a series of stanzas to be recited in propitiation of the sacred fire (lxii.). Chapters lxiii.–lxviii. constitute the *Āb-zōr*, 'offering to the waters,' which consists of an introduction (lxiii.–lxiv.), praises of Anāhitā, the goddess of the waters (lxv.), and the formulas used in the consecration and offering of the holy water (lxvi.–lxviii.). The book ends with further invocations (lxix.–lxxii.), which mark the conclusion of the Yasna ceremony.

(*b*) *Gāthās.*—The metrical Gāthās ('songs,' 'psalms') constitute the oldest as well as the most important part of the whole Avesta, and differ from the other parts in language, metre, and style. They are five in number, comprising 17 hymns (*Yas.* xxviii.–xxxiv., xliii.–xlvi., xlvii.–l., li., liii.), and are arranged according to their metres, and named Ahunavaiti, Ushtavaiti, Spenta Mainyu, Vohu Khshathra, and Vahishtoishti, after their opening words. These Zoroastrian psalms contain the teachings, exhortations, and revelations of the prophet Zoroaster himself, who seems a more distinct personality here than elsewhere in the Avesta. The style of the Gāthās is noticeably different from that of other parts, being almost free from the tiresome uniformity and barren reiteration of some of the later portions; and although there is a constant recurrence of the cardinal tenets, these do not become monotonous, because of their varying expression. Ceremonies and ritual observances are but little referred to, and the Haoma-cult, the *Fravashis*, and the whole naturalistic pantheon do not appear in these hymns, either because they present the religion in an earlier and loftier form, or, more probably, because they are concerned chiefly with the prophet's teaching regarding the conflict between Ormazd and Ahriman, the relation of the human individual to that conflict, its ultimate outcome in the routing of the forces of evil and the final victory of Ormazd, the last judgment, and the longed-for kingdom of Ormazd. The detached character of the verses, which nevertheless are a logical sequence, has led to the supposition that, like the verse portions of many Buddhistic works, they were the text of discourses of the prophet and a summary of his teachings in a form available for oral tradition (cf. Pischel and Geldner, *Vedische Studien*, Stuttgart, 1889, i. 287).

In the midst of the Gāthās is inserted the so-called 'Yasna of the Seven Chapters' (*Yasna Haptanghāiti*), which is written in prose, but in the same dialect as the Gāthās. It consists of a number of prayers and ascriptions of praise to Ormazd, the Amesha Spentas, or archangels, the souls of the righteous, the fire, the waters, and the earth. By some scholars it is held to represent a later and more developed form of the religion than appears in the Gāthās. Its language, in fact, shows certain departures from the Gāthic dialect. Under the Gāthās are also included four specially sacred prayers or formulas. These are the *Ahuna Vairya* (*Yas.* xxvii. 13), the *Ashem Vohū* (*Yas.* xxvii. 14), *Yenghē Hātām* (*Yas.* iv. 26), and the *Airyaman Ishya* previously mentioned (*Yas.* liv. 1).

(*c*) *Visparad.*—The Visparad (Av. *vīspē ratavō*, 'all the lords') is not a body of connected texts, but consists merely of additions to portions of the Yasna, which it resembles in language and form. It comprises 24 (according to some, 23 or 27) chapters, called Kardah, and is about one-seventh as long as the Yasna. The Visparad contains invocations and offerings of homage to 'all the lords,' whence its name. In the ritual its chapters are inserted among those of the Yasna.

(*d*) *Yashts.*—The Yashts (Av. *yeshti*, 'worship by praise') form a poetical book of 21 hymns, chiefly in verse, in which the angels of the religion (*yazatas*) and the heroes of ancient Iran are praised and glorified. The order in which the divinities are worshipped corresponds largely with the sequence in which they are used to name the days of the month. In external form the Yashts are characterized by their identical introduction and conclusion, but they differ greatly in length, age, and character. The first four are largely composed of

late and ungrammatical material, and the last two consist chiefly of regular Yasht formulas with a number of quotations from other passages. On the other hand, the intervening longer Yashts are almost entirely in verse, and have considerable poetic merit. Of chief importance among these are: Yasht v., in praise of Ardvī Sūrā Anāhitā, the goddess of the waters; Yasht viii., which exalts the star Tishtrya, and recounts his victory over the demon of drought; Yasht x., dedicated to Mithra, who, as the god of light and of truth, rides out in lordly array to wreak vengeance on those who have belied their oath or broken their pledge; Yasht xiii., devoted to glorifying and propitiating the guardian spirits (*fravashis*) of the righteous; Yasht xiv., in honour of Verethraghna, the incarnation of victory; and Yasht xix., which sings the praises of the Kingly Glory (*kavaya hvarenah*), a sort of halo or radiance said to have been possessed by kings and heroes of Iran in olden times as a sign of their rulership by divine right. Much of the material in the Yashts is evidently drawn from pre-Zoroastrian sages; there is a mythological and legendary atmosphere about them, and Firdausi's *Shāh Nāmah* serves to throw light on many of the events which they portray, and on allusions that would otherwise be obscure.

(*e*) *Minor Texts.*—Chief among the Minor Texts are the *Nyaishes*, or Zoroastrian Litanies, a collection of five short prayers or ascriptions of praise addressed to the Sun, Moon, Water, and Fire, and to the angels Khurshēd, Mihr (Mithra), Māh, Ardvisūr (Ardvī Sūrā Anāhitā), and Ātash, who preside over these elements. These litanies form an important part of the Khordah Avesta. They are composed of fragments from the Yasna and Yashts, and contain invocations, supplications, deprecations, and obsecrations employed daily by the laity as well as by the priesthood. Under the heading of Minor Texts come also the five *Gāhs*, addressed to the spirits of the five periods of the day; the two *Sīrōzahs*, the greater and the lesser, which in their 30 paragraphs invoke in turn the divinities of each day of the month, and which are recited especially on the thirtieth day after the death of a Zoroastrian; the *Āfringāns*, or blessings, four in number, used for various purposes with an accompanying offering: the *Āfringān-i Dahmān*, repeated in honour of those who have died in the faith; the *Āfringān-i Gāthā*, recited on the five concluding days of the year, when the souls of the dead revisit the earth; the *Āfringān-i Gahanbār*, composed chiefly of instructions to worshippers concerning participation in the celebration of the six special festivals of the year; and the *Āfringān-i Rapithwin*, recited at the beginning and end of summer. All of these belong to the Khordah Avesta.

(*f*) *Vendīdād.* — The Vendīdād (Av. *vīdaēvo-dāta*, 'the law against the demons'), although inserted for liturgical purposes among the Gāthās in the Zoroastrian ritual, is not actually a liturgical work but a priestly code prescribing the various purifications, penalties, and expiations. It originally formed the nineteenth Nask of the Avesta handed down to Sasanian times, but its parts vary greatly both in point of style and in time of composition. Much of it must be of late origin.

In its present form it contains 22 chapters, called fargards. Chapter i. is a dualistic account of creation that attributes all the disagreeable features of the otherwise delightful regions of the earth to the counter-creative activity of Ahriman. Chapter ii. tells the legend of Yima, of the Golden Age, and of the coming of a terrible winter and destructive floods, to preserve mankind from which the princely Yima is directed by Ormazd to build an enclosure (*vara*). The following chapter (iii.) treats of the pleasures and pains of earthly life, the manner of life prescribed for bearers of corpses (a special class of men), praise of agriculture, and the defilement of the earth by corpses. Chapter iv. concerns legal matters—breaches of contract, assault, punishments. Chapters v.–xii. relate mainly to impurity incurred through contact with the dead and to the methods of purification for removing the pollution, notably by undergoing an elaborate lustration for nine nights, the so-called *Barashnūm* (ix.). Chapters xiii.–xv. are devoted chiefly to the treatment to be accorded to the dog, an animal held in almost reverential regard by the early pastoral Zoroastrians. In chapters xvi.–xvii. instructions are given for purification from several sorts of uncleanness, and for the disposal of parings of the nails and clipped ends of the hair. Chapter xviii., one of the most interesting and instructive in the Vendīdād, deals, among other things, with the character of the true and the false priest, and with the cock that wakes the pious to prayer early in the morning; and it relates a conversation between the angel Sraosha, club in hand, and the evil spirit Druj, concerning the progeny of the latter. In chapter xix. are found an account of the temptation of Zoroaster and the revelation of the destiny of the soul after death. Chapters xx.–xxii. are chiefly of a medical character.

(*g*) *Fragments.* — In addition to the preceding books there are also a considerable number of fragments. There survive, for example, three chapters from the original Hādōkht Nask, the last two of which are eschatological in character, and deal with the destiny of the soul after death. Of special interest is a similar metrical fragment (Fr. W. 4), which refers to the efficacy of the *Airyaman Ishya* prayer, which is to be chanted by the Messianic Saoshyants at the day of judgment, to confound Ahriman and his hellish crew and to raise up the dead (cf. Haas, 'An Avestan Fragment on the Resurrection,' *Spiegel Memorial Volume*, Bombay, 1908, pp. 181–187). Among the longer fragmentary texts may be mentioned also the *Āfrīn-i Paighambar Zartusht* in honour of Zoroaster, a blessing invoked upon kings, and the so-called *Vishtāsp Yasht*, an enigmatical compilation, disconnected and ungrammatical, which is in no wise related to the regular Yashts. Many fragments are found as quotations in the Pahlavi ancillary literature. Most important of these is the *Nirangistān*, a work in three fargards, or chapters, collecting and commenting upon a number of Avestan *Nirangs*, or ritual prescriptions. The commentary cites additional directions of the same kind from another source. This work is of value for our knowledge of the ritual and for Avestan lexicography, but unfortunately the manuscript material is poor and the text consequently imperfect. Another Pahlavi treatise that contains Avestan passages is the *Āfrīn-i Dahmān*, also called *Aogemadaēcā* after the first quoted Avestan word. The Pahlavi commentaries on the Vendīdād and the Yasna, and other Pahlavi works, such as the *Shāyast-lā-Shāyast*, the *Vijīr-kart-i Dīnīk*, and the *Pursishnīhā*, contain a large number of Avestan quotations, many of them from the lost Nasks, and brief formulas and prayers are found here and there in manuscripts of the Khordah Avesta. Mention should likewise be made of the additions to Avestan lexicography in the *Frahang i-Oīm*, an Avesta-Pahlavi glossary (ed. Hoshangji Jamaspji and Haug, Bombay, 1867; cf. Reichelt, in *WZKM* xiv. 172–213, xv. 117–186). For a complete list of fragments and their editions see Bartholomae, *Altiran. Wörterbuch*, pp. viii–x.

The extant parts of the Avesta owe their preservation chiefly to their employment in the ritual. The liturgical portions, constantly used in priestly observances and ceremonies, were naturally considered of greater importance and cherished with greater care, whereas the other books that may have escaped destruction gradually fell into desuetude and neglect, were not copied as much as the parts occurring in the ritual, and finally disappeared altogether. Thus it happens that the present Avesta corresponds but little with the traditional 21 Nasks in arrangement or in extent. Only two of these original 21 books are now represented with any degree of completeness. The Vendīdād, or nineteenth Nask, has

survived in approximately its full form; yet even this shows evidence of having been patched up and pieced together. Many of the chapters of the Stōt-Yasht, or twenty-first Nask, are contained in the Yasna, where they extend, with interruptions, from chapter xiv. to chapter lviii. (cf. Geldner, 'Awestalitteratur,' in *GIrP* ii. 25–26). There exist also, in addition to these two remnants, an important part of the Bakān Yasht, or fourteenth Nask (most of the Yashts being referred back to this otherwise lost book), and portions or fragments of others are extant. Altogether there are preserved specimens of about 15 of the original 21 Nasks. This material is supplemented, however, by various passages that have been translated from the Avesta into Pahlavi, and have come down to us in that form. The Pahlavi *Būndahishn*, for example, is largely based on the old Avestan Dāmdāt Nask, and serves in a measure to replace its loss.

5. **Age and growth.**—The present form of the Avesta dates, as has been mentioned above, from the Sasanian period, but the various portions differ considerably from one another in age. The relative age of the component parts can be approximately determined by a study of their metre, grammar, and style. Although it is impossible to go into details here, it may be said in general that the later texts as a rule are written in prose, show lack of grammatical knowledge on the part of their authors or compilers, and consist to a very great extent of formulaic material. The application of this threefold criterion shows the chronological order of the texts to be somewhat as follows: (1) Gāthās (*Yas.* xxviii.–liii.), including (2) the Yasna Haptanghāiti (*Yas.* xxxv.–xlii.) and some other compositions in the Gāthā dialect (*Yas.* xii., lviii. and the four most sacred prayers, or formulas, mentioned above), (3) metrical Yasna and Yashts (*Yas.* ix.–xi., lvii., lxii., lxv.; *Yt.* v., viii.–x., xiv., xv., xvii., xix.), portions of Vendīdād ii.–v., xviii.–xix., and scattered verses in the Vīsparad, Nyaishes, Āfringāns, etc., and (4) the remaining prose portions of the Avesta.

The determination of the actual date of composition of the different parts of the Avesta is largely a matter of speculation. According to the generally accepted view, the Gāthās, the oldest part in substance as well as in form, date back to an early period of the religion, if not to the prophet Zoroaster himself, whereas certain minor portions of the scriptures may have been written or compiled as late as the time of Shāhpūhr II. of the Sasanian dynasty. The extreme limits of the period of development would thus be about B.C. 560 and A.D. 375. In his latest works (*Le Zend-Avesta*, iii., Introd.; see also *Zend-Avesta*², *SBE* iv.), the brilliant French scholar, Darmesteter, put forth a radical theory in regard to the composition of the Avesta as we now have it. In his opinion all sacred writings that may have existed under the Achæmenians were lost after the invasion of Alexander, and not a page of any earlier work has come down intact. The pre-Alexandrian spirit may be recognized, however, in the Vendīdād, which, although later than the Gāthās in composition, is older in material and Achæmenian in tone. According to this theory, the Gāthās, though the oldest part of the Avesta in form, represent the latest growth of the Zoroastrian spirit and show the influence of Gnosticism, the school of Philo Judæus, and Judaism. Darmesteter assigns their origin to the middle of the 1st cent. A.D. This radical hypothesis concerning the age and growth of the Avesta met at once with spirited opposition on the part of scholars best qualified to judge, and can hardly be said to have any acceptance to-day. Avestan specialists are at present agreed that there is no adequate reason for making so strong a claim that the tradition was lost. It is known that the latest Parthian monarchs were filled with the true Zoroastrian spirit, and it can be proved from Greek, Latin, and other writings that the tradition of the wisdom of Zoroaster lived on during the long period between Alexander and the rise of the house of Sāsān in the 3rd cent. A.D.

6. **Language.**—The language in which the Avesta is written is named 'Avestan.' It belongs to the Iranian branch of the Indo-Germanic family of tongues, and is most closely allied to the Sanskrit, though individually quite distinct from the latter. This relation to the Sanskrit was one of the means of establishing the authenticity of the Avesta, and is still of the greatest importance in its interpretation. In its phonology Avestan agrees with Sanskrit in its vowels in general, but shows a greater variety in its *e* and *o* sounds. Final vowels, except *ō*, are, as a rule, short. A striking peculiarity is the insertion of transitional and epenthetic vowels, the latter giving rise to improper diphthongs. Some of the consonants are identical with those of Sanskrit, others correspond uniformly with certain Sanskrit sounds. The Sanskrit voiceless stops *k, t, p*, for example, are generally represented in Avestan by the spirants *kh, th, f*, when followed by consonants; Sanskrit initial *s* appears in Avestan as *h*. Because of this close correspondence, many Avestan words and phrases may be changed at once into their Sanskrit equivalents by the mere application of certain phonetic laws. In inflexion the language shows nearly the richness of Vedic Sanskrit, and it possesses almost equal facility of word-formation. In syntax it differs from the Sanskrit in certain points, showing marked individuality, especially in the later portions.

Two dialects may be recognized in the Avesta: one the Gāthā dialect, the language of the oldest parts, often called *Gāthā Avestan* (*GAv.*); the other, the language of the great body of the Avesta, called *Younger Avestan* (*YAv.*). The Gāthā dialect is more archaic, bearing to the Younger Avestan somewhat the relation of the Vedic to the classical Sanskrit. Possibly this older dialect may owe some of its peculiarities also to an original difference of locality. Its chief characteristic is the lengthening of all final vowels and the frequent use of parasitic vowels. Its grammatical structure is remarkably pure. The same cannot be said of all the texts written in Younger Avestan, as the late compositions in this dialect, owing to linguistic decay, show many corruptions and confusions. All that is old or written in metre, however, is correct, and occasional inaccuracies in such parts must be attributed to faulty transmission.

7. **Metres.**—The metres of the Avesta deserve considerable attention, because they assist in determining the relative age of the various parts. Almost all the oldest portions of the texts are found to be metrical; the later, or inserted portions, are, as a rule, though not always, written in prose. The Gāthās are composed in metres that have analogies in the Vedas. These were the only metrical parts known to the later Zoroastrians until Western scholars discovered the rhythmical structure of many passages in the later texts. Almost all of these versified portions, especially frequent in the Yashts, are written in eight-syllable lines (cf. Geldner, *Über die Metrik des jüngeren Avesta*, Tübingen, 1877).

8. **Alphabet.**—The Avesta is written in an alphabet far younger than the language it presents. The characters are derived from the Sasanian Pahlavi, which was used to record the oral tradition when the texts were collected and edited in Sasanian times. The writing is read from right

to left. Nothing is known about the original Avestan script.

9. **Pahlavi version.**—The Pahlavi version of the Avesta was made in Persia in Sasanian times, when the general understanding of the sacred texts became more and more imperfect. Some of the exegetical portions and works of interpretation belong even to Muhammadan times, and may be assigned to the period between 700 and 900 A.D. Of the Pahlavi version there are now extant the entire Yasna, Vîsparad, and Vendîdâd, with some portions of other texts. The rendering is a word for word translation of the original, with the addition of occasional independent explanatory glosses. The original Avestan construction is usually adhered to verbatim, and the glossator has to eke out the inflexional poverty of the language in his day by the use of particles. These determinatives, however, are often omitted, and the loss of the sole means of indicating syntactical relation adds greatly to the ambiguity of the Pahlavi paraphrase. This version, with the accompanying glosses, presents the traditional Zoroastrian interpretation from an early time, and is of the greatest value for an understanding of obscure ideas and an insight into native thought. It is also of material assistance in determining the meaning of a word or phrase, and it serves to check the results of purely linguistic analysis. It must be conceded, nevertheless, that it abounds in errors and inaccuracies, and that its explanations are often fanciful. Furthermore, the more abstract or obscure the original, the less the commentator attempts to explain it. The Gâthâs, for example, have in general very few glosses, whereas some other parts of the Avesta are accompanied by an elaborate commentary. The chief defect of the version lies in its disregard of the principles of the grammar, of which its authors seem to have had scarcely any knowledge. As a result of the slavish adherence to the original, the style of the Pahlavi version is very clumsy in comparison with the Pahlavi of independent treatises.

About the year 1200 a large part of the Pahlavi version was translated into Sanskrit by Neryosangh, son of Dhaval, a Zoroastrian priest, who seems to have possessed a thorough knowledge of Pahlavi. His translation is of great value as a help in understanding the Pahlavi version, which he follows in construction and renders word for word. This method often obliges him to sacrifice the Sanskrit syntax to that of the original Pahlavi, and his language consequently assumes a peculiar Iranicized aspect. A further striking peculiarity of the Sanskrit of Neryosangh's version is his disregard of the rules of *sandhi*, or euphonic vowel-combination, so uniformly observed in other Sanskrit works. Neryosangh seems on occasion to have corrected the Pahlavi rendering when he thought it at fault, thus showing that he must have referred at times to the Avestan text itself and reached an independent decision as to its meaning.

A modern Persian translation of portions of the Pahlavi version of the Khordah Avesta was prepared in Persia at some time between 1600 and 1800 A.D., and two separate translations into Gujarati were made in India early in the last century, and appeared at Bombay in 1818 within five months of one another. These are the last independent native versions made before the percolation into India of the influence of Western scholarship. These later versions have some merit, in that they occasionally help us to understand an obscure or ambiguous passage in the Pahlavi, but they never venture upon an explanation other than that of the version on which they are based, and consequently they content themselves with reproducing the Pahlavi paraphrase and commentary without change.

10. **Discovery.**—The story of the discovery, or opening, of the Avesta to Europe has a special interest, since the Avesta has been known to the Western world for only a little more than a century. A manuscript of the Yasna seems to have been brought to Canterbury as early as 1633, and a copy of the Vendîdâd Sâdah was brought from Surat in 1723 by an Englishman, George Boucher, and deposited in the Bodleian Library at Oxford, where it was for a long time chained to the wall as a curiosity. No one, however, was able to read these manuscripts, and Thomas Hyde (*Historia Religionis Veterum Persarum*, Oxford, 1700) drew his information chiefly from later Parsi sources. To a young Frenchman, Anquetil du Perron, belongs the honour of being the first to decipher these texts. Some tracings made from the Oxford manuscript were sent to Paris and came to his notice. Du Perron at once conceived the idea of going to India or Persia and obtaining from the priests themselves the knowledge of their sacred books. In his eagerness to carry out his plan he did not wait for promised financial support from the French Academy, but enlisted as a soldier among the troops about to start for India, and left Paris with them in November, 1754. Before he had gone far on his journey, however, the government gave him his discharge from the army, and presented him with his passage to India. After innumerable discouragements, and in spite of almost insurmountable obstacles, he succeeded in winning the confidence of the priests, with whom he was able to communicate after learning Modern Persian. These he gradually induced to teach him the language of the Avesta, to let him have some of the manuscripts, and even to initiate him into some of the rites and ceremonies of their religion. After seven years among the Parsis, he returned to Europe in 1761, stopping at Oxford, before he returned to Paris, to compare his manuscripts with the one in the Bodleian Library in order to assure himself of their authenticity. During the next ten years he worked upon the texts and prepared a translation, which, together with explanatory material, he published in 1771 under the title *Zend-Avesta, Ouvrage de Zoroastre*.

The enthusiasm aroused by this discovery was soon followed by discussions regarding the authenticity of the scriptures that had been made accessible. Some scholars were disappointed not to find the important philosophical and religious ideas they had expected, and did not sufficiently realize the difficulties of pioneer work of this kind. It was suggested, therefore, that the so-called Zend-Avesta was not genuine, but a forgery. The foremost advocate of this view was the Orientalist Sir William Jones, who claimed that the Parsis had palmed off on du Perron a conglomeration of worthless fabrications and absurdities. In France the genuineness of the book was accepted almost universally, and the German scholar Kleuker was an ardent supporter of its authenticity, translating du Perron's work into German, and adding a collection of classical allusions to the Magi and the religion of the ancient Persians (9 parts, Riga and Leipzig, 1776–83). This discussion as to the authenticity lasted for fifty years, during which time little or no work was done on the texts themselves.

About the year 1825 the texts began to be studied by Sanskrit scholars. The close affinity between the two languages had already been noticed by various scholars, but the Danish philologian Rask first pointed out more exactly the relation between them. He had travelled in Persia and India, and had brought back with him many valuable manuscripts of the Avesta and the Pahlavi writings. In a little volume published in 1826 he

proved the antiquity of the language in which the Avesta was preserved, showed that it was distinct from Sanskrit, though closely related to it, and made some investigation into the alphabet of the texts. At about the same time the French scholar Burnouf began to study the Avesta. He soon found philological inaccuracies in Anquetil's translation; and with the help of Neryosangh's Sanskrit version, he was able to restore sense in many passages where before there had been but little. These further steps soon settled the question of authenticity. The foundation thus laid was built upon by such scholars as Bopp, Haug, Windischmann, Westergaard, Roth, and Spiegel, whose efforts were directed mainly to the establishment of a better text and the development of principles of investigation. For a long time the battle raged about the question of the relative value of the traditional and the linguistic methods, some scholars extolling the value of the Pahlavi version and the priestly tradition, and others placing supreme faith in the results of comparison with Sanskrit and other tongues. It is only in recent years that it has become generally recognized that in the interpretation of the Avesta neither of these methods should be employed to the exclusion of the other. Both have positive value, and a judicious balance of these two principles will henceforth doubtless be a fundamental requisite for sound scholarship in this field, which is being cultivated by a small but active band of workers.

LITERATURE.—i. *TEXTS*: Westergaard, Copenhagen, 1852-54; Spiegel, 2 vols., Vienna, 1853-58 (only Yasna, Visparad, and Vendīdād, but with the Pahlavi translation); Geldner, 3 parts, Stuttgart, 1886-96 (the standard ed.); Haug, *Die fünf Gâthâs*, 2 vols., Leipzig, 1858-60; Mills, *Gâthâs*, Leipzig, 1892-94 (with Avesta, Pahlavi, Sanskrit, and Persian versions, and translations of the first three); Baunack, 'Die drei wichtigsten Gebete der Parsen . . . und das siebenteilige Gebet (Yasna Haptaṅhāiti),' in *Studien auf dem Gebiete der griechischen und der arischen Sprachen*, i., Leipzig, 1886, pp. 303-473; Burnouf, *Vendidād Sadé*, Paris, 1829-43; Brockhaus, *Vendidād Sadé*, Leipzig, 1850; Antia, *Vendīdād Sadé*, Bombay, 1901; Sanjana, *Nīrangastān*, Bombay, 1894; Dhalla, *Nyaishes* (with versions and tr.), New York, 1908; Geiger, *Aogemadaēcā*, Erlangen, 1878; Haug, 'Hādōkht Nask,' in *Book of Arda Viraf*, Bombay, 1872, pp. 270-316 (with translation); Jamaspji and Haug, *Old Zand-Pahlavi Glossary*, Bombay, 1867; Reichelt, 'Frahang ī-Oīm,' in *WZKM* xiv.-xv.; Darmesteter, *Le Zend-Avesta*, iii., Paris, 1893 (including various fragments). For other fragments see Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, pp. ix-x.

ii. *TRANSLATIONS*: Anquetil du Perron, *Zend-Avesta, Ouvrage de Zoroastre*, 2 vols., Paris, 1771; Kleuker, *Zend-Avesta*, 9 parts, Riga and Leipzig, 1776-83 (a German translation, with additions, of the preceding); Spiegel, *Avesta . . . übersetzt*, 3 vols., Leipzig, 1852-63 (tr. into English by Bleeck, 3 parts, London, 1864); Pietrazewski, i., Berlin, 1864 (a *curiosum* of distorted learning); Darmesteter and Mills, in *SBE* iv., xxiii., xxxi.; de Harlez, *Avesta*², Paris, 1881; Darmesteter, *Le Zend-Avesta*, 3 vols., Paris, 1892-93; Söderblom, *Ur Avesta*, Stockholm, 1908; Mills, *The Gâthâs of Zarathushtra*, London, 1900; Bartholomae, *Die Gâthâs des Awesta*, Strassburg, 1905.

iii. *GRAMMAR AND LEXICOGRAPHY*: Spiegel, *Grammatik der altbaktrischen Sprache*, Leipzig, 1867, and *Vergleichende Grammatik der alterânischen Sprachen*, Leipzig, 1882; Geiger, *Handbuch der Awestasprache*, Erlangen, 1879; de Harlez, *Manuel de l'Avesta*, Paris, 1882; Bartholomae, *Handbuch der altiranischen Sprachen*, Leipzig, 1883, and 'Vorgeschichte der iran. Sprachen' and 'Awestisch und Altpersisch,' in *GIrP* i., Strassburg, 1895-1901; Jackson, *Avesta Grammar*, i., Stuttgart, 1891; Kanga, *Practical Grammar of the Avesta Language*, Bombay, 1891; Pizzi, *Grammatica elementare dell' antico iranico*, Turin, 1897; Justi, *Handbuch der Zendsprache*, Leipzig, 1864; Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, and *Zum altiran. Wörterbuch*, Strassburg, 1906; Mills, *Dict. of the Gâthic Language of the Zend Avesta*, Leipzig, 1902 ff. (still in progress); Blochet, *Lexique des fragments de l'Avesta*, Paris, 1895; Schuyler, *Index Verborum of the Fragments of the Avesta*, New York, 1901; Geldner, *Metrik des Jüngeren Avesta*, Tübingen, 1877; Reichelt, *Avestisches Elementarbuch*, Heibelberg, 1908.

iv. *COMMENTARIES, ETC.*: Spiegel, *Commentar über das Avesta*, 2 vols., Leipzig, 1864-68, and *Nerioṣengh's Sanskrit-Uebersetzung des Yaçna*, Leipzig, 1861; Sanjana, *The Pahlavi Version of the Avesta Vendidād*, Bombay, 1895; Bharucha, *Collected Sanskrit Writings of the Parsis*, i. (Khordah Avesta), Bombay, 1906; also much of the literature cited under i., especially Spiegel and Mills—the latter is also contributing numerous discussions of individual *Hās* of the Yasna to *ZDMG*, *JRAS*, *JAOS*, *Muséon*, etc.

v. *GENERAL DISCUSSIONS*: West, 'Contents of the Nasks' (translation of the Dinkarț passages on the subject)=*SBE* xxxvii.; Spiegel, *Erânische Alterthumskunde*, iii., Leipzig, 1878, pp. 771-797; Haug, *Essays on the Parsis*³, London, 1884; Ayuso, *Los Pueblos iranios y Zoroastro*, Madrid, 1874, pp. 31-55; Geldner, 'Awestalitteratur,' in *GIrP* ii., Strassburg, 1896-1904, pp. 1-53 (Eng. translation by Mackichan, in *Avesta, Pahlavi, and Ancient Persian Studies in Honour of . . . Sanjana*, Strassburg, 1904, pp. 2-82); Browne, *Literary History of Persia*, i., London, 1902, pp. 95-102; Sanjana, *Zarathushtra and Zarathushtrianism in the Avesta*, Leipzig, 1906; Mills, *Zarathushtra (Zoroaster), Philo, the Achæmenids, and Israel*, Chicago, 1906. A. V. WILLIAMS JACKSON.

AVICENNA, AVICENNISM.—I. Life.—The name 'Avicenna' is the Latinized form of the Hebrew 'Aven Sīnā,' the transcription of the Arabic 'Ibn Sīnā.' Abū 'Alī al-Ḥuṣain ibn 'Abd Allah ibn Sīnā was born in the year A.H. 370 (A.D 980-981), in the city of Kharmaitan. The son of a money-changer, and very precocious as a child, he received a first-class education. According to Musalmān custom, he began by learning the Qur'ān and belles-lettres (*adab*). He then studied Indian arithmetic under the guidance of a greengrocer. His next tutor was a philosopher called Nātili, otherwise unknown, who came to reside with his father at Bokhara, and taught the boy the elements of Logic, Euclid, and the Almagest. Avicenna studied medicine without the help of a teacher, and, while quite young, began to visit the sick. Aristotle's *Metaphysics* presented great difficulty to him at first. He read it forty times without understanding it, but at last grasped its purport by means of al-Fārābī's commentaries.

His medical talent soon brought him into favour with royal households. He cured the Sāmānid Sultan of Bokhara, Nuḥ, son of Manṣūr, and then became one of his intimate friends. This gave him access to the Sultan's library, a very valuable one, which shortly afterwards was unfortunately burned. Avicenna was officially employed at the court of Bokhara. Nevertheless, he soon turned his back on it, and travelled through many towns in search of a suitable patron. After short sojourns in Korkanj, Nasā, Abīward, and Ṭūs, he arrived at Jorjān, where he became connected with al-Juzjānī, who afterwards became his disciple. In fact, it is to him we are indebted for the rest of his life-story. The first part of this biography is culled from Avicenna's own account, which has been preserved by Ibn Abī Uṣaibia. This work is doubly precious to us because there are very few autobiographies in Arabic literature.

The *Shaikh*, as Avicenna was called, continued to lead this wandering life, like many savants of his time, in the hope of finding a powerful and faithful patron, whose influence and favour would be lasting. He became, for a time, the protégé of an admirer in Jorjān, then of the Princess of Rai; but he soon passed on to Kazvīn and Hamadān. He cured the Amir of Hamadān, and was entrusted with the post of Vizier. But his term of government was not a happy one. He accordingly renounced all public functions, and, hidden in the house of a druggist, became immersed in the composition of his greatest works. As he had a strong desire to leave Hamadān, he applied secretly to the Amir of Iṣfahān. The Amir of Hamadān discovered this step and straightway imprisoned him; but his captivity did not interrupt his literary work. After many adventures, he succeeded in escaping along with his brother, Juzjāni, and two servants, all five disguised as Ṣūfīs, and at last found a sure refuge with the Buwayhid prince Alā ad-Daula, who reigned in Iṣfahān. There he received the honour and dignities he so well deserved; and there he enjoyed, what he appreciated far more than any honours, tranquillity. At night, he held philosophical meetings, over which the Amir himself sometimes presided.

And meantime he finished his greatest works. Avicenna died in A.H. 428 (A.D. 1036–7), at the age of 58, in the course of a journey, made in the train of his master, to Hamadan.

His biography gives the impression of very great activity—an activity, too, which was exercised in more ways than one. Avicenna loved wine and pleasure almost as much as intellectual work; and he committed excesses which shortened his life. Legend has seized upon his character, and has made of him a sort of powerful but beneficent sorcerer, the hero of strange adventures and burlesque farces. A whole volume of Turkish tales is devoted to him.

2. **Works.**—Avicenna's works are very numerous. In Philosophy, the greatest is *ash Shifā* ('the Cure'). The Shaikh composed it by degrees at his different residences during his wanderings. When it was finished, he made an abridgment of it entitled *Najāt* ('Healing'). This abridgment, written in very concise language, but clear and logical, is suitable for study. Another famous philosophical work is entitled *Ishārāt*. The full title is *Kitāb al-ishārāt wa'l-tanbihāt*, that is to say, 'Book of theorems and propositions.' Juzjāni considered this Avicenna's best work, while he himself put a high value on it. It has been commented on by the scholar Nasīr ad-Dīn Tusi († A.H. 672 [A.D. 1273–4]).

Avicenna's other philosophical treatises are: *Philosophy el-Arudi*, *Philosophy el-Alāi*, so called from the names of the patrons to whom they are dedicated; *Guide to Wisdom*, composed by the Shaikh when in prison, and often commented on; an epistle on *The Fountains of Wisdom*, printed several times in the East; several treatises on *Logic*, one of which forms a part of the *Najāt*; a treatise *On the Soul*; a short poem on *The Soul*, rather a mysterious piece, which has been commented on; an epistle on *The Human Faculties and their Perceptions*, printed at Constantinople; lastly, a series of mystical treatises, and a few poems in Persian.

In Medicine, Avicenna composed the voluminous work entitled *Canon of Medicine*, so celebrated in the Middle Ages. He also produced works on the different sciences, abridged Euclid and the Almagest, and devoted some time to Astronomy. Shortly before his death, he asked Ala ad-Daula for permission to resume the astronomical observations which had been interrupted by troubles and wars. He was also credited in the Middle Ages with some treatises on Alchemy.

3. **Antecedents and characteristics.**—Avicenna belongs to the school which in Arabic literature took the name of 'School of Philosophers' (*al-falāsifa*). This name denotes all the philosophers who made a special study of Greek works, and the scholars who translated them. Shahrastāni (tr. Haarbrücker, ii. 212 f.) gives a list of about twenty who, before Avicenna's time, received this title of Philosopher. Among them are the Christian or Sabæan translators, Hunain son of Ishāq, Thābit son of Qurra, Yahyā son of Adi. Among the Musalmāns, the most celebrated representatives of this school, before Avicenna, are al-Kindi and al-Fārābī. Of these, al-Kindi is the real organizer of Arabic Scholasticism, while to al-Fārābī Avicenna is greatly indebted in Metaphysics, as he acknowledges, and probably also in Logic and Psychology. It is now generally granted that this school was a development of Neo-Platonism rather than strictly Peripatetic. Avicenna seems to have cleared up and systematized the work of his predecessors. In the following account of his original work, we shall not consider the medical or merely scientific portions, but confine our attention to his philosophical outlook.

4. **Philosophy.**—Avicenna's Philosophy may be sub-divided as follows: Logic, Physics, Psychology, Metaphysics, Mysticism, and Ethics. This division is in conformity with the custom of his school.

(1) *Logic.*—The parts of the *Najāt* relating to Logic were translated into French by Pierre Vattier (see Lit. at end of art.). The *Ishārāt* also contains some important passages in this connexion. In a treatise on the *Classification of the Sciences*, Avicenna gives Logic a very prominent place indeed among the sciences. His reason is not only the importance of Logic in itself, but also the comparatively extensive knowledge that the Arabs had of Aristotle's logical works. They were not so intimate with his other philosophical works. In this same treatise Avicenna further subdivides the science of Logic into nine different parts, which correspond respectively to the eight books of Aristotle, preceded by Porphyry's *Isagoge*, one of the best-known works of the Oriental Middle Ages.

The first part, corresponding to the *Isagoge*, is a kind of general philosophy of language, and is occupied with the terms of speech and their abstract elements; the second treats of simple abstract ideas, applicable to all beings, and is called by Aristotle the *Categories*; the third deals with the composition of simple ideas in order to form propositions, which is the subject of the *Hermeneutics*; the fourth unites the propositions together to form demonstrations, and corresponds to the First *Analytics*; the fifth discusses the conditions to be fulfilled by the premisses of reasoning, and is like the Second *Analytics*; the sixth, seventh, and eighth parts respectively treat of probable reasoning, false reasoning, and the art of persuading, and correspond to the *Topics* or *Dialectics*, the *Sophistic*, and *Rhetoric*. The ninth and last part treats of discourses whose aim is to stir the soul or the imagination, like the *Poetics*.

Logic, then, is taken here in a very broad sense; syllogistic is only a part of it. Syllogistic with Avicenna has no very special quality except that of being clear and well arranged, free from vain subtleties and all scholastic trifling.

Although, as we have seen, Avicenna gave Logic a very important place, he did not, at the same time, exaggerate its power. He shows very clearly that this power is, above all, negative. 'The aim of Logic,' he says in the *Ishārāt*, 'is to provide mankind with a rule, the observance of which will prevent him from erring in his reasoning.' Logic then, strictly speaking, does not discover truths, but helps man to make the best use of those he already possesses, and prevents him from making a wrong use of them.

Reasoning, according to Avicenna, starts from terms settled at the outset—the first data of experience and the first principles of understanding. The chain of deductions proceeding by a known deduced from a previously known is not unlimited; it must have a starting-point, found outside of the reasoning, which will be the base of the logical fabric. First, from direct experiences or ideas, descriptions or definitions are formed, and then, by means of these, arguments are arranged. Avicenna cleverly explains what definition is: by definition man is enabled to represent objects; by argument he is able to persuade. Avicenna gives both the senses and the reason a share in the formation of the primary data of the sciences. According to him, imagination always supports reason; opinion also, and even memory, fulfil the same office. There are primary principles which all hold because of common feeling, or because of the opinion of scholars which the illiterate do not contradict; others, again, arise from habits formed in childhood; and others are based on the experiences of life. All these principles (of feeling) join with the first principles, or principles of reason, which are produced in a man by his intellectual faculty without requiring the slightest conscious effort to persuade him of them. The mind realizes itself convinced and is

not even aware of how the conviction has arisen. A self-evident example of these first principles is: 'The whole is greater than the part.' This philosophy is very sound. It is a scholasticism, not yet antiquated, open and sincere, in many places recalling the analyses of Leibniz.

Avicenna further discusses the form and matter of definitions and arguments, distinguishes between definition and description, and sums up, in the manner of the Peripatetics, the different kinds of questions that arise in science: first of all, what a thing is, and if it is; next, where it is, when it is, how it is; and, lastly, why it is. We see here an application of the doctrine of the Categories. Avicenna recognizes the four causes—material, formal, efficient, and final. He shows that they may all appear together in a definition. Thus an axe may be defined as 'an iron implement, of such and such a shape, for cutting wood.' At the very beginning of his Logic, Avicenna explains species, difference, property, and common accident, which together furnish another method of constituting definition.

The Sciences are founded on experiences and reasonings. They have objects, questions, and premisses. As there are universal premisses (see above), so each science has its own peculiar premisses. The different objects of the sciences establish a hierarchy among themselves, according to their dignity. Besides this, the sciences are divided into theoretical science and practical science. The principal subjects of theoretical science are Physics, Mathematics, and Theology; and of practical, Applied Physics, Mechanics and Art, and Ethics. The problem of the classification of the sciences was very popular in the Middle Ages, both in the East and in the West.

(2) *PHYSICS.*—In the philosophical part of his Physics, Avicenna discusses several of the primary ideas of the human intellect, *e.g.* power, time, and movement. He desires from Physics a first acquaintance with the ideas which Scholasticism employs in Logic and Metaphysics, that is to say, with the ideas of form and matter and the categories. The ideas of form and matter are suggested by observation of the physical world: 'Physical bodies, strictly speaking, are constituted of two principles, matter and form; then there are attached to them the accidents which arise from the existence of the nine categories.' Scholasticism divides these accidents into primary qualities, which are inherent in the body, and secondary qualities, which can be taken away without annihilating the body, but which contribute to its perfection.

Avicenna's conception of power is more closely allied to dynamics than to statics. He is interested in the energy acting from within the body rather than in the forces which move it from without. Like Aristotle, he allows that each body has a natural place, to which it always returns, by some hidden power, when it has been removed from it. The commonest example of these innate powers is 'weight.' This idea of power is developed in Psychology and Metaphysics. In Physics there is no infinite power. Its effects are always either greater or less. Avicenna recognized the principle of mechanics that 'what is gained in power is lost in speed.'

Time he explains by movement, and it cannot be imagined otherwise. Time cannot be conceived in immobility; it would then be of fixed duration, and no longer true time. 'Bodies,' says Avicenna, 'are in time, not in their essence, but because they are in movement, and movement is in time.' Time was created, and it is nowhere except in itself. For the world in general, it is measured by the movement of the stars.

Avicenna also speaks of the locality of bodies, then of space and impenetrability. He tries to show, by somewhat subtle reasoning, that bodies cannot move in a vacuum, because, he thinks, the dimensions of a vacuum are impenetrable, from which he concludes that a vacuum does not exist. He does not admit the possibility of actual infinity. Like the ancients, he believes that the world is finite, and that there is outside of it neither fullness nor emptiness, but absolute nothingness. He admits, again, that bodies are divisible *in potentia* to infinity, and he rejects atomism. Atomism had its partisans at this time, the *mutakallim* ('theologians'), with whom Avicenna disputes. In this connexion too, he analyzes the idea of contact very cleverly.

Avicenna unfortunately hardly managed to rid himself of the errors of Peripatetic Physics, although he had the opportunity several times. Yet, from a philosophical point of view, his account, besides forming interesting reading, bears witness to a very acute intellect.

(3) *PSYCHOLOGY.*—In Avicenna's doctrine, Psychology is carefully systematized, and adheres to the scholastic form. Beings, and also the faculties, are classified methodically according to a hierarchic arrangement. The general plan of this grand construction is as follows:

There are three kinds of minds. These are, in ascending order, the vegetable mind, the animal mind, and the reasonable or human mind.

The vegetable mind, or nature, possesses three faculties: (1) nutritive power, which, when resident in a body, changes another body into the form of the first; (2) power of growing, by which the body itself increases, without changing its form, until it has attained its full maturity; (3) power of generation, which draws from the body a part similar to itself *in potentia*, which will, in its turn, produce other bodies similar to it *in actu*.

The animal mind possesses two kinds of faculties: motive faculties and apprehensive or perceptive faculties. (1) The motive faculties embrace appetitive power and efficient power. The appetitive power itself is either attractive or repulsive. If attractive, it is simply desire, concupiscence; if repulsive, it is irascibility, passion. The efficient power, which is the producer of movement, resides in the motor nerves and the muscles. (2) The perceptive faculties of the animal mind are classified as external and internal. The former include the five senses—sight, hearing, smell, taste, and touch. The latter have their beginning in the common sense, a sort of centre in which all the perceptions assemble before being elaborated by the higher faculties. The common sense is situated in the front part of the brain. The first faculty to act on the perceptions is the formative faculty or imagination. It strips the sensible form of the conditions of place, situation, and quantity, and then retains it after the object has ceased to make an impression on the senses. The formative is followed by the cogitative faculty, which works first of all by way of abstraction on the perceptions, now prepared, and draws notions out of them. The estimative faculty next groups these notions into what might be called judgments, but which are quite instinctive and not intellectual. This faculty it is which constitutes 'animal intelligence.' For example, the sheep knows by it to flee from the wolf. The last of the faculties of the animal mind is memory, which is situated in the back part of the brain.

The human mind alone possesses intelligence. This intelligence is divided into active intelligence, or practical reason, upon which morality depends, and speculative intelligence, or theoretical reason, which perceives ideas. The perception of ideas is built up through three faculties, which act so as to make the intelligence pass from mere power to actuality. The first of these faculties, the material intellect, is only a general possibility of knowing; the second, the intellect of possession, recognizes first principles; the third is that which is directly fitted to receive the forms of things that are intelligible. It is called the perfected intellect. It seizes hold of that which is intelligible, when, outside the human mind, it unites with the 'active intellect.'

There naturally arise, in the course of this theory, physiological questions regarding the functions of the senses and the localization of the different faculties. Avicenna treats of these as

best he could at a time when the biological sciences were as yet hardly in their infancy.

For example, he discusses the manner in which visual images are transmitted to the eyes, and draws a parallel between two processes of explanation, which he attributes respectively to Aristotle and Plato. He accepts Aristotle's method and rejects Plato's.

The discussion of the intelligence also brings up the question of universals. This question was not so pre-eminently important in Arabic as in Western scholasticism. Avicenna is a realist. Like the Neo-Platonists, he admits that the intelligibles, which are universals, exist in the active intellect. The human intelligence comprehends them *in actu*, when it unites with the active intellect. It also frees them from the particulars which the senses recognize. But this process of abstraction is not sufficient; it is only preparatory, and gives the comprehension of the universals only *in potentia*. Before this can pass to actuality, man's intelligence must become united with a superior intelligence. The reasonable mind starts from the sensible, and little by little rises above it, approaching meanwhile the region of universal realities. Psychology ends in Metaphysics.

The following are Avicenna's proofs of the spirituality of the soul. The soul perceives its own peculiar essence; intellectual power perceives ideas apart from organs; the locale of intelligibility cannot be a body. The immortality of the soul follows directly from its spirituality. The dependence of the soul on the body is not essential but accidental. Another form of this proof is that the soul is a simple substance.

Avicenna believes that the soul is created at the same time as the body is formed, and is to a certain extent in harmony with the body it is to animate. This condition of compatibility with the body makes metempsychosis impossible.

(4) *METAPHYSICS.*—There is one part of Avicenna's Metaphysics which seems quite old-fashioned now, and we must go back in imagination to the beginning of science to find any sense in it. It treats of the procession of the superior intelligences and the production of the celestial spheres. On the other hand, there is a part which seems still good and sound, although it has a systematic character no longer found in modern works of philosophy. This part treats of primary cause and necessary being. The following is, very briefly, the theory of the spheres:

The scale of beings, mentioned above [see § (3)], from the vegetable world up to man, is continued beyond man into the region of the stars. At the top of this scale is the Necessary Being, the principle of principles, who is perfect unity. From this first Being emerges the world of ideas, which is a collection of pure intelligences, simple substances, exempt from multiplicity and change. Below this world of ideas or intelligences is the world of souls. The souls are essences, bound to pure intelligences, which animate bodies. The bodies that they animate in this supra-human region are the stars, which are classed after the manner of ancient astronomy. Beneath the intelligences of the stars, below the last of them, which animates the moon, is the active intellect. From it flows the sublunary world.

Very noticeable in this theory is the analysis of the world of ideas into active intellect and astronomical intelligences. The unchangeableness of the stars is an old belief which was disputed down to the time of Galileo; and the comparison of their spheres with a superior kind of animal is an idea which dates back further than the Hellenic world, and which was long dear to the East.

In connexion with this system, which strikes a modern reader as uncouth, Avicenna discusses in a dignified manner the metaphysical theory of causality. He considers that the pure intelligences are the causes of each other in descending order, and the causes also of the souls of the spheres, and, through them, of their bodies. He holds, then, that intelligence is essentially active; it is even productive of being; and cause usually is simply intelligence. Elsewhere cause is identified with being itself; it is perceptible especially in the primary Being, who is intelligence and principle at the same time, and includes in His essence everything of which He is the principle. 'He comprehends everything in a universal manner, and at the same time no attribute of any particular thing, in the heavens or on the earth, is hid from Him, not even the weight of a *dirrah* (an atom).' He is, at the same time, a final and an efficient cause. The final cause precedes the efficient *in potentia; in actu* the efficient precedes. The cause of the efficient cause is the final end and aim.

God is not the actual moving power of the stars, for this function would beget a certain multiplicity in Him, and, according to the spirit of Avicennism, He must above all safeguard His simplicity. He moves the stars by the intermediation of the first caused, that is, of the first intelligence which springs from Him. This intelligence knows itself and it knows God. From this double knowledge arises a duality. The duality then changes to triplicity when the first caused still knows itself as possible in itself, and as necessary in the primary Being. In this way this philosophy introduces multiplicity into the world.

The doctrine of universals reappears in connexion with that of causes. There are causes of kind and causes of individual; the general has its own causes, the particular has others. A thing has a cause of its quiddity and another of its being, *i.e.* a cause by which it is what it is, and another by which it exists. If a thing is to be individualized, its idea must be able to receive the effect of particular causes.

The idea of the necessary Being is the terminus of the theory of causality. The necessary Being as such has no need of causes. He exists from the beginning complete, with all His qualities. He is absolute. He is pure good, for He possesses the perfection of existence, and existence in itself is goodness: existence, always *in actu*, is pure good. He is pure truth, for that is called true which can justly be said to exist, and, as His existence is necessary, He is therefore absolute truth.

The theory then takes quite a geometrical form. A demonstration composed of three lemmas proves the necessary Being:

(1) All possibles cannot spring from one possible cause, on which their series mounts up infinitely; (2) a series of causes finite in number cannot be possible in themselves and necessary to each other, so that they depend on one another in a circle; (3) everything produced has a cause, and every cause is determinating. This consequently signifies that all possibles must have cause, that causes are not linked together infinitely, and do not return on themselves. Therefore the series of possibles ends in the necessary Being.

This theory is a very fine effort to prove God and to deduce the world from Him in a vigorous way, by a dialectic of mathematical precision. Faith in the power of reason is manifested in this system. To us, who are now more sceptical, it seems pure rationalism, but rationalism in its infancy and slightly deceived by itself. It is redeemed, however, by its vigour and power.

(5) *MYSTICISM.*—It is doubtful whether Avicenna was really a mystic in the religious sense of the word. Here again he has followed the custom of the Neo-Platonic school, regarding mysticism as primarily a subdivision of philosophy. Ibn Ṭufail seems to say that Avicenna had a kind of esoteric doctrine called *ḥikmat-al-ishrāq*, 'philosophy of illumination,' which really contained his true ideas. But we know from one of the treatises of Suhrawardi al-Maqtūl that this philosophy is almost exactly Avicenna's own Neo-Platonism with a different nomenclature.

Passing over mysticism as related to asceticism,

ecstasies, and illumination, we shall confine our attention to Avicenna's teachings on Providence and the future happiness of the soul, in so far as they are complementary to metaphysics and morals. He describes Providence as the fact that the whole world is encompassed by the knowledge of primary Being. This knowledge is cognizant of the most perfect order as that which flows naturally from the Being. The theory of optimism, exhibited in this idea, is similar to Leibniz's: evil is not a part of Divine decree *in essentia*; its place there is accidental. Avicenna recognizes the three kinds of evil: want, physical suffering, and sin. We find evil only in what is still *in potentia*, and has not yet attained perfection. It affects only the individual; species are shielded from it. Evil, moreover, is always a good from some superior point of view. 'It does not enter into the plan of Divine wisdom to abandon lasting and universal good, because of fleeting evil in individual things.' Like Leibniz, Avicenna decides that, however common it may be, evil is not the general rule; it is only the exception to the good.

After death, the reasonable soul attains perfection. To effect this, it must become conscious and intelligent, and receive within it the form of harmony and well-being which pervades the world of superior essences. It unites with this idea of perfection, and so becomes like it. Only the soul which has been prepared by the practice of the virtues enjoys this happiness. Otherwise its taste is vitiated; it cannot attain its end, and accordingly suffers. But if a man has lived a mediocre life, his actions never reaching the height of his intentions, his soul, when freed from the body, becomes the centre of a struggle between his pure desires and his bad habits. Only when purified by this grievous struggle does it attain perfect bliss.

(6) *ETHICS.*—Avicenna, enamoured of the speculative part of philosophy, was on that account less interested in practical philosophy and moral analysis. In his mystical works, he has some fine pages on morals, but their character is distinctly metaphysical. He also wrote on ethics as well as a short treatise on *Government*, which was published recently. It is written in a practical spirit, but is really an elementary treatise in economics. It explains how a man should govern himself, his wives, his children, and his servants.

From the very earliest times, humanity felt a need of organisation. First of all, man had to settle in places where he could most easily and comfortably live. This led to the setting up and choice of dwellings. Once established, these required looking after. This duty was entrusted to the woman. From the woman the family was born, and, as it increased, servants were added to the household.

Man's need of subsistence was also the primary promoter of commerce and the arts. Avicenna divides the arts into three kinds: (1) those which are dependent on intelligence of the highest order, *e.g.* guidance, judgment, counsel; these are exercised only by the great; (2) those dependent on education, *e.g.* writing, speaking, medicine; (3) those founded on strength and courage, as military arts. Every individual should learn one of these and apply himself to it.

The good wife is her husband's associate in ruling and guiding. The best kind of wife is intelligent, religious, fond of her children, and sparing in words.

The management of the family is based on fear, dignity, and care. If a man does not make himself feared, his wives will domineer over him. The husband must see to the dignity of the family life by providing for clothing, veiling his wives, and preventing any jealousy from arising among them. The wife must give unremitting attention to her children and servants. Avicenna says a few words about the education of the one and the choice of the other. The woman whose mind is not occupied with domestic cares thinks of nothing except how she can best attract the attention of men by the beauty of her dress, and forgets the honour due to her husband.

5. **Avicenna's school.**—The school of Avicenna does not boast any very celebrated names. His philosophy was combated and refuted among the Musalmāns of the East by orthodox theologians, especially by al-Ghazālī. For the history of the school of 'Philosophers' proper in Western Islām, see AVERROËS, AVERROISM.

LITERATURE.—(*a*) On the MSS of Avicenna's works: C. Brockelmann, *Geschichte der arabischen Literatur*, Weimar and Berlin, 1897–1902. For Avicenna's life: Ibn Abī Uṣaibia, '*Uyūn al-Anbā*', ed. Müller, Königsberg, 1884, pp. 2–20. Avicenna's general philosophy: Carra de Vaux, *Avicenne*, Paris, 1900; S. Munk, 'Ibn Sînâ,' in Franck's *Dictionnaire des sciences philosophiques*; T. J. de Boer, *The History of Philosophy in Islam*, London, 1903. A very important work is now in process of preparation in Germany on the *Shifā* of Avicenna.

(*b*) The *Najāt* was published at Rome along with the *Canon of Medicine* in 1593; the *Ishārāt*, ed. Forget, Leyden, 1892; *La Logique du fils de Sînâ*, tr. Vattier, Paris, 1658.

On morals, 'Un Traité inédit d'Avicenna,' in the *Mashriq*, Beirut, 1906 (text).

B^ON CARRA DE VAUX.

AWE.—In the presence of an awe-inspiring object, we feel ourselves subdued, but are placid: we are powerfully laid hold of, but neither resist nor desire to be set free. On the contrary, we are drawn towards the object, and its presence is welcomed by us, though with a serious and pensive joy. The affections, then, are enlisted, as well as the imagination. The appeal is made to that part of our nature that is open to influences from what is higher or greater or grander or better than ourselves. We feel our inferiority, indeed, but there is no resentment; we are conscious that the superiority in the case is the complement, and not the contradiction, of ourselves. This is in line with the experience of the finite resting on, and complemented by, the infinite, and of 'the less being blessed of the better.'

Greater, higher, grander, better—these are the conditions of the possibility of the emotion of awe; and there is the further condition that these should not appear as threatening us with danger, but as friendly, or, at any rate, as not unfriendly. If all were on our own level, this peculiar emotion could not arise; and if we were threatened with evil, a contrary emotion would be aroused. The antithesis to the awe-inspiring in objects is the commonplace and the obvious, or the despicable and the mean—everything that tends to lower, and not to elevate, the soul. Dealing with what impresses us, awe is by its very nature contemplative and ennobling; it allies itself with our ideals and our aspirations, and is helpful towards enabling us to purify and to perfect character. That is its ethical value. Hence, mystery intensifies it—the unknown and the unknowable. We cannot but be serious in the presence of mystery. The feeling of the mysterious, when it takes possession of us, necessarily subdues us and keeps us humble.

We shall better understand the nature of the emotion, if we note the objects that call it forth. Some of these are impersonal, and some are personal. Of the impersonal causes, we have (*a*) phenomena of nature showing either the vast or the incomprehensible, objects that transcend our power of understanding or that give special scope and exercise to our imagination—such, therefore, as are exceptionally impressive and create in us a certain indefinite yearning, wonder, and admiration; *e.g.*, the starry heavens, the magnitude or vastness of

space, the infinity of time, the origin of life, the mystery of generation, and the like. But, besides these, we have (*b*) intellectual theories and moral principles—generalizations of commanding sweep and laws of transcendent excellence. Of the two things that made the profoundest impression on Kant, the Moral Law was one: the grandeur of it, the unconditionality of it, the authority of it—all contributed to make it awe-inspiring to a degree. In all this we have the feeling of feebleness or unworthiness on our part, and the contrast of might and worth set over against our impotence and imperfections. Next, we have (*c*) awe as associated with persons—an intellectual genius like Plato or Aristotle, a literary genius like Shakespeare or Goethe, a scientific genius like Newton, an ethical or a religious genius like St. John or St. Paul. But, of course, the highest of all examples is God—supreme in Majesty, the source of all the excellences ('wisdom, love, might'), and the fountain of Holiness. We have here the realization of the Ideal, which points the contrast,—'Woe is me! for I am undone; because I am a man of unclean lips, and I dwell in the midst of a people of unclean lips: for mine eyes have seen the King, the Lord of hosts' (Is 6^5). It is the contrast of the sinful and the weak, in presence of the Pure and the Strong; and yet, the purity and strength do not repel but attract us. It is felt that underneath the majesty and greatness lie beneficence and mercy: in the hands of the Supreme, we feel ourselves secure. Again, we have (*d*) things sacred causing awe—things associated, therefore, with the Divine. Such are shrines and holy places (see art. 'Bethel' in Hastings' *DB* and in *EBi*), the soul-moving services of religion on special occasions—the dispensing of Communion in Protestant Churches and the Elevation of the Host in the Church of Rome. Last of all, and akin to this, is (*e*) the awe that is associated with solemnity—*e.g.* the presence of Death, the death-chamber, funeral rites. Speaking of St. Edmund, Carlyle says:—

> 'They embalmed him with myrrh and sweet spices, with love, pity, and all high and awful thoughts; consecrating him with a very storm of melodious adoring admiration, and sun-dyed showers of tears;—joyfully, yet with awe (as all deep joy has something of the awful in it), commemorating his noble deeds and Godlike walk and conversation while on Earth' (*Past and Present*, bk. ii. ch. iii.).

Now, this being so, there can be little difficulty in perceiving the relation between awe and fear. The dictionary subsumes the one under the other: it makes awe simply a species of fear or dread. No greater error could be committed; for neither in their nature nor in their results have the two much in common. It would be ill both for ethics and for religion if they had.

It is the peculiarity of fear (*q.v.*) to agitate and unsettle us. It deranges the body and unhinges the nerves, producing well-marked outward effects (shaking of the limbs and frame, disturbance of vocal utterance, erection of the hair, and such like); but it has well-marked psychical effects also—intellectual and volitional. The first effect of fear is to stimulate us to resistance or to circumvention, and, if the terror is not excessive, it braces us for the effort; but, beyond that stage, it becomes detrimental and may be ultimately disastrous. However exhilarating fear in moderation may be, its normal action on the intellect is disturbing and disconcerting: it destroys the power of correctly appreciating the situation, and creates a tendency to magnify the danger, and so an inability to perceive the right course of action to be pursued if the impending evil is to be prevented. If at one moment the intellect, under fear, counsels resistance, at another moment it encourages to flight; till, last of all, it becomes powerless to counsel in any form—it simply collapses. So that, thus far, fear may be defined as 'nothing else but a surrender of the succours which reason offereth' (*Wisdom of Solomon* 17^{12}). But the effect on the will is no less conspicuous. Danger, if moderate, may act advantageously on the will and arouse it to effective opposition; but, beyond this point, the result is disquieting and weakening, until, in extreme cases, absolute paralysis sets in, and the subject can do nothing but remain helpless and await his fate. And so, fear *repels*, and does not attract; and its tendency is to *paralyze* both intellect and will and bring about disaster. Moreover, when the moment of fear is past, our attitude towards the object that created it is one of *hatred* or *dislike*.

Not so with awe. In most of the respects now enumerated, it is the antithesis of fear. It has a calming and quieting influence on the body (as seen in the bowed head, the soft walk, the restrained speech, and the reverential look, of the subject of it); and, inasmuch as it *attracts*, instead of repelling, it produces satisfaction and contentment, and a desire to continue in the presence or under the influence of the object that inspires it. In awe, we feel ourselves in the hands of superior power, but power that is conceived as beneficent or not maleficent, as well-disposed, or at least not ill-disposed, towards us, and under whose protection we may rest *secure*. The consciousness of danger (and therefore fear) is wanting, and the feeling of reliance takes its place. We trust the awe-inspiring object, and are attracted towards it, and we rest in the experience of it, and are satisfied. Hence the importance and significance of awe as a religious emotion, with its concomitants of reverence and veneration. It lies at the root of worship, and is the indispensable condition of the highest spiritual peace.

Hence, further, awe enters into the sublime. Not every sublime object, indeed, need beget awe (for pain sometimes is associated with sublimity, and fear is a distinctly felt ingredient of it, producing uneasiness); but much that is sublime also impresses us with awe. Both are results of the manifestation of power or excellence, and both are most effective when associated with Personality. Moral heroism, for instance, and magnanimity are of this stamp—greatness of soul rising superior to misfortune or adverse circumstances. 'Athanasius contra mundum' (a unique figure defying opposition, standing erect in solitary grandeur in the face of fearful odds) can never cease to move us strongly—to draw forth our admiration and to enlist our regard; and there are many acts of self-sacrifice and many lives of disinterested devotion that are sublime and awe-inspiring in the highest degree. They elevate our thoughts and win our affections; they purify our souls, and we feel that we are all the better for the contemplation of them.

WILLIAM L. DAVIDSON.

AXE.—There were several forms of axe, or adze, in use amongst the Greeks, as amongst other nations; but a special controversy has arisen over the *πέλεκυς* or *λάβρυς* with double blade, owing to its association with Zeus Labrandeus.

The double axe is derived from one of the Stone Age types, in which the handle passes through the middle, and the stone is thinned away to the twc flanges. Examples of this type may be seen in

any good collection, such as the Pitt-Rivers Museum at Oxford. The type was first translated into bronze, and then the form was modified, the wings growing and assuming a more curved outline. It may have been some variety of this axe that permitted the feat of Odysseus.[1] The axe is an ordinary tool or weapon in common use. In the black-figured vase-paintings of the Birth of Athene, Hephaistos uses it to split the divine skull.[2] Specimens with the marks of use on them have been found with other tools in a carpenter's shop at Anthedon,[3] and with other tools at Gournia and Palaikastro in Crete,[4] and at Troy.[5] A late Attic relief shows a youth holding one as a tool.[6] On other works of art, Ino attempts to kill Phrixus with this axe,[7] Theseus fights with it,[8] the Amazons are frequently armed with it.[9] It is represented as part of Gaulish war-spoil, along with other arms and weapons, upon many reliefs;[10] and it was dedicated as war-spoil.[11] It was used to slay the sacrificial victim by the Hittites and at Pagasæ,[12] and in Crete, where a priestess is represented with one in each hand,[13] and there is other evidence to be considered anon. Here is enough to prove that this axe was a war-weapon, or tool, and a sacrificial implement in common use.

We are now in a position to understand its meaning in the hands of divine persons. Zeus of Labranda is well known to have held it:[14] but so does Artemis,[15] so does Dionysus,[16] so does Apollo in Asia Minor,[17] so do the local heroes in Asia[18] and elsewhere.[19] These use it, no doubt, as a weapon of war; and Zeus with his axe manifestly protects Labranda as Athene armed cap-à-pie protects Athens, or any other armed deity stands forth in his might. We may even fairly suggest that the name Labranda has some such relation to *labrys* as Damascus or Toledo to their famous sword-blades.

The use of the axe in sacrifice seems to be enough to account for its representation along with the ox-skull, first as a memorial of sacrifice, and then as a decorative scheme. Here our evidence comes largely from Crete and the Mycenæan age. Mr. A. J. Evans has found representations in which the ox-head is surmounted by an axe, the handle being fixed in the skull: one is a Knossian seal,[20] another a Mycenæan vase-painting from Salamis.[21] The object called by Evans 'horns of consecration' (see ÆGEAN RELIGION), which is obviously a stand of some sort, and apparently is a conventionalized ox-skull,[22] also had the axe fixed in it;[23] one was found in the Knossian shrine with a hole, and a small double axe of steatite lying near, so that it may be fairly assumed that the axe stood in the hole.[24] The axe also becomes an

ornament of vases and other works of art.[1] We may compare with this the use of the ox-head with wreaths in a frieze, so common in Roman times; and the reliefs of ox-heads with other sacrificial implements carved on altars.[2] The axe shown is found carved with a late dedication to Apollo in Asia Minor, once apparently to commemorate the sacrifice of a bull.[3] It may perhaps be mentioned that the ox-skull, or its model, is hung up as a charm in gardens and vineyards by the modern Greeks, commonly in the Asiatic islands, and less commonly elsewhere.

The axe was an object of dedication, like any other weapon or tool. We have seen it as part of war-spoil; the axe was also dedicated to Apollo at Delphi;[4] and in the Dictæan cave of Zeus 19 axes were found,[5] along with 20 lance-heads, 25 darts, 160 knives, pins, and tweezers, a cart drawn by oxen, human and animal figures, vases, and other things. All the Cretan axes are *simulacra*, being too thin or too small for use; but most are perforated, and some have handles. Other tiny axes of this sort have been found, of different types: thick and solid, like stone axes; thin, and sometimes marked with dots like dice; sometimes the handles are perforated for hanging. These have been also dedicated to Zeus in Dodona, Olympia, and Palaikastro (Crete);[6] to Artemis in Arcadia,[7] in Ithaca,[8] and at Ephesus;[9] and to Athene and Artemis Orthia at Sparta.[10] The axe also becomes a motive of ornament;[11] and axes were found made of gold and bone in tombs and elsewhere.[12]

It is obvious that these dedications cannot be held to have any peculiar appropriateness to Zeus, because they are dedicated also to Athene, Apollo, and Artemis, and with them are found many other things that are not peculiar to Zeus. They are not for use; they may be either models of war-spoil,[13] or ornaments, or perhaps fractions of the axe-unit of exchange. Similar axes are known in modern times as fractions of the axe-unit, and there are indications that the unit was known in Greece;[14] or again, the shape may have remained as traditional after they ceased to be used in exchange.

It remains to discuss the graphic representations of the axe. The blocks that compose the walls of the palaces at Knossos and Phaistos are scored with a number of different signs, which occur either alone or in conjunction, just as the symbols of writing might do. Amongst these is the double axe, which is repeated alone a number of times on the four sides of a square pillar in the corridor at Knossos. Whether the pillar be sacred or not[15]—and there is at least room for doubt—there is no sufficient ground for regarding these signs as sacred. Such an explanation would account for only one out of many signs, all used together in the same way. It must also be

remembered that these signs were certainly covered over with plaster, as some of them still partially are. The Italian excavators of Phaistos regard them as literary signs; they all, or nearly all, occur on gems. Several, including the double axe, occur on the literary tablets of Knossos, and are interpreted as writing by Evans himself.[1] They are probably masons' marks; and some of them, including the double axe, have been noticed on stone blocks, apparently used for masons' marks, in other places, as the old Hellenic blocks used to build the mediæval fortress of Cos,[2] and the stones of Heriot's Hospital, Edinburgh.[3]

The above is enough to show that the double axe is not necessarily sacred, or necessarily connected with Zeus. But this is no reason why the axe should not have been the object of worship. Axe-worship is, of course, not fetish-worship, as some have loosely called it; but instances are not uncommon of weapons being worshipped, whether as weapons or as iron. Evans, in his paper on 'Mycenean Tree and Pillar Cult,'[4] has alluded to the subject; and A. B. Cook has collected evidence for axe-worship outside Crete.[5] The evidence for Crete is of varying value: the most weighty piece of evidence is the representation on the Hagia Triadha sarcophagus: a priestess is pouring some red liquid into a jar between two double axes.[6] The other evidence, such as axes set between horns, held in the hands of god or priestess, or visible on the ground of engraved seals, is indeterminate; but these may strengthen the case for worship, if it be established otherwise. Cook publishes a cut of a priest sacrificing before a number of objects, including an ibex, a star, a crescent moon, and two knobbed sceptres with a (one-flanged) axe set upright upon a stool (Assyrian); a Persian seal shows a worshipper before a stool with similar objects upon it. A coin of Tenedos[7] shows an axe upright standing on steps between two supports; another, an axe connected with a jar by a fillet. These seem to be the most significant facts that bear on an axe-cult; it is impossible here to recount all that has been brought in evidence to prove it, or to discuss the far-reaching and often fanciful inferences that have been drawn from them. The reader, however, may be reminded that there are several distinct questions, which have been often confused: (1) Was there an axe-cult? (2) Was the axe specially connected with Zeus? (3) Was the axe a symbol of Zeus, that is, was it treated as Zeus because associated with Zeus? (4) Is λαβύρινθος derived from λάβρυς? (5) Is the Knossian palace the Labyrinth?

LITERATURE.—The literature has been given throughout the article.

W. H. D. ROUSE.

AXIOM.—I. **Meanings of the term.**—The various senses in which the term 'axiom' is used are easily confused, and require to be carefully distinguished. We may mention five senses of the term, all of which are historically important. (1) Axiom in a predominantly *epistemological* sense: a proposition whose truth is self-evident; an immediately certain, objective truth. (2) Axiom in a predominantly *psychological* sense: a proposition of whose truth the man who calls it an axiom feels a fixed persuasion, while he regards the proposition as indemonstrable, and his faith as something fundamental and, for him, necessary; a proposition held to be true with an unwavering faith. (3) Axiom in a predominantly *logical* sense: a first principle which, itself not demonstrated, can be used as a basis for demonstrations. (4) Axiom in a predominantly *social* sense: an opinion which is, as a fact, accepted by all who are competent to understand its import. (5) Axiom in a predominantly *psycho-genetic* sense: an opinion which the innate constitution and the original instinctive tendencies of the mind lead us to accept, and which we therefore do not derive merely from our experience.

1. From the point of view of sense (1) all our knowledge is supposed to be either 'mediate' or 'immediate.' An axiom is a proposition known to be true, not 'mediately,' but 'immediately.' For this view, 'intuitive knowledge,' 'immediate insight,' 'direct assurance,' or 'evidence' is presupposed, as a possible form of knowledge and of consciousness. The criterion of an axiom is said to be that, when we consider the import of a given axiomatic proposition, this state of consciousness, this direct assurance, arises, and makes wholly unquestionable the truth of the particular axiom which comes under our observation. Here the stress is laid, therefore, first upon the *immediacy* of the insight in question. To think the axiom, and to know it to be true, are supposed to be simply inseparable acts. The assurance or 'intuitive knowledge' in question is further regarded according to sense (1) as *objective*. One does not mean by the term 'axiom,' when thus used, merely to point out the fact that a given person *feels sure* that this axiom is true. Sense (1) implies that whoever accepts the truth of the axiom 'intuitively knows,' that is, directly observes, the perfectly objective fact that the axiom is true.

2. Sense (2), on the contrary, lays stress upon what may turn out to be the *subjective necessity* with which some one *feels convinced* of the truth of the proposition. When such a feeling of necessity attends a conviction, and when no demonstration of the truth of the conviction can be given beyond the mere observation that, so long as one conceives the meaning of the proposition, one feels thus convinced, sense (2) requires one to call the proposition an axiom. Sense (2) therefore makes the criterion of an axiom *relative to the subject who feels the necessity*, and who is unable to give other reason for his conviction.

Sense (1) is present in the mind of Descartes when he speaks of propositions which we 'clearly and distinctly perceive to be true.' Sense (2) is emphasized if one lays stress upon some sort of 'unswerving' and, as one conceives, necessary 'faith' or 'assurance.' Aristotle maintains that the 'principle of contradiction' is immediately evident in sense (1). But in sense (2) various subjects, appealing each to his own subjective necessity, may regard as axioms propositions which other thinkers are known to regard as false. Thus the proposition that 'water cannot turn solid' might be regarded as an axiom in sense (2) by a dweller in the tropics, who, hearing for the first time a story of frosty weather in high latitudes, rejected it as essentially incredible, and found his unbelief wholly insurmountable.

Senses (1) and (2) are often confused. The question as to the relation between objective 'evidence' and subjective 'certainty' is central in the theory of knowledge, and only a thoroughgoing sceptic will deny that there is indeed a close connexion between at least *some* of our 'assurances' and the objective truth. But the danger of confounding mere 'conviction' with objective 'evidence' is manifest throughout the history both of science and of religion.

3. Sense (3) makes the use of the term 'axiom' *relative to a given or proposed theory or system*, consisting of propositions and of reasonings. In this third sense an axiom is a proposition which is not demonstrated in the course of the development of the system in question, but is assumed or accepted at the outset, and used as a basis for demonstrations that form parts of that system. If the system in question constitutes, or is regarded as constituting, the *whole* of the possible system of knowledge, then the axioms in sense (3) appear as

[1] *JHS* xvii. 33–46, xxi. 273; *BSA* vi. pl. ii.
[2] *Arch. Anzeiger*, xvi. 133.

[7] *Ib.* p. 184, figs. 2, 4; p. 191, fig. 14.

'absolutely first principles,' since, by hypothesis, they are essential to the rational demonstration of the truths of this system, and are nowhere to be proved in the course of any investigation that we can make. But if one is explicitly confining one's attention to some more or less *limited* province of knowledge, or to some special system of propositions, axioms in sense (3) may be entirely relative to that special system, and are then merely the principles presupposed, used, but not demonstrated, by the system in question.

Axioms in sense (3) might therefore be neither self-evident truths nor yet necessary convictions of anybody, but merely 'assumptions' or 'postulates.' On the other hand, sense (3), in so far as it requires an axiom to be a 'first principle,' emphasizes a character which we are all especially accustomed to connect with the term, namely, that character of logical *universality* which a majority of axiomatic propositions are very commonly regarded as possessing. Senses (1) and (2) could be satisfied by particular, or even by individnal, propositions. Thus the proposition 'I suffer,' uttered by one who has toothache, may be viewed by the sufferer either as a necessary persuasion of his own or as a 'self-evident' objective truth. Various theories of knowledge have used such 'intuitive evidence' of present experience as the very type of axiomatic knowledge. But particular propositions and reports of experience can be used as the principles of a set of demonstrations only when they are asserted along with universal propositions. And therefore at least some axioms, in sense (3) of the term, must be universal assertions. It especially belongs to sense (3) to emphasize this universal character of at least part of the axioms of any theories.

Sense (3), in contrast with, and sometimes to the exclusion of, senses (1) and (2), has been made prominent in various modern logical discussions of the principles of theoretical science. Thus, by the 'axioms' of a given mathematical theory, recent writers mean, in many cases, propositions which one uses simply as the 'fundamental hypotheses' of the theory in question (*e.g.*, of the theory of some one of the 'non-Euclidean' or 'non-Archimedean' geometries, or of the Cantorean 'Theory of Assemblages'). One need not assert such hypotheses to be true, except in the sense that one treats them, at least provisionally, as self-consistent assumptions about a logically possible state of things, and uses them as 'principles' or as 'primitive propositions' in some statement of a theory. An axiom, in this sense, is often opposed to a *theorem*, which is a proposition that is shown to follow from the principles, and that is, in this sense, demonstrated in the course of the theory in question. In two different statements of a theory (*e.g.* in two different theoretical developments of geometry or of number-theory) decidedly different sets of 'hypotheses' or 'postulates' may be used as the axioms of the theory. In such cases what is an axiom in one statement of a theory may appear as a theorem in another statement, and conversely; and the concept of a 'first principle' becomes then relative, not merely to the theory in question, but to a particular way of stating that theory, and of showing that certain propositions follow from certain other propositions.

If one insists, as Aristotle did, upon sense (3) as applying to certain propositions which are said to form the indemonstrable principles of *all* science, so that, without these absolutely first principles, no system of knowledge whatever is possible, then indeed, *unless* one is a philosophical sceptic, one has to assert that the absolutely first principles are also axioms in sense (1). For if all science rests upon a determinate set of absolutely first principles, and if no science can demonstrate these principles, then either all science is uncertain or some principle is 'immediately evident.' Hence for Aristotle, and for those who follow his way of treating the theory of knowledge, there are propositions which are axioms both in sense (1) and in sense (3). In consequence of the Aristotelian tradition, senses (1) and (3) have therefore come to be viewed by many philosophers as actually inseparable; so that the 'first and fundamental truths' and the 'self-evident' or 'immediately known' propositions are, in discussions of the problems relating to axioms, not infrequently simply identified. But the logically important distinction between the relatively first principles of a given theory and the intuitively evident propositions (if such there be) has been brought afresh to light, especially by the modern logical investigations of scientific theories, and should never be forgotten in dealing with the topic. If a proposition is to be called an axiom both in sense (1) and in sense (3), special reasons (such, for instance, as those of Aristotle) should be advanced for asserting that this is the case. As a fact, it can never be 'self-evident' that a proposition is an axiom in sense (3); for one can ascertain that a principle is indeed a logical basis for certain demonstrations only by taking the trouble to go through the demonstrations themselves—a highly 'mediated' procedure.

4. Sense (4) uses as the criterion of an axiom the 'universal assent,' the 'consensus' of 'all rational beings,' or sometimes the consensus of all the 'competent,' of all the 'normal,' or of the 'wise,' or of some class of knowing beings whose common opinion in the matter is treated as the standard opinion. The criterion here in question has frequently been emphasized, and its history forms part of the long annals of the doctrine of Nature, or of 'the natural,' or of the 'Law of Nature' and the 'consensus of humanity' as the standard whereby both opinions and deeds are to be judged. Criterion (4) becomes an exact one only for those who hold that, as a fact of human nature, there are indeed propositions which *nobody* denies, or which *all* who understand their import affirm. In practice, however, those who appeal to 'universal assent' as the warrant for an axiom usually render their criterion somewhat inexact, by the very fact that they employ this criterion in arguments directed against opponents, who, as appears, call in question either the truth, or the evidence, or the interpretation, of the axiom that is under consideration. If the opponent himself does not wholly assent, one can hardly appeal to 'universal assent' as an evidence against him, without modifying the sense in which one calls the assent 'universal.' Such modification occurs if one regards the consensus in question as that of the 'wise,' or of the 'competent,' or if one insists, in a well-known polemic fashion, that 'nobody who is in his senses' doubts the supposed axiom. Thus, in practice, an axiom in sense (4) is usually conceived in some close connexion with senses (1) and (2)—the connexion being often much confused in controversy. Not infrequently a thinker first explicitly asserts that a proposition is, for himself personally, an axiom in sense (2); then he draws the conclusion that it therefore must be an axiom in sense (1); and thus he proves, by a more or less lengthy mediate course of reasoning, that the proposition, being 'immediately evident,' cannot be proved. Since, perhaps, some opponent still remains unconvinced, and declines to admit the 'immediate evidence,' the defender of the proposition in question hereupon makes use of sense (4), and now undertakes quite convincingly to silence the objector by assuring him that nobody objects to the proposition, since it is 'known to all.' Or, if the opponent even yet persists in calling attention to the 'immediately evident' truth that at least he himself objects, the defender of the axiom finally confuses sense (4) itself by a convenient definition of the 'assent of all,' whereby the opponent is excluded from the 'all' who are worthy of consideration; and hereupon the matter becomes, of course, quite clear, although not to the opponent.

Such processes have played a great part in the history of controversy. A famous example is furnished by the controversies which have been suggested by Locke's revival, in

the First Book of the *Essay on the Human Understanding*, of the ancient questions as to whether all men possess in common a knowledge of logical, of mathematical, and of moral truths. Especially in the case of moral principles has the interest in making out whether there is any agreement amongst all men regarding the distinction between Right and Wrong been prominent in controversy ever since Locke. Numerous defenders of an axiomatic basis for morals have sought in Anthropology for the evidence that, regarding some moral opinions, all men agree, and have conceived their principles as definable in terms of sense (4).

5. Finally, in sense (5) of our list, an axiom is defined by reference to the famous doctrine of 'innate ideas.' This doctrine is one which Locke's equally famous attack upon it, in the First Book of his *Essay*, long made central in controversy; and the partisans of innate ideas, in the various forms which this doctrine has since assumed, have frequently connected, in many often conflicting ways, senses (1), (2), and (4), and to a certain extent sense (3), with the use of the criterion for an axiom which sense (5) emphasizes. From the point of view of sense (5) it is essential to an axiom that it should come to our consciousness by reason of the very 'constitution' or 'original nature' of the mind. Since the modern evolutionary view of the mind emphasizes the importance of our instinctive tendencies and inherited aptitudes as psychologically determining our whole intellectual life, evolutionists of the type of Spencer have been led to favour a theory of the innateness of those predispositions which, when developed through our individual experience, lead us to regard some propositions as certainly true, and as true far beyond the range of our personal experience. For Spencer an axiom is, in general, an expression in an individual of the results of the 'experience of the race,' and is in so far, indeed, innate in the individual. Such a doctrine has established new connexions between senses (4), (5), and (2), and has to some extent connected senses (1) and (3) with (5).

Nevertheless, it is at least possible that an axiom in sense (5) might prove to be an actually false proposition, for the 'innate constitution of the mind' might involve one or another aptitude to believe error. In fact, an evolutionary view, closely resembling Spencer's, might lead, in a thinker less optimistic about human nature than is Spencer, to the doctrine that certain instinctive tendencies, determined by evolution, are still such as to deceive the individual. Thus the innate hostility and resentfulness which form one aspect of human nature may be viewed, by an evolutionist, as a necessary result of the conditions of conflict under which humanity has developed. And such tendencies might easily lead, in a civilized man, to a belief regarded by the individual as axiomatic in sense (5), and probably also in sense (2). This belief might take the form of the principle that one ought to avenge all injuries, and to destroy, if possible, all enemies. As a fact, however, this belief, although dependent upon the very 'constitution' of the mind of one whose ancestors have lived by war and have enjoyed blood revenge, may be, and is, a false principle of ethics. Or again, a lover's beliefs about his beloved are deeply affected by the innate constitution of his mind, and may appear to him to be, not only in sense (5) but also in sense (2), axiomatic. Yet they may be in many respects false. A pessimist, such as Schopenhauer, is fond of emphasizing the innate 'illusions' which, according to him, characterize human nature. Buddhistic doctrine is equally emphatic in characterizing the most cherished and innate convictions of common sense as both logically false and morally destructive. Salvation for the Buddhist depends upon discovering axioms in sense (1) which are extremely hard to discover, so that only the Buddhas ever attain to them. But, when once seen, these axioms are for the enlightened indeed 'self-evident.' And the knowledge of them sets aside those axioms in sense (2) which are also axioms in sense (5), and which, according to Buddhism, are due to the innate deceitfulness of desire. So little, for some men, does either innateness or subjective necessity imply self-evidence and truth.

Axioms in sense (5), furthermore, need not always be axioms in sense (2); for, as partisans of innate ideas generally admit, any individual may remain unaware of some of his inherited aptitudes for conviction. On the other hand, there is no reason why a *new* assurance, or an axiom in sense (2), may not appear in the life of somebody whom revelation or a sudden growth or 'mutation' (such as may occur in the course of evolution) endows with a faith which, just because it is novel, does not constitute an axiom in sense (5).

As for senses (4) and (5), they very frequently coincide in their denotation, but need not do so. Although what 'the very constitution of the human mind determines us to believe' is, *ipso facto*, 'believed by all,' *in case* the constitution in question is precisely the constitution 'common to all human minds,' there is no reason why the innate might not also be the individual, the congenital *variation* of this or of that mind. The individual may possess an aptitude for conviction which belongs to his 'constitution,' but which no other man, or nobody who has preceded him, possesses or has possessed. This is as possible as is a new individual revelation due to any other source than the inherited temperament of the individual. Prophets, Buddhas, poets, geniuses generally, have often been credited with such aptitudes for forming out of the depths of their own natures new convictions, which they have then taught to other men. On the other hand, as Locke and other empiricists have frequently insisted, those convictions which in sense (4) are more or less common to many or even to all men need not on that account be regarded as mainly determined by our innate constitution. They may be supposed to be due to experience, which moulds men to common results.

The foregoing survey shows us that the five senses of the term 'axiom' here in question are in a large measure independent of one another, so far as their logical intension is concerned, while by virtue of their various applications, now to the same, now to different sets of propositions, these five meanings of the term 'axiom' have become painfully confused in the history of controversy and of the theory of knowledge. The result is that the term 'axiom' is a very attractive and a very dangerous term, which should never be employed by a careful thinker without a due consideration of the sense in which he himself proposes to employ it.

II. **History of the term.**—As to the history of the term 'axiom' and of its uses, the ancient sources are above all: (i.) Aristotle's theory of the axioms as propositions conforming both to our sense (1) and to sense (3); (ii.) Euclid's actual use of his axioms in his geometry, especially in sense (3), and in union with certain propositions called 'postulates' (which were also theoretical principles in our sense (3)). The treatment of the principles of science and of morals in sense (4) as principles 'known to all,' or as known to the 'wise' or to the 'competent,' has its beginnings in pre-Socratic philosophy, plays an important part in the Platonic *Dialogues*, and is in various special cases and passages carefully considered by Aristotle; but becomes especially prominent in the Stoical theory of knowledge and of ethics. While sense (2) plays a part throughout the history of ancient thought, it becomes especially important in Christianity and in modern discussions of the psychological aspects of the problem of knowledge.

Sense (5), implied by the Platonic theory of reminiscence, but long put into the background by the Aristotelian theory of knowledge, has come to play a very great part in modern discussion. Its completest classic expression is probably the one to be found in Leibniz's *Nouveaux Essais*.

The later discussion of the nature, the existence, the various senses, and the use of axiomatic truths, has been dominated since 1781 by three great movements: (1) the critical philosophy of Kant; (2) the various forms of modern Empiricism, Positivism, 'Pragmatism'; (3) the modern logical investigations of the principles of science—investigations which were especially stimulated by the famous inquiry into the axioms of Euclid's geometry, and which have since extended to the whole range of the foundations of mathematics, and also to the principles of theoretical physics, and to still other branches of scientific theory.

III. **Significance for modern philosophy.**—In the attempt to deal with the extremely complex philosophical problems which are suggested by the foregoing five senses of the term 'axiom,' there are one or two guiding considerations which any student of the topic may well bear in mind.

(*a*) First, not every philosophy which tries to avoid scepticism is forced to admit the existence of axioms in sense (1). The necessity of such an admission as the sole alternative to scepticism exists, indeed, for one who holds the opinions ascribed in the foregoing sketch to Aristotle. If all science depends upon a determinate set of absolutely 'first principles' (in sense (3)), then, unless these principles are also axioms in sense (1), our result would remain sceptical, for all scientific theory would lack basis. But the Aristotelian theory of scientific procedure is not the only possible one. That theory depends upon conceiving the structure of scientific theory as necessarily linear, with chains of syllogisms leading from determinate beginnings to the conclusions that constitute the scientific theory. But for a thinker such as Hegel, the ideal form of the totality of scientific theory is cyclical rather than linear. Truth may be, as a whole, a system of mutually supporting truths, whose absoluteness does not depend upon any one set of first principles, but consists in the rational coherence and inevitableness of the *totality* of the system. To assert such a doctrine involves considerations which cannot be developed here. It is enough that such a thesis has been attempted. From the point of view there would indeed be axioms in sense (3), viz., in relation to certain *partial* systems, such as this or that mathematical or logical doctrine, whose theoretical development would indeed depend upon chains of deductive reasoning. And there would also be necessary truth, both in the parts and in the whole system. But there would be no *absolutely* first principles, and there would also be no *immediate* certainties—nothing, in fact, that is *purely* immediate in the whole system of truth. The whole would be mediated by the parts, and conversely.

(*b*) Second, the traditional alternative: either this proposition is self-evident or else it is dependent upon some other proposition from which it is deduced, or else it remains uncertain, does *not* exhaust the logical possibilities regarding the rational discovery of truth. Omitting here the complex problem as to the relation between our experience of particular facts and the general truths which our scientific theories aim at establishing, we may point out that there are propositions such that *to deny them implies that they are true*. As Aristotle already observed, the principle of contradiction is itself a proposition of this type. Euclid's geometry contains more than one instance where a proposition is demonstrated by showing that the contradictory of the *probandum* implies the truth of this *probandum*. The proof that this is, in fact, the case may be no easy one, and may involve elaborate mediations. But any proposition A, such that the contradictory of A implies A, is, *ipso facto*, a true proposition, although nobody may yet have come to *feel* its necessity.

When we prove a proposition, however, by showing that its contradictory implies it, we do not make this proposition 'self-evident.' Nor yet do we demonstrate the proposition merely by reference to other propositions which we have to assume as prior certainties. What we find, in such cases, is not so much 'self-evidence,' as 'self-mediation'—an essentially cyclical process of developing the inter-relations which constitute the system of truth. In case, then, there are no axioms in sense (1), we need not abandon either the ideal or the hope of the attainment of rational truth.

(*c*) Third, axioms in sense (2) we need and use wherever and whenever we are engaged in practical activities, or are absorbed in contemplations, such as require a laying aside of the critical sense and a limitation of the business of reflexion. But the assertion 'I am sure of this' is never logically equivalent to the assertion 'This is true.' And it is no part of the business of science or of philosophy to seek, or to remain content with, merely private 'convictions' or 'persuasions,' however 'necessary' the subject feels them to be.

(*d*) Fourth, axioms in senses (4) and (5) interest the anthropologist, and the student of society, of history, of religion, of psychology; they can never satisfy the student of philosophy, or in particular, of logic, and of truth for its own sake.

(*e*) Finally, sense (3), interpreted not absolutely but relatively, so that an axiom is a principle which lies at the basis of a certain selected system of propositions, and which is not demonstrated in the course of that system, remains *the sense in which the term 'axiom' is still most serviceably employed in modern theory*. Philosophy seeks not absolute first principles, nor yet purely immediate insights, but the self-mediation of the system of truth, and an insight into this self-mediation. Axioms, in the language of modern theory, are best defined, neither as certainties nor as absolutely first principles, but as those principles which are used as the first in a special theory.

LITERATURE.—A complete view of the literature of the problems regarding axioms is impossible, since the topic is connected with all the fundamental philosophical issues. A few sources are:—Aristotle, *Analyt. Post.* i. 2, 3, *Metaphys.* iii. 2, iv. 3, 4; see also Zeller, *Philos. d. Griechen*[3], II. ii. 234–240. Of works bearing on the topic we may specially name:—Descartes, *Discourse on Method*, and *Meditations*; Spinoza, *Tract. de Emend. Intellectus*, and *Ethics*, especially pts. i. and ii.; Locke, *Essay on the Human Understanding*, esp. bks. i. and iv.; Leibniz, *Nouveaux Essais*; Reid, *Inquiry into the Human Mind*[7], 1814, and *Essay on the Powers of the Human Mind*[3], 1812; Kant, *Kritik der reinen Vernunft*; J. S. Mill, *Logic*[8], 1872; Hegel, *Logic*; H. Spencer, *Principles of Psychology*[2], 1870–72. Bertrand Russell's *Foundations of Geometry*, 1897, and *Principles of Mathematics*, 1903, and L. Couturat's *Logique mathématique*, contain summaries of the principal problems and results regarding the mathematical 'first principles' which are of philosophical importance.

JOSIAH ROYCE.

AZAZEL.—When the word 'Azazel' was first introduced into a Western Bible or language is unknown to the present writer. It does not occur in the Concordances of the Greek, Latin, and German Bibles; it found a place in AVm at Lv $16^{8.10.26}$ for the 'scapegoat' of the text, and in the text of the RV, 'dismissal' being its interpretation on the margin. In Greek it seems to have appeared first in print in Montfaucon's *Hexapla*, 1713, at Lv 16^{26}, from Cod. X (Coislinianus, now M). It is found a second time, according to Field, in the text of that Codex at v.[10], *εἰς ἀζαζὴλ εἰς τὴν ἔρημον τὴν ἀποπομπήν*; this reading

being shared, according to Holmes-Parsons, by Cod. 18. (In Redpath, *Concordance to the Proper Names of LXX*, p. 7, this reference to v.[10] is missing.) Though it appears in the Hebrew Bible three times in the famous chapter on the yearly Feast of the Atonement, lexicographers as yet completely disagree as to its explanation. The latest work on Hebrew lexicography, that of Brown-Driver-Briggs (1900), explains the word as '*entire removal*,' seeing in the form a 'redupl. intens. abstr.' from √[עזל] = Arab. عزل, 'remove' = 'entire removal' of sin and guilt from sacred places into the desert on the back of a goat, the symbol of entire forgiveness. This explanation is said to be preferable to another, which finds in it a proper name, either of a rough and rocky mountain (*Yoma*, 67*b*, קשה שבהרים), or of a spirit haunting the desert. The form עֲזָאזֵל is, in this case, considered as changed from עֲזַלְזֵל; עזא, עזאל being another name of a fallen angel. The name is not found elsewhere in Hebrew. In the Syriac Bible it is pronounced 'ăzâzâ'îl, and explained by the lexicographers as another name of the archangel Michael (after Theodore of Mopsuestia, *Thesaurus Syriacus*, p. 2851). The name became well known among the Syrians as that of a martyr in the days of Maximian, identified with St. Pancras of the Western calendars; see 'Histoire de Saint Azazaîl, texte syriaque inédit avec introduction et traduction française: précédée des actes grecs de Saint Pancrace, publiés pour la première fois par Frédéric Macler,' Paris, 1902 (*Bibliothèque de l'École pratique des hautes études*, fasc. 141), and cf. on it H. Delahaye, *Analecta Bollandiana*, xxiv. 93–95, and Brockelmann, *ZDMG* lviii. 499–501. Recently the whole conception has been derived from the Babylonians; cf. J. Dyneley Prince, 'Le Bouc Emissaire chez les Babyloniens' (*JA* x. 2. 1, pp. 133–156, Ju.-Ao. 1903); but M. Fossey (*La Magie assyrienne*, Paris, 1902, p. 85) seems to be right when he declares: 'Je ne puis rien voir de semblable.' If one reads Lv 16 with an open mind, the impression is that Azazel must be a being related to Jahweh in something of the same way as Ahriman to Ormazd, or Satan (Beelzebub) to God. To go into details on the rite of Atonement or the stories about the fallen angels (Gn 6[1.2]) is outside the scope of this article.*

LITERATURE.—Driver, art. 'Azazel,' in Hastings' *DB*; Benzinger-Cheyne in *Encyc. Bibl.*; Volck in *PRE*[3]; *Jew. Encyc.*; the Comm. on Leviticus; Marmorstein, *Studien zum Pseudo-Jonathan Targum*, 1905, p. 87 ff.

EB. NESTLE.

* In the Book of Enoch (ch. 6), *Asael* is the name of one of them, in the Greek text (ed. Radermacher) Ἀσεάλ, Syncellus Ἀζαήλ; in ch. 8 ff. *Azazel* in the Ethiopic, Ἀζαήλ in the Greek and Syncellus, Ἀζαζήλ according to Irenæus; he is thrown εἰς τὴν ἔρημον τὴν οὖσαν ἐν τῷ Δουδαήλ (Gr. Δαδουήλ), explained by Geiger as abbreviated from *Beth Ḥadudo* (the modern *Beth-ḥudêdun*), the crag down which the goat for Azazel was pushed.

B

BAAL, BEEL, BEL (fem. **Baalat, Beela, Beltu**).—Ba'al is a primitive title of divinities, which is found in all branches of the Semitic race (Arab. بعل, *ba'l*; Eth. *ba'âl*, *bâ'l*; Min. and Sab. *ba'l*; Sin. בעלו, *ba'lu*; Nab. בעל; Canaanite and Heb. בַּעַל, *ba'al*; Phœn. and Pun. בעל, *ba'l*; Aram. and Syr. בְּעֵל, ܒܥܠ, *b'ēl*; Palm. בול, *bôl*, and בל, *bêl*; Bab. and Assyr. *bêl*).

i. *PRIMITIVE MEANING OF THE NAME.*—The application of this name to deities is secondary; primarily it is a common noun denoting 'possessor,' 'owner.'

(1) It denotes ownership of physical objects. Thus the *ba'al* of a house, field, ditch, or animal is its 'proprietor'; the *ba'alat*, its 'proprietrix' (so in Heb. Phœn. Aram. Assyr. Arab. Eth.). The *be'âlîm* of a town are its 'citizens' (so in Heb. Phœn.). Even in the singular the word may be used for 'citizen' (cf. *CIS* 120, חרנא בעלת בונתי, 'Irene, a citizen of Byzantium'). (2) It denotes a 'possessor' of certain physical characteristics. Thus a two-horned ram is described as a *ba'al* of two horns; a bird, as a *ba'al* of two wings; a hairy man, as a *ba'al* of hair (so in Heb. Assyr. Aram. Eth.). (3) It denotes a 'possessor' of certain mental qualities. Thus a discerning man is called a *ba'al* of discernment; a hostile man, a *ba'al* of hostility; a sinful man, a *ba'al* of sin; a dreamer, a *ba'al* of dreams; an eloquent man, a *ba'al* of the tongue (so in Heb. Assyr. Aram. Eth.). (4) It denotes a 'possessor' of certain rights or claims over others. Thus a plaintiff is called *ba'al* of a case; a prosecutor, *ba'al* of one's justice; a confederate, *ba'al* of one's covenant (so Heb. Assyr. Aram. Eth.). (5) *ba'al* denotes a 'husband' as the 'owner' of a wife (cf. Dt 5[18 (21)] where house, field, male slave, female slave, ox, and ass are enumerated with wife as a man's possessions) (so in Heb. Nab. Palm. Aram. Arab. Assyr.). It is noteworthy, however, that *ba'al* is not used of the master of a slave, or of any other person who exercises authority over men. For the idea 'master,' or 'lord,' the Semitic languages in general use the words *'âdhôn*, *mâr*, *rabb*, but not *ba'al*. Only in Bab.-Assyr. has *bêl* (= *ba'al*) developed the general meaning of 'lord' and become a synonym of the other names of authority; but this usage is evidently secondary, since it is not found in the other dialects. Even the meaning 'husband' cannot be primitive, because the *ba'al* or 'owner' type of marriage was not original among the Semites. The evidence is abundant that the primitive constitution of Semitic society, as of so many other early peoples, was matriarchal (see 'ASHTART, 2). In such a society, where the mother was supreme and marriage was only a temporary union with men of other tribes, the husband obviously could not be called *ba'al* or 'owner,' since the wife was far too independent. He was known rather as *'abu*, 'nourisher,' which in the meaning of 'husband' is older than in the meaning of 'father' (cf. Jer 3[4] and old Bab. usage). In the stage of fraternal polyandry, which among some at least of the Semites succeeded the matriarchal stage, the husband was not yet a *ba'al*, and was probably still known as *'abu* (see 'AMM). Only at a relatively late date, when society had finally passed to the monogamous or polygamous stage and wives were secured by purchase, did the husband become an 'owner.' The old word *abu* could no longer be used in the sense of 'husband,' and was set apart to express the idea of 'father,' which now for the first time became important, since children now first knew their fathers. A new term, accordingly, had to be found to express the new conception of the husband as an 'owner.' The other names of authority, *'âdhôn*, *mâr*, *rabb*, had already been pre-empted to express the relation of master to slave and of superior to inferior; but *ba'al*, 'owner,' was an indefinite word that might be applied to the new relationship. It appears, accordingly, that in primitive Semitic usage *ba'al* designated an owner of things or qualities, but not an owner of persons.

As a title of deity, *ba'al* retained its primitive meaning as a common noun, and described the divinity in question as an 'owner' or 'occupier' of some physical object or locality, possibly also as a 'possessor' of some attribute (see below, ii. 10). If the numen was regarded as masculine, it was called a *ba'al*; if feminine, a *ba'alat*. The name was thus the equivalent of Arab. *dhû* (fem. *dhât*), 'he of, possessor of,' which in the South Arabian inscriptions alternates with *ba'al* in names of gods. In Babylonian the common noun *bêl* (= *ba'al*) developed the secondary meaning of 'master,' or 'lord,' and, corresponding to this, in the Assyro-Babylonian religion *bêl* described the god as an 'owner' or 'lord' of persons. Thus in their inscriptions the Assyrian kings group the great gods of the nation under the general formula *bêlê rabûte bêlêya*, 'the great lords, my lords.' In such cases we have *ba'als* of tribes and *ba'als* of persons, but this conception is

not found among the other Semites and cannot be primitive. Corresponding to the original usage which limited the name *ba'al* to owners of things, the *b*ᵉ*'ālîm* are elsewhere uniformly regarded as proprietors of objects and of places, not as owners of persons. Lords of tribes or of individuals are *'ĕlôhîm*, *'ădhônîm*, *m*ᵉ*lākhîm*, *rabbîm*, *marîn*, but never *b*ᵉ*'ālîm*. One never meets *Ba'al-Israel*, *Ba'al-Moab*, *Ba'al-Ammon*, as one meets *Ba'al-Ṣidon*, *Ba'al-Lebanon*, *Ba'al-Maon*, but instead *'Ĕlôhê-* or *Melek-Israel*, *-Moab*, *-Ammon*.

In Bab.-Assyr. the worshipper addresses his god as *Bêlî*, 'my lord,' or *Bêltî*, 'my lady' (cf. *Madonna*, *Notre Dame*); but this is not found in the other dialects, except where there is direct borrowing from the Babylonian. This is the case in *Bêltî* of Palmyra (de Vogüé, *Inscr. Sémit.* 1868, 52, 155). She is the consort of the Babylonian *Bêl*, who is worshipped alongside of the native *Bôl*. The *Ba'alat* of Gebal appears in Greek and Latin writers as *Bēltis* (=בעלתי), Βῆλτις (Abydenus in Müller, *FHG* iv. 283, 9), Βήλθης (Hesychius, *s.v.*), Βαάλτις (Philo Byblius in *FHG* iii. 569, 25), *Balti* (*CIL* iii. Suppl. 10393, 10964); but this is never found in native Sem. inscriptions, and is due to late syncretistic identification of the *Ba'alat* of Gebal with *Bêltis* of Babylon. The same is true of Βαλάνιος (=בעלן), 'our ba'al,' a title of Juppiter Heliopolitanus in *Chron. Pasch.* i. 561. It is noteworthy, however, that, while the worshipper does not speak of the god as 'my *ba'al*,' he may call himself 'slave of the *ba'al*,' e.g. in the Phœn. proper names *'Abd-ba'l*, and the Palmyrene name *'Abdi-bôl*.

Where *ba'al*, 'proprietor,' is identified with *mélek*, 'king,' as is the case in certain Phœnician inscriptions, this is due to syncretistic combination of the tribal god of the invading Semites with the local numen of Tyre, and is analogous to the syncretism that is seen in such Heb. proper names as *Ba'al-Yah*, 'the *ba'al* is Jahweh' (1 Ch 12^{5}), or *Yo-ba'al*, 'Jahweh is the *ba'al*,' if Kuenen's restoration of Jg 9^{26} be correct. Here Jahweh, the conquering God of Israel, is identified with one of the local *ba'als*. Thus Melḳart (=מלך קרית), 'king of the city,' is called the *ba'al* of Tyre (*CIS* 121, לארן למלקרת בעל צר, 'to our lord, to Melḳart, the *ba'al* of Tyre'). Similarly we find *Milk-Ba'l*, 'king-owner,' a compound deity like *Milk-'Ashtart* (*CIS* 123*a*, 147, 194, 380); *Ba'al-Malûku*, the name of a son of the king of Arvad (*KIB* ii. 173), perhaps the prototype of the obscure *Ba-al-ma-la-gi-e* of the treaty of Esarhaddon (*KAT*^{3} 357); and *Malak-bêl* in Palmyra (cf. also Jer 32^{35}). In *CIS*, p. 155, the god בעלארן (=*Ba'al-Adonis*) occurs; cf. the proper name ארנבעל, Lat. *Idnibal* (*CIS* 139), and Βεελ-μαρι (*CIS* I. i. p. 111). Such late combinations in Phœnician do not invalidate the general conclusion that *ba'al* as a divine name designates primarily the owner of a sanctuary and not the master of his worshippers.

If this be true, it follows that there are as many *b*ᵉ*'ālîm* as there are sacred objects and sacred places which they inhabit. Except in late theological abstraction, there is no such thing as a god *Ba'al*. The OT speaks habitually of the *b*ᵉ*'ālîm* in the plural (Jg 2^{11} 3^{7} 8^{33} 10$^{6.10}$, 1 S 7^{4} 12^{10}, 1 K 18^{18}, 2 Ch 17^{3} 24^{7} 28^{2} 33^{3} 34^{4}, Jer 2^{23} 9$^{13(14)}$, Hos 2$^{15(13).19(17)}$ 11^{2}). According to Jer 2^{28} 11^{13}, they were as numerous as the cities. This plural cannot be understood of images of one god *Ba'al* (so the older interpreters, and more recently Baethgen and Baudissin), for idols are never mentioned along with altars, standing stones, or asheras as part of the equipment of sanctuaries of the *b*ᵉ*'ālîm*. Neither can it be treated as a 'plural of majesty' like *Elohim*, for, unlike *Elohim*, when a divine name it is never construed as a singular. It can be taken only as indicating a multitude of local numina. When the singular *ba'al* is used, it requires a noun in the genitive to indicate which *ba'al* is meant; e.g. *Ba'al-Ḥaṣor*, *Ba'al-Ṣidon*, *Ba'al-Ḥarran*, etc. The contention of Baudissin (*PRE*^{3} 326) that these are merely the local forms of one god *Ba'al*, like the local forms of *Zeus* among the Greeks, is untenable, because there is no evidence that *ba'al* ever became a proper name like *Zeus*, and because the Semites never combined names of gods with names of places in this fashion; *e.g.* we never meet such combinations as *'Ashtart-Ṣidon*, *'Ashtart-Gebal* to distinguish the various forms under which *'Ashtart* was worshipped.

If *ba'al* is used without a following genitive, it regularly takes the article in the OT and in the inscriptions. Thus the *ba'al* of Jg 6$^{25.28.30.31.32}$ is the local numen of Ophrah, 'the *ba'al*' of 1 K 16$^{31.32}$ 18$^{21.22.25.26.40}$ 19^{18} 22$^{54(53)}$, 2 K 3^{2} 10$^{18-28}$ 11^{18} 17^{16} 21^{3} 23$^{4.5}$ (and the corresponding passages in Ch), Jer 2^{8} 7^{9} 11$^{13.17}$ 12^{16} 19^{5} 23$^{13.27}$ 32$^{29.35}$, Hos 2$^{10(8)}$ 13^{1}, Zeph 1^{4} is Melḳart, the *ba'al* of Tyre, whose cult was introduced into Israel in the reign of Ahab (1 K 16$^{31ff.}$), whence it spread to Judah through the influence of Ahab's daughter Athaliah (1 K 22$^{54(53)}$, 2 K 8^{18}). In these cases it cannot be said that 'the *ba'al*' means the image of one god Ba'al, or that the article is used to distinguish the local manifestations of one deity (Baudissin, *PRE*^{3} 328).

In Babylonian, where there is no article, *Bêl* alone, as a designation of Marduk, the chief god of Babylon, becomes a true proper name; but this usage is not found in the other dialects. The insertion of the article in Heb. and in Phœn. shows that *ba'al* has not yet lost its appellative force.

Only in proper names is the article with *ba'al* omitted, *e.g.* in the place names *Bamoth-ba'al* *Ḳiryath-ba'al*, in the Heb. personal names *Jerub-ba'al*, *Ish-ba'al*, *Meri-ba'al*, *Ba'al-yada'*, *Ba'al-Yah*, *Ba'al-ḥanan*, and in numerous similar Phœn. personal names, such as *Ba'al-ḥanan*, *Ḥanni-bal*, *Ba'al-yaton* (see Bloch, *Phön. Glossar. s.v.* בעל; Scholz, *Götzendienst*, 168 ff.); but these formations do not prove that *ba'al* is a proper name any more than the similar formations with *'ab*, 'father,' *'aḥ*, 'brother,' *'am*, 'uncle,' *melek*, 'king,' *'ădhôn*, 'lord,' prove that these words are personal names of deities. The absence of the article in these cases is due to the fact that these formations go back to a time when the article had not yet been developed in the various Semitic dialects. *Ba'al* is no more a proper name in these compounds than θεός in analogous Greek names. In the same manner we must estimate the omission of the article in names of gods compounded with *ba'al*, e.g. *Milk-ba'al*, *'Adhôn-ba'al*, *'Ashtart-shêm-ba'al*, *Tanit-pen-ba'al*, perhaps *Ba'al-Gad* and *Ba'al-Ẓāphôn* (see below, ii. 8, 10). When Βῆλος without the article is mentioned in the Greek inscriptions, the context shows that only the local deity is meant. Even in the Occident no one god Ba'al arose, but there were many local *ba'als*, whose names were either transliterated or translated into Greek or Latin. Augustine was still conscious of the appellative force of the name in Punic, when in his commentary on Judges (*PL* iii. 797) he translated *ba'al* 'dominus.' Jerome in his commentary on Hos 1^{2} translates it 'ἔχων, id est habens'; and Servius (*ad Æn.* i. 621) says, 'lingua Punica Baal deus dicitur.' In view of these facts it is impossible to agree with Baethgen (*Beiträge*, p. 16) when he says, 'It is clear that there was originally always one and the same Ba'al, who stood in relations to various localities'; or with Baudissin (*PRE*^{3} 327), 'Ba'al was apparently originally a title of the male divinity in general. Afterwards, when a number of such divinities were worshipped alongside of one an-

other, this word became the designation of the chief god of each locality.' On the contrary, in Sem. inscriptions and in Sem. literature, outside of Babylonia and Assyria, *ba'al* never loses its appellative force. Only in the theological speculations of Gr. and Lat. writers does *Belus* appear as a great god. This syncretism is to be regarded as the work of the Greeks, who were ignorant of the primitive meaning of *ba'al*, and thus were able to identify all the Sem. *bᵉʿālîm* with the Bab. *Belus* (see below, iii. 7).

If there was no such thing as a god *Ba'al*, and this name designated merely the individual proprietor of a particular sanctuary, then it is evident that the traditional identification of this deity with the sun has no foundation. It is true that the sun was the *ba'al* of certain places, as Larsa, Sippar, Heliopolis (Ba'al-bek), Beth-Shemesh; but this was only one of many kinds of *ba'als*. The moon was the *ba'al* of Ur, of Ḥarran, of Palmyra, and perhaps also originally of Sin-ai (from Sin, the moon-god). Other gods of all sorts were *ba'als* of other places. If *Ba'al-ḥammān* has anything to do with the sun, this proves only that the sun was the *ba'al* of certain places (see below, ii. 5). By the Greeks and the Romans the local *ba'als* were identified with Zeus, Saturn, and Herakles as well as Sol. Only in the speculations of late writers such as Macrobius, who are disposed to regard all gods as of solar origin, is *Ba'al* formally identified with the sun. This theory has been revived and has been given wide currency in modern times (*e.g.* Creuzer, *Symbolik u. Mythologie*[3], ii. 413; Movers, *Phönizier*, i. 169; Baudissin, *PRE*[3] 329 ff.), but is nevertheless destitute of scientific foundation. So also Baethgen's theory that *ba'al* was primarily the god of heaven (*Beiträge*, p. 264), or any other theory that identifies *ba'al* with a single god, goes to pieces on the fact that this word is not a proper name but an appellative.

In the light of these facts it appears that the *ba'al*-cult carries us back to the polydæmonistic stage of religion (see POLYDÆMONISM). Among the Semites, as among other ancient peoples, and as among savages in all parts of the world, every object in nature that could do something, or that was believed to be able to do something, was reverenced as divine. The objects of worship were conceived, after the analogy of human beings, as living persons consisting of soul and body. The phenomenon was the body, the indwelling spirit was the *ba'al* or 'owner.' In the case of celestial or atmospheric phenomena the name of the divinity was usually the same as that of the phenomenon (see below, ii. 8). Thus Shemesh was at once the sun and the sun-god; Ramman, the thunder and the thunder-god. In other cases the numen was distinguished from the physical object by being called its *ba'al*. This is a striking difference between Indo-European and Semitic polydæmonism. Among the Indo-Europeans *Daphne*, 'the laurel,' is also the name of the nymph that inhabits this tree; *Amymone*, the sacred spring at Nauplia, is also the name of its indwelling nymph; *Athene*, the patron goddess of Athens, bears the same name as her city: but among the Semites the numen of a palm-tree is not called *Tamar* but *Ba'al-tamar* (Jg 20[33]); the numen of a well, not *Bᵉʾēr* but *Ba'alath-bᵉʾēr* (Jos 19[8]); the numen of a mountain, not *Lebanon* but *Ba'al-Lebanon* (*CIS* 5); the numen of a city, not *Sidon* or *Gebal* but *Ba'al-Sidon* (*CIS* 3) and *Ba'alat-Gebal* (*CIS* 177). This difference of conception is significant for the later developments of Indo-European and of Semitic religion. The Indo-European could never free himself from the identification of his gods with nature, and consequently the highest forms of his religion remained pantheistic. The Semite, on the other hand, was accustomed from the earliest times to distinguish between the object and its *ba'al*. His religion tended towards transcendentalism, and in its highest form among the Hebrews became pure theism. Apart from this more independent relation of Semitic numina towards the physical objects that they inhabited, there was no essential difference between the *bᵉʿālîm* and the nymphs, dryads, satyrs, fauns, genii, fairies, gnomes, elves, and local gods of primitive Indo-European religion (see Usener, *Götternamen*). The *bᵉʿālîm*, as a rule, had no names of their own and no identity or existence apart from the objects or localities that they inhabited. Their cult was a lower stage of religion than polytheism, for they were not gods in any proper sense, but only *δαίμονες*, *numina*, spirits. Hence the name polydæmonism, which recent writers apply to this sort of religion instead of the ambiguous term 'animism' used by earlier writers. Out of the *bᵉʿālîm* gods might grow by groups of phenomena coming to be regarded as manifestations of a single power, or by a particular *ba'al* coming to be the patron of a tribe or of a city; but, apart from such developments, the *bᵉʿālîm* remained simply local dæmons.

ii. *CLASSIFICATION OF THE BA'ALS.*—The ba'als may be classified, according to the physical objects which they inhabit, as terrestrial and celestial. Among the terrestrial ba'als we may enumerate:

1. **Ba'als of springs.**—For the primitive Semitic nomad in the desert the spring was the most wonderful object in nature. Its waters gushed miraculously out of the arid sands, giving life to vegetation, to man, and to beast. On it the existence of the tribe depended, and about it as a centre the tribe rallied. It is no wonder, therefore, that it was reverenced as divine, and that its numen was regarded as the mother of the tribe, the giver of all earthly blessings (see 'ASHTART, 3). In all branches of the Sem. race springs retained their sanctity down to the latest times.

The following sacred springs may be mentioned.—Among the Arabs: the *Zemzem* at Mecca (Wellhausen, *Reste*[2], 103 f.); among the Canaanites and Hebrews, *'En-mishpāṭ*, 'the spring of decision,' an oracular fountain at Ḳadesh, 'the sanctuary' (Gn 14[7]); *Beer-laḥai-roi*, between Ḳadesh and Bered (Gn 16[14]); *Beer-sheba'*, 'well of seven' (Gn 21[31] 26[33], Am 5[5] 8[14]); *'En-rogel*, near Jerusalem, by the sacred stone Zoḥeleth, where Adonijah offered sacrifices and was proclaimed king (1 K 1[9]); *Giḥon*, 'the gusher,' an intermittent spring near Jerusalem, where Solomon was crowned (1 K 1[33]), probably the same as Bethesda (Jn 5[2-4]), the modern Virgin's Fountain, which is still regarded with superstitious reverence by the people of Jerusalem; the *Dragon's Well*, also near Jerusalem (Neh 2[13]); *'En-shemesh*, 'spring of the sun' (Jos 15[7] 18[17]); *Baal-Gad*, or *Baal-Ḥermon*, probably the sanctuary at the source of the Jordan at Panias (belonging to the god Pan), or Cæsarea Philippi, the modern Banias.—Among the Phœnicians: a spring at Joppa connected with the myth of Perseus and Andromeda (Paus. iv. 35. 9); the 'sanctuary of the spring *Yidlal*' (*Eshmunazar Inscr.*, line 17); the nymph 'Ανωβρέτ (= עין עברת, 'overflowing spring') in Philo Byb. (*FHG* iii. 570 f., frag. 4, 5); the river *Adonis* (= ארוני, 'my lord'), the modern Nahr Ibrahim, which bursts from a cave in the side of Lebanon at Afḳa, the seat of the cult of 'Ashtart and Adonis, according to Lucian (*Dea Syr.* 6) and Euseb. (*Vit. Const.* iii. 55); the river *Asklepios* (the Gr. equivalent of the Phœn. Eshmun), near Sidon (Antoninus Martyr, ed. Tobler, p. 4; Levy, *Phön. Stud.* i. 30 f.).—In the Phœnician colonies: the spring Μακαρία (= מקור, 'fountain'), the daughter of Herakles (Melḳart), at Marathon (Paus. i. 32. 6); the spring Κυάνη at Syracuse (Diod. Sic. v. 4. 1), and the hot springs at Himera, in Sicily (*ib.* iv. 23. 1), both of which were connected with myths of the Tyrian Melḳart-Herakles; the spring at Gades, in Spain (Strabo, iii. 5. 7; Pliny, *HN* 97 [100], 219).—In Syria: *Mabbog* (= מַבּוּעַ, 'spring'), the native name of Bambyce or Hierapolis, the sanctuary of the goddess Atargatis (see ATARGATIS); the oracular spring Kandalia, at Antioch (Sozomen, *HE* v. 19).—In Assyria: *Rish-Eni*, 'the fountain-head' (Ashurnaṣirpal, *Annals*, i. 104). Many of these sanctuaries have retained their holiness down to the present time, being regarded as the seats of Christian saints or Muslim *auliyā'* (pl. of *walī*, 'patron saint'); and in all parts of the Muslim world springs are still regarded as the abodes of powerful spirits, whose favour is sought through sacrifice and offerings

(see Curtiss, *Ursem. Religion*, pp. 94 ff., 118 ff., 121 f., 163, 270). On spring-worship in general see Baudissin, *Studien*, ii. 154–170, and the bibliography there given on p. 154.

The numina that inhabited the sacred springs were known as their *bᵉʿālîm*; thus **Baʿᵃlath-bᵉʾēr**, 'proprietrix of the well,' is the name of a town in the Negeb (Jos 19^{8}, cf. **Bᵉʿālôth**, Jos 15^{24}, 1 K 4^{16}). In 2 S 5^{20} (=1 Ch 14^{11}) the name **Baʿal-pᵉrāzim** is explained in such a way as to indicate that it meant originally 'proprietor of the breaking forth of waters.' It was one of the fountains that gush out of the sides of the Valley of Rephaim, the modern Wady el-Werd. The sacred river **Bēlus**, near Ptolemais (Acre), took its name from the *baʿal* that inhabited it (Pliny, *HN* xxxvi. 26 [65], 190; Jos. *BJ* ii. 10. 2). In Arabic the phrase 'that which the *baʿl* waters,' or simply '*baʿl*,' means land irrigated by subterranean waters (Lane, *Arab. Lex. s.v.*; Nestle, *Isr. Eigennamen*, p. 126; W. R. Smith, p. 99 ff.; Wellhausen, *Reste*², p. 146). The same usage survives in Mishnic Heb. שדה הבעל (*Baba bathra*, iii. 1), or simply בעל (*Suk.* iii. 3; *Terum.* x. 11; *Shebi.* ii. 9), and in the Gemara בית הבעל, in the meaning of 'land subterraneously watered' (see Levy, *Chald. Wörterb. s.v.*). If the text of Ca 8^{11} be correct, **Baʿal-hāmôn** can mean only 'owner of the torrent,' but it is possible that this name is corrupted out of the better known *Baʿal-Ḥermôn* (see below, 4) or *Baʿal-ḥammān* (see 5). The title בעלמי, which follows the name of Hadad on the Hadad statue from Zenjirli, possibly means 'owner of water' (see D. H. Müller, *WZKM* vii., 1893, p. 50 ff.). On the strength of the Arabic expression *baʿl* for 'land subterraneously watered,' and of Hos $2^{8ff.}$, which speaks of the *bᵉʿālîm* as givers of corn, wine, oil, wool, flax, vines, and fig-trees, W. R. Smith (p. 104 ff.) concludes that the *bᵉʿālîm* were primarily the numina of subterranean waters, and that they became the 'owners' of land by making it fruitful, just as the husbandman creates ownership in otherwise worthless land by irrigating it. These were doubtless an important class of the *bᵉʿālîm*; but in view of the numerous other sorts that we shall consider in the following paragraphs, it cannot be said that they were the only kind, or even the original kind. Here, as elsewhere, the attempt to trace religious conceptions to a single root is a failure. Polydæmonism was complex in its origin and protean in its manifestations.

2. **Baʿals of trees.**—In the Arabian desert, trees grew only in watered oases, consequently they shared the sanctity of springs in the esteem of the primitive Semites. The date-palm in particular, whose fruit formed one of the staples of life, could not fail to be worshipped as a divine benefactor. The Garden of Eden, with the tree of knowledge of good and evil and the tree of life, in Gn 2^{8-17} is a primitive Sem. tradition of an oasis with its sacred palm-trees.

According to Ṭabarî (ed. de Goeje, i. 922; ed. Nöldeke, p. 181), in the city of Najrân, before the introduction of Christianity, a great palm was worshipped and hung with garments and ornaments at the time of the annual feasts (see Osiander, *ZDMG* vii., 1853, p. 481). The sanctuary of the goddess al-ʿUzza at Naḫla, 'the date-palm,' consisted of three *samura* trees, of which one was regarded as the proper abode of the goddess (Wellhausen, *Reste*², p. 38). This seems to have been the same as the tree known as *Dhât anwâṭ*, 'she of the hanging,' to which the people of Mecca resorted yearly to adorn it with their weapons and to offer sacrifice (Krehl, *Rel. der vorislam. Araber*, p. 73 f.). By the holy spring Zemzem, at Mecca, there once stood a sacred tree (Dozy, *Israeliten zu Mekka*, p. 93). According to the Qur'ân (*Sura* xix. 23–25), the Virgin Mary was nourished before the birth of Jesus by the fruit of a palm-tree miraculously produced out of season.

Among the Canaanites and Hebrews the cult of trees is copiously attested by the OT. According to Hos 4^{13}, they sacrificed under oaks, and poplars, and terebinths (cf. Is 1^{29}). Dt 12^{2}, Jer 2^{20} $3^{6.13}$ 17^{2}, Ezk 6^{13} 20^{28}, 1 K 14^{23}, 2 K 16^{4} 17^{10}, Is 57^{5} state that they sacrificed 'under every green tree,' and Is 65^{3} 66^{17} speak of sacrifice in gardens. The following individual holy trees are mentioned: the burning bush at Sinai (Ex 3^{2}); the tamarisk at Beersheba (Gn 21^{33}, cf. 26^{25} 46^{1}); the oracular mulberry trees in the valley of Rephaim (2 S 5^{24}= 1 Ch 14^{15}); the pomegranate at Gibeah (1 S 14^{2}); the tamarisk at Ramah (1 S 22^{6}); the palm-tree of Deborah between Ramah and Bethel (Jg 4^{5}); the 'oak of weeping' below Bethel (Gn 35^{8}); the terebinth at Ophrah, where the angel appeared to Gideon, and where he offered sacrifice and built an altar (Jg $6^{11.19.24}$); the terebinth of Moreh, 'the diviner,' at Shechem, where Jahweh appeared unto Abram, and Abram built an altar (Gn $12^{6f.}$ 13^{18}), and where Jacob buried the images and the jewels (35^{4}), probably the same as 'the terebinth of the diviners' (Jg 9^{37}) and 'the terebinth of the standing stone that was by the sanctuary of Jahweh' (Jos 24^{26}, Jg 9^{6}); the tamarisk at Jabesh (1 S 31^{13}, cf. 1 Ch 10^{12}). The *'ăshērāh*, or sacred post, so often mentioned in the OT as part of the equipment of a sanctuary, was perhaps merely a conventionalized symbol of a living tree. If so, its use is an additional evidence of tree-worship among the Canaanites and Hebrews (see POLES). The persistence of this cult among the Hebrews is shown also by the combination of cherubim and palm-trees in the decoration of the Temple (1 K $6^{29.32.35}$). Such passages as Ps $52^{10\,(8)}$ and $92^{14\,(13)}$ suggest also that trees were planted in the court of the Temple, as in the modern Ḥaram. Even so late a writer as Zechariah sees myrtle trees at the entrance to Jahweh's abode (Zec 1^{8-11}). The cult still lingers in the Talmud, in the belief that certain trees are inhabited by demons (Grünbaum, *ZDMG* xxxi. 253 ff.).

Of the Phœnicians, Philo Byblius says that the plants of the earth were in ancient times esteemed as gods and honoured with libations and sacrifices, because from them the successive generations of men drew the support of their life (Müller, *FHG* iii. 565). Tyrian coins frequently exhibit cypresses standing in temple enclosures and palm-trees adored by a worshipper. There was a grove of Asklepios (Eshmun) between Beirut and Sidon (Strabo, xvi. 2. 6), a tree believed to enclose the body of Adonis at Gebal (Plut. *de Is. et Osir.* 15 f.), and a grove sacred to 'Ashtart at Aphaka (Euseb. *Vit. Const.* iii. 55; *Laud. Const.* 8). In the Phœn. colonies sacred trees existed in Arados (Lajard, *Mithra*, pl. vi. 1, 2), in Cyprus (Servius, *ad Æn.* v. 72; Athenæus, iii. 27; Strabo, xiii. 1. 51–65), in Rhodes (Paus. iii. 19. 10), in Crete (Diod. Sic. v. 66, 1; Athen. i. 49), at Corinth (Paus. ii. 1. 3, ii. 2. 4; Athen. xv. 22, p. 678*b*), in Arcadia (Paus. viii. 24), at Naukratis (Athen. xv. 18, p. 675 f.), at Carthage (Virg. *Æn.* i. 441 ff.; Tert. *Apol.* 9), in Iberia (Lajard, *Mithra*, p. 287 ff.).

In Syria holy trees were known at Baalbek (Mionnet, *Médailles Antiques*, v. 302 f.), at Damascus (Mionnet, v. 292 ff.), at Palmyra (Lajard, *Cyprès*, pl. iii. 1), at Antioch (Strabo, xvi. 2. 6; Soz. *HE* v. 19), at Mount Kasios (Servius, *ad Æn.* iii. 680). The early Syrian Christians felt it their duty to cut down 'the trees of the demons,' but many could not resist the temptation to turn to them for help when they were sick (Kayser, *Jacob v. Edessa*, p. 141). For survivals of tree-worship among the Sabians of Mesopotamia, see Chwolson, *Ssabier*, i. 293, ii. 29, 33, 34. The cult of trees in Babylonia and Assyria is attested by numerous reliefs and inscriptions on seals. Most frequently the female date-palm is depicted being fertilized by winged figures that symbolize the winds (see Schrader, *MBAW*, 1882, p. 426 ff.; Bonavia, *Bab. and Or. Record*, iii.; Tylor, *PSBA* xii. 181–184). In all parts of the modern Sem. world holy trees are still found which are visited with prayer and sacrifice, and on which bits of cloth torn from the garments are hung to serve as reminders of the worshipper (Doughty, *Arabia Deserta*, i. 448 f.; Curtiss, *Ursem. Rel.* pp. 96 ff., 154 ff.). For literature on tree-worship see Baudissin, *Studien*, ii. 184.

The numina that inhabited such sacred trees were known as their *bᵉʿālîm* or *bᵉʿālôth*, as the case might be. Thus in Arab. a palm-tree that imbibed water with its roots, and did not need to be watered, was known as *baʿl* (Lane, *Arab. Lex. s.v.*). A village near Gibeah bore the name of **Baʿal-tamar**, abbreviated from *Beth-baʿal-tamar*, 'house of the baʿal of the palm' (see below, iii. 2; Jg 20^{33}; Euseb. *Onom. Sac.* 238. 75). With this Baudissin (*Studien*, ii. 211) compares **Zeus Demarous**, the father of Herakles-Melḳart in Philo Byblius (Müller, *FHG* iii. 569, fr. 2, 24), which represents a Sem. *Baʿal-Ṭimār*, or *Baʿal-Timārôn*, just as *Zeus Karmelos* represents *Baʿal-Carmel* (see below, 4). With this is also to be compared the river *Tamuras*, in Strabo (xvi. 2. 22), the modern Nahr Damûr. Precisely analogous are the Arab. names of gods **Dhu-ʿAnama** (*ZDMG*, 1875, p. 611) and **Dhu-l-Ḫalaṣa** (Wellhausen, *Reste*², p. 47), which describe the deities in question as owners of the plants known as *ʿanama* and *ḫalaṣa*.

3. **Animal baʿals.**—In all branches of the Sem. race names of animals used as proper names, particularly of clans and of places, prove a primitive totemistic cult.

Thus in the OT we have the names *Aiah*, 'vulture'; *Aijalon*, 'stag'; *Arieh*, 'lion'; *Becher* and *Bichri*, 'young camel'; *Gemalli*, 'camel'; *Gedi*, 'kid'; *Deborah*, 'bee'; *Dishon*, 'mountain goat'; *Zeeb*, 'wolf'; *Zimran*, 'mountain sheep';

Hagabah, 'locust'; *Hezir*, 'swine'; *Huldah*, 'weasel'; *Ḥamor*, 'ass'; *Ḥumṭah*, 'lizard'; *Ṭelaim*, 'lambs'; *Jonah*, 'dove'; *Ja'el*, 'mountain goat'; *Car* and *Cheran*, 'lamb'; *Caleb*, 'dog'; *Lebaoth*, 'lions'; *Laish*, 'lion'; *Naḥash*, 'serpent'; *Nimrah*, 'leopard'; *Susah*, 'mare'; *'Eglah*, 'heifer'; *'Epher*, 'young gazelle'; *'Achbor*, 'mouse'; *'Oreb*, 'raven'; *'Arad*, 'wild ass'; *'Eṭam*, 'vulture'; *'Aḳrabbim*, 'scorpions'; *Parah*, 'cow'; *Ẓibiah*, 'gazelle'; *Ẓippor*, 'sparrow'; *Ẓorah*, 'hornet'; *Pir'am*, 'wild ass'; *Par'osh*, 'flea'; *Rachel*, 'ewe'; *Seirah*, 'goat'; *Shu'al*, 'fox'; *Shaphan*, 'badger'; *Shephuphan*, 'a kind of serpent'; *Tola'*, 'worm'; *Taḥash*, 'porpoise'; *Ẓibe'on*, 'hyæna'; *Sha'albim*, 'fox'; *Leah*, 'wild cow'; *Nun*, 'fish'; *Ḥoglah*, 'partridge' (list taken from Gray, *Heb. Proper Names*, p. 88 f.). For similar animal names among the Arabs and Syrians see W. R. Smith, *JPh* ix. 75–100; Nöldeke, *ZDMG*, 1886, pp. 148–187. The worship of the bullock among the Hebrews is attested by Ex $32^{4f.}$, 1 K $12^{28f.}$, Hos 8^{5} 10^{5} 13^{2}, and by the survival of אביר, 'bullock,' as a title of Jahweh. Such place names as *Beth-car*, 'house of the lamb'; *Beth-lebaoth*, 'house of lions'; *Beth-nimrah*, 'house of the leopard'; *Beth-ḥoglah*, 'house of the partridge,' are analogous to *Beth-Dagon*, *Beth-El*, *Beth-Shemesh*, compounded with names of gods, and seem to indicate that these places were seats of totemic animal-worship. If the name Dagon be derived from *dag*, 'fish,' this is an additional evidence of Sem. animal-worship (see DAGON). The *śe'īrīm*, 'hairy ones, he-goats,' of Lv 17^{7}, Is 13^{21} 34^{14}, 2 Ch 11^{15}, like the hairy Jinn of the Arabs (W. R. Smith, p. 119 ff.), are survivals of the same sort of cult. In Arabia we find also *Asad*, 'lion'; *Nasr*, 'vulture'; *'Auf*, 'bird of prey' (see ARABS, I. 3); in Babylonia, *NIN-SHAḪ* = *Bêl-shaḫî*, 'lord of the wild boar.'

Totemic animals were classed by OT writers along with other local numina under the general name of the *be'ālīm*, but it was not Semitic usage to speak of the *ba'al* of an animal as one spoke of the *ba'al* of a spring or of a tree. The bullock was worshipped directly, not the *ba'al* of the bullock (yet compare *Bêl-shaḫî* above). The reason for this, apparently, was a stronger sense of personality in the animal. It was an individual like a man, while a spring or tree was not an individual but an abode of one. The only exception to this rule is the name Ba'al-zebub, the god of Ekron, whose oracle was consulted by Ahaziah (2 K $1^{2.3.6.16}$). If the text be sound, this means 'owner of flies'; so LXX Βάαλ μυῖα θεός. Baudissin (*PRE*³ ii. 515) compares Ζεὺς ἀπόμυιος in Paus. v. 14. 1, viii. 26. 7; Clem. of Alex. *Protrept.* ii. 38, ed. Dindorf (cf. Pliny, *HN* x. 28 [40]. 75; Aelian, *Nat. Anim.* v. 17), but there is no evidence that the cult of this deity was of Sem. origin. The name *Ba'al-Zebub* occurs nowhere else than in the passage just cited in 2 Kings. Cheyne (*EBi* i. 407) holds that this form is a contemptuous Jewish perversion of Ba'al-zebul = *Be'el-zebul*, 'owner of the dwelling,' the form which occurs in the best MSS of Mt 10^{25} 12^{24}, Mk 3^{22}, Lk $11^{15.18f.}$ (see below, 6). If so, this name has nothing to do with flies, and the one instance of a compounding of *Ba'al* with the name of an animal disappears (see BAALZEBUB).

4. **Ba'als of mountains.**—The sanctity of mountains among all the Semites was due, perhaps, to the awe which their grandeur inspired, perhaps to their connexion with clouds and storms.

In Arabia, Sinai was counted holy from the earliest times (Ex 3^{1} 4^{27} 24^{13}). Its name is probably derived from the moon-god Sin. It retained its sanctity down to a late date (1 K 19^{8}). Other Arabian holy mountains were Hirâ, Taur, Tabir, Ko'aika'ân, and 'Arafât (v. Kremer, *Culturgeschichte des Orients*, ii. 14). In Ethiopic *dabr* means both 'mountain' and 'monastery.' According to Dt 12^{2}, Jer 2^{20} 3^{6} 17^{2}, Ezk 6^{13} 20^{28}, 1 K 14^{23}, 2 K 16^{4} 17^{10}, Is 57^{7}, Hos 4^{13}, the Canaanites and Hebrews sacrificed 'upon every high hill.' So conspicuous was this cult that it seemed to the Aramæans that the gods of the Hebrews were gods of the hills (1 K $20^{23.28}$). The following holy mountains are known in Canaan:—Hor (Nu $20^{25ff.}$), Peor (Nu $23^{28f.}$), Nebo (Dt 32^{49} 34^{1}), which derives its name from the Babylonian god Nebo (Is 46^{1}); the hill at Kiriath-jearim where the ark was kept (1 S 7^{1}), the mountain of the land of Moriah (Gn $22^{2.14}$), Zion (Is $2^{2.3}$ and often), the Mount of Olives (2 S 15^{32}, 1 K 11^{7}), Mizpah (Jg $20^{1.18.26-28}$ $21^{1.2.5}$, 1 S 7^{5}), Ramah (1 S 7^{17} $9^{12-14.19.25}$), Gibeah (1 S $10^{5.13}$), Gibeon (1 K 3^{4}), the mountain at Ophrah (Jg 6^{26}), Ebal and Gerizim (Dt $27^{4.12}$, Jos $8^{30.33}$, Jn 4^{20}), Tabor (Jg $4^{6.12.14}$, Hos 5^{1}), Carmel (1 K $18^{20.30}$), Gilead (Gn 31^{45-54}), Hermon (Jerome, *Onom. Sac.*, ed. Lagarde, p. 90, 19 ff.; Euseb. *Onom. s.v.* 'Αερμών). In the case of Hermon the ancient sanctity is still attested by the numerous ruins of temples that remain upon its slopes. The word *bāmāh*, which in the OT has come to be the general designation of seats of idolatrous worship, seems to denote primarily a 'height.' It is thus a witness to the wide diffusion of worship on hill-tops (see HIGH PLACE). Among the Phœnicians, Philo Byblius names Anti-lebanon, Lebanon, Kasios, and Brathy as holy mountains (Müller, *FHG* p. 566, frag. 2, 7). Baudissin (*Studien*, ii. 247) conjectures that Brathy is a corruption of Tabor. Strabo (xvi. 2. 15 f.) also mentions a sacred promontory near Tripolis. For holy mountains in the Phœn. colonies see Baudissin, *Studien*, ii. 249. For holy mountains in Northern Syria and Mesopotamia see Baudissin, ii. 246. For modern survivals of this cult see Curtiss, *Ursem. Rel.* p. 153 ff.

The divinities that inhabited these mountains were their *be'ālīm*. The name of Serbâl, the traditional Sinai, is probably compounded with *ba'al*. An Egyptian text speaks of the '*ba'al* upon the mountains' (W. M. Müller, *Asien u. Europa*, p. 309). In Canaan we find Ba'al-Pe'or (Nu 25^{3-5}, Dt 4^{3}, Hos 9^{10}, Ps 106^{28}), or simply *Pe'or*, as the name of the god (Nu 25^{18} 31^{16}, Jos 22^{17}, cf. *Beth-Pe'or*, Dt 3^{29} etc.); Bāmôth-ba'al, 'the high places of the *ba'al*' (Nu 22^{41} $23^{1f.}$, Jos 13^{17}); Har-hab-ba'ălāh, 'mount of the *ba'ălāh*' (Jos 15^{11}); *Zeus Atabyrios* = Ba'al-Tabor (Gesenius, *Thes. s.v.* תבור); Ba'al-Hermon (Jg 3^{3}, 1 Ch 5^{23}); *Zeus Karmelos* = Ba'al-Carmel (Tac. *Hist.* ii. 78); among the Phœnicians, Ba'al-Lebanon (*CIS* 5), probably the same as the god 'Amurru, lord of the mountain' (Reisner, *Hymn.* p. 139, lines 143, 145; cf. *KAT*³ 433), and Ζεὺς ὄρειος of Philo Byblius; *Ba'li-ra'si* = Ba'al-ra'š, 'ba'al of the promontory' (Shalmaneser II., fragment of annals, *KIB* i. 141); *Zeus Kasios* = Ba'al-Kaṣiw, 'ba'al of the precipice,' in Nabatæan inscriptions אלה קצי (Baudissin, *Studien* ii. 238); at Carthage, *Saturnus Balcaranensis* = Ba'al-Ḳarnaim, '*ba'al* of the two horns,' who was worshipped on a two-peaked mountain near Carthage, the modern Jebel bû Ḳurnein, where a temenos and altar have been discovered with hundreds of stelæ, dating from the 2nd and 3rd cents. A.D., bearing the inscription 'Saturno Balcaranensi, domino, magno, sancto, augusto' (Toutain, *Mélanges école franç.*, Rome, 1892, pp. 1–124, pl. i.–iv.).

5. **Ba'als of stones.**—Among the Semites, as among other primitive peoples, *maṣṣēbôth*, or fetish-stones, were reverenced as abodes of spirits.

Among the Arabs the most famous instance is the black stone at Mecca, which still forms the religious centre of the Muslim world. There was also a holy stone at the sanctuary of al-'Uzzâ at Nabla (Wellhausen, *Reste*², p. 39), and at the sanctuary of the god of Petra (Suidas, *s.v.* Ζεὺς Ἄρης; Epiphan. *Panarion*, li.). The prohibitions of the Law assume that such stones were standing in all parts of Canaan, and were adopted by the Israelites as part of the worship of Jahweh (Lv 26^{1}, Dt 12^{3} 16^{22}, Jer 2^{27} 3^{9}). The following holy stones are particularly mentioned: the twelve pillars at Sinai (Ex 24^{4}); 'Lot's Wife' (Gn 19^{26}); the stones at Gilgal, 'the circle' (Jos $4^{2.20}$); the stone at Beth-Shemesh (1 S 6^{18}), at Zor'ah (Jg 13^{19}); the pillar of Rachel's grave at Bethlehem (Gn 35^{20}); the stone of Bohan (Jos 15^{6} 18^{17}); the stone Zoheleth, near Jerusalem (1 K 1^{9}); the 'foundation-stone' in the Temple (Bab. Talm. *Yoma*, 54*a*); the stone of help at Mizpah (1 S 7^{12}); the stone 'Ezel, near Gibeah (1 S 20^{19}); the stone at Bethel (Gn 28^{18-22} 31^{13} 35^{14}), at Ophrah (Jg 6^{20}), at Shechem (Jos 24^{27}, Jg 9^{6}); the stones on Ebal (Dt 27^{4}), on Mount Gilead (Gn 31^{45-52}). Among the Phœnicians the name Zur, Tyre, 'rock,' is perhaps derived from the sacred stone of the local god. Coins of Seleucia, in Pieria, bear the inscription 'Zeus Kasios,' and show an upright stone standing in a temple (Mionnet, *Médailles Ant.* v. 276 f.). The goddesses of Gebal and of Paphos were similarly represented (see ASHTART, 4), so also in Syria the god Elagabal at Emesa (Cohen, *Déscription des monnaies*, p. 530 ff., Nos. 126–129, pl. xv. 127). At Nisibis in the 4th cent. there was a similar holy stone (*Beitr. z. Alterthumskunde*, 1880, p. 772; see MAṢṢĒBÂH). For stone-worship in modern Arabia see Zwemer, *Arabia*, pp. 36, 39, 284, and for modern Syria see Curtiss, *Ursem. Rel.* p. 90 ff.

Similar in character to the *maṣṣēbôth*, or 'standing stones' were the *ḥammānîm*, which along with altars, *'ăshērîm*, and idols formed part of the equipment of high places (Lv 26^{30}, Is 17^{8} 27^{9}, Ezk $6^{4.6}$, 2 Ch $14^{4(5)}$ $34^{4.7}$). In the Palmyrene inscription (de Vogüé, *op. cit.* 123*a*) a *ḥammāna* is dedicated to the sun. In an inscription from Um el-'Awamid (*CIS* 8) and in the Ma'sub inscription (Hoffmann, 'Phön. Inschr,' *AGG* xxxvi., 1890, p. 20 ff.) the deity '*El-ḥammān* occurs. Over 2000 inscriptions on small upright stelæ, like gravestones, from Carthage, bear the inscription, 'To the Lady Tanit, face of Ba'al, and to the Lord *Ba'al-ḥammān*, so and so has dedicated this.' Ba'al-hammān is also mentioned frequently in inscriptions from Malta, Sicily, and Sardinia. In three inscriptions (*CIS* 404, 405; Euting, *Karth. Inschr.* 123) the dedication is to *Ḥammān* without the prefixed *Ba'al*. Rashi first suggested that *ḥammān* was derived from the late Heb. and Rabbinic word *ḥammā*, 'sun,' and translated it

'sun-images'—an opinion that has been followed by many modern versions and commentators; but this translation is unknown to the ancient versions. LXX renders ξύλινα, βδελύγματα, εἴδωλα, τεμένη, ὑψηλά; Jerome, *simulacra*, *delubra*. No support is afforded to this theory by the fact that a *ḥammāna* is dedicated to the sun, since, according to 2 Ch 34^{4}, the *ḥammānîm* belonged to 'the *beʻālîm*' in general. That *Baʻal-ḥammān* had solar attributes, or that the name means 'owner of the sun' or 'glowing *baʻal*,' has not been proved. *Baʻal* is never compounded with *shemesh*, 'the sun,' or with the names of any of the other heavenly bodies (see below, 8); it is unnatural, therefore, to regard *ḥammān* as a synonym of *shemesh*. To take it as an adjective, 'glowing,' agreeing with *Baʻal*, is also without analogy (see below, 10). The suggestion of Renan (*CIS* I. i. 288 f.), that *ḥammān* is the same as the Egyptian god Amun Ra, is untenable, because in Heb. his name appears as 'Amon. The theory of Halévy (*Mélanges*, p. 426), that *ḥammān* is Mt. Amanus, and that *Baʻal-ḥammān* is the *Baʻal* of this mountain, is more in accordance with Sem. analogy; but in the Bab.-Assyr. inscriptions Amanus appears as Amana without the strong initial guttural. It is also hard to see how objects used in the cult of this deity should have been called 'Amanuses.' For such a usage there is no analogy in the worship of other mountain-gods. We seem accordingly to be shut up to the view that *ḥammān* is a cult-object of unknown etymology, and that *Baʻal-ḥammān* is the deity that inhabits this object. This is strictly in accordance with the analogy of such names as *Baʻal-tamar*, 'Baʻal of the palm,' and *Baʻalath-beʼēr*, 'Baʻalath of the well.' From the OT references it appears that the *ḥammānîm* were artificial products, 'the work of their fingers' (Is 17^{8}), that they 'rose up' (Is 27^{9}) 'above the altars' (2 Ch 34^{4}), that they could be 'cut off' (Lv 26^{30}), 'broken' (Ezk 6^{4}), and 'hewn down' (Ezk 6^{6}, 2 Ch 34^{7}). These expressions seem most applicable to stone pillars similar to the *maṣṣēbôth*. It is interesting to note that in none of the passages where *ḥammānîm* are mentioned are *maṣṣēbôth* mentioned. On the contrary, the *ḥammānîm* are combined with the *'ăshērîm* in Is 17^{8} 27^{9}, 2 Ch $34^{4.7}$, just as the *maṣṣēbôth* and the *'ăshērîm* are ordinarily combined. This suggests that the *ḥammānîm* are only variant forms of the *maṣṣēbôth*, perhaps artificially hewn, while the latter were native rock. In all probability the stelæ dedicated to *Baʻal-ḥammān* at Carthage and other Phœn. colonies were just such *ḥammānîm*.

A survival of stone-worship is seen in proper names compounded with *ẓûr*, צור, 'rock,' *e.g.* *Ẓuri-el*, 'my rock is a god'; *Ẓur-Shaddai*, 'a rock is Shaddai'; *Eli-ẓur*, 'my god is a rock'; *Beth-ẓur*, 'house of rock'; and, in the Panammu inscription from Zenjirli, *Bar-ẓur*, 'son of rock' (Lidzbarski, *Nordsem. Epig.* p. 442). In the light of these facts we should probably estimate the use of *Ẓûr* as a name of Jahweh (Dt $32^{4.15.18.30f.}$, 1 S 2^{2}, 2 S $22^{3.32.47}$, Is 17^{10} 30^{29}, Hab 1^{12} etc.). The proper name *Riẓpah*, 'hot stone,' probably refers to a meteoric stone or supposed 'thunderbolt' that was reverenced as a fetish.

The sacred stone was regarded as the residence of a divinity, and therefore was known as *beth-el*, 'abode of deity' (cf. Gn 28^{18-22}, where Jacob calls the stone that he sets up *beth-el*, and Gn 31^{13}, where God says, 'I am the God of Bethel, where thou didst anoint a *maṣṣēbāh*, where thou didst vow a vow'). This name for holy stones was common also among the Phœnicians, from whom it spread to the Greeks and the Romans as βαίτυλος, βαιτύλιον (see STONES).

The divine proprietor of the 'house of deity' was its *baʻal*, just as the human owner of a house was its *baʻal*; *e.g.* Baʻal-ḥammān, 'owner of the stele,' in the numerous Punic inscriptions referred to above. The form *Baʻal-maṣṣēbāh* does not happen to occur, but is perfectly in accord with Sem. habits of thought, and is the necessary counterpart to the conception of the *maṣṣēbāh* as a *beth-el*.

6. Baʻals of sanctuaries.—In a few cases, apparently, the *baʻal* is not named from the sacred object in which he is supposed to reside, but from the sacred enclosure that surrounds this object. The Sabæan goddess **Dhât Himâ**, 'she of the holy ground' (*ZDMG*, 1877, p. 84), thus takes her name from her temenos. A similar formation seems to be found in בעלת החדרת (*CIS* 41), which with Renan is probably to be rendered '*Baʻalat* of the inner sanctuary.' After this analogy also we should perhaps interpret Bal-addiris (=בעל חדר), who was worshipped at Sigus, in Numidia (*CIL* viii. 5279; Suppl. 19121–19123). If Baʻal-zebul be the correct reading instead of *Baʻal-Zebub* (see above, 3), then this '*baʻal* of the dwelling' may take his name from the sanctuary in which he was worshipped (but see below, 8).

7. Baʻals of places.—In the foregoing cases we are told what the particular natural phenomenon was with which the *baʻal* was connected. In other cases the phenomenon is not mentioned, but the *baʻal* is named from the place in which he was worshipped. Thus in Canaan we find **Baʻal-Meʻon** (Nu 32^{38}, Jos 13^{17}, Ezk 25^{9}, 1 Ch 5^{8}), **Baʻal-Shalishah** (2 K 4^{42}), **Baʻal-Ḥaẓor** (2 S 13^{23}); in Phœnicia, **Baʻal-Ṣidon** (*CIS* 3), **Baʻal-Tyre** (Hoffmann, *AGG* xxxvi., 1890, p. 19), **Baʻalat-Gebal** (*CIS* 1, 177); in Syria, **Belos of Apamea** (*CIL* xii. 1277); in Asia Minor, **Baʻal-Tarsus** (Scholz, *Götzendienst*, 149), **Baʻal-Gazur** (Head, *Hist. Num.* 631). In all these cases we must suppose that the divinity was connected with some striking physical phenomenon, only we are not told what this was, but are merely given the name of the town where it was located. Sometimes we know from other sources that there were sacred springs, trees, or stones in the places in question.

8. Celestial baʻals.—The object with which the divinity was connected was not necessarily situated on the earth; it might be the sky, one of the heavenly bodies, or some atmospheric phenomenon. Thus in Palmyrene, Phœnician, and Punic inscriptions we find frequent mention of **Beʻēl-shemayin**, **Baʻal-shāmēm**. This name is not derived from *shemesh*, 'sun,' as many have supposed, on the strength of identifications of this god with the sun by late Greek writers, but is derived from *shāmayim*, 'sky,' as Augustine (*Quæst. in Jud.* xvi.) correctly translates, 'Balsamem quasi dominum cœli Punici intelliguntur dicere.' It does not mean 'Lord of Heaven' in any abstract theological sense, but 'the one who lives in the sky.' It is thus the exact equivalent of the Sabæan god, *Dhû-Samâwi*, 'he of the sky.' *Baʻal-Shāmēm* is the Sem. counterpart of Varuna, Οὐρανός, among the Indo-Europeans. It is noteworthy, however, that, while the latter worship the sky directly, the former worship the *baʻal* of the sky (Lidzbarski, *Ephemeris*, i. 3).

Closely connected with *Baʻal-shāmēm* in conception is **Baʻal-ẓephôn** (**ẓāphôn**), 'owner of the north.' This was the name of a town on the Red Sea (Ex $14^{2.9}$, Nu 33^{7}). A goddess, **Baʻalat-ẓāphôn**, was also worshipped at Memphis (W. M. Müller, *Asien u. Europa*, p. 315). In the annals of Tiglath-pileser III. (*KIB* ii. 26 f.) a peak of Lebanon bears the name *Baʻali-ṣapuna* (cf. Sargon, *Annals*, 204). In the treaty between Baʻal, king of Tyre, and Esarhaddon, king of Assyria, one of the gods mentioned is *Baʻal-ṣapunu* (*KAT*[3] 357). There was a town Zaphon in Gad (Jos 13^{27}, Jg 12^{1}), also in Southern Palestine (*KIB* v., No. 174, 16), but it does not seem likely that this god can have derived his name from either of these insignificant places, since his cult spread all the way from Phœnicia to Egypt. *Ẓāphôn* is rather an abbreviation of *Baʻal-ẓāphôn*, and that in its turn of *Bêth-baʻal-ẓāphôn*, just as we find the series *Māʻôn*, *Baʻal-Māʻôn*, and *Beth-baʻal-Māʻôn* (Nu $32^{3.38}$, Jos 13^{17}). Moreover, *Ẓāphôn* alone occurs as the name of a deity in the Phœn. proper names ברצפן from Abydos (*CIS* 108), עבדצפן from Carthage (*CIS* 265), צפנבעל from Carthage (*CIS* 207, 857). The last name is *Baʻal-ẓāphôn*, with the elements reversed. The name *Gîr-ṣapûnu*, 'client of *Ẓāphôn*,' appears also as the name of an eponym in the time of Ashurbanipal (*KIB* i. 207, iv. 139). These names throw light upon the Heb. proper names Ẓaphon, Ẓephon, Ẓephonites, Ẓiphion. If *Ẓāphôn* is a god, we may either suppose with Gray (*Heb. Pr. Names*, p. 135) that this is a case of compounding two divine names, like Jahweh-Elohim, or, more probably, we may regard *Ẓāphôn*, 'the north,' as an object that might either be worshipped directly or be regarded as the abode of a deity, so that the god might be called indifferently *Ẓāphôn* or *Baʻal-Ẓāphôn*. The sanctity of the north as the dwelling-place of the gods is widely attested among the Semites (Is 14^{13}; cf. Baethgen, *Beiträge*, p. 22 f.; Baudissin, *Studien*, i. 278). *Baʻal-*

ṣāphôn, 'owner of the north,' accordingly, is nearly synonymous with *Ba'al-shāmēm*, 'owner of the sky,' although in the Phœn. pantheon the two deities existed side by side (*KAT*^{3} 357). The name *Ba'al-zebul*, 'owner of the dwelling' (see above, 3 and 6), may be given with reference to this heavenly abode rather than with reference to an earthly sanctuary (so Cheyne, *EBi* 514).

The worship of the sun, moon, and stars was universal among the ancient Semites (cf. Baethgen, *Beiträge*, p. 61; Grunwald, *Eigennamen*, pp. 30–35; Jastrow, *Rel. Bab.*^{2} pp. 134, 151; *KAT*^{3} pp. 361–370); but, as noted above, it was not customary to speak of the *bᵉ'ālîm* of these celestial objects as one spoke of the *ba'al* of the sky or the *ba'al* of the north. Like animals, they seemed to possess personality, and were worshipped directly as gods rather than as the abodes of gods. By the Hebrews they were spoken of collectively, not as the *bᵉ'ālîm*, but as 'the host of heaven.' The same holds true of atmospheric phenomena. *Ramman*, 'thunder' (*KAT*^{3} 442); *Regem*, 'storm'; *Baraḳ*, 'lightning' (*KAT*^{3} 446); *Resheph*, 'flame' (*KAT*^{3} 478); *Riẓpah*, 'thunderbolt' (?); *Barad*, 'hail'; *Maṭar*, 'rain'; *Geshem*, 'shower'; *Ṭal*, 'dew'; *Ḥôreph*, 'frost,' are shown by the evidence of proper names to have been objects of worship in all branches of the Semitic race (Grunwald, *Eigennamen*, p. 28 f.). These phenomena are worshipped directly. *Ramman*, *Regem*, *Baraḳ*, and *Resheph* are the gods' own names, and we never meet *Ba'al-Ramman* or *Ba'al-Regem* as the name of a god, although such formations are common in names of men (see below, 9). In this respect Semitic and Indo-European nature-worship were strictly parallel (see ARABS, I. 1).

9. Adopted ba'als.—Celestial and atmospheric phenomena that could not be reached in their proper abodes like terrestrial *bᵉ'ālîm* often had sanctuaries built for them on earth, and thus by a sort of adoption became the *bᵉ'ālîm* of these places. Thus *Dhû-Samâwî*, 'he of the sky,' appears in the Sabæan inscriptions also as *ba'al* of Baqir; and in like manner *Ba'al-shāmēm*, 'owner of the sky,' is *ba'al* of Tyre (*KAT*^{3} 357), of the Phœnician colonies (Baethgen, *Beitr.* p. 25), and of Palmyra (de Vogüé, *op. cit.* 50). *Ba'al-ṣāphôn*, 'owner of the north,' as we have seen above, is also a *ba'al* of Egypt and of Phœnicia. *Shams*, 'the sun,' is in the Sabæan inscriptions also *ba'alat* of Guḥfat (*CIS* iv. 11. 1) and *ba'alat* of Gabbaran (*CIS* iv. 43. 3). The sun was the *ba'al* of Ba'al-bek (Heliopolis), and Marduk, the spring sun, was the *bêl* of Babylon. Sin, the moon-god, was the *bêl* of Ur and of Ḥarran (Lidzbarski, *Nordsem. Epig.* p. 444, pl. xxiv.), and in Palmyra a god bore the name *Yarchi-bôl* (ירחבול), 'the moon is *ba'al*.' On a Syrian seal (Lidzbarski, *Ephemeris*, i. 12) the name *Ba'al-Regem* appears, which shows that in some districts *Regem*, 'the storm,' had become the local *ba'al*. Similarly, various *'ădhônîm*, *mᵉlākhîm*, *'ashtārôth*, and other tribal gods, that had originally no connexion with physical phenomena, might become the *bᵉ'ālîm* of certain places, through the circumstance that their worshippers settled in these places. Thus Jahweh became for the ancient Hebrews the *ba'al* of Canaan, Melḳart for the Phœnicians the *ba'al* of Tyre, and Ashtart for the Gebalites the *ba'alat* of Gebal. Certain local *bᵉ'ālîm* also became so important that their cults migrated to other cities, so that they became the *bᵉ'ālîm* of these new places. Under the name of *Zeus Atabyrios* the cult of *Ba'al-Tabor* spread to Rhodes and Sicily (Baudissin, *Studien*, ii. 247). *Zeus Kasios* (=*Ba'al-Ḳaṣiw*) was also the *ba'al* of Pelusium (Strabo, xvi. 2. 33; Philo Bybl. in Müller, *FHG* p. 568). Melḳart, the *ba'al* of Tyre, was also worshipped at Carthage and the other Phœn. colonies. *Ba'al-Ḥarran* was also one of the gods of Sam'al (Lidzbarski, *Nordsem. Epig.* 444, pl. xxiv.). In such cases as these, where *bᵉ'ālîm* were not originally connected with sanctuaries, but became their proprietors by adoption, they might have individual personal names; ordinarily they were nameless, and were known merely by the locality in which they had their abode.

10. Departmental ba'als.—The *ba'als* studied thus far all derived their titles from the fact that they were the 'proprietors' of certain physical objects or places. This usage of the divine name corresponds to the meaning 'owner' or 'citizen' of the common noun *ba'al*. The question now arises whether the divine name is also used like the common noun in the sense of 'possessor of an activity.' Numina, which preside over abstract qualities or activities, are very common in the Indo-European religions, and by Usener (*Götternamen*) have been entitled 'departmental deities.' Of the existence of such *bᵉ'ālîm* in the Semitic religions there is no clear evidence. At the temple of Deir el-Qal'a, near Beirut, inscriptions have been found in honour of Βαλμαρκώδης, Βαλμαρκώθ. This name is translated κοίρανος κώμων, 'leader of dances' (le Bas, 1855=Kaibel, *Epig. Gr.* 835), which indicates that the Phœn. original is **Ba'al-Marqôd.** *Marqôd* is evidently a derivative of *raqad*, 'dance,' and may express the abstract idea of 'dancing.' This interpretation seems to be favoured by the Greek translation. In this case we have a *ba'al* who presided over a human activity, like the Indo-European departmental deities. *Marqôd*, however, also denotes 'dancing-place,' and may have been the name of the locality where the temple was situated. 'Owner of the dancing-place' could easily have been paraphrased in Greek as 'leader of dances.' In this case we have simply a *ba'al* who takes his name from the locality where he is worshipped, like all the other *ba'als* we have studied thus far.

In an inscription from Cyprus (*CIS* 41) we meet בעל מרפא. This is commonly read **Ba'al-marpē,** 'possessor of healing,' or *Ba'al-mᵉrappē*, 'Baal the healer,' in which case we have another departmental *ba'al*; but *marpē*, 'healing-place,' or *mᵉrappē*, 'healer,' may equally well have been the name of a medicinal spring of which this *ba'al* was the owner. This will then be a local *ba'al* of the familiar type.

In Jg 8^{33} 9^4 mention is made of **Ba'al-berith** (cf. 9^{46} *El-berith*). This is commonly interpreted '*Ba'al* of the covenant.' The 'covenant' is then understood of the relation between the deity and his worshippers (Baethgen, Sayce), or of an alliance between Israelites and Canaanites (Bertheau, Kittel), or of an alliance between Shechem and neighbouring Canaanite towns (Ewald, Kuenen, Wellhausen, Cheyne), or of agreements in general, as Ζεὺς Ὅρκιος (Nöldeke, *ZDMG* xlii., 1888, p. 478). On any of these interpretations the name stands without confirmation elsewhere in the OT, and without analogy in the whole field of Semitic religion. Under these circumstances it is reasonable to suspect textual corruption in the passage in Judges. Instead of ברית, *bᵉrîth*, we should perhaps read ברות, *bᵉrûth*, 'cypress' (Ca 1^{17}). The worship of a Phœn. goddess, *Bērouth*, is attested by Philo Bybl. (Müller, *FHG* p. 567, fr. 2, 12). There was a famous holy tree at Shechem (see above, ii. 2). Or perhaps we should read בארות, *bᵉērôth*, 'wells.' *Ba'al-bᵉērôth* would then be the counterpart of *Ba'ᵃlath-bᵉēr* (Jos 19^8). Less likely is the suggestion of Bochart and Creuzer, that we should read *Ba'al-Bērôth*, Ba'al of Beirut (Berytus).

Ba'al-Gad (Jos 11^{17} 12^7 13^5) is commonly rendered 'lord of fortune,' and is supposed to be a deity whose function it was to bring good luck; but *Gad* is also the name of a god in Is 65^{11}, probably also in the proper names *Migdal-Gad* (Jos 15^{37}) and *Gaddi-El* (Nu 13^{10}), *Gaddi* (Nu 13^{11}), and the tribal name *Gad*. The name *Gad-melek*, 'Gad is king,' occurs on a

Heb. seal; *Gudu-bal* = *Gad-ba'al* (Hoffmann, *Phœn. Inscr.* 27) and such names as *Gadi-ya*, *Gadi-ilu*, in Assyrian business documents (Johns, *Deeds*, No. 275, 5; 443, etc.). For the cult of this god in Syria see Baethgen (*Beitr.* p. 76), and in Arabia, Wellhausen (*Reste*², p. 146); see 'Gad' in *HDB* and *EBi*. If *Gad* be regarded as the name of a deity in *Ba'al-Gad*, the difficulty arises that this is an abnormal formation for names of places. Such compounds as *Ba'al-Gad*, 'the owner is Gad,' and *Gadu-ba'l*, 'Gad is the owner,' are common as names of persons, but not as names of places (Gray, *Heb. Pr. Names*, p. 134). *Ba'al-Ẓāphôn* furnishes no real analogy, since *Ẓāphôn* is not only the name of a god, but also the name of a place, 'the north.' If we might suppose that *Ba'al-Gad* was originally the name of a man, and that the place was named after him, the difficulty would be solved; but there are no trustworthy analogies for such a procedure. Baethgen (*Beitr.* pp. 79, 254) regards this as a case of the synthesis of two deities, like *'Ashtar-Chemosh*, *'Atar-'Ate*, *Jahweh-Elohim*; but this implies that *ba'al* had become a proper name, and of this there is no evidence among the Hebrews or among any of the other West Semites until a late period. Accordingly, it is best to follow with Stade (*Gesch. Isr.* i. 272 n.) the analogy of the other *ba'als*, and to regard *Gad* as the name of the district occupied by the tribe of Gad. The name of *Ba'al-Gad* will then be parallel to *Ba'al-Judah*. Even if *Ba'al-Gad* were not situated in the tribe of Gad, this would make no difference, for, as we have just seen, *bᵉ'ālîm* frequently migrated.

The name בעל ימם (*CIS* 86*b*. 4) is commonly regarded as the equivalent of Heb. Ba'al-yāmîm, 'owner of days,' and is supposed to be a sort of Sem. Kronos; but the reading is very uncertain, and the name may be the equivalent of *Ba'al-yammim*, 'owner of the seas.'

These are all the cases that can be cited of apparent departmental *ba'als*. All are capable of an interpretation which makes them local *ba'als* of the familiar type. Accordingly we are probably justified in concluding that *ba'als* who presided over human activities or abstract qualities were unknown to Semitic thought. Such functions belonged rather to *'ădhônîm*, *mᵉlākhîm*, and other tribal deities. Thus Eshmun, the great god of the Phœnicians, was the god of healing, and Ishtar of Babylon was known as *Mu'allidtu*, *Mylitta*, the goddess of childbirth. From our investigation, we reach the conclusion that the *bᵉ'ālîm* were originally all numina of physical objects or localities, and that the only sense in which *ba'al* was used as a divine name was that of 'owner' or 'proprietor.'

iii. *HISTORY OF THE BA'AL-CULT*.—1. **In Arabia.**—In South Arabian inscriptions *ba'al* is constantly used to describe the great gods as 'proprietors' of particular shrines established in their honour. Thus, Ta'lab Riyam, *ba'al* of Tur'at, or *ba'al* of Ḳaduman; Ḥagar, *ba'al* of Maryab; Ilmaḳḳâh, *ba'al* of 'Awwam, or *ba'al* of Bar'ān; 'Athtar, *ba'al* of 'Alam; Shams, *ba'alat* of Guḥfat, or *ba'alat* of Gabbaran (*CIS* iv. 2. 3, 11. 1, 19. 2 f., 28. 1 f., 41. 2 f., 43. 2 f., 46. 5, 67. 3, 74. 3 f., 80. 2 f., 99. 2 ff., 100. 1). These names all belong to the ninth class noted above, 'adopted *ba'als*.' To express the primary relation of a god to the physical objects that he inhabits, or the sanctuary where he is originally at home, the Minæan and Sabæan inscriptions use *dhû* (fem. *dhât*), 'he of,' 'she of.' Thus instead of *Ba'al-Shāmēm* we meet *Dhû-Samâwî*, 'he of the sky,' who is also *ba'al* of Baqir; and similarly *Dhât Ḥimay*, *Dhât-Ba'dân*, *Dhât-Gadrân*, who also become the *ba'als* of various shrines (*CIS* iv. 145, 155).

In Ethiopic *ba'al* occurs as a loan-word in the version of the OT as a name of the Canaanitish deity, but is not used elsewhere. A trace of the old religious meaning of the word survives, however, in *ba'āl*, 'feast.' In the Sinaitic inscriptions *ba'al* occurs as a designation of the god of the mountain. Thus קדם אלבעלי, 'in the presence of the *ba'al*' (Euting, *Sin. Inschr.* 327); also in proper names, e.g. *Ausalba'lī*, *Garmalba'lī*, *'Abdalba'lī* (see Euting). In Nabatæan the name occurs in *Bᵉ'ēl-Shāmîn* (*CIS* 163, cf. 176) and in the personal names *Aiti-bêl* (*CIS* 196) and *Ba'al-Adhôn* (? *CIS* 192). This *ba'al* apparently has been borrowed from Syria. In classical Arabic *ba'al* is not used as a title of divinities. From this W. R. Smith (109 ff.) infers that the *bᵉ'ālîm* were deities of watered land and of agriculture, who were unknown to the desert Semites, and were first worshipped in the fruitful lands of Syria and Mesopotamia. This conclusion is unwarranted, (1) because, as noted above, the *bᵉ'ālîm* cannot be limited to watered land, and *bᵉ'ālîm* of trees, stones, mountains, celestial bodies, etc., can be worshipped in the desert as well as anywhere else; (2) because there is no evidence that the phrase *ba'l*, or what the *ba'l* waters (='Athtar-land) or a *ba'l*-palm, is borrowed from the Aramaic; (3) because the word can be used in such expressions as 'the (Christian) Igal have the cross as their *ba'l*,' and the verb *ba'ila*, 'be *ba'l*-struck, frightened'; (4) because the sacred mountain *Serbal* is probably a compound of *sarw* and *ba'l*. These are sufficient indications that *ba'l* was once a designation of deities in Arabic, although in the classical literature it has dropped out of use (so Nöldeke, *ZDMG* xl., 1886, p. 174; Wellhausen, *Reste*², p. 146; art. ARABS, i. 9). Instead of *ba'l*, *dhû*, which has already begun to displace it in Sabæan and Minæan, is commonly used in Arabic in forming titles of gods, e.g. *Dhû-l-Ḥalaṣa*, *Dhû-l-Rigl*, *Dhû-l-Kaffain*, *Dhû-'Anama*, *Dhât-Anwâṭ*, *Dhû-l-Labba*, *Dhât-Hima*, *Dhû-sh-Sharâ*. These all describe the divinity in question as belonging to a particular object or locality, and are thus the exact equivalent of *ba'al* names. On *Dhû-sh-Sharâ*, Wellhausen (p. 51) remarks that three Sharâs are known, all wooded thickets with water. This god was widely worshipped in Arabia (Wellhausen, *op. cit.* pp. 48–51), and was the chief god of the Nabatæans (Baethgen, *Beitr.* pp. 92, 108). The primitive religion of Arabia was evidently the worship of a multitude of local numina. Subsequently, through trade and shifting of population, cults migrated, and gods became *ba'als* of regions far removed from their original homes. Thus at Mecca, in the time of the Prophet, there were 360 different gods. Under Islām these old *bᵉ'ālîm* still survive as the *jinn* (W. R. Smith, 119 ff.) and the *ulia* (Zwemer, *Arabia*, p. 47 ff.).

2. **In Canaan.**—The earliest evidence of the *ba'al*-cult in Canaan is found in the Egyptian inscriptions, where *b-'-r* (=*ba'al*) is mentioned as a god of the Canaanites and of the Hyksos invaders (see E. Meyer, *Set-Typhon*, p. 47; *ZDMG* xxxi., 1877, p. 725; W. M. Müller, *Asien*, p. 309). In the Tell-el-Amarna letters the *ba'alat* of Gebal is frequently mentioned (*KIB* v., Nos. 18. 25, 55 ff.; 61. 54). *Ba'al* does not occur. In the personal names *Bêl-garib* and *Bêl-ram*, the god may be the Babylonian *Bêl*. It is probable that the ideogram *IM* in these letters should often be read *Ba'al* instead of *Adad* (Hommel, *Altisr. Ueberlief.* p. 220; Knudtzon, *Beitr. Ass.* iv. 320 f.; Zimmern, *KAT*³ 357). The OT says that the *bᵉ'ālîm* were the gods of the Canaanites, and that they were adopted by Israel after the conquest of the land (Jg 2¹¹⁻¹³ 10⁶, Hos 2²⁻¹³); consequently it is possible to learn a good deal about them from survivals in Israel. With the exception of *Ba'al-Judah* (2 S 6²), and possibly *Ba'al-Gad* (Jos 11¹⁷), all the place names

in the OT compounded with *ba'al* were probably derived from the earlier inhabitants. The original form of such names was like *Beth-ba'al-Ma'on*, 'house of the owner of Ma'on' (Jos 13^{17}), which might then be abbreviated into *Ba'al-Ma'on* (Nu 32^{38}) or *Beth-Ma'on* (Jer 48^{23}). The following names occur: *Ba'ᵃlath-bᵉ'ēr* or *Ba'al* (Jos 19^{8}, 1 Ch 4^{33}), *Ba'alah* (Jos 15^{29}), *Ba'alath* (Jos 19^{44}), *Bᵉ'aloth* (Jos 15^{24}), *Ba'al-bᵉrîth* (Jg 9^{4}), *Ba'al-Hāmôn* (Ca 8^{11}), *Ba'al-Hāzor* (2 S 13^{23}), *Ba'al-Hermon* (Jg 3^{3}), *Ba'al-pᵉrāṣîm* (2 S 5^{20}), *Ba'al-Shalishah* (2 K 4^{42}), *Ba'al-tamar* (Jg 20^{33}), *Har-hab-ba'ālah* (Jos 15^{11}), *Kiryath-ba'al* (Jos 15^{60}). These names are found in Benjamin, Gad, Judah, Simeon, Reuben, Dan, so that they witness to a general diffusion of the *ba'al*-cult throughout Canaan. There must have been innumerable other *bᵉ'ālîm* whose names have not come down to us, since, according to Jer 2^{28} 11^{13} 2^{20}, they were as numerous as the towns, and were worshipped on every high hill and under every green tree. The existence of *ba'al*-worship in Philistia is attested by the name *Ba'al-zebub* (*Ba'al-zebul*) at Ekron (2 K $1^{2ff.}$); in Edom by the personal name *Ba'al-ḥanan* (Gn $36^{38f.}$); in Moab, by the names *Ba'al-Peor* (Nu 25^{3}), *Bamoth-ba'al* (Nu 22^{41}), *Beth-ba'al-Ma'on* (Jos 13^{17}, *Mesha Inscr.* lines 9, 30); in Ammon perhaps by the personal name *Ba'alis* (Jer 40^{14}; see AMMONITES).

The *bᵉ'ālîm* who were worshipped in the fertile region of Israel where Hosea lived were regarded as the givers of wool and flax, oil and wine, grain, vines, and fig-trees (Hos $2^{5.8.12}$); but it is unsafe to infer from this that all the *bᵉ'ālîm* of Canaan had an agricultural character. As the names just enumerated show, there were also *bᵉ'ālîm* of springs, trees, mountains, and cities that did not necessarily have such a character. The Old Testament often combines the *bᵉ'ālîm* with the *'ashtārôth* in such a way as to suggest that the *'ashtārôth* were regarded as the consorts of the local *bᵉ'ālîm* (*e.g.* Jg 2^{13} 10^{6}, 1 S 7^{4} 12^{10}). Perhaps we may suppose that, under the influence of the meaning 'husband,' which the common noun *ba'al* had, every *ba'al* was regarded as the 'husband' of an *'ashtart*. It was the introduction of this sexual element into the *ba'al*-cult of Canaan that made it peculiarly obnoxious to the prophets, and led them to stigmatise it as adultery (Am 2^{7}, Hos 4^{11-14} 7^{4}). The places where the *bᵉ'ālîm* were worshipped were known as *bāmôth*, 'high places' (see HIGH PLACE; cf. the place-names *Bamoth-ba'al* [Nu 22^{41}] and *Bambula* at Citium in Cyprus [?]). The rock-hewn high places that have lately been discovered at Petra give a good idea of the arrangement of such sanctuaries (see Robinson, *Bibl. World*, 1908, pp. 8–21). Such high places contained altars, *'ăshērîm*, *maṣṣēbhôth*, and *ḥammānîm* (Jg 6^{25}, 2 Ch 14^{3-5} 34^{4-7}). Idols are not mentioned in connexion with the *bᵉ'ālîm*, and were probably not found in most of the high places. They belonged rather to the temples of the great gods. The existence of altars implies sacrifice. The offerings were doubtless similar to those which Israel brought Jahweh in the developed Hebrew cult, and to the offerings of the Phœnicians. Hos 2^{8} indicates that grain, new wine, oil, silver and gold were presented to the *bᵉ'ālîm*. Hos 2^{13} speaks of 'the days of the *bᵉ'ālîm* unto which she (Israel) burned incense, when she decked herself with her ear-rings and her jewels, and went after her lovers' (see CANAANITES).

3. In Israel.—The conquest of Canaan by Israel was a process extending over several centuries. The Hebrews did not exterminate the aborigines, but certain clans forced their way into the land, and occupied the rural districts, while the cities remained in the hands of the Canaanites. For some time there was constant warfare between the two races, but gradually hostilities ceased and they began to mingle. Little by little Israel acquired agriculture, industries, and all the other forms of Canaanitish civilization. With this came inevitably the adoption of the worship of the local gods of Canaan. Agriculture could not be carried on without observing the ceremonies that accompanied the planting of the grain and the reaping of the harvest. Altars, shrines, sacred trees, and holy stones in all parts of the land could not be appropriated without taking with them the divinities that belonged to them. As the Book of Judges and the early prophets repeatedly inform us, 'Israel served the *bᵉ'ālîm*'; that is, alongside of Jahweh the national God it also worshipped the local numina of the land that it had conquered. Through this process it was in danger of losing the measure of national unity that had been achieved by Moses, and of splitting up into a number of small communities that rallied about the local *ba'al*. Consciousness of this peril was awakened through the rapid development of the Philistine power. About B.C. 1050 the Philistines conquered Israel, taking captive the ark and burning its sanctuary at Shiloh (1 S 4, Jer 26^{6}). Hebrew nationality was now in danger of extinction, and the only thing that could save it was a union of all the clans in a supreme effort to shake off the Philistine yoke. No one of the *bᵉ'ālîm* of Canaan was important enough to form a centre for such a union; but Jahweh, the God of Sinai, who had brought Israel out of Egypt, and who had united the clans in a common cult in the desert, was able once more to rally them for the common defence. The leaders of Hebrew thought perceived that the only way to save Israel was to forsake the *bᵉ'ālîm* and to return to Jahweh. Some extremists, such as the Kenites and the Nazirites, wished also to reject agriculture, life in towns, and the other elements of Canaanitish civilization that were associated with the *bᵉ'ālîm*; but the wisest men saw that it was impossible to return to the life of the desert. If the *bᵉ'ālîm* were to be conquered, it could only be by appropriating to the service of Jahweh all that had hitherto belonged to them. Through the efforts of the Levites, the so-called 'Judges' or Vindicators, the Seers, and other enthusiasts for Jahweh, He finally triumphed over the *bᵉ'ālîm*, not by avoiding them, or by destroying them, but by absorbing them. The name *ba'al* became a synonym of Jahweh, and the *bᵉ'ālîm* were regarded as local manifestations of Jahweh. He ceased to be the God of Sinai and became the God of Canaan, the patron of agriculture and civilization. The ancient shrines of the land became His shrines, and the legends connected with them were retold as stories of His dealings with the patriarchs. The agricultural ritual and the harvest festivals of the *bᵉ'ālîm* were re-consecrated to His service. By the time of David the process was complete. Jahweh had appropriated everything that belonged to the *bᵉ'ālîm* that was worth saving. Observe how in 2 S 5^{20} David interprets the name *Ba'al-pᵉrāṣîm* as meaning 'Jahweh hath broken mine enemies before me like the breach of waters.'

This process of syncretism has left an interesting monument in some personal names of the period of the early monarchy. These are as follows: *Jerub-ba'al*, 'the *ba'al* contends' (Jg 8^{35}); *Ish-ba'al*, 'man of the *ba'al*,' a son of Saul (1 Ch 8^{33}), also one of David's heroes (1 Ch 11^{11}); *Merib-ba'al*, a son of Jonathan (1 Ch 9^{40} 8^{34}); *Ba'al-yādā'*, 'the *ba'al* knows,' a son of David (1 Ch 14^{7}); *Ba'al-ḥanan*, 'the *ba'al* is gracious,' a Gederite (1 Ch 27^{28}). No names of this type are found after the time of David. In most of these cases it is certain that *ba'al* is not a foreign god, but a title of

Jahweh, who has become the *ba'al* of Canaan, since Jerub-ba'al, Saul and David, were all loyal adherents of Jahweh. In *Ba'al-Yah*, 'the *ba'al* is Jahweh,' the name of one of David's helpers (1 Ch 12[5]), the identity of the *ba'al* with Jahweh is asserted; so also in *Yo-ba'al* (Jg 9[26]), if Kuenen's emendation be correct. These names accordingly belong to a period when worshippers of Jahweh were conquering the *bᵉ'ālīm* by identifying them with Jahweh. In popular conception in the time of Hosea the *bᵉ'ālīm* were not foreign gods, but local Jahwehs. Hos 2[16] says that Israel has called Jahweh *ba'al*, and 2[11. 13] identify the feasts of Jahweh with the days of the *bᵉ'ālīm*. As a result of this process the *bᵉ'ālīm* lost their power, and Jahweh became the God of Canaan; but the victory was purchased at the cost of a mixture of the religion of Jahweh with all sorts of alien elements. The early prophets faced the problem how to maintain the supremacy of Jahweh; the later prophets from Amos onward faced the problem how to purge the religion of Jahweh from the heathen innovations that had entered it. Their efforts were only partially successful, and Judaism, as seen in its chief literary monument, the Law, is properly regarded as a compromise between Prophetism and Ba'alism.

A totally different sort of *ba'al*-cult was the worship of **Melḳart, ba'al of Tyre** (see below, 4), which was introduced into Israel in the time of Ahab. Pressed by repeated attacks of Damascus, Ahab was constrained to seek the help of Phœnicia, and formed an alliance by marrying Jezebel, the daughter of Ethba'al, king of Tyre (1 K 16[31]). Such a relation of dependence usually involved the worship of the chief god of the protecting State (cf. 2 K 16[7-16]); consequently Ahab was compelled to establish the cult of Melḳart in Samaria (1 K 16[31f.]). Against this religious innovation Elijah and Elisha warred (1 K 18. 19[16-18], 2 K 9. 10). There is no record that either of these prophets opposed the old native *bᵉ'ālīm* that were identified with Jahweh. The golden bullock at Bethel, for instance, they never attacked as Hosea did subsequently; but the *ba'al* of Tyre was a foreign god, and to worship him was to repudiate Jahweh (1 K 18[21]), hence the intensity of the opposition of these prophets. According to 1 K 18, Elijah was successful, and in agreement with this we learn from the annals of Shalmaneser II. that in B.C. 856 Ahab was no longer in alliance with Phœnicia, but was fighting with Damascus against Assyria. Probably Damascus was so hard pushed that it was willing to grant an alliance without the condition of the adoption of its god Rimmon by Israel, and public sentiment was sufficiently strong in Israel to compel Ahab to give up the Phœnicians and their god and seek this new ally. Subsequently Ahab must have repudiated the Syrian alliance and have re-established relations with Phœnicia, for he died fighting against the Syrians (1 K 22[36]). After his death, under the influence of the queen-mother, Jezebel, the cult of the Tyrian *ba'al* was introduced once more in full force (1 K 22[53]). This cost the dynasty of Omri the throne. Instigated by Elisha, Jehu slew Jezebel and her son Jehoram, and exterminated the worship of Melḳart with fire and sword (2 K 9. 10). Immediately after this, in B.C. 842, we find him paying tribute to Assyria instead of Phœnicia, apparently on terms that did not demand the worship of Ashur. Melḳart never again gained a foothold in the northern kingdom. The problem which confronted Amos and Hosea was not the expulsion of this foreign deity, but the purification of the religion of Jahweh from admixture with rites of the ancient *bᵉ'ālīm* of Canaan.

The worship of the Tyrian *ba'al* was introduced into Judah by Athaliah, the daughter of Jezebel (1 K 22[54 (53)], 2 K 8[18]), doubtless as the price of a Phœnician alliance that maintained her on the throne. In the subsequent revolution that was incited by the priests Athaliah perished, 'and all the people of the land went into the house of the *ba'al* and brake it down; his altars and his images brake they in pieces thoroughly, and slew Mattan the priest of the *ba'al* before the altars' (2 K 11[18]). In the recrudescence of all sorts of heathenism under Manasseh, the Tyrian *ba'al* was once more worshipped (2 K 21[3]). To this Jeremiah and Ezekiel allude whenever they speak of 'the *ba'al*' in contrast to 'the *bᵉ'ālīm*.' Under Josiah this cult was stamped out (2 K 23[4. 5ff.]), and did not again gain a foothold in Judah. It was a foreign religion that never appealed strongly to the mass of the people.

With the old *bᵉ'ālīm* of Canaan it was very different. They were so thoroughly identified with Jahweh in the conception of the nation that it was unconscious of apostasy in worshipping them. All the efforts of the pre-exilic prophets to banish them were unsuccessful. Under the reign of every good king, and after every attempted reformation, the editor of Kings records: 'Nevertheless the high places were not taken away, the people still sacrificed and burned incense in the high places.' The Book of Deuteronomy and the reformation of Josiah had for their central aim the destruction of the *bᵉ'ālīm* by the centralization of worship at Jerusalem; but both Jeremiah and Ezekiel confess that the effort was unsuccessful. It was the Exile, which removed Israel from the old holy places and old religious associations of Canaan, that finally eradicated this cult. Orthodox Judaism detested this inveterate habit of the forefathers, and, interpreting literally the words of Hos 2[19 (17)] 'I will take away the names of the *bᵉ'ālīm* out of her mouth,' substituted *bōsheth*, 'shameful thing,' in the place of *ba'al* in the reading of the Scriptures. In Jer 3[24] and elsewhere *bōsheth* has actually taken the place of *ba'al* in the Heb. text. The Greek version often has ἡ Βάαλ to indicate that the reader is to substitute αἰσχύνη for *ba'al*, and in 1 K 18[19-25] this alternates with *ba'al* in the text. Particularly in the Books of Samuel *ba'al* has been eliminated from names of persons, although it has been allowed to stand in the parallels in Chronicles. Thus *Ish-ba'al* (1 Ch 8[33]) = *Ish-bosheth* throughout Samuel (*Ish-vi*, 1 S 14[49]); *Ish-ba'al* (1 Ch 11[11]) = *Josheb-bashshebeth* (2 S 23[8]); *Meri-ba'al* (1 Ch 9[40b]), or *Merib-ba'al* (1 Ch 9[40a], 1 Ch 8[34]) = *Mephi-bosheth* (2 S 4[4], cf. the other *Mephi-bosheth*, 2 S 21[8]); *Ba'al-yāda'* (1 Ch 14[7]) = *El-yāda'* (2 S 5[16]). *Abi-albon* (2 S 23[31]) is perhaps a perversion of *Abi-ba'al*, and *'Ebed*, 'slave' (Jg 9[26]), of some *ba'al* compound (see Geiger, *ZDMG* xvi., 1862, pp. 728–732; Nestle, *Die isr. Eigennamen*, pp. 108–132; Dillmann, *SBAW*, phil.-hist. Kl., 1881, p. 609 ff.; Wellhausen, *B. Samuelis*, pp. xii ff., 30 f.; Driver, *Samuel*, pp. 186, 195 f., 279; Gray, *Heb. Proper Names*, pp. 121–136). In spite of these efforts, however, *ba'al* remained in Mishnic Heb. as a designation of naturally irrigated land (see above, ii. 1), and under modified forms the *ba'al* cult lingered in the rural districts. In modern Palestine, the Jews unite with the Christians and Muslims in reverencing numerous local saints that are only the thinly-disguised *bᵉ'ālīm* of earlier days. In spite of all the efforts of Judaism, Christianity, and Muhammadanism, one may still say with the author of Kings, 'Nevertheless the high places are not taken away, the people still sacrifice and burn incense in the high places' (see Curtiss, *Ursem. Rel.* p. 81 ff.).

4. In Phœnicia and the Phœnician colonies.—In Phœnicia the name seems to have been pronounced *ba'l*, to judge from such proper names as

Hannibal, *Asdrubal* (Schröder, *Die Phön. Sprache*, p. 84). The most important of all the Phœn. *b'ālîm* was 'our lord **Melḳart, the ba'al of Tyre**' (*CIS* 121). He is mentioned in the treaty of Esarhaddon with Ba'al, king of Tyre (*KAT*^{3} 357), as (*ilu*) *Mi-il-ḳar-ti*, one of the great gods of Tyre. His name Melḳart (=*Melek-ḳiryath*, 'king of the city') shows that he was originally a tribal god who was identified with the local *ba'al*, just as Jahweh was identified with the *b'ālîm* of Canaan. In all the names of the kings of Tyre the element *ba'al* refers to Melḳart: thus, *Abi-ba'al*, the father of Hiram; *Ba'al-'azar I.*, the contemporary of Rehoboam; *Eth-ba'al* (Assyr. *Tu-ba-'-lu*), the contemporary of Ahab (1 K 16^{31}); *Ba'al-'azar II.*, the successor of Eth-ba'al; *Ba'al I.*, the contemporary of Sennacherib; *Eth-ba'al II.*, the contemporary of Nebuchadrezzar; *Ba'al II.* (B.C. 573–564), and somewhat later *Mer-ba'al*. He is also the *ba'al* meant in the numerous Tyrian proper names compounded with this name (see Lidzbarski, *Nordsem. Epig.* 239 ff.). Under the name of Herakles his temple at Tyre is mentioned by Menander in Josephus (*Ant.* VIII. v. 3, *cont. Ap.* i. 18) and by Herodotus (ii. 44). In regard to his cult little is known from native sources. Our fullest information is derived from the OT accounts of his worship in Israel. He had a temple, an altar, and an *'ăshērāh* (1 K 16^{33}, 2 K 10^{21} 11^{18}), also a *maṣṣēbāh*, or standing stone (2 K 3^2 10^{26}). An image is mentioned (2 K 11^{18}), and is implied in 1 K 19^{18}, Hos $2^{16\ (8)}$. There were prophets of the *ba'al* and of the associated *'ăshērāh* (1 K 18^{19}), also *Chemarim*, or priests of the *ba'al* (2 K 23^5, Zeph 1^4). The bullock was sacrificed to him (1 K 18^{26}). Like other *m'lākhîm*, Melḳart received human sacrifice (see under art. AMMONITES, vol. i. p. 391; and cf. Jer 19^5 32^{35}), but this was in his capacity as *melek* and not as *ba'al*. From this the inference cannot be drawn that such sacrifices were customary in the service of other *b'ālîm*. Kissing his image is mentioned as a rite in 1 K 19^{18}; dancing round the altar, and cutting the body with knives and shouting the name of the god, in 1 K 18^{26-28}.

Distinguished from *Ba'al-Melḳart* in the treaty of Esarhaddon, in spite of its identical etymology, is *Ba'al-ma-la-gi-e* (*KAT*^{3} 357). This is apparently **Ba'al-Malki**, 'Ba'al my king,' and is the same as *Milk-ba'al* of the Phœnician colonies (*CIS* 123*a*, 147, 194, 380). What his character was, and how he was differentiated from Melḳart is unknown. *Ba-al-sa-me-me* = **Ba'al-shāmēm**, 'owner of the sky' (see above, ii. 8), is also mentioned as one of the great gods of Tyre in the treaty of Esarhaddon (*KAT*^{3} 357). In an inscription from Um-el-'Awamid, near Tyre (*CIS* 7), a certain Abdelim states that he has dedicated to *Ba'al-shāmēm* a doorway and its doors, that it may serve as a memorial of him and a good name under the feet of his lord *Ba'al-shāmēm*. Philo Byblius also records the worship of Βεελσάμην in Phœnicia (Müller, *FHG* p. 566). Menander and Dius in Josephus (*Ant.* VIII. v. 3; *cont. Ap.* i. 17 f.) speak of the golden pillar in the temple of *Zeus Olympios* (*Ba'al-shāmēm*), which they distinguish from the temple of Herakles (Melḳart). Herodotus (ii. 44) also distinguishes the temple of the Thasian Herakles from that of Melḳart. As a different deity from *Ba'al-shāmēm* the treaty of Esarhaddon mentions *Ba-al-ṣa-pu-nu* = **Ba'al-ẓāphôn**, 'owner of the north' (see above, ii. 8). *Ba'al-ḥammān* (see above, ii. 5) is apparently mentioned in the Ma'sub inscription, line 3 (*RA*, 1885, p. 380 ff.), and in the second inscription from Um-el-'Awamid (*CIS* i. 8). Besides these *b'ālîm* which had risen to the rank of great gods, there were numerous local *b'ālîm* of a more primitive character. *Ba'al-Lebanon* is mentioned in *CIS* 5 (see above, ii. 4). The worship of *Zeus Atabyrios* (=*Ba'al-Tabor*) in the Phœnician colonies makes it certain that he must also have been worshipped in the mother-country (see above, ii. 4). The river *Belus*, near Acre, proves the existence of a local *ba'al* of the stream (see above, ii. 1). *Ba'al-Ṣidon* is mentioned in *CIS* 3. With him was associated '*Ashtart shem-ba'al*, "Ashtart name of the *ba'al*.' He still survives in *Neby Ṣaida*, the Muslim patron saint of modern Sidon. At Deir el-Qal'a, near Beirut, there was *Ba'al-Marqôd* (see above, ii. 10), and *Ba'al-rosh*, 'owner of the promontory,' at the mouth of the Nahr el-Kelb just north of Beirut (*KAT*^{3} 43). At Gebal 'Ashtart was worshipped as the local *ba'alat* in connexion with her spouse Adonis (*CIS* 1; *KIB* v., No. 55; Philo Bybl., ed. Müller, p. 569; Lucian, *Dea Syr.* 6; see 'ASHTART).

In the Phœnician colonies all the great *b'ālîm* of the mother-country were worshipped, and in addition a number of new local *b'ālîm*. Ba'al-Ẓāphôn is found in Egypt (Ex $14^{2.9}$, Nu 33^7), and in the proper name *Bod-Ẓāphôn* at Abydos (*CIS* 108); also *Ba'alti-ṣapunā* at Memphis (Müller, *Asien*, p. 315). *Zeus Kasios* (=Ba'al-Ḳaṣiw) was transplanted from his mountain near Antioch to Pelusium (see above, ii. 9). In Cyprus we find Melḳart the *ba'al* of Tyre (*CIS* 88. 3–7) and the proper name *Abd-Melḳart* (*CIS* 14. 7); *Zeus Keraunios* (Waddington, 2739), who in a Palmyrene bilingual is equated with Ba'al-shāmēm (de Vogüé, 50 = le Bas, iii. 2631); Ba'al-Lebanon (*CIS* 5); Ba'al-Mrp' (*CIS* 41) and Ba'al-ymm (*CIS* 84*b*. 4; see above, ii. 10). In Rhodes there is *Zeus Atabyrios* (=Ba'al-Tabor) (see Baudissin, *Studien*, ii. 247); in Corcyra, *Zeus Kasios* (Baudissin, ii. 243); in Thasos, *Melḳart* (Paus. v. 25; Herod. ii. 44). At Carthage, Melḳart the *ba'al* of Tyre appears frequently in proper names, *e.g.* '*Abd-Melḳart* (*CIS* 179, 234, and often). '*Abd-Melḳar* (Euting, *Karth. Inschr.* 18 = *Ammicar*, *CIL* viii. 68), *Ammat-Melḳart* or *Mat-Melḳart* (Euting, 153, 320), *Bod-Melḳart* (Euting, 28, 261) = *Bodmilcar* (*CIL* 9618), *Ḥat-Melḳart* (Euting, 213), *Ba'm-Melḳart* for *Ba'l-Melḳart* (Euting, 15), *Melḳart-mashal* (Euting, 130), *Melḳart-ḥalaṣ* (*CIS* 234; Euting, 48), *Ḥan-Melḳart* (Euting, 165), and many others. The compound deity Milk-Ba'al is also found, as in Phœnicia (*CIS* 123*a*, 147, 194). Ba'al-Adon (*CIS* i. p. 155) is a combination of the *ba'al* of Tyre with the *Adonis* of Gebal. Ba'al-shāmēm also appears (*CIS* 379). In Plautus (*Pœnulus*, 1027), Hanno swears *guneb Balsamem* (= נאני בעלשמם). Augustine also knows him as a Punic deity (*PL* iii. 797). The worship of Ba'al-Ẓāphôn at Carthage is attested by the proper names *Ẓāphôn-ba'al* (*CIS* 207, 857) and '*Abd-Ẓāphôn* (*CIS* 265). Ba'al-ḥammān (see above, ii. 5) attained at Carthage the rank of a patron deity. More inscriptions have been found in honour of him than of any other Punic god. In Carthage itself he is always associated with the goddess Tanit, whose name stands first, showing that she was considered the more important deity. In the Carthaginian dependencies Ba'al-ḥammān is named alone. The god is represented with rays surrounding his head, and holds a tree in his hand. Above him stands the sun. On another stele he grasps a grape-vine with his right hand and a pomegranate with his left. Still other stelæ bear representations of palms, flowers, and fishes. The god is thus seen to have been a patron of fertility, like the *b'ālîm* of Canaan (see Gesenius, *Phœn. Monumenta*, 'Numid.' i. ii. iv.). Balcaranensis (=*Ba'al-Ḳarnaim*, 'owner of the two horns'), was a local divinity who was worshipped on a two-peaked mountain near Carthage (see above, ii. 4). Ba'alat-ha-hdrt and Bal-addiris are also local Numidian deities (see above, ii. 6). In Malta, Melḳart *ba'al*

of Tyre is named in inscriptions on two votive pillars (*CIS* 121). Another pillar from Malta bears the inscription, 'Pillar of Milk-Ba'al, which Nahum has placed for Ba'al Ḥamman the lord, because he has heard the voice of his words' (*CIS* 123*a*). This shows syncretism of the already compound deity *Milk-Ba'al* with *Ba'al-ḥammān*. In Sicily we find a *Rosh-Melḳart* (Renan, *Mission*, p. 145) and *Zeus Atabyrios* (= *Ba'al-Tabor*, see Baudissin, *Studien*, ii. 247); in Sardinia, the proper names *'Abd-Melḳart* (*CIS* 152) and *Bod-Melḳart* (*CIS* 138), *Milk-Ba'al* and *Ba'al-ḥammān* (*CIS* 147), *Ba'al-shāmēm* (*CIS* 139). The sacrificial tablet of Marseilles belonged perhaps to a temple of *Ba'al-ẓāphôn* (*CIS* i. 227). At Tartessus in Spain the Tyrian Hercules (Melḳart) was worshipped (Arrian, *Alex.* ii. 16. 5); also at Gades (Scholz, *Götzendienst*, p. 201 ff.), and at Lixus on the West Coast of Africa (Pliny, *HN* v. 1, 19–22).

5. In Syria, Asia Minor, and Mesopotamia.—In the Aramaic dialects the name assumes the form בְּעֵל *beʿēl* (cf. LXX *Beelphegor* [Nu 25[3. 5]], *Beelzebul* [Mt 10[25]]). The name *Ba'albek* is evidently a compound with *ba'al*, but what the second element of the name means is uncertain. Hoffmann (*ZA* xi. 246 f.) thinks that it is a broken-down form of *melek* (cf. *Milk-Ba'al* in Tyre and *Malak-bel* in Palmyra). *Balanios* (=*ba'alan*, 'our *ba'al*') is given as a title of Juppiter Heliopolitanus (*Chron. Pasch.* i. 561). The Greek name of this place, Heliopolis, shows that the sun was the local *ba'al*. In Damascus, *Juppiter Damascenus* (= בעל דמשק) was worshipped with *'Athtar* (= *'Ashtart*) as his consort (Justin, xxxvi. 2; *Etym. Mag. s.v.* Δαμασκός). Inscriptions from Damascus show that his temple was richly endowed (le Bas-Waddington, 1879; cf. 2549 f.). His cult was important enough to spread to Italy (*CIL* vi. 405, x. 1576).

The recently discovered inscription of Zakir, king of Hamath and La'ash, which probably comes from a place lying between Hamath and Damascus, states that *Beelshamayin* (written as one word) has given Zakir his sovereignty, and has helped him against Bar-Hadad, son of Hazael, king of Aram, and his allies. Seven kings have besieged his city, but Zakir has raised his hands to *Beelshamayin*, and he through his seers has spoken to him a message of cheer. This inscription by its mention of the Benhadad of the OT is shown to belong to 8th cent. B.C.; and, like the inscription of Esarhaddon mentioned above, witnesses to the antiquity of the cult of *Ba'al-shamayim* (see Pognon, *Inscriptions sémitiques*, 1908, pp. 156–178).

In Palmyra, *Ba'al-shāmēm*, 'owner of the sky,' whom we have met already among the Nabatæans, the Phœnicians, and in the Phœnician colonies, appears as the chief god under the form Beʿēl-shāmîn, בעל שמן (de Vogüé, *Inscr. Sem.* 19, No. 16; 50, note 1; 53, No. 73; Euting, *Berichte Akad. Berlin*, 1885, 669, 4). His full Sem. title בעל שמן מרא עלמא, 'owner of the sky, lord of the world,' is in the Gr. parallel translated, Διὶ μεγίστῳ κεραυνίῳ. Most of the altars dedicated to him do not bear his name, but have the inscription, 'To Him whose name is for ever blessed, the good and compassionate' (de Vogüé, *Palm.* 74–105 *al.*); that he is meant, however, seems to be clear from the Greek parallels which read, Διὶ ὑψίστῳ καὶ ἐπηκόῳ. One inscription (de Vogüé, 16) is so restored by de Vogüé as to identify him with Ἥλιος; but this is very doubtful. The form *beʿēl* in his name shows that he is of foreign origin. בעל does not appear in Palmyrene proper names, and is not used except in the sense of 'husband.' Instead of this the native form of the word as a title of gods and in proper names is *bôl*. *Ba'al-shāmēm* was probably originally a Phœnician deity. Thence, as *Beʿēl-shāmîn*, his cult migrated to Syria, Palmyra, and the Nabatæans. In the Palmyrene inscriptions the god has a lofty ethical character beyond that of most of the *beʿālîm* of the Sem. world.

Associated with him are the subordinate deities *'Agli-bôl* and *Malak-bêl* (de Vogüé, 93). Apart from *Beʿēl-shāmîn*, these two deities are also frequently mentioned in the inscriptions (*ZDMG* xviii. 99 f.; *CIG* 6015; de Vogüé, 140, 153). 'Agli-bôl (עגלבול, 'Αγλίβωλος) was evidently a moon-god, since he is depicted as a young warrior with a crescent on his shoulders. The etymology of his name is obscure. De Vogüé connects *'Agli* with עגל, 'bullock,' as a symbol of the new moon. He was probably the original *ba'al* of Palmyra, and he is meant in proper names compounded with *bôl*; *e.g.* *'Abdi-bôl*, 'Αβδίβωλος (Vog. 6), *Zebad-bôl* (frequently), *Repha-bôl*, 'Ρεφάβωλος (Vog. 66), Δανίβωλος (*CIG* 4665), Μαθθαβωλίων (Waddington, 2579), *Bôl-barak*, *Bôl-laha*, *Bôl-'azor*, etc. (On the use of *bôl* over against *beʿēl* and *bêl* in Palm. see Nöldeke, *ZDMG* xlii., 1888, p. 474; Baudissin, *PRE*[3] 324; on the proper names, Ledrain, *Dictionnaire des noms propres palmyréniens.*) Malak-bêl (מלכבל, Μαλάχβηλος), like *Milk-ba'al* (see above, i., iii. 4), is a compound of *Malak* (= *Melek*, *Molech*, *Milcom*), 'king,' with *bêl* (= *ba'al*). The form *bêl* suggests that the deity is of Bab. origin (on *Malik* as a Babylonian god see Zimmern, *KAT*[3] 469; Jastrow, *Die Rel. Bab. u. Ass.* p. 162). The rays with which this god is represented on the monuments (Lajard, *Cyprès*, pl. I., II.) suggest that he was a sun-god like the Babylonian *Bêl-Marduk* (see below, 6). In the Lat. version of the Palmyrene inscription of the Capitol (*ZDMG* xviii. 101 f.) the god is called 'sol sanctissimus.'

Another pair of Palmyrene deities that appear together in the inscriptions are *Bêl* and *Yarḥi-bôl* (de Vogüé, p. 64). Bêl, as the form of his name and his conjunction with *Belti* show, is imported from Babylonia. He is *Marduk*, the great *bêl* of Babylon (see below, 6). His name occurs with special frequency on seals (Mordtmann, 50, 51; de Vogüé, *op. cit.* 132, 133, 134). Many proper names are compounded with *bêl* as with *bôl*, *e.g.* *Ela-bêl* ('Ελάβηλος), *Bêl-'aqab* (Βηλάκαβος), *Bêl-barak*, *Bêl-suri* (Βηλσούρου), *Nûr-bêl* (Νουρβήλου), *'Abdi-bêl* (see Ledrain, *Dictionnaire*). As in Babylon, so in Palmyra *Bêl* is a solar deity. Seals bearing his name show also the disc of the sun (Mordtmann, 77, 78), and one seal (Mordtmann, 77) bears the two names *Bêl*, *Shemesh*. As in Babylonia, *Bêl* has his consort Bêltî, 'my lady' (de Vogüé, 52, 155). Bêl's *paredros* Yarḥi-bôl ('Ιαρίβωλος) has the masculine predicates אלה and θεός. The name is compounded of ירח, 'the moon,' and בול = *ba'al* (de Vogüé, 93; Waddington, 2571*c*). *Yarḥi* alone occurs as a personal name (de Vogüé, 16). To *Yarḥi-bôl* a medicinal spring called Ἔφκα (= אפקא) was dedicated (de Vogüé, 99; Waddington, 2571*c*). Like *'Agli-bôl*, *Yarḥi-bôl* is to be regarded as a genuine Palmyrene deity. How these two moon-*ba'als* came to be worshipped side by side, or how they were differentiated from one another, is unknown. Still another Palmyrene *ba'al* seems to be found in Βωλάθη, known to Damascius (in Photius, cod. 242). This is a compound of the two gods *Bôl* and *'Ate* (see 'ATE). On the *ba'al*-cult at Palmyra see de Vogüé, *Palmyra*; and Baethgen, *Beiträge*, pp. 81–88.

A Ba'al of Apamea, 'fortunæ rector mentisque magister,' is mentioned in a Gallic inscription (*CIL* xii. 1277). From him Caracalla received an oracle, according to Dio Cass. (lxxviii. 8). He is perhaps to be identified with *Zeus Baitokaikeus*, the *ba'al* of the village of Baitokaike, near Apamea (*CIG* 4474 = Le Bas, 2720*a*; *CIL* iii. 184 and p. 972). Specially famous was *Zeus Kasios* (= Ba'al-Ḳaṣiw), whose cult we have found al-

ready in Egypt. Among the Nabatæans he appears as *Ḳaṣiw* or *Ela Ḳaṣiw* (de Vogüé, *Syr. Cent. Nabat.* iv. 2, vi. 2, vii. 1, 2; *Hauran.* v.). Baudissin conjectures that he is the same as *Koss*, the chief god of the Edomites (see EDOMITES). He was worshipped on a lofty mountain on the sea-coast near Antioch. His name, which is evidently derived from the root קצע, 'cut off,' de Vogüé refers to the 'precipice' on which his temple stood. Baudissin thinks that it rather means 'decider, judge.' The former interpretation is more in accordance with the local character of most *ba'al* names. At his sanctuary a feast was celebrated by the people of Antioch (Strabo, xvi. 2. 5). Seleucus Nicator obtained an oracle from him concerning the building of Seleucia (Malalas, ed. Dindorf, p. 199). The emperor Julian also consulted him (*Misopog.*, ed. Spanheim, p. 361; Ammianus Marcellinus, xx. 14. 4). Trajan dedicated gifts to his temple, and an epigram of Hadrian was preserved there (Suidas, *s.v.* Κάσιον ὄρος). Euhemerus (in Euseb. *Præp. Evang.* ii. 2) and Philo Byblius (*FHG*, p. 566) say that Kasios was formerly a ruler of this part of the country. Coins of Northern Syria bear the name *Zeus Kasios*, and show the sacred stone of the god standing in his temple (Mionnet, *Description des médailles*, iv. 276–280). It is evident that *Ba'al-Ḳaṣiw* was one of the chief divinities of Northern Syria (on his cult see de Vogüé, *Syr. Cent. Inscriptions*, pp. 103–105; Scholz, *Götzendienst*, p. 144; Baudissin, *Studien*, ii. 238–242). The famous Ba'alat of Mabbog (Bambyce, Hierapolis), on the road between Antioch and the Euphrates, was Atargatis (see ATARGATIS). At Śam'al (Zenjirli), at the foot of Mt. Amanus, *Ba'al-Ḥarran*, *i.e.* Sin, the moon-god of Ḥarran, was worshipped (Lidzbarski, *Nordsem. Epig.* p. 444, pl. xxiv.). At Tarsus there was a *Zeus Tarsios* = בעל תרז (Scholz, *Götzendienst*, p. 149). In Cappadocia the name Ba'al-Gazur appears on coins of Ariarathes I. († B.C. 322) that were probably minted in the old capital Gaziura. The god is represented seated on a throne with a sceptre and an eagle, holding an ear of grain and a dove (Head, *Hist. Num.* 631; Reinach, *Trois royaumes d'Asie Mineure*, p. 28 f.).

The Ba'al of Ḥarran in Mesopotamia is mentioned in the inscription from Zenjirli referred to above, and occurs in numerous Assyrian proper names of the time of Sennacherib, Esarhaddon, and Ashurbanipal. This was Sin, the ancient Babylonian moon-god. His cult seems to have been indigenous in Ur in Southern Babylonia, and to have migrated to Ḥarran at a very early period (cf. Abram's journey from Ur of the Chaldees to Ḥarran in Gn 11[31]). From the earliest to the latest times he received the homage of the Babylonians and Assyrians along with their domestic deities. Sargon, king of Assyria (B.C. 722–706), confirmed the exemption from taxes that Ḥarran enjoyed as the city of Sin (*Annals*, ed. Winckler, xiv. 5). Nabonidus, the last king of Babylon (B.C. 555–539), rebuilt the temple of Sin at Ḥarran (Rawlinson, v. 64, col. i. 8–ii. 46). At a later date we find the cult of Bᵉ'ēl-shāmīn, 'the owner of the sky,' at Ḥarran, perhaps through syncretism of the Syrian god with the ancient moon-god (Jacob of Sarug, in *ZDMG* xxix. p. 131). *Bᵉ'ēl-shāmīn* is also found in Nisibis (Isaac of Antioch, i. 209, v. 78 ff.; Bickel, *Be'ēl-Shamin princeps deorum Nisibis*, etc.). From Mesopotamia the worship of this god spread even into Armenia. Βαρσαμήνης (*Barshimnia*, *Parshamin*, *Parsham*), who had a famous temple in the town of Thoran in Armenia, was none other than *Bᵉ'ēl-shāmīn* (Agathang. 131, and Lagarde's note). According to Moses of Chorene, Tigranes brought back his image of gold, silver, and crystal from Mesopotamia (Langlois, *Historiens de l'Arménie*, i. 24, 40, 166; ii. 66, 88). It is clear that during the Greek period the cult of Bᵉ'ēl-shāmīn was generally diffused throughout Syria and Mesopotamia, and that he attained the rank of *summus deus*. This was doubtless due to his identification with *Zeus Olympios* in Phœnicia, Palmyra, and elsewhere. Zeus was the chief god of the Greek pantheon, and, therefore, wherever the Greeks went, his supposed Syrian counterpart enjoyed his pre-eminence (cf. his titles 'lord of the world,' μέγιστος, ὕψιστος, at Palmyra). Identification with Anu, the Lord of Heaven, in the Bab. religion may also have assisted in the process. In Syriac writers his name appears as a translation of Zeus (2 Mac 6[2]; Isocrates in Lagarde, *Analecta Syriaca*, 176, line 24). In Dn 12[11] *Ba'al-shāmēm*, as a translation of *Zeus Olympios*, whose cult Antiochus Epiphanes established in the Temple at Jerusalem, has been perverted by the Jewish scribes into *shiḳḳûṣ-shômēm*, 'the appalling abomination.'

6. In Babylonia. — Babylonia was originally occupied by the non-Semitic race now commonly known as Sumerian. The religion of these people was a polydæmonism that differed in no essential respect from the polydæmonism of the Semites. There was a multitude of divinities presiding over all sorts of natural objects and localities. A male numen was known as *en*, 'owner, lord,' and a female one as *nin*, 'proprietrix, mistress'; thus, *En-ki*, 'master of the sea'; *En-zu*, 'master of wisdom'; *Nin-ki*, 'mistress of the sea'; *Nin-ḫar-sag*, 'mistress of the great mountain'; *Nin-sun*, 'mistress of destruction'; *Nin-e-gal*, 'mistress of the great house (temple)'; *Nin-Mar*, 'mistress of Mar'; *Nin-a*, 'mistress of water' (?). By a process common among the Semites (cf. ASHTART, 2) many originally feminine divinities were transformed into masculine ones (cf. Barton, *Sem. Origins*, p. 192), so that *nin* eventually became an element in names of gods in the same sense as *en*; thus, *Nin-Girsu*, 'master of Girsu'; *Nin-a-gal*, 'master of great strength,' the patron of blacksmiths; *Nin-shaḫ*, 'master of the wild boar'; *Nin-gish-zida*, 'master of the tree of life.' Celestial phenomena were objects of special reverence, and gave the religion of Babylonia an astral character which it retained down to the latest times. Here may be mentioned *Anu*, 'the sky'; *En-lil*, 'master of the wind,' not 'master of the spirits,' as many have rendered his name, since Gudea (*Cylinder*, A 23. 14, 19 = *VAB* [*Vorderasiatische Bibliothek*], I. i. 114) calls him 'king of the storm, king of the whirlwind'; *Utu*, 'the sun'; *Ur* or *En-zu*, 'the moon'; and all the planets. As among the Semites, these celestial powers became in one way or another the 'proprietors' of certain cities that were specially devoted to their worship. Thus Erech became 'the residence of Anu' (*KIB* vi. 63) and Der 'the city of Anu' (*KIB* iii. 165); Nippur, the residence of *En-lil*; Sippar and Larsa of *Utu*; and Ur, of *Ur*. Through the growth and the conquests of certain cities their local divinities became great gods whose worship spread throughout all Babylonia. If, subsequently, these centres declined in political importance, their patrons still retained much of their old dignity, though they might be subordinated in the theological systems to the god of the conquering city.

At the earliest period disclosed to us by the Babylonian inscriptions, En-lil, the god of Nippur, had become the most important of all the Sumerian deities. He was the *en*, or 'lord,' *par excellence*, and was worshipped in all parts of Babylonia as well as at his proper residence. He bore the titles 'king of heaven and earth' (*VAB* p. 15), 'king of the lands, father of the gods' (*VAB* p. 37). As chief of the gods, who had his seat upon the

mountain of the north where the gods assembled, he was called 'great mountain.' His tower-temple at Nippur was known as *E-kur*, 'the mountain house.' All this indicates that Nippur must once have been the political as well as the religious centre of Babylonia; but this was in pre-historic times. In the period represented by the earliest inscriptions (*c.* 4000 B.C.), Nippur had lost the political hegemony, although its god still retained his ancient pre-eminence.

Alongside of *En-lil* stood his consort **Nin-lil**, who shared the high rank of her husband. She was known as 'the lady of the lower world, the mistress of heaven and earth.' One of her common titles was *Nin-ḫar-sag*, 'lady of the great mountain,' with reference to her supremacy on the mountain of the gods. Associated with *En-lil* as the greatest gods of the Sumerian pantheon were *Anu*, 'the sky,' and *En-ki*, 'lord of the sea.' Anu is mentioned in the earliest inscriptions, and, like *En-lil*, had temples in all parts of Babylonia. **En-ki**, otherwise known as *E-a*, 'house of water,' was the patron-god of Eridu. In pre-historic times this city lay at the head of the Persian Gulf, and must have been politically one of the most important cities of Babylonia. In the inscriptions of Lugalzaggizi (perhaps as early as B.C. 4000) the triad *En-lil*, *Anu*, and *En-ki* is already known (*VAB* i. 155), and it is frequently mentioned in the oldest inscriptions. Thus the visible universe was portioned out between *Anu*, lord of the sky; *En-lil*, lord of the earth; and *En-ki* or *E-a*, lord of the sea. There is reference perhaps to this triad in the words of the second commandment, 'the heavens above, and the earth beneath, and the waters under the earth' (Jastrow, *Die Rel. Bab.* p. 140). A second triad of inferior dignity consisted of **Ur**, the moon-god of Ur; **Utu**, the sun-god of Sippar; and **Nana**, the goddess of Erech. The superior rank of the moon-god in this triad was due to the greater political importance of his city, Ur.

The Semites who entered Babylonia used the word *bêl* (= *ba'al*, cf. Aram. בְּעֵל) in all the senses in which it was used by the other Semites, and, in addition, developed the meaning 'master' or 'lord,' which is not found in the other dialects. They spoke of their gods as *bêl*, both with reference to their ownership of physical objects and places, and with reference to their authority over tribes and individuals. The worshipper addressed his god as *bêlt*, 'my lord'—a usage that is not found in the other Semitic languages. When they conquered Babylonia, they found the Sumerian gods on the ground, and adopted them as their own, just as Israel adopted the *bᵉ'ālîm* of Canaan. The *en* of a particular object or locality became for them the *bêl*; the *nin*, the *bêlit*. The old Sumerian moon-god *Ur* became *Sin*, the *bêl* of Ur; the sun-god of Sippar, *Shamash*, the *bêl* of Sippar; *Nana* of Erech, *Ishtar*, the *bêlit* of Erech. The names of other Sumerian gods, such as *Ea* and *Ningirsu*, were retained untranslated, and they were known as the *bêls* or *bêlits* of their respective sanctuaries. *En-lil*, as the chief god of Babylonia, was known as **Bêl** *par excellence* (there is no article in Bab.), and in course of time this appellative drove the old name out of use and became the common designation of the god, so that, when *Bêl* was mentioned without any qualifying word, *En-lil* was understood to be meant. Thus in Babylonia *Bêl* became the name of an individual god in a way that was never true of *Ba'al* among the West Semites. In like manner, *Nin-ḫar-sag*, the consort of *En-lil*, was known as *Bêlit*, 'the lady.' For many centuries after the conquest of Babylonia by the Semites their language was not reduced to writing, and the ancient Sumerian was employed as a sacred tongue for all the inscriptions in the temples. The result is that before the time of Ḫammurabi the name of the god of Nippur is always written *En-lil*, although it is certain that the Semites habitually called him *Bêl*. From the time of Ḫammurabi onward Semitic inscriptions begin to be common, and then the name of the god appears written phonetically *Bêl* or *Bêlu*. The old name *En-lil* continued, however, to be used as an ideogram for *Bêl* down to the latest times. The Sem. kings of all parts of Babylonia have left inscriptions in honour of this god. Eannatum, king of Lagash (*c.* 3000 B.C.), calls him 'the lord of heaven and earth,' and speaks of Sin, the moon-god of Ur, as 'the strong calf of *En-lil*.' When he conquers the people of Gishḫu, it is in the name of *En-lil* (*VAB* i. 14). He speaks of himself as 'endued with strength by *En-lil*, nourished with holy milk by *Nin-ḫar-sag*' (*VAB* i. 19). He owes his position as king to the fact that 'his name has been spoken by *En-lil*' (*VAB* i. 19). Entemena of Lagash undertook restorations of the temple at Nippur, and constructed there a laver for the god (*VAB* i. 34). Gudea also ascribes his appointment as king of Lagash to *En-lil* (*VAB* i. 114), and wages his wars in the name of *En-lil* (*VAB* i. 128, 130). *Ningirsu*, the patron-god of Lagash, is called the son of *En-lil* (*VAB* i. 123). The temple of *En-lil* at Shirpurla, the capital of Lagash, was called *E-adda*, 'house of the father,' which shows the superior position that he held over against the local god. Ur-engur, king of Ur, rebuilt *E-kur*, the temple of *En-lil* at Nippur (*VAB* i. 189). By the dynasty of Ur *En-lil* was honoured to an extraordinary degree (cf. *VAB* 196*b*–*c*, 198, 200*b*–*d*). Aradsin of Larsa calls *En-lil* his god, who has given him the throne (*VAB* i. 212). Votive inscriptions in his honour from kings in all parts of Babylonia have been found by the expedition of the University of Pennsylvania at Nippur. His worship spread even as far as Elam (*VAB* i. 181).

The primitive character of *Bêl* of Nippur is difficult to determine, on account of the confusion of this god with Marduk in all the later religious texts. From the oldest inscriptions we gather that he was conceived as a mighty warrior, armed with a net, who marched forth for the destruction of the enemies of his worshippers (*VAB* i. 14, 19, 128, 130). The Creation-epic shows that in its original form he was regarded as the creator of heaven and earth. He determined the fates of men (*VAB* i. 21, 122). Oaths were administered in his name, and he punished those who violated them (*VAB* i. 14). On his temple at Nippur and the remains there found see Peters, *Nippur*; Hilprecht, *Babylonian Expedition of the University of Pennsylvania*, and *Explorations in Bible Lands*.

The high position that *Bêl* of Nippur maintained for centuries he finally lost through the rise of the city of Babylon to political supremacy. Before the time of Ḫammurabi (*c.* 2200 B.C.), Babylon was a relatively obscure place, and its chief god, **Marduk**, enjoyed only a local celebrity. He is never mentioned in the inscriptions of kings who reigned before the first dynasty of Babylon. He was originally the god of the morning and the spring sun, who had become the *bêl* of Babylon by a process similar to that by which Sin, the moon-god, had become the *bêl* of Ur. When Ḫammurabi expelled the Elamites and united all Babylonia beneath his rule, Babylon became the chief city of the empire, and Marduk, its god, was suddenly exalted to the chief place in the pantheon. He now became **Bêl**, or 'lord,' *par excellence*; and this title presently became a proper name that was used even more frequently than his real name, Marduk. There were now two *Bêls* in Babylonia—the old *Bêl* of Nippur, who, in spite of the fallen state of his city, was still reverenced through force

of religious conservatism, and the new *Bêl* of Babylon, who had proved himself to be the *de facto* lord through the strength of Ḫammurabi's arms. What was more natural than to attempt to prevent conflict between the two potentates by affirming their identity? This step was taken by the priests of Babylon as early as the reign of Ḫammurabi. All the attributes of the old *Bêl* of Nippur, 'lord of lords,' 'lord of heaven and earth,' 'lord of the lands,' 'creator,' etc., were transferred directly to the new *Bêl* of Babylon. All the ancient hymns and prayers to *Bêl* of Nippur were appropriated to the use of his rival. When Ḫammurabi and his successors of the first dynasty speak of *Bêl*, and use the language of the ancient inscriptions, they mean Marduk. In spite of this attempted syncretism, however, the priests were unable to banish the old *Bêl* entirely even from Babylon. As a member of the supreme triad—*Anu*, *Bêl*, *Ea*—*Bêl* held his own, and was constantly invoked in the inscriptions along with *Bel-Marduk*; but this was more a religious formula inherited from the past than an active belief. For all practical purposes of worship, *Enlil-Bêl* was absorbed by *Marduk-Bêl*. Outside of the city of Babylon the claim of *Marduk* to be the same as the older *Bêl* was not received without opposition, and there are evidences of a long struggle before it became a dogma acknowledged throughout Babylonia. The priests of Nippur naturally never accepted it, and throughout the entire period of the Kassite third dynasty Nippur retained its place as a sanctuary, to which pilgrims flocked from all parts of Babylonia. The Kassite kings had no special fondness for the patron-god of the dynasty of Ḫammurabi, and they bestowed special honour upon the old *Bêl* of Nippur (Hilprecht, *Old Bab. Inscr.* I. i. Nos. 28–32). With the fall of the Kassites and the establishment of a native Babylonian dynasty, *Marduk* regained the place that Ḫammurabi had given him, and *Bêl* of Nippur waned until little remained but the memory of his former glory. Curiously enough, *Bêlit* of Nippur did not share the fate of her husband and become the wife of *Marduk* when he was identified with *Bêl*. *Marduk* had already a consort, *Sarpanitum*, a relatively unimportant goddess, who was in no way comparable with the old *Bêlit* of Nippur. The two were never identified, as logical consistency would have demanded, but *Bêlit* held her own as an independent great goddess.

In the inscriptions of the Assyrian kings, *Bêl* usually means *Marduk*. He occupies the second place in the pantheon (after *Ashur*), and is usually named in connexion with his 'son' *Nabu*, the patron-god of Borsippa. The Assyrian kings showed him the highest reverence; and even when they conquered Babylonia, they claimed to do it in the service of *Bêl*, and took the throne by the formal ceremony of grasping the hands of *Bêl* at Babylon. Along with this there existed also the cult of the older *Bêl* of Nippur. The old triad, *Anu*, *Bêl*, *Ea*, still stands at the head of lists of gods in which *Marduk* appears as a separate deity; and when the Assyrian kings speak of *Bêl*, the lord of the lands, who dwells on the holy mountain, they mean the *Bêl* of Nippur. Tiglath-Pileser I. states expressly that he restored a temple of 'the old *Bêl*' at Ashur (Rawlinson, i. pl. 14, col. vi. 87). This double use of *Bêl* as a proper name lasted through the entire Assyrian period, and, besides this, *bêl* retained its generic meaning as a title of all the gods. The standing formula for the gods in general is *ilâni rabûti bêlêya*, 'the great gods my lords.' *Bêlit* was worshipped in Assyria partly as the ancient goddess of Nippur, partly as the consort of *Anu* or *Ashur*. Her name is also used as a title of the Assyrian *Ishtar*. This confusion is due to the fact that the common noun *bêlit* never lost its appellative meaning of 'mistress.' Many goddesses might be called 'mistress,' and then through this similarity of title be confused with one another. When Ashurbanipal wishes to distinguish the older *Bêlit*, he calls her *Bêlit* of Nippur (Rawlinson, v. 8, col. viii. 98, 99).

In the New Bab. period *Bêl-Marduk* regained the supremacy that in the Assyr. period he temporarily surrendered to Ashur. His cult was revived with great glory by Nabopolassar, Nebuchadrezzar, and Nabonidus, and all the attributes of supreme divinity were heaped upon him. Throughout Babylonia he was acknowledged without question as the *Bêl*, and his cult spread widely in the provinces of the empire. We have found it already at Palmyra (see above, iii. 5). Its presence at Edessa is attested by Jacob of Sarug (*ZDMG* xxix., 1875, p. 131). When *Bêl* is mentioned in the OT and Apoc. it is always *Marduk* that is meant. The old *Bêl* is unknown, except in so far as his character survives in his successor. In Jer 51[44] he is called '*Bêl* of Babylon.' In Is 46[1] he is named in connexion with *Nebo*, the god of Borsippa, the suburb of Babylon. In Jer 50[2] *Merodach* (=*Marduk*) stands in poetic parallelism with *Bêl*. Cf. also *Bel and the Dragon* (=Dn 14 in LXX), Baruch 6[41] (cf. 6[15]). *Bêl* also occurs in a few late Heb. proper names.

7. **Among the Greeks and Romans.**—Through Phœn. colonies in all parts of the coast of the Mediterranean, and through Greek colonies in Syria, the worship of the old Sem. *b*ᵉ*'ālîm* was widely disseminated throughout the Græco-Roman world, and exerted a deep influence upon Occidental thought. The local divinity was either called by his original Sem. name, *e.g.* **Balanios** at Heliopolis, **Balsamem** at Tyre, Palmyra, and the Phœnician colonies, **Balmarcodes** at Deir el-Ḳal'a, **Beelmaris** at Tyre, **Balcaranensis** at Carthage, **Baladdiris** at Sigus, **Aglibolos** and **Iaribolos** at Palmyra; or else his name was translated into its supposed Gr. or Lat. equivalent. The local *ba'al* was everywhere regarded as the supreme god, hence he was frequently identified with Zeus or Juppiter, the name of his city being appended to distinguish him from other similar divinities, *e.g.* **Zeus Kasios**, **Zeus Damascenos**, **Zeus Karmelos**, **Zeus Atabyrios**, **Zeus Tarsios**, **Juppiter Heliopolitanus** (see above under the corresponding Semitic names). Other *ba'als* had peculiarities which led to their identification with *Kronos-Saturn*. *Balcaranensis* of Carthage, for instance, is regularly called *Saturnus* in the inscriptions (cf. Alex. Polyh., frag. 3 in *FHG* iii. 212; Servius, *Aen.* i. 642, 729; Damascius, *Vit. Isid.* § 115; Joh. Chrys. on Ps. 105, § 3; Theodoret on Ps 105[28] in *PG* liii. 1730). The *ba'al* of Heliopolis, who was the sun, was, of course, identified with *Helios* and *Sol*. *Malak-Bel* at Palmyra is in the Latin parallel called 'Sol sanctissimus' (cf. Servius, *Aen.* i. 642, 729; Nonn. *Dionys.* xl. 392 ff.; Macrobius, *Saturn.* i. 23). Hesychius (*s.v.* Βῆλος), the *Etym. Mag.* (*s.v.* Βῆλ), and Parmenius (in Becker, *Anecd.* 225), connect *ba'al* with *Ouranos*. *Ba'al-Melḳart* of Tyre is almost uniformly identified by classical writers with *Herakles* (cf. Baethgen, *Beiträge*, 20 f.). Late writers assert that in Persian *Ba'al* is the same as *Ares* (Malalas, p. 19; John of Antioch, frag. 5, in *FHG* iv. 542; *Chron. Pasch.* i. 18). This variety in the identification bears witness to the multiplicity of the *b*ᵉ*'ālîm* with which Greeks and Romans came into contact (see Scholz, *Götzendienst*, p. 148 ff.; Baethgen, *Beiträge*, p. 19 ff.).

The Bab. *Bêl* is also known to the classical writers. In Servius (*Aen.* i. 612) a dim memory survives of a distinction between the older and the younger *Bêl*, but in general only *Marduk-Bêl* is known, and all the attributes of *Enlil-Bêl* are

ascribed to him, as in the later Bab. theology. Eudemos (in Damascius, *de Princip.* 125) knows that he is the son of *Aos* (*Ea*) and *Dauke* (*Damkina*). Berossus (in *FHG* ii. 497, 4 ff.) and Castor (in Euseb. *Chron.*, ed. Schoene, p. 53) narrate, in direct dependence upon the Bab. Creation-story, how *Bêl* slew the dragon of the deep, and out of her body created heaven and earth. Of him Arrian (*Anab.* iii. 16. 4) says that the Babylonians honour him most of all the gods (cf. Minucius Felix, vi. 1). The building of his temple at Babylon is ascribed to Semiramis (Diod. ii. 9; Dionysius Periegetes, 1007). Berossus (in Euseb. *Chron.* ed. Schoene, p. 48) and Josephus (*Ant.* x. xi. 1) tell how it was beautified by Nebuchadrezzar; Arrian (*Anab.* iii. 16. 4), how it was destroyed by Xerxes and rebuilt by Alexander. It is often mentioned by the classical writers (Herod. i. 181; Paus. i. 16. 3, viii. 33. 3; Pliny, vi. 121; Mart. Capell. vi. 701; Solin. lx. 3). A grave of *Bêl* at Babylon was known to Ctesias (frag. 29, 216; cf. Aelian, xii. 3; Strabo, xvi. 738; Diod. xvii. 102). The cult of the Bab. *Bêl* was never directly adopted by the Greeks or the Romans, as were the cults of the Phœn. and Syr. *bᵉʿālîm*; but indirectly many elements of Bab. theological speculation concerning his character and his creation of the world drifted into the Occident, and re-appear in the worship of Mithra (see MITHRA). Through the Bab. use of *Bêl* as a proper name, and through the exalted Bab. conception of his character as creator and supreme god, the Greeks were led to the idea that there was a single god *Bêl*, of whom the numerous Syr. and Phœn. *bᵉʿālîm* were only the local manifestations. Strabo speaks of *Bēlos* as a great god, worshipped throughout Africa and in Asia as far as Persia (xvi. 744; cf. *Excerpta Barbari* in Frick, *Chron. Min.* 281, 27; Curtius, iii. 3, 16). The form *Bēlos* as a proper name without additional determinative is evidently derived from the Bab. *Bêl* rather than from the Phœn. *ba'al*, and shows that the idea of a single god *Ba'al* is ultimately of Babylonian origin. On the Bab. *Bêl* in Greek writers see Scholz, *Götzendienst* (p. 365 ff.).

LEWIS BAYLES PATON.

BAALZEBUB and BEELZEBOUL.—These two names probably refer to the same supernatural being; or, at any rate, the second of them is derived from the first. Baalzebub (בעל זבוב) is the OT form (2 K $1^{2. 3. 6. 16}$), and Beelzeboul * (*βεελζεβούλ*, WH *βεεζεβούλ*) the NT form (Mt 10^{25} $12^{24. 27}$, Mk 3^{22}, Lk $11^{15. 18. 19}$).

Baalzebub is in the OT represented as the god of the Philistine city of Ekron, whose oracle was so famous that Ahaziah, king of Israel, sent to consult it, to the neglect of the oracles of Jahweh. The Hebrew word בעל זבוב would mean 'lord of flies'; זבוב = Assyrian *sumbu*, 'a fly' (cf. Ec 10^1). The LXX and Josephus so understood it, since they make the name of the god *βάαλ μυῖαν* (cf. LXX, *ad loc.*, and Jos. *Ant.* IX. ii. 1). Aquila supports the same reading by transliterating *βααλζεβούβ*, while Symmachus supports the NT form *βεελζεβούλ*. Bezold found, in an inscription of the Assyrian king Assur-bel-Kala (11th cent.), mention made among the gods of *Ebir-nari* (a name applied in Neh $2^{7. 9}$ to Syria and Palestine) of a god Bel-ze-bu-bi (or-na). Were the last syllable certain, it would show that *Baalzebub* was found there earlier (see *Catalogue*, K. 3500, and Hommel, *AHT* 195). Movers (*Die Phönizier*, i. 260 ff.) held that the original name was בעל זבול = 'lord of the mansion,' which originally meant a heavenly mansion, but afterwards the god of the nether world. This view is of very doubtful certainty, since זְבֻל in the sense of 'house' (1 K 8^{13} and Ps 49^{14}) is very uncertain (cf. LXX). In Is 63^{15} and Hab 3^{11} it is used of a station or abode in the heavens, while in the Talmud (*Chagiga*, 12*b*) זבול is the fourth heaven, in which are the heavenly Jerusalem and the altar. This would hardly be possible, if in Jewish thought the word had ever represented a region the lord of which was the prince of demons. Halévy (*JA* xix. [1892] p. 304 and *CAIBL* xx. [1892] p. 74) thinks Zebub the name of a place, comparing the *Ṣapuna* of the el-Amarna letters (*KB* v. 174. 16)—a theory which Kittel ('Könige,' in Nowack's *Handkommentar, ad loc.*) rightly rejects. The resemblance between Zebub and Ṣapuna is too slight, and the Biblical text states that the deity in question was the god of Ekron. In all probability Baalzebub means 'lord of flies,' which are very numerous in the neighbourhood of Ekron (see Barton, *A Year's Wandering in Bible Lands*, 1904, p. 216 ff.). This title was given as an epithet to the god, whether by the Ekronites or the Hebrews we do not know, though Baethgen (*Beit. z. sem. Religionsgesch.* 1888, p. 25) holds that he represented a process of divination by flies. In the NT, as already noted, the name is *βεελζεβούλ* and is applied to the lord of the devils, and made a synonym of Satan (cf. Mk $3^{22. 23}$, Lk $11^{15. 18}$). Cf. above, p. 287^a.

These facts have given rise to various conjectures. (1) The theory of Movers already referred to, that the name was בעל זבול, is thought by some to receive confirmation from the fact that in Mt 10^{25} *οἰκοδεσπότης* (= 'master of the house' †) may be considered a translation of it. There is no real reason, however, to consider one of these words a translation of the other. If זבול (= 'house') was an original element of the name, a punning Jew would easily have זיבול (= Syr. זְבְלָא = 'dung') suggested to him, and might so understand the

* Beelzebub of AV has no authority in Greek MSS. It owes its currency to the Vulgate.

† Cheyne (*EBi*, col. 514) holds that *οἰκοδεσπότης* suggests the reading בעל זביר, ז = Aram. 'of,' and ביר changed from בית = 'house.'

name (so Gould, 'Mark,' in *Inter. Crit. Com.* p. 62). (2) It is supposed that the name is a variation of *Baalsebub*, and that both the form and the significance have undergone change. As to the form, it is supposed (*a*) that the final *b* was changed to *l* by conscious perversion, so as to make it mean 'dung,' as *ba'al* (='lord') is sometimes changed to *bôsheth* (='shame') (cf. *Esh-baal*, 1 Ch 9[39], with *Ish-bosheth*, 2 S 2[10]); this perversion transformed 'fly' to 'dung,' or 'filth.' (*b*) Baudissin (*PRE*[3]) holds that *b* was changed to *l* in popular pronunciation, without intent to change the meaning, as *Bab-el-Mandeb* is sometimes changed to Bab-el-Mandel; and (*c*) Riehm (*HWB*[2]) held that in the time of Christ *Baal-sebub* was Aramaized to בעל־דבבא (='lord of enmity'), and so was the exact equivalent of Διάβολος, or Satan.

As to the significance of Beel-zeboul in the NT period different theories have been proposed to account for his evolution from the OT god. Geiger (*Urschrift*, p. 53) thought that the god of the hated Philistines became the representative of heathen power, and so the arch-enemy of Israel. He found confirmation of his view in the fact that, in Aramaic, זבוב would be phonetically transformed into דבב (='hostility'). This theory, though plausible, lacks historical confirmation. The Philistines were not a formidable enemy after the early days of the kingdom. Syrians, Assyrians, Babylonians, Persians, Greeks, and Romans took successively the place of principal enemy, and it is hardly probable that the god of Ekron, who is mentioned in but one narrative of the OT, could have continued to hold this place. Had he done so, he could not have escaped mention.

Another view is expressed in the Talmud, which regards the fly as the representative of evil. In *Bᵉrākhôth*, 61*a*, it is said: 'The evil spirit lies like a fly at the door of the human heart.' Again, in *Bᵉrākhôth*, 10*b*, it is said that the Shunammite woman (2 K 4[8] ff.) perceived that Elisha was a man of God, because no fly crossed his table. This estimate of the fly goes back to the *Mishna*, for in *Aboth*, 5[8], we read: 'A fly, being an impure thing, was never seen in the slaughter-house of the temple.' In reality the revival of interest in Baal-zebub in the NT was due to literary causes. Cheyne has pointed out that Lk 9[54] shows that in the time of Christ the narrative of 2 K 1 possessed a strange fascination for people. Probably both the hostility to Baal-zebub expressed in that narrative and the perversion of his name into the Aramaic בעל דבבא (='lord of hostility') helped this literary interest to make Beel-zebub a synonym of Satan. As the name meant 'lord of flies,' this would be sufficient to call into existence the Talmudic conception that the fly is a kind of imp, especially as Lv 11 and Dt 14 imply that it was to be reckoned among unclean flying things.

The change of *zebub* to *zebul* in the NT was, no doubt, due to conscious perversion. In addition to the analogy of *bôsheth*, cited above, the Talmud (*'Abôdā zārā*, 18*b*, cf. Dalman, *Aram. Gram.* p. 137) shows that זבח as applied to the sacrifices of the heathen was changed to זבל ('dung').

GEORGE A. BARTON.

BĀB, BĀBĪS.—*Bāb* (باب ='Gate' in Arabic) was the title first assumed by Mīrzā 'Alī Muḥammad, a young Sayyid of Shīrāz, who in A.H. 1260 (=A.D. 1844) began to preach a new religion, which spread through Persia with extraordinary rapidity, and, in spite of violent persecutions, culminating in the execution of the founder on July 9, 1850, and of some twenty-eight of his principal disciples on September 15, 1852, has continued to gain strength until the present day. Both the history and the doctrines of this religion present so many remarkable features, that the subject has, almost from the first, attracted a great deal of attention, not only in the East but in Europe, and latterly in America; and the literature dealing with it, even in European languages, is very extensive; while the Arabic and Persian writings, manuscript, lithographed and printed, connected with it are so numerous and, in some cases, so voluminous, that it would hardly be possible for the most industrious student to read in their entirety even those which are accessible in half a dozen of the best-known collections in Europe. An exhaustive treatment of the subject is therefore impossible, and we must content ourselves with a sketch of the most important outlines of the history, doctrines, and literature of the religion in question.

1. Antecedents.—In order to understand properly the origins and developments of Bābī doctrine, it is, of course, essential to have a fair knowledge of Islām, and especially of that form of Islām (the doctrine of the *Ithnā 'ashariyya* division of the Shī'a, or 'Sect of the Twelve' Imāms), of which Persia has from the earliest Muhammadan times been the stronghold, and which, since the 16th cent. of our era, has been the State religion of that kingdom. Information on this subject must be sought elsewhere in this Encyclopædia under the appropriate headings; but, even for the most elementary comprehension of the early Bābī doctrine, it is essential to grasp the Shī'ite doctrine of the Imāmate, and especially the Messianic teaching concerning the Twelfth Imām, or Imām Mahdī.

According to the Shī'ite view, the prophet Muḥammad appointed to succeed him, as the spiritual head of Islām, his cousin 'Alī ibn Abī Ṭālib, who, being married to Fāṭima, was also his son-in-law. 'Alī's rights were, however, usurped in turn by Abū Bakr, 'Umar, and 'Uthmān; and though he was elected Khalifa after 'Uthmān's death, he was assassinated after a brief and troubled reign of five years (A.D. 656–661). His eldest son, al-Ḥasan, the second Imām, abdicated five or six months after his father's death in favour of the Umayyad Mu'āwiya. His younger son, al-Ḥusayn, the third Imām, attempted to regain his temporal rights by a rash revolt against the Umayyads, but perished on the fatal field of Karbalā (Kerbelā) on Muḥarram 10, A.H. 61 (Oct. 10, A.D. 680), a day still celebrated with wailing and mourning in all Shī'ite communities, especially in Persia. The nine remaining Imāms all lived in more or less dread of the Umayyad, and afterwards of the 'Abbāsid khalīfas, and many of them died by poison or other violent means. They were all descended from al-Ḥusayn, and, according to the popular belief, from a daughter of Yazdigird III., the last Sāsānian king, who was taken captive by the Arabs after the battle of Qādisiyya, and given in marriage to al-Ḥusayn. This belief, which was prevalent at least as early as the 3rd cent. of the Hijra, since it is mentioned by the historian al-Ya'qūbī (ed. Houtsma, ii. 293, 363), undoubtedly explains, as remarked by Gobineau,* the affection in which the Imāms are held in Persia, since they are regarded as the direct descendants not only of the prophet Muḥammad, but also of the old royal house of Sāsān. The Divine Right of the Imāms to the temporal supremacy of which they had been unjustly deprived, and the absolute dependence

* *Rel. et Philos. dans l'Asie Centrale* (ed. 1866), p. 275.

of the faithful on the spiritual guidance of the 'Imām of the Age,' thus became the two most characteristic and essential dogmas of all the various Shī'ite sects. 'Whosoever dies,' says a well-known Shī'ite tradition, 'without recognizing the Imām of his time, dies the death of a pagan.'

Now, according to the 'Sect of the Twelve,' the Twelfth Imām, or Imām Mahdī, was the last of the series. But since, according to their belief, the world cannot do without an Imām, and since this last Imām, who succeeded his father in A.H. 260 (=A.D. 873–4), disappeared from mortal ken in A.H. 329 (=A.D. 940–1), it is held that he never died, but is still living in the mysterious city of Jābulqā, or Jābulsā, surrounded by a band of faithful disciples, and that at the end of time he will issue forth and 'fill the earth with justice after it has been filled with iniquity.' This Messianic Advent is ever present in the mind of the Persian Shī'ite, who, when he has occasion to mention the Twelfth Imām, or Imām Mahdī (also entitled *Ḥujjatu'llāh*, 'the Proof of God,' *Baqiyyatu'llāh*, 'the Remnant of God,' *Ṣāḥibu'z-Zamān*, 'the Lord of the Age,' and *Qā'imu 'Alī Muḥammad*, 'He who shall arise out of the house of Muḥammad'), always adds the formula عجّل الله فرجه ('May God hasten his glad Advent!').

Now, in connexion with Bābī doctrine, it is to be noticed first of all that the 'Manifestation' (ظهور) of Mīrzā 'Alī Muḥammad the Bāb took place, as already said, in A.H. 1260, exactly a thousand years after the succession of the Imām Mahdī to the Imāmate, or, in other words, at the completion of a millennium of 'Occultation' (غيبت). For the Imām Mahdī, according to the Shī'ite belief, appeared in public once only, on his accession, when he performed the funeral service over his father, after which he became invisible to the bulk of his followers. During the first 69 years of the millennium of 'Occultation,' however, his instructions and directions were communicated to his followers, the Shī'a, through four successive intermediaries, each of whom bore the title of *Bāb*, or 'Gate.'* This period is known as 'the Minor Occultation' (غيبت صغرى). In A.H. 329, however, this series of 'Gates,' or channels of communication between the Imām and his followers, came to an end, and such communication became impossible. This later and longer period (which, according to the Bābī view, lasted from A.H. 329 to A.H. 1260) is known as 'the Major Occultation' (غيبت كبرى).

It was in this sense, then, that Mīrzā 'Alī Muḥammad, at the beginning of his career, declared himself to be the *Bāb*, or 'Gate,' viz., the gate whereby communication, closed since the end of the 'Minor Occultation,' was re-opened between the Hidden Imām and his faithful followers. He did not invent this term, nor was he even the first to revive it, for it was used in the same sense by ash-Shalmaghānī, a Messiah of the 10th cent. of our era, and by others.† So far as recent times are concerned, however, it was the Shaykhī school, founded by Shaykh Aḥmad al-Aḥsā'ī (b. A.D. 1733, d. A.D. 1826) which revived the idea that amongst the faithful followers of the Twelfth Imām there must always exist one, whom they entitled *Shī'a-i-Kāmil* (شيعهٔ كامل), 'the Perfect Shī'ite,' who was in direct spiritual communication with him. Neither Shaykh Aḥmad nor his successor Sayyid Kāẓim of Rasht (d. A.D. 1843–1844) made use of the title 'Bāb,' but their conception of 'the Perfect Shī'ite' was practically identical with the idea connoted by that title. To this Shaykhī school, or sect, belonged not only Mīrzā 'Alī Muḥammad himself, but Mullā Ḥusayn of Bushrawayh, Qurratu'l-'Ayn, and many others of his first and most zealous disciples. On the death of Sayyid Kāẓim his followers were naturally impelled by their doctrine concerning 'the Perfect Shī'ite' to seek his successor. There were two claimants, Mīrzā 'Alī Muḥammad, who on May 23, 1844,* within a short time of Sayyid Kāẓim's death, announced himself to be the 'Bāb,' and whose followers were consequently called 'Bābīs'; and Ḥājjī Muḥammad Karīm Khān, a scion of the Qājār Royal Family, who was recognized, and whose descendants are still recognized, by the conservative or stationary Shaykhīs as their spiritual head. It is in the teachings of the Shaykhī school, therefore, that the immediate origins of early Bābī doctrine must be sought; but no European scholar has yet made a critical study of the works and doctrines of Shaykh Aḥmad and Sayyid Kāẓim. Those who desire somewhat fuller information on this subject may be referred to the *Traveller's Narrative*, ii. 234–244. A full and critical study of the Shaykhī doctrines would, however, form an indispensable preliminary to such a philosophical history of the Bābīs as must some day be written.

2. History of the movement during the life of the founder. — The first period of Bābī history begins with the 'Manifestation' on May 23, 1844, and ends with the martyrdom of the Bāb at Tabrīz on July 9, 1850. The detailed history of these six years will be found in the translations of the *Traveller's Narrative* (Camb. 1891) and the *New History of . . . the Bāb* (Camb. 1893), while a fairly complete bibliography of earlier works on the subject, both European and Oriental, is given in the former work (ii. 173–211). In the *JRAS* for 1889 (vol. xxi. new ser. pp. 485–526 and 881–1009) are also discussed critically various matters connected with both the history and the doctrines of the sect. Of the three chief histories composed in Persian by members of the sect, the earliest and most instructive is that written between 1850 and 1852 by Ḥājjī Mīrzā Jānī of Kāshān, who must have finished it only a little while before he was put to death among the twenty-eight Bābīs who suffered martyrdom at Ṭihrān (Teheran) on September 15, 1852. Of this work the only complete manuscript, so far as the present writer can ascertain, which existed (until he caused it to be transcribed for himself) was *Suppl. Pers.* 1071 in the Bibliothèque Nationale at Paris, one of the MSS brought from Persia by M. le Comte de Gobineau, the talented author of *Les Religions et les philosophies dans l'Asie Centrale*. Another MS in the same collection (*Suppl. Pers.* 1070) contains the first third of it, while the *New History* (تاريخ جديد) is a recension made (about A.D. 1875–1880) by Mīrzā Ḥusayn of Hamadān, containing many additions, but also remarkable for some extremely important omissions and alterations. There is thus sufficient material for an edition of this most important document, which the present writer is now (1908) printing. The *Traveller's Narrative*, the third of the three principal systematic accounts compiled by the

* For their names, and a fuller account of the whole matter, see the present writer's tr. of the *Traveller's Narrative*, ii. 296 ff.

† For a full discussion of this matter, see the note on the meaning of the title 'Bāb' in the tr. of the *Traveller's Narrative*, ii. 226–234.

* This date, and even the exact hour of his 'Manifestation,' is given by the Bāb in two passages of the Persian *Bayān* (Wāḥid ii. 7, and vi. 13). See *Trav. Narr.* ii. 218–226.

Bābīs of their history, is not only later, but deals less with the early history of the movement than with the biography and writings of Bahā'u'llāh, to whose son 'Abbās Efendi (also called 'Abdu'l-Bahā) its authorship is ascribed. The accounts of Bābī history given by Muḥammadan writers (notably by the Lisānu'l-Mulk in the *Nāsikhu't-Tawārīkh* and by Riżā-qulī-Khān in his supplement to the *Rawżatu'ṣ-Ṣafā*) must, as a rule, be used with great caution, but exception must be made in favour of the late Sayyid Jamālu'd-Dīn al-Afghān's article on the Bābīs in Buṭrusu'l-Bustānī's Arabic encyclopædia the *Dā'iratu'l-Ma'ārif* (Beirut, 1881), and of a more recent history compiled in Arabic by a Persian doctor named Za'īmu'd-Dawla, and published at Cairo in A.H. 1321 (A.D. 1903–4),* from both of which, in spite of the prejudice against the Bābīs which they display, important facts may be gleaned.

A very brief summary of the events of this first period (A.D. 1844–1850) is all that can be given here. The Bāb himself, who was only twenty-four years old at the time of his 'Manifestation,'† and not thirty when he suffered martyrdom, was a captive in the hands of his enemies during the greater portion of his brief career, first at Shīrāz (August–September 1845—March 1846), then at Iṣfahān (March 1846—March 1847), then at Mākū near Urumiyya, and, for the last six months of his life, at the neighbouring castle of Chihrīq. He enjoyed the greatest freedom at Iṣfahān, where the governor, Minūchihr Khān, a Georgian eunuch, treated him with consideration and even favour; but he was able to continue his writings and to correspond with, and even receive, his followers during the greater part of his captivity, save, perhaps, the last portion. He himself, however, took no part in the bloody battles which presently broke out between his followers and their Muslim antagonists. Of these armed risings of the Bābīs the chief were in Māzandarān, at Shaykh Ṭabarsī near Bārfurūsh, under the leadership of Mullā Ḥusayn of Bushrawayh and Ḥājjī Mullā Muḥammad 'Alī of Bārfurūsh (autumn of 1848 to summer of 1849); at Zanjān, under Mullā Muḥammad 'Alī Zanjānī (May–December 1850); and at Yazd and Nīrīz, under Aghā Sayyid Yaḥyā (summer of 1850), while a second rising at Nīrīz seems to have occurred in 1852.‡ Amongst other events of this period to which the Bābīs attach special importance, and of which they have preserved detailed accounts, is the martyrdom of 'the Seven Martyrs' at Ṭihrān, which also took place in the summer of 1850.§ During the later period of his career Mīrzā 'Alī Muḥammad discarded the title of 'Bāb' (which he conferred on one of his disciples) and announced that he was the *Qā'im*, or expected Imām, and even more than this, the *Nuqṭa* (نقطة), or 'Point.' It is by this title (*Ḥażrat-i-Nuqṭa-i-Ūlā*, 'His Holiness the First Point'), or by that of *Ḥażrat-i-Rabbiyu'l-A'lā*, 'His Holiness my Lord Most High,' that he is generally spoken of by his followers, though latterly the Bahā'īs, desiring to represent him as a mere forerunner of Bahā'u'llāh—a sort of John the Baptist—seem to have abandoned the use of these later and higher titles. But from the Bāb's own later writings, such as the Persian *Bayān*, as well as from what is said by Mīrzā Jānī and other contemporary writers, it is clear that he was regarded as a divine being, and that in a very full sense, as will be shown when the doctrines of the Bābīs are discussed, when the term 'Point' (*Nuqṭa*) will also be explained. The circumstances attending the execution of the Bāb at Tabrīz on July 9, 1850, and especially his strange escape from the first volley fired at him,* are fully recorded in the histories already mentioned, and need not be recapitulated here. His body, after being exposed for several days, was recovered by his disciples, together with that of his fellow-martyr Mīrzā Muḥammad 'Alī of Tabrīz, wrapped in white silk, placed in a coffin, and concealed for some seventeen years in a little shrine called Imām-zāda-i-Ma'ṣūm between Ṭihrān and Ribāṭ-Karīm. At a later date it was transferred to 'Akkā (St. Jean d'Acre) by order of Bahā'u'llāh, where it was placed in a shrine specially built for that purpose.†

3. **Period of Ṣubḥ-i-Ezel's supremacy** (A.D. 1850–1868).—Before his death the Bāb had nominated as his successor a lad named Mīrzā Yaḥyā, son of Mīrzā Buzurg of Nūr, and half-brother of the afterwards more famous Mīrzā Ḥusayn 'Alī, better known as Bahā'u'llāh. Mīrzā Yaḥyā was, according to Mīrzā Jānī, only 14 years old at the time of the Bāb's 'Manifestation,' so that he must have been born about A.H. 1246 (= A.D. 1830–1831). His mother died when he was a child, and he was brought up by his step-mother, the mother of his elder half-brother Bahā'u'llāh, who was about 13 years his senior.‡ Mīrzā Jānī, our oldest, best, and most unprejudiced authority (since he was killed in 1852, long before the schism between the Ezelīs and Bahā'īs took place) reports Bahā'u'llāh as saying that he did not then know how high a position Mīrzā Yaḥyā was destined to occupy. At the early age of 15, about a year after the 'Manifestation,' he was so attracted by what he heard of the Bāb and read of his writings, that he set off for Khurāsān and Māzandarān, met Janāb-i-Quddūs (*i.e.* Mullā Muḥammad 'Alī of Bārfurūsh) and Qurratu'l-'Ayn, and, with Bahā-'u'llāh, attempted to join the Bābīs who were besieged at Shaykh Ṭabarsī, but was prevented by the governor of Amul. In the fifth year of the 'Manifestation' (A.H. 1265 = A.D. 1849), shortly after the fall of Shaykh Ṭabarsī, the Bāb, having heard of Mīrzā Yaḥyā's youth, zeal, and devotion, declared that in him was fulfilled the sign of the Fifth Year given in the tradition of Kumayl, 'A Light shining from the Dawn of Eternity,' conferred on him the title *Ṣubḥ-i-Ezel* ('the Dawn of Eternity'), sent him his own rings and other personal possessions, authorized him, at such time as he should see fit, to add 8 *wāḥids* (or 'Unities' of 19 chapters each) to the *Bayān*, and appointed him his successor. On the Bāb's death, therefore, Ṣubḥ-i-Ezel, as we shall now continue to call him, was recognized with practical unanimity by the Bābīs as their spiritual head; but, owing to his youth and the secluded life which he adopted, the practical conduct of the affairs of the Bābī community devolved chiefly on his elder half-brother Bahā'u'llāh, or Janāb-i-Bahā, as he is called by Mīrzā Jānī. There seem to have been some rival claimants, notably Mīrzā Asadu'llāh of Tabrīz, entitled 'Dayyān,' who was, according to Gobineau (p. 277 f.), drowned in the Shaṭṭu'l-'Arab by some of the Bābīs who wished to put an end to his pretensions; and, according to Mīrzā Jānī, certain other persons, such as 'the Indian believer' Sayyid Baṣīr, Āghā Muḥammad Karāwī, and a young confectioner entitled 'Dhabīḥ' (ذبيح

* This work is entitled *Miftāḥu Bābi'l-Abwāb* ('the Key of the Gate of Gates').

† The most reliable evidence points to October 9, 1820, as the date of his birth. Mīrzā Ḥusayn 'Alī, afterwards known as *Bahā'u'llāh* was a year or two older (see *Trav. Narr.* ii. 218 ff.).

‡ See *Trav. Narr.* ii. 253–261.

§ *Ib.* ii. 211–218.

* See, however, the *New History*, p. 301, n. 1 *ad calc.*, which contains a correction of a detail given by Gobineau.

† See the *Traveller's Narrative*, ii. 46, and n. 1 *ad calc.*

‡ The date of Bahā'u'llāh's birth is given in Nabīl's rhymed chronicle as 2 Muḥarram, A.H. 1233 (= November 12, 1817). See *JRAS*, 1889, p. 521.

قنّاد), claimed to be theophanies or Divine Manifestations.* Mīrzā Jānī actually exulted in this state of things, declaring that just as the tree which bears most fruit is the most perfect, so the religion which produces most divine or *quasi*-Divine Manifestations thereby shows its superiority to other creeds. But none of these persons appears to have had any considerable following, and for some time Ṣubḥ-i-Ezel enjoyed, nominally at least, an uncontested supremacy.

For two years (July 1850–August 1852) little was heard of the Bābīs; but on August 15, 1852, three or four adherents of the sect made an attempt on the life of Nāṣiru'd-Dīn Shāh as he was leaving his palace at Niyāvarān to go out hunting. The attempt, which appears to have had no countenance from the leaders of the Bābīs, failed, but led to the fierce persecution of the sect, of whom some twenty-eight prominent members, including the beautiful poetess Qurratu'l-'Ayn, Mullā Shaykh 'Alī, called 'Janāb-i-'Aẓīm,' Āghā Sayyid Ḥusayn of Yazd the Bāb's secretary Sulaymān Khān, and our historian Ḥājjī Mīrzā Jānī, were among the most conspicuous victims. The object being to make all classes participators in their blood, the doomed Bābīs were divided among the different classes and gilds, beginning with the *'ulamā*, the princes of the Royal House, and the different Government offices, and ending with the royal pages and students of the *Dāru'l-Funūn*, one victim being assigned to each, and a rivalry in cruelty was thus produced which made that day, Wednesday, September 15, 1852, equally memorable and horrible to all who witnessed it. The fortitude of the Bābī martyrs, and especially the death-ecstasy of Sulaymān Khān, produced a profound impression, and, as Gobineau says, probably did more to win converts to the new faith than all the previous propaganda.†

Bahā'u'llāh and Ṣubḥ-i-Ezel both escaped death on this occasion, though the former was arrested,‡ and a price was set on the apprehension of the latter.§ Both ultimately escaped to Baghdad, where they arrived about the end of 1852, Bahā'u'llāh, who was imprisoned in Ṭihrān for four months, arriving soon after his half-brother.‖ For the next eleven or twelve years (1853–1864) Baghdad was the headquarters of the sect, of which Ṣubḥ-i-Ezel continued to be the ostensible head, and is even implicitly acknowledged as such by Bahā'u'llāh in the *Iqān*, composed by him in 1861–1862. In the *Traveller's Narrative* (ii. 54 ff., especially pp. 55 and 62–63 of the translation), which contains the official Bahā'ī version of these transactions, it is implied that the nomination of Ṣubḥ-i-Ezel was a mere blind, that Bahā'u'llāh was from the first intended, and that his 'Manifestation' took place in A.H. 1269 (=A.D. 1853), which the Bābīs call the year of 'after a while' (سنة بعد حين, for حين, 'while,' = 8 + 10 + 50 = 68, and the year 'after' is '69). Ostensibly, however, his claim to be 'He whom God shall manifest' dates from A.H. 1283 (A.D. 1866–1867), the end of the Adrianople period, which agrees with Nabīl's statement ¶ that he was fifty years old when he thus manifested his true nature, for he was born in A.H. 1233 (=A.D. 1817).

* Another such claimant, according to Ṣubḥ-i-Ezel, was Ḥusayn of Mīlān, who perished in the persecution of 1852 (see the *Traveller's Narrative*, ii. 330 f.), while two other claimants, Sayyid Ḥusayn of Hindiyān and Shaykh Isma'īl, are mentioned (see also p. 357 f. of the same, where other pretenders are named).

† For further details see the *Traveller's Narrative*, ii. 323–334.

§ *Ib.* p. 374 f.

‖ See *JRAS*, 1889, pp. 945–948.

¶ *JRAS*, 1889, pp. 984 and 988, verse 10.

The records of the Baghdad period are comparatively scanty, but the propaganda went steadily on, though conducted with a caution and prudence foreign to the early days of the sect. About a year after his arrival at Baghdad, Bahā'u'llāh retired alone for two years into the highlands of Turkish Kurdistān, living chiefly at a place called Sarkalū, and occasionally visiting Sulaymāniyya.* By the Bahā'īs this retirement is regarded as a kind of preparation and purification; by the Ezelīs, as due to annoyance at the opposition which he encountered in his plans from several prominent Bābīs of the old school. Ṣubḥ-i-Ezel, a man of modest and retiring disposition, seems to have lived in great seclusion both before and after this event, and the disputes which appear to have occurred at this period seem to have been chiefly between Bahā'u'llāh and his adherents on the one hand, and Mullā Muḥammad Ja'far of Nirāq, Mullā Rajab 'Alī *Qahīr*, Sayyid Muḥammad of Iṣfahān, Sayyid Jawād of Kerbelā and the like on the other. Ultimately, owing to the hostility of the Persian Consul at Baghdad, Mīrzā Buzurg Khān of Qazwīn, and Mīrzā Ḥusayn Khān *Mushīru'd-Dawla*, the Persian Ambassador at Constantinople, the Turkish government was induced to expel the Bābīs from Baghdad, where their proximity to the Persian frontier, and to the Shī'ite shrines of Kerbelā and Najaf, afforded them great opportunities of proselytizing among their countrymen. This took place in the spring or early summer of 1864. They were first taken to Constantinople, where they remained for four months, and thence banished to Adrianople, where they arrived about the end of the year above mentioned. There they remained for nearly four years (Dec. 1864–August 1868), and there it was that in A.H. 1283 (A.D. 1866–67) Bahā'u'llāh publicly announced that he was 'He whom God shall manifest,' foretold by the Bāb, and called on all the Bābīs to recognize him as such, and to pay their allegiance to him, not merely as the Bāb's successor, but as him of whose Advent the Bāb was a mere herald and forerunner.

This announcement, which naturally convulsed the whole Bābī community, was gradually accepted by the majority, but was strenuously opposed not only by Ṣubḥ-i-Ezel but by a considerable number of prominent Bābīs, including more than one of the original 18 disciples of the Bāb known as the 'Letters of the Living' (حروف حي). The strife waxed fierce; several persons were killed;† charges of attempted poisoning were hurled backwards and forwards between the two half-brothers;‡ and at length the Turkish government again intervened and divided the two rival factions, sending Ṣubḥ-i-Ezel with his family to Famagusta in Cyprus, and Bahā'u'llāh with his family and a number of his followers to 'Akkā in Syria, which places they respectively reached about the end of August 1868. To check their activities, however, and provide the government with the services of a band of unpaid informers, they caused four Bahā'īs with their families and dependents to accompany Ṣubḥ-i-Ezel, and four of the Ezelīs to accompany Bahā'u'llāh. All of the latter were killed, one before they left Adrianople, and the other three soon after their arrival at 'Akkā. Of the Bahā'īs at Famagusta, one died in 1871 and one in 1872, while the third escaped to Syria in 1870. The fourth, Mushkīn Qalam, a celebrated calligraphist, remained in Cyprus for some time after the British occupation, but finally left on

* *Traveller's Narr.* ii. 64 f., 356 f. Nabīl says that he was 38 years of age when he withdrew, and 40 when he returned.

† See *Traveller's Narrative*, ii. 362–364.

‡ *Ib.* pp. 359 f. and 365–369.

Sept. 14, 1886, for 'Akkā, where the present writer met him in April 1890. The Famagusta exiles numbered in all thirty persons, of whom full particulars are preserved, in consequence of the allowances to which they are entitled, in the State Papers of the Island government, which are epitomized in the *Traveller's Narrative* (ii. 376–389). Ṣubḥ-i-Ezel and some of his family are still (1908) residing at Famagusta, while descendants of some of the other exiles are also living in the island in various capacities. Concerning those banished to 'Akkā the same detailed information is not available, but their number appears to have considerably exceeded that of the Ezelis.

4. Period of Bahā'u'llāh's supremacy (A.D. 1868–1892).—The schism which divided the Bābīs into the two sects of Bahā'īs and Ezelis, though its beginnings go back to the earlier period of which we have just spoken, now became formal and final, and henceforth we have to consider two opposed centres of Bābī doctrine, 'Akkā in Syria, and Famagusta in Cyprus. Although there is much to be urged in favour of Ṣubḥ-i-Ezel's position, it cannot be denied that practically his influence is very slight and his followers very few. When the present writer visited him in 1890, apart from his own family only one of his adherents, an old man named 'Abdu'l-Aḥad, whose father was among the Bābīs who perished at Zanjān in 1850,* was resident at Famagusta. In Persia very few Ezelis were met, and those chiefly at Kirmān. One of Ṣubḥ-i-Ezel's sons-in-law, Shaykh Aḥmad of Kirmān, was a man of considerable talent and learning, but he was put to death at Tabrīz in 1896 on a charge of complicity in the assassination of Nāṣiru'd-Dīn Shāh in May of that year. He was the author of the *Hasht Bihisht*, a lengthy treatise on the philosophy, doctrine, and history of the Bābī religion, from the polemical portions of which, directed against Bahā'u'llāh, extracts are cited in the *Traveller's Narrative* (ii. 351–373). Ṣubḥ-i-Ezel is still (July 1908) alive and well; but, interesting as he is historically and personally, he can no longer be reckoned a force in the world, though as a source of information about the early history and doctrines of the Bābīs he is without a rival, and speaks with a freedom and frankness not to be found at 'Akkā, where policy and 'the expediency of the time' necessarily play a much larger part. Ṣubḥ-i-Ezel may, in short, in his island seclusion, be compared to Napoleon I. in St. Helena—a man who has played a great rôle in stirring events and times, but whose active life and power to mould men's thoughts and deeds have passed away. His writings are numerous, but little known or read outside his immediate circle, and no one has yet devoted himself to the study of the large collection of those acquired by the British Museum in recent years, through the instrumentality of Mr. C. Delaval Cobham, lately Commissioner at Larnaca in Cyprus. Of Bābīism as a living force, affecting both East and West, 'Akkā has been the centre for the last forty years, and seems likely so to remain; and thither we must now divert our attention.

The claim of Bahā'u'llāh to be a new and transcendent 'Manifestation' of God steadily and rapidly gained ground among the Bābīs, and involved a complete re-construction of the earlier Bābī conceptions. For if, as Bahā'u'llāh declared, the Bāb was a mere precursor and harbinger of his advent, then, in the blaze of light of the New Day, the candle lit by Mīrzā 'Alī Muḥammad ceased to merit attention, and, indeed, became invisible. The Bahā'īs, as a rule, show a marked disinclination to talk about the Bāb or his early disciples, or to discuss his life or doctrines, or to place his writings in the hands of the inquirer, while latterly they have avoided calling themselves Bābīs, preferring to be known simply as Bahā'īs. The Bāb's doctrines were, in their eyes, only preparatory, and his ordinances only provisional, and Bahā'u'llāh was entitled to modify or abrogate them as seemed good to him. The real question at issue between Ezel and Bahā was admirably described by Sir Cecil Spring-Rice, lately British Minister at Ṭihrān, as entirely similar to that which divided the respective followers of St. Peter and St. Paul in the early days of the Christian Church—the question, namely, whether Christianity was to be a Jewish sect or a new World-religion. The old Bābī doctrine, continued unchanged by the Ezelis, was in its essence Shī'ite; for, though the Bābīs put themselves outside the pale of Islām by rejecting the finality of the Qur'ān and the mission of Muḥammad, as well as by many other innovations both in doctrine and practice, their whole thought is deeply tinged with Shī'ite conceptions, shown, for example, even by their heterodox views as to the 'return to the life of the world' of the Prophet Muḥammad, his daughter Fāṭima, and the Twelve Imāms, and their identification of their own protagonists with one or other of these holy personages.

A wholly different spirit pervades the teachings of Bahā. His religion is more practical, his teaching more ethical and less mystical and metaphysical, and his appeal is to all men, not especially to Shī'ite Muḥammadans. His attitude towards the Shāh and the Persian government is, moreover, much more conciliatory, as is well seen in the celebrated Epistle to the King of Persia (*Lawḥ-i-Sulṭān*) which he addressed to Nāṣiru'd-Dīn Shāh soon after his arrival at 'Akkā.* This letter, of which a translation will be found in the *Traveller's Narrative* (ii. 108–151 and 390–400), was sent by the hand of a young Bahā'ī called Mīrzā Badī', who succeeded in carrying out his instructions and delivered it in person to the Shāh, for which boldness he was tortured and put to death.† At the same time Bahā'u'llāh addressed other letters (called by the Bahā'īs *Alwāḥ-i-Salāṭīn*, 'Epistles to the Kings') to several other rulers, including Queen Victoria, the Tsar of Russia, Napoleon III., and the Pope.‡

For a complete history of the sect during this period full materials are not available, but generally speaking it may be said to consist, so far as 'Akkā itself is concerned, of alternations of greater and less strict supervision of the exiles by the Ottoman government, gradual development of organization and propaganda, and the arrival and departure of innumerable pilgrims, mostly Persians, but, since the successful propaganda in the United States, including a good many Americans. In Persia, where the religion naturally counts most of its adherents, there have been sporadic persecutions, to which the Bahā'īs, in accordance with Bahā's command, 'It is better that you should be killed than that you should kill,' have patiently submitted. Among these persecutions may be especially mentioned, since the execution of Mīrzā Badī' in July 1869, the following. About 1880 two Sayyids of Iṣfahān, now known to their coreligionists as *Sulṭānu'sh-Shuhadā* ('the King of Martyrs'), and *Maḥbūbu'sh-Shuhadā* ('the Beloved of Martyrs'), were put to death by the clergy of that city.§ In October 1888, Āghā Mīrzā Ashraf of Ābāda was put to death in the same

* In *JRAS*, 1897, pp. 761–827, the present writer published a tr. of a memoir on the insurrection at Zanjān, written for him by this old man.

* Probably in the summer of 1869 (see *Trav. Narr.* ii. 392).

† See *Trav. Narr.* ii. 102–106.

place, and his body mutilated and burned.* In the summer of the following year, seven or eight Bābīs were put to death with great cruelty, at the instigation of Āghā-yi-Najafī, in the villages of Si-dih and Najaf-ābād near Iṣfahān.† On Sept. 8, 1889, a prominent Bahā'ī named Ḥājji Muḥammad Riẓā of Iṣfahān was stabbed to death in broad daylight in one of the chief thoroughfares of 'Ishqābād (Askabad) by two Shī'ite *fidā'īs* sent from Mashhad for that purpose. The assassins were sentenced to death by the Russian military tribunal before which they were tried, but this sentence was commuted to one of hard labour for life. This was the first time in the fifty years during which the sect had existed that condign punishment had been inflicted on any of their persecutors; their rejoicings were proportionately great, and Bahā'u'llāh made the event the occasion of two revelations in which Russian justice was highly extolled,‡ and Bahā's followers were enjoined not to forget it. In May 1891 there was a persecution of Bābīs at Yazd, in which seven of them were brutally killed (on May 18), while another, an old man, was secretly put to death a few days later. In the summer of 1903 there was another fierce persecution in the same town, of the horrors of which some account is given by Napier Malcolm in his *Five Years in a Persian Town* (Lond. 1905).

One of the most interesting phenomena in the recent history of the Bahā'īs has been the propaganda carried on with considerable success in America. This appears to have been begun by a Syrian convert to Bahāism named Ibrāhīm George Khayru'llāh, who is the author of many English works on the subject, and is married to an English wife. He seems first to have lectured on the subject at Chicago about 1892, for in the Preface to his book, *Behā'u'llāh* (Chicago, 1900), he says (p. vii.) that he 'began to preach the fulfilment of the truth which Christ and the Prophets foretold over seven years ago.'§ Born in Mount Lebanon, he lived twenty-one years in Cairo, and was then converted to the Bahā'ī doctrine by a certain 'Abdu'l-Karīm of Ṭihrān. Afterwards he settled in America and became naturalized as a citizen of the United States. The propaganda which he inaugurated seems to have been at its height in 1897 and 1898, and there is now a community of several thousand American Bahā'īs, a considerable American literature on the subject, and a certain amount of actual intercourse between America and the headquarters of the religion at 'Akkā. More will be said on this subject presently.

5. From the death of Bahā'u'llāh until the present day (A.D. 1892–1908).—Bahā'u'llāh died on May 16, 1892, leaving four sons and three daughters. Differences as to the succession arose between the two elder sons, 'Abbās Efendi (also called *'Abdu'l-Bahā*, 'the Servant of Bahā,' and *Ghuṣn-i-A'ẓam*, 'the Most Mighty Branch') and Mīrzā Muḥammad 'Alī (called *Ghuṣn-i-Akbar*, 'the Most Great Branch'). Bahā'u'llāh left a testament, entitled *Kitābu 'Ahdī*, which was published, with some introductory remarks and a Russian tr., by Lieut. Tumanski in the *Zapiski* of the Oriental Section of the Imperial Russian Archæological Society, viii. (1892). In this important document he says:

'God's injunction is that the Branches (*Aghṣān*), and Twigs (*Afnān*),* and Kinsfolk † (*Muntasabīn*) should all look to the Most Mighty Branch (*Ghuṣn-i-A'ẓam*, *i.e.* 'Abbās Efendi). Look at what We have revealed in my (*sic*) Most Holy Book (*Kitāb-i-Aqdas*): "When the Ocean of Union ebbs, and the Book of the Beginning and the Conclusion is finished, then turn to Him whom God intendeth (*man arādahu'llāh*), who is derived from this Ancient Stock." He who is meant by this blessed verse is the Most Mighty Branch: thus have we made clear the command as an act of grace on our part. Verily, I am the Bountiful, the Gracious. God hath determined the position of the Most Great Branch (*Ghuṣn-i-Akbar*, i.e. Mīrzā Muḥammad 'Alī)‡ after his position. Verily, He is the Commanding, the Wise. Verily, we have chosen the Most Great after the Most Mighty, a command on the part of One All-knowing and Wise. . . . Say, O Servants! Do not make the means of order a means of disorder, nor an instrument for [producing] union into an instrument for [producing] discord . . .'

Thus far, then, it would appear that, in face of so clear a pronouncement, no room for dissension was left to Bahā'u'llāh's followers. But almost immediately, it would seem (for the history of this fresh schism has not yet been dispassionately investigated, though much has been written on either side, not only in Persian but in English), the old struggle between what may be described as the 'stationary' and the 'progressive' elements broke out. 'Abbās Efendi apparently claimed that the Revelation was not ended, and that henceforth he was to be its channel. This claim was strenuously resisted by his brother Mīrzā Muḥammad 'Alī and those who followed him, among whom were included his two younger brothers, Mīrzā Badī'u'llāh and Mīrzā Ẓiyā'u-'llāh,§ Bahā'u'llāh's amanuensis, entitled *Janāb-i-Khādimu'llāh* ('the servant of God,' Mīrzā Āghā Jān of Kāshān), and many other prominent Bahā'īs, who held that, so far as this manifestation was concerned, the book of Revelation was closed, in proof of which view they adduced the following verse from the *Kitāb-i-Aqdas*, or 'Most Holy Book': 'Whosoever lays claim to any authority‖ before the completion of a millennium is assuredly a liar and a calumniator.' The dispute has been darkened by a mass of words, but in essence it is a conflict between these two sayings, viewed in the light of the supernatural claim—whatever its exact nature—which 'Abbās Efendi did and does advance. On the one hand, Bahā'u'llāh's *Testament* explicitly puts him first in the succession; on the other, being so preferred, he did 'lay claim to an authority' regarded by the partisans of his brother as bringing him under the condemnation equally explicitly enunciated by Bahā'u'llāh in the *Kitāb-i-Aqdas*. As in the case of the previous schism between Bahā'u'llāh and Ṣubḥ-i-Ezel, so here also the conflict was between those who held that every day of Theophany must be succeeded by a night of Occultation, and those who felt that the Light by which they had walked could not be extinguished, but must rather increase in brightness. And, as before, the conservative or stationary party was worsted. For a time a certain equilibrium seems to have been maintained, but steadily and surely the power and authority of 'Abbās Efendi waxed, while that of his brother waned. Very bitter feeling was again aroused, and this time over a large area; for not only Persia, but Egypt, Syria, and America were involved. Ibrāhīm Khayru'llāh, the protagonist of the Bahā'ī faith in America, finally espoused the cause of Muḥammad 'Alī;¶

§ It was at the 'Parliament of Religions,' held at Chicago in 1893, that the Bahā'ī doctrines first began to arouse considerable attention in America.

* 'The Branches' (*Ghuṣn*, pl. *Aghṣān*) are Bahā'u'llāh's descendants; the 'Twigs' (*Afnān*) are the Bāb's kinsfolk.

† Or perhaps 'adherents' is meant by *Muntasabīn*.

‡ *i.e.* We have placed 'Abbās Efendi first, then Mīrzā Muḥammad 'Alī.

§ One of these brothers subsequently died, and in 1903 the other joined 'Abbās Efendi and renounced his previous allegiance.

‖ *i.e.* authority to promulgate fresh revelations, and enact new or repeal old ordinances.

¶ According to his own statement (*The Three Questions*, p. 23), he visited 'Akkā and was well received by 'Abbās Efendi, but was not allowed to hold intercourse with the other brothers. Only seven months after his return to America did he denounce 'Abbās Efendi and declare his allegiance to Muḥammad 'Alī.

but missionaries, including the aged and learned Mīrzā Abu'l-Faḍl of Gulpāyagān, were sent out in the beginning of 1902 to the United States to oppose him,* and at one time he professed to be in fear of his life.

6. **Doctrine.**—A full discussion of Bābī and Bahā'ī doctrine, even were the time ripe for it, would far exceed the limits of an encyclopædia article. Before proceeding to set forth such a sketch of its most salient features as is possible within these limits, we must call the reader's attention to one or two general considerations.

(1) The Bāb's own doctrine underwent considerable development and change during the six years (A.D. 1844–1850) which elapsed between his 'Manifestation' and his death, and to trace this development it would be necessary to examine all his voluminous writings in a much more careful, detailed, and systematic manner than has yet been done. To mention only a few of the chief substantive works which issued from his pen, there is the *Ziyārat-nāma* (of which Gobineau quite misunderstood the nature when he described it as the *Journal du Pèlerinage*, for it is a devotional work designed for the use of pilgrims to the shrines of the Imāms) and the *Ṣaḥīfatu Bayna'l-Ḥaramayn*, both composed in the year of the 'Manifestation.' Then there is the *Dalā'il-i-sab'a* ('Seven Proofs'), and a number of Commentaries (*Tafāsīr*) on different *sūras* of the Qur'ān, notably the *Commentary on the Chapter of Joseph* (also called *Qayyūmu'l-Asmā*), and the Commentaries on the *sūras* entitled respectively *al-Baqara*, *al-Kawthar*, *al-'Aṣr*, etc., all of which belong to the earlier period before the Bāb announced that he was not merely the 'Gate' leading to the hidden Imām, but the Imām himself, nay the 'Point' (*Nuqṭa*) of a new Revelation. Of his later writings, to all of which, as we shall see, the name *Bayān* ('explanation,' 'utterance') is applied, the Persian *Bayān* is, perhaps, the most systematic, but there are also several Arabic *Bayāns*, a *Kitābu'l-Aḥkām*, or 'Book of Laws' (tr. by Gobineau at the end of his *Religions et Philosophies dans l'Asie Centrale*), and one or two 'Books of Names' (*Kitābu'l-Asmā*). Few of these books are easy reading, and he who has read even one or two of them will be inclined to agree with Gobineau's judgment, 'le style de Mirza Ali Mohammed est terne, raide et sans éclat'; while some are so confused, so full of repetitions, extraordinary words, and fantastic derivatives of Arabic roots, that they defy the most industrious and indefatigable reader. The works of Ṣubḥ-i-Ezel closely resemble those of the Bāb, but the Bahā'ī writings, especially in the later period, are much clearer and easier of comprehension, besides which the tendency of Bahā'ī thought was to avoid abstruse metaphysics and unintelligible rhapsodies, and to treat chiefly of ethical subjects.

(2) As there has never been anything corresponding to a 'Church Council' among the Bābīs, the greatest divergence of opinion will be found among them even on questions so important as the Future Life. All agree in denying the Resurrection of the Body as held by the Muḥammadans; but while certain passages in the Persian *Bayān* seem to indicate that the spirit of the deceased continues to take an interest in his earthly affairs, and while certain sayings of the older Bābīs lend colour to the assertion of their enemies that they inclined to the doctrine of Metempsychosis (*Tanāsukh-i-Arwāḥ*), generally held in abhorrence by the Musalmāns, other Bābīs understand the 'Return (*Rij'at*) to the life of this World' in a less material and more symbolic sense, while some disbelieve in personal immortality, or limit it to those holy beings who are endowed with a spirit of a higher grade than is vouchsafed to ordinary mortals.

(3) It must be clearly understood that Bābīism is in no sense latitudinarian or eclectic, and stands, therefore, in the sharpest antagonism to Ṣūfīism. However vague Bābī doctrine may be on certain points, it is essentially dogmatic, and every utterance or command uttered by the 'Manifestation' of the period (*i.e.* by the Bāb, Ṣubḥ-i-Ezel, Bahā'u'llāh, 'Abbās Efendi, and Muḥammad 'Alī respectively) must be accepted without reserve. Tolerance is, indeed, inculcated by Bahā'u'llāh: 'Associate with [those of other] religions with amity and harmony' is one of the commands given in the *Kitāb-i-Aqdas*. But the same book begins as follows: 'The first thing which God has prescribed unto His servants is Knowledge of the Day-spring of His Revelation and the Dawning-place of His Command, which is the Station of His Spirit in the World of Creation and Command. Whosoever attaineth unto this hath attained unto all good, and whosoever is debarred therefrom is of the people of error, even though he produce all [manner of good] deeds.' In other words, works without faith are dead. The Bāb himself, and his immediate followers, were still less inclined to tolerance; according to the *Bayān*, no unbelievers were to be suffered to dwell in the five principal provinces of Persia, and everywhere they were, as far as possible, to be subjected to restrictions, and kept in a position of inferiority. The Bābīs are strongly antagonistic alike to the Ṣūfīs and to the Muḥammadans, but for quite different reasons. In the case of the Ṣūfīs they object to their latitudinarianism, their pantheism, their individualism, and their doctrine of the 'Inner Light.' With the Muḥammadan outlook they have really more in common; but, apart from the natural resentment which they feel on account of the persecutions which they have suffered at the hands of the *'ulamā* of Islām, they condemn the refusal of the Muslims to see in this new 'Manifestation' the fulfilment of Islām, and, in short, regard them much as the Christians regard the Jews. For similar reasons the Bahā'īs detest the Ezelis, whilst among the former the followers of 'Abbās Efendi dislike and despise the followers of his brother Muḥammad 'Alī.

According to the Bābī conception, the Essence of God, the Primal Divine Unity, is unknowable, and entirely transcends human comprehension, and all that we can know is its Manifestations, that succession of theophanies which constitutes the series of Prophets. In essence all the Prophets are one; that is to say, one Universal Reason or Intelligence speaks to mankind successively, always according to their actual capacities and the exigencies of the age, through Abraham, Moses, David, Christ, Muḥammad, and now through this last Manifestation, by which the old Bābīs and the present Ezelis understand the Bāb (whom they commonly speak of as *Ḥaḍrat-i-Nuqṭa*, 'His Holiness the Point'; *Ḥaḍrat-i-Rabbiyu'l-A'lā*, 'His Holiness my Lord the Supreme,' etc.), while the Bahā'īs, who reduce the Bāb's position to that of a mere forerunner, or herald (*mubashshir*), comparing him to John the Baptist, understand Bahā-'u'llāh. In essence all the Prophets are one, and their teaching is one; but (to use one of the favourite illustrations of the Bābīs) just as the same teacher, expounding the same science, will speak in different, even in apparently contradictory, terms, according to whether he is addressing small children, young boys and girls, or persons of mature age and ripe understanding, so will the Prophet regulate his utterances and adjust his ordinances according to the degree of development attained by the community to which he is sent. Thus the material Paradise and Hell preached by Muḥammad do not really exist, but no more accurate conception of the realities which they symbolize could be conveyed to the rough Arabs to whom he was sent. When the world has outgrown the teaching of one 'Manifestation,' a new 'Manifestation' appears; and as the world and the human race are, according to the Bābī view, eternal, and progress is a universal law, there can be no final Revelation, and no 'last of the Prophets and seal of the Prophets,' as the Muḥammadans suppose. No point of the Bāb's doctrine is more strongly emphasized than this. Every Prophet has foretold his successor, and in every case that successor, when he finally came, has been rejected by the majority of that Prophet's followers. The Jews rejected their Messiah, whose advent they professed to be awaiting with such eagerness; the Christians rejected the Paraclete or Comforter whom Christ foretold in prophecies supposed by the Muḥammadans to have been fulfilled by the coming of Muḥammad; the Shī'ite Muḥammadans never mention the Twelfth Imām, or Mahdī, without adding the formula عَجَّلَ اللهُ فَرَجَهُ ('May God hasten his glad Advent!'), yet when at last after a thousand years the expected Imām returned (in the shape of the Bāb), they rejected, reviled, imprisoned, and finally slew him. The Bāb was determined that, so far as it lay in his power to prevent it, his followers should not fall into this error, and he again and again speaks of the succeeding Revelation which 'He whom God shall manifest' (مَن يُظْهِرُهُ اللهُ) shall bring, and of other later Revelations which in turn shall succeed that *ad infinitum*. Indeed, he goes so far as to

* Several American papers describing this mission are in the present writer's possession. One (*The North American*, Feb. 16, 1902) gives portraits of Mīrzā Abu'l-Faḍl, his companion Ḥajji Niyās of Kirmān, and of 'Abbās Efendi himself, and heads its leading article 'Astonishing Spread of Babism.'

say that if any one shall appear claiming to be 'He whom God shall manifest,' it is the duty of every believer to put aside all other business and hasten to investigate the proofs adduced in support of this claim, and that, even if he cannot convince himself of its truth, he must refrain from repudiating it, or denouncing him who advances it as an impostor. It is these provisions, no doubt, which have always given so great an advantage to every fresh claimant in the history of Bābīism, and have placed what may be called the 'Stationary Party' (*e.g.* the followers of Ṣubḥ-i-Ezel and, later, of Muḥammad 'Alī) at so great a disadvantage.

From what has been said above, the Western reader may be tempted to think of the Bābī doctrine as embodying, to a certain extent, the modern Western rationalistic spirit. No mistake could be greater. The belief in the fulfilment of prophecies; the love of apocalyptic sayings culled from the Jewish, Christian, and Muḥammadan Scriptures and traditions; the value attached to talismans (especially among the early Bābīs); the theory of correspondences, as illustrated by the mystical doctrine of the Unity and its manifestation in the number 19, and the whole elaborate system of equivalences between names, based on the numerical values of letters, point to a totally different order of ideas, and are, moreover, ingrained in the true Bābī doctrine, as distinguished from the same doctrine as presented to and understood by most American and European believers. Even the practical reforms enjoined or suggested by the Bāb are generally based on some quite non-utilitarian ground. Thus the severe chastisement of children is forbidden, and consideration for their feelings enjoined; but the reason for this is that when 'He whom God shall manifest' comes, he will come first as a child, and it would be a fearful thing for any one to have to reproach himself afterwards for having harshly treated the august infant. This and other similar social reforms, such as the amelioration of the position of women, are not, as some Europeans have supposed, the motive power of a heroism which has astonished the world, but rather the mystical ideas connected with the 'Manifestations,' 'Unities,' numbers, letters, and fulfilment of prophecies, which to European rationalists appear so fantastic and fanciful. But, above all, the essence of being a Bābī or a Bahā'ī is a boundless devotion to the 'Person of the Manifestation,' and a profound belief that he is divine and of a different order from all other beings. The Bāb, as we have seen, was called by his followers 'His Holiness my Lord the Supreme,' and Bahā'u'llāh is called not only 'the Blessed Perfection' (*Jamāl-i-Mubārak*), but, especially in Persia, 'God Almighty' (*Ḥaqq ta'ālā*). Then also there are differences of opinion as to the degree of divinity possessed by the 'Person of the Manifestation,' and not all the faithful go so far as the poet who exclaims: 'Men call thee "God," and I am filled with angry wonder as to how long thou wilt endure the shame of Godhead!'

Something more must now be said as to the 'Point,' the 'Unity,' and its manifestation in the number 19, and other kindred matters. The idea of the 'Point' (نقطة) seems to rest chiefly on two (probably spurious) Shī'ite traditions. 'Knowledge,' says one of these, 'is a point which the ignorant made multiple.' It was this 'point of knowledge'—not detailed knowledge of subsidiary matters, but vivid, essential, 'compendious' knowledge of the eternal realities of things—to which the Bāb laid claim. The second tradition is ascribed to 'Alī, the first Imām, who is alleged to have declared that all that was in the Qur'ān was contained implicitly in the *Sūratu'l-Fātiḥa*, or opening chapter of the Qur'ān, and that this in turn was contained in the *Bismi'llāh* which stands over it, this in turn in the initial B (ب) of the *Bismi'llāh*, and this in turn 'in the Point which stands under the ب'; 'and,' 'Alī is said to have added, 'I am the Point which stands under the ب.'

Now the formula بسم الله الرّحمن الرّحيم ('In the Name of God the Merciful, the Forgiving') comprises 19 letters, which, therefore, are the 'Manifestation' of the 'Point under the ب,' just as the whole Qur'ān is the further 'Manifestation,' on a plane of greater plurality, of the *Bismi'llāh*. Moreover, the Arabic word for 'One' is *Wāḥid* (واحد), and the letters composing the word *Wāḥid* (و=6; ا=1; ح=8; د=4) give the sum-total of 19. This 'first Unity' of 19 in turn manifests itself as 19 × 19 (19^2) or 361, which the Bābīs call 'the Number of All Things' (عدد كلّ شيْ), and the words *Kullu shay* ('All Things') are numerically equivalent to (ك=20 + ل=30 + ش=300 + ى=10) 360, to which, by adding 'the one which underlies all plurality,' 361, 'the Number of All Things,' or 19^2, is obtained.

To the number 19 great importance is attached by the Bābīs, and, so far as possible, it is made the basis of all divisions of time, money, and the like. Thus the Bābī year comprises 19 months of 19 days each, to which intercalary days 'according to the number of the H (ه),' *i.e.* 5, are added to bring the solar year (which they proposed to restore in place of the Muḥammadan lunar year) up to the requisite length. The same names (*Bahā*, *Jalāl*, *Jamāl*, etc.) serve for the months and the days, so that once in each month the day and the month (as in the Zoroastrian calendar) correspond, and such days are observed as festivals. The year begins with the old Persian *Naw-rūz*, or New Year's Day, corresponding with the Vernal Equinox, and conventionally observed on March 21. The month of fasting, which replaces the Ramaḍān of Islām, is the last month of the year, *i.e.* the 19 days preceding the *Naw-rūz*. The Bāb's idea of a coinage having 19 as its basis has been abandoned, along with many other impracticable ordinances, some of which are explicitly abrogated in the *Kitāb-i-Aqdas* or others of Bahā'u'llāh's writings. The 'Unity' is also manifested in the divine attribute *Ḥayy* (حيّ), 'the Living,' which equals 8+10=18, or, with the 'one which underlies all plurality,' 19. The Bāb accordingly chose 18 disciples, who, with himself, constituted the 'Letters of the Living' (حروف الحيّ) or 'First Unity.' The choice of Mīrzā Yaḥyā, 'Ṣubḥ-i-Ezel' ('the Dawn of Eternity'), by the Bāb as his successor, was probably also determined by the fact that the name *Yaḥyā* (يحيى = 36) was a multiple of 18, on which account Ṣubḥ-i-Ezel was also called *Wāḥid* (وحيد), which is numerically equivalent to 28 (the number of the letters constituting the Arabic alphabet), and signifies 'unique,' *i.e.* manifesting the Unity.

The importance attached by the Bābīs to the numerical equivalents of words is seen elsewhere,

and especially in their habit of referring cryptically to towns connected with their history by names of an equivalent value. Thus Adrianople, called in Turkish *Edirnė* (ادرنه), is named *Arḍu's-Sirr* (ارض السرّ), 'the Land of the Mystery,' both words, *Edirnė* and *Sirr*, being numerically equivalent to 260. So Zanjān (زنجان=111) is called *Arḍu'l-A'lā* (اعلى=111), and so on. Other strange expressions with which the Bābī writings (especially the earlier writings) abound constantly puzzle the uninitiated reader, who will have to discover for himself that, for example, the expression 'the Person of the Seven Letters' (ذات الحروف السبعة) is one of the titles of the Bāb, whose name, 'Alī Muḥammad, consists of seven letters. Even in Bahā'u'llāh's works such obscure terms occur as *al-Buq'atu'l-Ḥamrā*, 'the Red Place,' which means 'Akkā, and the like.

The Bāb laid down a number of laws, dictated in many cases by his personal tastes and feelings, which have practically fallen into abeyance. Such are his prohibition of smoking and the eating of onions (though these are still observed by the Ezelis), his regulations as to clothing, forms of salutation, the use of rings and perfumes, the names by which children might be named 'in the *Bayān*,' the burial of the dead, and the like. The laws enacted by Bahā'u'llāh in the *Kitāb-i-Aqdas*, with the exception of the law of Inheritance, are simpler and more practical, and the whole tone of the Bahā'ī scriptures (which, of course, according to the Bahā'ī view, entirely abrogate the Bāb's writings) is more simple, more practical, and more concerned with ethical than metaphysical questions. Historically, there is much to be said in favour of Ṣubḥ-i-Ezel's claim, since he was certainly nominated by the Bāb as his immediate successor, and was equally certainly so recognized for a good many years by the whole Bābī community; while, assuming the Bāb to have been divinely inspired (and this assumption must be made not only by every Bābī but by every Bahā'ī), it is difficult to suppose that he should choose to succeed himself one who was destined to be the chief opponent of 'Him whom God shall manifest.' Yet practically it cannot be doubted that the survival and extension of the religion formed by the Bāb were secured by the modifications effected in it by Bahā'u'llāh, for in its original form it could never have been intelligible, much less attractive, outside Persia; and even there, when once the ferment attending its introduction had subsided, it would probably have sunk into the insignificance shared by so many Muslim sects which once played an important rôle in history.

At the present day there are a few Bābīs of the old school who call themselves 'Kullu-shay'is,' and decline to enter into the Ezelī and Bahā'ī quarrel at all; there is a small, and probably diminishing, number of Ezelīs; and a large, but indeterminable number of Bahā'īs, of whom the great majority follow 'Abbās Efendi ('Abdu'l-Bahā), and the minority his brother Muḥammad 'Alī. Latterly the followers of Bahā'u'llāh have shown a strong disposition to drop the name of Bābī altogether, and call themselves Bahā'ī, and to ignore or suppress the earlier history and literature of their religion. Alike in intelligence and in morals the Bābīs (or Bahā'īs) stand high; but it is not certain to the present writer that their triumph over Islām in Persia would ultimately conduce to the welfare of that distracted land, or that the tolerance they now advocate would stand the test of success and supremacy.

LITERATURE.—An exhaustive treatment of the literature of this subject would have to deal with the following divisions:

i. *BĀBĪ SCRIPTURES*, all in Arabic or Persian, regarded by all or by certain sections of the Bābīs as revelations, and including:

(*a*) *Writings of* Mīrzā 'Alī Muḥammad the Bāb (A.D. 1844–1850).—These were divided by the Bāb himself into 'five grades' (*Shu'ūn-i-Khamsa*, شؤون خمسه), viz. verses (*āyāt*, آيات), supplications (*munājāt*, مناجات), commentaries (*tafāsīr*, تفاسير), scientific treatises (*Shu'ūn-i-'ilmiyya*, شؤون علميّه, or *suwar-i-'ilmiyya*, صور علميّه), and Persian writings (*Kalimāt-i-Fārsiyya*). The term *Bayān* applies especially to the writings of the 'first grade,' and includes all the *āyāt*, or verses in the style of the Qur'ān, produced by the Bāb during his whole career. To special collections of such verses the term *Bayān* is also applied, and in this sense there are several Arabic *Bayāns* and one Persian *Bayān*, which last is, on the whole, the most systematic and intelligible of the Bāb's writings.*

(*b*) *Writings of* Mīrzā Yaḥyā, 'Ṣubḥ-i-Ezel.'—Of these one of the earliest (composed before 1865, since it is mentioned by Gobineau, whose book was published in that year) is the *Kitāb-i-Nūr*, or 'Book of Light.' A list of some of Ṣubḥ-i-Ezel's writings, drawn up by himself, will be found in *Traveller's Narrative*, ii. 340 ff. Others are described in the 'Catalogue and Description of 27 Bābī Manuscripts' by the present writer, published in *JRAS*, 1892 (xxiv. 433–498, 600–662, etc.). In the last few years the British Museum Library has, through the good offices of Mr. Claude Delaval Cobham, lately Commissioner at Larnaca in Cyprus, been enriched by an extensive collection of manuscript works by Ṣubḥ-i-Ezel.

(*c*) *Writings of* Mīrzā Ḥusayn 'Alī 'Bahā'u'llāh.'—One at least of these—a polemical work in Persian named *Iqān*, 'the Assurance'—was composed about A.D. 1858–1859, during the Baghdad period, that is to say, previously to Bahā'u'llāh's 'Manifestation.' The remainder belong chiefly to the period intervening between that event and Bahā'u'llāh's death (A.D. 1866–1892). Since every letter (*lawḥ*, لوح='tablet') written at Bahā'u'llāh's dictation—and many were written every day—is regarded by his followers as a revelation, it would be manifestly impossible for any human being (except, possibly, his amanuensis) to enumerate them. The most important of his books, besides the earlier *Iqān*, the *Sūra-i-Haykal*, the *Alwāḥ-i-Salāṭīn*, or 'Letters to the Kings' (including the letter sent to Nāṣiru'd-Dīn Shāh, as above described, in A.D. 1869), are the *Kitāb-i-Aqdas* (which contains the most systematic and compendious statement of the doctrines, laws, and ordinances promulgated by Bahā'u'llāh), the *Lawḥ-i-Bashārāt*, the *Kalimāt-i-Maknūna*, and, lastly, the final Testament (*Kitābu 'Ahdī*) already mentioned. Several 'authorized' collections of these and other Bahā'ī scriptures have been lithographed in the East. The *Kitāb-i-Aqdas* has been printed at St. Petersburg, in 1899, with a Russ. tr., by Captain Tumanski, who also published the *Kitābu 'Ahdī* in 1892. In the same year Baron Victor Rosen published the *Lawḥ-i-Bashārāt*. The whole of the Epistle to Nāṣiru'd-Dīn Shāh and portions of the other Epistles to the Kings have been translated by the present writer in the *JRAS*, 1889, and in *Traveller's Narrative*, ii.; and a French translation of the *Iqān* ('Livre de la Certitude') was published by M. Hippolyte Dreyfus and Mīrzā Ḥabību'llāh Shīrāzī in 1904.

(*d*) *Writings of* 'Abbās Efendi (now called 'Abdu'l-Bahā).—Of these mention may be made of the *Mufāwaḍāt* (مفاوضات), or 'Outpourings,' recently published in the original Persian, and in Fr. and Eng. translations, by Miss Laura Barney and M. Hippolyte Dreyfus.

(*e*) *Writings of* Mīrzā Muḥammad 'Alī, the brother and rival of 'Abbās Efendi.

ii. *DEVOTIONAL, DOCTRINAL, AND APOLOGETIC WORKS* by companions and disciples of the Bāb, Ṣubḥ-i-Ezel, Bahā'u'llāh, 'Abbās Efendi, and Mīrzā Muḥammad 'Alī, of which in recent times a considerable number have been composed in English by American believers and a smaller number in French. Many of the early Bābīs, such as Mullā Muḥammad 'Alī of Bārfurūsh (*Janāb-i-Quddūs*), left writings which have been preserved in manuscript.† Mīrzā Abu'l-Faḍl of Gulpāyagān, a devoted fol-

---

* See the *Traveller's Narrative*, ii. 336–347, especially the definitions from the Persian *Bayān* given on p. 344 f. concerning the 'five grades'; see also *JRAS* xxiv. (1892) 452 f.

† For description of such a collection of the writings of *Janāb-i-Quddūs*, see *JRAS*, 1892, 483–487.

lower of Bahā'u'llāh, composed, about A.D. 1887, a Persian tract called *Istidlāliyya*,* in which he endeavoured to prove to the Jews that the advent of their expected Messiah was fulfilled by the 'Manifestation' of Bahā'u'llāh; and he also wrote and published in Cairo a Persian work of 781 pages entitled *Kitābu'l-Farā'id*, in which he replied to attacks made on the Bahā'is by Shaykh 'Abdu's-Salām. In defence of Ṣubḥ-i-Ezel's position and in elucidation of the primitive Bābī doctrine and the philosophical ideas underlying it, there is the very rare and instructive *Hasht Bihisht* † of Shaykh Aḥmad of Kirmān (called Rūḥī), who was put to death at Tabrīz about 1896. There is also a considerable literature, manuscript and lithographed, connected with the controversy which arose after the death of Bahā'u'llāh between his sons,‡ and this controversy is reflected in numerous English printed works produced in America by the respective partisans of the two brothers.

iii. *HISTORICAL WORKS* written by believers (such as the *History of Mīrzā Jānī of Kāshān*, the *New History*, the *Traveller's Narrative*, and part of the *Hasht Bihisht*), or by opponents (such as the account given by the official historians of the Persian Court, Riẓā-qulī-Khān and the Lisānu'l-Mulk, in the supplement to the *Rawẓatu'ṣ-Ṣafā* and the *Nāsikhu't-Tawārīkh* respectively), or by more or less impartial observers, Asiatic or European. Among the most valuable of those written in the East from a hostile, or at least a critical and not very friendly, point of view, mention should especially be made of Sayyid Jamālu'd-Dīn's art. in the *Dā'iratu'l-Ma'ārif*, or Arabic Encyclopædia, of Buṭrusu'l-Bustānī, and of Mīrzā Muḥammad Mahdī-Khān Za'īmu'd-Dawla's *Miftāḥu Bābi'l-Abwāb*, also in Arabic, published at Cairo in A.H. 1321 (A.D. 1903–1904). This last, though written in the form of a history, is rather polemical than historical, but it contains important information obtained from original oral sources, and a certain number of *pièces justificatives*. Another more purely polemical work, composed in Persian by a Christian convert to Islām, named Ḥusayn-qulī, dedicated to some of the *mujtahids* of Kerbelā and Najaf, entitled *Minhāju'ṭ-Ṭālibīn fī raddi'l-Bābiyya*, and lithographed at Bombay in A.H. 1320 (A.D. 1902), also deserves mention.

iv. *BĀBI POEMS.*—From the time of Qurratu'l-'Ayn, the Bābī heroine who suffered martyrdom in A.D. 1852, until the present day, poetry of a religious and often of a rhapsodical character has been produced, though not in very great abundance, by Bābī writers. The most celebrated Bābī poets since the time of Qurratu'l-'Ayn are Nabīl, 'Andalīb, Na'īm of Ābāda, and Mīrzā Yaḥyā *Sar-Khush*; but their poems are sporadic, and there does not seem to be any considerable collection of Bābī poems, either from one or from diverse pens.

v. *POLEMICAL WORKS.*—Some of these have been incidentally mentioned above under classes ii. and iii., but there exist others, such as the *Rajmu'sh-Shayṭān fī razā'ili'l-Bayān* ('Stoning of the Devil, on the vices of the *Bayān*'), by Ḥājjī 'Abdu'r-Rahīm, lithographed (without date or place of issue) about A.D. 1892. This tract professes to be written in refutation of a Bābī apology entitled *Kitābu'l-Imān fī iẓhāri-Nuqṭati'l-Bayān* ('the Book of Belief, setting forth the Point of Revelation,' *i.e.* the Bāb), which apology is incorporated in the refutation. There are, however, reasons for believing that, under the guise of a weak and unconvincing refutation, the writer's object was to argue in favour of the Bābī doctrine, as held by the elder Bābīs and the Ezelīs, since he speaks respectfully of the Bāb 'on account of his holy lineage,' makes the refutation of Ṣubḥ-i-Ezel depend on that of the Bāb (whom he does not effectively refute), and practically confines his attacks to Bahā'u'llāh.

vi. *THE ENGLISH AND FRENCH WRITINGS* of American and French believers in Bahā'ism (for only in the latter days of Bahā'u'llah did the doctrines of which the Bāb was the originator spread beyond Asia) may conveniently be placed in a separate class. The chief of those which have come into the present writer's hands (and there are, no doubt, many others with which he is unacquainted, for Bahā'ism is now active in America, and has its centres, associations, schools, and endowments) are, in chronological order, as follows:

Ibrāhīm George Kheiralla (*i.e.* Khayru'llāh) assisted by Howard MacNutt, *Behā'u'llāh* ('The Glory of God'), 2 vols., Chicago, 1900; *Facts for Behaists*, tr. and ed. by I. G. Kheiralla (this pamphlet deals with the dispute between 'Abbās Efendi and his brother Muḥammad 'Alī, and supports the claims of the latter), Chicago, 1901; Ibrāhīm George Kheiralla, *The Three Questions*, 26 pp. of English and 15 pp. of Arabic *pièces justificatives* (n.d.); Stoyan Krstoff Vatralsky, *Mohammedan Gnosticism in America: the origin, history, character, and esoteric doctrines of the Truth-knowers* (from *AJTh*, Jan. 1902, pp. 57–78), Boston, 1902; Gabriel Sacy, *Le Règne de Dieu et de l'Agneau, connu sous le nom de Babysme*, Cairo, 1902; *Le Livre des Sept Preuves* (a tr. of the Bāb's *Dalā'il-i-Sab'a*), tr. by A. L. M. Nicolas, Paris, 1902; *The Revelation of Bahā'u'llāh*, compiled by Isabella D. Brittingham, U.S.A., 1902; Myron H. Phelps, *The Life and Teachings of Abbās Effendi*, with Introduction by Edward G. Browne, London and New York, 1903; *Le Livre de la Certitude* (a tr. of the *Iqān*), tr. by Hippolyte Dreyfus and Mīrzā Ḥabību'llāh Shīrāzī, Paris, 1904; *Le Béyân Arabe, le livre sacré du Babysme de Séyyèd Ali Mohammed dit le Bab*, tr. from the Arabic by A. L. M. Nicolas, Paris, 1905; Arthur Pilsbury Dodge, *Whence? Why? Whither? Man: Things: Other things*, Westwood, Mass., 1907. One Ezelī manifesto, consisting chiefly of extracts from the *New History*, the *Traveller's Narrative*, and other works by the writer of this article, has also appeared in America under the title of *A Call of Attention to the Behaists or Babists of America*, by August J. Stenstrand, and is dated from Naperville, Ill., Feb. 18, 1907; Miss Laura Clifford Barney, who at different periods spent a considerable time at 'Akkā, and has also travelled in Persia, collected orally the answers of 'Abbās Efendi to a number of questions which she put to him on all sorts of subjects, and to which he replied from time to time. These replies have been published in the original Persian, in English, and in French almost simultaneously. The Persian text is entitled *An-Nūru'l-abhā fī Mufāwaḍāti 'Abdi'l Bahā*, and on the English title-page *Table Talks, collected by Laura Clifford Barney*, London, 1908. The English version is entitled *Some Questions answered . . . from the Persian of 'Abdul-Bahā*, translated by Miss L. C. Barney. The French version, translated from the Persian by Hippolyte Dreyfus, is entitled *Les Leçons de St. Jean d'Acre . . . recueillies par Laura Clifford Barney*, Paris, 1908.

EDWARD G. BROWNE.

* *JRAS*, 1892, pp. 701–705. † *Ib.* pp. 685–695.

‡ Of works belonging to this class the two following (published in A.H. 1318 and 1319 [= A.D. 1900–1901 respectively]), of which the present writer happens to possess copies, are in defence of Mīrzā Muḥammad 'Alī and against the claims of 'Abbās Efendi. The first is entitled *Ityānu'd-Dalīl li-man yurīdu'l-Iqbāla ila siwā'i's-sabīl*, and the second appears to be from the pen of Mīrzā Āqā Jān of Kāshān, called *Khādimu'llāh* ('the Servant of God'), who was for many years Bahā'u'llāh's amanuensis, and was afterwards among the most prominent of the supporters of Mīrzā Muḥammad 'Alī and the opponents of 'Abbās Efendi.

BĀBĀ LĀLĪS.—The name of a modern Indian monotheistic sect founded by one Bābā Lāl in the first half of the 17th cent. A.D. The sect is apparently now extinct. Bābā Lāl was a Khattrī by caste, born in Mālwā in Rājputāna. He became the pupil of a *Bhakti* apostle (see BHAKTI-MĀRGA) named Chetan Swāmi, whom he followed to Lahore. He finally settled at Dehanpur, near Sarhind (Sirhind) in the Panjāb, where he founded the sect which bears his name.

Bābā Lāl was one of those Indian reformers of the 16th and 17th cents. who, like Kabīr, Dādū, and the Emperor Akbar, endeavoured to found a purely monotheistic religion, combining elements derived partly from the beliefs of the Musalmān Ṣūfīs and partly from those of the followers of the Hindū Bhakti-mārga. Like Kabīr, he followed the Bhakti-mārga in the name by which he referred to the Supreme, viz. Rāma; but also, as in Kabīr's teaching, this Rāma was not to him the Deity incarnate as the earthly prince of Oudh, but was God the Father Himself, or, in other words, Rāma after he had returned to heaven from his incarnate sojourn upon earth. The doctrine of incarnation, which is an important part of the teaching of the Bhakti-mārga, had no place in his system. On the other hand, as in the Bhakti-mārga and as in Ṣūfīism, the keynote of his system was an all-absorbing love directed to a gracious personal God. As he himself says, 'The feelings of a perfect disciple have not been, and cannot be, described; as it is said: "A person asked me, What are the sensations of a lover?" I replied: "When you are a lover, you will know."'

Bābā Lāl's doctrine attracted the attention of the liberal-minded prince Dārā Shukoh, the eldest and favourite son of the Emperor Shāh Jahān, who sent for him and had several interviews with him in the year A.D. 1649. A report of these interviews is preserved in a Persian work entitled the *Nādiru'n-nikāt*, our only authority on Bābā Lāl's teaching. From this we gather that, besides the devoted love which was the essence and foundation of his religion, he taught that the human soul is a particle of the Supreme Soul, just as water contained in a flask is a part of the water of, say, the river Ganges. The flask which separates it from its source is the body, and blessed is the moment when the flask ceases to exist, and the water once contained in it can be reunited with the parent stream. The difference between the water in the flask and that in the Ganges is that a drop of wine added to the former would impart to

it its flavour, but would be lost in the river. Similarly the Supreme Soul, or in other words the Deity, is beyond accident, while the human soul is afflicted by sense and passion.

Withdrawal from worldly life is prudent, but not necessary. The real 'world' from which the disciple must withdraw is forgetfulness of God, not clothes, or wealth, or wife, or offspring. All created things are derived from one material source, or Nature, as the tree is derived from the seed, but the evolution of the former from the latter requires the interference of an evolving Cause, or the interposition of the Creator.

LITERATURE.—A fuller account of the sect will be found in Wilson, *Religious Sects of the Hindus* (vol. i. of 'Works'), London, 1862, p. 347 ff., from which most of the above has been drawn.

GEORGE A. GRIERSON.

BABYLONIANS AND ASSYRIANS.

[H. ZIMMERN.]

Introduction.—At the present moment it is an exceedingly difficult task to give a short comprehensive account of the Babylonian religion. In the first place, in spite of much diligent research, particularly in the course of the last two decades, the copious materials derived from the cuneiform inscriptions, which are ever increasing through new discoveries and publications, are far from being thoroughly investigated or arranged in a systematic form. The difficulty of acquiring a clear knowledge of the fundamental principles and the historical development of the Bab. religion is increased by its complex character, due to an intermingling, not only of Sumerian and Semitic, but of other foreign elements which find expression in it. Then, finally, it must be noted that among students of the subject great differences of opinion exist as to the essential character and historical evolution of this religion. In an objective account, such as is here demanded, these differences must necessarily be referred to. We have to deal, in the first place, with the following question: Are we to hold, with Winckler especially, that the religion of the Babylonians and their theory of the universe in general are to be regarded, at the time when our sources begin, *i.e.* about B.C. 3000, as essentially complete—a fixed system, based on astronomical principles, which arose in a period which, for us, is entirely pre-historic? Or, are the undoubted traces of the systematizing of the religion, which are found in our sources, and its close connexion with an astral scheme, only the product of a comparatively late period? Was it only in the post-Babylonian, the Hellenistic, period that the system was perfectly completed, instead of having taken place, as Winckler supposes, in the earliest known historical period? The present writer feels compelled, from his study and interpretation of the sources, to adopt an intermediate theory between the two extremes just mentioned. It seems to him undeniable that there was among the Babylonians, even at an early date, a tendency to reduce the world of the gods to a single system, and to carry out the law of correspondence between great and small, heavenly and earthly, time and space, the macrocosm and the microcosm. At the same time, he does not feel inclined to exclude the element of historical evolution from the actually known period of Assyro-Babylonian history to the same extent as Winckler does. In particular, it seems to him that the close connexion between almost all the chief deities and heavenly bodies and the proportionate distribution of the cosmos among them rest on a secondary element in our sources, which it is still possible to trace, at least partially, in the history. The present writer further feels inclined to ascribe a more individual character to the several Babylonian divinities than is done by Winckler, and to harbour a strong suspicion of the theory that even in ancient times the several divine forms were regarded in Babylonia as only partial manifestations of a single deity, so that they could at will be substituted for each other. Moreover, to a far larger extent than Winckler is disposed to admit, we seem to have to deal in the Babylonian religion with unreconciled differences, due partly to widely deviating local cults which once existed, and partly to the combination of Sumerian and Semitic elements already mentioned, as well as to the varied survivals from older stages of the Babylonian religion. We cannot, then, speak of a finished scheme as present in the Bab. *Weltanschauung* and consequently in its religion. At the same time, it must be conceded that Winckler's construction of a Bab. *Weltanschauung* has in many ways, in spite of its one-sidedness and evident exaggeration, made possible a better understanding of the religion of the Babylonians.

1. History: The principal places of worship and the character of the Babylonian religion in general.—At the very commencement of the cuneiform sources, about the year B.C. 3000, we find in the original documents—royal inscriptions and documents pertaining to civil law—a perfectly confusing multitude of divine figures and names of temples. On closer inspection, these distribute themselves among various local cults, which possess greater or less importance, according to the political or religious eminence of the respective seats of worship. Now, seeing that in Babylonia, in the earliest times, the seat of the supreme political power often changed, it is clear that the city-gods of different and successive capitals might, in turn, have supreme significance for the whole land—a significance which, as a rule, continued to influence the cult long after the city in question had lost its political supremacy. In connexion with this change of the seat of political power, it must early have been felt necessary to harmonize the local cults, which originally differed widely, and to bring the gods of the different places of worship into some definite relation to each other. In this way would be formed a divine State and divine families—preferably in the triad of father, mother, son—after the model of the earthly State and the human family. Along with this went the division of the different parts of the cosmos among the several gods. The matter is still further complicated by the fact that in most cases, particularly in towns of South and Middle Babylonia, the cult of an earlier Sumerian population was taken over by their Semitic successors. Here there must naturally have taken place new combinations of the original Sumerian and the imported Semitic religious ideas.

The most important seats of worship and their local deities which have to be considered are, proceeding from south to north, as follows: *Eridu* with the cult of Ea, *Uru* (Ur) with Sin (the moon-god), *Larsa* with Shamash (the sun-god), *Uruk* (Erech) with Anu and Ishtar-Nanâ, *Lagash* with Ningirsu, *Nippur* with Enlil, *Isin* with Bēlit-Isin, *Kish* with Zamama (Ninib), *Kutû* (Cuthah) with Nergal, *Babilu* (Babylon) with Marduk (Merodach), *Barsip* (Borsippa) with Nabû (Nebo), *Sippar* with Shamash, *Akkad* with Ishtar-Anunitu. In addition to these, we have in the Assyrian domain: *Ashshur* with the god Ashshur, *Ninua* (Nineveh) with Ishtar, *Arbail* (Arbela) with Ishtar, and in Mesopotamia *Harrān* with Sin.

Among these cities or seats of worship, Uruk, Nippur, and Eridu must in the earliest times have been very specially prominent, since their gods, Anu, Enlil, and Ea, occupy from ancient days the chief place in the Babylonian pantheon—a position which they retained (even if this was often a mere

form) down to the latest times. But Uru and Larsa must also at one time have held a chief place (as can be partially traced in the actual history), for their local deities, Sin and Shamash, play quite a pre-eminent part in the whole scheme of the Babylonian religion. We cannot say with equal certainty whether the important rôle assigned to Ishtar is due to her position as city-goddess of Uruk or as that of Akkad. Undoubtedly in the case of the cults of Shamash and Sin we have from the very beginning to do with worship of the sun and the moon; but it is not so certain that, in the later systematic scheme of the pantheon, the connexion of heaven with Anu, the earth with Enlil, and the water with Ea, corresponds entirely with the original nature of these three gods. Rather may it have been that, under the influence of the systematizing process which had set in, particular features connecting one of these gods with heaven, a second with earth, a third with water, were so utilized as afterwards to distinguish them sharply in these three directions, and to distribute the cosmos among them correspondingly. Again, in the case of Ishtar it is a question whether her cult had originally to do with the worship of the morning (and the evening) star, the planet Venus, or whether here once more the astral character of Ishtar is not a secondary phenomenon, so that we have originally in this deity a personification of fertility in human, animal, and plant life. It is still less certain that the gods Marduk, Nabû, Ninib, Nergal, who in later times were associated on the one hand with phases of the sun, and on the other with the four remaining planets known to the ancients, had, to begin with, any solar or astral significance. There is much, on the other hand, to indicate that the connexion of these gods with the heavenly bodies did not belong to their original cult and nature, but that other features connecting them with nature and human life are the real key to their original character.

Accordingly, we are of opinion that it is impossible to postulate a purely astral basis for the Babylonian religion, either in its Sumerian or its Semitic elements. On the other hand, it must certainly be granted that at a relatively very early date, *i.e.* partially at least, in the period represented by our oldest sources, all the chief gods, and not merely those who, like Shamash and Sin, had their origin in the worship of the heavenly bodies, had been connected with the stars and the cosmos, and that the Babylonian religion had assumed an astral stamp. This comes to light in all the outward forms of the religion, and finds particularly clear expression in the cults and the mythology. This wide-spread astral vein must undoubtedly be regarded as an inheritance from the Sumerians. In its origin it is connected with the remarkable conception of the world as a unity—another undoubted heirloom received from the Sumerians, which Winckler has set before us so clearly. According to this view of the universe, all phenomena in the macrocosm and in the microcosm, in heaven and on earth, are in a relation of mutual correspondence.

2. **The chief figures of the pantheon.**—Some of these have been already mentioned, but we must now proceed to notice and characterize them more fully.

Anu (Anum) stands at the head of the supreme divine triad—Anu, Enlil, Ea. Whatever may have been the original signification of the name, it was interpreted as meaning 'heaven,' corresponding to the Sumerian *ana*, 'heaven,' and thus the deity was regarded as the heaven-god, over-against Enlil (the earth-god) and Ea (the water-god). He was thought of as enthroned in heaven, especially on the northern pole, which is eternally at rest. Here he reigned as king and father of the gods, who, for their part, had their homes in the stars which circle round the pole. Even the evil demons are in the last resort subject to him. The chief seat of the worship of Anu was Uruk; but in later times he had also a temple at Ashshur, in common with the storm-god Adad. But, at least in the period known to us from our sources, his cult retired strangely into the background. On the other hand, he continues to play a certain part in the mythology, where he is regarded as the supreme disposer of all events. The high esteem which, notwithstanding, Anu at all periods continued to enjoy as the chief of the gods, can only be explained as the after effect of a wide-spread Anu-worship belonging to a pre-historic time. We find *Antu*, or *Anatu*, mentioned as the wife of Anu. She appears sometimes as the goddess of the earth, in contrast with her husband, the god of the heavens.

Enlil (Ellil)—a name which used to be generally misread *Bel*—is the second god of the highest triad. Here he is regarded as the lord of lands, as contrasted with Anu, the lord of the heavens. From the mythical (cosmic) great mountain of the world (earth-mountain), where he had his dwelling-place, he bears the frequent epithet of the 'great mountain.' His wife is called *Ninlil*, also *Bēlit-mātāte*, the 'lady of lands,' as well as *Bēlit-ile*, the 'lady of the gods,' the mother-goddess κατ' ἐξοχήν. Enlil's seat of worship was the city Nippur, with the temple E-kur, whose remains have been excavated by an American expedition. The worship of this deity must have held a specially important place in the earlier Babylonian period. This can be gathered, not only from the direct evidence of the excavations at Nippur, but also from the rôle which, down to the latest times, Enlil plays in the Bab. mythology (cf. the story of the Flood) and hymns. For, although in later days much which had been ascribed to Enlil was transferred to other gods, particularly to Marduk of Babylon, this very fact proves that at a certain period Enlil must have occupied the chief place.

Ea is the third god of the highest triad, and, as such, ruler of the water-depths. The pronunciation of the name as *Ea* has not yet been quite fully established. Perhaps, judging from the Ἀὸς in Damascius, the name ought rather to be read *Ae* or something similar. His seat of worship was Eridu in the south of Babylonia, lying near the sea and the embouchure of the Euphrates and the Tigris. The cult of Ea must also once have enjoyed the highest reputation, as is indicated by the after-effects in the myths (cf., again, the story of the Flood) and the literature of exorcism. Owing to the fact that at a later date the cult of Eridu came, in a way that is not yet quite clear, to be combined with the cult of Babylon, Ea as the father of Marduk remained an object of living worship to the latest period of the Babylonian religion. He is regarded as the one of the great gods who stands nearest to mankind, and is thus most ready to help in difficult situations, and who, as the wise god, the lord of wisdom, has always the necessary means of assistance at hand. In particular, he helps by means of his own element, the healing water of the streams and the underground springs, which play an exceedingly important part in exorcism—the peculiar domain of the Ea-cult. Here he is assisted by his son Marduk, who in this connexion is to be regarded not as the city-god of Babylon, but rather as a deity of Eridu, whose identification with the god of Babylon was only secondary. Ea's wife is *Damkina*.

Sin, the moon-god, the first of the second triad of gods consisting of Sin, Shamash, and Ishtar (or also Sin, Shamash, and Adad), is the city-god of

Uru (OT *Ur*) in South Babylonia, where his temple, *E-kishshirgal* ('house of light'), stood. But the Sin-cult had a strong hold at an early date also at Harrân in Mesopotamia. For even as early as the sources derived from Boghazköi (middle of the 2nd mill. B.C.), Sin of Harrân is mentioned. Here also a name readily applied to him is *Bêl-Ḥarrân*, 'lord of Harrân.' His wife is always called *Ningal*, 'the great lady,' 'the queen.' His son is Shamash, the sun-god (in Harrân, Nusku specially appears as the son of Sin). According to the one view at least, Ishtar is regarded as his daughter. The figure of Sin was undoubtedly connected from the very first with the worship of the moon, for the name *Sin* was actually used by the Babylonians as an appellative for the moon. Moreover, in the hymns addressed to Sin his character as moon-god is quite clear; and it may be noted in this connexion that the moon-god is regarded as a pre-eminently benignant and well-disposed deity. Also connected with the moon is Sin's rôle as the god of oracles, although in this respect he is somewhat overshadowed by Shamash, the oracle-god κατ' ἐξοχήν.

Shamash, the sun-god, comes next to Sin in the series of deities, and is regarded as his son—a circumstance to be explained perhaps by a later sun-cult having displaced an earlier cult of the moon. In the case of Shamash also the name of the god is identical with the Babylonian and the common Semitic name for the sun, so that here also the connexion of this deity with the great star of day is at all events original. The sun-god, moreover, of Babylonian religion is always of the male sex; whereas in South Arabia, *e.g.*, the sun was worshipped as a goddess. The seats of worship peculiar to Shamash are: in Southern Babylonia, Larsa; in Northern, Sippar. In both of these places his temple was called *E-babbar*, 'clear shining house,' that which 'is as the dwelling of heaven.' His wife or mistress is *Aja*, 'the bride.' As son of Sin he is also regarded as the brother of Ishtar. As children of his we find mentioned Kettu, 'justice,' and Mêsharu, 'rectitude'—personifications of qualities which belong to Shamash pre-eminently as the supreme divine judge. There is further associated with him his charioteer, Bunene. In many hymns Shamash is celebrated as the sun-god, who every morning favours mankind with his light, who is the champion of all good and the enemy and avenger of all evil. Thus he is specially regarded, as is noted above, as the supreme judge in heaven and on the earth, to whom all legislation is ascribed (cf. the introduction to the laws of Ḥammurabi and the relief figure of Shamash on the stele containing this code). As sun-god he was at the same time the supreme oracle-god, in whose name all soothsaying was carried on, and who was the patron-god of the gild of soothsaying priests which held so important a place in Babylonia.

Ishtar, often placed third in the triad of divinities along with Sin and Shamash, is the most prominent female deity in the Babylonian pantheon. Starting with local cults in which, as a female deity, she occupied the chief place, Ishtar came in the end practically to absorb all other goddesses of the Assyro-Babylonian pantheon, so that her name became, even at an early date, a Bab. appellative for 'goddess.' Whether her cult, like that of Sin and Shamash, was from the beginning connected with star-worship—especially that of Venus—cannot be decided with certainty, although this connexion of Ishtar with the planet Venus and her character as 'queen of heaven' may go back to remote antiquity. The name *Ishtar*, whose origin and etymology are still matter of dispute, does not enable us to come to any definite conclusion on this point. As little can we gather any certain information from the Astarte figures of the other Semitic religions, which are in name and character closely related to the Babylonian Ishtar. Possibly we ought rather to assume a greater antiquity for her character as the goddess of fertility. Her principal seats of worship were Uruk (where she was also worshipped as Nanâ), Akkad (here worshipped as Anunîtu), Nineveh, and Arbela. Here too, as is indicated by the very names Nanâ and Anunîtu, we have undoubtedly to do with what were originally independent local deities, who came only in the course of time to be connected and identified. This no doubt also accounts for the way in which, in the later Assyro-Babylonian religion, quite heterogeneous elements are combined in the figure of Ishtar. Her many-sided origin is again reflected in the varying genealogical relation in which she is placed to the other gods. Thus she appears at one time as the daughter of Anu, at another as the daughter of Sin. The following are the most prominent of the varied qualities of Ishtar. She is the goddess of love and of the life of Nature in general, the goddess in whose cult, particularly at Uruk, temple-prostitution was a feature. In the mythological literature, especially in 'Ishtar's descent to Hades,' this characteristic of Ishtar as the goddess of the sexual impulse occupies a prominent place. On the other hand, she is expressly the goddess of war and of the chase. In this aspect she is hailed with predilection by the Assyrian kings who were lovers of war and the chase. The character of a mother-goddess appears to have been attached to the person of Ishtar only after the figures of other mother-goddesses, particularly Ninlil (Bêlit-ile) and Damkina, had been assimilated by her. In respect of astral connexion, we find Ishtar associated not only with the planet Venus, but also with the brightest fixed star Sirius. Her sacred animal is the lion, but perhaps the dove also belongs to her. In the countless hymns addressed to her Ishtar is hailed as goddess in all the aspects mentioned above. But these Ishtar-hymns sometimes reach also a relatively high ethical level, glorifying her as the mightiest and most merciful helper of mankind, who frees from curse and sickness, and forgives sin and guilt. A unique feature in Bab. mythology is the relation between Ishtar and Tammûz (see below, under 'Tammûz').

Marduk (OT *Merodach*), the city-god of Babylon, is, from the point of view of his significance in the Bab. mythology, most closely connected with the fate of the city of Babylon. Just as Babylon came to the front politically at a late date as compared with the other cities of Babylonia, but thereafter always overshadowed the whole in importance and power, so also Marduk is a younger figure in the Babylonian system of deities, and yet he finally comes near to absorbing all the other gods. The meaning of the name *Marduk* has not yet been satisfactorily explained. His temple in Babylon was called *E-sagila* ('lofty house'), with the temple-tower *E-temenanki* ('house of the foundation of heaven and earth'). Mention is found of his wife *Ṣarpanitu* ('the silver-gleaming one'), of his father Ea, and of his son Nabû. But this connecting of Marduk with Ea and Nabû is undoubtedly accounted for by an assimilation of the local cults of Eridu and Borsippa and their gods Ea and Nabû with those of Babylon. On the other hand, an original feature of the Marduk-cult at Babylon appears to be present in the fact that his chief feast, the later general New Year festival of Babylonia, fell at the time of the spring equinox. This fact, along with many other phenomena,

leads us to conclude that Marduk was essentially a deity who, as far as the year is concerned, was conceived as embodied in the spring sun bringing new life and light, and similarly embodied in the morning sun by day. At a still earlier date, perhaps, he was regarded as only a god of vegetation, who had his chief form of manifestation in the reviving vegetation of spring-time. On the other hand, the rôle of arbiter of destiny, which Marduk assumes at this New Year festival, seems to have been first taken over from Nabû. The same holds good with regard to further features, which came later to be regarded as essential characteristics of Marduk, although certain original traits in his character may have facilitated this assimilation. Thus the quality of Marduk as the god of healing and the helper in all sickness and need—the rôle which he accordingly plays in the literature of exorcism—is derived, as we saw in the case of Ea, from the cult of Eridu. The same source, in all likelihood, is responsible for the emphasis laid on Marduk as the wise and prudent among the gods. In like manner, the rôle of creator, ascribed to Marduk in the Bab. mythology, was only secondary and transferred to him from other gods, like Enlil of Nippur and Ea of Eridu—a conclusion clearly indicated by the respective myths themselves. The connecting of Marduk with one of the planets—during the supremacy of the city of Babylon, with the clear shining Juppiter—is certainly not original, but merely a product of priestly astral speculation. We have still to mention that the proper name *Marduk* was, in the later period, more and more displaced by the appellative *bêlu*, 'the lord,' so that finally Marduk was almost exclusively designated as *Bêl*. In like manner, his spouse came to be called by preference *Bêlit*, 'lady.' In the extant hymns to Marduk naturally all the features are reflected which were finally ascribed to him as the supreme being, the king of all the gods. Like the hymns addressed to Ishtar and Shamash, the Marduk-hymns belong to the noblest and relatively highest ethical products of the Babylonian literature.

Nabû (OT *Nebo*), the city-god of Barsip (Borsippa), occupied, it would seem, in the more ancient period before the rise of Babylon as the recognized capital, a more important position than later, when in the system of the Babylonian priesthood he is regarded merely as 'son' of Marduk and as 'recorder' of destiny at the New Year festival. The name *Nabû* is Semitic, and signifies 'announcer.' What kind of 'announcement'—possibly that of destiny—is in view is uncertain. His later function, already mentioned as recorder, writer of destiny, at all events favours the notion that the determining of destiny belonged originally to him, and was perhaps transferred from him to Marduk. Nabû is regarded not only as the writer of destiny, but in general as the god of the art of writing and of science. Among other essential qualities of Nabû we have to note that he often appears as a god of vegetation—probably one of the most original traits in his nature. On the other hand, Nabû probably owes his connexion with a planet—latterly Mercury, in the pre-Babylonian period possibly Juppiter—to priestly speculation, which drew all the deities into its astro-mythological system. The same reason will account also for sporadic references associating him with the darker half of the year, in opposition to Marduk, the god of the bright half. The temple of Nabû in Borsippa bore the name *E-sida* ('perpetual house'), with the tower *E-uriminanki* ('house of the seven rulers of heaven and earth'). Nabû's wife is called *Tashmêtu*, a personification of an abstract idea, 'audience,' without much living content. Nanâ, too, frequently appears as the wife of Nabû, and so does Nisaba the goddess of corn.

Ninib is merely the conventional pronunciation of the name of a chief god of the Babylonians and Assyrians. Unfortunately we are still in ignorance as to the real phonetic reading of the name. Lately, indeed, we have got nearer the goal by the discovery that the Aramaic reproduction of the name of this god was composed of the consonants *'-n-w-š-t*; but opinion is still divided as to the Bab. prototype of this Aram. equivalent. Ninib originally belonged to the cult which had its seat at Nippur. Here he was regarded as the first-born son of Enlil, and the third of a triad composed of father, mother, and son (Enlil, Ninlil and Ninib), which we encounter in a similar fashion in most of the old Bab. seats of worship. His essential character is that of a mighty hero, who victoriously casts down all opposing powers—the aspect under which he was afterwards taken over by the Assyrians as specially the god of war and the chase. In this aspect Zamama of Kish closely resembles Ninib, and is occasionally directly identified with him. At the same time, Ninib is a god of healing—a quality which is specially ascribed also to his wife *Gula*, the great physician, the guardian patroness of the healing art. He is further regarded as a god of the fields—a trait which brings him into close contact with Ningirsu, the city-god of Lagash, a deity who in later times was very often directly identified with Ninib. Here again, perhaps, as in the similar case of Nabû, it is possible that this relation to vegetation is one of the oldest features in the character of Ninib. On the other hand, the solar and astral traits in Ninib may again be due to his introduction into the priestly astro-mythological system. As far as his solar character is concerned, it is still doubtful whether he is to be regarded as connected with the morning and spring sun, or rather to be thought of as associated with the sun of noon and summer. The planet associated with him is called Kaimânu (Kêwân)—the name in the Babylonian period at least for Saturn, but perhaps in the earlier period for Mars. In the heaven of fixed stars he was localized in Orion, and it is very likely that the conception of the constellation of Orion as a warrior goes back to the elevation of the warlike Ninib to the skies.

Nergal is properly the city-god of Kutû (OT *Cuthah*), where his temple bore the name of *E-shitlam*. The (Sumerian) name *Nergal* is unfortunately of uncertain significance, although the pronunciation is fixed by its reproduction in the OT and on other grounds. Nergal has quite a peculiar position in the Babylonian pantheon and mythology, being expressly the god of the under world, ruler of the realm of the dead, and as such the husband of *Eresh-kigal*, the sovereign lady of the under world (although goddesses with other names—Laṣ (Laz) and Mamitu—are associated with him as city-goddesses of Cuthah). It is very questionable, however, whether this relation of Nergal to the realm of the dead is original, and not a later development due to some other trait in his character, or some peculiarity of the city of Cuthah. Thus Nergal is also a god of plague and fever, and as such stands very close to Ira, the plague-god proper, and is often identified with him. Like Ninib, he also appears as the god of war and of the chase. Again, in the same way as Ninib, he also appears as a benevolent god of the fields, granting fertility. It is possible, as was suggested in the case of Ninib, that in this relation to vegetation is to be found the original feature of his character. On the other hand, the solar and astral associations may in his case also be secondary. For the connexion of Nergal with

the sun, the destructive influence of the noonday and midsummer sun would be the determining factor. As far as connexion with the planets is concerned, he was, at least in the Babylonian period, associated with Mars, but possibly at an earlier date with Saturn. In the firmament of fixed stars he was probably represented in the constellation of Leo (which was known in the Babylonian age), as we meet elsewhere with the lion as the symbol of Nergal.

Nusku (or Nushku), the meaning of whose name is still uncertain, belongs to the cult-group of Nippur, where he appears as the great plenipotentiary of Enlil. Besides, he is met with in the sphere of Sin of Harrân, and is here occasionally introduced directly as the son of Sin. As to his nature, we are at least certain that he is a god of light. Frequently his name even alternates with that of the fire-god Girru (Gibil). Hence, like the latter, Nusku is ethically regarded as the enemy and conqueror of all evil and the promoter of all good. As thus connected with the moon-god Sin, Nusku is specially associated with the sickle of the crescent moon.

Girru (the Sem. form of the Sumer. *Gibil*) is the personification of fire, the fire-god proper of the Bab. pantheon. As such, he is, for instance, the god of smith-craft; he is also the god of the holy sacrificial fire. But, above all, he readily assumes an ethical aspect, as the terrible god, who destroys evil by his purifying fire.

Ramman (also called **Adad**) is the special storm- and thunder-god of the Babylonians. Both forms of his name, Ramman and Adad, of which the latter is the more common in Assyria, are of Semitic origin, and may refer to the roar of the thunderstorm. It is likely that the designation Adad is not native to Assyro-Babylonia, but goes back to the Western Semitic *Hadad*. But in any case the figure of a storm-god as such is of very old standing in the Babylonian pantheon, being found even in the Sumerian period, when he seems to have borne the name *Ishkur*. The great importance assigned to the storm-god in the Babylonian pantheon is evident not only from the rôle which he plays in the myths (*e.g.* the story of the Flood), but also, *e.g.*, from the fact that, in the official lists of the gods, he often occupies the third place in the second divine triad, namely, Sin, Shamash, and Adad, instead of the usual Sin, Shamash, and Ishtar. As storm-god he was naturally hailed as the giver of the beneficent rains; while, on the other hand, by withholding rain he could bring drought and famine on the land. In his aspect as thunder-god he is readily viewed as one who by his thunder and lightning destroys the host of the enemy. His symbol is the thunderbolt, his sacred animal the ox. In Babylonia, among other seats of Ramman-worship, there is mention of Karkara and Khallab; in Assyria, at the ancient capital Ashshur, a temple was consecrated to him in common with Anu, who is represented as his father. Ramman also appears with Shamash as the god of oracles. The name of his wife is given as *Shala*.

Tammûz is a deity who occupies an altogether unique position in the Bab. pantheon. He does not belong to the number of the great principal gods. His cult must, notwithstanding, have enjoyed great prestige. This is indicated by the fact that the Tammûz-cult survived in the lands adjoining Babylonia on the west, and in the post-Babylonian period. The name *Tammûz* is derived from the Sumer. *Dumuzi*, and signifies literally 'real child'; the older form is *Dumuzi-zuab* = 'real child of the water-depths.' He is described as the god of the green plant-growth, which is produced and nourished by fresh water. For Tammûz is essentially the god of vegetation, whose reviving in spring and withering in midsummer this deity personifies. Our sources do not, so far at least, enable us to decide whether (as in the Egyptian Osiris-cult and probably in the later Tammûz-Adonis-cult outside Babylonia) the native Bab. Tammûz-cult saw in that deity a figure of human life with its growth and decay, and even included the hope of a continuance of life for man after death. One of the main features of this cult is the mourning for the premature death of the youthful Tammûz, which found expression in the weeping for him by male and female professional mourners—a custom witnessed to by a number of hymns referring to it. There are also traces of a joyous festival in honour of the revivification of Tammûz. The myth of Tammûz brings him into close connexion with Ishtar, making him her husband, or rather her lover. True, it is Ishtar also at whose door, according to the Gilgamesh epic, lies the responsibility for the yearly mourning for Tammûz. But side by side with this appears another conception, for instance in several Tammûz-hymns and in the so-called 'Descent of Ishtar to Hades,' according to which it is Ishtar that follows Tammûz to the depths of the under world and seeks to bring him up again. The sister of Tammûz, Geshtinanna, is also found playing this part.

Ashshur, the national god of the Assyrians, also deserves special mention. Originally the local god of the city bearing the same name, the old capital of Assyria, Ashshur thus gained the position of supreme god of Assyria. As such he appears at the time of the Assyrian supremacy especially as a god of war, who during campaigns gives the Assyrian kings victory over their enemies, and calls them to hold sway over all nations. It is easy to understand how all that was attributed originally to the supreme gods of Babylon—such as Anu, Enlil, and Marduk—came to be transferred, not only in the mythology but elsewhere, to Ashshur, as the chief god of Assyria. Thus, *e.g.*, he undertakes the conflict with the sea-monster Tiâmat, which plays so large a part in the Bab. Creation epic.

Finally, mention must be made of the names *Igigi* and *Anunnaki*—designations for the Bab. deities as a whole, in their arrangement as gods of heaven and gods of the earth (under world). In the astral sense, in particular, we have to understand by the *Igigi* the gods who were thought of as embodied in the stars above the horizon; while the star-gods, who had sunk below the horizon, were regarded as *Anunnaki*.

Alongside of the great gods, properly speaking, whose chief representatives have been described above, the Babylonians included in their religious system a great number of lesser divine beings. These again were divided into those who manifested a character positively good and well-disposed to mankind, and those who showed a disposition positively hostile to man, and a desire to injure him. To the *good spirits* belong, among others, the guardian deities (god and goddess), one of whom was supposed to be assigned to every man. The *evil demons* by a favourite conception make their appearance in groups of seven. They play a very important part in the literature of exorcism, as all misfortune and sickness against which the exorcisms were directed were traced back to their evil influence. In the same category with these evil demons were placed the spirits of the dead, the ghosts, to whom all kinds of hostile action towards the living were ascribed.

3. **The myths and epics.**—In the study of the Babylonian religion we have at our command a considerable treasure of myths and epics. The following is a list of those which are most important for our purpose, and thus far best known from the excavations: the Creation and cognate

myths, the Adapa myth, the story of the Flood with the other Atrakhasis myths and the myth of the primeval kings, the Ira myth, the Labbu myth, the Zû myth, the Etana myth, Nergal and Eresh-kigal, Ishtar's descent to Hades, the Gilgamesh epic. Most of these literary remains are derived, in the form in which we now have them, for the greater part, from the library of Ashurbanipal. But internal and external evidence shows that their composition belongs to a much earlier period. In the case of some of them we have even actual copies of an earlier date (*c.* 2000–1500 B.C.).

(*a*) *The Creation.*—This part of the Babylonian mythology—partially known to us, even before the re-discovery of ancient Babylonia, from the Greek tradition of Berossus—receives fullest treatment in the cuneiform mythological literature in the seven-tablet epic *Enuma elish*, so called from its opening words. The contents are briefly as follows: Before the heavens and the earth were made, the primeval father Apsû and the primeval mother Tiâmat (both personifications of the primeval ocean) along with their son Mummu were in existence. From these in a succession of generations sprang the gods. Apsû and Tiâmat, disturbed in the peace they had up to this time enjoyed, and accordingly discontented with the new condition of affairs, devise a plan against the new world of gods. Apsû perishes at this stage. But Tiâmat vigorously prosecutes the scheme, and chooses for herself a new husband and assistant in the person of Kingu, to whom she gives the tablets of destiny. She attracts a section of gods to her side, and creates a number of monsters—the eleven—to help her in the battle against the gods. The contest at once begins. After several other gods have attempted in vain to overcome Tiâmat, Marduk at last offers to enter the lists against her. But he stipulates that, if he is victorious, the highest place among the gods shall in future belong to him. In a solemn conclave of the gods this condition is accepted, and homage is done to him as the future king of the gods. Then comes a detailed and most vivid picture of the preparations for the battle of Marduk with Tiâmat and of the battle itself. Marduk proves victor, and puts an end to Tiâmat. He then turns his attention to the gods in her train, overcomes these also, and makes them prisoners. In the same way he renders harmless the monsters she has created to assist her, and finally her husband Kingu suffers the same fate. Marduk then returns to the corpse of Tiâmat and cuts it in two parts, from which he fashions the heavens and the earth. Then follow the several acts of creation. Accounts have been discovered of the formation of the heavenly bodies, and, after a large gap, the beginning of an account of the creation of man. The whole concludes with a hymn to Marduk as the creator-god. It is worthy of note that this version of the Creation myth is clearly adapted to the position of Marduk as city-god of Babylon, the rôle of creator being ascribed to him, although in other versions and at other centres of worship it was filled by such gods as Anu, Enlil, or Ea. The creation of the world by Marduk forms at the same time the festal legend of the Babylonian New Year festival, the creation of the world being evidently paralleled with the annual reviving of nature in the spring. Alongside of this highly detailed version of the Creation myth we possess a shorter one, which, apart from a number of other marked variations, differs from the other particularly in this, that it knows nothing of the battle of Marduk with Tiâmat, but describes the world as arising—here also out of the ocean—without conflict, in quite a peaceful manner.

(*b*) While, as yet at least, we cannot prove the existence in Babylon of a so-called Paradise legend proper, we have in the myth of *Adapa* a story which seems intended to explain the mortality of man as opposed to the immortality of the gods. Adapa, a son of Ea, has received from his father a high degree of wisdom—hence his designation 'the superlatively prudent' (*Atrakhasis*)—but not the gift of eternal life. On account of an act of violence committed by him, he is cited to appear before the throne of Anu, the god of heaven. Adapa here had the opportunity, by partaking of the food and water of life which Anu offered him, of acquiring immortality for himself. But, acting on a prior counsel of Ea, he rejected the offered gifts, and thus forfeited eternal life.

(*c*) Between the Creation and the Flood the Bab. mythical chronology, at least as we know it from Berossus,—the cuneiform originals supply as yet only sporadic traces,—interposes a list of *ten primeval kings*, of whom the hero of the Flood, Utnapishtim-Atrakhasis (in Berossus, *Xisuthros*), is the last. The inscriptions hitherto have yielded no details concerning any of these kings except the seventh in Berossus' list, Evedoranchos. According to them, Enmeduranki—the native form of the name—was king in Sippar, the city of the sun-god Shamash. The latter adopted him as his associate, and taught him all the secrets of the soothsayer's art. Hence Enmeduranki was regarded by the Babylonians as the ancestor of the highly esteemed soothsaying priests.

(*d*) It is most likely the same *Atrakhasis* as the hero of the legend of the Flood that meets us in another mythical story. This myth tells how all kinds of plague, blight, pestilence, famine, and sickness were sent upon men by Enlil, the lord of gods, on account of their constantly repeated transgressions. But Atrakhasis, who also appears in this myth as a confidant of Ea, always succeeds by his intercession in securing the cessation of the judgment. The connexion of this with the Flood myth is probably that the Flood was thought of as the last great judgment of Enlil on men because of their continual relapses into sin—a judgment from which there was no escape except for Atrakhasis himself.

(*e*) It is not so certain whether the myth of the destroying god *Ira* should be placed in the same category, *i.e.* among the judgments preceding the Flood. In this myth Ira's plenipotentiary, Ishum, at his command traverses all lands, and works a frightful carnage among men.

(*f*) The Bab. *Flood narrative*, like that of the Creation, was long known from the pages of Berossus. In the original recovered by the excavations, the story forms part of the Gilgamesh epic, although there are clear indications that it once existed independently. The chief features of the story are briefly as follows. The gods in solemn assembly determine to send a flood in order to punish men for their sins (this is plainly stated, at least at the close of the narrative). The god Ea, who had been present at the council, reveals this design to a protégé of his, Utnapishtim—also called *Atrakhasis*, 'the superlatively prudent'—of the city of Shurippak, and commands him to build a ship for his safety, and to take living creatures of every kind with him into it. Utnapishtim carries out the command, builds his ship according to a scale supplied by the god, and introduces his family and relatives, as well as all kinds of animals, into it. Shortly before the beginning of the flood, whose advent had been previously indicated to him by a divine sign, he enters the ship himself and closes the door, entrusting the steersman with the guidance of the vessel. Early next morning the flood breaks forth, accompanied by violent storms and thick darkness. The gods themselves are afraid of the

flood, and ascend to heaven. The mother of the gods laments over the destruction of her human offspring, and repents having given her assent to the flood in the conclave of the gods. Six days and six nights the flood rages. But on the seventh day the sea is calm and the storm ceases. Utnapishtim opens an air-hole, and the light falls on his cheeks. Then land begins to appear, and the ship grounds on the mountain Niṣir. After seven days, Utnapishtim lets a dove fly from the ship. But she comes back because she finds no resting-place. The same happens with a swallow, which Utnapishtim next sets free. At last a raven, which was the third bird liberated, does not return, having settled down to feed. Then Utnapishtim brings out all that are in the ship, and offers a sacrifice, whose sweet smell the gods perceive with pleasure. Then follows a scene in which the mother of the gods and Ea wrangle with Enlil for having caused the flood. Enlil himself, however, is enraged that all men did not perish, and that one, Utnapishtim, with his family, has been saved. In the end, however, he changes his mind, and even endows Utnapishtim and his wife with the divine nature, and removes them to the realm far distant, to the 'estuary of the streams.'

We do not purpose here to discuss the real meaning of the Babylonian Flood myth—a subject on which the opinions of students are very much divided. We may say, however, that in all probability no actual historical occurrence is even reflected in it; it is more likely that we have to do with a nature myth whose background is formed by events in the daily and yearly course of the sun.

(*g*) The subject of the *Labbu myth* is the raging of a fabulous lion-like monster, allied with a mythical water-serpent, against men on the earth. After vain attempts on the part of other gods, one god finally succeeds in overcoming this lion (*labbu*), and thereby procures for himself divine supremacy, as Marduk did after his victory over Tiâmat.

(*h*) The *Zû myth* relates how the tablets of destiny, whose possession ensures the supreme power, were once stolen from Enlil by the storm-god Zû. Here, again, the supremacy is promised to whoever recovers the tablets from Zû. And, as in the case of Tiâmat and of Labbu, it happens that various gods make vain attempts till at last—for so we may complete the defective text—one of them is successful.

(*i*) The *Etana myth* has for its principal figure Etana, a primeval hero, who seems to be regarded as the founder of the kingship on earth. In order to bring about the happy birth of his son, who is to be the first king on earth, he applies, by the advice of Shamash, to the eagle for help to bring from heaven the medicinal herb which shall secure a safe delivery. Etana, seated upon the eagle, undertakes a journey, described with epic fulness of detail, to the highest heaven, to the throne of the queen of heaven, Ishtar, where the wonder-working plant is kept. But when he has almost reached his goal, Etana is overcome with fear, and drags the eagle down with him till both fall on the earth. Unfortunately, the conclusion is wanting, but presumably it was to the effect that the child, in spite of the deadly fall of Etana, came happily into the world and became the ruler of the land. The same myth further tells how this eagle, as an enemy of the serpent, once devoured its brood, in return for which the serpent plucked his wings and left him in a pitiable condition in a ditch. This event seems to have taken place before the flight to heaven with Etana; hence we may assume that, after his misfortune with the serpent, the eagle regained his lost powers.

(*j*) The myth of *Nergal and Eresh-kigal* tells how Nergal effected a violent entrance into the under world and threatened its goddess, Eresh-kigal, but afterwards became her husband and king of that realm. The visit of Nergal to the lower world was occasioned by a dispute, caused by Nergal, between Eresh-kigal and the gods of the upper world. In his passage he is accompanied by twice seven fever-demons.

(*k*) The following are the principal points in the so-called *Descent of Ishtar to Hades*. Ishtar, the daughter of Sin, directs her steps to the realm of the dead, which, so far as its appearance and inhabitants are concerned, is painted in the darkest colours. On arriving at the door of the realm of death, she imperiously demands entrance from the doorkeeper, and, on the command of Eresh-kigal, this is granted. At every one of the seven doors, however, an article of clothing is taken from her by the doorkeepers, so that finally she has to enter the kingdom of the dead perfectly naked. Here she is imprisoned by Namtaru, at the command of his mistress Eresh-kigal. Coincident with Ishtar's descent to the lower world, all sexual intercourse ceases on earth among both men and animals. In this extremity Ea interposes. He creates a messenger, Ṣîtushunamir, and sends him to the under world, with the result that Eresh-kigal, although against her will, commands Namtaru to sprinkle Ishtar with 'water of life' and to lead her out through the seven doors of the under world, restoring her garments as she goes. The conclusion of the mythical narrative then refers, in a way as yet not very clearly understood, to Tammûz, the youthful husband of Ishtar, and his worship, which seems to be connected with the cult of the dead.

(*l*) The *Gilgamesh epic* is, so far as we can now judge, the most extensive epic poem of the Babylonians. It is specially rich in mythological matter, and hence, in spite of its being for the most part a heroic epic, its main contents deserve to be indicated here. The story is as follows. Gilgamesh is the ruler of the city of Uruk. His yoke rests heavily on the citizens. In answer to the prayer of the people of Uruk, the goddess Aruru creates Eabani in order that he may go on adventures with Gilgamesh. Eabani, a creature possessed of great strength of body and violent sensual desires, dwells at first in the steppes with the wild beasts. It is only by means of a variety of treacherous devices, among which the seductive arts of a prostitute play the chief rôle, that he can be prevailed upon to enter Uruk and become the companion of Gilgamesh. Together, the two make an expedition to the cedar mountain in the East, where dwells the goddess Ishtar—probably the city-goddess of Uruk, who had been carried off by the Elamites—guarded by the watchman Ḫumbaba. Their aim is to kill the watchman and obtain possession of Ishtar. After a fierce conflict, Gilgamesh and Eabani succeed in slaying Ḫumbaba. Ishtar then offers her love to the victorious Gilgamesh, who, however, repels her advances, because she has had many lovers and has always destroyed them. Highly incensed at this affront, Ishtar gets her father Anu to create the ox of heaven, and sends him against Gilgamesh to destroy him. But Gilgamesh and Eabani succeed in slaying the ox, and thereby rouse afresh the wrath of Ishtar, who is besides cruelly taunted by Eabani. It may be as a consequence of this conduct that we find Eabani attacked by severe sickness which ends in his death. Gilgamesh, deeply affected by the death of his comrade, hurries unresting over the steppes. His object is to seek in the far distance, at 'the estuary of the streams,' his deified ancestor, Utnapishtim—

also called Khasīsatra (Atrakhasīs), 'the superlatively wise'—the hero of the Flood. But the way is exceedingly difficult. First it leads through the uncultivated steppe, where lions have their dens; then it goes through the dark mountain Mashu, whose entrance is guarded by two terrible scorpion-like men, who only with difficulty allow him to pass. When he emerges on the other side of the mountain Mashu, Gilgamesh comes to a wonderful park of the gods, lying on the seashore, where the goddess Ṣabītu, covered with a veil, sits on the 'throne of the sea.' From her Gilgamesh receives directions as to the way to Utnapishtim, and is advised to apply to his boatman in the neighbourhood that he may ferry him over the sea and the 'water of death' to his great ancestor. Gilgamesh follows this counsel, finds the boatman, and after all kinds of adventures, especially in crossing the 'water of death,' he reaches Utnapishtim. That hero imparts to the new arrival instruction regarding the meaning of human life, and, at his request, gives him a detailed account of the Flood and of his own translation to his present dwelling-place at the close of the Flood. It is, in fact, the Babylonian account of the Deluge, shortly sketched above, which is here interwoven as an episode into the Gilgamesh epic. At the close of this narrative, Utnapishtim and his wife have recourse to all kinds of magic manipulations, in order to assist their guest to 'life,' but only with very imperfect success. By direction of Utnapishtim, the boatman then causes Gilgamesh to bathe at the place of purification, and thereafter embarks with him to restore him to his home. Gilgamesh luckily finds in the deep waters a wonder-working plant mentioned by Utnapishtim, to which he gives the name 'when grey-haired, the man becomes young again.' This he intends to take with him to Uruk, to eat it, and to return to the condition of youth. But on the way the wondrous plant is snatched from him by a serpent. Great lamentation follows. Finally, along with the boatman, he reaches Uruk, but without the plant. The conclusion of the epic then relates how Gilgamesh, by means of necromancy, enters into communication with the spirit of his dead friend Eabani, and obtains information from him regarding the nature of the realm of the dead.

4. **The realm of the dead and belief in a future life.**—The ideas of the Babylonians regarding a life after death are to be discovered from various passages in the mythological literature containing descriptions of the realm of the dead: *e.g.* the Descent of Ishtar to Hades, the IInd, Xth, and XIIth tablets of the Gilgamesh epic, the myth of Nergal and Eresh-kigal, and a variety of sporadic passages. On the other hand, certain pictorial representations, the so-called Hades reliefs, which were formerly regarded as pictures of funeral rites and of the Babylonian hell, cannot, according to later investigation, be viewed in this light. The Bab. realm of the dead is depicted in the above passages as a dark place under the surface of the earth, full of dust, wherein the dead, clothed in winged raiment, spend a shadowy existence, having the dust of the earth as their food. The approach to this home of the dead appears to be situated in the western region of the earth, and is effected through seven gates, and therefore seven walls. The entrance is guarded by sentinels. The fate of the dead in the lower world seems to vary according to the way in which they passed from life—those, for instance, who fell in battle obtain a relatively endurable lot (drinking pure water)—or according to the degree in which they are provided with offerings by surviving relatives. The worst fate, according to Bab. notions, that could befall a dead person was to remain unburied. The judgment, too, which the *Anunnaki* pronounced at the entrance of a dead man into the under world no doubt determined largely the conditions of his sojourn there. The ruler of the realm of the dead is the goddess Eresh-kigal, also called Allatu, who is enthroned in a palace as queen. Her husband appears sometimes as Nergal and again as Ninazu. To her retinue belong also Bēlit-ṣēri, the great recorderess of the under world, and Namtaru, the attendant of Eresh-kigal, who carries out her commands. In this place of the departed there is also to be found a spring of 'the water of life,' which seems to be under the control of the *Anunnaki*. The fate of the dead in the under world seems, according to Bab. conceptions, to have been unalterable and permanent. Thus far, at all events, no certain traces have been found in the Bab. literature of any belief in a general resurrection or in the transmigration of souls. The deification of the kings in the old Bab. period—partially during their lifetime and especially after their death—is to be otherwise interpreted, and proves nothing regarding a belief in a general resurrection.

The cult of the dead had an important place in Babylonia and Assyria, although not nearly to the same extent as in Egypt. Among its rites were the arranging of the obsequies, coupled with the appropriate funeral dirge and the usual mourning ceremonies, as well as the regular provision of food and drink as offerings to the departed. The method of disposing of the corpse was always, at least in the historic period (as we learn from the inscriptions and the excavations), that of burial; and all kinds of ornaments and utensils accompanied the body into the grave.

5. **Soothsaying and exorcism.** — Soothsaying and exorcism in their various forms play a very large rôle in the Bab. religion. Both of these arts were not merely practised unofficially, but formed an important part of the official State religion. Thus in all the inscriptions of the Bab. and Assyr. kings, from the earliest to the latest date, we read of their having recourse to the soothsayer and exorcist at every critical moment of their undertakings as well as in connexion with all important religious ceremonies. This accounts for the high esteem which was always enjoyed by the priestly soothsayer and the priestly exorcist in Babylonia and Assyria. For the same reason the texts relating to soothsaying and exorcism are so exceedingly numerous as to form the chief component of the whole Bab. religious literature.

The principal spheres from which the soothsayer drew his omens were the heavens—particularly solar, lunar, and planetary phenomena—and entrails—particularly the liver of sheep offered in sacrifice. Thus, astrology on the one hand and examination of livers on the other could almost be described as the characteristic features of Bab. soothsaying. There were, however, numerous other phenomena from which omens were obtained. Thus, even as early as the Ḫammurabi period, we have texts relating to hydromancy. There are also numerous instances of soothsaying from dreams, from the action of animals of all kinds, especially from the flight of birds, from unnatural phenomena such as monstrous births—human or animal,—from atmospheric changes, and so on. The copious Bab. literature on the subject consists of exhaustive catechism-like text-books for the soothsaying priests. All possible occurrences are casuistically stated, and their various interpretations given, according to a scheme such as the following: 'If such and such is the condition of the liver of the sheep, then the king (or the land) will have such and such an experience (happy or otherwise).' Inscribed clay models of sheep livers, of which only two specimens have as yet been discovered, were

even used to educate in this kind of soothsaying. There have also come down to us very minute instructions regarding the ritual to be observed in practising the art in question. The patron of the soothsaying priests was Shamash, although Adad's name is frequently coupled with his as occupying a secondary place.

From a religious point of view a much higher stage than this act of soothsaying in the narrower sense exhibits is to be found in oracular responses of a comforting and encouraging character, which were given by priests and especially by priestesses, in the name of the deity. But the extant literature belonging to this department cannot with certainty be dated earlier than the 7th cent., the time of Esarhaddon and Ashurbanipal.

The art of exorcism occupies a similarly important place in the Assyro-Babylonian religion. The priest-exorcist found his sphere of work especially in cases of sickness, where the function of the physician was only gradually evolved from that of the exorcist. It was the duty of the latter to remove the ban which was supposed to lie on the sick person, and to drive out the hostile demons who had presumably caused the trouble. But in addition to cases of actual sickness, the exorcist was called in whenever there was any suspicion of enchantment by evil demons or human beings—witches and wizards—who were conceived to act as the instruments of demons. In the same way it fell to the exorcist to assist at all kinds of ceremonial actions, such as the consecration of temples, the erection of pictures of the gods, etc., and also at the worship of the dead—in short, on every occasion on which men believed they had to fear the interposition of hostile divine powers, and where accordingly the exorcist by means of his charms would be able to counteract the activity of evil spirits. The means used by the exorcist in the ritual consisted, in the first place, in the repetition of incantations, a huge mass of which have been handed down to us in the Babylonian and Assyrian literatures. In addition, there were a great many ritual actions, such as sprinkling with water, smearing the body of the patient, the practice of symbolic ceremonies such as the burning of all kinds of objects, and the like. An important rôle was played also by the penitent who was the subject of exorcism. He had to take a multiform part in the whole proceeding, by recitation and various other actions, such as casting himself on the ground, kneeling, etc. As in the case of soothsaying so in the service of exorcism, an extremely complicated ritual was in use, of which we possess extensive fragments in the form of texts relating to liturgical arrangements. Ea and Marduk appear as the chief gods of the exorcist cult. Eridu, the seat of Ea's worship, is regarded as the home of the rites of exorcism.

6. Hymns and prayers.—The Bab. hymns and prayers to the gods reach a much higher religious level than the extensive literature of soothsaying and exorcism. Here again a large literature is at our disposal, although much of it is unfortunately as yet in a very fragmentary condition. This hymn-literature, as we are now able to prove from identical copies belonging to the old Bab. period, emanated preponderatingly from this very early date. From that time they were handed down with little variation, through thousands of years, to the latest times of the cuneiform inscriptions. We obtain from these hymns valuable insight into the religious ideas of the earliest Babylonian period. On the other hand, they can hardly be used as sources for the knowledge of the Assyro-Babylonian religion of the later epochs. For this we have rather to take account of the prayers and hymn-like invocations which are frequently introduced in the royal inscriptions of Bab. and Assyr. rulers, and whose date can thus be exactly fixed. It must also be noted that the Babylonian hymnology, so far as yet known, is almost exclusively of a liturgical character. Further, by far the greater number of the hymns in question belong to the ritual of exorcism, although the connexion of a hymn with this cult must often have been only secondary. As to form, the Bab. hymns are, as was to be expected, characterized by a strongly marked rhythm. This strikes the eye at once from the fact that the verses each occupy a separate line, and often half-verses are indicated by the writing being in columns. The same impression is made on the eye by the frequent combination of two verses into a double verse. Similar phenomena are found in the other poetical literature of the Babylonians, in the myths, epics, incantations, etc.

Most of the liturgical pieces, so far as they are not formulæ for exorcism, consist of festal hymns in honour of a god or goddess. These were sung by the priests or priestesses on the particular feast days, and were intended for the glorification of a particular deity—often through the description of his exploits as portrayed in the myths. Thus we possess a series of New Year hymns, which were intended to be sung at the New Year festival, Marduk's festival in the spring. So there are a number of hymns to Tammûz, which no doubt were used especially on the occasions of the weeping for Tammûz and the rejoicing for his return. In the case of many other hymns, such, for instance, as those to Sin, Shamash, or Ishtar, there is little doubt that these also were intended mainly for festivals in honour of these deities. On the other hand, the numerous incantation hymns, as is at once indicated through their frequent introduction into the exorcistic liturgies, were destined for the mouth either of the priest or of the penitent, to be employed for purposes of exorcism. These incantation formulæ, like the act of exorcism itself, exhibit a fixed type, the different successive acts of the ritual finding expression in the hymn, now in a shorter and now in a longer form. In the case of the priest we have the recitation of his credentials, the description of the action of the demon, the praise of the god who overcomes the hostile demon, and finally the act of exorcism proper. In the case of the penitent, there is the confession of sin, the singing of a lament, the repetition of a penitential litany, and, finally, the offering of a prayer of thanksgiving, and the singing of a hymn of praise for the divine help received. So far as their contents are concerned, we constantly encounter, alike in the festal hymns and the incantation formulæ, the most elevated religious and ethical conceptions to be met with in the whole Babylonian literature.

7. Temples, priests, sacrifices, rites, festivals.—The inscriptions, from the earliest to the latest period, all go to show how numerous were the *temples* which the Babylonians and Assyrians erected for the worship of their gods. Not only had every city-god his chief sanctuary at his special seat of worship, but also all the gods belonging to the same group with him, as well as a multitude of gods outside it, had temples erected for their worship, at least in all the larger cities. The structural plan of the Babylonian temple can to a certain extent be gathered from the numerous inscriptions of Bab. and Assyr. kings relating to temples built by them. Lately our information has been extended by the discoveries in Nippur, Babylon, and Ashshur, where a number of ground-plans have been unearthed. Allowing for all kinds of variations in detail, the general type of building seems to have been as follows. A large rectangular

court, approached through a smaller fore-court, occupied the principal space. At the end farthest from the entrance there was a small sanctuary, the most holy place of the temple, where the image of the god was set up. At the sides of the great hall there were to be found a variety of side-chambers, used for keeping the temple-vessels, and as apartments for the priests. The temple proper had attached to it a storeyed tower (*ziqqurat*) rising from a square foundation. This tower was regarded as specially sacred, and bore a special name. Like the temple as a whole, the tower in particular was looked on as an earthly copy of the world-structure, which was also conceived as of storeyed form. The tower seems also to have been frequently looked on as the 'grave' of the god to whom the temple belonged. The names of the temples and temple-towers belong almost exclusively to the old sacred Sumerian language —an indication of the influence which ideas originally Sumerian continued to exert on the Bab. cult. We must note also a very important part that was played by the temples in the great cities such as Babylon, Nippur, and Sippar, altogether apart from the religious sphere. Owing to their possession of extensive lands and their wealth derived from other sources, they were a determining factor in the economic life of Babylon, becoming to a large extent centres of trade. Proof of this is found in the numerous commercial contracts, belonging to the earliest as well as the latest period, which have been discovered in the temple archives.

In view of the important place which religion occupied in the life of the Babylonians and Assyrians, the prestige and power of the *priests* were at all periods naturally very great. Whenever any of the kings, as, *e.g.*, Sennacherib, attempted to free himself from the tyranny of the priesthood, his action simply recoiled upon himself, and a reaction always set in which only intensified the power of the priests. The subdivisions of the priesthood were many, as is sufficiently evidenced by the great variety of designations applied to them. A specially important place was held by the priestly soothsayers and the exorcists or propitiatory priests, whose functions have been dealt with in the foregoing section on 'Soothsaying and exorcism.' A peculiar position was occupied also by the priestly musicians, whose duty it was to sing the hymns in the performance of the cult. For each of these separate classes of priests there were special ritual instructions, which are still partially extant. These give most minute directions regarding the separate functions of the priests in the various acts of worship. The different classes of priests also formed among themselves exclusive bodies with their own traditions. In this connexion the gild of soothsayers was specially exclusive, the office descending from father to son, and very strict rules being laid down as to physical condition as a qualification for priestly service. Similar, though presumably not quite so stringent, regulations would apply to other priestly gilds. The fact that the arts of reading and writing, and indeed every branch of knowledge, were in the hands of the priests, readily explains why in the Bab. literature almost every subject is looked at from the point of view of religion and priestly wisdom. This knowledge as well as acquaintance with writing and literature—in Babylonia no easy attainment—were communicated esoterically in the priestly schools, where successive generations of priests underwent long years of instruction. Of this we have abundant evidence through our possession of the actual tablets used in this training. Priestesses are also repeatedly to be met with in Babylonia, especially in connexion with the cult of Ishtar; but women make their appearance in the cult more especially as discharging the function of *hierodouloi* or temple-prostitutes.

At all periods of the Assyro-Babylonian religion the *sacrificial system* was extensive and multiform. Much can be gathered about Bab. sacrificial customs not only from numerous notices in the inscriptions, but also from pictorial representations of sacrificial scenes. Very frequently the sacrifice is regarded, quite in accordance with its original idea, as a gift, supplying the god with food or drink, or (in the case of the 'incense'-offering) causing him to smell a sweet odour. But in other passages the idea clearly emerges that the animal sacrifice is a substitute for a human sacrifice that would otherwise have to be offered to the gods. At the same time, there is not any certain trace of actual human sacrifice either in the literature or in the pictorial representations. The offerings came to be regarded to a large extent as simply a temple-due, and as means of support for the numerous priests. The materials of the bloodless offerings were chiefly bread, wine, water, mead, honey, butter, milk, oil, grain, and fruit. The animal sacrifices usually consisted of oxen and sheep, but other domestic animals were also offered, as well as fowls and fish, and even wild animals. For the 'incense'-offering cedar and cypress wood, and flour, cane, and myrtle were used. In the case of the animal sacrifices, definite parts were reserved for the god, while other parts became the portion of the priests. Strangely enough, the blood of the sacrificial victim does not seem to have played any conspicuous part in the Bab. ritual. In addition to the offerings proper, it was customary at all periods of Bab. antiquity to bring the most varied gifts to the temple as votive offerings.

Side by side with sacrifices and votive offerings, there was a great variety of other *rites* in the Bab. religion. Among these an important place is held by the propitiatory rites practised by the exorcizing priests, who have been referred to in the section on 'Soothsaying and exorcism.' Then we have also the mourning customs connected with the cult of the dead. These included such practices as the beating of the thigh and the breast, the plucking out of the beard, and the mutilation of the body by means of knives. The supreme occasions of the cult were naturally *the festivals*. Of these by far the most prominent was the Babylonian New Year festival. This feast was in earlier times held in honour of other gods. But when the Marduk-cult of the capital, Babylon, came to the forefront, the New Year feast became at once the chief festival of Marduk and the greatest and most important festival in the Bab. calendar. It was celebrated on the first days of the month Nisan, at the time of the spring equinox. One feature of it was a procession, in which the image of Marduk was taken in a gorgeously equipped ship-car along the festal street from his temple, E-sagilā, to the house of the New Year festival, and thence back to his temple. Neighbouring towns also brought the images of their gods to Babylon to join in this procession. At the time of the festival the gods were supposed to sit in solemn conclave, under the presidency of Marduk, in the chamber of destiny, in order to determine the fates for the coming year. Among other festivals mentioned in the Bab. literature, a special place belongs to the lament for Tammūz in midsummer, in the month called after him. Prominent also is the feast of Ishtar in the following month, Ab. Among the days of each month the 7th, 14th, 21st, 28th, and also the 19th were supposed to be specially unlucky, and therefore there was a general suspension of business on these days.

General Remarks on the Character of the Babylonian Religion.—It is very difficult to form a just estimate of the value and relative standing of Babylonian religious thought. This is due to the fact that we are for the most part dependent on official documents, such as royal inscriptions, liturgical collections, etc.; we have very few documents of a private and individual nature which would give us actual insight into the religious ideas which the people connected with the external and traditional ritual forms and doctrines. But we may regard it as practically certain that in course of time, even when external religious forms were retained unaltered, the mental attitude towards them underwent important changes. This may be assumed, in particular, for the later Assyrian and the New Bab. period, and it finds support in isolated expressions in the inscriptions. Again, it is difficult to judge whether, and to what extent, there existed a simple unquestioning piety among the people, alongside of the learning and partially conscious deception of the priestly speculations. The presence among the Babylonians of this simple piety, a child-like trust in the divine help in all situations of life, is proved—and that even in the earliest period—by many deeply religious passages in the hymns and prayers, as well as by other indications, *e.g.* the religious ideas which find expression in the formation of Bab. proper names. The religious sense of the Babylonians admittedly never rose beyond a certain limit. They never attained to a stage at all corresponding to the ethical monotheism of the Hebrew prophets, or even the ethically elevated Ahura Mazda religion of the Persians. A purer development of the nobler germs present in the Babylonian religion was hampered by the strong predominance of the magical and superstitious element, which at all periods played so great a part in it. At the same time, the Babylonian religion is a historical factor whose importance in its own genus must be fully recognized. Even the strong emphasis laid on the astral element led, in movements historically connected with it, to many pure and elevated ideas, if also to much that was abstruse and superstitious.

Literature.—I. *General.*—The fullest treatment is by M. Jastrow, *The Rel. of Babylonia and Assyria*, Boston, 1898, also *Die Rel. Babyloniens u. Assyriens*, Giessen, 1902 ff.; cf., further, H. Zimmern, 'Religion,' in *KAT*[3], Berlin, 1903, pp. 345–643; F. Jeremias, 'Die Babylonier und Assyrer,' in de la Saussaye[3], i. 257–348; A. H. Sayce, *The Rel. of the Ancient Babylonians* (Hibbert Lectures), London, 1887, also *The Rel. of Ancient Egypt and Babylonia* (Gifford Lectures), Edinburgh, 1902; C. P. Tiele, *Gesch. der Rel. im Altertum*, Gotha, 1896, vol. i. pp. 127–216, also *Bab.-assyr. Gesch.*, Gotha, 1886, pp. 515–557; M. Jastrow, 'Religion of Babylonia,' etc., in *HDB*, extra vol. pp. 531–584; L. W. King, *Bab. Rel. and Mythology*, London, 1899; D. Bassi, *Mitol. Bab.-Assir.*, Milan, 1899; R. W. Rogers, *The Rel. of Babylonia and Assyria*, New York, 1908. Cf., further, for many points regarding Bab. religion, and in particular for its conception of the world, etc., the following works: P. BACKSLIDING.—A falling from grace after identification with religion, a reversion to sin and worldly ways after conversion, or a return to old habits after reformation. The term historically has several times shifted the centre of weight of meaning. One can distinguish perhaps four different qualities of interpretation, although the various meanings will much overlap. (1) The first is that before it acquired any special technical significance. This applies, for example, to the use of 'backsliding' (מְשׁוּבָה) in the OT, although the more special sense is recognized in the numerous Scripture precepts to constancy, and in such examples as Saul, Judas, and Demas. Our Lord predicts times of falling away in times of trial (Mt 24[10. 12]) and the First Epistle of John and the Epistle to the Hebrews are full of warnings against the same danger. During early Christian centuries the fact of backsliding was also fully appreciated, but the content of the term had its discussion chiefly under the heading of 'apostasy' (*q.v.*), or of 'perseverance' (*q.v.*).

(2) The second stage in its use was that in which it assumed a theological meaning. It was at the time of and following the Calvinist and Arminian controversy that the distinctly practical human interest in the idea was drafted off in the direction of speculative theology. If the salvation of the elect is foreordained, how can it be otherwise than that the chosen of the Lord shall persevere to the end? The Arminians said, however, that if the will of man is in any sense free, if the unction of the gospel has any significance, and if the efforts of the righteous have any value, there must be not only the possibility, but the danger of falling away. The Arminians busied themselves in explaining away such passages as Ro 8[28-30], which formulate a doctrine of predestination and election, and in softening the 'impossibility of repentance' on the part of those who 'fall away,' as presented in He 6[4-6] (cf., *e.g.*, Tillotson, *Works* [London, 1820], vi. 65 ff.). It is an interesting fact that Calvinists have been almost as diligent in preaching the need

of perseverance as have the Arminians. Jonathan Edwards, for example, writes:

'As persons are commanded and counselled to repent and be converted, though it is already determined whether they shall be converted or no; after the same manner, and with the same propriety, persons are commanded and counselled to persevere, although by their being already converted, it is certain that they shall persevere. By their resolutely and steadfastly persevering through all difficulties, opposition, and trials, they obtain an evidence of the truth and soundness of their conversion; and by their unstableness and backsliding, they procure an evidence of their unsoundness and hypocrisy' (*Works*, N.Y. 1830, vol. vii. p. 488).

(3) Another change in meaning was that in which the idea assumed an evangelistic flavour. After pronounced conversions came to receive a high degree of emphasis among Protestants as the desirable, if not the only, method of regeneration, the danger of backsliding came to be accepted as a matter of course, and was made the subject of the most zealous admonitions and sermons (cf. Baxter, *Works* [London, 1830], iv. 351–371). The need of a 'renewal' after backsliding was a common experience, and the frequency of such an occurrence may be regarded as the occasion of the formulation of the notion of the 'second experience' or 'sanctification' (*q.v.*).

(4) Later there has arisen the psychological interpretation of the term. Even at the height of the evangelical interest in the question, say during the first half of the nineteenth century, the groundwork was being laid for an explanation of the lapses from the lively experiences at the inception of the religious life. Among the causes of backsliding usually specified in treatises and theological dictionaries were: 'the cares of the world, improper connexions, inattention to secret and closet duties, self-conceit and dependence, indolence and listening to and parleying with temptations.' As early as 1835 there was published a novel in Boston, entitled *The Backslider*, the chief point of which seems to have been to show the differences in the temperamental and other characteristics of the hero and heroine of the tale, which would account for the constancy of the one and the backsliding of the other; and a reviewer in the *Christian Register* [1836], vol. ii. pp. 198–206) expresses the conviction that we shall 'succeed in the attempt to arrange the present multifarious mass of mental phenomena, and evolve the first principles to which they must all be referable,' as is being done in the material sciences; and he appeals by analogy to the success of Mr. Louis in the investigation of the causes and conditions of diseases. Recently, something of a study has been made, of a statistical and psychological character, upon backsliding (see Starbuck, *Psychology of Religion*, 1899, pp. 354–391).

It appears that nearly all persons who experience conversion are sooner or later beset with difficulties. When the character of these difficulties is catalogued, they are clearly the same in kind, essentially, as those which ordinarily belong to adolescent development when not attended with conversion. It is worthy of note that the frequency of troubles is slightly greater among those who have undergone conversion than among the others. One may look for the cause of this difference in several directions. In the first place, those who experience conversion are more open to suggestion and more impressionable, and accordingly more liable to have mental crises. Their emotional difficulties predominate, while intellectual doubts and questionings are more common among those whose growth is not attended by conversion. The difference seems to be due in part, likewise, to the fact that at conversion the ideal life and the past life are brought into definite conflict. There is a sharper cleavage between the higher and lower selves; an ideal is established which is more difficult to attain because of its great incongruity with the old life. The person is suddenly expected to identify himself with the conventional ways of the Churches, which are at variance with his usual habits of life. It seems natural, if these causes obtain, that the conflict and friction in the adjustment of life to the new standard should be greater in the case of the conversion type.

Still another cause of backsliding is the persistence of old habits which for the time have lost their force, and are hidden from view in the presence of new lines of activity. When, after a time, the newly-acquired enthusiasm has partially spent itself, the old habits re-assert themselves. The difficulties usually continue until there is formed a new set of neural habits which correspond to the conduct of life on the spiritual plane, and have become so deeply ingrained that life expresses itself naturally and easily through them.

A very central condition underlying backsliding seems to be found in the natural tendency of human interests to ebb and flow. Nervous energy, when directed vigorously in a certain way, completely expends itself, and must then have a period of recuperation. Rhythms in the supply of available energy are fully recognized, as is shown in experiments upon continuous muscular activity, in the rise and fall of the wave of attention when focused upon a continuous object, in the successive presence and absence of a stimulus on the threshold of sensation, and in many like phenomena. It is observable in the spells of depression that follow an exceptionally busy day, and in subnormal temperatures following fever. Persons very active in religious matters are apt to have ups and downs in their degree of religious enthusiasm. Those have been found who have experienced wave-like fluctuations of religious interest at pretty regular intervals. If a rhythmical flow of energy is a law of life, it should be expected that, following the great enthusiasm attendant upon conversion, there should be a decline.

The rise and fall of religious feelings may sometimes be the attendant of other natural rhythms. One person reports that during five successive years he was awakened to a religious enthusiasm during the winter, which declined during the summer; and many other similar, though less striking, instances are on record. It has been ascertained by Malling-Hausen that physical growth is accelerated during the autumn months and retarded from April to July. The rise and fall of religious feeling may be conditioned somewhat by the rate of the metabolisms going on in the organism at different times of the year. It is an interesting coincidence that religious revivals are held most commonly during the winter.

There is a distinction between backsliding in so far as it affects the will-attitudes and that which centres in a fluctuation of warmth of feeling. While there are many instances of the former, due, perhaps, to the re-assertion of old habitual modes of reaction, the analysis of religious confessions shows another type, in whom the changed attitude towards life brought about through conversion is fairly constant, in spite of the fact that the intensity of their religious ardour suffers a decline. Their real religious status seems not to be affected even while they are inactive in the direction of the new life. These would seem to require a different spiritual regimen from those who backslide in the former sense.

The point of greatest practical significance, perhaps, in respect of the post-conversion experience, is that the new insight or mode of conduct, however genuine it may be, must, in order to be permanent, become so incorporated into a new set of neural habits that the new life may be as natural and spontaneous as the old. The former

type of life which is still structurally a part of consciousness, must either be refined and co-ordinated with the new, or the newly acquired spiritual selfhood become so persistent and constant as to draft off the available energy and so cast out the evil with the good.

EDWIN D. STARBUCK.

BACON, FRANCIS. — 1. **Life.** — The second greatest of the stars that shed their brilliance upon Elizabethan England,—great both in power and achievement within his chosen field of speculation,—Francis Bacon has left a name that is a byword among popular moralists. Conscious of failure in his own time, he trusted his name and memory 'to men's charitable speeches, to foreign nations, and the next ages,' but the stain of his deeds, or of his omissions, has not yet allowed the splendour of his intellect to be clearly seen and understood.

He was born in London on the 22nd of January 1561, his father, Sir Nicholas Bacon, being then Lord Keeper to Queen Elizabeth. His mother, second wife of Sir Nicholas, was a sister of the wife of Sir William Cecil, afterwards Lord Burghley, the Queen's chief minister. His father had the gifts of humour, audacity, and duplicity essential to success at Elizabeth's court; his mother possessed a classical training and resultant taste, which were grafted upon a rigid Calvinism in religion. Some trace of all of these influences may be found in the character and attainments of the son. At the age of twelve, Francis Bacon entered Trinity College, Cambridge, of which Whitgift, the future 'moderate' Archbishop, was the head. He remained till he was almost fifteen (Christmas 1575), forming at the time a boyish disapproval of Aristotle's philosophy, which was afterwards gravely recorded. In 1576 he became a member of the Society of Gray's Inn, being destined no doubt for political office, to be secured through the profession of the Law. From 1576 to 1579 he was in the retinue of Sir Amyas Paulet, Ambassador of the Queen to France, but was summoned home on the sudden death of his father in the latter year. Dean Church dates from this event, and the immediate downfall of his reasonable hopes which it occasioned, the deterioration of Bacon's character. At any rate he began soon afterwards the series of canvassing, importuning, obsequious, and servile letters to his relatives and others, asking for promotion or help, which are so pitiful to read, as coming from one so nobly endowed. He entered into residence at Gray's Inn, became an 'Utter Barrister' in 1582, and a 'Bencher' (which gave him the right to practise) in 1586. Meantime he had entered Parliament as member for Melcombe Regis in 1584, and in subsequent Parliaments he sat successively for Taunton, Liverpool, and Middlesex. He became one of the foremost speakers of the day, and one of the most eloquent, according to the well-known description of Ben Jonson: 'There happened in my time one noble speaker who was full of gravity in his speaking. His language, when he could spare or pass by a jest, was nobly censorious. No man ever spoke more neatly, more pressly, more weightily, or suffered less emptiness, less idleness, in what he uttered. No member of his speech but consisted of his own graces. . . . The fear of every man that heard him was lest he should make an end' (Ben Jonson, *Timber or Discoveries*, ed. Schelling, p. 30).

In politics, both in the reign of Elizabeth and in that of her successor, he supported the supremacy of the *personal* authority of the sovereign, but urged, wherever possible, toleration and moderate reform. In 1591 he made the acquaintance of the Earl of Essex, a young favourite of the Queen, between whom and Bacon a strong friendship speedily grew up. In 1593, Bacon's action in the House of Commons upon the Subsidy Bill, which he opposed for good reasons, brought him into disfavour with the Queen. Although he did not recant his opinion, Bacon prostrated himself at the feet of the Queen and her Minister, but beyond his recognition as one of the Counsel to the Crown, he did not either then or during the Queen's lifetime receive any public appointment. His uncle seems to have looked with distrust upon his brilliant abilities, and may have feared him as a rival to his own son (and successor), Sir Robert Cecil. Queen Elizabeth herself, it is recorded, said of him that he had 'a great wit, and an excellent gift of speech, and much other good learning, but in law thought he could rather show to the uttermost of his knowledge, than that he was deep' (Spedding, *Letters and Life of Bacon*, vol. i. p. 297). His share in the trial and condemnation of Essex will always remain a blot upon his character, however many the extenuating circumstances that may be urged. To strengthen his waning authority with the Queen, Essex obtained the appointment of Commander-in-Chief in Ireland for himself. He failed lamentably and utterly, and returned to face his 'enemies' at Court, after being expressly forbidden to leave his post. Placed under arrest, but afterwards released, he entered into a plot to seize the Queen's person, control the appointment of her ministers, and, above all, force the nomination of her successor. The rash attempt, foolishly conceived and recklessly begun, might have had the gravest consequences. Essex was (along with the conspirators) arrested, arraigned for high treason, condemned and executed (1601). Bacon, as Counsel to the Crown, was one of those selected to carry out the preliminary examination, and he took active part in the trial—to the prejudice of the prisoner's chances. Essex being a popular hero, it was necessary to justify his execution, and Bacon was entrusted with the task of blackening the memory of his friend and benefactor. It is true that Bacon was bound, and had always professed, to place the service of his Queen and country above that of his friend; and, as it has been pointed out, it is difficult to see at what stage he could either honourably, or even safely, have withheld his services. One can only regret that he showed himself so zealous. Perhaps he could not, and should not, have saved the life of Essex, but he need not have lent a hand in vilifying his name.

After the death of the Queen and the accession of James in 1603, Bacon rapidly rose in honour and position. He married the daughter of an alderman, with a good dowry, in 1606, became Solicitor-General in 1607, Attorney-General in 1613, and Lord Keeper (a title which was soon exchanged for the higher one of Lord Chancellor) in March 1616-17. When he was Attorney-General there occurred the famous Peacham case, of which Macaulay has made unscrupulous use against Bacon. The discovery of a sermon, evidently intended for publication, and containing treasonable language, suggested a conspiracy, and it was decided to apply torture to Peacham in order to elicit the names of his fellow-conspirators. The warrant was signed by the Archbishop of Canterbury and by leading members of the Lords and of the Commons. Bacon, as Attorney-General, attended the examination, but cannot by any stretch of the imagination be held responsible for it. It was one of the last occasions on which torture was applied in England; Bacon, however, was not, in this matter, in advance of his time. Another of the unpopular cases in which Bacon, owing to his position, was involved, was that of the trial and execution of Sir Walter Raleigh (1618) after his worse than foolish expedition to South America.

The real evil of his life, however, now as ever, was his subservience, sometimes immoral, and always mean, to the great men of the day, who under King James were invariably selfish, grasping, regardless of popular rights and even of the common virtues of life. Buckingham, whom Bacon allowed to intervene in the Courts and to influence the judges, is the most conspicuous instance. Bacon, who had been knighted in 1603, was in 1618 made Baron Verulam, and in January 1620-21 Viscount St. Albans.

But at the very moment when fortune seemed to smile most sweetly upon him, she was preparing a *volte-face* unparalleled in history. James, who for many years had been governing without a Parliament, but who was in urgent need of subsidies, called a Parliament at last, which began to sit in 1621. From the first the members showed that money would not be voted for nothing: they began an investigation into certain abuses, the infamous monopoly-system and other matters. But it was soon clear that the Lord Chancellor himself was the principal quarry they hunted. Certain evidence was brought forward of his having taken presents of money from suitors after, and even during, the hearing of their cases. It was not proved that Bacon had ever actually given a wrongous decision on account of the bribes; the practice was common at the time, along with much worse practices. But the fact remains that Bacon, from the moment he discovered that he himself was in danger, showed the white feather. He was in ill health and unable to attend the House of Lords when his case was being tried; he confessed to every item of a long series of charges, and was condemned to be imprisoned in the Tower, to pay a fine of £40,000, to be deprived of all his offices, and to forfeit the right to sit in Parliament. The imprisonment lasted only a few days, and the fine appears never to have been enforced, but Bacon was irretrievably ruined in character and in fortune. He had never been wise in money matters, or indeed in any of the practical affairs of life, and he now found himself hard pressed. He showed courage, however, in his misfortune, declaring, 'I was the justest judge that was in England these fifty years: but it was the justest censure in Parliament that was these two hundred years.' Melodramatic as the statement sounds, it was probably correct. He had certainly been one of the most expeditious judges of his time. Although in 1624 Bacon's punishment was finally remitted and he was even summoned to sit in Parliament, he did not return to public life. The remainder of his life he spent in retirement, working at his great project of the renovation of the sciences. His death was directly caused by an experiment entered upon to determine whether animal bodies can be preserved by cold. He caught a sudden chill in the process, and was carried to the house of Lord Arundel, where he died on 9th April 1626. To his host he had written, shortly before his death,—in expectation of a speedy recovery—'As for the experiment itself, it succeeded excellently well' (printed in Sir Tobie Matthew's *Collection of Letters*, 1660, p. 57).

2. **Works.**—Bacon's earliest printed work, and the most famous of all, was the *Essays*. It was published first in 1597, and consisted of ten essays, along with which were printed the *Meditationes Sacræ* and the *Colours of Good and Evil*. This edition was reprinted several times, but in 1612 it

was expanded into forty essays, and in 1625 into fifty-eight, the final number. Within its own field, it is undoubtedly one of the great books of the world. The terseness and brilliancy of its phrases, the delicacy and point of its criticisms upon life's various phases, the depth and yet the lightness of its observations, have made it a 'classic' almost from the date of its publication. It was followed in 1605 by the *Two Books on the Advancement of Learning*. This work was afterwards regarded by Bacon as a part of the 'Great Renovation' (*Instauratio Magna*), was translated into Latin (the second book being expanded into eight new books), and published in 1623 as the *de Dignitate et Augmentis Scientiarum, Libri IX*. It is a review of the whole state of knowledge as it was in Bacon's time, and as Bacon desired it should be. It pointed out the defects of man's present knowledge, the *lacunæ* or *desiderata*, and suggested a detailed classification and systematization of the various branches of knowledge. The *de Sapientia Veterum*, 1609, is a fanciful attempt to show that in the Myths of the Ancients lies concealed a body of physical and moral knowledge which dates from an earlier, greater, golden age of man. The work on which Bacon's fame as a philosopher chiefly rests is the *Novum Organum*, published, although incomplete, in 1620. It contains his logical method, his criticism of earlier methods of scientific study, his warnings as to the dangers of fallacy which lie in wait for human thought—the famous doctrine of the *Idola*, etc. The treatise had been written and re-written by Bacon no fewer than twelve times. 'Severe as it is,' says Church, 'it is instinct with enthusiasm, sometimes with passion. The Latin in which it is written answers to it; it has the conciseness, the breadth, the lordliness of a great piece of philosophical legislation' (*Bacon*, p. 225). Few other works (*Historia Ventorum*, *Historia Vitæ et Mortis*, *History of Henry the Seventh*) were published during Bacon's lifetime, but a great number of works and fragments appeared at different dates after his death. The *Sylva Sylvarum*—a collection of facts, fables, and problems in various branches of Natural History—and the *New Atlantis*—Bacon's scientific Utopia—were edited by Rawley in 1627. Others followed in 1629 (*Certaine Miscellany Works*), 1638 (*Opera Moralia et Civilia*), 1648 (*Remains of Francis, Lord Verulam*), 1653 (*Scripta in Nat. et Univ. Philosophia*: Gruter), 1657 (*Resuscitatio*), 1658 (*Opuscula Varia Posthuma*), 1679 (*Baconiana*: Tenison). The majority of these were edited by Rawley, who was Bacon's secretary in the last years of his life, and who remained his profound admirer. The complete works are to be found in Ellis, Spedding, and Heath's edition, referred to below. The works include many occasional pieces of historical and legal interest, as well as a number of sketches and appendixes to Bacon's *Instauratio Magna* of the Sciences. The majority of these are in Latin, but the more important pieces, along with the *de Augmentis*, and the *Novum Organum*, are translated by Spedding in the 4th and 5th volumes of the Complete Edition.

3. Philosophy.—Bacon, said Macaulay, 'moved the intellects which have moved the world': he did not himself produce anything original in Science, in Philosophy, or in his own chosen region of the latter, Logic. But he inspired others with his enthusiasm for Natural Science, his hopes of the great issues for man which depended on its study, his ideal of the methods by which it was to be approached. It is largely through his inspiration that what is vaguely described as the Scientific Method, the Positive or Empirical Method, is universally applied to-day to the investigation not merely of natural, but of psychological, ethical, social, and religious phenomena. When Bacon wrote, thought had already awakened from the sleep of the Middle Ages; here and there observers had arisen who looked to nature itself rather than to human authority for information, and who had recourse to experiment to compel nature to answer their questions. Such were Roger Bacon, Nicolaus of Cusa, Leonardo da Vinci, Copernicus, Vesalius, Telesio, Severinus, Tycho Brahe, Bruno, Gilbert, Galileo, Kepler, and Harvey. The mental horizon had been widened equally with the physical horizon: the discovery of America and the invention of printing were still novelties to the world into which Bacon was born. There seemed no limit to the possibilities of wealth, of happiness, of knowledge, within man's reach. In Bacon's view it was the last of these, knowledge, that was to be the means of gaining the other two: and from the beginning of his maturer life he set himself the task of showing men how the knowledge, which was also power, was to be attained. At 25 he wrote an essay on the subject which he called the 'Greatest Birth of Time' (*Temporis Partus Maximus*), and, six years later, sent to Burghley the letter in which occur the famous words, 'I confess I have as vast contemplative ends as I have moderate civil ends: for I have taken all knowledge to be my province' (*Letters and Life*, i. 108 f.). In the fragment called *de Interpretatione Naturæ Proœmium* (complete ed. iii. 518), he describes his qualifications for the task:

'For myself, I found that I was fitted for nothing so well as for the study of Truth; as having a mind nimble and versatile enough to catch the resemblances of things (which is the chief point), and at the same time steady enough to fix and distinguish their subtler differences; as being gifted by nature with desire to seek, patience to doubt, fondness to meditate, slowness to assert, readiness to reconsider, carefulness to dispose and set in order; and as being a man that neither affects what is new nor admires what is old, and that hates every kind of imposture. So I thought my nature had a kind of familiarity and relationship with Truth' (Spedding's tr., *Letters and Life*, iii. 85).

This is no mere bombast, for these were strictly the real qualities of Bacon's mind when face to face with the facts of nature. Truth became the passion of his life—or rather the discovery of truth, for truth itself he regarded rather as a means to man's advancement than as an end in itself. From the first he set before him as his goal the Kingdom or Empire of Man—*Regnum Hominis*—the dominion of man over nature, and, *through* this power, the increase of his happiness and his dignity. In this sense, no doubt, he was the true forerunner of the Utilitarians in England. Of Salomon's House—the college which was the 'eye' of the kingdom of *New Atlantis*—it is said: 'The end of our foundation is the knowledge of causes and secret motions of things; and the *enlarging of the bounds of human empire, to the effecting of all things possible*.'

In Bacon's design the *Instauratio Magna* was to consist of six parts, only one of which, the first, was completed by him. The parts are as follows: (1) *Partitiones Scientiarum*: classification of the sciences, and the distribution of inquiries among them, a map of the conquests already made, and a survey of the unoccupied lands. (2) *Novum Organum, sive Indicia de Interpretatione Naturæ*: the new method of discovery, or suggestions on the interpretation of nature, by which the old and futile method of 'anticipating' nature was to be displaced. (3) *Phænomena Universi*: tables of facts, the results of observation and experiment, on which philosophy (or science) was to be built up. (4) *Scala Intellectus sive Filum Labyrinthi*: 'the ladder of the intellect,' or 'clue of the labyrinth,' was to consist in examples, types, or models of the method in actual working, concrete applications of Bacon's inductive scheme. (5) *Prodromi, sive Anticipationes Philosophiæ Secundæ*: anticipations of the new philosophy, before the latter should have been completed, a kind of foretaste, or, as

Bacon suggests, a kind of interest before the principal is produced. The last part (6), *Philosophia Secunda*, or *Scientia Activa*, was to be the final completion and crowning of the whole structure. Bacon himself was merely laying the foundations, it was to be left to others to finish; indeed, it could only be the work of many hands and brains. Bacon long hoped for royal support for his cause; he constantly writes as if he desired wealth and position only that he might have more influence and authority in promulgating his ideas. He was to be the bell-ringer, who is 'first up, to call others to church,' the man who sounds the clarion, but enters not into the battle. His hope was in a Society such as he describes in *New Atlantis*, and such as the Royal Society became soon after his day—a body of workers directing their powers of observation and inference upon limited fields of inquiry, after the first great collection of facts has been made. In one passage he anticipates that the future judgment passed upon himself would be that he did no great things, but simply made less account of the things that were accounted great (*Nov. Org.* i. Aph. 97).

(1) It is unnecessary here to give Bacon's classification of the Sciences in full, although it is important in the history of scientific method. It appears in the *Advancement of Learning*, the *de Augmentis*, and the *Descriptio Globi Intellectualis*, with certain variations. The ground of division is the radically false one of the human mental faculties—*Memory, Imagination, Reason*. Thus the branches of knowledge are classified under three heads: History (corresponding to Memory, and dealing with Individuals), Poetry (corresponding to Imagination, and also dealing with Individuals), and Philosophy (corresponding to Reason, dealing with General Notions or Universals). Poetry is merely feigned history. 'As all knowledge is the exercise and *work* of the mind, so poesy may be regarded as its *sport*. In philosophy the mind is bound to things, in poesy it is released from that bond, and wanders forth, and feigns what it pleases' (complete ed. v. 503). The term 'Philosophy' with Bacon covers all Arts and Sciences, as well as Philosophy in the narrow sense. Parallel to the three divisions of Rational or Acquired Knowledge are those of Theology, or Revealed Knowledge. Like Locke, Bacon regarded the senses as the ultimate and only source of natural knowledge; the *notions* of science are abstracted from sense-impressions by composition and division according to the Laws of Nature and evidence of the things themselves (*ib.* i. 494). Bacon anticipates modern methods in his insistence on keeping close to nature, and in his suggestion that Natural History should take special account of aberrations and monsters, *i.e.* pathological or morbid phenomena, and also of the products of human art, as well as of the normal and unmodified phenomena of Nature. In other words, he insisted both on the unity of Nature, on the identity in substance of the natural and the artificial, and on the value to science of a knowledge of limiting cases and borderland phenomena (cf. also *Nov. Org.* ii. 28, 30). Philosophy or Science, with its three subdivisions—Divine Philosophy or Natural Theology, Philosophy of Nature, and Philosophy of Man—was to be preceded by a *Prima Philosophia*, a form of Metaphysics; the Sciences were to be 'like branches of a tree that meet in one stem, which stem grows for some distance entire and continuous before it divides itself into arms and boughs' (complete ed. i. 540). It was intended by Bacon to deal with two sets of subjects: (*a*) the most general principles, those which are common to several of the sciences, and (*b*) the 'adventitious conditions of essences,' such as Much-Little, Like-Unlike, Possible-Impossible. The second part was to be a kind of Teleology; it was to give the reasons or grounds of the distribution of Much-Little, etc.—why there is much of one thing, little of another. In other words, *Prima Philosophia* was to take the parts which are played now by the Theory of Knowledge on the one hand, and the Doctrine of Evolution on the other. Metaphysics was also to form one of the divisions (Physics being the other) of the Speculative part of Natural Philosophy, or that which was to inquire into the *causes* of things. Physics was to deal with the Efficient and Material Causes, Metaphysics with the Formal and Final Causes. The latter Bacon therefore excluded from Physics, but not from Natural Philosophy itself. 'The inquisition of Final Causes is barren, and, like a virgin consecrated to God, produces nothing,' he said in the *de Aug.* (iii. ch. 5). According to Fowler, Bacon meant not that the knowledge of them is useless, but that knowing the purpose or end an object serves does not help us to produce the object, which is the true aim of Science.

The Classification, with its wealth of subdivisions, details, appendixes, should be studied, as showing the remarkable comprehensiveness, fertility, and penetration of Bacon's mind. It has, of course, been superseded by the actual advance of the Sciences themselves, in many instances along different lines from those anticipated by Bacon, but it is still fruitful of suggestion in this age of specialists.

(2) The second part of the *Instauratio*, to which the *Novum Organum* belongs, and which remains incomplete, was to reveal the New Logic of Discovery. It was to differ from the ordinary Logic in three things—its end, its methods of proof, its principles of inquiry. Its end was to be, not arguments, but arts; its method, not syllogism, but induction; its principles, not the first notions of the mind, or the immediate data of the senses, but notions duly abstracted by the mind purified of its errors and prejudices, according to the evidence of things themselves (complete ed. i. 135 ff.).

Bacon's influence on scientific method has lain chiefly in the fact that he showed so clearly and incisively the errors and the psychological sources of the errors to which inquirers are liable, and to which they had before his day so conspicuously fallen victims. The mind must become as far as possible a *tabula abrasa*, if it is to be a true mirror of Nature; to this end it must first be cleared of its prejudices or preconceptions. The famous doctrine of the *Idola* (or 'phantoms') of the mind (see *Nov. Org.* i. Aph. 38–70, and the *Distrib. Operis*) classifies these as: (1) *Idola Tribus*, Phantoms of the Tribe, or those common to all men; (2) *Idola Specus*, Phantoms of the Cave, those which depend on the nature, character, or training of the individual; (3) *Idola Fori*, Phantoms of the Market-place, those that spring from words, the counters which men exchange so carelessly in society, but which so often are false coins, suggesting a value which does not exist; (4) *Idola Theatri*, Phantoms of the Theatre, which include the false philosophies, the Sophistical, the Empirical, and the Superstitious (see also the *Redargutio Philosophiarum* and the *Cogitata et Visa*), which had held the stage of thought until Bacon's time, and which, it was necessary to show, were mere vain imaginations, fantastic shows, neither realities nor copies of reality; this is the idea underlying the term 'Theatre.' But the mind, once cleared, would only grow another crop of weeds if left to itself (*intellectus sibi permissus*). How the Tree of Knowledge is to spring, to branch and to blossom in the mind, it is the purpose of the Method to show. It was to be purely mechanical: 'My way of discovering sciences goes far to level men's wits, and leaves but

little to their individual excellence, because it performs everything by the surest rules and demonstrations' (*Nov. Org*. i. Aph. 122). The steps are (*a*) the collection of facts in the Natural and Experimental History, (*b*) the arrangement of these facts according to Topics or Natures. Bacon thought Nature was like a printed book, containing many and varied combinations of a few simple natures or elementary qualities or forces. Given the knowledge of these, the book might be read by any one. Further, he seems to have thought that each *nature* is a limitation or 'mode' of some more general nature, irrespective of the supposed simplicity of the former nature. This more general nature is the *Form*. At other times, however, the 'form' seems to mean the nature itself which is being inquired into, *i.e.* its essence, or simple state, when apart from the many other natures with which it is combined in things. Thus the 'form' of heat is something which is common to all instances of heat, diverse as these may be in other respects, and which is absent from all instances from which heat is absent. According to Fowler (*Nov. Org.*[2] Introd.), Bacon's 'Form' sometimes means *Essence* or *Definition*, at other times *Cause* or *Law* of Production ('veræ rerum differentiæ,' 'res ipsissima,' 'natura alia quæ sit cum natura data convertibilis et tamen sit limitatio naturæ notioris,' 'fons emanationis,' 'lex actus puri,' etc., *Nov. Org.* i. 75, ii. 1, 2, 4). Both of these conceptions are contained in the modern idea of Cause. Thus, in his own remarkable example of the working of his method, he shows that heat is a kind of motion, a motion of restrained or checked expansion, in the smaller particles of a body (*Nov. Org.* ii. 20); this motion would be the 'form' of heat, *i.e.* its statement would give the definition of heat, and its production would mean the production of heat. Needless to say, it was the latter result, *operation*, that Bacon aimed at, although he held that Light-bringing experiments should be tried rather than Fruit-bringing, in the first instance.

(3) The third step in the Method is the arrangement of the Material, for a given nature or quality, into certain Tables as a basis for Induction—*Tables* of *Essence* or *Presence*, i.e. of instances which agree in the presence of the given quality, *e.g.* all cases and kinds of heat; *Tables* of *Deviation*, or of *Absence*, i.e. negative instances, or instances, *analogous to the affirmative instances*, in which the nature is absent; and *Tables* of *Degrees* or *Comparison*, instances in which the nature occurs in varying degrees.

(4) The fourth step was to be the *Exclusion* of all those natures which are either absent when the given nature is present (by the first Table), present when the latter is absent (by the second Table), or which increase when the given nature decreases, or *vice versa* (by the third Table). And it is on the application of Exclusion that Bacon places the main stress of his Induction. He expected that within a few years after the Experimental History had been formed, everything would be known about Nature! As a matter of fact, the Exclusion itself, for a single quality, would have been an endless process.

The two chief flaws in Bacon's Method are his erroneous conception of the simplicity of Nature, and his disregard of hypothesis, of the scientific imagination, as a source of 'probable' knowledge. Bacon looked for certainty, not probability. Yet he recognizes the value of hypothesis, first, in his own *Vindemiatio Prima*, or First Vintage—the example he gives of an anticipatory induction (*Nov. Org.* ii. 20, on the Form of Heat); and secondly, in the aids to Induction, of which only one class were dealt with by him, viz. the *Prerogativæ Instantiarum*, or Prerogative Instances (*ib.* ii. 21-51). These are instances such as throw light more readily or effectively than others upon the true nature of a quality; they include such well-known terms as 'Solitary,' 'Striking' or 'Glaring,' 'Parallel,' 'Limiting' or 'Borderland,' and 'Crucial' or 'Finger-post' Instances. It is possible to say that his statement of these Prerogative Instances, and the illustrations he gives, have had more influence upon scientific procedure than his Method itself has had. For the rest, the laws expressing the Forms were to give the lowest principles of Induction, from which men were to rise, first, to Middle Principles, and thence to the Highest Principles; from these, and from these only, the *Deduction* of new particulars and operations was to take place; they were to express the very heart or marrow of Nature. Such axioms, so derived and abstracted, would, Bacon believed, bring whole 'flocks of works' in their train.

Of the remaining parts of the intended *Instauratio*, Bacon wrote only some chapters of a description of the Universe—the Natural and Experimental History—in the History of the Winds, of Life and Death, of the Dense and the Rare, the *Sylva Sylvarum*, etc.; but it was not a work for which he felt himself fitted, and much that he has collected is absurd, superstitious, or unverified report from unknown or untested authorities. Active science was not his part in life. But he undertook the work only because it was a necessary preliminary, and he could get no others to do it for him. It remains true of his Method as a whole, that it was neither so novel as he believed nor so effective as he hoped. No discoveries were made by its use, and the great scientific masters that followed him employed the imagination much more than his doctrine allowed. Nor can it be otherwise; science is further than ever from Bacon's ideal, viz. that of a method which any one whatever may learn and apply. At the same time, Bacon stands, along with Aristotle, as one of the 'masters of those who know'; he stimulated, if he did not awaken, the passionate devotion to Nature and to the pursuit of truth which has been a characteristic of European science since his day. Directly or indirectly, he initiated the study of mental, moral, and social phenomena by scientific and experimental methods. He laid the foundation-stone of English Empiricism, and of the French Enlightenment. A more specific claim is made by Fowler (*Francis Bacon*, p. 91): 'Inductive Logic, that is, the systematic analysis and arrangement of inductive evidence, as distinct from the natural induction which all men practise, is almost as much the creation of Bacon as Deductive Logic is that of Aristotle.' And of both Dean Church says: 'The combination of patient and careful industry, with the courage and divination of genius, in doing what none had done before, makes it equally stupid and idle to impeach their greatness' (*Bacon*, p. 204). While ignorant or unappreciative of many of the great discoveries of his predecessors and contemporaries, Bacon's remarkable catholicity of interest and impartial judgment enabled him to anticipate, or at least to foreshadow, many of the most recent generalizations of science.

Moral Philosophy Bacon still regarded as the Handmaid of Theology; and neither in his division of its parts (*de Augmentis*, bk. 7) nor in the practical rules and wisdom of the *Essays* is he ahead of his time. In Theology he was whole-heartedly with the Moderate party in his Church; he defended toleration both by his voice and by his pen, but he preferred Atheism to Superstition (*i.e.* Romanism). Theoretically, he insisted on the complete separation between Theology and Philosophy or Science, between Faith and Reason, Revelation and Natural Experience, just as in Psychology also

he recognized in the soul of man two principles or parts, the one divine, inspired, immortal, the other animal, created, perishing—a doctrine adopted from Telesio, but ultimately Aristotle's. For the deeper questions of Metaphysics or of Theology he had, however, no taste, and it is only in his criticism of his predecessors and in his inspired proclamation of the New Method of Discovery that he has influenced the thought of the world.

LITERATURE.—I. *WORKS*.—The most complete and accurate edition is that of Ellis, Spedding, and Heath (with valuable introductions), 7 vols., 1857–59 (reprinted 1879–90). Annotated editions of separate works are: *Advancement of Learning*[4], by Aldis Wright, 1891; *Novum Organum*[2], by Fowler, 1889; *Essays*, by Whately (1864), Aldis Wright (1862), Abbott (1889), and Reynolds (1890).

II. *LIFE*.—James Spedding, *Letters and Life of Francis Bacon*, 7 vols., Lond. 1861–74, *Life and Times of Francis Bacon*, 2 vols., Lond. 1878, and *Evenings with a Reviewer; or, Macaulay and Bacon*, 2 vols., Lond. 1881; Macaulay, 'Essay on Bacon' (*Edin. Rev.* 1837); E. A. Abbott, *Bacon and Essex*, Lond. 1877, and *Francis Bacon, an Account of his Life and Works*, 1885; R. W. Church, 'Bacon' (*Eng. Men of Letters*), Lond. 1884; T. Fowler, 'Francis Bacon' (*Eng. Philosophers*), Edin. 1881; John Nichol, *Francis Bacon, His Life and Philosophy*, 2 vols., Edin. 1888, 1889 (reprinted 1901); Charles de Rémusat, *Bacon, sa vie, son temps, sa philosophie*[3], etc., Paris, 1877; Sidney Lee, *Great Englishmen of the Sixteenth Century*, 1904.

III. *PHILOSOPHY, METHOD, ETC.*—Ch. Adam, *Philosophie de Fr. Bacon*, Paris, 1890; Barthélemy St.-Hilaire, *Étude sur Fr. Bacon*, Paris, 1890; Kuno Fischer, *Francis Bacon von Verulam, die Real-philosophie und ihre Zeitalter*, 1856 [2nd ed. 1875; Eng. tr. by John Oxenford, 1857]; Efraim Liljequist, *Om Francis Bacon's filosofi*, Upsala, 1894 (with special reference to Bacon's Moral Philosophy); Hans Natge, *Ueber Francis Bacons Formenlehre*, Leipzig, 1891.

J. L. M'INTYRE.

BĀDARĀYAṆA.—The name of the supposed author of the *Vedānta-* or *Brahma-sūtras*. In Indian tradition he also bears the name of *Vyāsa*, *Vedavyāsa*, or *Kṛṣṇa Dvaipāyana*; but nothing is known of his person or life. Cf. F. Max Müller, *Six Systems of Indian Philosophy*, London, 1899, p. 153 ff., and art. VEDĀNTA.

R. GARBE.

BAD(A)RĪNĀTH.—A famous temple and place of pilgrimage situated on the banks of the Vishṇugangā, a tributary of the Alaknandā (wh. see), in British Gaṛhwāl, on the lower slopes of the Himālaya, lat. 30° 44′ 15″ N.; long. 79° 30′ 40″ E. The place takes its name from the worship of Vishṇu in his manifestation as Badarīnātha or Badarīnārāyaṇa, 'Lord of the *badarī* or jujube tree' (*Zizyphus jujuba*), which, however, does not now grow there. Probably an ancient tree-cult is here associated with the thermal spring close by, which suggested the sanctity of the place; and it has been from time immemorial a resort of pilgrims, the merit of the pilgrimage being enhanced by the difficulties of the journey to the spot. The temple is said to owe its foundation to the great teacher Śankarāchārya, a Malabar Brāhman, who lived about the beginning of the 8th cent. A.D., and was the leading Brāhmanical missionary to Northern India. But the building has been repeatedly devastated by earthquakes and avalanches, and the present temple has no appearance of great antiquity.

'The idol in the principal temple,' writes Atkinson (*Himalayan Gazetteer*, iii. 24 f.), 'is formed of black stone or marble about three feet high. It is usually clothed with rich gold brocade, and above its head is a small mirror which reflects the objects from the outside. In front are several lamps always burning, and a table also covered with brocade. To the right are images of Nar and Nārāyaṇa, and on the left those of Kuvera and Nārada. The idol is adorned with one jewel, a diamond of moderate size, in the middle of its forehead, whilst the whole of the properties, including dresses, eating vessels, and other paraphernalia are not worth more than Rs. 5000 (£333).'

'A good deal of ostentatious attention is paid to the personal comfort of the idol at Badarī. It is daily provided with meals, which are placed before it; the doors of the sanctuary are then closed, and the idol is left to consume its meals in quietness. The doors are not opened again till after sunset; and at a late hour, its bed being prepared by the attendants, the doors are again closed until morning. The vessels in which the idol is served are of gold and silver, and a large establishment of servants is kept up, both male and female, the latter as dancing-girls and mistresses of the celibate priests. The only persons who have access to the inner apartments are the servants, and no one but the Rāwal himself is allowed to touch the idol' (*ib.*).

The temple is closed in November, and the treasure and valuable utensils are shut up in a vault beneath the shrine, after which all the establishment retires to a lower valley in the hills. As a rule, from November until the end of May the temple is covered with snow. The idol itself is said to have been miraculously discovered in the bed of the river, and, as it bears scarcely any resemblance to the human form and exhibits obvious traces of having been worn by water action, this seems probable. As an illustration of the miraculous powers attributed to the image, it is said that a Sonār, or goldsmith, visited the shrine, and, finding that his iron ring on touching the image became gold, cut off one of the god's fingers for his private use. But the stump began to ooze with unmistakable blood, and from that day to this no Sonār dares to approach the shrine and risk incurring the judgment which befell the sinner, who was immediately struck blind (Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, iv. 340).

The close connexion of the temple and its ritual with Southern India is shown by the fact that the principal priests are Nambūri or Nambūtiri Brāhmans from Malabar, the head man of whom is called Rāval (Skr. *rāja-kula*, 'king's family'). In order to provide for the succession in the event of the illness or death of the Rāval, a disciple (*chelā*) is always in attendance to take his place. Formerly the priests were supposed to be celibate, but they excuse their failure to maintain this rule by the fact that they have almost altogether broken off their connexion with Southern India. The chief pilgrims to the shrine, which can be reached only after a dangerous and difficult journey, are Yogin (*q.v.*) and Bairāgin (*q.v.*) ascetics. Every twelfth year, when the sun is in the sign of Aquarius, is held the Kumbha fair, and the Ādhkumbha, or 'half Kumbha,' every sixth year. On these occasions the shrine is visited by large numbers of pilgrims.

LITERATURE.—Atkinson, *Himalayan Gazetteer*, iii. 23 ff.; Traill, *Statistical Account of Kumaun*, ed. Batten, p. 57; *Punjab Notes and Queries*, iv. 196. For a full account of the Nambūtiri Brāhmans of the Malabar Coast, see Fawcett, *Bulletin of the Madras Museum*, iii. pt. i. 33 ff.

W. CROOKE.

BADGES.—**I. Totem marks and tribal badges.**—The earliest and most wide-spread use of badges was their employment on the persons of men; among savage peoples every man bore on his body his *totemic mark*, in addition to his *tribal badge*. These two are quite distinct; the totem mark, which is by far the more ancient, was intended to indicate the totem from which the bearer believed himself to be descended, so that all the members of the same stock were recognized by their totem mark. It was a later stage in civilization when a number of stocks, or clans, joined together, and thus brought about the formation of tribes; the communities which were so formed were differentiated from each other by their tribal badge. The religious significance of these badges must at one time have been very great; for, though the totem mark was not originally religious in character, yet with the development of the religious instinct it became so in process of time.

'A totem tribe—which is not necessarily a local unity . . . is one in which the belief that all members of the tribe are of one blood is associated with a conviction, more or less religious in character, that the life of the tribe is in some mysterious way derived from an animal, a plant, or more rarely some other natural object.'

'Totem tribesmen in savage countries often affect a resemblance to their sacred animal, even at the cost of slight mutilations and other self-inflicted deformities. In other cases stocks are distinguished by the patterns of their tattooing, which there is reason to believe were in many cases originally meant as rude pictorial representations of the totem.' *

* Robertson Smith, *Kinship*[2] (1903), pp. 217 f., 247.

Some examples of these totemic badges are as follows. Among the Omahas, a North American tribe, the Buffalo clan wear two locks of hair in imitation of horns; the members of another Buffalo clan 'wear a crest of hair about two inches long, standing erect and extending from ear to ear; this is in imitation of the back of a buffalo.' A bird clan among the same people 'leave a little hair in front, over the forehead, for a bill, and some at the back of the head, for the bird's tail, with much over each ear for the wings.' The Bakotas, in Africa, knock out the upper front teeth in order, as they say, to be like oxen; the Mangangas chip their teeth in order to make them resemble those of a cat or a crocodile.* Tatuings, cicatrices, and the like are now often of a merely ornamental character, but it seems certain that originally they always denoted something more specific; the fact that they are very frequently made at initiation ceremonies is significant.† The tribal badge, as indicating kinship with a god, was probably a religious emblem from the beginning.

2. Totem dress.—A badge of a different kind, but lineally descended from the totem badge, is that which indicates being under the special protection of a totem-god; this is the totem dress. It is represented in a great variety of forms, but the principle underlying each is the same, namely, that of effecting a resemblance as close as possible to the totem-god, and thus ensuring his protection. Association of ideas, not reason, is what guides men in the stage of undeveloped civilization in these things. It is at the great crises of life, such as initiation, marriage, and death, that these badges are assumed; for example, among many savage peoples, when a youth is definitely made a member of his tribe by being initiated into the tribal mysteries, he is dressed or painted or otherwise made to resemble the totem—or god, as the case may be —by some means or other; that is to say, he is brought into closer contact than usual with it. The custom of which Lucian gives an example is probably connected with this:

> 'When a man intends to go on a pilgrimage to Hierapolis, he offers up a sheep and eats some of its flesh. He then kneels down and draws its head over his own head, and prays at the same time to his god.' ‡

3. Secret Society badge.—Of an entirely different character are the badges worn among certain savage peoples to indicate membership of a secret society. Among the most striking examples of this category are the leaf or flower badges of the various *tamate* associations which exist in the Banks Islands and the neighbouring Torres group. Here the badge is usually worn on the head, the distinctive flower or leaf being stuck in the hair.§ To assume the badge without being a member of the *tamate* is an offence against the society, and is punished according to the power and position of the society offended.‖

4. Analogous customs among Semites.—What has been said may be paralleled by analogous customs among races within the Semitic area. While direct evidence for the existence of the totem badge among the Semites is wanting, there are a good number of data to be gathered from various sources which suggest that examples of this must at one time have existed among them. Thus among the Arabs every tribe has its *wasm* ('tribal mark'), which is branded on its cattle;* this is paralleled by the custom of the Bechuanas, who mark the ears of their cattle with an incision which resembles the open jaws of a crocodile, one of their totems.† The Indian hook-cross, or *swastika* —whatever its origin—was likewise a badge of ownership, which was branded on the ears of the cattle.‡ The same custom, though the badge was different, was practised by the ancient Icelanders, by the Madagascans, Somalis, etc.;§ as regards the Romans, Columella gives the following testimony: 'His etiam diebus maturi agni, et reliqui fœtus pecudum, nec minus majora quadrupedia charactere signari debent.'‖ These, and many other examples that might be given, doubtless all descend from similar origins.

Such analogous instances among peoples, some of whom still use totem badges on their persons, suggest the probability that originally the *wasm* among the Arabs was branded on the tribesmen as well as on their cattle;¶ this is confirmed by the fact that, according to Lucian, all the Syrians bore *stigmata* of religious significance on their wrist or neck.** Just as the cattle were marked with the badge of ownership, so, one may reasonably surmise, in earlier days men were marked with the badge of their god to denote that they belonged to him and were under his protection. Herodotus tells us that fugitive slaves who fled for sanctuary to the Heracleum at the fish-curing station near the Canopic mouth of the Nile, were dedicated by being tatued with sacred marks, and were thus made over to the god, so that they could not be reclaimed by their master.†† Among the Semites generally it may be said that all marks upon the body, within the categories referred to, were badges of relationship either to a god or to a fellow-creature. The nature of these relationships differed, of course. In a large number of cases, as we have seen, it denoted ownership; but it is probable that both types of relationship go back to a common original, viz. the totemic badge.‡‡ Perhaps one may conceive the sequence of ideas and practice to have been, roughly speaking, something of this kind. The totem formed the background; from this arose the totem mark, or badge of kinship with the totem; the next step would be the development of totem gods, necessarily conceived of as tribal ancestors, to whom worshippers would dedicate themselves by stigmatization; closely related to the latter would be the mourning custom known as 'cuttings for the dead,' which was a remnant of part of the ritual connected with ancestor-worship. Thus the badge of kinship became the god's mark of ownership. Regarding the relationship between the god and his worshippers there were always reciprocal duties; in return for worship, and all that this implied, the god was bound to look after his people. It was always, therefore, a question of *covenant*, and the stigmatization became thus the *badge of the covenant* between the god and his worshippers. This is brought out by the fact that the ultimate Semitic root is the same for 'mark' and 'covenant' (cf. the

Arabic *sharaṭ*, 'a mark,' and *sharṭ*, 'a covenant'; cf. Gn 9^{13} 31^{46}).* On the analogy of this badge of covenant between a god and his people arose that of a covenant between man and man. Among the Arabs, when two men made a covenant, they inflicted a wound in their flesh, either in the hand or arm, and drank each other's blood.† It is true that the reciprocal blood-drinking constituted the central act, but the mark left on the person of each party to the covenant was the visible badge of the covenant.‡

What has been said may be illustrated by some Old Testament data. We shall not expect to find here any reference to marks which could be considered as directly totemic, for it is only remnants of the later stages, referred to above, that we come across in the OT; at the same time, the existence of animal names of clans and men § suggests the probability that totemism existed among the early ancestors of the Israelites. Circumcision was the badge of the covenant between Jahweh and His worshippers (cf. Gn 17^{14}). Originally it must have denoted something else. This is proved by the very wide observance of the custom by a great variety of peoples, ‖ and more especially by the fact that there are strong reasons for the belief that the rite came to the Israelites through Egypt; ¶ but to the Israelites it became the distinguishing mark of Jahweh's ownership. Belonging to the same category was the *prophet's badge*. The story preserved in 1 K 20^{35-43} is sufficient evidence of the existence of such a badge. As the prophets were dedicated to the service of Jahweh in a special manner, a badge peculiar to their order in early times would be appropriate enough. Of the character of this badge nothing is known beyond the fact that it was made on the forehead or on the top of the head (cf. the tonsure of later days). An interesting parallel is the Buddhist badge of priesthood. After having served his novitiate, the candidate goes through the ceremony of admission to the priesthood; he kneels before the idol, and 'three small heaps of incense are laid upon his forehead, and these are set fire to. The man must kneel till the incense heaps burn down, and thus burn an indelible mark on the head. This ordeal is repeated, as the man rises in the priesthood, till he bears nine scars upon his scalp.'** The distinctive dress of the Israelite prophet, which may be regarded as a badge of office, is paralleled by the yellow robe of the Buddhist priest. The Taoist priest also wears a distinctive dress, which differs from that of the Buddhist priest.

'Cuttings for the dead' (cf. above) are mentioned in Lv 19^{28} (cf. 21^{5}, Dt 14^{1}). In the last passage it says: 'Ye shall not cut yourselves, nor make any baldness [the cognate Arabic root means 'wound'] between your eyes for the dead.' The custom is prohibited on account of its being a heathen rite. From this it is permissible to assume that it was both ancient and widely prevalent. Cuttings in the body such as those mentioned in 1 K 18^{27-29} may perhaps be a remnant of a practice whereby a god was, in times of great emergency, reminded of the badge denoting his ownership, and thereby called upon to fulfil his part of the covenant.

Badges which may also have at one time proclaimed Jahweh's ownership were the 'sign' on the hand and the 'memorial' between the eyes mentioned in Ex $13^{9.16}$ (cf. Rev 20^{4}). These must originally have been marks cut into the hands and forehead, and were preserved perhaps in their original form only by the prophetical order; later on the 'phylacteries' took their place (see Dt 6^{8} 11^{18} etc.).* Lineally descended from these, too, is perhaps the badge referred to in Job 31^{35} ('Lo, here is my mark, let the Almighty answer me'). The word used here for 'mark' comes from the root meaning 'to wound,' and it is the same as that used in Ezk $9^{4.6}$, the reference being to those who are true to God, and therefore belong to Him.

A mark of an entirely different character is the badge of the manslayer, mentioned only once in the OT, in reference to Cain.†

5. Jewish Badge.—One of the most extraordinary uses of badges is exemplified in the various forms of the 'Jewish badge' worn by the Jews during the Middle Ages. This first originated among the Muhammadans; by the 'Pact of Omar' (640) all Jews living in Muhammadan countries were ordered to wear a yellow seam on their upper garments.‡ In later times Jews in Egypt were compelled to wear bells on their garments, and a little calf carved of wood; the latter, according to Lane-Poole, was to remind them of the Golden Calf. In the 14th cent. the badge took the form of a yellow turban § among Jews in Egypt; in other parts, *e.g.* in Tripoli, a particoloured turban marked the Jew.‖ It was, in the first instance, the Muhammadan precedent which was followed when in Christian lands the Jewish badge was introduced. It appears that this badge was already in use in some lands before the central authority in Rome put forth an ordinance on the subject applying to all Christendom; thus in France the badge was in use in 1208; ¶ but its use was made universal by a decree, prompted by Innocent III., of the fourth Lateran Council (1215), and it applied to Muhammadans as well as to Jews. The reason given for the decree was the need of preventing inter-marriage and concubinage between Christians and non-Christians.

'Contingit interdum quod per errorem Christiani Judæorum seu Saracenorum et Judæi seu Saraceni Christianorum mulieribus commisceantur. Ne igitur tam damnatæ commixtionis excessus per velamentum erroris hujusmodi excusationis ulterius possint habere diffugium, statuimus ut tales utriusque sexus in omni Christianorum provincia et omni tempore qualitate habitus publici ab aliis populis distinguantur.'**

In accordance with this the badge was everywhere enforced; but it differed in size, shape, and colour in different countries. In France it was a circular piece of cloth, usually yellow in colour, sewn on to the outer garment. The alternative of a yellow head-dress was permitted, while Jewesses wore a distinctive veil. The age at which Jews had to begin to wear the badge varied in different parts of France, at some places seven years, at others not until fourteen. The badge could be worn on the breast, or left shoulder, or on the girdle, or even on the hat. In France, Spain, and Italy the customs were similar; in these countries, too, exemptions from wearing the badge were often permitted, usually in consideration of a money payment. In Germany the badge took the form of a special hat, the 'Judenhut.' It was pointed

at the top, and the brim was often twisted into the shape of a pair of horns. Red was the usual colour, in later times green. But the wheel-badge, of yellow or saffron and of various sizes, was also worn in Germany in the 15th cent. by the men, while Jewesses were obliged to wear two blue stripes on their veils or cloaks. Sometimes the letter S (=*signum*) appeared in the yellow circle. In Switzerland the badge took the form of a piece of red cloth shaped like a pointed hat; later on it became a wheel fixed on the back.* In Crete the circle was worn; this was also marked upon the houses of Jews, a custom which is in vogue even at the present day.† In England it would almost seem as though the badge was at first introduced as a safeguard for the Jews. The Earl of Pembroke, who was regent during the early years of the minority of Henry III., sought to encourage the settlement of the Jews again in England after their cruel experiences during the reign of John. It was to ensure their security, so that no one could plead that he had assaulted a Jew in ignorance of his race, that the badge was, so far as is known, first introduced into England, and worn by Jews whenever they appeared in public. The ordinance containing this provision was put forth in 1218. The badge consisted of two strips of white linen or parchment, imitative of the Two Tables of stone, which were fastened to the dress in a prominent manner. Originally these were white in colour, but later yellow was ordered. By the statute of Edward I., *de Judaismo* (3 Edw. I. 1274-1275),‡ which dealt exhaustively with the Jewish Question, Jewesses as well as Jews were forced to wear a badge, and its object now was to mark out Jews, who by this statute were prohibited from mixing with Christians. Thus it became, as in other countries, a badge of shame.§

LITERATURE.—There do not seem to be any works definitely occupied with the subject of badges. Data have to be gathered from a great variety of sources. See the references in the footnotes above, which represent only a selection.

BĀGDĪ.—A Dravidian, cultivating, fishing, and menial caste of Central and Western Bengal, which at the Census of 1901 numbered 1,042,550. Their religion is a compound of orthodox Hinduism with survivals of animism and nature-worship. In the former stage, the regular Hindu deities are worshipped in a more or less intelligent fashion. But besides these they venerate Guṣain Ērā, the goddess of the Santāls, and Bar Pahāṛ or Marang Buru, the mountain-god of the hill races (see ORĀON). According to their own statement, their favourite deity is the snake-goddess, Manasā, whose image, represented with four arms, crowned by a tiara of snakes, and grasping a cobra in each hand, is paraded through their villages, and finally flung into a tank—apparently a rite of mimetic magic intended to remove her dangerous influence. They also parade the effigy of a female saint named Bhādū, who is said to have been daughter of the Rājā of Pachet, and who died a virgin for the good of the people. Her worship consists of songs and wild dances, in which men, women, and children take part. The legend supplies one more instance of the development of local gods in India from actual historical personages, as illustrated by Lyall (*Asiatic Studies*², i. 39 ff.).

BAGHDAD.—I. **Sketch of history.**—Baghdad is the capital of the Eastern Khalīfate, founded in A.D. 754 (A.H. 136) by al-Manṣūr, second Khalīf of the 'Abbāsid dynasty, whose metropolis it remained, except for the period 836-862, when the court was transferred to Samarra, until the overthrow of the dynasty by the Mongol Hūlāgū in 1258 (A.H. 656), after which the seat of the Khalīfate was removed to Cairo. Baghdad remained in the hands of the Ilchans, or Persian Mongols, till 1507, when it was taken by Shah Ismā'īl, founder of the Safawid dynasty, from whom it was taken in 1534 by the Ottomans, in whose hands it has ever since continued, except for the brief period of occupation by the Persians.

The name Baghdad (*bāgha-dāta*, 'given by Bagha *or* God') is one of the many cases in which the older name of a locality outlasts newer appellations. The name which Manṣūr gave his city was either his own, or *Madīnat al-Salām*, 'City of Peace.' Another appellation was *al-Zaurā*, 'the Crooked,' on the analogy of similar names given to the chief cities of Islām. Of the older name there are several dialectic forms. Jews and Christians often called it Babel.

An account of the secular history of this city should be sought in historical works dealing with the Khalīfate, or in the monograph of Guy le Strange, *Baghdad under the Abbasid Caliphate*, Oxford, 1900. We shall confine ourselves to its importance for the history of Religion and Ethics.

The accession of the 'Abbāsid dynasty marked the recognition in Islām of a principle which at the first had been vehemently repudiated—the hereditary right of the Prophet's family to the sovereignty (*imāma*). The rise of this is clearly due to the hereditary principle having been adopted by the usurper Mu'āwiyah, founder of the Umayyad dynasty; when it was once recognized that the sovereignty belonged to one family, the majority of Muslims would be disposed to agree that that family should be the Prophet's. Only, since the Prophet's line was continued through a daughter, there was room for difference of opinion as to which of two families had the right to his inheritance. The law of the Qur'ān seemed to favour the doctrine that, where there was no male issue, the father's brother succeeded, and on this theory the claim of the 'Abbāsids was based. But to those who held that there could be succession through the female line the Prophet's heirs were the descendants of his daughter Fāṭima and her husband 'Alī—the 'Alids, 'Alawids, or Fāṭimids.

So long as the problem was to dispossess the Umayyads, these two families worked together, leaving the question between themselves to be decided later; but when the organizing genius of Abū Muslim had won the throne for the 'Abbāsids, they fell out, and, the latter being in possession, the 'Alids were perpetually rising, but never produced in the Eastern provinces a leader capable of securing success; they were decimated by massacres, and were intimidated by torture and imprisonment. Nevertheless they formed a potent factor in Baghdad politics till the coming of the Mongols, and in the *fatwā* which decided the assassination of the last of the Khalīfs of Baghdad the influence of 'Alid sentiment is noticeable. The Mongol general asked whether it was true that the execution of the Khalīf would cause a general convulsion of nature. The jurists whom he consulted replied that, if such an act could cause a natural convulsion, nature would have been convulsed by the death of 'Alī and that of his son Ḥusain.

The site of the 'Abbāsid capital was selected with a view to avoid Syria, where the Umayyads were popular, and Arabia, where the 'Alid cause was strong, and to be near Persia, especially Khorasan, where the 'Abbāsids had their chief adherents. And, indeed, the triumph of the 'Abbā-

sids is sometimes regarded as the re-conquest by Persia of its ancient hegemony. Persian influence speedily grew strong at the Khalîf's court, and the institution of a foreign bodyguard soon took all power out of the Khalîf's hands, and placed it in those of a Dailemite or a Turkish Sultan.

2. Literary importance of the foundation of Baghdad.—The rise of the new dynasty synchronized with the popularization of *paper*, an invention nearly as momentous for the diffusion of knowledge as that of printing. It also broke with the illiterate tradition of the earlier periods of Islâm, which indeed some of the Umayyads had shown a tendency to discard. The production of literary works proceeded apace, and the 3rd cent. of Islâm produced polygraphs such as Isḥâḳ of Mauṣil and Jâḥiẓ of Baṣra. Translation from foreign languages was encouraged, especially Greek, Syriac, and Pahlavi; a royal library was founded by Ma'mûn (ob. A.D. 833), and his example was followed by other men of eminence, such as the vizier of Mutawakkil, al-Fatḥ b. Khâḳân (ob. 861). The respect which the creations of the Greek genius have universally won was accorded to them at Baghdad, where indeed the dogma of the infallibility of the Greeks in all scientific questions had its adherents. Debates, in which religious questions were not absolutely avoided, were encouraged by literary viziers, and fanaticism on such occasions was at times unfashionable (cf. Yâḳût, ed. D. S. Margoliouth, ii. 46 and the Pahlavi *Gujastak-Abâlish*, ed. Barthélemy, Paris, 1887). A public library with endowments for the assistance of students was founded in the 4th cent. A.H. by the vizier Sâbûr b. Ardashîr; and the building of colleges on a large scale characterized Seljûk rule in the 5th.

3. Islâmic religious buildings in Baghdad.—The founder of the city, Manṣûr, built a mosque, known subsequently as *al-Ṣaḥn. al-'Atîḳ*, 'the Old Court,' side by side with his Palace of the Golden Gate. This was subsequently enlarged by succeeding Khalîfs, and appears to have survived the sack of the city by Hûlâgû, though no trace remains of it now (le Strange, *op. cit.* 32-37). Since the building of mosques counted as a meritorious act, apart from the needs of worshippers, they continued to be erected so long as the Khalîfate lasted; and the quarter called 'the Baṣra Gate' was said to contain 30,000 of these edifices (Ṣafadî, *Com. on Lâmiyyat al-'Ajam*, i. 64). Round the tombs of famous men several notable sanctuaries arose; such were the *mashhads* of Abû Ḥanîfa and Mûsâ b. Ja'far, the tomb of Ma'rûf of Karkh, etc. Preachers and teachers built or had built for themselves hermitages, called *ribâṭ*, of which the number must have been very great; perhaps the most celebrated of these was the *ribâṭ* of the Shaikh al-Shuyûkh, built by order of 'Amîd al-'Irâḳ for the Ṣûfî Abû Sa'd of Nisabur (ob. 1086: Ibn al-Athîr, *annis* 450 and 479 A.H.). Another of some note was the *ribâṭ* of al-Zauzanî, opposite the mosque of Manṣûr, built for 'Alî b. Maḥmûd al-Zauzanî (ob. 1060). The preacher 'Abd al-Qâdir al-Jîlânî (*q.v.*) had a *ribâṭ* as well as a school. The works hitherto made accessible on the topography of Baghdad do not offer the same variety of names for mosques as is exhibited by the topographies of Cairo, but this is likely to be accidental. The doors of the mosques were used for placarding government notices (Ibn al-Athîr, A.H. 533), and the inside of the buildings served for many uses not directly connected with religion, *e.g.* the recitation of verses, and the narrating of stories (Jâḥiẓ, *Ḥayawân*, iii. 8: 'Mosque of 'Attâb'), or the publication of political intelligence (Ṭabarî, iii. 2216: 'in the two public mosques of Baghdad'; 2224, 13: 2249, 3, etc.).

4. Religious history of Baghdad.—Shortly after the founding of the city an inquisition was started by Manṣûr with the view of suppressing the *zindîḳs* (see art. ATHEISM [Muhammadan]), and this was continued by his successors Mahdî and Hâdî (*Aghani*, xii. 100, xiii. 74; Ṭabarî, iii. 517, 548); on the accession of Hârûn al-Rashîd all criminals except those under this charge were released. After the taking of the city by Ma'mûn's forces (A.D. 813) the dogma of the createdness of the Qur'ân was adopted by the new Khalîf, who instituted an inquisition into the tenets of his subjects, and violently persecuted those who rejected this doctrine: the inquisition was maintained by the two succeeding Khalîfs, and was finally stopped in the second year of Mutawakkil (A.D. 848-849, W. M. Patton, *Aḥmed Ibn Ḥanbal and the Miḥna*, Leyden, 1897). The followers of the most distinguished martyr in these persecutions, Aḥmad Ibn Ḥanbal, presently became a power in the city, and riots between them and the Shâfi'ites took place at many periods; they are first mentioned in the year 934, when the Ḥanbalites endeavoured to enforce their ascetic rules on the population by a variety of violent proceedings. A furious manifesto was fulminated against them by the Khalîf Râḍî, charging them with anthropomorphism, and threatening them with the extreme penalty of the law unless they abandoned their system. Similar troubles are mentioned as late as 1082. The Khalîf Râḍî, immediately after his accession (A.H. 322, A.D. 934), had started an inquisition, having for its purpose the suppression of the sect which believed the deity to be incarnate in one Ibn Abî' l-'Azâḳir al-Shalmaghânî. His published letter on this subject is in part preserved (see Yâḳût, *op. cit.* i. 298). One of this person's followers refused to retract his opinion even when the alleged possessor of deity was publicly scourged. The sect was not extinguished by this persecution, as in the year 952 a fresh inquisition was instituted by the vizier Muhallabî.

The chief cause for religious riots, however, was the ceaseless dispute between Sunnites and Shî'ites, whose differences, in spite of the centuries that have intervened, are still a cause of trouble in India and elsewhere. The dispute was in origin, as has been seen, more political than religious; and although the founder of Baghdad massacred the Alids, some of the later 'Abbâsids were inclined to favour their cause, and it is asserted that Ma'mûn had the intention of willing away the sovereignty to a member of their family. This was frustrated; and the perpetual risings of the 'Alids led Mutawakkil in the year 850 to destroy the grave of al-Ḥusain, and penalize visits to it, an act which was regarded by his son as justifying parricide. The process by which Shî'ism was transformed from a political movement into a religion is not quite easy to trace; but it seems likely that the fantastic beliefs which gathered round the person of 'Alî and his descendants were due to the infusion of Indian and Persian ideas into Islâm. It is probable that the separation of Shî'ism from Sunnism, as a system with a code and a liturgy of its own, was due to the rise of the Fâṭimid dynasty of N. Africa, whose rulers after their conquest of Egypt proceeded to the work of codification, their practice having doubtless existed some time before. In the disputes between Turks and Dailemites which marked the 4th and 5th cents. of Islâm, the former theoretically favoured Sunnism, the latter Shî'ism; and the Buyid (Dailemite) conqueror of Baghdad, Mu'izz al-Daula, in 962 ordered certain Shî'ite execrations to be affixed to the mosque doors. These were erased by the populace; and on the advice of his vizier Muhallabî he had a harmless formula substituted. The next

year, however (963), he insisted on the observance of the fast of Muḥarram 10 in Shî'ite fashion; and this practice continued some time after his death, as in 968 it is spoken of as 'celebrated as usual.' His successors appear to have been far less keenly attached to Shî'ite doctrine; and it is asserted by a good authority (*Rasâ'il* of Hamadhânî, p. 424) that 'Aḍud al-Daula went so far as to impose a poll-tax on the Shî'ites, as being members of a tolerated religion. The practice of the fast appears to have become gradually restricted to the Shî'ite quarter of the city, which in 971 (perhaps for the first time) appears as Karkh, also at that time 'the quarter of the merchants.' In the first riot (of that year) many sects and parties are involved, but on subsequent occasions the Sunnites and Shî'ites appear to have been the chief combatants. In 973, when the dispute between Bakhtiyar and Subuktakin gave the Turkish party the upper hand for the time in Baghdad, the Sunnites, who were in possession of 'the Food Market,' mounted a woman on a camel, and called her 'Â'isha, and made two of their number represent Ṭalḥa and Zubair respectively; they then made an onslaught on the Shî'ites, thus reproducing the Battle of the Camel, in which 'Â'isha and her allies had attacked the forces of 'Alî. In 1015 there was a riot between the two parties, resulting in the Shî'ites being forbidden to celebrate the Fast by order of Fakhr al-Mulk; we find the Shî'ites still in occupation of the quarter called Karkh, whereas the Ḳallâ'în and Barley-gate were in possession of the Sunnites: in 1048 the Bâb al-Âzaj (Eastern side) and the 'Cobblers' are further specified as Sunnite abodes. The following year, owing to an armed force having attempted to prevent the Shî'ites from celebrating the Muḥarram lamentations, the latter began to fortify their quarter (Karkh) with a wall; and the Sunnites proceeded to do the same with their Ḳallâ'în quarter, which immediately adjoined the other. After considerable fighting the parties agreed to a truce, with the view of preventing government intervention; they proceeded, however, with their fortifications, and a fresh outbreak was caused by the Shî'ites building towers on which they inscribed the words 'Muhammad and 'Alî are the best of mankind; whoso assents shows gratitude, but whoso denies is an unbeliever'—a formula which charged the Sunnites (with whom Abû Bakr is the *second best* of mankind) with unbelief. The Sunnites were headed by the Ḥanbalites. The *mashhad* Bâb al-Tibn (according to le Strange's maps, at a long distance from the disturbed quarter), apparently a Shî'ite sanctuary, was in the course of these riots violated, plundered, and burned by the Sunnites, to avenge the death of one of their number. The Shî'ites in revenge burned the Ḥanafite institutions. The disturbance soon spread to the eastern city, where the dwellings of the sects were also divided. At the beginning of 1053 the Turkish mercenaries mixed themselves up with the dispute, and killed a member of the 'Alid family; in the riots which followed, a large part of the Karkh quarter was burned down, and the inhabitants moved to other parts of Baghdad. Karkh, however, remained the headquarters of the Shî'ites, and in 1086 we hear of a riot between them and their Sunnite neighbours on the west, in the Baṣra Gate Quarter. Something like a final reconciliation between the two parties was effected in 1108, when the people of Karkh, fearing a fresh persecution, gave the Sunnites free passage through their quarter on a visit to the tomb of Muṣ'ab b. Zubair, a practice which had been forbidden for fear of giving offence to the Shî'ites; and the Sunnites in their turn granted some corresponding concessions. Karkh, however, remained the Shî'ite quarter after this settlement of the dispute (Sibṭ Ibn al-Ta'âwîdhî, ed. Margoliouth, p. 215).

Besides the disputes which led to riots, there were frequent bickerings between members of rival sects, and it would appear that all which were started had some representation at the capital. Attempts were at times made to suppress the discussions between them, but without permanent success.

The history of Muslim ritual was doubtless largely influenced by Baghdad practice, which itself was at times dictated by political motives. So we are told (Ibn al-Athir, *anno* 494 A.H.) that the practice of crying aloud the formula called *basmala* had been abandoned for years in the mosques of Baghdad, because it had been adopted in the rival Khalîfate of Cairo; the Khalîf who re-introduced this practice adopted another which was also against the principles of the Shî'a. Islâm in these matters is extraordinarily conservative, and innovations found little favour.

5. Standard of morality.—The Islâmic principles of the relations between the sexes, embodied in the practices of polygamy, concubinage, and the veiling and seclusion of women, render the morality of a Muslim community too different from that of a Christian or Aryan community to admit of comparison. Thus we find a leading theologian at Baghdad having 148 concubines (Ibn Khallikan, i. 386) without offending public opinion. Such pictures as have come down to us of Baghdad society, as in the *Arabian Nights*, imply a state of affairs on which it would be painful to dwell; of the most elaborate of these descriptions (Abu' l-Ḳâsim, *Ein Bagdâder Sittenbild*, of the 4th century; ed. A. Mez) few pages could be rendered into a modern language without infamy. The dignity of the highest offices of state, the Khalîfate and the Vizierate, did not appear inconsistent with the bandying of the grossest jests (see, *e.g.*, Ibn Khallikan, tr. de Slane, i. 29). Allusions to immoralities not sanctioned by the Muslim law are also so common in the literature of the period, that we can only suppose the practices to have been widespread. Towards drunkenness popular opinion was more decidedly unfavourable; yet this vice seems to have been prevalent in fashionable circles, and scenes in which the leading men and their associates are all under the influence of liquor are common during the whole period. An example may be taken from the middle of the fourth century, which is recorded by Yâḳût (*op. cit.* i. 342): a letter comes from the Sultan Mu'izz al-Daula to the vizier al-Muhallabî, who has all his secretaries and under-secretaries with him. The letter is urgent, but every man in the room has drunk deep. Ibrâhîm the Ṣabian has drunk no less than the others, but, having a stronger head than they, is able to write the necessary reply. We have another contemporary description of the wine-parties of this vizier (*Yatîmat al-dahr*, ii. 106), which took place twice a week; the chief judge of Baghdad with other judges took part on these occasions, when each 'received a gold cup weighing 1000 *mithḳâls* or less, into which he would plunge his beard; after exhausting most of the contents, they would sprinkle the remains on each other and then dance.' In the 6th cent. the poet Ibn al-Ta'âwîdhî introduces descriptions of wine-drinking into his encomiums on Khalîfs (p. 162) and other distinguished persons (p. 86). From the 4th cent. onwards the history of Baghdad is frequently occupied with the '*ayyârûn*, or robbers; and the *Maḳâmahs* of Hamadhânî (late 4th cent.) furnish us with a list of thieves' tricks showing that their trade was highly specialized; the contemporary anecdotes of Tanûkhî indicate, however, that the metropolis was fairly well policed. The same

tales indicate that the practice of banking was fairly developed, implying the existence of a well-established code of rectitude in monetary transactions; they also show that there was a considerable amount of sympathy and mutual kindness between the poorer members of the community, but great disregard for the sanctity of human life, and an insufficient sense of responsibility in the domestic relations. Public opinion seems to have been ordinarily in favour of the kindly treatment of slaves (Jâḥiẓ, *Misers*, p. 38), and against severe punishments.

6. **Agencies for reform.**—For dealing with the criminal classes the rulers of Baghdad employed spies, whose business it was to report at head-quarters whatever seemed to them worthy of notice; certain rulers occupied themselves particularly with public morality: so the Khalîf Mu'tamid (A.D. 892) issued an edict forbidding story-tellers, astrologers, or fortune-tellers to sit in the street or in the great Mosque; while book-sellers had to take an oath that they would sell no metaphysical or theological works. Similarly the Khalîf Muḳtadir (ob. A.D. 1094) banished from the capital all singing-women and *filles de joie*, forbade the entry to the public baths except in decent attire, and ordered the demolition of various galleries in which games were played, and which permitted the players to look down into people's houses. Probably the efficacy of these and similar edicts was of no long duration. In the year 816 we read (Ṭabarî, iii. 1008) of an interesting case of a voluntary organization of the peaceful citizens of Baghdad to repress crime and outrages; one of the leaders in this movement 'hung a Qur'ân on his neck, and began by exhorting the inhabitants of his locality; and when he had obtained a hearing, proceeded to admonish all the inhabitants of Baghdad, high and low, beginning with the noblest family of all, the Banû Hâshim; he established a register in which he inscribed the names of all those who undertook to observe his regulations and coerce those who disobeyed them. With the followers thus acquired he patrolled the streets of Baghdad, and put a stop to robbery and blackmailing.' His proceedings were at first disapproved by the government, but afterwards they acquiesced and bade him continue. A less drastic method of dealing with the vicious propensities of the citizens was furnished by the efforts of the preachers, of whom we have notices for all periods of the Khalîfate; the satirists Hamadhânî and Ḥarîrî endeavour to represent them as shameless hypocrites, whose interest lay only in the collection, but there is no reason for believing this account to have been ordinarily correct. The earliest of these preachers whose sermons have come down to us is al-Ḥârith b. 'Abdallah al-Muḥâsibî (ob. 857); they are practical in character, but are said to have attracted vast audiences, and to have produced ecstatic phenomena among their hearers. It is chiefly in and after the 5th cent. of Islâm that the historians call attention to the performances of the Baghdad preachers, for whom colleges (or, as we should say, chapels) were often erected. In 1093 the capital was visited by a preacher from Merv, Ardashîr b. Manṣûr; he met with such signal success that, when the ground occupied by his hearers was measured, it was found to cover 157 by 120 cubits. The Khalîf himself at times condescended to attend these discourses, which were occasionally used for political or seditious purposes. The aim of the preachers was not only to ameliorate the morals of their co-religionists, but to convert members of other communities to Islâm; and fabulous accounts are given in their biographies of their success in both endeavours. The preacher about whom we possess the largest amount of information is 'Abd al-Qâdir al-Jîlânî (ob. A.D. 1165). He appears to have carried on an agency in which the temporal as well as the spiritual wants of his converts were served. Money for the purpose was provided partly by four wealthy wives of the preacher, and partly by gifts taking the form of thank-offerings which came in from the many regions whither his fame had spread; and others who followed this calling were financed in the same way.

7. **Christian communities in Baghdad.**—Religious toleration, as understood by the Muslim community, was practised by the 'Abbâsid Khalîfs, and a Christian community began to gather in Baghdad almost immediately after its foundation. Perhaps the earliest scene which introduces Christians in this city is one recorded in the *Chronicle* of Dionysius of Tell-Mahré, when the Jacobites in the year A.D. 767 refer to the Khalîf Manṣûr the question of appointing a Patriarch for their sect. The Khalîf, ordinarily terrible, treats them with courtesy, and tells them to make the choice themselves; they select one David of Dara, and the Khalîf gives him a deed of investiture, authorizing him to punish with the extreme penalty of the law any Jacobite who fails to acknowledge his authority. The Nestorian sect, however, was of greater importance than that of the Jacobites at the 'Abbâsid capital. In the reign of Mahdî (A.D. 775–785) the great Nestorian monastery, called Dair al-Rûm, was founded in the Shammasiya Quarter, where the chief Christian settlement, called Dar al-Rum, was located. It was followed by the erection of many more churches and monasteries, several of which were destroyed when Baghdad was taken by Hûlâgû; their names are collected by le Strange (*op. cit.* 206–212). The different sects had different churches, and kept apart in religious matters; only at some time the Nestorian Patriarch, whose residence was in Baghdad, came to be regarded as the official head of the whole Christian community, and as such he is described in the deed of investiture of the year A.D. 1138 (H. F. Amedroz, in *JRAS*, 1908, p. 448). The sects there enumerated are four: the two already mentioned, the Melchites, or Greek orthodox, and the Rûm, whom there is some reason for identifying with the Franks, or Roman Catholics. Owing, probably, to the superiority of Christian morality and education, the members of these communities had a tendency to monopolize all the professions, trades, and situations in which skill and trustworthiness were required. The humiliating and intolerant edicts of Omar I. had repeatedly to be proclaimed, owing to outbreaks of Muslim jealousy (A.D. 849, 853, 1091, etc.), but fell quickly into abeyance; Mutawakkil, who in the year A.D. 849 tried to enforce them, ten years later put into the charge of a Christian scribe the money for the building of his contemplated city, Jafariyyah. Normally it would appear that the Christian doctors (in all senses of the word) enjoyed high favour at the Khalîfs' and Sultans' courts. The *History of the Nestorian Patriarchs* (ed. Gismondi, Rome, 1896) tells of the familiar intercourse enjoyed by the Patriarch Timotheus with the Khalîfs Hâdî (A.D. 785–786) and his son the famous Hârûn al-Rashîd. A specimen of their conversation is there given (p. 65): 'O father of the Christians,' said Hârûn to the Patriarch, 'tell me briefly which religion is the true one in God's eyes.' Without hesitation Timotheus answered: 'That religion of which the rules and precepts correspond with the works of God.' The reply was regarded as felicitous, because the Khalîf's request contained a dangerous trap; and the mere rumour that a Christian had spoken disrespectfully of Islâm or its Prophet would have been sufficient

to cause a riot (Ṭabarī, iii. 2162). The sanguinary rule that punished apostasy from Islâm with death remained unaltered (*ib.* 1434, A.D. 856); but, owing to the mild spirit of Abû Ḥanîfa's legislation, there was a tendency to mitigate the more barbarous regulations of 'the Pious Khalîfs,' and the tone of the code drawn up by his pupil Abû Yûsuf for the Khalîf Hârûn is decidedly humane. The magnificence with which the Christian feasts were celebrated attracted many Muslims to take part in these occasions, and even attend services in the churches; if the poet Sibṭ Ibn al-Ta'âwîdhî may be believed (ed. D. S. Margoliouth, p. 400), he went so far as to fast fifty days in order to gratify his Christian friends. The monasteries were also visited by Muslims anxious to purchase wine, the sale of which in shops was, nominally at least, forbidden (*ib.* 240, 14–18); while the beauty of the youthful deacons attracted other visitors for a still less reputable reason (*ib.* 52). The form of immorality alluded to appears at times to have led to shameful persecution (Yâḳût, *op. cit.* ii. 26, where the scene is at Edessa).

8. Other religious communities.—The Jews enjoyed the same rights as Christians in Baghdad, and had a special quarter, with a bridge called after them. Numerous synagogues were founded, of which the largest was called Bar-Nashala (?) (Grätz, *Geschichte der Juden*, v. [1895] 198). References to the Jews are not very common in the historical and anecdotic literature concerned with the city; they appear, however, to have had their share of the State appointments, and, indeed, in A.D. 1091 we read of one holding the very high posts of Vice-Sultan (*wakîl al-Sulṭân*) and Manager of the Empire (*Niẓâm al-Mulk*). They practised the medical profession, and probably various trades, including that of scribe; as early as the time of Ma'mûn (813–833) we read of one who made his living by executing copies of the Old and New Testaments and the Qur'ân (Amedroz, in *JRAS*, 1907, p. 38). At times they were in possession of great wealth, and were notorious for the display of finery (Ghazâlî, *Revival of the Religious Sciences*, iii. 182). It was thought meritorious to refuse to teach them Arabic grammar even for large sums, as the proof-passages came from the Qur'ân; and insulting language about them is used by poets (Sibṭ Ibn al-Ta'âwîdhî, 75, 246). Nevertheless the foundation of Baghdad and the improvement in their condition, due to the greater toleration of the 'Abbâsids, seem to have been epoch-making for the Jewish community. Jewish literature from this time follows Muslim literature almost slavishly, the various departments of grammar, codification, philosophy, poetry, elegant prose, homiletics, collections of anecdotes, all taking their rise from Arabic models; and since no Jewish non-Biblical MS earlier than the 'Abbâsid period has hitherto been discovered, it has been argued by the present writer that the remaining departments of Jewish literature (notably the collections of Tradition) are based on Islâmic models also (cf. *JE* ii. 435–8).

A community which produced some men of eminence in the scientific and literary world of Baghdad, chiefly in the 4th cent. of Islâm, were the *Ṣabians*, who arbitrarily took a Qur'ânic appellation, properly belonging to a very different sect. The most distinguished member of it, the state-secretary Ibrâhîm, appears to have found in his religion no obstacle in the way of promotion, and to have enjoyed the friendship of even such ecclesiastical dignitaries as the Registrar of the 'Alids, who honoured him with a memorial poem; while the familiar acquaintance with the Qur'ân which his profession demanded was regarded as a merit. His grandson, however, found it desirable to embrace Islâm. The *Magian*, or Mazdayan, system enjoyed fewer privileges than the above-named sects, as intermarriage with them and the use of meat slaughtered by them were forbidden the Muslims; nor were they allowed to have acknowledged places of worship. Nevertheless it would appear that some of them were settled in Baghdad, and even enjoyed wealth. They were to be found (according to Jâḥiẓ, *Misers*, p. 111) all over Baghdad and the other cities of Irâḳ, distinguished by their bare feet or their laceless shoes. Of other sects, usually offshoots of those which have been mentioned, there are occasional notices.

LITERATURE.—To the references given throughout the article there may be added the historical romance (Arabic), *Haḍârat al-Islâm fî Dâr al-Salâm*, by a modern writer, Jamîl Nakhlah al-Mudawwar (Cairo, 1905).

D. S. MARGOLIOUTH.

BAHAISM.—See BĀB, BĀBIS.

BAHELIA (Skr. *vyādha*, 'one who wounds').—A tribe of hunters and fowlers in Northern India, which at the Census of 1901 numbered 53,554, the majority of whom are found in the United Provinces and Bengal. They are probably survivors of a non-Aryan race, who still practise their primitive occupation of hunting, trapping birds, and collecting jungle produce. They are, in name at least, all Hindus, but are never initiated into any of the orthodox sects. They worship a pantheon of deified ghosts, such as Kālū Bīr, Parihār, Hardeo or Hardaur Lālā, the cholera godling, Kālē Deo, and Miyān, probably the Musalmān saint of Amrohā in the Morādābād district. To these, sacrifices of fowls, goats, or pigs are made, with offerings of cakes, fruits, and grain. Parched grain and milk are offered to the household snake at his festival, the Nāgpañchamī, or Dragon's Fifth. Besides these they observe the ordinary Hindu feasts, and their religious rites are superintended by a low class of village Brāhmans.

LITERATURE.—Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 109.

W. CROOKE.

BAIDYĀ (Skr. *vaidya*, 'one learned in the Veda,' esp. in the Āyur Veda, on which the Hindu system of medicine is based).—The Bengal caste of physicians, which at the Census of 1901 numbered 90,036, found under this name only in Bengal and Assam. They are a highly respected caste, claiming descent from a Brāhman father and Vaiśya mother. Their religion is that of the orthodox high-caste Hindu. The older families worship the Śaktis, or Mother-goddesses. Some among the poorer classes follow the rule of Viṣṇu. Many have in recent years joined the Brahmo Samāj. They were closely associated with the Neo-Vaiṣṇavism preached by Chaitanya (*q.v.*) in Bengal (*q.v.*), and several of the best known Guṣains, or spiritual guides, of that sect are drawn from the ranks of the Baidyās. The business of a physician is naturally confined to men of high caste, because taking medicine from the hands of a Baidyā is a sort of sacramental act, so that some orthodox Hindus in Bengal, when at the point of death, call in a Baidyā to prescribe for them, in the belief that by swallowing the drugs he orders they obtain absolution from their sins. In the Deccan the Vaidūs, who have adopted a name derived from the same Skr. root, are wandering Telugu beggars, who gather healing drugs and simples and hawk them from door to door, or beg for alms. Their religion is of the vaguest type, their family-god being Vyānkoba of Giri or Tirupati (*q.v.*), in North Arcot. But when they are on their begging tours they seldom carry his image with them. They never go on pilgrimages or keep any fast or feast, except the Dasahrā in September, when they offer

boiled mutton to their god, and after laying it on his altar eat it themselves.

LITERATURE.—For the Bengal Baidyās, Risley, *Tribes and Castes*, 1891, i. 49; for the Deccan Vaidūs, *Bombay Gazetteer*, xvii. 212 f.

BAIGĀ.—A term of Dravidian origin, applied to designate the non-Brāhmanic priests of the Goṇḍs and kindred races along the hills of the Cent. Prov. and Bengal. It has been specially applied to a cultivating tribe, which at the Census of 1901 numbered 33,914, found in the Cent. Prov. and in Cent. India. The best account of them is that by Ward, who found them in the Mandlā district of the Cent. Provinces. He describes them as the acknowledged superiors of the Goṇḍ races, being their priests and authorities in all points of religious observance. The decision of a Baigā in a boundary dispute is almost always accepted as final, and, from this right as children of the soil and arbiters of the land belonging to each village, they are said to have derived their title of Bhūmiyā (Skr. *bhūmi*, 'the land').

These Baigās, who are found in the eastern districts of the Cent. Prov., are reported to be quite different from the Goṇḍs, their vocabulary consisting almost entirely of Hindi words. Those who occupy the Maikal range of hills do not show the flat head and nose and receding forehead characteristic of the Goṇḍs, but have longer heads, more aquiline features, and particularly small hands. It is thns possible that they may represent an intruding race from the Gangetic valley, who introduced the northern culture among the Goṇḍs and gained the position of priests among that people, with whom they afterwards intermingled. Their religion much resembles that of the Goṇḍs (*q.v.*), and they reverence the same gods, adding to the Goṇḍ pantheon Māī Dharitrī, or Mother Earth. The god in charge of the village is Ṭhākur Deo, the 'Divine Lord,' and he is honoured accordingly. But they fully believe also in the spirits which haunt the forests—the primary basis of the religion of the Dravidians of Northern India—and in the places which are regarded as more especially the haunts of these spirits, shrines (*pāt*) are erected, each under the charge of a special member of the tribe. There is no special rule regulating the erection of these shrines, except that they are built at places where it is believed there has been a spirit manifestation. Sometimes it is a place where a man has been killed by a tiger or a snake, or has met his death in a sudden or tragical manner; and a special rite is performed to lay the ghosts of those who have died in an unexpected way. Some members of the tribe are supposed to be gifted with special powers of magic or witchcraft, and it is common for the Baigā medicine-man to be called in to bewitch the tigers and prevent them from carrying off the village cattle. The Goṇḍs thoroughly believe that they are possessed of powers such as these.

The religious rites of the Baigās are of the same type as those of the Goṇḍs; at marriages, births, and deaths the customs of the two tribes are identical. In the Chhattīsgaṛh District the Baigā worship centres round Dūlhā Deo, the deified bridegroom god, and Devī, the Mother-goddess, in her manifestation as Bhavānī. They have a peculiarly brutal mode of sacrificing a pig in honour of Nārāyaṇ Deo, who is identified with the Sun, and is regarded as their household god. The wretched animal is crushed to death under a beam, after having been cruelly tortured—this rendering the sacrifice more acceptable to the deity.

Further east, in the hill country of the United Provinces and Bengal, the Baigās do not form a special tribe, but are the exorcists, medicine-men, and priests of the hill races. They are generally drawn from the wilder and more secluded tribes who are supposed to have maintained the race traditions in the most perfect way. They discharge all the religious duties of these peoples, the functions of the priest being as yet differentiated from those of the exorcist or sorcerer only in the most imperfect way, if at all.

W. CROOKE.

BAIN.—I. **Life and personality.**—(1) Born in the part of Aberdeen known as Gilcomston, on the 11th of June 1818, Alexander Bain died at Ferryhill Lodge, in his native city, on the th18 of September 1903, in the eighty-sixth year of his age. Although he reached this long term of years, he was never a man of very robust constitution: on the contrary, from the time, in early days, when a serious breakdown in health occurred, he had to husband his strength, and to make the most of favouring circumstances. This he did by careful habits and a well-planned system of simple living, subjecting everything to rule and method. He was specially attentive to diet and to physical exercise; and walking in particular (his chief recreation) was timed and regulated with almost mathematical precision. As a boy, and during his student days at Aberdeen, he worked as a handloom weaver—his father's occupation. When he was a pupil at Gilcomston Church School, his ability was recognized; and as he was emerging into youth he had the good fortune to attract the attention of the Rev. John Murray, minister of the North Parish of Aberdeen, who introduced him as a promising youth to Dr. John Cruickshank, then Professor of Mathematics at Marischal College, and a patron of talented and aspiring young men. This was in 1835. From that moment, Dr. Cruickshank took young Bain by the hand; and his interest in him was fully rewarded by the high position that the pupil achieved in most of the University classes. In 1841, Bain (having just passed from studentdom) received an appointment in the University as Assistant to Dr. Glennie, Professor of Moral Philosophy, who had fallen into ill health. In this capacity he had to conduct the class on the Professor's approved methods, and to read the Professor's lectures, being responsible for the order of the class. In the interests of discipline, he made innovations little by little in the teaching, bringing the subject more up to date, and giving expression (in more or less guarded fashion) to his own views. This, when discovered by the Professor, was resented, and led, after three sessions, to Bain's losing the post of Assistant. Thereafter he made his way to London, the goal of all ambitious Scotsmen, where, in 1848, he was appointed to an office in the Board of Health under Edwin Chadwick. In London he soon came into contact with great literary and political leaders—more especially with George Grote and J. S. Mill, who became his fast friends, and with whom he was closely associated in philosophical and other work. From London he returned to Scotland, where he wrote many literary productions for Messrs. Chambers of Edinburgh; then went again to London, where he married and settled down for a time, producing there his two great philosophical works, *The Senses and the Intellect* in 1855, and *The Emotions and the Will* in 1859.

These works raised him at once to the front rank of psychologists. Consequently, when the two Universities of Aberdeen (King's and Marischal) were united (or, as the local term is, 'fused') in 1860, Bain was presented by the Crown, on the

recommendation of Sir G. Cornewall Lewis, then Home Secretary, to the Chair of Logic and English in the united University. For twenty years from this date—down, that is, to the year 1880—he occupied this Chair with great distinction, teaching the two subjects of English and Logic (including in the latter Psychology) and making his influence felt. These were years of enormous intellectual activity and literary productiveness, when there issued from his pen in unceasing flow works on English Grammar, on Rhetoric, on Logic, on Psychology, on Ethics, and on Education; when also he originated the philosophical journal *Mind*, which he owned and financially carried on for sixteen years at considerable pecuniary loss; and when, in the Senatus and the Council of his University, he pushed forward with untiring energy, and in the face of strenuous opposition, projects of University reform. Nor did his activity diminish when he resigned the Chair in 1880. There ceased only, at that time, his class-teaching. His writing of books went on, as well as his active interest in local affairs; and it was while he was Emeritus Professor that the students of the University, appreciating his genius and his faculty for practical work, and proud of his fame, elected him their Lord Rector for two separate terms of three years each. This entailed his constant attendance at, and presiding over, the meetings of the University Court, and his indefatigable piloting of University schemes to successful issue at a most important and electrically charged moment of the University's existence.

His professorial labours were in part rewarded when former pupils, in 1884, had his portrait painted by Sir George Reid, and presented as a lasting memorial to the University. Reward for services done to the community came also about the same time, or somewhat later—in particular, the presentation of his bust in marble to the Free Public Library, in 1892, in recognition of his long-continued and whole-hearted interest in the education of the masses, dating from his student days, and his early connexion, as lecturer and as secretary, with the Mechanics' Institute of the city. All the while, his pen continued active. New works appeared, old works were revised (often in large part re-written); and, though the energy slackened by degrees as the years advanced, it could hardly be said ever to have actually ceased, for, as late as 1903 (the year of his death), appeared his *Dissertations on Leading Philosophical Topics*, and to the end he retained a keen interest in the progress of Psychology and the movement of Philosophy. Passing by minor productions, his chief works are these:—*The Senses and the Intellect* (1855), *The Emotions and the Will* (1859), *On the Study of Character, including an Estimate of Phrenology* (1861), *An English Grammar* (1863), *English Composition and Rhetoric* (1866, enlarged ed. 1887–8), *Mental and Moral Science* (1868), *Logic* (1870), *Mind and Body* (1872), *A Higher English Grammar* (1873), *Education as a Science* (1879), *James Mill—a Biography* (1882), *John Stuart Mill—a Criticism, with Personal Recollections*, (1882), *Practical Essays* (1884), *On Teaching English* (1887), *Dissertations on Leading Philosophical Topics* (1903), *Autobiography* (1904).

(2) His personality was striking; and a stranger seeing him for the first time could not but ask who he was. A dapper figure, somewhat under medium height, he had a well-knit frame, with expansive chest and broad shoulders; a finely formed head, with a brow marked by notable prominences at the temples; keen, piercing hazel eyes, with unusually long eyelids; a strong curved nose; thin lips, which gave the mouth the character of determination, and readily expressive either of satisfaction or of contempt; a face covered by a copious beard—all save the upper part of the chin, which, till his later years, was clean shaved; hands with long fingers, and particularly expressive thumbs, which bent back in a significant fashion as he gesticulated. His gait was peculiar. While walking, he bent his body forward and placed a hand behind his back, as if steadying the movement, and forthwith accelerated his pace till it became a moderated run—indicative of mental activity, exhilaration, and the utter absence of self-consciousness and regard for outward appearance. Keen as a needle intellectually, he never spoke in public or wrote for publication without showing the logician's subtle power; and, in private talk, one could not help feeling that one was in the presence of a supremely observant and analytic mind—a modern Aristotle, noting and dissecting everything. Yet he was a man of very wide interests and of warm heart. He took an active part in many public duties—School Board, Mechanics' Institute, Free Library, etc. His feelings were always under control, and those who met him casually (and to whom he would be dry and reserved) pronounced him to be hard and unsympathetic (as, indeed, he not infrequently was, if he met conventional and commonplace people). But let genius or sterling character appear, no matter where (it might be in the humblest ranks of life), and he was immediately attracted. It was genuine worth alone that counted with him.

Readers of his works have often complained that his writings are devoid of emotion. They have ground for their complaint. Bain did himself an injustice here. Whenever he took up the pen, his feelings seemed to forsake him. But with a special friend—say, a favourite student (these were not many, but they were choice)—looking to him for help or counsel, his real nature came forth. All his resources—his advice, his ideas, his MSS, his library, his patronage—were put at his disposal; and he spared no effort to further his interests and aspirations. Underlying all was true generosity of disposition. In like manner, in the small circle of his intimates, his gentler and more attractive qualities came out. He had wit and humour; and he possessed a fund of anecdotes, which he told well. He was a kind host, and a staunch friend. On the other hand, he had his dislikes and his animosities. Like all true-hearted people, he was sensitive to insult and determined in his opposition. It was no light matter to arouse his enmity. He was a man of strong convictions and loved a controversy; and in debate he hit hard, but never took a mean advantage of an opponent. Meanness raised his indignation and contempt, and he had none of it himself. He was dominated by a sense of justice and of truthfulness (few men more so), and his judgment was ever balanced—a fact that comes clearly out in his published writings, as it did in his daily life. He had the power of judging apart from personal feeling, to a degree that is very unusual. Hence his criticisms were pre-eminently impartial. And it mattered not whether he were criticizing himself or others. As he looked back upon it, his own work was viewed with a clear unprejudiced eye, and commented on and appraised accordingly—as may be seen in some striking instances in the *Autobiography*. In like manner, his criticisms of others' work were frank and honest, and they frequently gave offence to friends. He had not learned the art of saying what he did not mean, and such an art he heartily despised. He had many fine qualities, which those who knew him best could best appreciate; and his defects not infrequently arose from these.

2. Position in Literature and in Philosophy.— In estimating Bain's position in Literature and in Philosophy, we must keep his offices apart.

(1) First of all, let us take him as *grammarian*. This need not detain us long. His works show his merit to be that of a subtle analyst and a clear expositor — scientific and methodical, and not afraid to express his views, even when they might be unacceptable; and when we remember the backward condition of the North of Scotland in grammatical attainments at the time when Bain came as Professor to Aberdeen, we can see the magnitude of the task that lay before him as he set forth to instruct in grammar. But the task was successfully accomplished, although not without difficulty. He had to get hold of the teachers, and these were apathetic, when not actively hostile. He solved the difficulty by indoctrinating his students, a large proportion of whom were to be teachers, with newer and progressive views, and thus by degrees revolutionized the teaching of English in Scotland, and made his name one to conjure with throughout the North.

(2) But his work as *rhetorician* is even more remarkable. Campbell and Blair had ruled supreme in this realm; but now a new impulse was given to the study and the practice of composition, and the effect for good was soon visible on all hands. It has sometimes been objected to Bain's teaching that he did not produce stylists. It may very well be doubted whether the stylist is not a man 'born and not made.' But, be that as it may, the objection is superficial. For style is wherever clearness of exposition is, and wherever there is a writer who has an intelligent appreciation of the shades of meaning in words and can give utterance to his thoughts in definite logical form and with exact precision. Such writers Bain produced in abundance. Rhetoric was to him, first and foremost, an intellectual discipline, designed to secure clearness of expression; and for this end he was supremely critical. Not even Shakespeare, still less the minor poets, neither Bacon nor De Quincey nor Macaulay nor Carlyle among our master prose writers, escaped his scalpel: all were subjected to analysis and dissection, so that the student might be warned against their faults, while encouraged to imitate their virtues. This cold, critical, dissecting process has been greatly objected to in the teaching of style; and perhaps it may be admitted that Bain made too drastic a use of it. But if it be the safeguard against that florid vacuous writing which so frequently passes for style, a little excess in the use of it may be tolerated with equanimity, if not actually excused.

(3) As an *educationist*, Bain holds a very high position. He held advanced views on University reform, and advocated the due recognition of the modern languages (as against the traditional monopoly of Classics), and the right of Natural Science to have an equal place in the University training with the older established subjects. But besides, he went outside University requirements and took a wide view of Education, raising the question of Education in general and the grading of subjects at the various stages of instruction. In this connexion he gave expression to very definite notions about the proper order of studies, and about how teaching should be conducted so as to be best suited to the harmonious development of the individual mind. His contributions to this highly important subject are to be found chiefly in his book on *Education as a Science*.

(4) As *logician*, Bain holds a place with J. S. Mill. He never pretended to start afresh here, but simply to amend and carry forward Mill. This he succeeded in doing. His amendments and additions are noteworthy, both in Deductive and in Inductive Logic; but specially valuable is his carrying of logical principles to their practical issues and his splendid application of them to the sciences in detail (see bk. v. of his *Logic*). This stands by itself in Logic manuals.

(5) But Bain's greatest fame must ever rest on his *psychology*. He was a reformer here in a supreme and lasting sense. One of the earliest in modern times to recognize the importance of bringing psychology into close relation with physiology, he devoted much attention to the elaboration of this position, and presented it in a striking fashion. From the standpoint of the cerebro-psychologist, he handled mind in all its processes —emotive, intellectual, and volitional. This led to his discarding the old 'faculty' psychology, which looked upon the mind far too much as if made up of self-contained compartments, where the processes worked in independence of each other, and in which the connexion with the body was slurred over or ignored; and it led also to his devising a natural-history plan for the description of mental phenomena—a plan where the physical embodiment of mental states was recognized as rigorously as the specifically psychical aspect of them. It is obvious that we have here the precursor of what has come to play so prominent a part in more recent psychology, viz. psychophysics and the experimental determination (determination by experiments systematically carried out in the laboratory) of the workings of mind. Next, Bain was supreme among his fellow-psychologists in the persistent application of Association and its laws to the interpretation of mind, and in the thorough treatment that these laws received at his hands (see also art. ASSOCIATION). He is first and chiefly an Associationist, and his whole strength is devoted to showing that the great problems of psychology — especially the problem of the Perception of an External (Material) World —are to be solved on Associationist principles. This stupendous task he accomplished in a way that, whether we be fully satisfied with the result or not, gives him a foremost place in the history of psychology. No one can know what modern Associationism is at its best who does not go to *The Senses and the Intellect* for information; but this must be supplemented by Bain's most recent utterances in other productions. For example, the objection had frequently been made that his Associationist explanation is too mechanical, and neglects to take account of the activity of the mind. Here is his reply, given in *Mind*, in criticism of Wundt, and reprinted in *Dissertations on Leading Philosophical Topics* (pp. 50, 51):

'I propose to remark upon the bearing of Wundt's speculation upon the laws of Association, properly so called. Notwithstanding the stress put upon the action of the will, he still allows that will is not everything: he does not shunt the associating links, and lay the whole stress of the exposition on the apperceptive volition. What he says as to the essential concurrence of emotion and will with the workings of association we fully admit. No associating link can be forged, in the first instance, except in the fire of consciousness; and the rapidity of the operation depends on the intensity of the glow. In like manner, the links thus forged are dormant and inactive, until some stimulus of consciousness is present, whether feeling or will. . . . The subsequent rise or resuscitation of ideas consequent on association is a fresh field of study. . . . Over and above the original adhesion, there are circumstances that assist in the reproduction, and make it a success or a failure. Chief among these is the power of the will, but not to the exclusion of other influences. Even the addition of emotional excitement, which of itself counts for a great deal—that is, apart from moving the will—is not all. The purely intellectual conditions, under which I include the number and nature of the associating connexions at work in a given case, bear a large part in the process of resuscitation. More particularly, as to the influence of the will in apperception, everything that Wundt advances is supported by our experience. The will may make up, in some small degree, for the feebleness of a contiguous linking, partly by a more strenuous attention, but far more by the search for collateral links in aid. It may likewise favour the recall of a resembling image. But neither of

these two cases represents its habitual and all-powerful efficacy: in both, the limits of its reproductive force are still narrow. The operation that represents Wundt's Apperception in its full sweep is that crowning example of voluntary power—the command of the thoughts, by detaining some and dismissing others, as they arise, and are found suitable, or the contrary. Too much cannot be said as to the importance of voluntary attention in this lofty sphere. All thinking for an end—whether it be practical or speculative, scientific or æsthetic—consists in availing ourselves of the materials afforded by association, and choosing or rejecting according to the perceived fitness or unfitness for an end. When, therefore, Wundt says that Association alone does not explain the higher intellectual functions, he only says what we all admit, namely, that Association needs the control of will and feelings, in order to bring forth our more important thinking products. In the absence of some degree of conscious intensity, Association can no more unite ideas, or restore the past by virtue of such unions, than a complete set of water-pipes can distribute water without a full reservoir to draw from. The scheme of Wundt does not lead to the slighting of Association as a great intellectual factor. His Apperception would be nothing without it.'

Next, Bain excels in his analysis of mental states and processes and his fullness of telling illustrations. We have only to look at his handling of the Sensations, or at his treatment of the Emotions, to see that he has subtlety and insight of a very exceptional kind. Even when dissenting from him, we must confess that he is penetrative and suggestive to a degree. He is too analytic at times—this we may frankly allow; but his keen dissection is a helpful preliminary to a better understanding of the phenomenon dissected. Where his psychology stands him in least stead is when the distinction between psychology and epistemology comes in and needs to be specially attended to. Though he was quite aware of this distinction, it never assumed in his thoughts its rightful place; and his exposition sometimes suffers accordingly. He is also, in his general handling of mind, too individualistic. Although in his later years he explicitly recognized that the growth of the human mind cannot be thoroughly explained without taking into consideration the fact of Heredity (see, for example, the *latest* edition of *The Senses and the Intellect*), he had originally shaped his theory on the supposition that each individual had to learn for himself what he comes ultimately to attain, and this prevented his ever giving to the wider conception the due scope in psychology that it merits. In like manner, he never laid sufficient stress on what the fact of his being born into a formed language does for the individual, enabling him to appropriate with comparative ease, at an early age and in a comparatively short time, knowledge which, if he had to acquire it for himself from the beginning without such aid, would take him an indefinitely long time, and perhaps might not be achieved at all within the three score years and ten of his life.

(6) It was in line with Bain's psychological principles and with his democratic nature that, in *Ethics*, he should be a thoroughgoing *Utilitarian*. The same analytic spirit that he had shown in his handling of intellectual and emotional phenomena he shows in his treatment of the will. His analysis of conscience and his review of moral principles in his *Moral Science* show what Associationism can do in explanation of our ethical nature. They are certainly subtle and practical, and put the matter with calm scientific precision. Ethics is to him a *science* or nothing at all. He, therefore, has no trust in high ideality: principles tested by concrete facts of experience are what he requires. Yet, the whole of the facts must be attended to. Hence, he was emphatic in acknowledging the altruistic and disinterested, as well as the egoistic, side of our ethical constitution. Consequently, if we take morality as simply concerned with our relations as members of society, having our own and other men's interests in view, then Bain's teaching commands attention and no small measure of approval. It is essentially a doctrine of justice as between man and man, and between the individual and the community, and of the right of the State, having regard to the interests of the social units, to legislate with authority. It would, if accepted and consistently acted on, produce good citizens and promote the general welfare. Where it is defective is in not recognizing the value of the *ideal* side of morality and in not making adequate allowance for the strength and potency of the emotions in moral conduct. Appeals to ideality and the dignity of man appeared to him 'gross pandering to human vanity'; and he did not think that much practical good could come from that. Man, as we actually find him, is too frail and erring, and, what is worse, too malevolent by nature (for Bain was insistent on the native malignity of human nature) to permit our catering with impunity to his self-conceit. We must view him as he is, not blinking the disagreeable facts, and legislate accordingly; and, doing so, our Ethics must be sober and reasonable. Hence, his teaching lacks the glow which the Ethics that recognizes the Ideal as supreme unquestionably possesses.

(7) Bain was not, in the strict sense of the term, a *metaphysician*. Indeed, it was his claim to have purged psychology of metaphysics, and he had an inveterate distrust of unbridled speculation. Speculation, indeed, was not absolutely forbidden; but it must be speculation based on experiential data, and verifiable by appeal to experience again. Here he was the prototype of modern Pragmatism. In both, we have the same inductive spirit, the same determination to trust experience alone, the same regard to utility or the practical needs of man—experience the test, practicality the end. True, he could not avoid occasionally being himself, at least, half metaphysical; as, for example, when, at the end of his chapter on the 'History of the Theories of the Soul' in *Mind and Body*, he says:

'The arguments for the two substances have, we believe, now entirely lost their validity. . . . The one substance, with two sets of properties, two sides, the physical and the mental—a *double-faced unity*—would appear to comply with all the exigencies of the case. We are to deal with this as, in the language of the Athanasian Creed, not confounding the persons nor dividing the substance.'

Nevertheless he regarded the higher philosophical thinking, as we find it, *e.g.*, in Spinoza or in Hegel or in Kant, with great suspicion. Such metaphysical terms as 'personality,' 'self-consciousness,' 'the Absolute,' he would, if he could, have banished from the language. He constantly protested his inability to read any meaning into them. He also refused, because of the ambiguity of the term 'self,' to accept 'self-realization' as adequate to express the ultimate ethical end. Moreover, the great metaphysical problems—those of the External World and of the Freedom of the Will—seemed to him to be in great measure mere word-puzzles: they arose from our inability to find a formula or a linguistic setting fully adequate to express what we are conscious of in our experience.

Such, then, was Professor Bain as a thinker and a writer. His attitude towards Metaphysics being discounted, he made a name in Logic and in Ethics, as well as in the spheres of Grammar and Rhetoric. But in the realm of Psychology he occupies a position all his own. It is here that his influence has been greatest, and it will continue. Not only has the professed psychologist learned from him, but his principles have been effective in their practical application to many sciences (such as Education), and they cannot be ignored by any teaching that has respect to experience and the nature of man as we actually find it. What is best in his

system has been assimilated by philosophy, and is being carried forward to greater issues. That, perhaps, is the highest compliment that can be paid to a thinker.

LITERATURE.—A. Bain, his works as enumerated in this article; Th. Ribot, *La Psychologie anglaise contemporaine* (1870); W. L. Davidson, art. in *Mind*, xiii. (new series) 151–155 and 161–179, also art. 'Bain, Alexander,' in *EBr*[10] xxvi. 77–79.

WILLIAM L. DAVIDSON.

BAIRĀGĪ (Skr. *Vairāgin* [*vi-rāga*, 'one who has subdued all earthly desires']).—A sect of Hindu ascetics, which at the Census of 1901 numbered 765,253, of whom the vast majority are found in Bengal and Rājputāna. The term is usually restricted to those who follow the cult of Vishṇu, or of one of his incarnations, especially those of Rāma and Kṛishṇa. There is some evidence to prove that this worship, which is specially popular in Northern India, arose on the spread of the Rājput power which followed the overthrew of the Buddhist dynasties. The Bairāgis

'probably represent a very old element in Indian religion, for those of the sect who wear a leopard's skin doubtless do so as personating Narasiṁha, the leopard incarnation of Vishṇu, just as the Bhaganti faqir imitates the dress, dance, etc., of Kṛishṇa. The priest who personates the god whom he worships is found in "almost every rude religion, while in later cults the old rite survives, at least in the use of animal masks," a practice still to be found in Tibet' (Rose, *Panjāb Census Report*, 1901, i. 131, quoting Trumpp, *Ādi-Granth*, 98; Robertson Smith, *Religion of the Semites*[2], 437; see also Frazer, *Adonis, Attis, Osiris*, 64 ff.).

Though the particular cult followed by this sect is most influential in the Gangetic valley and in Rājputāna, it arose in Southern India from the teaching of Rāmānujāchārya, who was born about A.D. 1017 at Śrīperumbūdūr, near Madras. He taught the existence of a triad of principles (*padārtha-tritayam*), viz.: (1) the Supreme Spirit (*Para-Brahman* or *Īśvara*); (2) the separate spirits (*Chit*) of men; and (3) non-spirit (*A-chit*). Vishṇu is identified with the Supreme Spirit; individual beings are separate spirits; the visible world (*dṛśyam*) is non-spirit. All these have eternal existence and are inseparable; yet Chit and A-chit are different from, and at the same time dependent upon, Īśvara (Monier Williams, *Brāhmanism and Hinduism*[4], 119 f.). But the sect did not attain much prominence in Northern India until the time of Rāmānanda, who was born at the close of the 13th, and preached in Northern India at the beginning of the 14th, century. Indeed, it is only to the followers of Rāmānanda and his contemporaries that the title Bairāgī is properly applied. His teaching marked the progressive popularization of Hinduism; and in particular the ascetic Orders, which had been previously monopolized by Brāhmans and Kshatriyas, were now opened to men of lower rank. In addition to this, the religious books published by the adherents of Rāmānanda were now written in Hindī, not in Skr., and thus Northern India was provided with a new national religion of a very clear and vigorous type.

Though this liberal movement marked a decided advance, the Bairāgis since the time of Rāmānanda have been outdone by the still more liberal teaching for which he provided the impulse, and at the present day Bairāgis may be regarded as representing the more conservative, orthodox school of Hindu theology. As a rule, they are followers of Vishṇu in one or other of his incarnations, and they are all agreed in the veneration of both Kṛishṇa and Rāma; but some sections pay more reverence to one, and some prefer the other. In the Panjāb this divergence is represented by the Rāmānandī and Nīmānandī sections, the former specially addicted to the worship of Rāma, the latter to that of Kṛishṇa. Each has different sectarian marks, and each visits the sacred places, and studies the literature, connected with the deities which are special objects of their veneration. In the Central Provinces the old rule that admission to the Order was gained only by a rite of initiation is now generally neglected, and many are married and have families. Thus the Order is gradually tending to become a caste (Russell, *Census Report*, 1901, i. 162). In the United Provinces there are four sections, of which the two most important are the Rāmānuja or Śrī Vaishṇava, and the Nīmāvat or Nīmbārak. The former, the most ancient and respectable of the reformed Vaishṇava communities, is based on the teaching of Rāmānuja, and its special tenet is that Vishṇu, the one Supreme God, though invisible as a cause, is visible as effect in a secondary form in material creation. They refuse to follow the example of other Mathura sectaries in worshipping Rādhā, the spouse of Kṛishṇa, whom they either completely ignore or regard as merely the mistress of the deity. This branch is also divided into the Tengalai or Southerners, and the Vadagalai or Northerners, who differ in some points of doctrine, which, however, they consider to be of less importance than the manner in which the frontal sectarian mark is to be made. Of the other sect, the Nīmbārak, the doctrines, so far as they are known, are of a very enlightened character. As Growse (*Mathura*, 181 f.) writes:

'Thus their doctrine of salvation by faith is thought by many scholars to have been directly derived from the Gospel; while another article in their creed, which is less known, but is equally striking in its divergence from ordinary Hindu sentiment, is the continuance of conscious individual existence in a future world, when the highest reward of the good will be, not extinction, but the enjoyment of the visible presence of the divinity whom they have served on earth; a state, therefore, absolutely identical with heaven, as our theologists define it. The one infinite and invisible God, who is the only real existence, is, they affirm, the only proper object of man's devout contemplation. But, as the incomprehensible is utterly beyond the reach of human faculties, He is partially manifested for our behoof in the book of Creation, in which natural objects are the letters of the universal alphabet, and express the sentiments of the Divine Author. A printed page, however, conveys no meaning to any one but a scholar, and is liable to be misunderstood even by him; so, too, with the book of the world. Thus it matters little whether Rādhā and Kṛishṇa were ever real personages; the mysteries of Divine love which they symbolise remain though the symbols disappear.'

Though the Bairāgī, a follower of the mild-natured Vishṇu, does not as a rule practise the austerities characteristic of Śaiva ascetics, like the Yogī or Paramahaṁsa, we find him occasionally lying on the nailed couch, the Śaraśayyā, or 'arrowy bed' of Bhīshma, as described in the Mahābhārata (*Bhīshma parva*, 119 ff., tr. M. N. Dutt, vi. 208 ff., tr. Kisari Mohan Ganguli, iv. 444). Monier Williams (*op. cit.* 560 f.) describes an ascetic of this kind whom he met at the Lake Pushkar. But even he, with the catholic feeling of Hinduism, included in his worship not only the Śālagrāma, or ammonite of Vishṇu, but the Bāṇa-linga, or white stone of Śiva, and the red stone of Gaṇeśa.

BAITARAṆĪ.—A river of North India in the Keonjhar State of Orissa, which, after joining the Brāhmanī, flows, under the name of Dhāmra, into the Bay of Bengal. The name represents Skr. *Vaitaraṇī* (*vi-taraṇa*, in the sense of 'crossing' or 'giving'), liberality to Brāhmans being supposed to assist the soul in crossing this, the Hindu Styx or River of Death. The term *Vaitaraṇī* is also applied to one of the many Hindu hells, which, according to the Vishṇu Purāṇa (tr. Wilson, 209), is reserved for the man who destroys a beehive or pillages a hamlet. An important part of the Hindu death-rites is devoted to assisting the soul to cross this terrible river, the current of which is supposed to run with great impetuosity, hot, fetid

in odour, and filled with blood, hair, and all manner of foulness. After the lustration, done at an early period of the morning, it is customary to present the funeral priest with a vessel full of black sesamum (*tila*), and a cow to whose tail the ghost may cling in crossing the hated waters—a belief, as Ward (*Hindoos*[3], ii. 62) suggests, based upon the common habit of cowherds in Bengal, who cross rivers in this way. He doubts whether the Hindus ever imagined the existence of a Charon to escort the dead over the stream. But Risley (*Tribes and Castes of Bengal*, i. 359) says that the Jugis place with the dead four cowries with which 'the spirit pays the Chāran (see BHĀṬ) who ferries it across the Vaitaraṇī.' This is an example of the world-wide belief that the departing soul on its way to the land of the dead must cross a river, which is sometimes spanned by a bridge (Tylor, *Primitive Culture*[2], ii. 94, *Researches into the Early History of Mankind*, 349 ff.). The legend of the Juāngs, that remarkable tribe which down to quite recent times, and perhaps still in some places, wears only aprons of leaves, tells that when the river-goddess, Baitaranī, emerged for the first time from a rock, she 'came suddenly on a rollicking party of Juāngs dancing naked, and, ordering them to adopt leaves on the moment as a covering, laid on them the curse that they must adhere to that costume for ever or die' (Dalton, *Descriptive Ethnology of Bengal*, 156).

LITERATURE.—To the literature mentioned throughout the art. add *Imperial Gazetteer*, new ed., 1908, vi. 218 f.

W. CROOKE.

BALI.—The term *bali*, a Kanarese word corresponding to *bari* in Tamil and *bedagu* in Telugu, means an exogamous totemistic section, that is to say, a section of a caste or tribe worshipping a totem and strictly prohibiting marriage between those who have the same totem. The term is derived from an old Kanarese word meaning (1) way, road, (2) place, spot, (3) vicinity, nearness, company, (4) way, order, (5) race or lineage.* It also means the navel. It is in use among the cultivating, fishing, and forest tribes and castes of the Kanarese tracts of the Bombay and Madras Presidencies, and of the Mysore State. A *bali* is thus the name of an exogamous section. It may be named after some well-known animal, fish, bird, tree, fruit, or flower. The following are common names of *balis* in the districts referred to: the elephant, elk, spotted deer, hog deer, mouse deer, wolf, pig, monkey, goat, porcupine, tortoise, scorpion, the nágchampa (*mesua ferrea*), turmeric, the screw pine (*pandanus odoratissimus*), the honne tree (*pterocarpus marsupium*), the neral (*eugenia jambolana*), the soapnut (*acacia concinna*), and many other local trees and shrubs.

It is noteworthy that the section named after one of these *balis* not only worships the animal or object after which it is named, but obeys strict rules framed to protect the animal or object from injury. Thus, a member of the elephant section may not wear ornaments of ivory, a woman of the *nágchampa* section must never wear the flowers of the *mesua ferrea*, and turmeric must not be used in the marriage ceremonies of the turmeric section, though commonly applied to the bride and bridegroom in the weddings of many Indian castes. The mouse deer section will not kill the mouse deer, and the screw pine section will not cut the branches, pluck the leaves, or even sit in the shade of the screw pine. The *bali*, or totem, of these primitive people, or an image of the same in stone or wood, is usually to be found installed in a rude temple near the village site. Ordinarily the temple is a mere thatched shed of mud walls, surrounded by a small mud-wall enclosure. Here will be found the image of an elk, or a branch of the tree representing the object from which the *bali* takes its name. To this coco-nuts and other suitable offerings are constantly brought, with the object of securing its favours and protection. At certain seasons the members of the section assemble from the surrounding villages, and make special offerings under the guidance of the caste priest. Contact with more advanced castes and tribes, who are organized by family stocks, or *kuls*, is tending rapidly to supplant the *balis* of the Kanarese country, which are forgotten or ignored as something to be ashamed of, by a system of family stocks named after an ancestor. It is not easy to induce these primitive people to describe their *balis* in reply to inquiries. The offspring of parents who, under the system above described, must be members of different *balis*, is sometimes allotted to the *bali* of the father, in other cases, of the mother. The practice varies with different tribes. It is probable that the earliest practice was to trace the *bali* through the mother, and that this system is gradually being supplanted by the Aryan custom of tracing descent through the father.

* Kittel, *Kanarese Dictionary*, s.v.

The *bali*, or totem, organization is a primitive system of which traces are to be found in India in many castes that stand high in the social scale. A remarkable instance of this is the Marathas and the allied castes of undoubted Maratha origin, which have crystallized into separate castes, such as washerman, carpenter, blacksmith, or grain parcher, owing to the influence of occupation. Among these, in varying degree, is to be found a system of *devaks*, or marriage guardians, closely resembling the *balis* of the Kanarese country, though the *devak*, by the progress of events, has in many cases ceased to regulate marriage, and no longer forms a bar to the union of two worshippers of one *devak*. The *devak* is usually some common tree such as the bel (*ægle marmelos*), fig (*ficus religiosa*), banyan, or the sami (*prosopis spicigera*). In its commonest form it is the leaves of five trees, of which one, as the original *devak* of the section, is held specially sacred. It is worshipped chiefly at the time of marriage, which suggests its former close connexion with marriages. It is also worshipped at the time of entering a new house. The installation of the *devak* is still an important part of the marriage ceremony in many castes in the Maratha country.

The existence of the *bali* in Southern India as an obsolescent system of totem-worship, and the survival of traces of a similar system farther north, seem to point to a time previous to the Aryan penetration into the central portion of the Indian continent, when a wide-spread system of totemism prevailed among the Dravidian population.

LITERATURE.—See literature under TOTEMISM.

R. E. ENTHOVEN.

BALLABHPUR (Skr. *Vallabhapura*, 'city of the beloved').—A suburb of Serampore in the Hooghly District of Bengal (lat. 22° 45′ 26″ N.; long. 88° 23′ 10″ E.), famous for the ceremonies performed in honour of Vishnu in the form of Jagannātha, 'Lord of the World.' Ward (*Hindoos*, ii. 164 ff.) describes the rites of the Snāna-yātra, or ceremonial bathing of the god, and the Ratha-yātra, or car procession. In the first, held in the month Jyeshṭha (May–June), Brāhmans, in the midst of an immense concourse of spectators, bathe the god by pouring water on his head, while incantations are recited. The worshippers prostrate themselves before the image, and depart after being assured by the priests that they shall not be subject to re-birth, but be admitted to heaven after the death of the body. About seventeen days after this rite the Ratha-yātra is performed. The idol, after

being worshipped, is placed in an enormous car. Jagannātha (see JAGANNĀTH) is here accompanied by his brother, Balarāma, and his sister, Subhadrā. This triad of deities is believed to be an adaptation of the Triratna of the Buddhists, or of the Triśūla, or trident. The former, the Three Jewels, symbolizes Buddha, Dharma, or Law, and Saṅgha, or the Congregation. It is, however, doubtful whether this symbolism is found in India (Waddell, *Buddhism of Tibet*, 346). The modern triple image is probably due to a modification of the familiar Triśūla, or trident symbol (D'Alviella, *Migration of Symbols*, 254 ff.). As these idols are moved, an attendant fans them with a tail of the holy Tibetan cow. The object of the procession is that the triple deity should visit the temple of the god Rādhāvallabha, 'lover of Rādhā,' one of the forms of the erotic cult of Kṛishṇa. The visit lasts eight days, and the gods then return to their own temple. The rite is said to commemorate the sports of Kṛishṇa with the Gopīs, or milkmaids. It really marks the association of Jagannāth, a survival of Buddhism, with the cultus of Kṛishṇa and its adoption by Vaishṇavism. The pilgrimage, the Rath-yātra, everything in fact connected with the worship of Jagannāth, as Fergusson says (*Hist. of Indian and Eastern Architecture*, 429), 'is redolent of Buddhism, but of Buddhism so degraded as hardly to be recognizable by those who know that faith only in its older and purer form.' The idol car is found still in the Buddhism of Tibet (Waddell, *op. cit.* 313).

BALUCHISTĀN. — The country of Baluchistān, in the widest sense of the word, comprises all the territory occupied by the Baluch and Brāhūī races and some minor tribes subordinate to or mixed up with them, and must be understood as including not only the Baluchistān Agency under the Government of India (that is, the Khanat of Kalāt, Makrān, and Las Bela), but also the southern part of the Province of British Baluchistān, parts of the Districts of Dera Ghāzi Khān in the Panjāb, Jacobābād in Sind, and the Province of Persian Baluchistān.

The two main races, the Baluch and Brāhūī, although differing from one another in origin, appearance, and language, are yet bound together as members of one social organization. The tribes of both races live in close contact, and their religious beliefs and practices cannot easily be discriminated. The universal religion among them is Muhammadanism. The few Hindu traders found scattered through the country are either themselves immigrants from India or the descendants of recent settlers. The Baluches and Brāhūīs all profess to be Sunnīs, or followers of the orthodox creed; but in practice they show great laxity, and follow many customs rather resembling those of the Shī'ahs and others, which no doubt go back to the days of paganism. They show the greatest respect to 'Alī, Ḥasan and Ḥusain, and observe the full ten days of the Muharram fast, like the Shī'ahs, and not only the last day, as among the strict Sunnīs. The observance of the five times of prayer prescribed for all Musalmāns has till lately not been at all prevalent among the hill-tribes. It was considered sufficient for the chief of a tribe to say prayers for the whole body of tribesmen.

The Baluches all wear their hair long, and cut neither hair nor beard, except to clip the ends of their moustache in the Sunnī fashion, to show that they are not Shī'ahs. Many of their more civilized or orthodox neighbours say that Baluch orthodoxy consists of little else, and indeed deny them the possession of any religion except one of a negative kind. They are fond of repeating a Persian verse to the effect that a Baluch earns heaven for seven generations of his ancestors by committing robbery and murder. This is unjust; for although the tribesmen are addicted to raiding and the blood-feud, yet many of them have a keen sense of right and wrong, and their defects are those common to all races in the same stage of civilization. Their laxity has its good side, for it is accompanied by a tolerant spirit and an absence of the fanaticism so prevalent among their Afghan neighbours. As Sir D. Ibbetson has well observed of the Baluch, if 'he has less of God in his creed he has less of the devil in his nature.'* His faithfulness to his code of honour, and the respect shown to women and children (who are never injured in Baluch raids), are points in his favour which should not be forgotten. There are few Mullahs and Sayyids among the Baluches, nor have they great influence; on the other hand, great respect is shown to the shrines of saints, as will be described below. Mosques are not common, and, where found, often consist only of a pattern of stones roughly marked out on the hillside, sufficient to indicate the *qibla*, or direction of Mecca.

The conversion of the Baluches and Brāhūīs to the Muhammadan faith had taken place before their settlement in the country now known as Baluchistān, and may be assigned to the period following the first Arab conquest of south-east Persia. The Baluches occupied the mountains and deserts of Kirmān, and were associated with another race known to the Arabs as Qufs and to the Persians as Koch, who may possibly be identical with the Brāhūīs; but the origin of this race is obscure. In any case, there is no historical information regarding their presence in Baluchistān until after the Baluch settlement there. The conversion of these races is ascribed by the historian Istakhrī, who wrote in the 10th cent., to the period of the Abbāsid Khalīfs. Yāqūt, on the authority of er-Rohini, speaks of the Qufs as savages without religion of any sort; but er-Rohini added that they did show some respect for 'Alī out of imitation of their neighbours. The hatred of a Sunnī writer for Shī'ahs is clearly perceptible here, and his language is very like that used to-day regarding the Baluch and Brāhūī mountaineers.

The settlement of the Baluches in the country they now occupy took place during a period extending from the 13th to the 16th century. They gradually spread over Makrān, and in the beginning of the 16th cent. a great migration took place in the Indus valley, the Brāhūīs taking the place of the Baluches on the plateau of Kalāt. The invasion of India was led by Mīr Chākur and his son Shahzād. It is probable that the Shī'ah sect was still prevalent among the Baluches, for Ferishta relates that Shahzād was the first person to bring the Shī'ah creed into vogue at Multān. Baluch legend represents Shahzād as of mysterious origin. A shadow (that of 'Alī) fell upon his mother while she was bathing, during Mīr Chākur's absence at the siege of Delhi with the emperor Humāyūn. She conceived and gave birth to a son shortly before her husband's return. When he returned, the child, who was then three months old, addressed him and told him to fear nothing, as he had been begotten by the influence of the saint. A mystical poem, half in Baluchi and half in corrupt Persian, which is attributed to Shahzād has been verbally handed down to the present day. The following extract will give an idea of its nature:

'I gaze upon the brightness of the King; he created the golden throne of Heaven; his speech was sweet and heart-entrancing; he was like unto the Lord of Light. Day and night he created, day and night are of small account to him.

* D. Ibbetson, *Outlines of Panjāb Ethnography*, 1883.

The dry earth he created, and the smoke that went upwards. There was neither sky nor firmament: there was neither existence nor speech; there was neither Grandmother Eve nor Grandfather Adam. There was no Ibrāhim the Friend of God, nor was there the ark of Noah, nor Isā the Spirit of God, nor the throne of Sulaimān. He himself was "He is," Hamid 'Ali.'

After this period the Baluches seem gradually to have adopted the Sunnī faith, in name at least, although the change has made little practical difference.

'Alī figures largely in Baluch legend, and in some of the stories about him it is impossible not to suspect a Buddhist origin. Such is the legend of the hawk and the pigeon. A pigeon was struck down by a hawk at 'Alī's feet and appealed to him for protection. The hawk, on the other hand, represented that he had left his young ones starving, and could find no other food for them but the pigeon. 'Alī in order to satisfy the hawk cut off a piece of his own flesh. Whereupon both the pigeon and hawk revealed themselves as angels sent by God to try him.

On another occasion 'Alī had himself sold as a slave in order to pay the marriage portion of the daughter of a petitioner. Again he is said to have given a whole caravan of money to a blind beggar by the roadside, who afterwards developed into the celebrated saint Sakhī Sarwar, whose shrine at Nigāhā, near Dera Ghāzi Khān, is one of the chief places of pilgrimage, not only for Baluches but equally for Hindus and Musalmāns from all parts of the Panjāb.

The shrines of saints, or *pīrs*, are centres of worship and pilgrimage throughout the country, and form the most important feature in the actual religion of the people. In many cases there can be no doubt that these shrines have been in existence from times preceding the introduction of Islām, and that most of them were found already established by the Baluches and Brāhūīs when they settled in the country. Some are of great importance, and attract visitors from far and wide, while others are known only locally. Pieces of cloth, bells, horns, fossils, and other objects are left at the shrines by pilgrims in fulfilment of their vows.* Among the most frequented shrines are those of Sakhī Sarwar (already mentioned); Sulaimān Shāh of Taunsa Sharīf, a modern orthodox Muhammadan shrine; Hazrat Ghaus on Mt. Chihl-tan, or Forty Saints, so called from the saint's forty children who were exposed on the mountain; † Pīr Sohri at Sohri Kushtagh in the Bughti country, a truly Baluch shrine; ‡ Chetan Shah near Kalāt; Pīr 'Umar near Khozdār, where the ordeal by water is applied; Sultan Shāh in Zehri, visited by sufferers from fever; § and Jīve Lāl (otherwise called Lāl Shāhbāz) at Sehwān in Sind.‖

A strict adhesion to the tribal code of honour is regarded by all Baluches as of supreme importance, and this code has greater influence than the tenets of their nominal religion. Liberality to all petitioners and hospitality to all comers stand first, and all people are judged by this standard, which plays a large part in the legends of the saints. The legendary hero most admired is Nodhbandagh, who gave away all his possessions; and his verses in praise of giving are often quoted:

'Whatsoever comes to me from the Creator, a hundred treasures without blemish, I will seize with my right hand, I will cut with my knife, I will deal out with my heart, I will let nothing be kept back.'

Next comes the duty of supporting and protecting refugees, and refusing to surrender them to their enemies or to the law. The maintenance of family honour by the punishment of infidelity in wives is considered also of the greatest importance, and death is the penalty both for the woman and for her paramour, although in modern times under British influence compensation is accepted. This is fixed in money, but in practice the debt is generally discharged by the marriage or betrothal of a woman belonging to the family of the aggressor to a man of the family of the injured husband. These are the principal articles of the tribal code, and in addition to these customs there are others of a superstitious nature. Signs and omens are observed, and augury is carried out by examining the blood-vessels on the surface of the shoulder-blade of a newly killed sheep. To see a shrike on the left hand when starting on a journey is an inauspicious omen, and is sufficient to make a whole band of horsemen turn back. The flesh of swine is, of course, forbidden, as to all Musalmāns, but the Baluches add certain national or tribal prohibitions. Fish is universally avoided by them, the reason assigned being that they cannot be killed in the orthodox fashion by cutting the throat; and eggs also are often considered carrion or unclean. The Sardār Khels among the Rinds of Kachhi will not eat camels' flesh, and the Lashari clan of the same tract avoid the *ālro* or *launsh*, a small milky-juiced plant much eaten by the hillmen generally. It is possible that some of these prohibitions have a totemistic origin. A few tribal or clan names are derived from the names of plants or animals—which gives some countenance to this idea. There is, however, no instance of an actual survival of totemistic practice among either Baluches or Brāhūīs. The wearing of the hair and beard long is a national custom almost possessing the force of a religious precept, as among the Sikhs. It is considered most disgraceful for a Baluch to cut either hair or beard, although the moustache is trimmed in the Sunnī fashion.

The ordeal by fire and water is still occasionally met with. A case of the ordeal by fire occurred among the Bozdars in the present writer's own experience in 1889,* and Mr. Hughes-Buller describes a slightly differing form, as also the ordeal by water.

There are certain tribes or sections of tribes which have special Levitical functions, and whose members are believed to have the power of curing the sick by breathing on them. Such are the Nothani clan among the Bughtis, the Kahiri tribe, and the Kalmati tribe. The last named are probably not Baluch by origin, although now assimilated. There seems to be a probability that they are the descendants of the Karmatī or Karmathian heretics who were expelled from Multān by Mahmūd of Ghaznī at the commencement of the 11th century.

The only heretical sect which now has any influence in Baluchistān is that known as the Zikrī, which is powerful in Makrān and Las Bela. Its members appear not to be Baluches but Jats and other tribes of Indian or indigenous origin, and some Brāhūīs, especially the Bizanjo tribe. The Zikrīs believe that their founder, Dost Muhammad, was the twelfth Mahdī, and his abode, Koh-i-Murād, near Turbat, takes the place of Mecca as the object of their pilgrimages. Their Mullahs have great power.†

The Baluches are much given to poetry, both ancient and modern; and, in addition to their ballads of war and love, poems on religious subjects are by no means uncommon. To illustrate their feelings and ideas on these subjects, we append translations of some extracts from religious poems taken down from verbal recitation among the Baluches, in the case of the first poem from the author himself:

1. *By Brahim Shambānī:*

'I remember 'Alī the King, who has poured a torrent into my heart, and the pure Prophet who sits upon his throne to do judgment and justice.

'The true God is merciful, with him is neither greed nor avarice; nor is he father of any fair son; nor is there mother

† A full account of this sect is given by Mr. Hughes-Buller in the *Baluchistan Census Report*, 1902.

or sister with him. I cannot tell who has begotten him, nor can I fathom his might. Five angels stand close to him in his service to do his bidding. The first is Wahi (Jibrā'īl or Gabriel), then 'Azrā'īl, the third is Khwaja Khidr (instead of Mīkā'īl or Michael), and the fourth is the trumpet-blower (Isrāfīl), who sends forth the winds that blow upon the earth. Lastly, there is Shaitān, who rebelled on account of the creation of mankind.

He sits alone, and adds up the full reckoning of every man, and then he gives his command to 'Azrā'īl to take his breath at once. He looks not at good or evil, he heeds not prayer or supplication, he carries away sons from parents, nor does he take their money or sheep or goats with them. He carries a man away by the hair; there is no pity in his stony heart, and he is no man's enemy.

The poet Brahim has spoken. Listen to my words, to the story of God. I have heard with my ears that there was no heaven and earth, neither Mother Eve nor Adam. In a moment he made the firmament; by his might he made the water; from the foam he created the dry land; he spread forth the mountains and trees and placed them on the earth, and the smoke he made to go upwards. He built up the seven heavens, and the Garden of Paradise, and hell.

And these are the tokens of heaven. A tree stands by the gate to shade the city. The fruit of the garden ripens at all seasons; by his might there are figs and olives, grapes, pomegranates, and mangoes, and the scent of musk and attar. There the Peris may not enter. There is the place of the great assembly where he himself sits with the martyrs, the king Kāsim sits by him, and royal Ḥusain with his followers. Beds and couches are spread, hūris are their attendants standing in their service. There dwell the men of Paradise and eat of the fruit of the garden.

Listen, oh young men! I have seen the greatness of God, of the Lord the breaker-down of strongholds. I have seen, and am terrified, how hundreds of thousands are born, and if he does not give them breath their bodies are dust and their souls go to meet their fate. Some are lords of the land, some are poor and hungry. I am not a great man, I fear how I shall speak, I ask of the Mullahs. . . .

Save me from Doomsday, from the fiery flames of hell; make my passage over Sirāt like the crossing of a bridge. May I pass over at once by the order of God the Creator, and enter into Paradise!'

2. *By Lashkarān Sumelānī*:

'. . . No one is free from sin. I am in dread of thy wrath. When Munkar and Nakīr examine me, and the clouds come rolling up, and the turbaned heads are laid low, with both hands they heave up a weighty fiery club. God preserve my body in the heat of that fiery wrath! Having gone through that narrow pass, clouds again gather beyond. Have mercy at that time! . . .

When the earth heats like copper, the son will not love his father, brother will be separated from brother, the babe torn from the mother. Each must bear his burden on his own head, each pour forth his own sweat. Eve and Adam are departed, they have gathered what their hands sowed. . . . Have mercy through the Prophet's intercession; let me pass over Sirāt behind him. Those who are misers, cowards, and usurers lose their souls in their accounts, the Kārūns (Corahs) are the world's carrion; the cowardly wretches groan in their grief; they are cut off from the scent of Paradise. Their eyes are fixed on the sun so that their heads boil in hell. My brethren and friends, hear the words of a Rind. This is the song of the hospitable. Their sins are forgotten, they sit on an equality with martyrs and pluck the fruit of the Tūba-tree by the golden dwellings of Paradise and the noble fountains of Kausar.'

3. *Another by the same author*:

'Mighty is the Lord without companion; by his power he created the world. God is King, Muhammad his minister, 'Alī the helper and attendant of the Imāmat. There are four angels at the holy gate; one (*Jibrā'īl*) is the ambassador to the prophet, the second (*Mīkā'īl*) rides upon the storm-clouds, the third (*Azrā'īl*) wanders about at deaths, the fourth (*Isrāfīl*) has the trumpet in his mouth, his loins girt up, his eyes on his Lord: the north wind blows from his mouth, and when the Lord gives the order he sweeps all things away.

The pure spirit looks upon his creation; one half he colours like a skilful craftsman, the other half is left plain, with a life of distress. My soul! Do not possess your heart in grief, the place of all is one, in the dust and clay. The prophet is responsible for all creation, men of the faith carry their own provisions for the journey, the five times of prayer and fasting for their sins. Debts are due to God by his slaves, for all are mad and out of their minds; the Almighty will demand his debts, and our hope of paying is in our Surety. With my hands I cling to thy skirt, my eyes are open, my trust is in thee.

When he attacks the infidels and beats the gong of the faith against the ranks of the heathen, men and horses fall in the midst as a tree sheds its leaves. The King breaks the rear of the infidels and they flee at the sight of the Lord Jesus. Then by God's mercy the clouds come, rain pours down with a rainbow, and the earth becomes cool. The prophet will return and proclaim his message to the four quarters, the gardens will bloom for those firm in the faith.'

4. *A Story of Moses the prophet and Sultān Zumzum*:

'Moses the prince was given to wandering, and one day while out hunting he saw a skull lying in a desert place. Seven times did he address the skull, and at the eighth it spoke to him and said:

"I was a king, my name was Sultān Zumzum. I was a king, but I was blind in my rule, a tyrant, and harsh to the poor. I had wealth beyond that of Kārūn. Your herd of camels is three thousand all told (*i.e.* including females and young), but I had three thousand strong male camels of burden, and three thousand youths rode with me, all with golden rings in their ears. As many as your friends are, so many drank of my cup, and when they raced their steeds they spread mattresses on the ground lest the dust which arose from the hard hoofs of the chestnuts should settle on the turban of Zumzum.

One day I took the fancy to go a-hunting; I saw a wild goat in the wilderness and spurred after it, but it disappeared into the air, and I thereupon fell sick of a fever. I became insensible, delirium seized me, and my tongue wandered. Men came to give medicine to Zumzum, but with the Angel of Death medicine is worthless. One hundred and thirty remedies were in my red pouch, but when *he* swoops down he comes on a man suddenly. With a thousand insults he dragged out my breath; they carried out my body to bury it, and when they had buried it, and the funeral procession turned back, I was brought to the Lords of the Club (Munkar and Nakīr), who raised their clubs and struck me in the face, and made my body earth and ashes and fine dust. Ants and snakes feed under my ears, and black wasps make their nests in the hollow of my nostrils. My shrunken eyes are filled with earth and dry sand, and my dried-up teeth are like shrunken betel-nut. . . .

For a while I stayed in that place, and there I saw women with their locks all matted, women who had killed their little children; they were ground under rocky millstones, and their loud lamentations came over the blue water.

For a while I stayed in that place, and there I saw men with their faces and beards all withered up. These are those men who followed unlawful lusts, and cast their eyes on their fathers' and brothers' wives, and trod their brethren under foot.

Pass on now, and tell all the youths who follow after to stay their passions, and to give freely to all who come, without dissimulation. Leave me now and do good to the poor."'

LITERATURE.—Little information is to be found in the works of most travellers in Baluchistān, with the exception of Pottinger (1816) and Masson (1844). Some information may be obtained from Burton's *Sind Revisited* (1877), and from Douie's translation of Hetū-Rām's *Bilūchi-nāma* (Calcutta, 1885). The chapter on Religions by Hughes-Buller in the *Baluchistan Census Report*, 1902, is most valuable. The present writer's monograph, 'The Baluch Race' (*Royal Asiatic Society*, 1904) and an article on 'Balochi Folklore' (*Folklore*, 1902) may also be referred to.

M. LONGWORTH DAMES.

BAMBINO.—'Bambino' is the Italian word for a male infant, especially applied to artistic representations of the Infant Christ, but particularly to certain images or doll-like figures exhibited in churches about the time of the Christmas and Epiphany festivals.

1. Early representations of the Christ Child.—Christian art only by degrees ventured to depict the Saviour. Yet as early as the 2nd cent. a fresco in the catacomb of S. Priscilla at Rome has for its subject the Virgin (represented as a woman of classical type) holding on her knee the Child, naked, his hand on her breast, his face turned round towards the spectator, as in the best artistic types of much later times. To the left stands a male figure, the prophet Isaiah, pointing to a star (Michel, *Histoire de l'Art*, Paris, 1906, i. 134; Liell, *Die Darstellungen der allerseligsten Jungfrau und Gottesgebärerin Maria*, Freiburg, 1887, 316). A similar fresco with the same figures is found in the catacomb of Domitilla, and dates from the 3rd century. The Virgin and Child is the subject of several other frescoes on the walls of the catacombs, and doubtless many more have perished. In certain cases the adoration of the Magi before the Child is represented, the Magi being two (catacomb of SS. Peter and Marcellin, 3rd cent.), three, or four (catacomb of Domitilla) in number. Here the infant is naked, in swaddling-clothes, or clad in a tunic and seated on his mother's knee (Michel, i. 34; Leclercq, *Manuel d'Archéol. chrétienne*, Paris, 1907, i. 194). The prototype of all these Magi representations occurs in the catacomb of Priscilla, where the Child is in swaddling-clothes (Liell, 225). From the time of Constantine onwards, if not before, the scenes of the Infancy were depicted in fresco on the walls of churches—the Nativity, the crib with the Child, the ox and ass looking on, the shepherds, the adoration of the Magi, etc. (S. John Damascene, *Epist. ad Theophilum*, c. 3; Michel, i. 171; Leclercq, ii. 186). To the period after the peace of the Church belongs a

new method of representing these scenes of the Infancy, viz. in mosaic, an art already in use in the catacombs. An early example is found in the decorations of S. Maria Maggiore in the 5th cent. by Sixtus III., where among other subjects is that of the Adoration, the Magi presenting gifts to the Child, who is seated on a throne and makes a gesture of benediction (Michel, i. 49). The arts of bas-relief and sculpture also depicted the scenes of the Infancy. The earliest known examples of these are found on sarcophagi from the catacombs, which give the first representation of the crib. The Child lies in a basket crib; the ox and ass, Joseph and the Virgin, the Magi, and the shepherds are also represented. To the year A.D. 343 belongs the first example which has been preserved (Michel, i. 66; Leclercq, ii. 317). Similar scenes were represented in statuesque decorations of churches. Figures of the Magi seeking and adoring the Infant Christ seated on his mother's knee were sculptured on the ambon of a church at Salonica, dating from the 5th cent. (Michel, i. 261); while a fragment of a statue of the Virgin and Child, probably from another 4th cent. church, exists in a museum at Constantinople (Reinach, *Catalogue du musée d'antiquités*, Constantinople, 1882, 62). The Virgin and Child are also represented on early gems, one in the Cabinet de France being dated before A.D. 340 (Babelon, *Guide Illustré*, Paris, 1900, 1400*b*), and on a variety of works in metal, glass, etc. The themes of the Nativity, and the Madonna and Child, were favourite subjects for art treatment in every department, but especially in painting, which down to the present time has produced innumerable examples, some attaining the highest degree of artistic skill, of the Mother and her Divine Child.

It has sometimes been claimed that the representations of the Madonna and Child are founded on those of the Egyptian Isis suckling Horus (cf. Budge, ii. 220-221). But whatever the stories of the Apocryphal Gospels and the later cult of the Virgin may owe to the myth and cult of Isis, the earliest examples in which the Madonna and Child are represented are purely classical in form, and there is no reason to doubt their originality. Certain Coptic representations may continue the pagan Egyptian types, since there is a close resemblance between the two; while later Byzantine images or paintings probably borrow certain accessories from pagan sources, perhaps through Gnostic influences, especially after the cult of the Virgin developed. But the simplicity of the composition—a mother suckling or holding her child, would tend to make all representations, whether pagan (a goddess and child) or Christian (the Madonna and the Infant Christ), similar in character and type; and there is no reason to suppose that the early Christian artists had to borrow the *motif* from existing pagan models. Thus certain Buddhist examples closely resemble the Christian representations, while an Egyptian stele, which almost certainly depicts Isis and Horus and a worshipper, had been adapted to Christian uses, and has frequently been regarded as depicting the Virgin and Child (Leclercq, ii. 325). The same *motif* is found in Græco-Roman, Assyro-Babylonian, and Hindu religious art. The council of Ephesus (A.D. 431) defined the manner in which the Virgin and Child were to be represented.

2. **Liturgical drama.**—The Bambino as an image is connected with the liturgical and symbolic elements of the Christmas festival. The dramatic aspect of Christian beliefs, culminating in the Mystery-plays, was already present in germ both in liturgy and ceremonial. First, the custom of antiphonal singing and the use of antiphons suggested dialogue, while the symbolical actions in various parts of the service suggested dramatic action. But more particularly the tropes sung at festivals in the form of dialogue were a point of departure for the Mystery-play. Thus a 9th cent. MS at S. Gall already has a dialogued trope for Easter (Gautier, *Hist. de la poésie liturgique*, Paris, 1887, i. 216). This seems to have given rise to others of the same character for Christmas. One of these is found in an 11th cent. MS, in which two *cantores* represent the shepherds, and are addressed by two deacons in the words: 'Quem quæritis in præsepe, pastores, dicite?' They answer: 'Salvatorem Christum Dominum, infantem pannis involutum, secundum sermonem angelicum.' To this the deacons reply: 'Adest hic parvulus cum Maria,' etc. (Gautier, 215). These tropes at first had their place before mass, but were sometimes separated from it. In the 10th cent. the Easter tropes are connected with the mimetic action and exhibition of the empty sepulchre, which probably had a separate origin as a symbolic act (see the *Concordia Regularis* of S. Ethelwold, Dugdale, *Monasticon*, I. xxvii.). Similarly the Christmas tropes gave rise to a liturgical drama, in which a *præsepe* ('manger' or 'crib') with an image of the Virgin and Child was the central feature. Clergy as shepherds approached the choir, and heard a boy as the angel singing 'Gloria in excelsis.' They were met by priests *quasi obstetrices* singing 'Quem quæritis,' etc., and the dialogue of the trope and adoration by the shepherds followed. This is from an *Officium Pastorum* used in the 14th cent., and probably earlier, at Rouen (Davidson, *English Mystery Plays*, 1892, 173). A similar office occurs in the *Ordinarium* of Amiens, 1291; and here the figure of a child was placed in the *præsepe*, and it is supposed that the office originated not later than the 11th century. But here, as in the Easter drama, the *præsepe* probably had a separate existence before it was connected with the dialogued trope. This *Officium Pastorum* was early connected with a similar dramatic representation of the Three Kings, which originally had also a central symbolic action, that of the movement of a star across the church. In a Rouen *Officium Stellæ* (Davidson, 176) the kings point to a star and sing. The office included the showing of the Virgin and Child to the kings, while they worshipped and offered their gifts. Elsewhere the two offices followed each other, and occasionally they were combined into one drama. In 1336, at Milan, an elaborate representation took place, the kings, with their attendants, walking in procession to a church, on one side of the high altar of which was a *præsepe* with the ox and ass, and the Madonna and Child (Chambers, *Book of Days*, 1863, i. 62). To such early dramatic forms the rise of the Mystery-play must be traced. But the exhibition of the *præsepe* was probably not at first connected with the liturgical office, and it still exists as a mere spectacle, without accompanying dramatic action (see Chambers, *Mediæval Stage*, 1903, ii. chs. 18, 19).

3. **The præsepe.**—Later tradition ascribed the origin of the *præsepe* to S. Francis of Assisi in the year 1223. Having obtained the Pope's permission, he caused a scenic representation to be prepared in the church at Greccio on Christmas Eve. In it an ox and ass figured, and all was prepared in accordance with the narrative of the Nativity in realistic detail. The whole population flocked to see the sight, the saint stood rapt by the manger, and mass was said (Mrs. Oliphant, *Francis of Assisi*, 1871, 223). But such *præsepia* were certainly in existence long before. The earliest form of such representations is probably not now discoverable, but Origen says: 'There is shown at Bethlehem the cave where Christ was born, and the manger in the cave where He was wrapped in swaddling-clothes. And this sight is greatly talked of in surrounding places' (*adv. Celsum*, bk. i. cap. 1). S. Jerome complains that pagans celebrated the rites of Adonis in the cave (*Ep. ad Paulinum*, 58), but after S. Helena built the basilica over the cave in A.D. 335 it became a regular place of pilgrimage, and was luxuriously adorned. A homily ascribed to S. Gregory Thaumaturgus, and dating at latest about the beginning of the 5th cent., and certain sermons of S. Proclus, bp. of Constantinople (A.D. 432–446), both use language which suggests actual representations in churches of the Virgin and Child and Joseph in a Nativity scene (Pitra, *Anal.*

Sacra, iv. 394; *PG* lxv. 711). Such figured representations may first have been introduced in connexion with the manger-cave of the basilica at Bethlehem, and, if so, would rapidly be imitated elsewhere. In the West the earliest notices of a *præsepe* are connected with the Church of S. Maria Maggiore at Rome. This church, originally built in the 4th cent. by Pope Liberius, was re-constructed and dedicated to the Virgin by Sixtus III. (432–440). In the 7th cent., if not earlier, it was known as *S. Maria ad præsepe*; and this points to a 'crib' in the church, which may even have existed in the basilica as built by Liberius (Usener, *Religionsgesch. Untersuchungen*, Bonn, 1889, i. 288, 290). This 'crib' was in a chapel in the right aisle, described in the time of Gregory III. (731–741) as an 'oratory,' and in that of Sergius II. (843–847) as a 'chamber' (*Lib. pontif.*, *ap.* Usener, i. 280). Here the Pope celebrated mass on Christmas Eve, the crib serving as an altar. Probably the 'manger' was at first only a copy of that in the cave at Bethlehem, but figures may have been associated with it at an early date. Gregory III. furnished it with a statue of the Madonna and Child in gold. This crib-chapel became the model for others. Gregory IV. (827–843) erected a similar one in the Church of S. Maria in Trastevere, which he provided with 'imaginem auream habentem historiam dominæ nostræ cum diversis et pretiosis gemmis.' This probably refers to actual figures in a Nativity scene (Usener, i. 291). To such crib-chapels may be traced all others, whether permanent or temporary, in mediæval and later church usage.

4. **The Santissimo Bambino.**—Of all examples of the *præsepe* with figures of the Child, that of the Church of S. Maria in Ara-Cœli at Rome is the most famous. It is arranged with many accessories —side-scenes, vistas, and lights in the Chapel of the Presepio—and exhibited from Christmas to Epiphany. In a grotto are the Virgin, with the Bambino on her knee, and S. Joseph. Behind are the ox and ass, and grouped around are the shepherds and kings. Arranged in perspective in the background is a pastoral landscape, with small figures of shepherds and flocks, giving the idea of distance. Women are represented bringing presents of fruit. The whole scene is beautifully arranged to give the illusory effect of reality, while above is represented the Father, with angels and cherubs. Formerly Augustus and the Sibyl pointed to the Child, the legend being that the Emperor raised an altar on the site of the church to the Son of God, whose advent was made known to him from the Sibylline books. During the festival season the Presepio is visited by crowds of people. On Epiphany, mass being concluded, a procession of clergy moves towards the chapel, and, arrived there, the bishop removes the Bambino from the arms of the Madonna with much solemnity. To the strains of triumphal music, the image is borne through the church to the great outer steps. There it is elevated by the bishop before the kneeling crowd, while the music thunders and censers are swung. This done, it is carried back to the chapel. The more important figures are of life-size, painted and appropriately dressed. The Bambino is of olive wood, rudely carved and painted. It is magnificently dressed, and covered with great numbers of costly jewels, while during the period of its exhibition it wears a crown encrusted with rich gems. During the festal season the stairway of the church is thronged with pedlars selling sacred objects, among others prints of the Bambino, and wax dolls clad in cotton wool representing the Child. During the rest of the year the Bambino is kept in the inner sacristy, where it is shown to pilgrims and visitors. An inscription in the sacristy relates that a devout Minorite carved the image in Jerusalem out of wood from the Mount of Olives, that it might be used at this festival. But, as paint was lacking to make it more lifelike, prayer was offered that fresh colours might be bestowed upon it by Divine interposition. The vessel which carried it to Rome was wrecked, but the image was floated ashore in its case, and, being recognized by the brethren there (for its fame had spread from Jerusalem to Italy), it was brought to its destination in safety. According to popular belief, the painting was miraculously done by St. Luke or by an angel.

To the Bambino are ascribed miraculous powers of healing, and it is taken with great ceremony to patients in cases of severe illness. A special carriage is provided for the image, which is accompanied by two *frati*; and, as it passes through the streets, the people show it great devotion, kneeling or crossing themselves, while some implore its assistance for their needs, spiritual or temporal. At one time the Bambino was left on the bed of the patient, but now it is never out of sight of its attendants; because on one occasion a woman, feigning illness, exchanged another image for the Bambino, sending the fraud back in its place. During the night the *frati* were disturbed by knocking at the door of the church. Hastening thither and opening it, they found the Bambino waiting to be admitted, having returned of its own accord. In a variant of this tale, the Bambino was stolen from the church and returned at night, the thief being thus discomfited. The story is referred to in the inscription. It is obvious that the Bambino is regarded as a species of fetish; and this appears further in the popular belief that, when carried to the sick-bed of a child, it reddens if the child is to recover, and turns pale if it is to die (Story, *Roba di Roma*, 1875, 74 ff.; Rouse, *FL*, 1894, v. 7; Hare, *Walks in Rome*, 1903, i. 102; Tuker and Malleson, *Handbook to Christian and Eccl. Rome*, 1900, ii. 212). Similar exhibitions of the *præsepe*, some of them equally elaborate, are seen in other Italian churches (see Rouse, *loc. cit.*), and they are a usual feature in most Roman Catholic and in some Anglican churches, the equivalent name being *crèche* or 'crib.'

Other images of the Infant Christ, though not used in the representation of a *præsepe*, have acquired great fame. Some of these are black, as in the parish church of Mont-Saint-Michel in Brittany, and some are well known as being equally miraculous with the Santissimo Bambino, *e.g.* the famous miraculous image, dating from the 17th cent., in the church of the Carmelite Fathers at Prague.

BAN.—See CURSING AND BLESSING.

BANERJEA, KRISHNA MOHAN.—Krishna Mohan Banerjea was one of the early converts of the North India Protestant Missions, and one of the most learned Indians of his time. He was born at Calcutta in 1813, and spent his life in that city. A Brāhman by caste, even among Brāhmans he belonged to the *kulins*, or recognized aristocracy, his family claiming descent from one of the *ṛṣis* or ancient sages. The distinguished Indians of the 19th cent. were the product of the new life inspired by India's contact with the West through British rule. Dr. K. M. Banerjea was no exception, and in the capital of India, where he was brought up, the new influences were naturally most direct and concentrated. In 1828 the Brāhmo Samāj, or Indian Theistic Church, had been founded at Calcutta by Rammohun Roy and others. In

1830, Dr. Duff, first missionary of the Church of Scotland, had landed in Calcutta. But the influence that confessedly formed young Banerjea in his teens was that of a Eurasian, Derozio, a master in the Calcutta Hindu College, which Banerjea had entered in 1824. Derozio's openness of manner, his enthusiasm, and his thoroughgoing rationalism and radicalism quite carried away his youthful disciples, and indeed affected the minds of a whole generation in Calcutta. In that atmosphere of negation and destruction, in 1830, we find K. M. Banerjea leader of a youthful band publicly repudiating Hinduism and all religious belief, and demanding the abolition of caste and the education of Hindu women. On one occasion, in 1831, the leaders went to the extreme of throwing pieces of beef into Hindu houses, wantonly and grossly outraging the feelings of Hindus. The insult was naturally followed by the excommunication of young Banerjea from his family and caste; but a few European, Eurasian, and Hindu friends still gave him countenance, and the reformer thus contrived to continue what he felt to be a holy war on behalf of religion and his countrymen. Gradually he came under the influence of Dr. Duff, in whom he found an equally ardent temperament, but also convictions as definite and positive as his own had been merely negative and critical. October 1832 finally saw Krishna Mohan Banerjea received into the Christian Church by Dr. Duff.

The great native reformer, Rammohun Roy, was still living in 1832 at the time of Banerjea's conversion. Both men possessed an acute and powerful intellect, and manifested an independence of character which would have been noteworthy even in a European. But the younger possessed an intensity of temperament lacking in his great contemporary. Rammohun Roy's campaign had been that of reason against unreason, and his progress was from Hinduism to Hindu Theism [as he conceived it to be], and thence to non-militant Unitarian Christianity, of an orthodox type. The progress of K. M. Banerjea, on the other hand, was from Hinduism to repudiation of religious belief; out of which, again, he passed, as decidedly, to strong personal Christian faith and strenuous advocacy of what he believed.

Taking orders in the Church of England in 1839, K. M. Banerjea thus became the first ordained native clergyman of that Church in North India, the first in all probability of any non-Roman Church. In the Anglican community in Calcutta he soon became the leading figure, taking a large share in the work of the Anglican Mission College [Bishop's College] and in the translation of theological and religious literature for the young Christian community. He has justly been called the Father of Bengali Christian Literature. But his activity was by no means limited to the Indian Christian community. In journalism and in every public movement connected with education or the general welfare, he was in the forefront. Two of his articles in the early numbers of the *Calcutta Review*, founded in 1844, on 'The Kulin Brāhman of Bengal' and 'Hindu Caste,' are of special value to the historical student as first-hand and reliable evidence of former socio-religious conditions now considerably modified. With these may be conjoined a later paper on 'Human Sacrifice' in the *JRAS*, written in 1876. In 1846 he began the publication of a work of great importance in its day, the *Encyclopædia Bengalensis*, a series of thirteen volumes in English and Bengali. In it, for the first time, Euclid was presented to the people of India in one of their vernaculars. In later years we find his attention devoted more particularly to Sanskrit and Hindu Philosophy. For the Asiatic Society of Bengal he edited two Sanskrit texts, the *Mārkaṇḍeya Purāṇa* and the *Nārada Pañcharātra*, both published in the Society's *Bibliotheca Indica*; subsequently also, for the same Society, an English translation of the *Brahma Sūtras* with Śaṅkara's Commentary, and of the *Mahimnastava*, a hymn to Śiva. An edition of a portion of the *Rigveda* with notes and an introductory essay appeared in 1875.

The work by which Dr. K. M. Banerjea is best known to students of India is his *Dialogues on the Hindu Philosophy*, an English work, published in 1861 both at Calcutta and London, and afterwards translated into Bengali. In the dialogues, Satyakāma [Desire of Truth], representing the modern spirit of impartial philosophic inquiry, discusses with representatives of traditional orthodoxy the relationship of the Vedas, Buddhism, the six philosophical systems, and Brāhmanism. Satyakāma proceeds by the historical method, setting forth as foundation the chronological relationship of the various systems to one another and to Buddhism. The six systems he regards as rationalizing efforts on the part of the Brāhmanical order, partly the outcome of the rationalistic spirit that had already called forth Buddhism, and partly designed to controvert Buddhism. Of the philosophical systems, all of which Dr. Banerjea thus dates later than Buddhism, he puts the Nyāya earliest, then the Vaiśeṣika and the Sāṅkhya. The application of the historical method to a subject so involved and obscure constitutes the chief merit and originality of the *Dialogues*. As a critic in the *Westminster Review* in 1862, believed to be Professor Goldstücker of London University, observes, no writer before Dr. Banerjea 'had ever attempted to give so continuous and graphic a sketch of the origin and sequence of the various portions of Hindu Philosophy.' It was, of course, almost inevitable, where so much is mere inference, that the historical conclusions of the pioneer should not go unchallenged. Dr. Goldstücker himself regarded the Mīmāṁsa system as the oldest. Professor Macdonell (*Sanskrit Literature*) and others regard the Sāṅkhya as the oldest among the Hindu rationalizing and systematizing schemes, and as forming the basis of the two heterodox systems of Buddhism and Jainism. Apart from the chronological order, however, Dr. Banerjea's exposition of the systems is justified by the latest writers as against his early critic. His declaration regarding the Sāṅkhya denial of a Supreme Soul is now accepted without question by modern students. The atheism of the Sāṅkhya system and the fundamental ignoring of deity in other systems Dr. Banerjea associates with the conception of the eternity of souls implied in the doctrine of transmigration common to all the systems alike. That again is virtually the position of Professor Macdonell, viz. that the doctrine of transmigration scarcely leaves room for the idea of deity. Dr. Banerjea's position in regard to Vedāntic pantheism, repudiated by his critic in the *Westminster Review*, is similarly not far from the position of modern Sanskritists. Vedāntic pantheism, according to the *Dialogues*, is essentially as much a denial of deity as it is professedly a denial of man, and fails to supply the dualism implied and inherent in the idea of duty.

The author's erudition we find more directly enlisted in the cause of Christianity and his countrymen in *The Arian* [Aryan] *Witness to Christianity*, published in 1875. It belongs to the period of Indian missionary work in the 19th cent., in which stress was laid upon the discovering in Hinduism of a preparation or call for Christianity, if not also of the rudiments of Christian doctrines. Dr. Banerjea's main point, for example, is that in

the sacrifice of Puruṣa, the primeval male,* elsewhere put as the self-sacrifice of Prajāpati himself, the Lord of Creation, we have ideas closely akin to those of the voluntary atoning death of Christ, the Eternal Son of God, who was both God and Man. Such reasoning, however, has no longer the same prominence. Experience has shown that such parallels, while confirmatory and helpful to men already convinced, bring Christianity no nearer to Hindus than it brings Christianity to Hinduism.

Dr. Banerjea was all his life a standing refutation of the libel on Indian Christians that they are unpatriotic. He was one of the first *elected* representatives to the Calcutta Municipality in 1876; and in his old age, in 1883, he identified himself with a movement for constitutional political agitation both in India and Britain, of which the National Congress may be called the fruit. Native education likewise had no warmer advocate, as his earlier publications and his evidence before the Education Commission of 1883 testify. Without fear of either native or English opinion, he was a man of public spirit in the truest sense. The University of Calcutta recognized his position as a scholar by electing him President of the Faculty of Arts, 1867–1869, and further, in 1876, by the bestowal of the honorary degree of D.L., which has been given to only two other Indians during the fifty years' existence of the University. His public services were recognized by the conferring upon him of the 'Companionship of the Indian Empire' in 1885, the year of his death.

JOHN MORRISON.

BANIĀ, BANYĀ (Skr. *vaṇijya, baṇijya*, 'trade, traffic').—A generic name for the great merchant caste of Northern and Western India. Under the titles of Baniā, Banyā, or Vānī, persons numbering 2,898,126 recorded themselves at the Census of 1901. But this does not include numerous practically identical castes, like the Agarwālā, numbering 557,596; the Oswāl, 382,712; the Māṛwāṛī, 49,108, and many others. These may be taken as examples of the religion of this caste in general.

The Agarwālā, who are found in greatest numbers in the United Provinces and Rājputāna, are mostly orthodox Hindus, the Jaina element being quite inconsiderable. Like all classes of the population who, under the protection of British rule, obtain promotion to a higher social rank than they ever acquired under the native governments, they are precise and liberal in the observances of their religion; and at domestic ceremonies, such as birth, marriage, and death, are notorious for their lavish expenditure on Brāhmans. Most of them follow the humanitarian cult of Vishṇu; and though a small minority observe the rule of Śiva and of the Śakti, or Mother-goddesses, in deference to tribal feeling they abstain from sacrificing animals and consuming meat and spirituous liquor. The small Jaina section observe the same social rules, and are even more careful of animal life than those who are orthodox Hindus. Hence, owing, perhaps, to the uniformity in matters of diet and other social observances, there is no bar to intermarriage between the followers of the two creeds. When husband and wife differ in religion, the wife is usually admitted formally into the religion of her husband, and, accordingly, when she visits the home of her parents, she must have her food separately cooked. The usual tribal deity of the Agarwālā sub-caste is Lakshmī, goddess of fortune and beauty, who in the later mythology is frequently identified with Śrī, and is regarded as the consort of Vishṇu. They are careful to perform the *Śrāddha*, or mind-rite, for the repose of the souls of their deceased ancestors. Their tribal legends connect them closely with a primitive snake-cult, and the women worship the snake as an important part of the domestic rites. Among trees they pay special reverence to the *pipal*, or sacred fig.

* *Rigveda*, Maṇḍala, x. 90.

The other side of Baniā religion appears among the Oswāl, who, except an insignificant minority, belong to the Jaina faith. They take their name from the old town of Osī in Mārwār, and all their associations connect them with Rājputāna. They employ for their domestic rites a class of Brāhmans, who, when their clients adopted the new Jaina rule, fell from their high estate, and became known by the significant name of Bhojak, 'eaters.' They preside over and receive the offerings dedicated to the footprints of the saints who have passed into a state of beatitude. But the real priests of the Oswāl are the Jaina Jatīs, who are bound by the strictest rules of ceremonial purity, and in particular must avoid any possibility of destroying animal life. The Oswāl make pilgrimage to the chief holy places of Jainism —Mount Ābū, Palitānā, Parasnāth (see artt.); Sametā Sikharā, in Western Bengal, where twenty of the Jinas are said to have attained beatitude; Satrañjāyā and Girnār in Kāṭhiāwār, sacred respectively to the Jinas Ṛishabhanātha and Neminātha; Charidrapuri, where Vāsupūjya died; and Pāwā in Bengal, the scene of the death of Vardhamāna. The worship thus largely concentrates itself on the cult of the Tīrthakaras, 'the finders of the ford' through the ocean of *saṁsāra*, the revolution of birth and death. They also visit the sacred places of the Hindus, like Benares and Ajudhyā. Of course, no animal sacrifice of any kind is permitted in their temples, and the sordid ostentation of the worshippers is shown by the rule which prevails in some of the Western Indian temples, under which the right to make the daily offerings is set up to auction and sold to the highest bidder. Their chief solemnity is that held in the rainy season, which resembles the retreat (*vārśika*) of the Buddhists, when the wandering monks rested during the inclemency of the monsoon (Kern, *Manual of Indian Buddhism*, 80).

Another important sub-caste of the Baniās is the Māṛwāṛī, who take their name from the State of Māṛwāṛ in Rājputāna. According to the Census of 1901, they number 49,108, the vast majority being Hindus. They are most numerous in Hyderābād, but settle in all parts of the Peninsula in search of trade. They are the most active, niggardly money-lenders and small traders in the country. They generally worship the local gods of their native land. Thus in Kanara they worship as their family deities Ambū, Jaypāl, and Hilājī, whose shrines are at Sirohī in Māṛwāṛ; but those of Ahmadnagar worship Bālājī of Tirupati in North Arcot, and in Poona, Kshetrapāla, the guardian deity of Mount Ābū.

Many Baniās, again, are members of the sect of the Vallabhāchārya or Gokulaṣṭha Gusains. This sect, or rather its pontiffs, known as Mahārājā, or 'great king,' acquired rather disgraceful notoriety in connexion with the celebrated Mahārājā libel case which was tried in Bombay in 1862.

They are thus described by Growse at Mathura:

'They are the Epicureans of the East, and are not ashamed to avow their belief that the ideal life consists rather in social enjoyment than in solitude and mortification. Such a creed is naturally destructive of all self-restraint, even in matters where indulgence is by common consent held criminal; and the profligacy to which it has given rise is so notorious, that the Mahārājā of Jaipur was moved to expel from his capital the ancient image of Gokul Chandrama, for which the sect entertained special veneration, and has further conceived such a prejudice against Vaishṇavas in general, that all his subjects

are compelled, before they appear in his presence, to mark their foreheads with the three horizontal lines that indicate a votary of Śiva.'

LITERATURE.—For the Agarwālā and Oswāl, see Risley, *Tribes and Castes of Bengal*, 1891, i. 4 ff., ii. 150 f.; Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 23, iv. 104 f. W. CROOKE.

BANISHMENT.—1. Banishment (putting under 'ban' or proclamation as an outlaw) is the punishment of expelling an offender from his native land. By analogy with the most primitive surviving social systems, we can infer that in very early stages of civilization the family was the unit of society, and that any member of a family who disputed the rule of its head was cast out. As civilization advanced, and families and tribes united to form States, the easiest way, short of summary execution, to rid the State of an evil-doer was to expel him from its boundaries. We find evidence of this in the records of all ancient nations.

2. In ancient Israel, banishment invariably occurs as a Divine, not a human, punishment. Such was the banishment of Adam from the Garden of Eden (Gn 3[24]), and of Cain from the presence of the Lord (Gn 4[16]). This penalty was inflicted not only on individuals, but on the whole nation. The Captivities befell the idolatrous people, but the assurance, 'the Lord will gather thee, and will bring thee into the land which thy fathers possessed' (Dt 30[4f.]), lent to banishment the character of a temporary punishment, of a trial of faith. In Rabbinical Law, banishment (*gālūth*) is the name given to the fleeing of the manslayer, in cases of unintentional murder, to one of the Cities of Refuge (*Sifrē Num.* 60; *Mak.* ii. 6). The banishment spoken of by Abtalion (*Aboth.* i. 12, ed. Taylor) as befalling 'the wise' refers to political events. The Pharisees, during the reign of Queen Salome Alexandra, exerted 'the power and authority of banishing and bringing back whomsoever they chose' (Jos. *BJ* I. v. 2; cf. also *JE* ii. 490 f.).

3. In India, banishment was a recognized form of punishment as early as the Vedic period, for *Rigveda* x. lxi. 8 clearly alludes to the 'exile' (*parāvṛj*) as fleeing to the south; while the later codes prescribe banishment for those who express hostile sentiments concerning the king, or for false witnesses; and crimes punished by death in the case of the lower castes, were visited with banishment in the case of Brāhmans (Jolly, *Recht und Sitte*, Strassburg, 1896, pp. 127, 129, 142). Among the Teutonic peoples, banishment was equally well known, as is shown by Old High German *reccho*, Old Norse *rekr*, Old Saxon *wrekkio*, and Anglo-Saxon *wrecca*, 'exile,' 'outcast,' 'wretch' (cf. Schrader, *Reallexikon der indogerm. Altertumskunde*, Strassburg, 1901, p. 835); while among the Gauls, at least in some cases, murder of a compatriot was punished by banishment, at all events from the territory of the city (Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 191 f.).

4. In Greece, banishment seldom appears as a punishment appointed by law for particular offences. The general term φυγή, in heroic times, was applied, for the most part, to those who, to escape some punishment or danger, fled from their own State to another. This was the rule in cases of homicide. Even in historical times, exile was usually voluntary, to escape the death-sentence for murder. The accused was permitted to leave the country after the first day of trial; but in that case he was condemned to perpetual banishment and confiscation of property. When appointed by law as the punishment for certain offences, banishment might be for a specified period, as in cases of accidental homicide; or, if the crime was sacrilege, the murder of a non-citizen, or wounding with intent to kill, the penalty was exile for life. Ostracism (*q.v.*), a form of banishment peculiar to Athens, was designed to guard against any citizen becoming a tyrant. After passing a decree that an ostracism should take place, on a fixed day the citizens voted by tribes in the agora, each writing on an ὄστρακον the name of the man he considered a danger to the State. He who obtained the majority of votes, provided there was a minimum of 6000, was banished for ten years, though he might be recalled earlier by a special vote.

5. In Rome, during the Republic, *exsilium* meant banishment inflicted by the State as a punishment, accompanied by loss of *civitas*; if the person banished did not cease to be a *civis*, it was not properly *exsilium* but *relegatio*. Since the Romans shrank from depriving a man of his citizenship, *exsilium* was very rare. The accused, however, might voluntarily go into exile to escape capital punishment; and in the earlier times of the Republic, a Roman citizen had the right of going into *exsilium* to another State, by virtue of the isopolitical relations between that State and Rome. The voluntary withdrawal of the criminal being regarded as an admission of his guilt, the Romans confirmed it by a *plebiscitum*, which gave it a legal character; and, to prevent his return, forbade the citizens to afford him shelter, fire and water (*aquæ ignis tecti interdictio*). In later times it became usual to inflict this punishment as an ordinary penalty, independent of any voluntary withdrawal on the part of the criminal. The Emperors introduced a new form of banishment—*deportatio in insulam*—by which the criminal was confined for life, or for an indefinite time, to an island or other prescribed space, within which he had personal liberty though he suffered loss of *civitas*. This gradually supplanted the old *interdictio*.

6. During the Middle Ages banishment was a common punishment, and indeed still occurs among many nations. In England the punishment of banishment was prohibited by Magna Charta, but was still practised, as a criminal was permitted to go into voluntary exile to escape death. The punishment was again made legal by the Vagrancy Act of Queen Elizabeth, which, by giving Justices power 'to banish offenders and remove them to such parts beyond the seas as should be assigned by H.M. Privy Council,' contained the germ of transportation. This Act was given full effect in the reign of James I., 1619 ('100 dissolute persons to be sent to Virginia'), though the name 'transportation' does not occur till the reign of Charles II. In 1718 the system of transportation became more fully developed; political offenders and others who had escaped the death-penalty were handed over to contractors for transportation to the American Colonies, and these contractors farmed out the convicts to the planters as labourers. The War of Independence, however, ended this system. After 1787, Penal Colonies were founded in Australia, in New South Wales. At first the convicts were employed on Government works, but as their numbers increased they were hired out to private employers. Supervision was necessarily lax, and the convicts terrorized the country, so that the worst offenders were returned to the care of the Government and confined in the penal settlements. The Australians began to protest in 1835, and transportation gradually diminished, till in 1867 the penal settlements in Australia and Tasmania were abolished in favour of convict prisons at home. France and Russia still maintain the system of transportation. The French penal settlements founded in French

Guiana in 1853 were disastrous, owing to the unhealthy climate and the harsh regulations, so they were abandoned in 1864 except for Negro and Arab convicts. The Settlements in New Caledonia, however, are still continued. Russia transports criminals and political offenders to Siberia, where, after a term of imprisonment, they are employed in mining and agriculture.

Transportation has not been found to act as a deterrent from crime. It does not possess the reformatory qualities which are an essential part of an effective system of punishment. See OSTRACISM, OUTLAWRY, PUNISHMENT.

W. D. MORRISON and I. LOW.

BANJĀRA (Skr. *vaṇij*, 'a merchant,' *kāraka*, 'doing').—The tribe of wandering grain-carriers in India, which at the Census of 1901 numbered 765,861, most numerous in Hyderābād, but found in all the Indian provinces. As a result of their wandering habits, which have now much decreased since the carrying trade has fallen into the hands of the railway authorities, they are a very mixed race. Their origin is probably Dravidian, but they now all trace their descent from the Brāhman or Rājput tribes of Northern India. It is in the Deccan and in the State of Hyderābād that they still retain more of their primitive beliefs and customs than in the scattered colonies in the more northern parts of the country, where they have largely fallen under Hindu or Muhammadan influence. Of the Deccan branch an excellent account has been given by Cumberlege from the Wūn district of the province of Berār. There they seem to be descendants of the emigrant sutlers who followed the Muhammadan armies into Southern India. Though some vague references to them have been traced in the earlier Sanskrit literature, the first mention of them in Musalmān history is in the account of Sikandar's attack on Dholpur in A.D. 1504 (Elliot, *History of India*, v. 100; Briggs, *Ferishta*, i. 579).

1. *Religion of the Deccan Banjāras: witchcraft.*—In the legends of the Deccan branch of the tribe, Guru Nānak, the founder of the Sikh faith, figures as a worker of miracles and as their spiritual adviser. They have a priest or medicine-man, known as a *bhagat*, or devotee (Skr. *bhakti*, 'faith,' 'devotion'). He is called in to cure all manner of disease, which they believe to be the result of the attacks of evil spirits, sorcery, or witchcraft. In fact, there are few Indian tribes more witch-ridden than the Banjāras. They are, says Lyall (*Asiatic Studies*[3], 1st series, 117 f.),

'terribly vexed by witchcraft, to which their wandering and precarious existence especially exposes them, in the shape of fever, rheumatism, and dysentery. Solemn inquiries are still held in the wild jungles where these people camp out like gypsies, and many an unlucky hag has been strangled by sentence of their secret tribunals. In difficult cases they consult the most eminent of their spiritual advisers or holy men who may be within reach; but it is usual, as a proper precaution against mistakes which even learned divines may commit, to buy some trifling article on the road to the consultation, and to try the diviner's faculty by making him guess what it may be, before proceeding to matters of life or death. The saint works himself into a state of demoniac possession, and gasps out some woman's name. She is killed by her nearest relative or allowed to commit suicide, unless indeed her family are able to make it worth the diviner's while to have another fit, and to detect some one else.'

2. *Gods of the Deccan branch.*—These Deccan Banjāras have a large pantheon of deities. First comes Mariyāī or Mahākālī, the great Mother-goddess in her most terrible form. It is she who is supposed to enter the *bhagat* medicine-man and inspire him to utter oracles. The Chāran branch are deists, with special proclivities towards Sikhism, which they brought with them from their original home in the Panjāb. With them Guru Nānak, the founder of Sikhism, is supreme. They also worship Bālājī, or Kṛishṇa in his infant form; Tuljā Devī, the famous South Indian Mother of Tuljāpur in the State of Hyderābād; a number of deified men, such as Śiva Bhaiyyā, a holy man of Pohorā in the Wūn district in the Berār province; Satī, the ghost of some noted woman who perished on the funeral pyre of her husband; and Miṭṭhū Bhūkiyā, a famous freebooter of olden days. For the last a hut is set apart in every camp, and, when a white flag is raised before it, this is a sign that the people are engaged in the worship of Miṭṭhū Bhūkiyā, who is always invoked to give his aid when any plundering expedition or other crime is being planned. In such cases an appeal is also made to the deified Satī. Clarified butter is placed in a saucer, and in this a wick is lighted. Appeal is then made to Satī for an omen, the worshippers mentioning in a low tone the object of the contemplated expedition. The wick is watched, and, should it drop, the omen is regarded as auspicious.

3. *Ox-worship in Central India.*—In Central India the Banjāras have a peculiar form of ox-worship. This animal is known as Hatādiyā (Skr. *hatya-ādhya*, 'he whom it is an exceeding sin to slay'), and he is devoted to the service of the god Bālājī, or Kṛishṇa in his infant form. No burden is ever laid upon the animal, and he is decorated with streamers of red silk and tinkling bells, with many brass chains and rings on his neck and feet, and strings of cowry shells and tassels. He moves steadily at the head of the convoy, and wherever he lies down there they make their halting-place during the heat of the day. At his feet they make vows whenever trouble befalls them, and in illness, whether of themselves or among their cattle, they trust to the worship of him for a cure.

4. *Forms of worship in Kāṭhiāwār.*—In Kāṭhiāwār their worship is paid to the dread Mother-goddess, Kālikā Mātā. In Khāndesh they mostly worship Bālājī and Khaṇḍobā, and in honour of the latter a dance known as the Gondhal is often performed in discharge of a vow or on the completion of a marriage. On the day after the Holī, or spring fire-festival, the Lād branch of the tribe have what is known as the Vīra, or hero procession, when one of the descendants of an ancient warrior who died in battle is led in triumph round the camp. At marriages, two married couples, one representing the bride and the other the bridegroom, fast all day, and at night cook a mess of rice, grain, molasses, and butter. While cooking this they cover their faces with a cloth, as the touch of the steam rising from the pot bodes evil to the couple. This food, when cooked, is eaten by the men of the party, and anything that remains must be given to a cow or thrown into a river. To allow a stranger, or the son of a slave, to partake of this holy food is considered a grievous sin, which will bring a fatal curse upon the family. This is known as the worship of Vādhī Devatā, the god of increase. If this rite, which seems to be an elaborate form of *confarreatio*, be not performed at a wedding, the married pair are looked down on by the community. All the sections of the tribe in Khāndesh wear the sacred Brāhmanical thread, worship Bālājī, and celebrate the Gokul-ashṭamī feast, or birthday of Kṛishṇa, with rejoicings and public entertainments. In Nāsik the Lād section worship Khaṇḍobā, Bhairobā, Devī, and Ganapati or Gaṇeśa, and keep in their houses images representing their ancestors. When they arrive at a village where there is a temple of Māruti or Hanumān, the monkey god, they worship him daily. In Ahmadnagar their family deities are Vyānkobā of Tirupatī in North Arcot, and Mariyāī, the Mother-goddess, whom they worship in conjunction with the other Hindu gods. Their special pilgrimages are made to Jejurī in Poona, Pandharpur in Sholāpur, and

Tuljāpur in Hyderābād. In Kanara they are specially devoted to the Krishna cultus.

5. *Religion of the North India Banjāras.*—Passing to Northern India—in Chhattīsgaṛh of the Cent. Prov. they have a special tribal goddess, Banjārī, the impersonated female energy of the tribe, who is represented by a piece of stone daubed with vermilion at the Divālī, or feast of lamps. Farther north those who are Hindus worship the local gods of the places where their camps or settlements are situated. This pantheon is of a very heterogeneous description, including Musalmān saints, like Zāhir Pīr and the Miyān of Amrohā in the Moradābād District, and deified ghosts like Hardaur Lālā, the cholera-god, and Kālū Deo. To these, sacrifices of goats are offered; but sometimes there is not a complete sacrifice, the ear of the animal being only pierced, and a drop or two of blood sprinkled on the altar. In some places, as in the Kherī District of Oudh, they incline towards monotheism, and worship a single Creator under the name of Bhagvān or Parameśvara.

LITERATURE.—The best account of the Banjāras of the Deccan is to be found in a pamphlet by N. R. Cumberlege, printed in abstract in *Berar Gazetteer*, 195 ff., and in full with additions in *North Indian Notes and Queries*, iv. 163 ff. For the United Provinces, see Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 149 ff., where references to the literature will be found. BANNERS.—1. In considering the use of banners from very early times, and onwards, we must employ the word in a wide sense, for both in form and significance banners have passed through a long and varied history. In their origin, and throughout their history—until down to, comparatively speaking, recent times—banners served primarily a 'religious' purpose, and their object was, in the first instance, to *indicate* something rather than to gather people together. The including of banners, standards, flags, and ensigns within one comprehensive category, while justifiable perhaps in view of modern usage, tends to obscure the originally clear distinction between what corresponded to the staff and the flag respectively. There seems to be no doubt that each of these was represented in very early times; nevertheless, the 'staff'—whether of stone or, later on, of wood—might, and evidently often did, do service for the 'flag' as well. Sometimes what corresponded to the 'flag' was a rude engraving figured *upon* the 'staff,' while at other times the 'flag' was a separate object which was attached to the 'staff'; for as banners always had the primary purpose of indicating something, or of drawing attention to something, the thing indicated could be represented upon the upper part of the 'staff' itself, or else it might be a separate object attached to the 'staff.' The Phœnician *cippi*, for example, dedicated to Tanith and Baal Ḥamman, which often have a hand figured on them, must be objects which have a long history behind them, and represent, as one may reasonably suppose, an early form of 'sign-post.' That primitive pillars of this kind were the originals from which in later times monuments on the one hand, and banners on the other, developed and diverged, seems fairly obvious when all the facts are taken into consideration. An instructive example of a very early kind may be seen, for instance, in the 'banner-stones' of the American Indians. In form these vary greatly, but there are certain fundamental features of their shape which are practically constant, and which are of such a nature as to suggest the justifiable use of this term 'banner-stone.' These features are the 'axial perforations and the extension of the body or midrib into two wing-like projections.' They are strongly reminiscent of the 'double axe' which played such an important part in Minoan worship.* The presence of the perforations makes it probable that these 'banner-stones' were mounted for use on a staff, or on a handle as a ceremonial weapon, or on the stem of a calumet.

'These objects are usually made of varieties of stone selected for their fine grain and pleasing colour, and are carefully shaped and finished. In Florida, and perhaps elsewhere, examples made of shell are found. The perforation is cylindrical, and is bored with great precision longitudinally through the thick portion or midrib, which may symbolically represent the body of a bird. . . . They are found in burial mounds and on formerly inhabited sites generally, and were probably as a class the outgrowth of the remarkable culture development which accompanied and resulted in the construction of the great earthworks of the Mississippi valley.' †

2. Banners of a different character were the poles carried in battle by the *North American Indians*, to the top of which eagles' feathers were attached. A similar custom prevailed among many other savage tribes. These were probably the predecessors of the types of banners in vogue among the nations of ancient civilization. Thus the banners of the *Egyptians* consisted of representations of various kinds—holy animals, the sacred boat, and other emblems, sometimes also the name of a king,‡ fans and feather-shaped symbols—which were raised on the end of a staff, and carried by the standard-bearers of each company when an army was marching out to battle.

'Being raised on a spear or staff, which an officer bore aloft, each standard served to point out to the men their respective regiments, enabled them more effectually to keep their ranks, encouraged them to the charge, and offered a conspicuous rallying point in the confusion of battle.' §

Besides these ordinary banners, there were also the royal banners and those borne by the principal persons of the household near the king himself. Only royal princes or sons of the nobility could carry these.‖ The earliest known representations of Egyptian banners are those found on the votive tablet of Nar-Mer (B.C. 4000–5000) at Hierakonpolis; on this are represented four bearers carrying poles with various emblems on the top of them. Something similar, though the pole is not so long, is found on a relief of Rameses I.; the banner-bearer precedes a company of archers. Banners seem also to have been placed on fortresses; on the Ḥeta-fortress of Dapuru, for example, a standard is fixed; it consists of a shield pierced with arrows upon a pole. This is shown in the representation of a siege.¶ Mention should also be made of the masts which stood in front of the *pylons* and *propylons* of Egyptian temples. These masts were decorated with small flags.** The *Assyrian* banners usually took the form of the representation of a deity placed within a disc fixed to the top of a pole. Immediately beneath the disc there was sometimes a species of ornamentation in the shape of flag-like streamers. Judging from the inscriptions, they were fixed to the chariots. It is noteworthy that in none of the battle scenes given in Layard's magnificent series

do banners figure in connexion with foot-soldiers, though in several cases chariots are furnished with them.* The device usually represented is that of a deity.† In the few *Phœnician* battle-scenes and the like which are extant no sign of any banners appears.‡ The *Persians*, like the Assyrians, fixed their banners on chariots. One of their banner-designs consisted of a golden eagle upon a lance. They also appear to have had masts, similar to those which stood in front of the entrances to Egyptian temples. These, too, were probably decorated with flags.§ The earliest form of banner among the *Greeks* consisted of a piece of armour fixed to the top of a spear; in later times different cities carried sacred emblems, *e.g.* the Athenians the owl and the olive, the Thebans a sphinx, and so on. The Dacians carried on their standard the representation of a serpent, also a dragon; this latter was the military ensign of the Parthians, and is that of the Chinese at the present day. Among the *Romans* there was, firstly, the *vexillum*. This appears to have been the oldest form of banner in the Roman army.‖ It corresponds to the modern flag, its main feature being a piece of cloth with a fringe which hung down from a transverse beam; the name of the legion was embroidered on this. The *vexilla* were the 'standards of those divisions of infantry which were separated from the main division for some special duty, or of the troops of discharged veterans called out for further service.'¶ Secondly, in the Roman army each *maniple* had its own *signum*. When the army was on the march the *signa* were borne in front, but during the battle the *signiferi* stood behind the hindmost rank. The pole of the *signum* was a lance pointed at the lower end so that it might the more easily be fixed into the ground. It had a transverse bar near the top from which ribands hung down. Below this bar there were several discs, varying in number from two to seven. These were usually of silver; below them was the crescent moon, above them either a small shield, or a *corona aurea*, or a symbol of some other kind. These discs could be removed from the pole; this was done at military funerals. The *signum* was also carried on war-galleys.** The standards of the prætorians differed from those of the legions in that crowns took the place of the *phaleræ*; a medallion containing a picture of the Emperor was placed in the middle of the pole. These *imagines*, 'effigies' (προτομαί), represented the reigning and earlier Emperors. Another of the Roman standards was the *aquila*, i.e. an eagle with outstretched wings, placed on the top of a long pole; this was usually of silver, but sometimes of gold. The eagle was sometimes represented with an oak-leaf in its beak, perhaps as a presage of victory.††

Among the Indo-Germanic peoples, indeed, the use of banners goes back to very early times. The *Atharva Veda* (v. xxi. 12) speaks of the armies of the gods as *sūryaketu* ('sun-bannered'), and the *Mahābhārata* (xiv. lxxxii. 23) of the hero Megha-sandhi as *vānaraketana* ('monkey-bannered'), while *vṛṣabhadhvaja* ('bull-bannered') and *makaraketana* ('dolphin-bannered') are conventional epithets of Siva and Kāma (the god of love) respectively. In the Avesta (*Yasna* x. 14) there is mention of the 'kine banner' (*gāuš drafšō*), which, in view of the sanctity attached to kine by the Indo-Iranians, may not be without an ultimate totemistic significance. In Rome, besides the instances already noted, previous to the second consulate of Caius Marius, wolves, minotaurs, horses, and boars had figured on the standards of the army in addition to the eagle (Pliny, *HN* x. 16). A similar state of things is implied for the ancient Teutons by Tacitus (*Germania*, vii.), and this is borne out by the fact that the Old High German *chumbirra*, 'tribe,' is cognate etymologically with the Anglo-Saxon *cumbor*, *cumbol*, 'sign' (especially 'military standard'). The Gauls, in like manner, possessed banners with images of theriomorphic deities which were carried into battle, 'car ces enseignes à représentations animales ont une sorte de vie magique; elles menacent véritablement ceux vers qui on les tourne; . . . il se dégageait d'elles des effluves magiques, salutaires à leurs défenseurs, funestes à leurs ennemis, et les dieux se mêlaient ainsi aux guerres des hommes' (Renel, *Religions de la Gaule avant le christianisme*, p. 185). The Arch of Orange represents a number of the Gallic banners, chiefly of boars, though the horse also occurs. It should also be noted that the figure of the theriomorphic deity was often affixed to the helmet among the Gauls as among the Anglo-Saxons (cf. Anglo-Saxon *eoforcumbol*, 'boar-sign,' 'helmet'). The use of banners in war was equally common among the ancient Irish, their word for 'banner' being *meirge*, cognate with the English *mark*, 'sign.'*

All these were originally, without doubt, carried in the belief that they would ensure victory,† a fact which further emphasizes their religious character. The employment of banners as rallying-centres, though very ancient, was a secondary idea; this, however, appears to have been their main use among the *Israelites*. An ensign was set up upon a hill for the purpose of gathering the people together (Is 13^2, cf. 11^{10} 18^3).‡ This was called a נֵס (*nēs*), a word which is used in connexion with the setting up of the brazen serpent in the wilderness (Nu 21^9). Another word used in the OT is דֶּגֶל (*degel*); this would perhaps correspond more with banner in the stricter sense, though the character of both types is conjectural, since no hints as to this are given in the OT.§ According to Nu $2^{2ff.}$ each tribe had its own standard. In *Midrashic literature*‖ it is said that the various emblems and colours of these standards corresponded to the twelve precious stones set in the breast-plate of the high priest. The emblems comprised a lion, a mandrake, the sun and moon, a ship, a snake, etc.¶ On the analogy of the character of other ancient banners, it is possible that a substratum of historical truth may underlie this statement. According to a legend preserved in the *Targum Jerushalmi*, the banner of the Hasmonæans had inscribed upon it the letters מכבי, an abbreviation for מי כמך באלים יי ('Who is like thee among the mighty, Jahweh!').

3. As an example of another and altogether different use of banners, reference may be made to what

are called 'Trees of the Law' among the *Tibetans*. These are lofty flagstaffs, with silk flags upon them emblazoned with that mystic charm of wonder-working power, the sacred words: *Om Mani padme hūm* ('Ah, the jewel is in the lotus,' *i.e.* [?] the Self-creative force is in the Kosmos).

'Whenever the flags are blown open by the wind, and "the holy six syllables" are turned towards heaven, it counts as if a prayer were uttered—a prayer which brings down blessings, not only upon the pious devotee at whose expense it was put up, but also upon the whole country-side. Everywhere in Tibet these flagstaffs meet the eye.' *

4. Ecclesiastical banners, which were adapted from military usage, have always played a great part in Church ceremonial. The idea underlying the use of these is that of the Christian emblem, figured on the banner, going before the army of Christian soldiers. They are thus intended for processional use. Banners of this kind are, as a rule, attached to a transverse bar which is fixed by means of a cord to the staff; in this way the representation of a cross is made. The banner itself is made of silk, linen, or other material, on which is embroidered or painted the picture of a saint, or a sacred symbol expressive of some Christian truth, or else mottoes, either Biblical or based on some Scripture passage, are inscribed upon it. The use of banners in the Christian Church dates from a very early period, namely, from the time of the Emperor Constantine, at the beginning of the 4th century. According to the well-known story, Constantine saw in a vision the Cross upon a banner which bore the inscription, *τούτῳ νίκα*. On awaking, he caused a banner to be made after the pattern of this, and henceforward the *labarum*, as it was called, was carried before his troops. Upon it was figured the Cross in combination with the initial letters of the name of Christ. The *labarum* was the ordinary cavalry standard (*vexillum*) adapted to a specifically Christian use by having Christian symbols upon it. The eagle of victory surmounting the pole gave place to the sacred monogram placed within a chaplet; other Christian emblems were embroidered upon the banner itself.† Banners used in procession must have come into vogue soon after this. The bearers were called *draconii* or *vexilliferi*. Bede, in describing the approach of St. Augustine and his followers to King Ethelbert, says that they came 'bearing a silver cross for a standard, and the image of the Lord and Saviour painted on a panel.'‡ Gregory of Tours, also, in referring to a procession to a basilica, uses the words 'post crucem præcedentibus signis.'§ A later custom was that of carrying a banner of sackcloth in processions of the reconciliation of penitents. This is prescribed, for example, in the Sarum Use.

LITERATURE.—The literature has been given fully throughout the article. W. O. E. OESTERLEY.

BĀNSPHOR (Hindī *bāns*, 'a bamboo,' *phoṛna*, 'to split').—A branch of the Ḍom tribe (wh. see), with whom in the Census returns of 1901 the Basor and Basuhā are included, the whole numbering 95,979, of whom a large majority are found in the United and Central Provinces. The chief occupation of Bānsphoṛs is, as their name implies, working in bamboo, out of which they make fans, baskets, and boxes. But they also occasionally take service as sweepers, and are therefore subject to the tabu which all orthodox Hindus impose on those who practise a trade of this kind. Their religion is of the animistic type found among all branches of the Ḍom tribe, their chief deities being in Upper India the Vindhyabāsinī Devī, the mountain-goddess of the Vindhyan hills, whose temple is at Bindhāchal in the Mirzāpur District. They also worship local village gods who are venerated in the places where they settle, such as Kālikā and Samai. To the former, at household celebrations, such as marriage and childbirth, a young pig, spirituous liquor, flowers, and ground rice boiled in treacle and milk are offered, all the food after dedication being consumed by the worshippers. The offering to Samai is a yearling pig. The ordinary Hindu feasts are observed, among which in particular the Holī, or fire feast, in spring is celebrated with drinking and coarse revelry, and the Kajarī in the rainy season, when drunkenness prevails and all rules of sexual morality are disregarded. They have a great respect for the snake, and, at the Guṛiyā feast, girls make dolls of rags, which are supposed to represent snakes and are beaten with rods by boys and flung into a tank—the real origin of the celebration probably being the expulsion of the powers of evil impersonated in the snake. They fear the spirits of the dead, and propitiate them by laying out food for them, which is afterwards eaten by the children and by crows. The ancestors, especially, rejoice in the savour of roast pork, and if not honoured by the sacrifice of a pig, which is cooked and eaten by the worshippers, may bring trouble upon the household. At a birth the Bānsphoṛ worship the spirit of the well from which they draw water, and they hold the Pīpal tree (*Ficus indica*) in great respect, and will not cut or injure it. The same reverence is felt with regard to the Gūlar (*Ficus glomerata*) and the Semal (*Bombax heptaphyllum*). No Brāhman officiates at any of their rites, all of which are performed by a member of the tribe or household.

LITERATURE.—Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 171 f. W. CROOKE.

BANTU AND S. AFRICA.

[E. SIDNEY HARTLAND.]

1. Race and geographical distribution of the Bantu.
2. Culture and organization.
3. Totemism.
4. Worship of the dead and other spirits. Burial rites.
5. Idols.
6. Priests, medicine-men, diviners, and sorcerers.
7. Supreme Being, Nature-spirits.

1. Race and geographical distribution of the Bantu.—The term *Bantu* (pl. of *Muntu*, a native word meaning 'man') is applied to that variety of the Negro race which, prior to the coming of Europeans, was politically, and still is numerically, predominant in South Africa. The Bantu are distinct alike from the West African or true Negroes, and from the Nilotic Negroes of the Sudan and adjacent lands. They were differentiated at some remote period, probably by intermixture with a Hamitic stock. They seem to have originated as a distinct variety somewhere in the neighbourhood of the Great Lakes, and thence to have spread southward and westward over the greater part of the continent. North of the equator they are found from the northern shores of Lake Victoria Nyanza right across to the Gulf of Guinea, thus embracing the entire valley of the Congo. Still further to the north they have thrown out numerous colonies, as far as the northern Cameroon, among the true Negroes. On the other hand, the latter are traceable down the eastern side of the Gulf of Guinea until they finally disappear in French Congo, giving place to the Bantu not very far south of the Equator. The Bantu never penetrated

into that part of Cape Colony which lies west of the Great Fish River, or into the southern portion of German South-west Africa.

The Bantu are usually divided into three main groups, distinguished by the manner in which the plural name is formed, viz. :—

1. The South-eastern tribes (Ama-Zulu, Ama-Xosa, etc.).
2. The Central tribes (Be-Chuana, Ba-Suto, Ma-Shuna, etc.).
3. The South-western tribes (Ova-Mbo, Ova-Herero, etc.).

To these, however, we may conveniently add as distinct groups—

4. The Northern tribes still living in the region of the Great Lakes, such as the Baganda, Warundi, Awemba, and others.
5. The Western or Forest tribes, occupying the Congo valley and a large tract of country north and south of that region, such as the Ovimbundu, Bavili, etc.

This distribution, though geographical, corresponds in the main to the ethnical peculiarities of the different groups, due doubtless to the streams of emigration and the various influences, human and climatic, which met the immigrant tribes on their way to the regions where they finally settled. It would occupy too great a space to discuss the details here. The causes of difference are largely conjectural, and the questions raised are greatly complicated by the incessant wars which have resulted in the intermingling or extermination of many distinct tribes, or in wholesale emigrations of hordes which have broken away from the parent stock after it had settled in its present *habitat*.

2. Culture and organization. — The primary application of the term *Bantu* is linguistic. The Bantu languages are formed on common principles, and are related to one another in the same way as the Aryan languages of Europe and Asia are related to one another. But, since the peoples speaking those languages belong, with few exceptions, to a well-marked anthropological type, it is usually and conveniently applied to that type. The Bantu peoples are in a fairly uniform stage of culture, and may be generally described as both pastoral and agricultural. As the climate of the continent varies from desert to forest, from tableland intersected by broad but often intermittent rivers to mountain regions embracing deep fertile valleys and vast inland seas, so necessarily do the occupations of the people differ. On the western side the extremes are found—that of the Hereros, who, living in a waste and well-nigh waterless country, practise no agriculture at all, and that of the tribes of the Congo, among whom the rearing of domestic animals is reduced to a minimum. All the Negroid peoples of Africa are acquainted with the use of iron; some of them are capable and ingenious smiths. Excellent spears, or assagais, knives, and hoes are produced by their simple forges. Small implements are carved from horn or bone; and among many tribes basket-work is much developed. The typical Bantu house is a circular hut, beehive-shaped among some tribes such as the Zulus, or with a true roof. These huts are built in groups, or villages, enclosed with a palisade, a hedge, or a wall of mud or stones. Every village is ruled by a chief, who in some tribes may be a woman, and whose authority varies, according to the tribe, from absolute rule to a rule exercised with the concurrence of the heads of the houses composing the village. In the more highly organized and military tribes the village chiefs are subject to a very real control by the supreme chief or king, who is surrounded by a number of ministers, and often keeps up a large measure of barbaric state. His power is in such cases exercised ruthlessly, and, however limited in theory, is in practice checked only by the dread of assassination, or (at all events in the southern portions of the continent) by the knowledge that his people may gradually desert him and go to augment the following of a more popular rival. The continuance, therefore, of a Bantu realm depends upon the political genius of its king. Within a couple of generations the mightiest kingdom is apt to fall to pieces, and another will arise on its ruins. This instability could be illustrated again and again from South African history; it has been a serious barrier to the progress of the arts of peace, has frequently depopulated large tracts of country, and has caused endless confusion and misery in every direction.

In addition to their political divisions, all the Bantu peoples are divided into stocks or clans. The members of each of these clans are united by a real or imputed community of blood, symbolized by a common name, usually derived from some animal or plant. Two opposite methods of reckoning the kinship are in use. It is probable that mankind originally reckoned kinship only through females. This mode of reckoning is called mother-right. The Western, or Forest, and some of the Northern tribes are still in this stage. Consequently the husband and father, though the head of the household, has a very limited power over the children, who in many cases are liable to be sold into slavery by their mother's brother, or pawned for his debts. Their mother's brother is their nearest male relative, and they inherit his property and liabilities. When a Bantu marries, he is required to pay what is usually, but inaccurately, called a 'bride-price.' Where kinship is reckoned through women only, this is often paid to the bride's maternal uncle. On the other hand, the Eastern and Central tribes have advanced to the stage of father-right, or the reckoning of kinship through males only. The husband and father owns the children of his wife, by whomsoever they are begotten. He has extensive powers over them, though these powers are often, as among the Basuto, limited by the rights of the wife's eldest brother. The *malume*, as the wife's brother is called, is the special protector of the child. The Basuto perform the rite of circumcision about the age of puberty. On this occasion the *malume* makes his nephew a present of a javelin and a heifer. He subsequently furnishes a part of the bride-price on the youth's marriage; and, if surviving, he presides at his funeral. He is entitled to a share of the spoil taken by his sisters' sons in war, and of the cattle which form the bride-price of his sisters' daughters. These rights and duties are best explained as a survival from the stage of mother-right.

If we turn to the South-western tribes, we find among the Ovaherero a peculiar organization intermediate between mother-right and father-right. The Ovaherero are the predominant Bantu people of German territory. According to the older organization, they were divided into clans called *eanda* (pl. *omaanda*), in which kinship was reckoned exclusively through females. These are now being superseded by clans called *oruzo* (pl. *otuzo*), in which kinship is reckoned exclusively through males. The consequence is that every Herero belongs to two distinct stocks—to an *eanda* through his mother, and to an *oruzo* through his father. Kinship is thus reckoned through both lines. The *patria potestas* is, as might be surmised, greatly limited. The husband and father is responsible to his wife's kin for the death of wife or child in consequence of his acts. The wife is capable of owning property apart from her husband, to which on her death he does not as a rule succeed. It is taken by her kin reckoned through the *eanda*. On the death of a man his property does not necessarily fall to his son as in strict father-right; but the claims of the son as *oruzo*-heir and of his sisters' sons or other *eanda*-heirs are the subject of adjustment (Dannert, 32, 47, 58).

3. Totemism.—The object from which a Bantu clan or *gens* derives its name is, as already stated, usually a species of animal or plant, generally the former. More rarely, such an object as the sun or rain, iron or an artificial product like the hoe, is found as the name and symbol of a clan.

The organisation in clans thus distinguished was first observed among the North American Indians; and *totem*, the name scientifically adopted to denote the clan-symbol, is derived from an Ojibwa word. The condition or status of peoples thus organised and possessing totems is known as totemism. Much obscurity still hangs over the origin of totemism. Without discussing the question here, it is sufficient to observe that totemism takes its rise in savagery and among peoples who trace their descent exclusively through the mother. A special bond unites every member of the clan to every individual of the totem-species, all of which are under a ban or tabu. They are sacrosanct. Save in special cases, they may not be killed or eaten or used in any way; if killed or found dead, they are often honoured with funeral rites and mourning, like human members of the clan. At puberty the children of the clan usually undergo initiation into the mysteries and privileges of the clan; not until then are they considered full members. Marriage is contracted exclusively outside the clan, sexual relations being wholly forbidden between members of the same clan. As soon as the stage of pure savagery is passed, totemism begins to decay. No Bantu tribe is in the stage of pure savagery. Consequently totemism, though found among them as the basis of their social organization, is nowhere in its pristine power and development. From many of the tribes, indeed, it has disappeared, leaving only traces of its former presence. Totemism is often regarded as an incipient form of religion; but it should be observed that it lacks some of what we are accustomed to consider distinctive features of religion, such as prayer and sacrifice. See, further, art. TOTEMISM.

(*a*) *Central and South-eastern tribes.*—The Bechuana are a congeries of tribes in the centre of South Africa, for the most part of common origin. Livingstone tells us that the different tribes 'are named after certain animals. . . . The term *Bakatla* means "they of the monkey"; *Bakuena*, "they of the alligator"; *Batlapi*, "they of the fish"; each tribe having a superstitious dread of the animal after which it is called. They also use the word *bina*, "to dance," in reference to the custom of thus naming themselves, so that, when you wish to ascertain what tribe they belong to, you say, "What do you dance?" It would seem as if that had been a part of the worship of old. A tribe never eats the animal which is its namesake, using the term *ila*, "hate *or* dread," in reference to killing it. We find traces of many ancient tribes in the country in individual members of those now extinct, as the *Batau*, "they of the lion"; the *Banoga*, "they of the serpent"; though no such tribes now exist' (*Missionary Travels*, 13).

It is right to call attention here to the confusion between *tribe*, the local or political unit, and *clan*, the social unit. This arises partly from the great explorer's loose terminology; but it must be said that the tracing of descent through the father instead of through the mother tends to localize the clans, and the political instability already mentioned from time to time wipes out many of the clans thus localized, or absorbs them among the followers and subjects of one or more of the powerful chiefs. A body of men belonging to different clans localized under the rule of a chief soon learns, in the stage of father-right, to reverence his ancestors and his totem, and to regard their own as of less importance.

In the middle of the 19th cent. the clan of the Bakuena was thus an important tribe living about the sources of the Notuani river. They are reported as calling the crocodile their father, celebrating it in their festivals, swearing by it, and making an incision, resembling the mouth of a crocodile, in the ears of their cattle to distinguish them from others. The chief was called 'Great Man of the Crocodile' (Casalis, *The Basutos*, Lond. 1861, 211). None of the Bakuena would approach a crocodile. If they happened to go near one, they would spit on the ground, and indicate its presence by saying *Boleo ki bo*, 'There is sin.' They imagined the mere sight of it would give inflammation of the eyes (Livingstone, *op. cit.* 255). In the decay of totemism, however, either the wide distribution of the crocodile clan, or the power of chiefs belonging to it, has resulted in an extension of *quasi*-religious practices relating to the crocodile far beyond the bounds of the Bakuena clan. The nation of the Basuto was formed by the genius of its great ruler, Moshesh, of men belonging to many clans and, indeed, of different tribes. But Moshesh belonged to the Bakuena; and he succeeded in transmitting his rule to his descendants, one of whom still wields the power under British protection. Consequently the crocodile has become the sacred animal of the whole nation, and is the subject of various rites. The blood of a young crocodile, caught alive and afterwards returned to the water, is a favourite 'medicine' to make a chief 'strong.' 'Medicine' for a kraal is prepared with the brain of a crocodile mixed with that of a man. Both among the Basuto and the Bechuana a man who is bitten by a crocodile is expelled from his village; for the people say, 'A man who is so bad that the crocodile bites him can come no more into our community,' as if they saw in this bite a Divine judgment. The death of a crocodile causes the children to cough. Its body is handed over to the medicine-men, who slay a black sheep on the spot where it was killed, as a sort of atonement for its death. The crocodile's blood kneaded up with mud, its hide, teeth, and claws, are used as talismans (Merensky, *Beiträge zur Kenntniss Süd-Afrikas*, Berlin, 1875, 92, 132). These usages and others that might be named probably result from a decay of totemism under the social and political influences dominant on the central plateau of South Africa. Among more certain evidences of still existing totemism is the practice of addressing the chief of a clan as the animal itself. The totem of Khama, the famous chief of the Bamangwato, was a duyker antelope. If one were in agreement with something he had just said, it would be highly respectful to reply, 'Yes, Duyker.' Similarly it would be proper to say to the chief of the Bakuena, 'Yes, Crocodile' (W. C. Willoughby, in *JAI* xxxv. 301). No one dares to eat the flesh or clothe himself with the skin of the animal whose name he bears. Even if this animal be hurtful, as a lion for instance, it may not be killed without great apologies being made to it, and its pardon being asked. Purification is necessary after the commission of such sacrilege (Casalis, 211). The great oath of the Baperi 'is that of *ka noku*, "by the porcupine," because the majority of them *sing*, to use the consecrated phrase, intimating that they feast, worship, or revere that animal. . . . When they see any one maltreat that animal, they afflict themselves, grieve, collect with religious care the quills, if it has been killed, spit upon them, and rub their eyebrows with them, saying, "They have slain our brother, our master, one of ours, him whom we sing." They fear that they will die if they eat the flesh of one' (Arbousset, *An Exploratory Tour to the N.E. of the Colony of the Cape of Good Hope*, Lond. 1852, 176).

Most of the central tribes practise *circumcision*. The ceremony is performed upon boys about the age of puberty. It takes place at intervals of time which depend on the number of candidates. The lads who are to be subjected to it are gathered into a hut, where they have to reside for several weeks, and where they are initiated into the traditions of the tribe and the duties of manhood. When they are at length released, they issue with the rights of adult and fully qualified members of the tribe. Among some tribes, such as the Basuto of the Transvaal, the 'schools,' as they are often called, are spread over three periods, held at intervals of three years; but they are more usually completed in one term. The discipline undergone by the candidates is intended to harden them and develop their endurance and self-restraint. In regard to sexual matters, however, it is the reverse of what we should consider moral. The actual performance of circumcision is not an original or necessary part of the initiation ceremonies. Though ancient among many of the tribes, it has only recently been introduced among some, and is still rejected by others. Among the Baronga it fell into

desuetude in the early years of the last century; and Chaka, the great Zulu king, abolished it about the same time among the Zulus (Maclean, 94, 153; Alberti, *De Kaffers*, Amsterdam, 1810, p. 73; *Journ. African Soc.* v. 247; *JAI* xxxv. 251, 267, 372; Junod, 28). The Basuto of Basutoland, the Bechuana, and many other tribes require a similar period of retirement and instruction to be undergone by girls before they are esteemed marriageable.

The Zulus, the Xosas, the Pondos, and other tribes of the south-east, observe the rule of *exogamy*. They are forbidden to marry members of the same clan, though belonging to different tribes. The rule, however, is breaking down (Theal, *Kaffir Folk-Lore*, Lond. 1882, 198; Shooter, *Kafirs of Natal*, Lond. 1857, 45). Among the tribes of the interior it has rarely been recorded. A somewhat similar rule forbidding marriage within the kin has recently, however, been noted by a German traveller as characteristic of the Batauana, an offshoot of the Bamangwato inhabiting the Okawango marshland near Lake Ngami (*ZE* xxxvi. 704); and though it has escaped record, it is possible that it may be observed by others of the central and south-eastern tribes.

(*b*) *Northern tribes.*—Among the northern tribes, such as the Baganda and the Banyoro around the Victoria Nyanza, totemism is still a powerful part of the social organization. Sir Harry Johnston gives a list of twenty-nine clans in Uganda proper and its southern province of Buddu, named after various animals and vegetables. The object which serves as the name of the clan is in some way identified with the original founder, though there is no evidence that the clan is believed to be actually descended from it. It is held so far sacred that the members of the clan do not willingly destroy or eat it. The *mamba*, or lung-fish, though generally appreciated as an article of diet, is not killed or eaten by the Mamba clan; the elephant is not injured by the members of the Elephant clan; members of the Leopard or the Lion clan will endeavour to avoid killing the animal whose name they bear; and so on. The word used for 'totem' is *muziro*, 'something tabued or avoided,' and is, Sir Harry Johnston declares, 'a fair translation' of the word *totem* (Johnston, ii. 587, 588, 691, 692). The same distinguished author was of opinion that there was no prohibition of marriage within the clan. More recent investigations, however, have resulted in a different conclusion; and it seems fairly certain that, whatever was the custom among the Banyoro, the Baganda and probably the Basoga forbade marriage between even the most distant members of the same clan. As elsewhere, the kin is reckoned through the father, and has the consequent tendency to localize itself. Every family has its *kialo*, or place of origin; and the residents in a given village usually belong to the same totem. Circumcision and other initiatory ceremonies appear to be unknown.

Meagre as is our information with regard to the Uganda Protectorate, we know still less of the totemism of the other northern peoples. Father van der Burgt, to whose monograph we are indebted for all that we know of the Warundi of German East Africa, uses the word without any clear notion of its meaning. The goat, the wild boar, and the domestic fowl are not eaten, though the first and last are offered in sacrifice. Mutton is not eaten by every one. Fish is not eaten, save on the shores of Lake Tanganyika. But whether these tabus are totemic we cannot say. The Warundi seem to count kinship through the father. The wife, however, occupies a much better position than among the tribes south of the Zambesi. Indications given here and there by Father van der Burgt point to an organization in clans. How far it is effective, and whether the clans are exogamous, does not appear. Circumcision is not practised. On puberty rites we have no information; but secret societies exist, and serpents and other animals are said to play a part in their ceremonies. Nothing, however, is really known of the facts.

On the Shire Highlands, between Lake Nyasa and the Zambesi, the Wayao and Mang'anja reckon descent through the mother. When a man marries, he settles in his wife's village. He does not, as a rule, take a second wife while the first is living, unless he inherits her from his elder brother or maternal uncle. When he dies, any property he may have which is not buried with him or consumed in the funeral feast and expenses devolves on his next brother, or, failing younger brothers, on his eldest sister's son, and so on (Macdonald, *Africana*, i. 187; Werner, 132). The Wayao are divided into exogamous clans. These clans appear to be totemic, but no list has been made of them. Each of them is said to have a *mwiko*, or tabu, with regard to some animal. The subject, however, still awaits investigation (Werner, 252). Girls and boys undergo initiation about the age of puberty. The retirement and ceremonies for a girl occupy about a month, for a boy about six weeks. A boy's name is changed, and after he has gone through the mysteries it is not permitted to call him by his previous name. Among the Mang'anja only the girls undergo puberty rites. Their names are changed, like those of the Yao boys (Macdonald, *op. cit.* i. 125; Werner, 123). The front teeth of both sexes are chipped into saw-like points; but this does not appear to be done at the puberty rites.

The Awemba inhabiting North-Eastern Rhodesia between Lake Tanganyika and Lake Bangweolo have totems which descend exclusively through women. The crocodile, the hoe, and the mushroom are stated to be totems. 'But no special worship is paid to the crocodile, though the natives believe that the souls of the drowned migrate into the bodies of crocodiles' (*JAI* xxxvi. 154). Our information is at present too meagre to enable us to judge how far totemism is still the basis of society.

(*c*) *South-western tribes.*—Turning to the Hereros in the south-west, we find a curious condition corresponding to the double reckoning of kinship already noted. Each *eanda* has a totem, and nearly all of them a number of sub-totems. Most of the characteristics of totemism have, however, been taken over by the *otuzo*, and are no longer observed by the *omaanda*. Thus the chameleon is sacred to the *oru-esembi* (the *oruzo* of the chameleon). The members of the clan call it 'Our Old Ancestor,' and they will not touch it. The members of the *oruzo* of the sun eat and drink only while the sun is above the horizon. The chief tabus of the *oruzo* have been concentrated on domestic animals. The *oruzo* of the chameleon prefer brown and especially piebald cattle; they neither keep nor eat sheep or oxen into the colour of which grey enters. Another *oruzo* neither keep nor eat yellow or grey cattle; they are forbidden to eat the tongue or other part of the flesh of pack-oxen. The *oruzo* of the Koodoos not only eat no koodoo-flesh; they keep no cattle or sheep without horns or with mutilated horns; nor will they eat of such as have lost their ears. At the death of a member of the clan no sacrifice is offered. Hence the characteristic ornament of Herero graves—that of the ox-horns—is wanting; but koodoo-horns are laid on the grave and by the sacred fire at the *werft* ('village'). These tabus of domestic animals having certain colours and other marks, and of portions of animals, bear the stamp of comparatively recent origin—an attempt to import into the *oruzo* a distinctive series of observances parallel with, and yet different from, those which were pro-

bably characteristic of the *eanda*, but which have now disappeared. The blood-feud, however, still attaches to the *eanda*, and has not been transferred to the *oruzo*. It is to be inferred that the *eanda* was exogamous. At present the Herero prefers to marry within the circle of his relatives; but—significant exception—children of two sisters or of two brothers cannot intermarry. According to the Herero reckoning, they are themselves brother and sister. If children of two sisters, they would belong to the same *eanda*; if children of two brothers, to the same *oruzo*. There appear to be no puberty-mysteries for either boys or girls. Circumcision is practised, but it is an individual rite performed for the most part at a very early age. The hair of a girl, except a tuft on the middle of the head, is shaved in her eighth year. The lower front teeth of both sexes are broken out, and the upper teeth chipped into a pointed form, between their eleventh and fourteenth years. These appear to be relics of puberty-rites; but none of them are said to be performed collectively when the parents can afford the sole expense of the festivities usual on the occasion. Only from motives of economy are these rites now imposed upon the young people in companies.

(*d*) *Western or Forest tribes*.—So far as our information goes, the vestiges of totemism among the Western tribes are few and uncertain—and this in spite of the fact that most of the tribes are still in the stage of mother-right. The prevalent tabus, especially those of food, however, point to a totemic origin. They are generally known under the name of *xina*, *orunda*, or *kazila* (compare the *ila* of the Bechuana), or some dialectic variation of one or another of those words. The Congo tribes inhabiting the lower reaches of the river as far inland as Stanley Pool call a tabu *mpangu*. These tabus are of two kinds.

There is, first, the personal *orunda*, observed by virtue of a vow by the individual concerned or of the directions of a medicine-man, or else promised and vowed, after divination, for an infant at birth, and sometimes expressed in his name. Many of these prohibitions are attributed to the direct commands of a *Nkici* (tutelary god or 'fetish'). Many are self-imposed as a religious observance in honour of a *Nkici*, or as a measure of precaution. Some are connected with a secret society, and are required of all its members. Natives are frequently named after animals; and such of the prohibitions as go with the name of an animal may have been taken over from totemism. The rest are perhaps due to the development of 'fetishism' and idol-worship (see § 5).

The other kind of *orunda* is observed by entire families. In Calabar, as we are told by a missionary, 'certain kinds of food are forbidden by some juju law or custom of their own to families and persons bearing certain names' (Waddell, *Twenty-nine Years in the West Indies and Central Africa*, Lond. 1863, 369). Among the Bavili or Fyât, in French Congo, the pig is forbidden to all royal blood; other families 'will not touch certain animals because their ancestors owe such animals a debt of gratitude.' The buffalo is forbidden 'to the Bakutu, as a punishment to them for not listening to the words of Maloango; the antelope to a family round about Fahi, for refusing to give water to a voice in the bush when asked for it; fish of certain inland waters to certain people, near Cabinda, for not giving water to Nzambi (§ 7) and her child; and so on' (Dennett, *Folkl. of the Fjort*, 10, 149; cf. Bastian, *Loango-Küste*, i. 183 ff.). Du Chaillu's evidence is to the same effect. He tells us that the flesh of the *Bos brachiceros* was an abomination to the king of the Bakalai and all his family, because many generations previously one of their women gave birth to a calf instead of a child; that the crocodile was forbidden food to another family for the same reason; and that further inquiry disclosed the fact that 'scarce a man could be found to whom some article of food' was not *orunda*. Crocodile, hippopotamus, monkey, boa, wild pig are enumerated by the traveller as objects of such prohibition, which is observed even at the risk of starvation, and under the belief of supernatural punishment by miscarriage of women of the family or the birth of monstrosities in the shape of the prohibited animal (du Chaillu, *Equat. Afr.*, Lond. 1861, 308). The word 'family' used by our authorities corresponds with little doubt to a clan tracing its membership through women; and the fact that the name frequently indicates the prohibited food lends countenance to the belief that we have here a survival of a genuine totemic tabu. It seems, however, that by a curious exception, the totem, if totem it be, descends, among the tribes of the Lower Congo, always from father to son, though in other respects the tribes in question are in the stage of mother-right (Bentley, *Pioneering on the Congo*, i. 263). Further investigation is needed on this point.

The Barotse are an outlying Western tribe on the upper waters of the Zambesi. They reckon descent through the father only, though traces linger of the earlier form of organization. Our information as to their food-prohibitions is very meagre. The members of the royal family are forbidden the flesh of the sheep and the goat. The pig seems more generally tabued; and the young women abstain from a certain fish lest it render them sterile (Béguin, *Les Ma-Rotsé*, Lausanne, 1903, p. 124). But whether the latter prohibitions are confined to the Barotse themselves or apply also to any of their subject peoples does not appear.

More uncertain as a trace of totemism are the puberty-rites. Circumcision is very general, except among the Barotse; and though sometimes performed upon boys individually when they arrive at the proper age, and, indeed, among certain of the Upper Congo tribes a few days after birth, it is frequently, as in Angola, a collective rite, at which the boys who are subjected to it live for a month in seclusion under the care of a *nganga* (§ 6). Girls on reaching puberty are required to undergo seclusion in a hut called 'the paint-house,' where they are instructed by an old woman in the duties of adult life, and whence they often do not issue until they are about to be married. But this is an individual rite. Secret Societies flourish all down the West Coast. They have probably been introduced from the Negro tribes, and seem to be connected with the worship of special gods. Boys and often girls about the age of puberty are compelled to be initiated. They are taken away into the bush for a season and there instructed in the cult of the Society. Absolute obedience to its commands is required; and oaths of secrecy are imposed. So well are these kept that even converted natives refuse to speak of the rites. Consequently very little is known of them. As among many of the Australian tribes, it is believed by the uninitiated that the novices are killed and brought to life again. On returning to the village they feign ignorance of their language, and even of their nearest relatives and the most familiar objects of their daily life. 'They appear dazed, and cannot talk. They want whatever they see, seize whatever takes their fancy. No one is allowed to resist, because "they do not know any better." They behave like lunatics, and pretend not to know how to eat; even food has to be masticated for them, so well do they act their part. After a few days the excitement and interest of the deception

wear off, and they gradually resume intelligence' (Bentley, i. 287). The Societies wield enormous political and social power, of which they frequently give public demonstration; and it is one of the main objects of civilized governments to put them down. We may conjecture that here, as elsewhere in the lower culture, they are a development of the puberty-rites arising on the decay of totemism.

Certain of the tribes also, both inland and on the coast, knock out the two middle front teeth in the upper jaw at puberty. The Mushicongos, like the Hereros, chip all their front teeth into points (Decle, *Three Years in Savage Africa*, Lond. 1898, 81; Monteiro, *Angola and the River Congo*, Lond. 1875, i. 262). The one or the other mutilation is common in Africa, as well as in other parts of the world; and although generally connected with puberty cannot be reckoned as necessarily a relic of totemism.

The laws of marriage, so far as relates to prohibited degrees, have scarcely been investigated; but at all events some of the tribes forbid marriage within the clan, however remote the relationship according to our reckoning.

4. **Worship of the dead and other spirits. Burial rites.**—(*a*) *Central and South-eastern tribes.*—The principal factors in the decay of the totemism of the Central and South-eastern tribes have been their pastoral and warlike habits. These have necessitated a higher social organization with father-right as its basis. As already pointed out, the change from mother-right to father-right tends to localize the clans, and to merge them in the local organization under the recognized head of the clan. The social and religious rites of each household are performed by its head; those of the tribe are performed by its chief. Thus they gradually centre round him while living; nor does his power cease with his death. The very ancient and world-wide belief in the life after death leads to the conviction that the chief is still a chief; the father of a household still exercises his functions of owner, provider, controller, preserver, behind the veil that separates him from his survivors and descendants. No other life can be imagined for him; and the people over whom and for whom he exercises these functions are the same whom he ruled in his lifetime. The chief is the father of his tribe; he is its head, and his tribesmen are in a sense his children. In South Africa the tribe is often called by his name. Many a tribe credits its chief with extraordinary powers: he controls the rain; he gives or withholds plenty; he performs the ceremonies which give success in war. 'The chief,' says Merensky, 'is the focus of witchcraft and superstition; he is the high priest of his people; and faith in his supernatural power is the strongest bond which unites his subjects to himself' (*Beiträge*, 116). Such an one receives in his lifetime a reverence hardly distinguishable from worship. That reverence is exalted and intensified by death. His powers are now released from many of their limitations, and are exercised in more terrible, because more mysterious, ways. He becomes part of the tribal religion, for the moment the most prominent object of worship; and such he remains until his successor in his turn supplants him.

Ancestor-worship thus developed—worship of their ancestors by the members of a family, and of their departed chiefs by a whole tribe—is the religion of the Central and South-eastern Bantu peoples.

It is to the ancestors of the reigning chief, says M. Junod, speaking of the Baronga, 'that prayers and sacrifices are always presented when the interest of the tribe as a whole is concerned—in national calamities, in time of famine, drought, war, or at the opening of a new season when it is desired to obtain from the divinities an abundant harvest. Their names compose the genealogy of the royal family. They are invoked one after another; and it is doubtless this religious practice which has saved from oblivion the names of these revered chiefs, become the protecting genii of the tribe. Moreover, each family possesses also its string of *chikwembo* [ancestral *manes*], longer or shorter, better or worse preserved. If the family pride be well developed, if the ancestors have been men of mark, and if their sons have guarded the family tradition with intelligence, this family religion will be well developed' (*Les Barongas*, 382).

As the ancestors of the chief are worshipped on national occasions, the ancestors of the family are worshipped on occasions of family interest, such as marriage, death, or sickness, or any occasion of rejoicing, prayer, or mourning.

The Central and South-eastern Bantu believe that the ordinary existence of the soul after death is led underground (a conception which is the natural consequence of burial), often in villages like those on earth, and with cattle variously said to be entirely white or (among the Basuto) of a blue colour with red and white spots. But the dead retain the power of appearing in dreams, or of assuming the form of animals. Sometimes they enter into men and inspire them. They retain their human feelings, and desire to be remembered by their descendants and nourished by sacrifice. It would seem as if they were dependent for their continued existence, or at all events for their comfort, on the continuance of their line. If they have no one to remember them and to offer sacrifices to them, they will be reduced to eating grasshoppers, and they will 'die of cold on the mountains.' This expression is perhaps not to be taken literally; but at least it indicates a state of extreme misery (Callaway, *Rel. Syst.* 145, 225; Arbousset, 237). Though worshipped, the dead are feared rather than loved. They are possessed of more than human power and knowledge, and appear sometimes for beneficent purposes, as to warn of danger, or to reveal medicines. Sneezing is caused by the *manes*; it is a sign that the spirit of an ancestor is with the man to help him. More usually, however, the visits of the dead are to demand sacrifice or to call the living. They often harass the living by their presence, and must be laid. The dead husband is jealous of his wife; and, before she marries another, the spirit must be laid, and she must be 'purified.' When the dead reveal themselves to their descendants and tribesmen in dreams, they usually appear in their own proper forms. When they appear otherwise than in dreams, it is as animals. Buffaloes, hippopotami, lizards, and even mice are mentioned among the animals held by the Zulus to be manifestations of their dead. Among the Matabele and the Mashuna the dead may be changed into animals such as elephants, bucks, lions, and so forth. Other tribes hold crocodiles or hyænas to be manifestations of their departed members. In fact, almost any animal may be credited with being an incarnation of the dead. But by far the commonest form assumed is that of a snake. Several kinds of such snakes are distinguished by the Zulus. Some of them are appropriated to deceased chiefs; others are incarnations of the common people; and one kind is shared by chieftainesses with commoners (Callaway, *op. cit.* 196). All animals to which these beliefs attach are, of course, treated with respect; offerings are made to them; and they are never killed or injured.

In addition to the animals referred to in the foregoing paragraph, a sacred character attaches to the ox. The chief wealth of these tribes consists of their domestic cattle. The Zulu cattle-pen, or *kraal*, is placed in the centre of the village, and the human habitations are built round it in a circle. The Pondos build their villages in horse-shoe form, with the kraal between the two ends. Farther to the north the Bavenda huts are scattered irregularly in a palisaded enclosure on a hill-side, the kraal occupying one of the lower corners. Each tribe has its own type of village; but in any case, the kraal

is the most sacred spot. There the chief of the village receives and feasts his visitors and people on great occasions; there he offers his sacrifices to the *manes*; and often, when he dies, he is buried there. All public assemblies are held there, and all solemn rites performed. The burial of the chief in the kraal involves the identification in some sense of the cattle with the deceased. A Bechuana chief is frequently addressed as 'One who came forth from cattle.' Among the Basuto the cattle are called '*melimo* (spirits, *manes*) of the wet noses.' Yet the cattle are not regarded with the reverence and fear which the animals previously mentioned enjoy. As domestic animals they are treated as the property of their owners; they are driven forth to pasture and back to their kraal; they are milked; superfluous bull-calves are castrated; above all, they are killed for sacrifice and for food. Probably, in the first instance, they were never slain except for sacrifice. But a sacrifice to the *manes* results in a feast on the slaughtered animals by the living members of the village or the tribe; and now among tribes like the Baronga the cattle are killed for food, while the goat, a less valuable beast, is the largest sacrifice (Junod, *op. cit.* 200). Among the Bechuana and other tribes a bull or an ox is still offered on all important occasions. In extreme emergencies, when the ordinary prayers for rain have been of no avail, the Bamangwato offer an ox on the grave of a chief. On setting out for war the Bechuana sacrifice a bull with special ceremonies, and the contents of its stomach are carried before the host as a talisman of victory. The same uninviting substance is smeared over warriors in the purification ceremony after returning from a fight; and chiefs who have quarrelled, meeting in a reconciliation ceremony, smear it over one another's arms as they clasp hands. At a Bechuana marriage the fat surrounding the entrails of the slaughtered ox is rubbed with 'medicine' and laid about the shoulders and bosom of the bride. Among the Basuto an ox is sacrificed at a death, the corpse is buried wrapped in the skin with a piece of the meat and some grain, and the contents of the victim's stomach are placed on the grave. The ritual in all these cases indicates the sacredness of the animal; and many other native customs and phrases point in the same direction (*JAI* xxxv. 301 ff.; Martin, *Basutoland*, London, 1903, p. 90 f.; Junod, *op. cit.* 200).

The origin and exact bearing of these practices are still undetermined. They are possibly to be traced to the special care and affection with which cattle are thought to be regarded by the deceased ancestors whose chief possessions they were, and who are held to incarnate themselves in, or to inspire, them from time to time. The Sesuto phrase, for instance, above quoted, is said to be used because it is believed by the Basuto that the spirits of the departed take up their abode for a time in the bodies of the cattle (Mrs. Cartwright, in *FL* xv. 246). It would seem, however, that such possessions are to be distinguished from those previously referred to, being usually no more than temporary.

Some tribes are accustomed to bury their chiefs in a special burial-ground. The royal burial-grounds of the Baronga are described as vast and almost impenetrable thickets. A small path hardly traceable leads into them, trodden only at intervals by the reigning chief, the descendant of the sacred line, for the purpose of sacrificing to his ancestors. To all others entrance is forbidden. Within the thicket the illustrious dead rest beneath barrows, on which are to be seen the dried and decaying remains of offerings, and often calabashes and other household utensils, broken and cast upon the grave at the time of burial. Naturally serpents abound in the underwood, probably deemed to be manifestations of the deceased. These cemeteries are invested with all the terrors of superstition; and awful tales are told of sacrilegious persons who have dared to pluck the fruits of the trees, or even to cut a branch of dried wood for fuel (Junod, *op. cit.* 383 ff.). The kings of the Bavenda are similarly buried with their ancestors in the holy grove. Formerly the body was laid on a low wooden scaffold and left until the flesh had fallen off, when the skeleton alone was buried. Kings are not said to 'die,' but to 'go away for a time.' At their graves sacrifice is offered from time to time. The altar consists of three stones fixed in the ground, in the centre of which a shrub, flower, or rush has been planted. This plant is probably the *modzimo* ('soul' or 'manifestation') of an ancestor; for among the Bavenda the dead return into various objects, such as cattle, goats, sheep, or weapons and tools of the defunct, which are then held sacred (*JAI* xxxv. 376 ff.). In the same way among the Baronga, at a chief's death his nails, hair, and beard are cut, and the cuttings are kneaded up, together with some of the dung of the oxen slain at his death, into a ball, which is carefully surrounded with thongs of hide. When his successor dies, a second ball is made and added to the first, and so on. The sacred object thus formed is called a *mhamba*. It is not an idol, but a sort of national palladium. It is placed in the custody of an officer, who is specially chosen for his calmness and sobriety. He becomes a sort of high priest of the tribe; and on all national occasions he offers the sacrifice and brandishes the *mhamba* before the eyes of the people (Junod, *op. cit.* 398). The Basuto of the Transvaal have sacred trees in which the *manes* dwell (Merensky, 132).

(*b*) *South-western tribes.*—Among the Hereros the worship of the dead is well developed. When a man dies, he is buried near a tree, or, if the chief of a *werft*, or village, in his cattle-kraal; cattle are slain, especially any supposed to be favourites of the deceased, cut to pieces, and cast away as offerings to him, the horns being taken to adorn the tree beside the grave. The *werft* is then abandoned and allowed to fall into decay. Nor do the people return, unless the deceased has himself expressed the wish to hear again after his death the lowing of his cattle about his grave. When they do return to rebuild the *werft*, they lament for the dead at the grave and address the *omukuru* ('deceased'): 'See, father! we are here, we thy children. See, we have done as thou hast ordered us. We have brought the cattle thou gavest us here,' and so on. New fire is kindled on the old hearth, a sheep is slaughtered, of which all the people eat. Every son of the deceased then approaches the fire with a branch or a small tree. These are set up in a row half-way between the fire and the cattle-kraal. An ox or sheep is slaughtered for each of the sons, and its flesh is laid upon the grave. When it is thus consecrated at the grave, it is further consecrated by tasting by the sons of the deceased. Married men who have children are the only persons allowed to eat of this flesh. So long as these ceremonies are proceeding (apparently for some days), all milk must in the same way be consecrated by presentation at the grave, and a little of it is always left standing in a pail on the grave. Another ceremony is also performed, but it does not seem clear whether it is an invariable part of the rites. The eldest son, standing at the grave, personates his father, and pretending to be angry throws stones at the assembled people. At first they are frightened and flee, crying out, 'Our father is angry! Our father fights!' Regaining courage, they return to the grave and throw stones back. After a sham fight of this kind for a little while the *omukuru* is supposed to become quiet; and the son standing at the grave begins to speak in his father's name. He asks first about the cattle individually by name or colour, and then about the people. The people reply suitably to the questions (*S. Afr. F. L. Journ.* i. 55 ff.). Here we have beyond doubt the recognition of a new divinity with whom direct relations of worship on the one side and tutelage on the other are entered into. But he is not taken as a divinity in substitution for another. He is only the most recent of the *ovakuru*, or deceased ancestors, all of whom are regarded as powerful beings.

In the closest connexion with the worship of ancestors is *the sacred fire*. The household fire burns before every hut. The chief's hearth is between his hut and the cattle-kraal. The fire is in charge of his eldest unmarried daughter, who is responsible for keeping it alight. Its extinction is a calamity to be expiated only by solemn offerings of cattle (Andersson, *Lake Ngami*, 223), and it must be re-kindled with the fire-sticks which represent the male and female ancestors. It is thus that the new fire is kindled at the ceremony just described. When, as sometimes happens, a portion of the population swarms off from an old *werft* under the leadership of a son of the chief, a portion of

the old fire is taken with them; and if it go out, it must, if possible, be re-kindled by a brand from the old hearth; if not, then by means of the fire-sticks. Every child is presented a few days after birth at the sacred hearth to the *omukuru*. The father then takes the child into his arms and gives it a name, calling upon his ancestors and presenting the child to them. Birth takes place in a special hut, and until this ceremony has been performed the mother is not re-admitted into her own house. The meat slaughtered at the festival when a youth is circumcised is holy, and must be cooked at the *okuruo* ('sacred fire'). It is solemnly eaten there in the presence of sticks representing the *ovakuru*, which are brought for the purpose from the sacred house where they are kept. The ceremony of breaking-out and chipping the teeth of children (§ 3) is likewise performed at the sacred hearth. Marriage rites, too, are performed before the *okuruo*. The sick are carried round and round the sacred fire with a chant addressed to the *omukuru*, praying for their recovery (*S. Afr. F. L. Journ.* i. 41 ff., ii. 166; Dannert, 23, 48).

(*c*) *Northern tribes.*—We turn to the Northern tribes, and first to the Protectorate of Uganda. Ancestor-worship is described as 'the foundation of such religious beliefs as are held by the Banyoro.' Every clan has its own *muchwezi* (pl. *bachwezi*), or ancestral spirit, sometimes confused with the totem. The same word is applied to the priest or medicine-man who conducts the worship. It is also given to the individual members of the light-coloured Galla race which is dominant in these lands and, mingled with Bantu blood, now forms the Bahima aristocracy. The fearful thunderstorms common in the Protectorate are looked upon by the Banyoro as caused by the *bachwezi*. When a person is killed by lightning, his death is regarded as the manifestation of anger on the part of the *bachwezi*, either against him or his clan. A great ceremony is performed; the medicine-man is summoned to investigate the cause; and sacrifices are duly offered to appease the *bachwezi* (Johnston, *Uganda Prot.* ii. 588 ff.).

The religion of the **Bahima**, as we might expect from their Hamitic ancestry, is somewhat more developed. They have small huts, built close to the houses in every village, where offerings are made. Either in addition to the ancestral spirits, or as a specialized form of them, a number of beings are believed in who are looked upon as 'devils' or evil influences, and who therefore require to be constantly propitiated. The Bahima worship deceased chiefs and prominent personages, though they have 'little definite belief in a future life on the part of any individnal man or woman.' Nevertheless, they are said to believe in a land of the departed, called *mitoma*, away to the east, whither all Bahima go (Johnston, *op. cit.* ii. 631; Cunningham, 22).

The **Baganda**, now nominally either Christians or Muhammadans, formerly worshipped a number of ancestral and other spirits. Their religion appears to have been somewhat nearer to a genuine polytheism than that of their Western neighbours the Banyoro and Bahima. The most influential of their gods was Mukasa, who is believed by Sir Harry Johnston to have been originally 'an ancestral spirit, and whose place of origin and principal temple was on the biggest of the Sese Islands.' He became in time the god of Lake Victoria Nyanza. He was propitiated by those making a long voyage. He and some of the other gods were provided with earthly wives in the persons of virgins, who were required to live chaste, though it is a question how far they complied with the requirement. Mukasa is, however, of uncertain sex, being often referred to as female. The highest god was the sky-god *Kazoba*, whose name is derived from a word signifying 'sun.' There were other departmental gods.

On the east of Uganda proper and immediately to the north of the lake lies a district called Busoga. The people, called **Basoga**, closely related to the Baganda, are said to worship a number of spirits (*balubare*), each of which has its priests. Here, as among the Baganda, the worship is frequently localized. Certain rivers are reputed to be the homes of special *lubare*. Thus the river Ntakwe is the home of the *lubare* Takwe, who 'personifies that stream.' If a virgin had been seduced and become pregnant, she and the man, with stones tied to their ankles and legs, and with a sacrificial sheep, were thrown into the river to be drowned. Human sacrifices with revolting details were offered to the river Nagua on the occasion of a chief's death. Certain trees also were associated with spirits. Johnston relates the performance of a ceremony at the native town of Luba at a time when the famine was threatened. In this ceremony all the details of sacrifice of a young girl at the foot of a sacred tree were performed in mimicry, but in fact her life was spared to be devoted to perpetual virginity (Johnston, *op. cit.* ii. 718 ff.).

Little need be said of the **burial rites** of these tribes as indicative of their religion. The Bahima are a purely pastoral people. At each cattle-kraal there is a huge heap of manure, which is of course daily added to. In this heap the dead are buried. Peasants, who do not belong to the Bahima, or ruling aristocracy, are buried at the hut-door. The Banyoro kings were put into a circular pit about twelve feet deep, along with nine living men. The pit was then covered with a cowhide tightly pegged down all round, and a temple built over it. A headman was placed as watcher; and many of the personal servants of the deceased were appointed to live in the temple. They and their descendants (who continued their duty) were supplied with food by the surrounding country. Bahima chiefs are buried beneath their huts; other persons are exposed to be eaten by hyænas. The kings of Uganda were buried at a place called Emerera. A great house was built to receive the royal corpse. Wrapped round with many layers of native bark-cloth, the body was laid on a low wooden scaffold in the middle of the house. The door was then closed and securely fastened, not to be opened again. The deceased king's cook, his headman of the beer-pots, and his chief herdsman were seized, together with three women of corresponding rank; they were dragged in front of the house and there slaughtered, their bodies being left to the vultures. The king's under-jaw had been cut off previously to his entombment. It was ornamented with cowries and kept in a house in an adjacent enclosure. Hard by in the same enclosure lived a chief who was appointed guardian of the jaw, another chief who was guardian of the tomb, and the wives of the deceased and their successors, who were supposed to keep watch over the tomb for ever. The late king, Mutesa, abolished this custom; but his wives, so long as they lived, were to be, and they remain, the official guardians, dwelling in the great house which has been erected over his grave (Cunningham, 10, 29, 224). A chief of the Basoga is buried beneath his own house, which is then suffered to fall into decay. An ordinary peasant is buried in front of his dwelling. If a man die at a distance from home, a reed or stick, over which the deceased has been called to come for burial, is wrapped up in bark-cloth and buried as the dead man.

Passing by a number of tribes about which we are even more imperfectly informed than about those of the Uganda Protectorate, we turn to the **Man-g'anja** and the **Wa-yao** in the Shire Highlands. These two tribes believe themselves to be of common origin. The latter are an intrusive people, whose original seat was probably the Unango mountains between Lake Nyasa and the Mozambique coast, whence they were driven by pressure of other tribes from the north in the earlier half of last

century. They conquered the Mang'anja, ultimately settling side by side with them and intermarrying. In all probability at no distant date they will fuse into one people. To that fusion their religion will offer no difficulties, for it is in all essentials the same. It is primarily a worship of the dead. The soul or spirit is called *lisoka* (pl. *masoka*). As usual in the lower culture, it is believed to depart from the body during sleep, and its adventures are the cause of dreams. At death it departs to return to the body no more. One of the words for 'spirit' is *msimu*, obviously related to the Sechuana *morimo* (p. 364[a]). Just as a lunatic, moreover, is called by the Bechuana *barimo*, so among the Yaos sufferers from madness, idiocy, or delirium are *wa masoka* ('they of the spirits'). After death the *lisoka* is said to have 'gone to *Mulungu*': it is even called *mulungu*. This word is used by the missionaries to translate 'God,' for which it is no more the equivalent than is the Sechuana *morimo*. But the fuller discussion of *mulungu* must be reserved for a subsequent section (see p. 365[a]).

Besides the *manes*, the Yaos recognize other personal beings who receive worship. Of these the chief is Mtanga, often identified with *Mulungu*. Mtanga is said to have pinched up the earth into mountains, dug channels for the rivers, and brought down the rain to fill them. He is associated with Mangochi, the great hill in the country to the north-east of their present *habitat*, which the Yaos occupied until the middle of last century. He does not appear to be identified with Mangochi, but there is some evidence that tribes at no great distance worshipped remarkable hills. Some of these divinities seem to have been originally spirits of the departed. It is possible that some or all of them may have been local objects of worship, and in consequence of the removal of the tribe from its earlier seats they may have become more or less generalized in character and attributes. In any case a tendency is discernible on the part of the Yaos, as of other Northern tribes, to develop from ancestor-worship to polytheism (Macdonald, *Africana*, i. 58 ff.; *JAI* xxxii. 89).

The spirits are approached with offerings of native flour or beer, or of fowls or goats. These are presented at the shrine and left for the spirit's consumption. In the case of a goat, however, only one leg is usually presented, the remainder being eaten by the villagers themselves. Sometimes the spirit asks for some other offering. If for tobacco, a quantity is put on a plate and set on fire; if for a house, a new hut is built for him. Offerings are made not only at the grave or shrine of a dead man. The first-fruits of the crops are placed in a rough shed outside the village or near the hut of the chief or head-man. Occasional small offerings of flour or beer are placed at the foot of the tree in the village courtyard where men sit and talk or work. On sitting down to a meal the native throws a piece of the food at the root of the nearest tree. On a journey a little flour is often laid at the foot of a wayside tree or at an angle where two roads meet. All these offerings are made to *Mulungu*, and the act is *kulomba Mulungu*, 'to worship *Mulungu*.'

The reigning chief is the priest of his deceased ancestors, and the head of a family is the priest of the departed of his family. When a man dies, he is buried in his own house, or in the forest. If he owned slaves, some of them are put to death or buried alive with him; his body rests on theirs in the grave. Valuables such as ivory and beads are ground to powder and put into the grave with him; food and drink are left upon the surface. If he is buried in his house, the house becomes a shrine or temple for his worship; otherwise it is broken down, but still considered sacred to him, and offerings are presented on the site. At a chief's death the village is abandoned—at all events, for the time. Prayer is made to the deceased before hunting, for rain, for crops, and on other occasions. He manifests himself in dreams or in animal-form. A great hunter takes the form of a lion or a leopard; witches appear as hyænas; other spirits often appear as serpents. The chief's principal wife or some other woman is set apart as prophetess or oracle of the spirit. He inspires her at night; she becomes frenzied, and her ravings are heard all over the village. Sometimes she announces the demand for a human sacrifice. If the divinity be resident on a mountain, the victim is bound and left to be eaten by wild beasts or to die of hunger. If, on the other hand, the divinity's abode be near a lake or river, the victim is tied to a stone and thrown into the water.

In almost every Yao village is found a shrine, consisting of a hut within a strong fence of cactus enclosing the grave of some chief. Such a shrine is regarded with awe. If the village be removed the old shrine is not forgotten; periodical visits are made to it. On the occasion of a long journey or a warlike expedition, or in case of drought, prayers are offered to the deceased, and a feast is held, his successor or some other near relative officiating as priest. Slaves and common people are regarded as of no account. Their graves are in the thick bush, and no offerings are made to them, for they can have no influence in the spirit-world.

The Mang'anja bury in groves or thickets, called *nkalango*, which often form landmarks; but important men may be buried in their own houses. Miss Werner describes one such grove visited by her. Pots of all sorts and sizes, each with a hole broken in the bottom, were scattered over the graves, and broken sifting-baskets, and handles of hoes or axes were laid upon them. Among the other graves was a body wrapped in a red mat slung from a pole supported between two trees—a case of what is called sub-aerial burial (Werner, 155).

Upwards of 800 miles to the north-north-west, in German territory, the Warundi hold beliefs in all essentials similar to those of the Yaos. The foundation of their religion is the worship of the dead. Father van der Burgt gives a list of thirty names of spirits distinct from the ordinary *manes*. Many of these turn out on examination to be collective appellations. One of them, Umugassa, little regarded by the Warundi, is, as the good Father points out, Mukasa, the god of Lake Victoria Nyanza venerated by the Baganda. Another, Rugaba, is said to be the name of the most ancient king of the Wahinda, the parent tribe of the Warundi. Others seem to be departmental spirits; but the natives are vague about the matter, and there is reason to think that some of them at least are local divinities on their way to a more general acceptance. Several are declared to be identical with Imana, who is spoken of in the same way as is Mulungu among the Wa-yao. The name Mulungu is found among the Warundi, but is not employed as that of an object of worship: Imana seems to take its place. Imana is vaguely said to make all, see all, and be able to do all; to give life, health, death, the fruits of the earth, and so forth. But there is no idea of creation, properly so called; at most Imana or one of the other spirits is an arranger, a transformer. The name *Imana* is, however, a collective name, like *Mulungu* (p. 365[a]). Another spirit, Kiranga, often identified with Imana, receives most of the practical worship. As the name *Imana* is applied to the sacred grove or ancestral kraal of the king,

and to the king himself as invested with a religious character, so the priests and hierophants of Kiranga are called by his name and he is believed to inspire them.

The great national rite is the adoration of the sacred spear of Kiranga. It is performed at the birth of twins, in case of grave sickness, at a marriage, or on some other important occasion. The chief priest, wearing a cap of tiger-cat skin with the tail hanging down his back, and with the sacred spear grasped in his hand, sits between his assistants. When the priest is a man, his assistants are women. But the priest may be a woman, in which case her assistants are men. Carrying gourd-rattles, the people gravely dance to a solemn chant. Then each, taking a little quantity of straw, bows before the spear, offering the straw with a short prayer. When all the participants have performed this rite, they quit the hut and go to the *ikitabo*, or place of assembly, found in every village. This consists of a bed of fine white grass strewn round a sycamore tree, bordered by a circle of branches or stalks of manioc. Hither sick persons are brought to sleep and recover; dying persons are carried hither, and over them is recited a formula ascribing their condition to the *manes*, or to witchcraft or other suspected cause. The *ikitabo* is in fact sacred to the *manes*. At the adoration of the spear the opportunity is often taken to consecrate a new *ikitabo* by the solemn planting of a young tree as its centre. After a certain time of silent rest at the *ikitabo* from the fatigues of the rite, the hut is re-entered, one of the priests takes a winnowing basket, and, turning it upside down, pours water over it. He then asperses the assembly by striking it with his hand, so that drops of water are scattered round. This is perhaps a rain-charm, for the upturned bottom of the basket is said to represent the vault of heaven, whence the priest causes the blessing to descend on the expectant people, who are meanwhile murmuring prayers. A pot of sacrificial beer is brought in, and each one drinks of it in turn. The assembly is then dismissed, and the chief priest is paid for his services with beads and a mat.

The Warundi also possess small huts or votive shrines dedicated specially to the *misimu* (pl. of *umuzimu*, the Kirundi form of the Sechuana *morimo*), or *manes*. Such huts are also dedicated with the adoration of the spear. The men eat beside the hut ritual food by way of communion with the *manes*, and what is left is put into the hut. A little beer is put into a pot, and the pot placed in the hut. Every time afterwards that the adoration of the spear takes place, a little food and beer are deposited in the hut. This is also done on other occasions; and it is believed that the *manes* often visit these huts, if they do not reside there. Heaps of stones are also to be found by the roadside, to which every passer-by adds. These are said to be dedicated to the *misimu*. They may perhaps now be connected in the people's minds with the *manes*; but this must be considered doubtful, unless the statement be limited to the *manes* of the Watwa, a subject pygmy tribe, who, though having many customs in common with the Warundi, bury in the bush, raise a heap of stones over the grave, and plant a hedge of thorns around it. Such heaps are found practically all over the world, and are usually raised to more or less vaguely conceived local spirits.

The Warundi bury not by the roadside, but in the village. A father's grave is dug in the midst of his courtyard, opposite the door of the principal hut. A heap of stones is made over the grave, and on it are flung the door of the hut and the basket used to remove the earth from the grave. Before the body is put into the grave, the wife of the deceased anoints the head with butter, praying to the departed to be propitious to those who are left behind, to herself and to the children. The tumulus in the courtyard becomes a shrine, at which rites similar to those just described are performed: prayers and sacrifices are offered, and the sick are laid upon it. When the king dies, his remains are wrapped in the skin of a black ox and desiccated at a fire. The body is then laid on a low scaffold in the middle of his courtyard. The people come from all parts to pay homage to the deceased, to adore his *manes*, and to pray for favours. The body remains until the ants have eaten away the feet of the scaffold. It is then buried on the spot. Many of the chiefs and of the royal widows are sacrificed to the *manes*. The burial ceremony is accompanied by that of the adoration of the sacred spear; a sycamore is planted over the grave; and the royal kraal then abandoned becomes a sacred grove, haunted, mysterious, which no one enters but the official guardian whose duty it is from time to time to bring food and beer for the spirits. These groves are numerous, though the country is in general bare of trees. Tree-worship proper, however, can hardly be said to exist.

Elsewhere Father van der Burgt tells us that, when the king or a member of the royal family dies, one of the worms generated in the process of putrefaction is said to be chosen and fed with milk. Hence we should infer that desiccation is not invariably practised. The worm is subsequently transformed into a lion, or in the case of one of the king's wives into a python, or in the case of a prince of the blood royal into a leopard. The spirit of the deceased is thought to reside in the animal. It is regarded as sacred; sacrifices are offered to it, and it must not be injured.

Sacrifices usually consist of beer and sorghum-meal. Goats, cocks, and oxen are, however, also offered. A special kind of pipe with two bowls is smoked on certain occasions by the father or mother of the family as chief priest of the *manes*. This ceremony is a sort of offering.

At the head of the pantheon of the Awemba stands Leza, the consideration of whose character and position is reserved for § 7. Inferior to him are the *milungu* (a word obviously the same as *mulungu* of the Wa-yao). The *milungu* reside in hills, mountains, and rivers, and their chief function is to send rain and to fertilize the crops, for which they are worshipped with prayers and sacrifice. Another being with a similar name is Mulenga, the 'god' of the rinderpest, who is said to come periodically to wreak vengeance on chiefs who have not worshipped him with offerings of cattle. He is reputed to be the father of all albino children. The spirits of dead ancestors are called *mipashi*. They appear to be distinct from the *milungu*, who, it is conjectured, are either the nature-spirits worshipped by the aborigines of the country before the Awemba conquest and subsequently taken over by the conquerors, or *mipashi* of very ancient chiefs of the Awemba exalted to something like deity. At any rate, they now bear the characteristics of nature-spirits, haunting prominent natural objects rather than the groves and burial-places which are the resort of the *mipashi*. The spirit of the head of each family is worshipped inside the hut, at the hearth. The *mipashi* of chiefs are worshipped at the thickets or groves which are the royal burial-places. Occasionally they take the form of a python. More usually they communicate with the living by appearing in dreams, or by 'possession.' There is another class of spirits called *vibanda*, which are regarded as malicious. They appear to be spirits of deceased wizards and other criminals. They are said to be worshipped by the *waloshi* (wizards), of whom more hereafter (p. 363[b]).

Burial takes place in a thicket or grove near the village where the deceased lived. The corpse is rolled in a mat in the crouching position common in the lower culture. Flour is sprinkled over the body on the way to the grave. After the body has been lowered into the grave, the nearest relative is let down and cuts a hole in the mat, over the ear of the deceased, that 'he may hear when God [presumably Leza] calls him.' One of the relatives then makes a speech (probably to the deceased), promising that they will take care of his wife and children, and expressing the hope that he will become a good spirit in the next world (see § 7). Food, calico, and his pipe are buried with the corpse.

If he was an iron- or ivory-worker, his implements are broken over the tomb. When the late king died, two of his wives were instantly sacrificed. The body was then shut up in his principal hut until the funeral, which could not take place before his successor was appointed and had given permission for it. By that time the corpse was reduced to a skeleton. It was buried wrapped in a bull's hide, and all the servants, councillors, and wives were paraded before the tomb, smitten between the eyes with a club, and left for dead. Those who survived were not afterwards troubled, as they were declared to be unacceptable to the dead chief's spirit. When a chief of the Wabisa (one of the tribes subject to the Awemba) was buried, only his head wife was killed. Her body was split in two, the bones of the chief were put inside, and so buried. The successor offered libations and sacrifices to his predecessor's *mupashi*.

(*d*) *Western tribes*.—One of the chief elements in the religion of the Western tribes is the fear of the spirits of the dead; but seeing that mother-right still prevails, it has not become so highly organized a worship of ancestors as among the Central and South-eastern tribes. Dr. Nassau distinguishes five kinds or classes of spirits:—(1) *Inina* (Mpongwe; pl. *anina*) or *Ilina* (Benga; pl. *malina*), a human embodied soul. This appears to be divided by some native philosophers into two, three, or even four. Of these the first is the body-soul or animal-soul, which dies with the body; the second is the personal soul, which survives death; the third is the dream-soul, which leaves the body during sleep and whose adventures are the dreams; the fourth is 'vaguely spoken of by some as a component part of the human personality, by others as separate but closely associated from birth to death, and called the life-spirit.' Worship is paid to the last by its possessor, and it seems to be looked upon much in the light of a genius or guardian-angel.—(2) *Ibambo* (Mpongwe; pl. *abambo*), the spirits of ancestors, as distinguished from the spirits of strangers. The *ibambo* is regarded with superstitious dread, like a European ghost.—(3) *Ombwiri* (Mpongwe; pl. *awiri*), a localized spirit, but spoken of by Dr. Nassau with the *nkinda* and *olaga* mentioned below as all coming from the spirits of the dead. The *ombwiri* has its seat on a rock, tree, or mountain-top, or in a cavern or some such place. It resents trespass there, and passers-by must go reverently and with an offering, even if it be only a pebble or a leaf. It is also regarded as a tutelary spirit; and almost every man has his own *ombwiri*, for which he provides a small house or shrine. 'Ombwiri is also regarded as the author of everything in the world which is marvellous or mysterious. Any remarkable feature in the physical aspect of the country, any notable phenomenon in the heavens, or extraordinary event in the affairs of men [is] ascribed to Ombwiri.' He has no priest, 'his intercourse with men being direct and immediate.' Souls of great chiefs and other important persons become *awiri*. White men are themselves *awiri*. *Awiri* are in general well-disposed, especially to their human kindred. They are gratified by these with worship; and among the special boons they grant is the gift of children. They continue to dwell in the district of their own people even if the latter remove, when they remain on the old site and enter into relations with any new-comers who may occupy it. A curious belief about them is that they become small and inert during the cold dry season.—(4) *Nkinda* (pl. *sinkinda*), a class partly consisting of spirits of common people deceased, partly of uncertain origin. *Sinkinda* are usually evil-disposed. They enter the bodies of living persons, causing disease, or, if many of them enter, raving or delirium.—(5) *Mondi* (Benga; pl. *myondi*), a class resembling *sinkinda*, but more evil-disposed, powerful, and independent. They require to be exorcized. *Ilâgâ* (the spirits of deceased strangers), *sinkinda*, and *awiri* are invoked for their expulsion from a patient of whom they have taken possession. They are worshipped, especially at new moon, almost always in a deprecatory way (Nassau, *Fetichism in W. Africa*, 64 ff.).

The classes of spirits thus recognized by the Mpongwe and their neighbouring tribes are not always enumerated in the same way. But we have in Dr. Nassau's analysis a fair illustration of the beliefs of the Western Bantu with regard to the soul. They are intimately related to those of the true Negroes (*q.v.*). Excepting the first class, which is rather an earlier condition of some of the others than a separate class of spirits, they are by no means distinctly defined. As Dr. Nassau observes, their 'powers and functions shade into each other, or may be assumed by members of almost any class.' Individual spirits differ in kind and degree of power; none is omnipotent. All 'can be influenced and made subservient to human wishes by a variety of incantations': in other words, they are objects of worship. However, therefore, we are to regard these class distinctions, it is clear that the essential fact is that the worship is to a large extent the worship of the dead. That it is not entirely so appears from the fact that spirits are very often localized in particularly prominent natural objects. Localities are spoken of as having good or bad (that is, favourable or malignant) spirits. Such objects and localities are found all over West Africa. It is very improbable that all the spirits haunting them are spirits of the dead. Rather they would seem to be vague nature-spirits, the product of awe, wonder, fear, and the sense of mystery. As we shall see in a subsequent section (§ 7), an idea of sacredness and mystery attaches to various objects of the external world; and though many of them are not objects of worship, still they are something apart, they contain a germ, or it may be a vestige, of nature-worship. One means by which the localization of spirits, especially the spirits of the dead, is effected is by images. Contrary to the general practice of the Bantu tribes previously discussed, images are in frequent use among the Western Bantu. Even more than images the skulls and other bones of distinguished men and ancestors are venerated. Among the Benga on Corisco Bay, the family fetish, called by the name of *yâkâ*, consists of a bundle of finger- and toe-joints, nail and hair clippings, eyes, and other portions of the anatomy of deceased members of the family. The spirits of these deceased members are associated in the native belief with their relics. Their efficiency is called into action by prayer and the medicine-man's incantations. Among the Bavili, the *nkulu*, or spirit of the deceased, is secured by picking up at the funeral a portion of the earth from the grave and mixing it with some 'medicine,' to be afterwards put by the *nganga* (priest, or medicine-man) into an antelope's horn or other receptacle. Having thus been secured, the spirit is ultimately transferred by means of a special ceremony to an abiding-place in the head of a relative. Those spirits which are not fortunate enough to obtain such a habitation continue to haunt unseen the abodes of their kindred, and to mourn with them in trouble, though without the power to help them. Like the *Ombwiri* mentioned above, they tend to become local spirits, for it is believed 'that, if every one of the Bavili were destroyed to-morrow, these *bakulu* would hover about in the grass around their towns for ever and ever' (Dennett, *Black Man's Mind*, 82).

In accordance with these beliefs, the dead are buried in the forest, or in low-lying lands and tangled thickets along the sea-beach or the river-bank away from the villages, or occasionally in the plantain-ground behind the houses. Some of the Coast tribes, however, bury such of their dead as they specially desire to honour under the floor of the hut. This is more common among certain of the inland tribes. A considerable part of the dead man's property is laid upon his grave—if a rich man, in a little hut built upon the grave. The body itself is often wrapped in a large amount of cloths and habiliments; food, drink, and tobacco are placed in the coffin. Slaves and wives are buried with a man of importance, that he may not enter the spirit-world unattended. The usual purification by bathing, to rid them of the contact of the spirit, is undergone immediately after the burial by those who have dug the grave or taken part in the ceremony. The next day the medicine-man sprinkles the survivors, their property, and the entrances to the village with a decoction of balondo-bark for the same purpose, while the people ejaculate prayers to the spirit for wealth or food. The mourners remove to another house and remain there during the period of mourning, lest the spirit return and eat with them, thus causing

sickness. For any important person, dances are held from time to time as a gratification to his spirit during the mourning. Improvised songs are sung in praise of the deceased. Wailing, rending of garments, and other signs of woe are practised in abundance. When anything untoward happens of which the cause is unknown, it is put down to the spirit, and prayers are made with offerings of food and drink at the grave, that the spirit may cease from disturbing the survivors, and bless them instead. The usual inquiry is held as to the cause of death, and the person accused is compelled to disprove the charge of witchcraft by the poison-ordeal, to which he generally succumbs.

Whether it is held definitely and dogmatically that spirits never die may be doubted. But they are unquestionably believed by many of the tribes to be capable of re-incarnation. Some of them, at all events, are born again, either in their own family or another, or even as beasts. This, it seems, may happen repeatedly.

The **Barotse** are firm believers in the transmigration of the soul after death into an animal. A chief re-appears as a hippopotamus; others come back as snakes, hyænas, crocodiles, and so forth (Decle, 74; Bertrand, *The Kingdom of the Barotsi*, London, 1899, 278). The deceased monarchs are the principal divinities. They are called *ditino*. The town where a king has lived has a sacred grove adjacent to it, surrounded by a palisade covered with mats; and in that grove is his tomb. It is kept scrupulously clean and tidy. At every new moon the women piously sweep both the tomb and its approaches, as well as the village itself. The custodian of the tomb is a kind of priest; he may enter the immediate presence of the divinity; he is an intermediary between the latter and those who come to pray. No others are allowed to enter the grove. Even the reigning king, when he comes to consult the ancestor who reposes there, must remain without; he must make known his request to the custodian, deposit his offering, and await the result of his petition. The *ditino* are consulted in case of sickness, drought, and public calamity of various kinds. In 1896, when the cattle-plague swept through the continent, the Barotse had recourse to their *ditino*; and it is curious that their cattle escaped the pestilence, thereby greatly adding to the prestige of the *ditino*. No one thinks of passing by the shrine of one of these divinities without leaving an offering, however trifling, to show respect and pray for a prosperous journey, or to render thanks on a safe return (Béguin, 120). An ordinary chief is usually buried, as among the Zulus, in his cattle-kraal. A father's grave, we are told, is respected and visited by his offspring on certain occasions (Bertrand, 278), probably for purposes of worship.

5. **Idols.**—Among the Central, South-eastern, and South-western tribes idols are unknown. The objects which have sometimes been described as idols are merely dolls. Most of these dolls are no more than playthings, though some are carried by women as amulets to produce children. A sort of amulet or fetish is made, as already mentioned (p. 356[a]), by the Baronga at a chief's death, of portions of his *exuviæ*. Among the Northern tribes idols are of the rarest occurrence. The sacred spear of the Warundi is hardly an idol. The Achewa of North-eastern Rhodesia are said to conjure the spirit of the dead into a doll or image composed of small pieces of wood enclosing a tiny box made of the handle of a gourd-cup; the whole is bound round with calico and bark-rope, and afterwards receives the prayers of the survivors. Elsewhere in the neighbourhood of Lake Tanganyika, the habitation of the disembodied soul is a carved human image. It is set up in or near a village, and prayers and sacrifices are addressed to it (*FL* xiv. 61). An image of a god is reported on apparently good authority to have existed at Mwaruli, tended by priestesses, who were called the wives of the god. This seems to require further investigation. Among the Western tribes the case is different. As has been already (§ 4) noted, images are used in the worship of the dead, as well as family fetishes comparable with those of the Baronga chiefs. On the West Coast the objects most usually associated in the mind of Europeans with the religion of the natives are called 'fetishes.' Properly speaking, the word **fetish** (from the Portuguese *feitiço*) means 'sorcery' or 'amulet.' Fetishes are of two kinds, protective and imprecatory. The protective class consists of wooden human (frequently ithyphallic) figures and objects of various other substances and shapes. Some of them are regarded as personal beings, or, at least, as possessed of an indwelling spirit; others are mere amulets. When one of the former is made, a man (or, according to the kind of fetish, a woman) who is a member of the family for which it is made is chosen as its custodian and spokesman. A ceremony of consecration is performed by the *nganga*, by which the spirit, or voice, is supposed to enter the spokesman's head. The spirits of such fetishes are said to be brought by one or other of the winds. The imprecatory fetishes consist entirely of wooden figures, generally human, into which nails are driven from time to time, and which are therefore known as nail-fetishes. Into every one of these fetishes the spirit of some known person is conjured when it is made. It is first decided whose spirit is to be secured. The *nganga* then goes with a party into the bush and calls out the name of the doomed man. Having done that, he proceeds to cut down a tree, from which it is believed that blood gushes forth. A fowl is killed, and its blood is mingled with that of the tree. The fetish is shaped from the tree, and the person named dies, certainly within ten days; his spirit, in fact, is thenceforth united with the fetish. The nail-fetish is used for two purposes. Oaths are sworn by it: the person swearing calls upon it to kill him if he do or have done such and such a thing, and he thereupon drives a nail into it. At a 'big palaver' (dispute or lawsuit) the fetish is brought out, and each of the parties strikes it, thus imprecating death upon himself if he do not speak the truth. The other purpose for which nail-fetishes are used is to call down evil upon another person. The client goes to the fetish, makes his demand, and drives a nail into it. The palaver is then settled, so far as he is concerned. 'The *kulu* (spirit) of the man whose life was sacrificed upon the cutting of the tree sees to the rest' (Dennett, *Black Man's Mind*, 85 ff.). Numerous examples of the nail-fetish are to be seen in European museums, of which the finest, perhaps, is one called 'Mavungu,' left by Miss Kingsley to the Pitt-Rivers Museum at Oxford. The nail-fetishes, however, because used for purely imprecatory purposes, are regarded quite differently from all other objects of prayer or supernatural beings. They are connected in the minds of the people with hostile magic rather than with religion. Their priests form a class apart.

6. **Priests, medicine-men, diviners, and sorcerers.**—(*a*) *Central and South-eastern tribes.*—Among the Central and South-eastern tribes sacrifice is usually offered by the living head of the family or tribe to his ancestors. But there is an order of men some of whom among certain tribes are charged with this duty. These men, who are now suppressed as far as possible by the law of the white man, are commonly called witch-doctors or medicine-men. Among the Bavenda they are divided by a recent observer into nine

distinct classes, viz. (1) rain-makers; (2) witch-finders; (3) medicine-doctors; (4) a class whose duty it is to consecrate weapons and make the warriors invulnerable; (5) women who, armed with a calabash-rattle, foretell fortune or misfortune; (6) another kind of medical practitioners who cure illness by sucking the evil out of the patient's body; (7) a third kind of medical practitioners whose duty it is to cure insanity; (8) a further kind who undertake the cure of the sick by dancing during the night; (9) family or clan priests, called *chefi* (sing.). The head of each clan or family chooses his *chefi*, whose duty it is to sacrifice once a year at the beginning of harvest; who speaks with the divine ancestors, and brings their answers to mankind. The *chefi* of the Bavenda king is a woman, his eldest sister or nearest female relative. In all other cases it is a man. The generic name of all these classes is *dsi-ñanga* (sing. *ñanga*) (*JAI* xxxv. 379). The word *ñanga* is common to many of the Bantu tongues, and means in strictness a man who is skilled in any particular matter (Callaway, *op. cit.* 131). The Zulus have a class of *ñanga* who are diviners, another class of rain-makers, whose business it is to make rain and drive away lightning and hail, a third who practise medical magic, and so forth. To become a diviner a man must be entered by the *amatongo* (*manes*). They are said to 'walk in his body.' He complains of pain, conceives a distaste for food, and habitually avoids certain kinds. He becomes 'a house of dreams.' After some time he manifests possession by repeated yawning and sneezing. Then he has convulsions. He sleeps merely by snatches; he begins to sing. Sacrifices are offered for him. Finally, he takes an emetic which 'makes the Itongo white,' and after being subjected to various tests he is recognized as a diviner. Candidates for the class of rain-makers, on the other hand, are chosen by other *iziñanga*, who put them through a course of fasting (Callaway, *op. cit.* 259 ff., 388). Further to the south the Xosa tribes enumerate five kinds of doctors: (1) witch-doctors, including diviners and prophets; (2) surgeons or bone-setters; (3) herb-doctors; (4) rain-doctors; and (5) war-doctors. Except the last, who are always men, they may be of either sex. The word used for 'doctor' among these tribes is *igqira*, perhaps of Hottentot derivation (Hewat, *Bantu Folklore*, 1905, p. 27 ff.).

Sickness is caused by the *manes*, or by fabulous monsters, or by the magical practices of some evil-disposed person, or else it is 'only sickness and nothing more.' The first thing when attacked with disease is to ascertain to which of these kinds of sickness it belongs. This is done by divination; and the diviner often knows or can divine the remedy. In cases of sickness declared to be due to witchcraft, the next step is to divine, or 'smell out,' the sorcerer, and to counteract his magic. 'The one subject that all Kafirs are agreed upon,' we are told (and the statement is true of the whole Bantu race, and indeed of all peoples in their stage of civilization), 'is the reality of magic. No Kafir in his senses dreams of doubting the tremendous power of magic' (Kidd, *The Essential Kafir*, 1904, p. 139). Magic is inextricably mixed up with religion. It is applied to everything. In worship, in war, at birth, at marriage, it is part of all ceremonies. It protects the cattle, the cultivated grain and roots, the lives and health of the people. It is performed at puberty, in sickness, on a journey. By magic, rain is made to bring forth the fruits of the earth, or thunderstorms, hail, and blighting droughts are averted. All these are beneficent applications of magic, approved by public opinion. But there is another aspect of magic. The power that can work good can work evil. Some of the ceremonies on the occasion of a war are intended to terrify or to injure the enemy. In like manner an evil-disposed individual can cause misfortune, sickness, or death to any one of whom he may be envious, or against whom he may have a grudge or an injury to avenge. It is the business of the *ñanga* on any such occasion to discover the witch. On every death (at any rate, on the death of every wealthy or important person) an inquest is held to ascertain the cause, and, if determined to be witchcraft, then to divine the criminal. A favourite method of divining is by means of small bones, stones, and shells, which are used as dice. According as they fall when thrown by the diviner, they indicate the answer to the questions he puts. The diviner is generally a shrewd, experienced man, who knows how to attune his discoveries to the expectations and the prejudices of his clients. The penalty of witchcraft exercised against individuals is death and confiscation to the chief of all the offender's goods. The practice of 'smelling out,' or discovering, witches is therefore profitable to the ruler, and is, besides, a means of keeping his subjects in continual fear and subjection. Its result has very often been so disastrous, and has spread so much misery, devastation, and death among the tribes, that it has been prohibited in all the British colonies.

(*b*) *South-western tribes.*—The Herero medicine-men are divided into three classes, viz. (1) witch-doctors proper (*onganga*, pl. *ozonganga*), who combine the professions of physician and poisoner; (2) soothsayers (*ombuhe*, pl. *ozombuhe*), who foretell the outcome of political action by the inspection of the entrails of slaughtered cattle; (3) diviners (*ombetere*, pl. *ozombetere*). These last are called in to ascertain the person who has caused misfortune, disease, or evil of any kind. The *modus operandi* is to take three iron beads or small round stones in the left hand, and slowly move the hand up and down. From the way in which the beads arrange themselves, on the lines of the hand and the fingers, as this is done, the diviner arrives at his conclusions. The medicine-man's art descends from father to son, or if there be no son, to the practitioner's younger brothers, to whom it is secretly taught. Ordeals are not in use. There is no order of priests strictly so called. The father of a household is the priest of his ancestors; he offers the sacrifices and prayers (see § 4).

(*c*) *Northern tribes.*—It has already been mentioned (§ 4 (*c*)) that the priests of the Banyoro in the Uganda Protectorate are called, equally with the ancestral spirits whose worship they conduct, *bachwezi*. They combine the functions of priest, sorcerer, and witch-doctor, and each clan seems to rejoice in one such accredited official. But there are, besides these, private practitioners in black or white magic. The Bahima aristocracy have a profound belief in witchcraft. The country of Ankole used to be continually agitated by the 'smelling-out' of witches and wizards, and their execution. The Hima medicine-men collect a certain grass, of which they make hay. This hay is put into a jar of mead, banana-wine, or sorghum-beer, and left for twenty-four hours in one of the small huts or shrines already (§ 4) described. The liquor is afterwards removed, and drunk as a medicine. The medicine-men also make little oval-shaped or cubical pieces of wood, over which they mutter incantations, and then sell them for amulets, especially to persons who are troubled with sickness or bad dreams (Johnston, *Uganda*, ii. 588, 632).

Among the Baganda the priests of gods and ancestral spirits were termed *bamandwa*. They wore aprons consisting of little white goat-skins, and were adorned with amulets. They were also diviners. If a man was travelling, and wished for news of his parents and his wife, he went to the *mandwa*, who, furnished with his nine cowry shells sewn on a strip of leather, would with this strip make the sign of the cross and fling it before him, and then, as if inspired, would reply to the questions. The cross was employed as a symbol by the priests before the introduction of Christianity. Besides the priests there were three classes of 'doctors' in Uganda, viz. (1) *musawo*, a physician, skilled in herbs and the treatment of ulcers, wounds, and skin-diseases; (2) *mulogo*, a sorcerer; (3) *mwabutwa*, a poisoner. The *mulogo* is reputed to travel about at night stark naked, a disembodied spirit at all events in some respects, and in his own belief as well as in that of others. If in this condition he dance at midnight before a banana plantation, the trees will wither and the fruit shrivel. He is said to exercise mesmeric influence over weak-minded people. 'He is used as a detective of criminals' (presumably a 'smeller-out'), and for casting love-charms or secretly injuring an

enemy. He is often confounded with the priest, and carries on the worship of spirits (Johnston, *op. cit.* ii. 678, 676).

The Wa-yao and Mang'anja seem to possess no priests as a special order in whom are vested the right and duty of approaching the higher powers. As already mentioned (§ 4), the head of every family offers the prayers and sacrifices to his ancestors, and a woman is often set apart as prophetess or diviner. The *msinganga* practises as a physician, using simples and charms, and performing rough surgical operations. The diviner or sorcerer (*mchisango*) determines the cause of disease, 'smells-out' the witch who has produced sickness or misfortune, and generally advises (for a substantial consideration) any clients who may seek his aid. This he does ostensibly by inspecting the contents of a gourd filled with sticks, bones, claws, pieces of pottery, and so forth, much in the way previously described, and by shaking a gourd-rattle filled with pebbles. After a death and on other occasions an inquiry is held. The diviner is usually a woman. On the day appointed for the ceremony she proceeds, accompanied by a strong guard of armed men, to the place, and goes through a dance, wherein she is gradually wrought up into a more or less delirious condition, and is then supposed to be under the influence of the *masoka*. Witches are believed not only to have supernatural knowledge, but also to be addicted to cannibalism. They kill, as Hamlet's father was killed, by instilling a powerful poison into the ear as the victim sleeps. When he is dead, they are believed to hold midnight orgies and eat the body. The person accused of witchcraft is required to undergo the poison-ordeal, which is rarely refused, everybody, of course, being confident of innocence. Sometimes it is administered by proxy, the recipient being a dog or a fowl, which is tied to the accused. In case of refusal to undergo the test, the alleged witch used to be burnt. One who dies under the poison-ordeal is denied the ordinary rites of sepulture (Macdonald, chs. ii. iii. iv. v. xv.). Rain-making is practised, but there is no professional class of rain-makers. There is some evidence that the ceremonial clearing-out of wells by women, as among the Baronga, is a rain-charm. Mpambe is supplicated for rain. In an account given by a missionary of one such ceremony, which may probably be taken as representative, the leading part was taken by the chief's sister, who occupies an important position in the tribe. After prayer and dancing, 'a large jar of water was brought and placed before the chief; first Mbudzi (his sister) washed her hands, arms, and face; then water was poured over her by another woman; then all the women rushed forward with calabashes in their hands, and, dipping them into the jar, threw the water into the air, with loud cries and wild gesticulations.' Amulets and 'medicine' of different kinds are used for various purposes, offensive and defensive—for protection against thieves, against crocodiles and other fierce animals, to assist hunters, warriors, thieves, and so forth; and objects are buried to bewitch, or at least they are discovered by diviners in the process of 'smelling-out.' These practices, however, offer no striking peculiarity (Werner, 56, 76, 80).

Among the Warundi the father or mother of the family acts as priest of the *manes*. Other objects of worship are served by special priests. The chief of these is Kiranga. As we have seen (p. 359[a]), his priest may be either a man or a woman, who is called by the same name as the divinity, and is held to be inspired by him. A *kiranga* is made in one or other of three ways: (1) by inheritance; (2) by being struck by lightning; or (3) by inspiration or possession during the adoration of the sacred spear. Divination is practised by professors of the art similar to those among other Bantu tribes. The belief in witchcraft presents no special features. When sickness occurs, a medicine-man is called in to counteract the sorcery, though various vegetable remedies are known, as well as bleeding and cautery. Ordeals (red-hot iron or boiling water) are resorted to in order to discover the witch. The dead bodies of such as are convicted of sorcery are left unburied.

The Awemba king was the chief priest of the *milungu* and of his ancestors, though the management of the ritual was generally left to the *basing'anga* (pl. of *sing'anga*), who formed the regular priesthood. 'Their main function was to interpret the will of the *milungu* and the *mipashi* (p. 359[b]), and to combat the evil enchantments of the sorcerers. They named children at birth, superintended the sacrifices, tended the sick, and charmed away diseases by divination and their amulets' (*JAI* xxxvi. 155). Their office was not hereditary. Most of the old people claimed to be *basing'anga*, by virtue of their position as the oldest members of the family. There is a class of women who assert that they are possessed by some dead chief. They hold what may be described as *séances* at times, and are regarded with great veneration. It need hardly be said that sorcery is an article of belief. The *waloshi* (wizards or sorcerers) are reputed to compass, by means of black arts and powerful 'medicines,' the death of anybody who comes under their ban. They and they alone worship the *vibanda* (p. 359[b]), who impart to them instructions, 'medicines,' and power to change into predatory wild beasts. Wizards are sometimes possessed by *vibanda* (*JAI*, *loc. cit.*).

(*d*) *Western tribes.*—Turning to the Western tribes, we have already mentioned the *nganga* in treating of the nail-fetishes (p. 361[b]). The other *zinganga* (pl. of *nganga*)—at any rate, among the Bavili—form a hierarchy, at the head of which is the king. Some of them are attached to special divinities or sacred groves. As might be expected, many of them officiate not merely as priests, but also as physicians; for disease and misfortunes of all sorts are held here, as elsewhere, to be due to more than what we call natural causes. The *nganga*, therefore, treats the sick, and, like his brethren among other branches of the Bantu race, provides preventive 'medicines' intended to avert danger from witchcraft, weapons, wild beasts, and other possible fatalities. He also divines the origin and remedy for sickness, the wizard who has caused it, and many other matters connected with the hopes and fears of his clients. On the death of the king, the *nganga mpuku*, or chief diviner, decides by the aid of a magical mirror, in case of doubt, which of the eligible children of the royal princesses is to be the new king. Certain of the *zinganga* officiate in the administration of ordeals. In so far as these ordeals are distinguishable from other methods of divination, they may be described as the taking of powdered bark of the Ukasa (tree) or the Bundu (herb), or passing of hot knives across the palms and calves of the accused. Some of the Upper Congo tribes are said to be happy enough to be destitute of any ordeal for witchcraft, and indeed of any *nganga*.

7. **Supreme Being. Nature-spirits.**—(*a*) *Central and S.E. tribes.*—The most obscure and difficult question connected with the religion of the Bantu is whether they have any belief in a Supreme God, a Creator, an overruling Providence. Confining our attention for the moment to the Central and South-eastern tribes, we may say without fear of contradiction that the notion of creation is foreign to their minds. As they dwelt on a great continent, the question of the origin of heaven and earth never entered their thoughts. Concerning the origin of men and of animals, they were not wholly devoid

of speculation. The Zulus speak of Unkulunkulu as the first of men, the man who in some way brought men into existence. But they are by no means agreed as to how he did so. He himself is said to have sprung out of a bed of reeds. It is not clear, however, that this expression is to be taken literally. Some were of opinion that he begat men, or that he made them out of a reed. Others thought he had dug them up or split them out of a stone. The word *Unkulunkulu* simply means the most remote ancestor known to a tribe or a clan. Every clan has its own *Unkulunkulu*, and the word is ordinarily used as equivalent indifferently to our 'great-great-grandfather' and 'great-great-grandmother' (compare the *nkulu* of the Bavili, pp. 360[b], 361[b]). *Uthlanga* is another name frequently cited as that of a Zulu creator. The word means a reed, and is metaphorically used for a source of being. Thus a father is described as the *Uthlanga* of his children, from which they stooled or broke off as the offsets from a reed. Unkulunkulu, in the sense of First Man, is sometimes said to have begotten men by Uthlanga; in such a case Uthlanga is regarded as his wife. *Umdabuko* (from *ukudabuka*, 'to be broken off') is a third expression, sometimes used in a personal sense as 'the lord or chief who gives life,' and identified with Uthlanga.

Nor have the Zulus any belief in a personal, supreme, overruling Providence. There are traditions of a lord, or chief, in heaven. Bishop Callaway, however, after a most patient inquiry, came to the conclusion that in the native mind there is hardly any notion of Deity, if any at all, wrapt up in their sayings about a heavenly chief. 'When [this expression] is applied to God, it is simply the result of [Christian] teaching. Among themselves he is not regarded as the Creator, nor as the Preserver of Men, but as a power' (Callaway, *op. cit.* 124). The result of M. Junod's inquiries among the allied tribe of the Baronga is to the same effect. The problem of creation does not trouble the Ronga mind. But the word *Tilo*, 'Heaven,' ordinarily applied to the sky, embraces a much vaguer, vaster, but quite embryonic notion. As such it means a place, and more than a place, a power which manifests itself in thunder or in portents such as twins. It is called 'Lord,' but is regarded for the most part as essentially impersonal.

(*b*) *Central tribes.*—The religious beliefs of the inland tribes have never been the subject of inquiry so systematic and minute as that to which Callaway subjected the beliefs of the Zulus. But the evidence, so far as it goes, concerning the Basuto and the Bechuana is to the same effect. There is a word common to these and other tribes of the interior which has been adopted by the missionaries to translate 'God.' It was adopted many years ago before the native ideas were fully understood; and it is now too late to displace it, although, as it turns out, it was an unfortunate choice. That word is, in its Sechuana form, *Morimo*. It means a ghost or disembodied spirit, and it has a strong flavour of malevolence.

'Morimo,' says Moffat, 'to those who knew anything about it, had been represented as a malevolent *selo* or thing.' Arbousset declares: 'All the blacks whom I have known are atheists, but it would not be difficult to find amongst them some theists.' This seems contradictory. What he probably means is that individuals might be found, though he had not met them, who had a vague speculative notion of a Supreme Being. He goes on: 'Their atheism, however, does not prevent their being extremely superstitious, or from rendering a kind of worship to their ancestors, whom they call *Barimo*, or in the singular *Morimo*' (Arbousset, 39). *Barimo* beyond doubt means the ancestral *manes*. A phrase for dying is 'going to Barimo.' A lunatic, or one delirious or talking foolishly, is called *Barimo*, that is, one possessed by one or more of the *manes*. There is another plural of *Morimo*, namely, *Merimo*, which is often translated 'gods,' and which is the word used in the Sesuto phrase above cited (§ 4) for cattle. In the tongue of the Bavenda the word *Modzimo*, which is a dialectic form of *Morimo*, means 'nothing else but the totality of the good souls of their ancestors, who have not been *valoi* [maleficent sorcerers], with the founder of their tribe as head, and the ruling chief as living representative. Besides this *Modzimo*, of which the plural is *Vadzimo* [corresponding to *Barimo*], meaning the single souls of their ancestors, they also have *Medzimo* [corresponding to *Merimo*], another plural of *Modzimo*, which denotes the many objects on earth which have been made the visible representative of the ancestors of each clan and family.' Among these *Medzimo* are enumerated 'cattle, goats, sheep, or weapons and tools of old dead ancestors.' 'Even shrubs, flowers, or rushes,' we are told, 'may be created *Medzimo*' (*JAI* xxxv. 378 f.).

Besides the *Modzimo*, the Bavenda are said to have a dim idea of a Creator, whom they call Kosana, and who no longer interferes with the affairs of the world. He has left the business in the hands of another divinity named Ralowimba, who is the rewarder of good and the punisher of evil. Ralowimba is much feared, and in everyday life the people pray to him, though the two annual sacrifices at ploughing and at harvest, and sacrifices ordered by the witch-doctors on account of illness or calamities, are offered exclusively to Modzimo. There is a third deity named Thovela, the protector of pregnant women and unborn children, and of the stranger and visitor travelling through the country. The Bavenda have a tradition that they are immigrants into the Transvaal from another country. Their language points to their affinity with the peoples of the Great Lakes, though it has been thought that they came from the Lower Congo (*ib.* 378, 365). The belief in the gods just mentioned is quite different from that of the more southerly tribes, and it seems to need more extended inquiry. All attributions, for example, to savage and barbarous peoples of belief in a god who dispenses rewards and punishments after death are to be received with great caution. Such statements are generally foreign to their religious ideas, and on close examination are discovered to be founded on a misapprehension.

(*c*) *South-western tribes.*—The Herero word used by the missionaries to translate 'God' is *Mukuru*—a choice as unfortunate as the others we have noted, since it is the same word as that used for a deceased father or person of importance who has attained *quasi*-divine honours. When the Hereros entered what is now German territory, they found in possession of the country, besides the Bushmen, a people called the Ovambo, or Hill Damaras. Concerning the Ovambo little is known. They are, unlike the Hereros, a peaceful and retiring people, and are probably earlier Bantu immigrants considerably mingled with Hottentot blood. In common with the Ovambo, the Hereros have a word, *Kalunga* or *Karunga*, which seems to be etymologically related to the Zulu word *Unkulunkulu*. Kalunga is said to be the name among the Ovambo of a mythical being who gives fertility to the fields, and kills only very bad people. He has, according to Ovambo tradition, a wife named Musisi, and two children, a girl and a boy. He lives in the ground near the chief village. In one tale it is related how he came up from the earth and 'created' from *ouna* ('little things') which he set up three couples, the ancestors of the Ovambo, the Bushmen, and the Hereros. His residence in the ground, and the fact that the word *musisi* is the singular of *aasisi*, the spirits of the dead, point to his being a deified ancestor. This identification is the more probable if it be the fact, as reported by one of the missionaries, that the Hereros hold Mukuru, Musisi, and Karunga to be one and the same. Yet, according to another missionary, Karunga is to be distinguished from the *ovakuru*, and never was a human being. On the whole, the same vagueness and uncertainty on these subjects as in the case of the Central and South-eastern tribes is characteristic of the Ovambo and Hereros. Their practical interest is centred in

the *ovakuru*, to whom alone they offer sacrifice, though the Hereros sometimes cry to Karunga for help in danger, and on the occasion of a violent thunderstorm they pray to Karunga and Musisi to go away and flash into the animals of the field and into the trees. According to their legend of origin, the human race is to be traced to a tree called Omumborombonga, near Ondonga, out of which a man and woman came in the beginning (*S. Afr. F. L. Journ.* i. 67, ii. 88 ff.).

(*d*) *Northern tribes.*—Dr. Bleek, whose etymology has been generally accepted, connects with Kalunga and Unkulunkulu a word we have already found in use among several of the Northern tribes, and translated by the missionaries as 'God.' That word, *Mulungu*, is applied by the Wa-yao 'to the human *lisoka* (p. 358ª) when regarded as an object of worship or as an inhabitant of the spirit-world. But it is also used to denote that spirit-world in general or, more properly speaking, the aggregate of the spirits of all the dead. The plural form of the word is rarely heard, unless when the allusion is made to the souls in their individualities. . . . The untaught Yao refuses to assign to it any idea of being or personality. It is to him more a quality or faculty of the human nature whose signification he has extended so as to embrace the whole spirit-world. . . . Yet the Yao approaches closely to the idea of personality and a personal being when he speaks of what *Mulungu* has done and is doing. It is *Mulungu* who made the world and man and animals. . . . *Mulungu* is also regarded as the agent in anything mysterious. "It's *Mulungu*" is the Yao exclamation on being shown anything that is beyond the range of his understanding.' When it thunders Mulungu is speaking; and the rainbow is Mulungu's bow. Mulungu is sometimes represented as assigning to the spirits their various places in the spirit-world. He arranges them in rows or tiers. If, however, we consider the various applications of the name and the usages connected with it, and compare it with the Zulu *Unkulunkulu* and the Ronga *Tilo*, we are compelled to the inference that there is a very small element of personality in it. It is vague, and essentially impersonal. When a missionary endeavoured by means of it to convey to a Yao the idea of a personal God, such as Christians entertain, the heathen beginning to grasp the idea spoke of *Che Mulungu* (Mr. God!), as if without the personal prefix it meant something quite different to him (*JAI* xxxii. 94; Macdonald, i. 67).

The Mang'anja are acquainted with the word *Mulungu*, which in their dialect is *Morungo*. But the word they generally use for the same conception is *Mpambe*. Mpambe is invoked for rain. In some parts the word is reported as meaning thunder, and sometimes lightning. Among the tribes of the coast *Muungu* or *Mulungu* seems to mean 'Heaven,' and thus to correspond with the Ronga *Tilo* (Krapf, *Suahili Dict.*, Lond. 1882, *s.v.*). Molonka, which appears to be the same word, is the name given by the Batonga on the banks of the Zambesi to that river (Thomas, *Eleven Years in Central S. Africa*, 377).

The use of the word *Mulungu* by the Warundi and Awemba has been explained in § 4. The latter people acknowledge but do not worship a vague being, in some sense supreme, called Leza. He is said to be the judge of the dead, dividing them into *vibanda*, or evil spirits, and *mipashi*, or good spirits. This recalls the Yao representation of Mulungu as arranging the dead in tiers. Probably neither statement is indigenous to the Bantu mind. The name of Leza is invoked only in blessing or in cursing; but the ordeal which a man accused of witchcraft or other serious crime is required to undergo is said to be regarded as an appeal to Leza. In any case he is not anthropomorphic, and receives no direct worship; he is little if anything more than a name.

Further still to the north the Bahima have no clear idea of an overruling God. It is said indeed that they have a name for God; but such name is apparently associated only with the sky, the rain, and the thunderstorm. Whether the Baganda recognized any Supreme Being is at least doubtful.

It appears from the foregoing account of the beliefs of the Northern tribes that, while among none of them, so far as we know, is there, any more than among the Central and Southern tribes, a definite idea of a Supreme Being, there is a tendency towards polytheism. Many, indeed, of the tribes recognize and have entered into relations of worship with beings so much above mankind, either living in the flesh or in the state of disembodied spirits, that they may fairly be described as gods (see § 4). Whether these gods have been developed, as Sir Harry Johnston and others think, from ancestral *manes*, or owe their origin to local spirits, or to vaster, more vaguely conceived nature-spirits, is a very difficult question.

(*e*) *Western tribes.*—Nature-spirits at all events seem to play their part in the religion of the Western tribes. We have seen (§ 4) that localized spirits are commonly known.

According to the belief of the Bavili (if we may trust Mr. Dennett's exposition in his book, *At the Back of the Black Man's Mind*), the world as conceived by them is filled with *Bakici Baci* (pl. of *Nkici Ci*). This phrase he translates as 'speaking powers on earth.' To these Bakici Baci a number of sacred groves, which are known by their various names, are dedicated. Various kinds of trees and animals are also held sacred, or Bakici Baci. All the provinces of the kingdom and the rivers are in addition reckoned sacred, and the representatives of all the different families owning sacred ground within the kingdom are Bakici Baci. One of the titles of the king is Nkici Ci; and he is said to be regarded as the product and final effect of the Bakici Baci. Certain of the Bakici Baci, such as Xikamaci, the north wind, and others, besides the king, are regarded as living beings and are propitiated. But, speaking generally, they are not objects of worship—still less actual gods. They may be vaguely recognized as 'powers'; they are rather, it would seem, sacred categories, in which practically everything (including many things that to us are mere abstractions) is included.

They are said to be the personal attributes or manifestations of Nzambi. Over the concept of Nzambi, however, no little obscurity hangs. The name is found under various forms among all the Western Bantu, and perhaps even among the true Negroes to the north of the Gulf of Guinea. Its meaning is quite unknown. A wider knowledge of Bantu philology is required to interpret it than is possessed by anybody who has hitherto guessed at it. Among the South-western tribe of the Hereros, Ndyambi is said to be identical with Karunga, already discussed. By the Barotse, Nyambe is sometimes identified with the sun, sometimes regarded more vaguely as a kind of Supreme Being, and the progenitor by a female being of the animals and man. Concerning the Mpongwe our information is contradictory. Dr. Nassau represents the people as speaking of Njambi as their father, and attributing to him the making of things in general. They suppose him to exist from an indefinite time past, and to have made some spirits, but not necessarily all. Those whom he has made live with him in Njambi's Town. Dr. Nassau, however, quotes an earlier missionary who refers to Onyambe as hateful and wicked, and as only one of two spirits associated under 'God' in

the government of the world, but apparently with very little influence. The Fans, near neighbours of the Mpongwe, are reported to believe in a number of gods at the head of whom stands Nzame, or Anyambi, the Father who made or begat all things. But the accounts given by the missionaries vary so much that it is impossible, in the present state of our information, to be sure of the exact status of the 'god' in question. In any case he has long ago deserted the world, and is indifferent to human wants and sufferings. On the Upper Congo, Njambe figures as only one of four seemingly equal beings. He is the author of death, sickness, and evils of all kinds; Libanza, another of the four, being called 'Creator.' On the Lower Congo two beings are spoken of: Nzambi and Nzambi Mpungu. The latter is generally represented as superior to the former, who is sometimes called his daughter, sometimes his wife, and sometimes is a male undergod. Nzambi, as a female being, is the subject of many legends. She is always 'spoken of as the "mother," generally of a beautiful daughter, or as a great princess calling all the animals about her to some great meeting, or palaver; or as a poor woman carrying a thirsty or hungry infant on her back, begging for food, who then reveals herself and punishes those who refused her drink or food by drowning them, or by rewarding with great and rich presents those who have given her child drink. Animals and people refer their palavers to her as judge' (Dennett, *Fjort*, 2). Mr. Dennett has, however, in a more recent work given a different version of Nzambi. According to this, Nzambi is the abstract idea, the cause. 'From the abstract Nzambi proceed Nzambi Mpungu, Nzambi Ci, and Kici.' Nzambi Mpungu is 'God Almighty, the father God who dwells in the heavens and is the guardian of the fire'; Nzambi Ci is 'God the essence, the God on earth, the great princess, the mother of all the animals, the one who promises her daughter to the animal who shall bring her the fire from heaven,' the Nzambi, in short, of his earlier account; Kici is 'the mysterious inherent quality in things that causes the Bavili to fear and respect.' Mr. Dennett proceeds to say that 'it is not unnatural that, one of the personalities of Zambi being Kici, his powers (or perhaps attributes) are called Bakici Baci, the speaking powers on earth, and that their product or final effect is Nkici'ci (Kici on earth), one of the tribes of the king Maluango' (*Black Man's Mind*, 105, 166). Elsewhere, however, he makes Nyambi (to which he attaches the same meaning as to Nzambi) the nephew of Bunzi, the South Wind, and one of the Bakici Baci, while admitting that 'some people call God Nyambi instead of Nzambi' (*ib.* 116). This agrees more nearly with Bastian's account. He represents Nzambi as a family fetish, originally descended from Bunzi, the Father and Mother of All, a local fetish or divinity of Moanda. It is, however, a fetish of high rank, since special powers for the consecration of other fetishes are assigned to it. It seems, in fact, to be the royal fetish; for pork is the *orunda* of all its worshippers, and pork, as we know, is forbidden to the royal family. When a woman becomes pregnant she is required to appear before Nzambi, in order that the *nganga* inspired by the fetish may formally declare her condition, paint her, and put a girdle round her as an amulet for easy delivery. Not until then is she permitted to mention the fact of her pregnancy (Bastian, *Loango-Küste*, i. 175, 173).

On the whole, we may probably conclude that the Western tribes have developed the belief in 'a relatively Supreme Being,' to use Mr. Andrew Lang's phrase, to a point at which, though still vague, it does embrace the idea of the author of the present condition of the world as they know it, and that of a far-away, somnolent and indifferent overlord, whose government is exercised by inferior and practically independent chiefs, comparable with the subordinate chiefs of a Bantu realm. These, the real powers with which mankind comes into contact, are not arranged in any system intelligible to us from our present information. They comprise all the personal beings imagined to infest the native's environment, whether unseen or attached to a 'fetish,' or to superintend the affairs of the world, including a vast variety of more or less vaguely conceived nature-spirits. Unless secured to a protective fetish, or unless ancestral spirits, their activity is dreaded as at all events primarily hostile. Even their favour is of a very precarious description, easily lost by the neglect, voluntary or involuntary, of offerings or of some *orunda*.

CONCLUSION.—Bantu religion thus divides into two great branches. The religion of the roving and warlike tribes of the centre and south of the continent is pure, or nearly pure, worship of ancestors. That of the more settled and agricultural tribes of the Great Lakes and the west of the continent is a mingled worship of nature-spirits and ancestors. Partly corresponding with this division is the distribution of the names Unkulunkulu and Nzambi. Neither of these names has been reported from the north-eastern region, which was the centre of distribution of the Bantu peoples. The one has been developed on the eastern side of the continent among the ancestor-worshipping tribes; the other on the western side among the tribes acknowledging nature-spirits and paying worship to them as well as to the *manes*. But, whereas the former do not, so far as we can discover, attach a definite personal concept to Unkulunkulu or its etymological variants, Nzambi, on the other hand, among the Western tribes, does seem to convey a personal meaning, and is the subject of many mythological stories. It has been suggested with probability that these two names, with the two different types of mental and religious evolution which they mark, indicate separate streams of emigration by distinct branches of the Bantu race. But whether the distinction had arisen before these two branches parted company, or how far the evolution was helped or hindered by the climate, the nature of the country, the habits consequently acquired by the people, and the influence of other races, has yet to be determined.

LITERATURE.—Our information with regard to nearly all the Bantu peoples is of a fragmentary description. Those best known to us are the tribes inhabiting the southern part of the central plateau of South Africa and the coast-fringe from Delagoa Bay southwards. In the following list no attempt is made to enumerate more than the principal works to which we are indebted for our knowledge of the customs and religion of the Bantu. Incidental contributions of value are often to be found in other writings by missionaries, travellers, and administrators.

I. *SOUTH-EASTERN TRIBES*: John Maclean, *A Compendium of Kafir Laws and Customs*, Cape Town, 1866 [intended for use in the courts of British Kaffraria]; H. Callaway, *Nursery Tales, Traditions and Histories of the Zulus*, London, 1868, also *Religious System of the Amazulu*, London, 1870 [both fragments, but of the highest value]; Henri Junod, *Les Baronga*, Neuchatel, 1898 [the only systematic monograph on any of the tribes hitherto published]; Report of the Cape Government Commission on *Native Laws and Customs*, Cape Town, 1883.

II. *CENTRAL TRIBES*: General reference may be made to the writings of the missionaries: Moffat, *Missionary Labours in S. Africa*, London, 1842; Campbell, *Travels in South Africa*, 3 vols., Lond. 1815–22; Casalis, *Les Bassoutos*, Paris, 1859 (Eng. tr. London, 1861); Merensky, *Beiträge zur Kenntniss Süd-Afrikas*, Berlin, 1875; Mackenzie, *Ten Years North of the Orange River*, Edinburgh, 1871, *Day-Dawn in Dark Places*, London, 1884, *Austral Africa*, 2 vols., *ib.* 1887; Thomas, *Eleven Years in Central S. Africa*, London, 1872; Arbousset and Daumas, *Exploratory Tour*, Cape Town, 1846, and others, and of numerous explorers.

III. *SOUTH-WESTERN TRIBES*: Andersson, *Lake Ngami: Explorations and Discoveries during four Years' Wanderings in the Wilds of South-western Africa*, London, 1856; Edward

Dannert, *Zum Rechte der Herero*, Berlin, 1906 [a juridical treatise by a German official]; articles on the Herero and Ovambo by German missionaries in the *South African Folk-Lore Journal*, Cape Town, 1879–1880.

IV. *NORTHERN TRIBES*: Sir Harry H. Johnston, *The Uganda Protectorate*, 2 vols., London, 1902, also *British Central Africa*, London, 1897; J. F. Cunningham, *Uganda and its Peoples*, London, 1905; J. M. M. van der Burgt, *Un Grand Peuple de l'Afrique Equatoriale*, Bois-le-Duc, 1904 [a work by a Roman Catholic missionary on the Warundi]; Duff Macdonald, *Africana; or, the Heart of Heathen Africa*, 2 vols., London, 1882 [a valuable work by a Scottish missionary to the Wa-yao and Mang'anja of the Shire Highlands]; A. Werner, *The Natives of British Central Africa*, London, 1906 [dealing chiefly with the same two tribes]. The Swahili and other tribes of the east coast have been to a large extent Arabized. For the most part they profess Muhammadanism, which is, however, greatly debased by native superstitions. They need no special treatment. The Masai, and neighbouring peoples of mingled Hamitic and Negro or Bantu blood, do not come within the limits of this article.

V. *WESTERN OR FOREST TRIBES*.—For the coastal tribes, A. Bastian, *Ein Besuch in San Salvador*, Bremen, 1859, also *Die Deutsche Expedition an der Loango-Küste*, 2 vols., Jena, 1874; Heli Chatelain, *Folk-tales of Angola*, Boston, 1894; M. H. Kingsley, *Travels in West Africa*, London, 1897, also *West African Studies*, 1899; R. E. Dennett, *Notes on the Folk-lore of the Fjort*, London, 1898, also *At the Back of the Black Man's Mind*, 1906. To these must be added the old writers Proyart, *Histoire de Loango, Kakongo, et autres royaumes d'Afrique*, Paris, 1776, and Merolla, 'A Voyage to Congo, and several other Countries in the South Africk . . . in the Year 1682,' in Churchill, *Collection of Voyages and Travels*, i., Lond. 1732, as first-hand authorities, all the more important because they describe (though often without understanding it) the condition of native society before it became so largely contaminated by foreign intercourse. For the more inland tribes, see Du Chaillu, *Explorations and Adventures in South Africa*, London, 1861, also *A Journey to Ashangoland*, 1867; Sir H. H. Johnston, *The River Congo*, London, 1884. Bentley, *Pioneering on the Congo*, 2 vols., London, 1900, the works of other members of the Baptist mission to the Congo, and Coillard, *On the Threshold of Central Africa*, Lond. 1897, and the works of other French Protestant missionaries to the Barotse, should also be mentioned.

E. SIDNEY HARTLAND.

BAPTISM.

BAPTISM (Ethnic).—Among many peoples a rite is found, performed either at infancy or later in life, which has considerable likeness to the ceremony of Christian baptism. Sometimes that likeness is only on the surface; in other cases it extends deeper, and the pagan rite has also a religious and ethical purpose. The use of water in such a ceremony is connected with its more general ceremonial use among heathen races as a means of ritual purification. This subject will be considered by itself (see PURIFICATION); we confine ourselves here to such rites as may be described as baptismal, and to an inquiry into the rationale of these, as well as into the causes which have led to water being used for this purpose.

1. *Origin of ethnic baptismal rites.*—First, let it be clearly understood that the ceremonial use of water in rites which are sometimes exceedingly simple, but at other times are profoundly symbolic and complex, though now inextricably connected with other opinions regarding its nature and power, has proceeded by a regular process of evolution from the simple use of water as a cleansing and purifying medium. Water obviously purifies the body from dirt; then, as its powers become enhanced in the primitive mind, it can cleanse from evil considered as a material or spiritual pollution, or can ward it off by a species of magical virtue; until, finally, it comes to be thought that it can also cleanse from the stain of moral guilt. This comes into view when it is considered that the ceremonial use of water occurs frequently at precisely those times which require its ordinary purifying powers, *e.g.* childbirth, or after contact of the person with disease or death. We shall now refer to some of the causes which have extended the idea of simple purification by water, or have transformed it into a special ceremonial purificatory rite, more or less symbolic, and connected with the giving of a name.

2. *Mother and child tabu at birth.*—As a result of the general theory of sexual tabu, by which, through the mystery which surrounds certain periodic or occasional functions of woman's life, she is considered more or less dangerous, and must therefore be avoided, it is usual among savage races for the woman, during and after childbirth, to be set apart from her fellows. She is frequently isolated in a special hut prepared for her, as in certain parts of Australia, in North America, and in New Zealand (*JAI* ii. 268; Petitot, *Traditions indiennes du Canada nord-ouest*, Paris, 1886, p. 257; Shortland, *Traditions and Superstitions of the New Zealanders*, London, 1854, p. 143); elsewhere she is set apart for some days after the birth to undergo rites of purification. Childbirth is one of those crises in human life, occasional or periodic, in which the persons passing through them are regarded as centres of danger either to themselves or to others. It is as a result of this primitive belief that the period of maternity is a period of ceremonial 'uncleanness'; the woman is then tabu. But equally the child, which is part of herself, and has been in such close contact with the mother, is also unclean—another centre of danger. As a rule, therefore, whatever ceremonies have to be undergone by the mother to remove the tabu have also to be participated in by the child. Thus, with the Koragars of West India, mother and child are ceremonially unclean for five days, and both are restored to purity by a tepid bath (Walhouse, *JAI* iv. 375).

Among the Polynesians the child is *tapu*, and can be touched by none but sacred persons. He becomes *noa* (free from *tapu*) by the father touching him with roast fern root, which he then eats. Next morning the eldest relative in the female line does the same (Shortland, *op. cit.* 143). Lustration of the woman and newborn child is practised among the American Indians, Negroes, and Hottentots, who purify both mother and child by smearing them 'after the uncleanly native fashion' (Tylor, *Prim. Cult.*[3] ii. 432). Among the Karens 'children are supposed to come into the world defiled, and, unless that defilement is removed, they will be unfortunate and unsuccessful in their undertakings.' This defilement is therefore fanned away by one of the elders with appropriate words, after which he binds thread round the child's wrist and gives it a name (*JRASBe* xxxvii. pt. 2, 131). So with the Malays, infants are purified by fumigation, and women after childbirth are half-roasted over the purificatory fire (Skeat, *Malay Magic*, London, 1900, 77).

3. *Mother and child at the mercy of evil spirits.*—In addition to mother and child being regarded

as unclean or tabu, they are also, according to a widely distributed opinion, especially subject to the attack of evil spirits. Their very helplessness probably suggested this idea among peoples who believed themselves surrounded at all times by hosts of spirits ready to snatch them away or to do them an ill turn. The child is thought by the people of East Central Africa to be most open to attack until seven days old. Here the spirits are propitiated by sacrifice (Macdonald, *Africana*, London, 1882, i. 224). The Kalmuks drive off the evil spirits from mother and child by rushing about, shouting and brandishing cudgels (Pallas, *Reisen*, St. Petersburg, 1771–76, i. 360), while the tribes of the Malay Peninsula scare them away with bonfires (*Jour. Ind. Arch.* i. 270). A similar precaution is prescribed by the Parsi sacred books—a fire or a lamp is kept lit for three days to keep away the Devs and Drujs, wizards and witches, who use their utmost efforts to kill mother and child (West, *Pahlavi Texts*, i. 316, 343–344, iii. 277). Such beliefs have survived among the European peasantry, but with them it is now mostly either witches or fairies who are feared. In some districts witches were believed to carry off children to devour them in a ritual orgy at the Sabbat; while fairies stole the child in order to bring it up among themselves, leaving a puny changeling in its place. Hence the recent Scandinavian custom of never letting the fire out till the child is baptized —a custom identical with one followed by the ancient Romans; and the Celtic practice of protecting mother and child from fairies, spirits, and the like by carrying fire round them sunwise.

4. *Removal of tabu.*—In order to remove the dangerous influences which were supposed to emanate from the child and to neutralize the evils to which it was in turn exposed, various methods were and are resorted to. Among these are purification by water, or by blood, or by fire, while analogous rites at birth or puberty, frequently in connexion with the name-giving ceremony, are tatuing, circumcision, and other bodily mutilations, or initiation, with the simulation of death and re-birth. Where such efforts had for their end the removal of tabu, they were mainly of a purificatory nature. The tabu, in savage opinion, resembles both a contagious and an infectious disease. It is a kind of invisible essence, surrounding the tabued person or thing, and easily passing over to other things and persons. All rites for removal of tabu are, therefore, largely purificatory. Much the same may be said of the evil influences to which mother or child is exposed. But their removal is effected not only by purificatory rites, but by magical ceremonies, by sacrifices, or by terrorizing them. Examples of various methods of removing tabu or external evil influences may be referred to. The subject is frequently placed by the fire, or fumigated with smoke or incense. Or the tabu or the evil is wiped or scraped off with the hands, which are then washed, or with a scraper, which is afterwards buried or destroyed. Or, again, the evil is transferred bodily to some other person or thing, according to a wide-spread series of rites of which that of the scapegoat is an instance, and that of 'carrying out death' another. But the most natural method of all is that of washing or lustration with water. 'The tabu essence, as if exuding from the pores and clinging to the skin, like a contagious disease, is wiped off with water, the universal cleanser' (Crawley, *Mystic Rose*, London, 1902, 228). With the Jews, washing with water was one of the necessary ceremonial methods of removing uncleanness or tabu; so among the Navahos the man who has touched a dead body must remove his clothes and wash himself before he mingles with his fellows (*BE*, First Report, p. 123); and Skeat tells us that among the Malays purification of mother and child is usually accomplished by means of fire or a mixture of rice-flour and water (*op. cit.* 77), the process not only removing tabu, but 'destroying the active potentialities of evil spirits.' This ceremonial use of water is further illustrated by its use among the Kafirs, who, as Lichtenstein says (*Travels in Southern Africa*, London, 1812–15, i. 257), remove the contagion of the guilt of murder, of death, or of magic, by washing. So Basuto warriors bathe after battle to wash off the ghosts of their victims, 'medicines' being put in the water by a sorcerer farther up the stream (Casalis, *Basutos*, London, 1861, p. 258). The washing with lustral water is thus necessary to remove the contagion of 'uncleanness'; it is also a safeguard against impending evil, and acts as a kind of magic armour which turns aside the attacks of a visible or invisible foe. We go on now to ask why water should have this efficacy, as a preliminary to showing its actual use in ethnic baptismal rites.

5. *Water as a safeguard.*—The animistic theory of the universe which underlies all primitive religion and philosophy suggested that water was a living being, which, in so far as it assisted the processes of growth and aided men in other ways, might be presumed to be beneficent. But even apart from the animistic theory, water, more than any other thing in the universe, seemed to be alive. Its motion, its sound, its power, hinted at life; hence the vivid Hebrew phrase (occurring with other peoples also) of 'living water.' It may be presumed also that man soon discovered the purifying effects of water for himself; its power of quenching thirst he already knew; that of invigorating the body by a plunge in its cool waves he must soon have found out, for he did not confine this invigorating process to himself, but even bathed the images of his gods on stated occasions, in order to renew their powers. The further idea arose, aided by the belief in a spirit or divinity of the waters, that certain waters, more usually springs, lakes, or wells, had miraculous healing properties —a belief which has survived centuries of Christianity. We find these various beliefs about the Water of Life conferring immortality, strength, or beauty, or about the Fountain of Youth, idealized in folk-lore in the many European folk-tales, with parallels from all stages of barbaric and savage culture (cf. MacCulloch, *CF*, London, 1905, ch. 3). Another concrete survival of such primitive ideas is the belief that no spirit or power of evil can cross running water. It was thus by a logical process that water, considered as having all these various powers and as being itself the vehicle or abode of spirits favourable to man, should have been used as one method of removing the contagion of tabu or the influence of evil spirits, or at a higher stage should have been held to possess the power of removing the guilt of sin. This last function may be conveniently illustrated by the Hindu belief in sacred rivers, *e.g.* the Ganges, in which the sins of a lifetime may be removed by a plunge—a process known also to the superstitious Roman whom Juvenal (vi. 520–23) satirizes for washing away his sins by dipping his head three times in the waters of the Tiber. Water, which removed dirt from the body, could therefore remove the contagion of tabu; and if it could do this, it was presumed that it had the further power of removing the stain of moral evil. It is on such a basis that what are justly to be called ethnic baptismal rites are founded. Primarily, they are simple purifications to remove tabu, or to ward off spirits who are intent on doing the child an injury. Then they are con-

nected with the process of name-giving. Lastly, with some correspondence to Christian adult baptism, they are used at initiations or before the celebration of Mysteries, and have then a certain ethical content; they remove sin. But all alike arose out of the necessary washing of the child after birth, which is itself sometimes a religious rite, connected also with name-giving, and from those primitive ideas about water just referred to. Each of these stages will now be considered separately.

6. *Ceremonial lustration without name-giving.*—Among the people of Sarac, E. Africa, it is customary to wash the child, when it is three days old, with water which has been specially blessed for this purpose (Munzinger, *Ostafr. Stud.*, Gotha, 1865, p. 387). The act has even greater significance among the Basutos, with whom the Naka, when he comes to consecrate the child, makes a foam out of water and various 'medicines,' with which he lathers the child's head. He then binds a medicine bag round his thighs (Tylor, *Prim. Cult.*[3] ii. 435). Among many S. African tribes—Giacas, Gcalekas, Tembus, Pondos, Pondomisi, Fingoes, etc.—the mother is secluded for a month after the birth. The father slaughters an ox to obtain the favour of the ancestral spirits, and during the month wise women sprinkle the child daily with a decoction of herbs, and repeat meaningless hymns to ensure its development and health. It is also passed through the smoke of aromatic wood to bring it wisdom, vigour, and valour. Later the father gives the child a name, usually from some passing event. Similar customs prevail among the Yaos, Makololo, Machuas, Angoni, and other East African peoples (Macdonald, *JAI* xix. 267, xxii. 100). A combined use of water and fire is found among the Jakun tribes of the Malay Peninsula, who wash the newborn child in a stream, and then, bringing it back to the hut, pass it frequently over a newly-kindled fire on which pieces of sweet-smelling wood have been thrown (*Jour. Ind. Arch.* ii. 264); while in Java the ceremony consists in shaving the child's head forty days after birth, before an assembled throng, after which he is dipped in a brook. In Fiji the child's first bath is made the occasion of a feast; in Uvea, at the feast held after the birth of a child, his head is ceremonially sprinkled with water; while in Rotuma the head, face, gums and lips of the newly-born are rubbed with salt water and coco-nut oil (Ploss, *Das Kind*, i. 258). With these ceremonies may be compared the custom of the Chinese, who, when the child is washed at three days old, hold a religious rite in connexion with this act of purification (Doolittle, *Social Life of the Chinese*, New York, 1867, i. 120). The intended effect of such ceremonies is seen in the custom, common in Upper Egypt, of bathing the child at its fortieth day and then pronouncing it 'clean.' All the examples cited show that the first washing of the child is itself made a religious and social rite, or that such a rite, more or less symbolic, occurs soon after birth.

7. *Lustration with name-giving.*—The custom of name-giving may occur at birth, or again at puberty, when the boy is initiated into the totem-clan, the tribe, or the tribal mysteries, at which time, as entering upon a newer or fuller life, he usually receives a new name. Among the Zuñis the initiation and first name-giving occur any time after the child, till then called 'baby,' is four years old. Although there is no use of water, the rite is so like that of Christian baptism in other respects that it may be described. A 'sponsor' breathes on a wand which he extends towards the child's mouth as he receives his name. The initiation is 'mainly done by sponsors, and the boy must personally take the vows as soon as he is old enough' (*BE*, Fifth Report, p. 553). Among most races the name-giving is usually a religio-social ceremony of great importance, since the name is considered among primitive folk to be a part of one's personality (see NAME), and since the ceremony admits the child to the privileges of the clan or tribe. We are here concerned with the ceremony only as it is accompanied with a ritual use of water. First it should be observed that the custom of giving a name at a ceremonial washing which has become 'baptismal' has probably arisen accidentally. We have seen that the newly-born child is washed as a protection against evil, or to make him ceremonially pure. But an equally important part of the child's dawning life was the conferring of a name upon him—the name, as a part of the personality, being a thing of magic or sacred import. What more natural, then, than the combination of two rites, which must frequently have been performed successively, into one which included both? But as a further stage in the evolution of the rite, the purificatory act becomes then more and more symbolic, and, in certain aspects, subsidiary to the name-giving ceremony. Actual washing and name-giving immediately after birth occur among the Kichtak Islanders (Billings, *N. Russia*, 1802, p. 175).

(1) Africa.—The more ceremonial act is well marked among several African tribes. Among the Yoruba Negroes a priest is sent for at a birth, and it is his duty to discover from the deities which ancestor means to dwell in the child, so that he may be called by his name. At the actual name-giving ceremony the child's face is sprinkled with water from a vessel which stands under a sacred tree (Bastian, *Geog. und Eth. Bilder*, Jena, 1873, p. 182). Such ceremonies are general in West Africa. Further south, among the Mfiote people of Loanga, when the child is three or four months old he is sprinkled with water in presence of all the dwellers in the village, and is called by the name of an illustrious ancestor (Ploss, *Das Kind*, i. 259). The same social significance of the religious rite—the reception of the child into the corporate community—is well marked among the tribes of the Gabun. When a birth has taken place, the fact is announced by a public crier, who claims for the child a name and place among the living. Some member of the community then promises for the people that the child will be received, and will have a right to all their privileges and immunities. The people then assemble, and the child is brought out before them. The headman of the family or village sprinkles water upon it, gives it a name, and blesses it—the blessing usually referring to its future material welfare (Nassau, *Fetichism in W. Africa*, N. Y. 1904, p. 212). This social significance of the rite will be met with in other cases. With the Baganda of Central Africa the ceremony forms part of another which tests the legitimacy of the child. Several children of two years old are usually brought together. Each mother throws the fragment of the umbilical cord which she has preserved into a bowl containing a mixture of water, palm-wine, and milk. If it floats, the child is declared legitimate. A name is conferred, and part of the fluid is then poured upon the child's head (J. Roscoe, in *JAI* xxxii. 25). Among the Ova-Herero the rite is most elaborate. The child is carried by the mother from the lying-in house to a sacred fire which is constantly tended by the headman's eldest daughter, who sprinkles child and mother with water as they proceed. Arrived at the place, mother and child are again sprinkled with water by the headman, who then addresses the child's ancestors, and, after various acts, touches its forehead with his own and gives it a name. Each man present does the same, repeat-

ing this name or conferring a new one; thus a child may have several names. After this ceremony the child's forehead is touched with that of a cow, which now becomes his property. He is then considered an Ova-Herero (*Globus*, xxxviii. 364).

(2) **Malay Archipelago.**—Similar rites are found all over the Malay Archipelago, as the following instances will show. In Sumatra, at the name-giving ceremony, the child is carried to the nearest running water by the men; there the father dips it, and gives it a name (Ploss, *op. cit.* i. 258). Among the Papuans the name-giving takes place as soon as the child can run; at the same time it is taken to a spring and there solemnly bathed several times (*ZE*, 1876, p. 185). The rite is made the occasion of a feast among the relatives. With the Negritoes of the Philippines the mouth of the newborn child is filled with salt; after this women hasten with it to the nearest brook, in which they bathe it. The name-giving occurs at the same time (Ploss, *op. cit.* i. 258). The use of salt occurs among several peoples as a ritual act, and is part of the baptismal ceremony of the Roman Church.

(3) Among various **Polynesian** tribes the rite was usually connected with the removal of tabu from the child. The priest asperged the head with a green twig dipped in water, or else immersed the child bodily in the water, accompanying the act with prayers and conjurations in dialogue form, and in an archaic language. With the Maoris, the priest repeated a number of names borne by ancestors till the child sneezed, and the name spoken at that moment was bestowed upon him, along with the act of asperging or dipping him in water. The child was, at the same time, dedicated to the war-god Tu (Tregear, *JAI* xix. 98; Ellis, *Polynesian Researches*, 4 vols., London, 1832–34, i. 259; Taylor, *New Zealand*, London, 1868, p. 184). Sir George Grey, in his *Polynesian Mythology* (p. 32), cites a myth which shows the importance attached to the exact observance of the ritual. When Maui's father baptized him, he hurried over or omitted some of the *karakias*—prayers offered to make him sacred and free from impurities—and for this he afterwards feared that the gods would be angry. This, of course, is akin to the fear shown by savages everywhere regarding the non-observance of tabu rites. At a later period, when the child had grown up to be a youth, he was again sprinkled with water, in order to be admitted to the rank of warrior.

(4) Similar observances are found among the **American Indian tribes**. The Cherokees performed the rite when the child was three days old, and firmly believed that, if it were omitted, the child would certainly die (Whipple, *Report on Indian Tribes*, Washington, 1855, p. 35). The Mayas believed that the ceremonial ablution washed away evil, hindered the influence of evil demons, and gave the child inclinations to good. The priest having appointed a lucky day, a feast was prepared, and the father fasted for three days. Among the customs observed at the rite were cleansing the house to drive out evil, throwing maize and incense on a fire by each child who was to be baptized, striking the child to drive away unclean thoughts. The priest then signed the child and sprinkled him with sacred water; this act was repeated by the father, and the rite concluded with the cutting of a lock of the child's hair by means of a stone knife (Bancroft, *NR*, San Francisco, 1883, i. 664). This most elaborate ceremony had an evidently ethical as well as a religious import; the same is true of the Mexican and Peruvian rites, though we should be careful to observe that the ethical standard of these races was far from being that of our own. Dr. Brinton has pointed out that the purification of the child by water was, with several of the native races of America, styled by a word signifying 'to be born again' (*Myths of the New World*, N. Y. 1868, p. 148). Astonishing as this may appear, it is on a level with the psychology of other savage religious rites, *e.g.* those of initiation to the mysteries, or at the making of sorcerers, when the youth is believed to die and come to life again, receiving a new name, and acting in all respects as if all life was new to him. It is well known that both Aztecs and Peruvians used some kind of baptism; and while the facts may have been exaggerated by contemporary reporters, the Christian priests who witnessed the rites believed firmly that the devil, for his own evil ends, had mimicked the Christian sacrament. We may therefore assume that the description of the rite among these peoples is, on the whole, correct. Sahagun says that the order of baptism among the Aztecs began, 'O child, receive the water of the Lord of the world, which is our life; it is to wash and purify; may these drops remove the sin which was given thee before the creation of the world, since all of us are under its power'; and concluded, 'Now he liveth anew and is born anew, now is he purified and cleansed, now our Mother the Water again bringeth him into the world.' The ceremonial washing was repeated twice, at birth and four days later, and at the later ceremony the child received its name, usually that of some ancestor, who, it was hoped, would watch over it until the time of the second name-giving and baptism in later life (*Hist. de la Nueva España*, lib. vi. cap. 37). The expressions used here concerning the water show that the rite was based on those primitive ideas of the power of water which have already been referred to. The Peruvian rite had much the same purpose. A priest immersed the child in water, at the same time exorcizing evil spirits from it, and bidding them enter the water, which was then buried in the ground. A first name was at the same time conferred upon the child (Réville, *Religions of Mexico and of Peru*, London, 1884, p. 234). Both Aztecs and Peruvians had a considerable sense of moral evil. This is especially noticeable in the Mexican rite, where also it was sought to free the child from evil spirits as well as from inherited sin. With both peoples, it should also be noted, as with the Hindus, ritual ablutions were used to remove the guilt of sins when these were confessed to the priests. Similar rites were common among the wild tribes of Mexico, after the name had been selected at the moment of birth (Bancroft, *op. cit.* i. 661); and they are known to exist among various tribes of S. America, *e.g.* the Yumanas of Brazil, with whom the child is, as it were, made one of the family by receiving an ancestral name, while it is sprinkled at the same time with a decoction of herbs (Martius, *Beiträge zur Ethnographie und Sprachenkunde Amerikas*, 2 vols., Leipz. 1867, i. 485). The Eskimos of North America, who believe that the name is a living thing, call the child after a dead ancestor. Its mouth is damped with water, the name is repeated, and it is believed to enter the child at that moment. Until then, the name having left the body of the dead man, both he and it have been restless, but now both are at peace (Nansen, *Eskimo Life*, Lond. 1893, p. 228).

(5) **Asiatic races** and religions frequently combine name-giving and lustration. Among the Tibetan and Mongolian Buddhists the ceremony takes place from three to ten days after birth. Candles are lit on the house-altars, and over a vessel of water the lama repeats the consecration formulæ. He then immerses the child in the water three times, signs it, and calls it by its

name. He also draws its horoscope by means of certain 'medicines' which he places in the baptismal water, and names the guardian divinity of the child. The ceremony ends with a feast and the offering of a present to the lama (Köppen, *Rel. des Buddha*, Berlin, 1857–59, ii. 320). Frequently, as Smolev relates of the Buriats, the name is changed if it proves unlucky (*L'Anthropologie*, xii. 482). In Japan the name is given to the child when it is a month old, water being at the same time sprinkled upon it (Siebold, *Nippon*, v. 22). The ceremonies, as conducted among the Chinese, are of an elaborate character. On the third day after the birth a Taoist priest comes to the house and sprinkles the rooms with water—a rite known as 'the Purification.' Onions, garlic, celery, and other things with magical virtues are then placed in the water in which the child is to be washed, after which its fortune is told and its mythic guardian tree is ascertained. The next step is for the priest to inquire through 'cup-divination' by what name the child shall be called, and when this has been discovered, he then bestows it on the infant. It should be noted that, to prevent a demon soul taking possession of the child's body in the absence of its own soul, the mother mixes the ash of banana-skin with water, and paints a cross with this mixture on the sleeping child's forehead (*FLJ* v. 222 f.). With the Buddhists of Ceylon and Burma, on the fourteenth day after birth, at an hour fixed by an astrologer, the relatives and friends feast together, the child is named, and its head is washed for the first time. The ceremony is analogous to the Brāhmanic rite of Jātakarman (M. Williams, *Buddhism*, 1889, p. 353).

(6) The Indian and Iranian rites, though scarcely baptismal, are worth noting, especially when they are taken in connexion with the rites of initiation (see § 12) which are their complement. Among the ancient Hindus (and, less completely, in modern times) the following ceremonies were performed. Before the navel-string was cut the Jātakarman rite was performed for male children, and while the sacred formulæ were recited, the child was fed with honey and butter. Ten or twelve days after birth the father performed, or caused to be performed, the Nāmadheya, or rite of naming, giving the child a secret name besides the name for common use, which had to be auspicious if he were a Brāhman, connected with power if a Kṣatriya, with wealth if a Vaiśya, or contemptible if a Sūdra. Later, there were rites in connexion with first leaving the house, making the tonsure, etc. Other writers speak of the child being ceremonially washed, or dipped in the sacred waters of the Ganges or some other river (*Laws of Manu*, ii. 29, 30; Dutt, *Civ. in Ancient India*, London, 1893, i. 262; Zimmer, *Altindisches Leben*, Berlin, 1879, p. 320). Little is known of the birth ceremonies among the ancient Iranians beyond those already described, and the statements sometimes made regarding the use of a kind of baptism may rest on erroneous renderings of passages in the sacred books (see Geiger, *Civ. of E. Iran*, London, 1885, i. 56, and translator's note). Beausobre (*Hist. Manich.*, Amsterdam, 1734–39, lib. ix. cap. 6, sec. 16) says the child was carried to the temple, where the priest plunged it into a vessel of water, and the father gave it a name. Corresponding to the Hindu feeding with honey and butter is perhaps the old custom of giving the newly-born child some haoma-juice and aloes, in order to confer wisdom upon it, as well as to drive off fiends and evil spirits (*Sad Dar*, xxiv.; *Shāyast la-Shāyast*, x. 15–16; and cf. Gomme, *Eth. in Folklore*, London, 1892, p. 129, for the purpose of this ceremonial feeding). Among modern Parsis there are no formalities in connexion with name-giving, the mother conferring a name upon the child (Geiger, i. 57, translator's note), although the *joshi* (astrologer) 'first gives out the names the child can bear according to its affinity to the stars under whose influence it was born' (Karaka, *History of the Parsis*, London, 1884, i. 161–162). With them, the Bareshnum rite (see § 12 (2)) washes away all defilement contracted in the womb.

(7) Among the ancient pagan races of Europe similar customs were also found. The heathen Teutons had a baptismal rite long before Christian influences had reached them. The ceremony took place immediately after birth, the father sprinkling the child, giving it a name, and consecrating it to the household gods. In this way he acknowledged it as his own, and after the rite the child could not be exposed, as it had now become one of the kin. The ceremony was known as *vatni ausa*, 'sprinkling with water' (Grimm, *Teut. Myth.*, London, 1880–83, ii. 592). References to the rite occur in the *Chronicles*. Snorro Sturleson (*Chron.* c. 70) relates that a noble, in the reign of Harold Harfagr, took a newborn child, and, pouring water upon its head, called it Haco. Pope Gregory III. directed the missionary Boniface how to proceed in such cases where this pagan baptism had already been used. Mallet (*North. Antiq.*, London, 1770, i. 335) rightly shows the true nature of such rites when he says they were intended to preserve children 'from the sorceries and evil charms which wicked spirits might employ against them at the moment of their birth.' The Celts also had similar customs; and here the priest is more in evidence, although, as some think, the method of naming and the whole of Druidism were taken over from the non-Celtic races with whom the Celts found themselves in contact. Saga and legend alike give many instances of the Druid bestowing a name on the child from some casual circumstance which had happened at the birth or after, —a method of name-giving common among various savage races. As with the Eskimos, the name was an entity, an actual substance put upon the child by the Druid. Occasionally, also, a baptismal rite is mentioned as performed by the Druid; *e.g.* Conall Cernach was so baptized (Windisch, *Irische Texte*, Leipzig, 1891–97, iii. 392, 423). There is no reason to think with M. D'Arbois de Jubainville (*Rev. Celt.* xix. 90), that there is here only a product of the imagination of the saga-writers, reflecting Christian ideas, since such a rite is so wide-spread in paganism, while (see (8)) some trace of it still remains as a survival on Celtic ground (Rhys and Jones, *The Welsh People*, London, 1900, 66 f.; W. Stokes, *Cóir Anmann* [in Windisch, *Irische Texte*, iii.] sec. 251; and *Academy*, 1896, p. 137). The birth-ritual of the Greeks (among whom ritual purification occupied so large a place) was as follows: The child was at once bathed in water, sometimes mixed with oil or wine. On the fifth or seventh day, a more formal purification took place (the ἀμφιδρόμια), and the child was also carried round the fire. On this day or on the tenth day, on the occasion of a family festival, which was also sacrificial, the father recognized the child, which (as in the Teutonic instance) could not then be exposed, and the name, usually that of a grandparent, was given (see scholium on Aristotle, *Lysistr.* 757). The Romans, on the Dies Lustricus,—the ninth day after birth for boys, the eighth for girls,—conferred a name on the child, which was passed through water, the nurse at the same time touching its lips and forehead with saliva to avert magical and demoniac arts (Macrobius, *Saturnalia*, lib. i. cap. 16).

(8) It is curious to observe how, occasionally, a pre-Christian rite remains as a superstitious observance, even where Christian baptism is common.

A good example of this occurs among the Lapps, who, in heathen times, had a ceremony called *laugo* (see more fully art. BIRTH, Finns and Lapps). This consisted in bathing or sprinkling the child with water in which alder-twigs had been placed, while a name was given to it, and it was placed under the protection of Sarakha, the birth-goddess. At any illness the ceremony was repeated and a new name given. But when Christian baptism was introduced, the old rite was still continued privately, both by way of confirming the Christian rite and continuing the advantages supposed to be given by the heathen ceremony (Pinkerton, *General Collection of . . . Voyages and Travels*, London, 1808–1814, i. 483; Ploss, i. 257, 258). Such a case as this distinctly points to the rationale of ethnic baptismal rites as already set forth, viz. a defence against evil influences as well as a removal of 'uncleanness.' The baptismal ceremony of the pagan Celts already referred to has not altogether been destroyed by the use of the Christian rite; for even now, in remote districts, the following survival is found. After birth, the nurse drops three drops of water on the child's forehead *in Nomine*. A temporary name is given until the real name is conferred in the Christian ceremony. This earlier baptism keeps off fairies (evil influences) and ensures burial in consecrated ground. It is thus a clear survival of an earlier purificatory and protective rite, which at the same time admitted to the tribal religious privileges (Carmichael, *Carmina Gadelica*, 1900, i. 115). The pagan rite also persists with the Lithuanian peoples on the Baltic coast. On the evening before the baptism by the priest, the child is bathed in warm water, while an old woman kills a cock at the place where the child was born (*L'Anthropologie*, v. 713).

8. *Suggested influence of Christian and Jewish rites.*—The possibility of the derivation of some of these ethnic baptismal rites from Jewish or Christian sources should not be overlooked. Dr. Nassau suggests this in the case of the West African ceremonies; nor is it improbable in this and in other cases when we consider the diffusion of belief, ritual, myth, folk-tale, or of art and industrial products outwards from various centres, and their ready acceptance by races at a great distance from such centres. But, on the other hand, similar beliefs everywhere produce similar results, and the universality of the opinions regarding uncleanness, the contagion of evil, and harmful spirits, as well as concerning the power of water, may quite easily have given rise to similar purificatory rites in various regions and religions, without any necessary recourse to imitation of Jewish or Christian rites. To these, name-giving was sometimes attached, here by accident, there by intention. Frequently, too, what makes these heathen rites appear so much to resemble the Christian sacrament is the use of Christian formulæ in describing them by those who have witnessed them and have been struck with the resemblances rather than with the differences. The universality and, in some cases, the antiquity of these rites point to their originality.

9. *Religious and social aspect of the rites.*—Analyzing the various examples of ethnic baptism, we note several points. First, the purificatory washing frequently passes over into a mere symbolic act of sprinkling, a process analogous to the change in the Christian rite from dipping to pouring water over the candidate. Next, the religious aspect of the rite is emphasized by the dedication of the child to the gods (Polynesia, Mexico, etc.); by the solemnity of the act; by its frequent performance by priest or medicine-man (various African tribes, Polynesians, Mexicans, Peruvians, Mayas, Tibetans, Chinese, Hindus, Iranians, and Celts), or by the father as house-priest; by the use of 'medicine' in addition to, or in place of, water; and by the general intention of the rite as already pointed out. Lastly, the social aspect of the rite is emphasized in its public performance, occasionally by the headman of the community; by the reception of the child into the kin; by the feast held on the occasion, which is attended by the relatives; and also by the common custom of naming after an ancestor. (For examples of name-giving by itself, accompanied by a feast attended by relatives, or as making the child a member of the kin, see Hind, *Labrador*, 2 vols., Lond. 1863, i. 286; *JAI* xix. 324 [Torres Straits]; *BE*, Third Report, p. 246 [Omahas, the child's face is marked with the privileged symbolic decoration]; *L'Anthrop.* x. 729 [Borneo]). Thus ethnic baptism, accompanying the act of name-giving, cannot be considered as a casual rite, but must be regarded as one of considerable importance for the religious and social life of the child. The occasional performance of the rite by the mother or by other women of the tribe must have originated through the matriarchate and descent through the mother.

10. *Baptism with blood.*—The aspect of the baptismal rite as a formal admission into the clan or tribe is further seen in those cases where the child or, later, the youth is sprinkled with his father's or kinsman's, or with sacrificial, blood. Among the Caribs the newborn child was sprinkled with blood drawn from the father's shoulder, to give it courage and generosity, and, since the life of the clan is in the blood, to admit it to the circle of the kin (Rochefort, *Iles Antilles*, 1660, p. 550). Among certain Australian tribes at the initiation of youths, it is customary for the older men to cut themselves and let the blood run upon the novice, the object being to strengthen him, or to transfuse the kin-life into him. Especially is this the case where the smearing with blood takes place after the pretended killing and restoration of the candidate, when he also receives a new name (Howitt, pp. 658, 668; Frazer, *Totemism*; and for corresponding uses of blood, Spencer-Gillen[b], p. 596 f.). Among the Alfoers the child is smeared with swine's blood (Bastian, *Die Völker der östlichen Asien*, Jena, 1866–1871, v. 270); and on the Gold Coast, rum (replacing blood) is squirted over him by the father (Ellis, *Tshi-speaking Peoples*, London, 1887, p. 233). The modern Arabs retain the custom from heathen times of washing a child's forehead with the blood of an animal sacrificed to a saint whose favour has caused the child's birth, and whose protection is thus expected to be given to him. There is also some idea of identifying the child with the sacrifice by which he is redeemed (Curtiss, *Prim. Sem. Rel.*, Chicago, 1902, p. 201). In heathen times this rite had greater significance as bringing the child within the stock; he was dedicated to the stock-god in connexion with a sacrifice, the blood of which was daubed on his head. The blood united god and child. The child was also named and its gums rubbed with masticated dates (symbolic food-giving rite, cf. § 7 (6), India, Persia) on the morning after its birth, probably by the priest. All these rites signified reception into the privileges, social and religious, of the kin-group (W. R. Smith, *Kinship in Arabia*, Cambridge, 1903, p. 152 f.).

11. *Use of saliva.*—The same intention of acknowledging kinship, and of bestowing it ceremonially through contact of the child with something belonging to the kinsman, is seen in several rites where the child is rubbed with the saliva of a relative or is spat upon. Actual examples in connexion with the giving of a name are found among the

Mandingos and Bambaras of West Africa, the priest spitting thrice in the child's face (Park, *Interior Districts of Africa*, Edin. 1860, p. 246). Among the Banyoro of Uganda, on the third or fourth day after the child is born, the priest presents it to the ancestral spirits and begs their favour for it, accompanying each special request by spitting on the child's body and pinching it (Sir H. Johnston, *Uganda Protectorate*, Lond. 1902, ii. 587). Muhammad is said to have done the same when he named his grandson Hasan (Ockley, *Saracens*[4], Lond. 1847, p. 351). Persius, in his *Satires* (ii. 31), ridicules the female relative who rubs the baby's forehead with saliva when it receives its name (see § 7 (7) for the Roman custom). The practice survives in the use of spittle in baptism in the early Church and in modern Roman Catholic usage, as well as in folk-custom in Europe. Here the intention is altered, and the purpose is to ward off the evil eye, spells, witches, and fairies. But this, which brings the custom into line with the general powers of water in this direction, is probably derivative. Saliva is in many other instances used to ward off evil, but it probably does so because it is a bond between two or more persons who thus form a strong array against the powers of evil (see Hartland, *LP*, London, 1894-96, ii. 261 f.).

12. *Baptism at initiation.*—These social and religious aspects of the rite are also marked in the ceremonies at initiation to tribal or totem-group privileges, or to sacred mysteries. As an example of those initiatory rites, we may first refer to such a simple form as the sprinkling of girls who have just reached womanhood, as practised among the Basutos (Casalis, p. 267). This form of purification is analogous to the tatuing, scourging, fasting, etc., of other peoples, undergone by the boy or girl on arriving at puberty, as a means of driving out evil (see under these titles). We have noted that baptismal and cognate rites at birth or soon after have the effect of admitting the child into the community or into the religious privileges of the tribe. But sometimes this admission, however it is accomplished, is deferred until the dawn of manhood or womanhood, or a little earlier, or is repeated then, as in savage initiations to the totem clan or to the tribal mysteries (see TOTEM, MYSTERIES). In such cases the same ideas of purification from the infection of evil, sometimes by means of water, or again by sprinkling with or bathing in blood, by circumcision, or by simulated death and re-birth, are found, with the intention of introducing the postulant to a fuller life.

(1) As an example of such ceremonies in the higher religions, the Brāhmanic rites may be referred to. The ceremony of *Upanaya*, or initiation to the privileges of religion, took place when a boy had arrived at years of discretion. The *guru* asked the boy's name, and, taking water, sprinkled his hands with it three times. In modern times the investiture with the threefold sacred thread, which is blessed by a Brāhman, while texts from the sacred books are recited over it and it is sprinkled with holy water, is the chief part of this rite. Before this the boy is not called a Brāhman; but now he becomes 'twice-born' or regenerate, and it is open to him to read the sacred books, and to take part in prayers and in the religious ceremonies (Manu, ii. 36; Dutt, i. 263; M. Williams, *Rel. Thought and Life in India*, London, 1883, p. 358).

(2) This ceremony resembles that of the Parsis, whose sacred books lay strong emphasis upon the uncleanness contracted by the child in the womb of its mother (see § 2). In order to be free from all such defilement, it is necessary for each one at or before the age of 15 to perform the elaborate purificatory ceremonies of the Bareshnum, else at death he will not pass the Chinvat bridge. The rite includes sprinkling with *gomez* and washing with *gomez* and water (for the ceremony see *SBE* i. 122; xviii.). About the same time, and still in view of the pre-natal defilement, the sacred girdle thread is assumed, 'to establish the wearer in the department of Ormazd, and to take him out of the department of Ahriman' (*Sad Dar*, x.). The result of these ceremonies is to make the youth *navazad*, 'newly-born,' a term corresponding to the Brāhmanic 'twice-born,' and to the view taken of such ceremonies elsewhere, while he now becomes a member of the community (West, *Pahlavi Texts*, i. 320, iii. 262; *Shāyast la-Shāyast*, x. 11).

(3) A species of baptismal rite occurred as a formula of admission in separate religious societies or mysteries. Candidates for admission to the Egyptian mysteries of Isis were baptized by the priest, the result being purification and forgiveness of sins. '[Sacerdos] stipatum me religiosa cohorte deducit ad proximas balneas et prius sueto lavacro traditum, præfatus deûm veniam, purissime circumrorans abluit' (Apuleius, *Met.* xi.).

(4) In the ritual of the Orphic mysteries the mystic affirmed ἔριφος ἐς γάλ' ἔπετον, 'a kid I have fallen into milk,' but the significance of the words is uncertain, and they do not seem to point to a rite of immersion in milk. The use of milk in early Christian baptism—the newborn in Christ drinking the food of babes—may suggest a symbolic drinking of milk in the rite (for a discussion of the formula see Miss Harrison, *Proleg. to Greek Rel.*, Cambridge, 1908, p. 596 f.).

(5) But of all such purificatory rites the best known are those of the Greek Eleusinia, in which the initiation was most searching, and no one could be admitted to the celebration of the mysteries who had not undergone it, while to reveal these to the uninitiated was a criminal act. Purification by water was part of the preliminary rites, which were regarded as a kind of new birth. The candidate bathed, and emerged from the bath a new man with a new name. This purification, or κάθαρσις, is constantly referred to by the Greek Fathers, especially Clem. Alex., as a parallel to the Christian rite of baptism both in its nature and in its intended effects of admitting to a higher life, to the 'Greater Mysteries' (*Strom.* v. 71, 72). Whatever view of sin was held in the doctrine of the Mysteries, whether it was highly ethical or simply ceremonial, these purificatory rites freed the candidate from the stain of sin and prepared him for the revelation to come, while he himself was required to be ἀγαθὸς εὐσεβὴς καὶ ἁγνός. By the preliminary ceremonies the candidates became τελεταί, and were admitted to the τελεστήριον and the revelations which awaited them there (Lobeck, *Aglaophamus*, Königsberg, 1829; Foucart, *Recherches sur les mystères d'Eleusis*, Paris, 1895).

(6) Similar purificatory rites entered into the ceremonies of the various Religious Associations which, entering Greece from the east, gained such a hold over the people. The candidate was examined to prove whether he was 'pure, pious, and good,' ἁγνὸς εὐσεβὴς κἀγαθός, and all members who had become impure had to submit to purificatory rites. Such impurities were, however, material rather than moral, and correspond on the whole to those savage tabus which had to be removed by various rites. The eating of pork or garlic, connexion with a woman, contact with a corpse, the defilement of murder, are some of those enumerated on inscriptions or in Greek writers. Purification was of different kinds, according to the society; sometimes it was by means of water thrown on the head, as in savage baptismal rites. Plutarch describes these vigorously as ῥυπαραὶ ἁγνεῖαι, ἀκάθαρτοι καθαρμοί, but all alike had to do with outward

purification alone. Theophrastus and Plutarch (*Char.* 16; *de Super.* 3) give an excellent picture of the man who was careful to perform all such purifications after every defilement, imaginary or real—'Call the old woman who will purify thee by rubbing thee with bran and clay; plunge in the sea and pass the day seated on the ground.' Menander also refers to purifications by means of water drawn from three different sources, and into which salt and lentils had been thrown (*Deisidaimon*, frag. 3). Later, the philosophers explained them by saying they were the image of that purity of the soul which alone was agreeable to the gods (Cicero, *de Leg.* ii. 10); but their nature and intention obviously connect them with primitive purificatory and baptismal rites, and explain the existence of the latter as a preliminary of entrance to the Mysteries.

Of all these associations, the initiatory rites of the worshippers of Sabazios, a Phrygian god, corresponding on the whole to Dionysus, are best known to us from the scorn which Demosthenes poured upon them (*de Corona*, 313). They are an excellent type of such initiatory baptismal rites as form our third class. The period is B.C. 315, and Demosthenes says to Æschines: 'When you became a man, you assisted your mother in the initiations. At night you clothed yourself in a fawn-skin. *You poured on the candidates water from a bowl*, you purified them, you rubbed them with clay and bran; then you made them stand upright after the purification, and say, "I have fled the evil, I have found a better"' (ἔφυγον κακόν, εὗρον ἄμεινον). These rites, which had only the slenderest ethical value, led up to the revealing of the Mysteries and the sacred symbols of the association. The society which worshipped the Thracian goddess Cotytto was ridiculed under the title of βάπται by dramatists like Eupolis and poets like Juvenal, and the title suggests a purification by water similar to that practised by the worshippers of Sabazios (Foucart, *Associations rel. chez les Grecs*, Paris, 1873). The daubing with clay or dirt is a common savage practice at initiations, and doubtless in the Mysteries it was a survival of some earlier primitive rite. In the Mandan mysteries the candidate was covered with clay and then washed (Catlin, *O-Kee-Pa*, London, 1867, p. 21); the same is recorded of the Busk festival of the Cree Indians—the ceremony removing them 'out of the reach of temporal punishment for their past vicious conduct' (Adair, *Hist. of Amer. Ind.*, London, 1875, p. 96 f.); in the Victorian and other Australian rites of initiation, as well as in Fiji, the body was covered with charcoal, mud, and clay, and then washed (Brough Smyth, *Abor. of Vict.*, London, 1878, i. 60; Howitt, *op. cit.* p. 536); in Banks Island the youth is blackened with dirt and soot and then washed (Codrington, *Melanesians*, Oxford, 1891, p. 87); and a similar rite is referred to as occurring in West Africa (W. Reade, *Savage Africa*, London, 1863). Name-giving accompanies most of these ceremonies which introduce the candidate to a new life; the symbolism of removing the dirt is expressive of the passing from an old to a new life.

(7) Mithraism, perhaps the most eclectic of all religious faiths, is frequently accused of borrowing many of its ceremonies from Christianity. The early Fathers, like the Roman Catholic missionaries in the case of the religions of Mexico and Peru, and of Buddhism, did not hesitate to say that Mithraism was the devil's counterfeit of Christianity, as they described its rites with their ready resemblance to Baptism, Confirmation, and Holy Communion. But while there may have been deliberate imitation, the actual rites were already in use both in Persia and Greece, and, as Cumont says, Mithraism was *Parsisme hellénisé*. The initiatory ceremonies were many—by blood, by fire, by fasting; while, as in many savage mysteries, death and resurrection were simulated as typifying the dawn of a better life. The purification by water washed away sin, and was thus a kind of adult baptism, while the later stage of sealing the candidate's forehead as the mark of his initiation to the grade of 'soldier,' was compared by Tertullian to the rite of confirmation (Cumont, *Mysteries of Mithra*, Chicago, 1903, p. 157). We may refer, finally, to a baptism of blood, the Taurobolium, used for purification, whether personally or by proxy, as well as in initiating the candidate to the rites of the Great Mother, which became so popular all over the Roman Empire at the dawn of Christianity. The underlying idea of the Taurobolium (*q.v.*) bears a curious resemblance to the doctrine of regeneration in Christian life. The candidate was seated in a trench underneath an open grating on which a bull was sacrificed. The blood, as it fell through the roof, gushed all over him, and he was then declared to be re-born. Monuments which commemorate this baptismal rite on the part of its grateful recipients, speak of him by whom it was received as 'regenerate,' *renatus in æternum Taurobolio* (Prudentius, *Peristeph.* x. 101 f.; Sainte-Croix, *Mystères du paganisme*, Paris, 1817, i. 95). Whether original or imitated from Christianity, these later classic Mysteries speak of the growing need of a new life and of certitude in matters of faith. These were supplied by Christianity, and, after a long struggle, it gave the deathblow to the pagan Mysteries.

13. *Ethnic rites in folk-custom.*—Finally, reference must be made to the superstitious views entertained by European peasants regarding Christian baptism. These are a direct inheritance from pre-Christian beliefs as to the vulnerability of the newly-born child to attack from evil spirits until certain rites, such as those enumerated above, have been performed. Christian baptism, taking the place of those earlier baptismal rites, has in folk-belief been credited with their efficacy; the beliefs concerning them have been directly transferred to it; and the unanimity as concerns this transference is seen by the similarity of the superstitions among Celts, Scandinavians, Germans, Slavs, and the Latin-speaking races. With the first three groups fairies are feared, and they have taken the place of evil spirits. These have great power over an unbaptized child; hence the utmost precautions are taken to guard it from their power, and to prevent its being stolen away and an ugly changeling left in its place. Baptism, however, is the complete safeguard against these terrors. Among the last two groups it is generally some evil demon or witch whose power over the child is neutralized by baptism; with some of the Slavs and with the Greeks (a survival from classical times) it is the *Lamia*, regarded as a being half-demon, half-witch, who has power over the unbaptized. But even where the fairy belief is prevalent, the witch's power over the unbaptized is also feared. In early mediæval times, witch and wise-woman and midwife were hardly discriminated; all alike were the survival of the priestesses of a goddess of fertility, to whom an occasional sacrifice of a child was made. This custom survived as a vague belief that witches took a toll of unbaptized children on Walpurgis night (Grimm, *op. cit.* iii. 1060–1061; Pearson, *Chances of Death*, London, 1897, ii. *passim*). But in all cases the real power of fairy, demon, or witch over the unbaptized child lay in this, that the child was yet a pagan, and therefore, until it had been received into the Christian fold, was the natural prey of those who were clearly pagan witches, fairies, and demons. This is emphasized

in the fact that the child, till baptized, is in Sicily and Spain called by some name signifying its unregenerate character—Jew, Moor, Turk, Pagan, or (in Greece) Drakos (see Hartland, *Science of Fairy Tales*, London, 1891, p. 100 f.). In Greece, too, it is believed that an unbaptized child may disappear as a snake. This belief in the unbaptized child's being a pagan is further illustrated by the idea, found in various parts of England and in Scotland, that such children, if they die, become fairies, or that their souls wander about restlessly in the air till the day of judgment, as well as in the curious 16th cent. Irish custom of leaving the male child's right arm unchristened so that it might deal a deadlier blow. All these customs denote not only the survival of paganism and its ideas in Christianity, but also the continued struggle between the two forces when the latter had ostensibly triumphed (see a paper by G. L. Gomme, *Folk-Lore*, iii. 17).

Tylor, *Primitive Culture*^{3}, vol. ii., London, 1891; Baring-Gould, *Origin and Development of Religious Belief*, London, 1869–70, i. 397 ff.; MacCulloch, *Comparative Theology*, London, 1902, ch. xii.; Nassau, *Fetichism in West Africa*, 1904, p. 212 f.; Grey, *Polynesian Mythology*, 1855, p. 32; Mallet, *Northern Antiquities*, Eng. tr., London, 1770, i. 335.

J. A. MACCULLOCH.

BAPTISM (New Testament).—The term 'baptism' does not occur in the LXX, either in its more general (*βαπτισμός*) or more special form (*βάπτισμα*). While the verb *βάπτειν*, 'to dip' or 'immerse' (*e.g.* Ex 12^{22}, Lv $4^{6.17}$, Job 9^{31}), occurs there frequently, we find the intensive *βαπτίζειν*—with which alone we are concerned when dealing with baptism—only four times: twice in a literal sense, of bathing (2 K 5^{14}, Jth 12^{7}), once metaphorically (Is 21^{4} *ἡ ἀνομία με βαπτίζει*, cf. Mk $10^{38f.}$, Lk 12^{50}), and once of ritual lustration (Sir 31^{30} [34^{25}] *βαπτιζόμενος ἀπὸ νεκροῦ*).* The earlier and more usual word for such lustration is *λούεσθαι* (Lv $14^{8f.}$ $15^{5ff.}$, cf. Jn 13^{10}, He 10^{22} *λελουσμένοι τὸ σῶμα ὕδατι καθαρῷ*), the middle voice denoting the active participation of the subject of purification, as also in the NT use of *ἀπολούεσθαι* in connexion with baptism (Ac 22^{16}, 1 Co 6^{11}). But with the NT *βαπτίζειν* emerges prominently and without any explanation of its specific sense, viz. thorough washing for religious cleansing, as though this were already fixed by the current usage of later Judaism, of which Sir 31^{30} is itself a significant instance (cf. Lk 11^{38}, Mk 7^{4}). Both forms of the substantive, *βαπτισμός*, *βάπτισμα*, occur, the former in a more general sense (Mk 7^{4}, He 9^{10}, cf. 6^{2} where the specific meaning is included), the latter in the specific sense of 'cleansing rite of initiation' into a new religious status (defined by the context), whether John's or Christ's (Mk 1^{4} ||, Lk 7^{29} 20^{4}, Ac 1^{22} 10^{37} 13^{24} 18^{25} $19^{3f.}$, Ro 6^{4}, Eph 4^{5}, Col 2^{12}, 1 P 3^{21}). Naturally *βάπτισμα* becomes the regular ecclesiastical term for the rite, along with *λουτρόν* ('washing,' later passing into the more concrete sense of 'laver,' *lavacrum*), already found in Sir 31^{30} [34^{25}], cf. Ca 4^{2} $6^{5(6)}$; thus *λουτρὸν τοῦ ὕδατος* (Eph 5^{26}), *λ. παλιγγενεσίας* (Tit 3^{5}).

I. Sources.—In what follows we have to do, not with ritual washings or lustrations generally, but only with that special form of religious washing which admitted to the Christian sphere or community. Accordingly we say nothing about the prevalence, both on Semitic and non-Semitic soil, of such lustrations (like those of the Essenes) as have no bearing on baptism as a public rite of incorporation into a religious fellowship with God and man, and that once for all. In fact we need begin our study no further back than the point at which the term first emerges in the Bible—the baptism of John the Baptist, and what it assumes.

(*a*) *The baptism of John and its associations.*—OT religion rests upon the notion of *a covenant relation* between Jahweh the God of Israel and Israel as a people or religious unit. When the actual state of Israel was in accord with the will of God, as expressed in the Torah unfolding the contents of His covenant, then Israel was 'righteous' and in the enjoyment of 'salvation,' or full well-being as determined by Divine favour. But such a state, conceived as indicated by obvious national prosperity, was felt to have been fully realized only at intervals in the past, and was certainly not Israel's when John the Baptist appeared. For was not the alien in power in the Holy Land? It was felt, also, that only by that supreme intervention of God, as Israel's true King, which was thought of as His Messianic Kingdom,—and beyond which there was no further horizon,—could that betterment or 'redemption of Israel' come for which all true Israelites longed and waited. Yet the best among them, and John in particular, knew that only through a radical change in the nation's religious state, in conduct both public and private, could this deliverance be reached. Messiah would come only to a righteous Israel, fit and ready for God's holy rule in its midst. Hence a general repentance towards God and His covenant, such as the prophets of old had called for, was needed ere the Spirit of the Lord could be 'poured forth' in that fullness which was to mark the Messianic age. John stood forth, then, in the spirit of those prophets, to preach his 'baptism of repentance'—a repentance symbolized by cleansing with water (Jer 4^{14}, Ezk $36^{25ff.}$, Zec 13^{1})—with a view to the near approach of 'the Kingdom of God.' Such a baptism was primarily corporate in idea, relative to salvation as of a holy people—an Israel answering to its idea as in vital covenant with its God. This is the main reason, at least, why Jesus was able to accept John's 'baptism of repentance' without any feeling of sin save in a corporate sense. To Him personally it was but an act of obedience to a Divine ordinance—'a righteousness' (Mt 3^{15}). But as yet salvation, even for Israel, was only a promise conditional upon obedience to Messiah when He should be manifested, and with Him the Kingdom or real Sovereignty of God. Hence John claimed no saving virtue for his baptism, only a certain preparedness when it was the outward sign of an inward penitence; the real gift of a new experience was to come with the higher order of 'baptism' which Messiah Himself would impart. This was not to be with 'water' at all, but with Holy Spirit, *i.e.* a holy inspiration of soul, such as the prophets had foretold (Mk 1^{8}, cf. Mt 3^{11}, Lk 3^{16} 'holy spirit and fire').

(*b*) *The relation of Messiah's baptism to the Forerunner's.*—Of this contrast, however, there was at first no sign in Christ's ministry. While not Himself administering water-baptism, like His forerunner, Jesus permitted His disciples (themselves doubtless baptized by John [cf. Lk $7^{29f.}$, Jn $1^{35ff.}$], and so forward to do for their new Master's preaching what John had done to seal his own) to do so for a time, *i.e.* during the preliminary stage when He was preaching parallel, as it were, with John (Jn $3^{22ff.}$ $4^{1f.}$). During this period Jesus' message was outwardly the same as John's in tenor, viz. 'Repent ye; for the kingdom of heaven is at hand' (Mt 4^{17}, cf. Mk 1^{15}, which is perhaps rather less accurate here). Such a practice, however, seems confined to the early Judæan preaching; we find no trace of it in the later stages, which began with John's imprisonment and Jesus' return to Galilee (Mk 1^{14} ||).

* In 2 K 5^{14} *ἐβαπτίσατο* translates טבל, 'dip,' and in Is 21^{4} *βαπτίζει* paraphrases בעת, 'fall upon, startle.' The Heb. original of Judith and of Sir 31^{30} is no longer extant.

Baptism never appears among the conditions of discipleship (*e.g.* Mt $8^{21f.}$, Lk 9^{59-62}); and this silence can hardly be accidental. We find instead, in final interviews with the inner circle, promise of a Spirit-baptism, to which John had referred as distinctive of Messiah (see Lk 24^{49}, Ac $1^{4f.}$ 11^{16}, Jn 20^{22}, cf. Jn 14-16). But nothing is said as to water-baptism as entering into Messianic baptism (the two are contrasted in Ac 1^{5} 11^{16}), which is referred to in terms recalling His own words about the purely spiritual baptism of suffering (Mk $10^{38f.}$‖). Christ's direct sanction, then, for water-baptism by His followers after His own earthly life (Jn 3^{5} does not apply here) must depend on our view of Mt 28^{19} [Mk 16^{16} not being an original part of Mark's Gospel].

There is no real ground for doubting the authenticity of Mt 28^{19} as part of Mt.'s Gospel in its final form (cf. F. H. Chase in *JThSt* vi. 483 ff.). But this is far from settling its historicity as a word of Jesus Himself. The clause touching baptism as part of the 'discipling' of 'all the nations' might easily arise as merely descriptive and directive of the Church's actual practice in the matter, whenever and wherever this Gospel was composed. For the same reasons it cannot be held to settle the question of the formula originally used (see the careful discussion in Rendtorff, *Die Taufe im Urchristentum*, 1905, p. 39 ff., for both points). Further, had Paul known of such a commission to baptize, he could hardly have said, as he does in 1 Co 1^{17} 'Christ did not commission me to baptise, but to evangelise.' Cf. p. 881^{a}.

(*c*) *Apostolic baptism.*—This, in its conjunction of water-baptism with the Spirit sensibly outpoured, seems due to the Apostles' own initiative, like other primitive Christian rites, the forms of which were adopted instinctively from their Jewish training. Thus when, on the crucial Day of Pentecost, the Messianic Spirit described in Jl $2^{28ff.}$ was felt to be 'poured out' upon Messianic Israel, in fulfilment of Jesus' promise and in ratification of His Messianic dignity (Ac 2^{33-36}), it was most natural that Peter, appealed to for the terms of participation in the manifest Divine presence, should reply: 'Repent, and let each of you get baptized in the name of Jesus Messiah unto remission of your sins, and ye shall receive the free gift of the Holy Spirit,' and so escape the fate of 'this crooked generation'—revealed as such in its treatment of Messiah. This thought connected itself with the closing words of the passage just cited from Joel: 'And it shall be, that whosoever shall invoke the name of the Lord shall be saved,' *i.e.* from wrath in 'the day of the Lord, the great and notable day.' There was a recognized connexion between solemn invocation of the Lord as Protector and the rite of baptism. Possibly this had existed in John's baptism; it certainly did so in that of proselytes, with which the former was perhaps felt to have affinity—an affinity which affronted Pharisees and scribes (Lk 7^{30}). Thus Maimonides (*Issure Biah*, 13) says: 'Israel was admitted into covenant by three things; namely, by circumcision, baptism, and sacrifice. Circumcision was in Egypt. . . . Baptism was in the wilderness before the giving of the Law, for it is said: "Thou shalt sanctify them . . . and let them wash their garments . . ." So, whenever a Gentile desires to enter the Covenant of Israel and place himself under the wings of the Divine Majesty, and take the yoke of the Law upon him, he must be circumcised and baptized, and bring a sacrifice.' This passage bears directly upon the baptism of Gentile Christians; but it casts light also on the genesis of Jewish Christian baptism; for, apart from circumcision, the cases were largely parallel. Sinful Israelites, too, needed to re-enter the covenant in a deeper sense ('the new covenant' of Jer $31^{31ff.}$, Mk 14^{24}‖, 1 Co 11^{25})—on the basis of Messiah's 'sacrifice' for them (Is $53^{4ff.}$, cf. Ac $8^{32ff.}$, He 9-10)—so placing themselves 'under the wings of the Shekinah' for protection (cf. He 6^{1} 'Repentance from dead works and faith fixed upon God,' and Ac 20^{21} 'Repentance towards God and faith towards our Lord Jesus'), and pledging themselves to obedience to the Lord's will, under the yoke of His Law; and in this connexion the 'clean water' of Ezk $36^{25ff.}$ would readily occur to mind (cf. Zec 13^{1}). Here the words of Ananias to Saul are instructive: 'Arise, get thyself baptized (middle voice, as usual), and so wash away from thyself thy sins, invoking his name' (Ac 22^{16}).

How fundamental was this conception of water-baptism as denoting, on the one hand, confession of sins and renunciation of the old, false allegiance they involved, and, on the other, confession of Jesus as Messiah or Lord (as Jahweh was Israel's Lord) and loyalty to the new and true allegiance (cf. Ac 20^{21}), appears from Ro $10^{8ff.}$, in allusion to the act of baptism. In that passage Christians are described as 'those who invoke Jesus as Lord,' Jl 2^{32} being cited in support of the description (cf. Ac $9^{14.\ 21}$). 'With the mouth confession is made unto salvation' (Ro 10^{10}); that is the outward or objective side of the faith in the heart on which 'righteousness' is bestowed, and which expresses itself both in the water of baptism and in the word of the mouth to which Paul here directs attention. The very phrasing of this parallel statement suggests that salvation was at first thought of mainly in its collective aspect (in keeping with OT religion). It was the community's state of true prosperity, in which through confession of faith in baptism—*from* the old sinful state *to* the new, holy, or consecrate one—the justified individual came to participate. Indeed, Judæo-Christians tended always to realize this objective side of admission to the covenant sphere of 'the saints' (cf. Col $1^{13f.}$ 'who rescued us from the sway (ἐξουσία) of darkness, and transferred us into the kingdom of the Son of his love; in whom we have the redemption, the remission of sins') more than the subjective side of the believer's fitness, *qua* believer, for such admission, formally and definitively, in the act and article of baptism, 'sealed' by manifest Holy Spirit power or inspiration. Hence, though Paul's teaching as to baptism starts from the common basis of primitive Judæo-Christian thought, it goes far further in inwardness and psychological analysis; and it is needful to study the two types of representation apart, when we come to consider more closely the significance attaching to the rite and its symbolism.

Baptismal 'laying on of hands' confirms the view of baptism as simply an Apostolic practice derived from Jewish usage. As referred to in He 6^{2}, 'doctrine of baptisms (Christian and Jewish, *e.g.* John's, cf. Jn 3^{25}, Ac $19^{3ff.}$) and of laying on of hands,' it is a piece of Jewish symbolism for which no word of Christ can be cited, adopted to express union between the new believer and the holy community. As such it constituted the psychological moment when the Messianic gift, or Spirit-baptism, was, as a rule, experienced (Ac 8^{17} 19^{6}, yet see $10^{44ff.}$ for 'the gift' before baptism and apart from laying on of hands). There is no evidence that this act was confined to Apostles (the case in Ac $8^{15ff.}$ is exceptional, as the admission through Apostles of a *new class* of believers, the Samaritans); it might be performed by any member of the Spirit-bearing community. This appears not only from Ac $9^{17f.}$ (cf. 8^{38}) but also from 1 Co 1^{14}, where Paul could not so have spoken had he performed this most impressive part of baptism in the case of his Corinthian converts generally. It was an edifying symbol, with no constant or essential relation (save, perhaps, in the minds of the simpler sort) to Spirit-baptism, God's 'seal' of 'ownership' upon His 'heritage' in 'the saints' (Eph $1^{14.\ 18}$, cf. Tit 2^{14}).

2. Significance of baptism.—(*a*) *One, yet various.*—From the first, and in all circles, baptism implied definite identification with Jesus as Messiah or Lord, the head of the Messianic kingdom or the Body, the determinative centre of life for the whole spiritual organism. After 'baptism in the name of the Lord,' a man was regarded as 'in Christ' or 'in the Lord.' Jesus the Christ was Himself the Covenant (Is 49^{8}) for His own, and He,

as Lord, became the very sphere of the religious personality of the baptized, hence fitly called 'Christians.' The metaphor of the marriage bond, used in the OT of the moral union between Jahweh and Israel, is in the NT applied to the relation between Christ and the Church; and baptism was as the marriage rite, openly sealing for the individual this intimate spiritual relation already virtually present in faith, as marriage is in plighted love (Eph 5^{25-32}, cf. 1 Co 6^{17} 'he that is joined unto the Lord is one spirit'). The matter was, however, conceived rather differently in different circles. Jewish Christians viewed baptism mainly on its objective or collective side, through the OT associations of covenant and Messiah, as related to the solidarity of Israel, the chosen people; while Paul thought more of the subjective and personal side, bound up with his profound idea of faith as the bond between the believer and his spiritual Head, 'our life' (Col 3^{4}). But to both baptism was corporate in idea, 'into one body' (1 Co 12^{13}, cf. $10^{1f.}$), while repentance and faith were presupposed in the baptized, by Jewish Christians no less than by Paul. Still the difference of emphasis remains, and shows itself in the figures used, Paul's being the more experimental or psychological. He alone could pen passages like Ro $6^{3ff.}$, Gal 2^{19-21}, implying such spiritual identity with Christ by faith as resulted in his distinctive metaphor of baptism as formally marking transition from death to new life (Ro $6^{1ff.}$, 2 Co 5^{14-17}, cf. 1 P 3^{21} $4^{1f.}$ $1^{2.22f.}$ 2^{2}, which are probably adaptations of Pauline ideas to a less mystical mode of thought).

(*b*) *The psychological side of baptism.*—In all attempts to extract from the NT a connected view of primitive baptismal thought and practice, we must never forget its essentially experimental nature. Really to enter into its meaning, we must enter the very souls of the primitive Christians and share their experiences. In so doing, we get our best aid from analogous fresh Christian beginnings, whether in revivals of religious life, as seen, *e.g.*, in George Fox's *Journal*, or on the more virgin soil of the mission field. While the former analogy warns us against exaggerating the value of the rite, as compared with the Spirit-baptism—the distinctive Christian element (Ac 1^{5}),—the latter saves us from divorcing the inner reality altogether from the outer symbol. Due proportion between the two is preserved by the vital experiences of mission converts, in relation both to previous state and to alien environment. So seen, baptism is the seal by which life-giving faith (as in Abraham's circumcision, Ro $4^{10f.}$) is ratified, and so confirmed through a definitive *act* in which consciousness of separation *from* the sphere of moral deadness, and *unto* that of full moral life, is enhanced and made the more effective for the subsequent 'walk in newness of life.' It is thus truly an 'efficacious seal' for faith, yet only for faith. It completes and makes more vivid the experience of 'regeneration'—both objective, as between the old social world and the new, and subjective, as between two inner states of the soul. So is it 'regenerative washing and Holy Spirit renewal' (Tit 3^{5}) in an experimental, a religiously real sense; it is the final stage in experience of 'salvation' (in principle) from self and 'the world' to God and His Kingdom of Christian fellowship.

(*c*) *Symbol and sacrament.*—It is not a bare symbol, as of something already complete, but a sacrament, *i.e.* a symbol conditioning a present deeper and decisive experience of the Divine grace, already embraced by faith. But all is psychologically conditioned, being thereby raised above the level of the magical or *quasi*-physical conception of sacramental grace, native to paganism, but alien to perfected Hebraism—the religion of revelation and faith.

The recent attempt of the strict 'religious-historical' school in Germany and elsewhere to trace the influence of the magical, non-ethical notion of sacraments, prevalent in the 'syncretist' or mixed religious consciousness of the age, upon the NT writers and their circles, is for the most part mistaken. It minimises the Hebraic basis of primitive Christianity, not only in Palestine, but also outside it. In particular, it fails to read Paul's language sufficiently in relation to his personal experience and essential teaching of faith as the universal coefficient of all spiritual blessing (ἐκ πίστεως εἰς πίστιν, Ro 1^{17}); while it does not distinguish enough between Paul's own belief and the suggestions of terminology used by him in becoming 'to the Greeks a Greek.' In a word, it confuses Paul the missionary with Paul the theologian. The only excuse for this theory as regards baptism lies in false exegesis of a single passage, 1 Co 15^{29}, where Paul in passing seized upon an *arg. ad hom.* from a usage existing among his Christian converts, without meaning to give it his positive sanction (see 11^{34} for minor abuses as left over against his own coming). On the whole subject see Rendtorff, *Die Taufe im Urchristentum*, pp. 16–37.

3. **The baptismal formula.**—To sum up: as baptism had in Judaism come to mean *purificatory consecration*, with a twofold reference—from an old state and to a new—, so was it in Christianity. It denoted (1) the convert's attitude towards his past sinful state with its 'dead works,' or towards God as sinned against (He 6^{1}, Ac 20^{21})—repentance; and (2) his new attitude, faith towards God (He 6^{1}) or Christ (Ac 20^{21}), as the ground of hope for the future, of which Christ's resurrection was the guarantee or type (cf. 1 P 3^{21}). The practical effect was remission of past sins or justification, the token of which was the gift of the Holy Spirit, in sensible experience, as marking Divine acceptance of the new subject of Messiah's Kingdom.

All this is present in germ in Peter's words (Ac 2^{38-40}), 'Repent, and let each of you get himself baptized in the name of Jesus Christ unto remission of sins,' etc. The phrase 'in the name' now calls for closer consideration. It is clear from contemporary usage (*e.g.* Ac 1^{15}, Rev 3^{4} 11^{13}) that 'name' was an ancient synonym for 'person.' Parallels, moreover, from the colloquial Greek of the time show that the expression 'in the name' was itself widely used, especially in solemn or formal connexions, and with special reference to proprietorship. Thus a payment is made εἰς ὄνομά τινος, 'into so-and-so's account'; a petition is presented εἰς τὸ τοῦ βασιλέως ὄνομα, 'to the king's person'; and, still more significantly in our connexion, soldiers swear 'in the king's name' (Rendtorff, *op. cit.* p. 9 f.). Such solemn invocation of the king's name in token of personal allegiance answers exactly to one marked aspect of baptism (cf. 2 Ti $2^{3f.}$), which was further developed in Christian thought after the Apostolic Age, in the notion of the *militia Christi* (see Harnack's monograph so entitled). Only, in primitive Christian baptism, 'the name,' possibly as sum of the Divine perfections (cf. Ps 115^{1} where 'mercy' and 'truth' are elements of God's name), was invoked, in the first instance, for mercy and protection. In any case the formula 'in the name of,' with or without associations from OT usage (=לְשֵׁם rather than בְּ, so Dalman), came to have in all Christian circles—though with different shades of thought, as between typical Jews and others—the pregnant sense of identification between the baptized and Him in whose name baptism took place. The one became thereby the personal property of the other, as part of the people of peculiar possession (λαὸς εἰς περιποίησιν with other synonyms in 1 P $2^{9f.}$; περιούσιος, Tit 2^{14}) and the 'bondservant' of the true Lord (see 2 Co 4^{5}), as all NT writers agree in putting it. That this was the essence of the matter appears from the very title, 'the Lord Jesus,' usual among Gentile converts, just as 'the Christ' or 'Christ Jesus' was in more Jewish circles. 'The Lord Jesus' seems, indeed, to grow out of the central phrase of the baptismal con-

fession, viz., 'Jesus is Lord.' Reading 1 Co 12[3] 'No man can say Κύριος Ἰησοῦς save in Holy Spirit' (cf. 1[2b] 6[11]), in the light of Ro 10[9] 'If thou confess "the utterance" (ῥῆμα, more fully τὸ ῥ. τῆς πίστεως ὃ κηρύσσομεν) in thy mouth (phrases just quoted from Dt 30[14], cf. Eph 5[26] 'cleansing it with the washing of water ἐν ῥήματι'), to wit, Κύριος Ἰησοῦς (cf. Ph 2[11]), and believe in thy heart that God raised him from out the dead (in proof of Messianic Lordship, Ro 1[4]), thou shalt be saved'—one perceives this clearly. 'Christ Jesus,' as distinct from 'Jesus Christ' (=Jesus the Christ), perhaps arose from a similar Jewish Christian form of confession, 'Jesus is Christ (Messiah)'—whence 'one Lord, one faith, one baptism' (Eph 4[5]). But did the formula used in baptism, εἰς τὸ ὄνομα τοῦ Κυρίου Ἰησοῦ (Ac 8[16] 19[5], 1 Co 6[11]), embrace more than this distinctive element, having, for instance, such explicit reference to the unity of God as must have been the heart of proselyte baptism? This is suggested not only by 1 Co 8[6] (ἡμῖν εἷς θεός, ὁ πατήρ, ἐξ οὗ τὰ πάντα καὶ ἡμεῖς εἰς αὐτόν, καὶ εἷς Κύριος, Ἰησοῦς Χριστός, δι' οὗ τὰ πάντα καὶ ἡμεῖς δι' αὐτοῦ, cf. Eph 4[5f.]), but also by the constant dual form of Apostolic salutations and benedictions (cf. Rev 14[1] 'having his name and the name of his Father written on their foreheads'). The use of a Trinitarian formula of any sort is not similarly suggested, in spite of 2 Co 13[14]. Ac 19[2f. 5] tells against any view that explicit reference to the Holy Spirit occurred in baptism: so also 1 Co 6[11]. It is probable, then, that God the Creator was in some way confessed in baptism (cf. Hermas, *Mand.* i. 1: 'First of all yield belief [πίστευσον] that God is one,' etc.); yet exactly in what form remains an open question, one which depends upon another, to which attention has recently been directed (see A. Seeberg, *Der Katechismus der Urchristenheit*, 1903).

4. **Procedure in baptism.**—Here light is cast forward by Jewish proselyte baptism and backward by sub-Apostolic Christian usage, both of which make it unlikely that baptism was a bare rite of confessing a sacred Name, followed by immersion in water. This were too formal and abstract a conception to suit the intense moral reality of the religious crisis in question. The rite itself had a concrete setting of ethical exhortation and pledging, to which missionary experience of all ages affords parallels. According to this conception, the confession Κύριος Ἰησοῦς was probably the answer of practical allegiance, given by the candidate for baptism, to instruction in the rudiments of Christian piety, on lines best indicated by the 'Two Ways' of Life and Death, preserved in expanded form in the first half of the *Didache*. Thus the confession in baptism ('in the name of the Lord,' *Did.* 9[5], and perhaps originally in 7[1] likewise) pledged the baptized to the Christian obedience (cf. Justin, *Apol.* 6, βιοῦν οὕτως δύνασθαι ὑπισχνῶνται)—a pledge which may have been weekly renewed in early Christian worship, at least in certain regions. For in Bithynia-Pontus, according to Pliny's *Epistle* of *c.* 112 A.D., the Christians used in their Lord's Day morning meeting to 'pledge themselves with a solemn oath (*sacramento se obstringere*) not to the commission of any crime, but to avoidance of theft, robbery, adultery, breach of faith, denial of deposit when called upon.' This is most suggestive, not only as to the genius of primitive Christian worship as profoundly ethical in tone, but also as to the obligations undertaken in baptism, no doubt in very solemn and explicit fashion, including the witness of those best able to answer (sponsors) for the candidate's good faith and fitness. Thus the *Didache*, after giving the 'Two Ways,' continues: 'All these things first pronounce and so baptize,' a practice probably referred to in Mt 28[19] 'Disciple all nations, baptizing them into the name . . ., teaching (διδάσκοντες) them to observe all the precepts I have given to you' (ὅσα ἐνετειλάμην=a διδαχὴ Κυρίου consisting of ἐντολαί). There is, moreover, hardly a doubt that the bulk of the 'Two Ways,' as found in the *Didache* and related documents, goes back to the Jewish ethical instruction, on a monotheistic basis, given to proselytes among the Diaspora, under the figure of a Way of Life and a Way of Death set before men, found in the OT, but also among Greek moralists. To this, in its earliest Christian form, reference may be found even in the Pauline letters (*e.g.* 2 Th 2[15] παραδόσεις ἃς ἐδιδάχθητε, Ro 16[17] τοὺς . . . παρὰ τὴν διδαχὴν ἣν ὑμεῖς ἐμάθετε ποιοῦντας, where διχοστασίαι and σκάνδαλα are in view, 1 Co 4[17] τὰς ὁδούς μου τὰς ἐν Χριστῷ [Ἰησοῦ], καθὼς πανταχοῦ ἐν πάσῃ ἐκκλησίᾳ διδάσκω). Most significant is the language of Ro 6[15ff.], where occurs the notion of prior 'bond-service' to sin 'unto death,' followed by obedience to a τύπος διδαχῆς issuing in new 'bond-service' to 'righteousness,' or to God and Christ, and the end 'life eternal.' So again 2 Ti 2[19] 'Let every one that nameth the name of the Lord forthwith abstain from iniquity,' which is the human side of the seal placed on God's firm 'foundation' of piety among men. All this suggests such a formal renunciation of the service of Sin as the Way of Death, and a placing of oneself under obedience to Christ as Lord, as emerges after the sub-Apostolic age in the *abrenuntiatio diaboli* and the ranging of oneself with Christ (Χριστῷ συντάσσομαι; cf. the Two Ways of 'teaching and dominion' in Barn. 18). This is perhaps the key to the description of baptism in 1 P 3[21], 'not a putting away of filth in the sphere of the flesh (as by water), but the appeal of a good conscience directed to God,' as pledged to give part and lot in Christ's resurrection to those who yield 'obedience of faith' to God in Him. This appeal may refer specially to the invocation of the Name by the candidate, in answer to the baptizer's interrogation as to his acceptance *ex animo* of the true allegiance; whereupon the latter sealed the reception of the candidate into the holy community by invoking 'the fair name' of the Lord Jesus upon his head (see Ja 2[7], cf. Rev 7[3] 9[4] 14[1] 22[4]).

This human sealing by sacred formula was normally countersigned, as it were, on the Divine part by the Messianic gift of a holy enthusiasm ('Holy Spirit' as a phenomenon in the human spirit), the spirit of adoption, through the deeper and abiding consciousness of which the Christian henceforth utters his soul in the word 'Father' (Ro 8[15], the Aramaic exclamation, *Abba*, even passing into use in Gentile circles; cf. *Maranatha*, 'Lord come,' 1 Co 16[22], *Did.* 10). Such Divine 'confirming' of the baptized 'into Christ' as a member of His Body, by an 'unction,' a sealing, a giving of the Spirit in 'earnest' (ἀρραβών, 2 Co 1[21f.]), took place in experience at baptism. But as it issued from a more secret working of the Spirit, as author of the faith which qualified for baptism, so it gave place to an abiding 'fellowship of the Holy Spirit' (2 Co 13[14]) in which Christians shared and by which they were 'led' in their 'walk' (Ro 8[9. 14. 16], Gal 5[16-26]). The effect of all this was such a spiritually real, or mystical, union with Christ that in baptism Paul regarded Christ as 'put on' like a robe (Gal 3[27]), or again as entering the believer as his 'life' (Ro 8[10], Gal 2[20]).

Immersion and affusion.—Immersion seems to have been the practice of the Apostolic age, in continuity with Jewish proselyte baptism; and it is implied in Paul's language, especially in his figure of baptism as spiritual burial and resurrection (Ro 6[3-5], Col 2[12]). But the form was not held

essential; and when conditions presented practical difficulties—whether local, climatic, or due to physical weakness—it came to be modified (cf. *Did.* 7). The most usual form, of which we have evidence from the 2nd cent. onwards, as regards adults, was that of standing semi-immersed in water, up to knees or waist, combined with threefold pouring over the head (trine affusion).

5. **Adult and infant baptism.**—So far we have been dealing with adult baptism only. It alone occupies attention in the NT, as it does mainly in missionary literature to-day. But this by no means exhausts the facts of the case, as we may learn from the analogy of Jewish missions and their baptism of proselytes. The idea that a parent should enter a religion or covenant-relation with God as an individual merely, *i.e.* by himself as distinct from his immediate family, would never occur to the ancients, least of all to a Jew. There were no 'individuals' in our sharp modern sense of the term. All were seen as members of larger units, of which the family was the chief in the time of Christ, when the clan and nation were no longer so overshadowing as in earlier days. The *paterfamilias* included legally and in social ethics the members of his household. Any change in his religious status *ipso facto* affected them. Hence to any one familiar with the modes of antique thought, no proof in any given case is needed that children from their birth were regarded as sharing their parents' religious status, objectively or socially considered: the *onus probandi* falls entirely on those who, under the influence of certain modern modes of thought, would maintain the contrary. Now, not only is there no evidence in the NT read historically, *i.e.* with due regard to the interest of the writer and his original readers in what is said or implied, that children stood to the Christian community in a different relation from that belonging to them in ancient religions generally, and especially in Judaism; but what we know of the Jewish practice touching proselytes—which usually regulated practice among Gentile Christians—makes it most improbable that Christianity here introduced any novel usage. Had such been the case, it must have been emphasized, and could hardly have failed to leave its mark somewhere on the NT. Those who were to be reared 'in the Lord's training and admonition,' and to obey their parents 'in the Lord' (*i.e.* for Christian motives, Eph 6^{1-4}), must have been viewed as already Christians in status or objectively—ranking, according to their stage of development, with 'those of the household of faith' and not with 'those without.' This went back to infancy; for Paul regards the child of faith, even on one side only, as thereby 'holy,' *i.e.* objectively in covenant with God (1 Co 7^{14}). No subjective difference between such children and others is implied any more than in Judaism itself. But as in Judaism the child's objective status was conditioned by circumcision, it is natural to suppose that in the Church it was so by baptism (cf. Col $2^{11f.}$). The only possible doubt is whether the child was regarded as baptized vicariously in its parent, or whether the rite was administered to it also. For the latter alternative we have not only the analogy of circumcision in Israel, but also proselyte baptism. Thus we read that 'a little proselyte' is baptized without his intelligent consent, on the principle that one may act for another to his advantage, though not to his disadvantage, apart from his knowledge and consent. Where the proselyte father brings the children, their solidarity with him as their head or authority is enough to warrant baptism; where only the mother, baptism is conferred 'on the authority of a *beth din*' or Jewish court of law (see C. Taylor, *Two Lectures on the Teaching of the Twelve Apostles*, p. 54 ff.). In either case its effect is only provisional; the child is brought within the covenant so far as social or family life goes, but his personal or subjective relation to the covenant waits on the development of reflective will, just as with the circumcision of a born Jew, who, as a rule, became a 'son of the Law,' and was publicly accepted into the visible membership of the Synagogue, only on his thirteenth birthday. Thereupon a father became free from the burden of his son's sins, *i.e.* full responsibility for his religious condition. Here is the obvious analogue of Christian 'Confirmation,' or joining the Church on personal confession. The regeneration effected by baptism in the case of an adult proselyte was meant in an objective sense, to define his new relations with his holy environment; for 'a newly made proselyte is like a new-born child' (Bab. *Yebamoth* 48*b*). So was it with children both of proselytes and of Christians. Their status of holiness or salvation was objective, and from the nature of the case only objective. It related to the holy or saving environment amid which they stood, first by birth and then by formal covenant seal—ratifying their birthright of good (cf. Ac 2^{39}) so far as human act and recognition could, *i.e.* corporately and as basis for 'training and admonition' in the Lord. The subjective reality waited for the emergence of the subjective conditions, as with child proselytes, who, on coming to years of discretion (like young Jews), were free to repudiate the objective relations in which they found themselves, without thereby being classed and treated as 'apostates.' That is, all was provisional as regards subjective reality. There was no idea of infant baptismal 'regeneration' in the later and still prevalent sense, a confusion of thought responsible for anti-pædobaptist reaction—away from primitive practice, to some extent also away from the primitive attitude to the 'children of the covenant.' Such confusion between the objective and subjective senses of holiness and salvation (united in the case of adult subjects of baptism) arose naturally enough once terms were transferred from Jewish to Gentile soil, with its less ethical and more physical notions of religious grace. Here the influence of the 'Mysteries' played a considerable part in working a change, which was unconscious for the most part in the minds of Gentile converts. See, further, § 2 of next article.

LITERATURE.—For Jewish baptisms, especially that of proselytes: Schürer, *HJP* II. ii. 319 ff. (later German ed. 1898, iii. 129 ff.); see also separate article BAPTISM (Jewish), and *JE*, art. 'Baptism.' For Jewish practice in relation to Christian: C. Taylor, *Two Lectures on the Teaching of the Twelve Apostles*, 1886, p. 54 ff.; J. H. Hanauer, *Baptism, Jewish and Christian*, 1906. For the Greek and other ethnic analogies: F. M. Rendtorff, *Die Taufe im Urchristentum*, Leipzig, 1905, where full references will be found to recent German discussions of the *Religionsgeschichtliche* type and a sober criticism of the same (cf. preceding art.). Fuller reff. in Hastings' *DB*, art. 'Baptism,' to which may be added E. Vaucher, *Le Baptême*, Paris, 1894.

J. V. BARTLET.

BAPTISM (Early Christian).—1. The origin of Christian baptism.—There are three possible views. The traditional belief is that baptism was instituted by Christ in His parting address to His disciples; but in recent times it has been maintained either that baptism was a custom used by the Jews, practised by John the Baptist, and inherited by the early Christians, or that it was adopted by the Christians from the Græco-Roman world. Of these three the choice must probably be made between the first and the second—the third is not by itself adequate to explain the facts, though it is probable that the general ideas of the Græco-Roman world did much to determine and modify the exact form which early Christian baptism took. The evidence consists so largely of the

exegesis and criticism of the same passages that the case for and against each view cannot be put separately. The main Scripture passages concerned are Mt 28^{19}, Mk 16^{16}, and Jn 3^{5}, of which Mt 28^{19} is the central piece of evidence for the traditional view of the institution of baptism by Christ. It describes the Risen Lord as saying to His disciples, 'Go ye and make disciples of all the nations, baptizing them into the name of the Father, the Son, and the Holy Spirit.' If it were undisputed, this would, of course, be decisive, but its trustworthiness is impugned on the grounds of textual criticism, literary criticism, and historical criticism.

(*a*) *Textual criticism.*—In all extant MSS and versions the text is found in the traditional form, *πορευθέντες οὖν μαθητεύσατε πάντα τὰ ἔθνη, βαπτίζοντες αὐτοὺς εἰς τὸ ὄνομα τοῦ πατρὸς καὶ τοῦ υἱοῦ καὶ τοῦ ἁγίου πνεύματος, διδάσκοντες αὐτοὺς τηρεῖν πάντα ὅσα ἐνετειλάμην ὑμῖν*, though it must be remembered that the best manuscripts both of the African Old Latin and of the Old Syriac versions are defective at this point. The evidence of Patristic quotations is not so clear. It was formerly thought to be as unanimous as that of the MSS and Versions, but F. C. Conybeare (*ZNTW*, 1901, p. 275 ff.) has shown that this is not true, at least in the case of Eusebius of Cæsarea.

The facts are in summary that Eusebius quotes Mt 28^{19} twenty-one times, either omitting everything between *ἔθνη* and *διδάσκοντες* or in the form *πορευθέντες μαθητεύσατε πάντα τὰ ἔθνη ἐν τῷ ὀνόματί μου, διδάσκοντες, κ.τ.λ.*, the latter form being the more frequent. He also quotes it four times in the ordinary text; but it is significant that these four quotations are all in the later writings of Eusebius [once in the Syriac Theophany, iv. 8 (Lee's tr. p. 223), once in *contra Marcellum*, p. 8 C, once in the *de Ecclesiastica Theologia*, v. p. 174*a*, and once in the letter of Eusebius to the Church at Cæsarea quoted by Socrates, *HE* i. 8. 38; it should be noted that there is reason to think that the Syriac translator is giving, not the text of Eusebius, but the version to which he was accustomed (cf. Burkitt, *Evangelion da-Mepharreshe*, ii. 171), and that the authorship of the *contra Marcellum* and the *de Ecclesiastica Theologia* is doubtful (cf. Conybeare, *ZNTW*, 1905, p. 250 ff., and a reply by Gerhard Loeschcke, *ib.* 1906, p. 69 ff.)]. At first sight this evidence seems to prove that Eusebius, in his earlier writings at all events, used MSS of the Gospels which omitted the command to baptize in Mt 28^{19}, but Riggenbach ('Die trinitarische Taufbefehl,' *Beiträge zur Forderung christl. Theol.* 1903) and Chase (*JThSt*, 1905, p. 481 ff.) have argued that his method of quotation is due to the influence of the *arcani disciplina*. This suggestion does not seem to bear examination, for the quotations in Eusebius are not found in works intended for unbelievers or for catechumens. The most reasonable view seems to be that Conybeare has shown that the quotations in Eusebius point to a text which omitted the baptismal formula, though it is still open to question whether Eusebius knew also the traditional form. It is naturally important to ask whether there is any other evidence for the 'Eusebian' type of text. Conybeare thinks that he can see traces of it in Justin Martyr, *Dial.* xxxix. 258, and liii. 272, and in Hermas, *Simil.* ix. 17. 4; but none of these passages is convincing, and perhaps more striking than any of them is the passage in which Justin gives a description of the regeneration of Christian converts in connexion with baptism (*Apol.* i. 61). Here he quotes a saying of Christ ('Except ye be born again ye shall not enter into the kingdom of heaven') as a proof of the necessity of regeneration, but falls back upon the use of Isaiah and Apostolic tradition to justify the practice of baptism and the use of the trine formula. This certainly suggests that Justin did not know the traditional text of Mt 28^{19}.

Whether the 'Eusebian' text, if its existence be granted, has any real claim to be regarded as a serious rival to the traditional form, is a wholly different question. The answer depends on the view taken of the general problem of textual criticism. If a high value be attached to the existing MSS of the NT, the traditional text, though no longer unassailed, must be accepted. But if it be thought (as many critics think) that no MSS represent more than comparatively late recensions of the text, it is necessary to set against the mass of manuscript evidence the influence of baptismal practice. It seems easier to believe that the traditional text was brought about by this influence working on the 'Eusebian' text, than that the latter arose out of the former in spite of it.

(*b*) *Literary criticism.*—The objection raised to Mt 28^{19} by literary criticism is that it can be shown by a comparison with the other Gospels to be no part of the earliest tradition. The greater part of Mt 28 rests on a source almost or quite identical with our Mark, which is generally recognized as the oldest and best account of the life of Christ; it is possible, though perhaps improbable, that the writer was acquainted with the lost conclusion of Mark, but the method in which Matthew treats his sources is such that it is impossible to be certain that any one sentence (such as 28^{19}) was found in it. The other accounts of the parting words of our Lord differ so much, that it is improbable that they may be traced to any common documentary source. Still it is possible that they represent a common tradition which reported our Lord's parting words, and they may be examined in order to see if they suggest that those parting words contained any command to baptize, whether in the trine name or in the name of the Lord.

The accounts which we possess are Mt 28^{16-20}, Mk 16^{15-18}, Lk 24^{44-49}, and perhaps Jn 20^{21-23}. Of these Mk 16^{15-18} is generally considered to be a patchwork composition based on Matthew and Luke. If this be so, it affords evidence that at the time when it was written baptism was connected with the preaching of the gospel. It does not support the trine formula, but rather the 'Eusebian' text (cf. *ἐν τῷ ὀνόματί μου* in 16^{17}), and it is as easy to think that the reference to baptism was derived from contemporary usage as from Mt 28^{19}. Lk 24^{47} is more closely allied with the Eusebian than with the traditional text, and both this passage and Jn 20^{21-23} suggest that the earliest form of tradition as to the Lord's parting words to the disciples said nothing about baptism. It may be argued that the idea of repentance and forgiveness of sin was for early Christianity so closely connected with that of baptism that one implies the other. But this is not the point. It is probable that baptism and the preaching of the gospel went hand in hand from the beginning. The question is whether this was due to their direct association in the 'parting words' of the Lord, or to other causes. The evidence of Mt 28^{19}, if the traditional text be sound, points to the former alternative; but the Third and Fourth Gospels suggest that the earliest tradition knew only of a command to preach the gospel of repentance for the forgiveness of sins. In the case of the Third Gospel this argument is especially strong. Either Luke knew of the commission to baptize (whether in the trine name or not) and omitted it, or he did not know it. It seems impossible to find any reason why he should have omitted it. At first sight this argument holds equally good for the Fourth Gospel, but it is not nearly so strong, as the writer has not unreasonably been thought to show a tendency to omit the material side of the sacramental rites of early Christianity, because of a tendency to over-emphasize its importance. Hence he omits the institution of the Eucharist. So that his omission to connect baptism with the forgiveness of sins in Jn 20^{23} is not so strong an argument as is the similar omission by Luke.

On the whole, then, the evidence of literary criticism is against the historical character of the traditional text of Mt 28^{19}.

(*c*) *Historical criticism.*—The objection made to the authenticity of Mt 28^{19} from the standpoint of historical criticism is that the references to baptism in the Acts point to the earliest form as baptism 'in the name of the Lord.' Thus it is not, like the previous objections, directed against the command as a whole, but against the formula used in it.

Christian baptism, when connected with the mention of a formula, is alluded to four times in the Acts (2^{38} 8^{16} 10^{48} 19^{5}), and the formula is never that of Mt 28^{19}, but is twice *ἐν τῷ ὀνόματι Ἰησοῦ Χριστοῦ* (2^{38} 10^{48}) and twice *εἰς τὸ ὄνομα τοῦ κυρίου Ἰησοῦ* (8^{16} 19^{5}). That this was the usual formula of Christian baptism is supported by the evidence of the Pauline Epistles, which speak of being baptized only *εἰς Χριστόν* (Gal 3^{27}) or *εἰς Χριστὸν Ἰησοῦν* (Ro 6^{3}). Is it possible to reconcile these facts with the belief that Christ commanded the disciples to baptize in the trine name? The obvious explanation of the silence of the NT on the trine name, and the use of another formula in Acts and Paul, is that this other formula was the earlier, and that the trine formula is a later addition. It would require very strong arguments to controvert this presumption, and none seems to exist (a statement of curious attempts, ancient and modern, is given in 'Baptism' in Hastings' *DB*, vol. i., by Dr. A. Plummer).

The cumulative evidence of these three lines of criticism is thus distinctly against the view that Mt 28^{19} represents the *ipsissima verba* of Christ in

instituting Christian baptism. If this be so, it is plain that neither Mk 16^{16} nor Jn 3^{5} can prove the institution. Mk 16^{16} has been incidentally dealt with; Jn 3^{5} is more difficult. Doubts have been cast on the text of this verse, so far as the reference to water is concerned, but for the present it is enough to point out that, even if the reference to baptism be undisputed, it does not follow that it implies the institution of baptism by Christ; it rather suggests a practice which He found existing and accepted. It is also necessary to remember that in the present position of the criticism of the Fourth Gospel no one can confidently build on historical statements which are found only in that document.

The case against the indirect evidence in support of the traditional view is less convincing. The position in defence of that view is that, even if the evidence in Acts be admitted to prove that baptism in the trine name was not instituted by Christ, it shows that from the beginning it was unquestioningly practised by all Christians, and it is urged that this would not be so if it had not been instituted by Christ. Against this it is alleged that the last conclusion is unwarranted, and that some of the evidence in the Epistles, properly regarded, tells against rather than for the traditional view. The crucial passage is 1 Co 1^{14-17}:

εὐχαριστῶ ὅτι οὐδένα ὑμῶν ἐβάπτισα εἰ μὴ Κρίσπον καὶ Γάϊον ἵνα μή τις εἴπῃ ὅτι εἰς τὸ ἐμὸν ὄνομα ἐβαπτίσθητε. ἐβάπτισα δὲ καὶ τὸν Στεφανᾶ οἶκον· λοιπὸν οὐκ οἶδα εἴ τινα ἄλλον ἐβάπτισα. οὐ γὰρ ἀπέστειλέν με Χριστὸς βαπτίζειν ἀλλ' εὐαγγελίζεσθαι.

It is urged with great force that Paul could not possibly have written this if Christ had given the definite command to baptize, related in Mt 28^{19}. It is possible to argue that Paul is speaking of himself, not of the other disciples; but this introduces a limitation into the commission to baptize which cannot be supported, and is also contrary to the constant claim of Paul that he has the Apostolic commission as fully as any of the other apostles.

Thus, so far as the negative side of the argument is concerned, the opponents of the traditional view have decidedly the better case. The weak spot in their position is when they attempt to give any positive explanation of the origin of Christian baptism. The suggestion is that baptism was an already existing custom which the Church took over from the beginning. But if so, from what source did it take it? The answer is that that side of baptism which is concerned with cleansing from sin is found in Græco-Roman and Jewish as well as in Christian baptism, and was a feature of John's baptism, in which also it had an eschatological significance. It was, in fact, part of the common stock of ideas of the 1st century.

Similarly, the use of the 'name' in baptism is only part of the complex of doctrine connected with the use of names as a means of employing the power which belonged to the original owner of the name. This also was common to Jew and Gentile alike. It is therefore plain that, on what may be termed the negative side of baptism, *i.e.* the side which is especially connected with purification, and so far as the use of the 'name' is concerned, there is no reason to quarrel with the view that Christian baptism is an adaptation of customs and ideas which were common to the whole world in the time of Christ. There is nothing in them so strange as to force us to suppose that they were due to the special institution of Christ. The more difficult side of the question is concerned with the relation of baptism to the gift of the Spirit. The baptism of John did not claim to give the Spirit, nor did Jewish baptism. It is also not quite possible to prove the existence of exactly the same thing in the Mysteries, though they did undoubtedly present cognate ideas, especially that of regeneration. This is therefore the strongest point of the argument for either a specifically Christian or a specifically Græco-Roman origin for baptism. The Pauline Epistles are the earliest evidence for a connexion between baptism and the gift of the Spirit. If this view was not known to the Jews, St. Paul must have received it from the original disciples (who again received it from Christ), or have adopted it from the general stock of Græco-Roman ideas. Yet the *prima facie* strength of this argument must be qualified by the following considerations:

(1) In the first place, it may be thought with much reason that Christ spoke of the Spirit, and compared it, as the ground of Christian life, with baptism, which was the ground of discipleship to John the Baptist. If so, a natural confusion of thought would be made stronger by the fact that the beginning of the life in the Spirit did, in fact, often coincide with the water-baptism which marked the initiation of the Christian. That it was coincidence and not identity would not be observed until later, but that it was observed can be seen in the Acts.

(2) In the second place, there seems no reason to doubt the tradition in the Gospels that John the Baptist himself referred to a baptism in the Spirit. Such a reference seems to go back to the use of a passage in the OT which lies behind his baptism, viz. Ezk 36^{25-27}. In $36^{25f.}$ we read: 'I will sprinkle clean water upon you and ye shall be clean (baptism). . . . A new heart will I put within you (μετάνοια [?]).' This clearly is the background of John's preaching; but it leads up to the next verse: 'And I will put my spirit within you.' It does not therefore seem too much to say that the teaching by John the Baptist of a water-baptism of repentance for the remission of sins, to the mind of any Jew familiar with the OT, seemed to fulfil this passage, and so inevitably suggested that the gift of the Spirit, which fulfilled the second half and was found in the Christian Church, was to be looked for also in baptism.

(3) Moreover, our real knowledge of popular Jewish theology and religious observances in the time of Christ is small. It is true that the official Rabbinical religion had no sacramental washings or baptisms, and probably did not give any such interpretation to the baptism of proselytes; but the Essenes probably went further in this direction, attaching a sacramental meaning to their baptisms; and it is possible that this view was common among the people outside the official classes. If so, this may have been an important factor in the genesis of Christian baptism (see Bousset, *Die Religion des Judentums*, pp. 230 and 529 ff.).

These arguments cannot be said to prove that Christ did not institute baptism, but they may fairly be said to show that the existence of Christian baptism is most intelligible on the supposition that it was a Jewish custom which the Christians took over, modifying it by the natural adoption of the 'name,' and by an equally natural connexion with the gift of the Spirit. Moreover, there is certainly no satisfactory positive evidence that Christ did institute baptism. It is therefore more probable that the origin of Christian baptism is the adoption and adaptation of a Jewish custom than that it was directly and specially instituted by Christ. This is also far more probable than that it was first borrowed by St. Paul from the Græco-Roman world. At the same time, baptism was certainly one of the elements in Christianity which was most likely to obtain a favourable reception from the Roman world, and this may have led to the emphasis which was laid upon it, and to the rapid development of the doctrine connected with it.

2. Baptism in the NT.—i. *DOCTRINE OF BAPTISM.*—(1) IN THE PAULINE EPISTLES.—There are four main ways in which baptism is regarded in the Pauline Epistles.

(*a*) *Union with Christ.*—In Ro $6^{3f.}$ the immersion in and the rising out of the water are regarded as a union with the death and resurrection of Christ. 'Are ye ignorant that all we who were baptized into Christ Jesus were baptized into his death? We were buried with him through baptism into death: that like as Christ was raised from the dead through the glory of the Father, so we also might walk in newness of life.' Baptism is thus the beginning of a new life of union with the risen Christ. The same idea is found in Gal 3^{27} 'As many of you as were baptized into Christ did put on Christ,' and in Col 2^{12} '. . . buried with him

in baptism, wherein ye were also raised with him . . .' In the light of these passages it is difficult to doubt that St. Paul regarded baptism as more than symbolical; it was an act which really brought about the result ascribed to it, and not merely an acted description of that result, which was actually caused by something else.

(*b*) *The gift of the Spirit.*—In 1 Co 12^{13} the baptized are regarded as members of Christ's body, inspired by the same Divine spirit: 'For as the body is one, and hath many members, and all the members of the body, being many, are one body; so also is Christ. For in one Spirit were we all baptized into one body . . .' At first sight this seems an idea which is difficult to reconcile with the former; but the difference is probably quite superficial. To St. Paul the Christ of spiritual experience and the Spirit were almost if not quite identical. This may be seen in Ro 8^{9-17} and 2 Co 3^{17}.

(*c*) *Cleansing from sin.*—In 1 Co 6^{11}, where baptism is not mentioned but certainly implied, it is represented as a cleansing effected through the name of the Lord and through the Divine spirit: 'Ye were washed, ye were sanctified, ye were justified in the name of the Lord Jesus Christ and in the Spirit of our God.' This view is complementary to the others, and describes some of the results which follow from them. The importance of this passage is that it explains that baptism can produce these effects because it works 'in the name,' and so links up baptism with the view, prevalent at the time in almost every circle, that the pronunciation of the name of any one could, if properly used, enable the user to enjoy the benefit of the attributes attached to the original owner of the name (see also art. NAME).

Thus the Pauline doctrine of baptism is that on the positive side it gives the Christian union with Christ, which may also be described as inspiration with the Holy Spirit, while on the negative side it cleanses from sin. This it accomplishes by the power of the name of the Lord Jesus Christ, and by the sacramental effect of the water, according to the well-known idea that results could be reached in the unseen spiritual world by the performance of analogous acts in the visible material world. Baptism is regarded as really giving these results, and not merely as a sign that they have been, or can be, obtained in some other way.

(*d*) *Vicarious baptism.*—It would also seem from 1 Co 15^{29} that St. Paul recognized the practice of vicarious baptism for the dead. It is impossible that 'Else what shall they do who are baptized for the dead? If the dead are not raised at all, why then are they baptized for them?' can refer to anything except vicarious baptism.

(2) IN THE PAULINE EPISTLES OF DOUBTFUL AUTHENTICITY.—Under this heading it is perhaps wisest to deal with the evidence of Eph $5^{26f.}$, Tit 3^{5-7}.

In Ephesians the cleansing efficacy of the water is emphasized, and is connected with the 'word' ('having cleansed it by the washing of water with the word'). This emphasis is somewhat stronger than anything in the unquestioned Epistles, but it is practically implied in 1 Co 6^{11}, in which passage also the 'name' may correspond to the 'word' (ῥῆμα) of Ephesians. In Titus the union with Christ's risen life is regarded as a new birth; 'according to his mercy he saved us through the washing of regeneration and renewing of the Holy Spirit.' The phrase 'regeneration' is strange to the Pauline vocabulary, but the idea which it conveys is involved in Ro 8^{14} 'For as many as are led by the Spirit of God, these are sons of God,' when taken in connexion with the view that the Spirit was given in baptism (cf. also Gal $3^{26f.}$, where the idea of sonship to God and baptism are closely connected).

(3) IN 1 PETER.—The only place in the Catholic Epistles which explicitly speaks of baptism is 1 P 3^{21} '. . . which (*i.e.* water) in the antitype doth now save you, namely baptism, not a putting away of the filth of the flesh, but a "question" of a good conscience toward God. . . .' Here the doctrine of the 'real' efficacy of baptism is clearly asserted; but there is a protest against too material an emphasis on the water, to counteract which mention is made of a *συνειδήσεως ἀγαθῆς ἐπερώτημα*. It is not quite certain what this phrase means. It is improbable that it refers to prayer to God, for *ἐπερωτῶ* is never used in this sense, or of inquiry after God, for this would require *ἐπερώτησις*, and the best interpretation seems to be that it is a reference to the question directed to a convert at his baptism (see C. Bigg, '1 Peter' in *The Intern. Crit. Comment.* p. 165). In this 'a good conscience' probably defines the content of the demand made on the candidate—it was of a moral rather than a doctrinal nature. The writer also goes on to explain that the water of baptism receives this power 'through the resurrection of Jesus Christ, who is on the right hand of God, having gone into heaven, angels and authorities and powers being made subject unto him.' This seems to be an explanation why the name of the Lord was so potent in baptism: He had triumphed over death, and regained life, and those who used His name were able to use His power to do the same. It is true that no actual statement is made in 1 Peter that baptism was in the name of the Lord, but no one is likely to dispute that this was the case.

(4) IN THE SYNOPTIC GOSPELS.—Christian baptism is mentioned only in Mt 28^{19} and Mk 16^{16}. The former passage ('Go ye into all the world and make disciples of all the nations, baptizing them into the name of the Father, the Son, and the Holy Spirit') claims the direct institution of baptism by Christ, but its authenticity is open to doubt (see § I).

Here it is only necessary to ask, What is the meaning of the formula translated 'in the name of'? The question is whether *εἰς τὸ ὄνομα* means the same as *ἐν τῷ ὀνόματι*. The probability seems to be that the two phrases are, in the late Greek of the NT, identical. It is now common knowledge that *εἰς* and *ἐν* were interchangeable in late Greek, and the Latin and Syriac translators of Mt 28^{19} clearly took this view, which is convincingly defended by J. Armitage Robinson in *JThSt* vii. (Jan. 1906) in answer to an article by F. H. Chase in *JThSt* vi. (July 1905). The meaning of the writer of the Gospel (or of the redactor who added the clause relating to baptism) was that Christians had the power of baptizing in the name communicated to them by the Lord who had gained the power (*ἐξουσία*) over everything in heaven and earth. The idea is parallel with that in 1 P $3^{21f.}$.

In Mk 16^{16} ('He that believes and is baptized shall be saved') baptism is regarded as a necessary means to salvation, but no further details are given.

(5) IN THE ACTS.—The references to baptism in the Acts are doctrinally important in connexion with the formula used, and with the relation between baptism and the gift of the Spirit. The former point is sufficiently discussed in § I. The latter may best be formulated thus: (*a*) There is in the Acts a series of passages in which baptism seems to be clearly identified with the gift of the Spirit; (*b*) there is a second series in which it is clearly distinguished from this gift; and (*c*) there is a third series which either does not allude to the point, or may be interpreted equally well on either hypothesis. This third series can, of course, be disregarded (such passages are Ac 8^{36-39} 16^{15} 16^{33} 18^{8} 22^{16}); but an attempt must be made either to interpret the two others in such a way as to remove the apparent contradiction, or to see in the difference between them an indication of different sources.

(*a*) The passages which seem to identify baptism with the gift of the Spirit are Ac 1^{5} 2^{38} 11^{16} and 19^{2-6}. In 1^{5} ('John indeed baptized with water; but ye shall be baptized with the Holy Spirit not many days hence') a contrast is apparently drawn between John's baptism and Christian baptism, the latter being regarded as baptism with the Holy Spirit; but as the narrative goes on to describe the fulfilment of this promise on the day of Pentecost, in which there is no suggestion of baptism

in the ordinary literal sense, it is probable that the word 'baptize' in 1^{5} is used metaphorically, and not with reference to ordinary Christian baptism. This interpretation is supported by Ac 11^{16}, where the words of 1^{5} are quoted by St. Peter in connexion with the episode of Cornelius, for here the gift of the Spirit is conferred without baptism in water, and baptism in water is given to those who have already received the Spirit. In Ac 2^{38} St. Peter says: 'Repent and be baptized . . . and ye shall receive the gift of the Holy Spirit.' This certainly seems to identify the gift of the Spirit with baptism, but it is not decisive. The context is that the promise made in Ac 1^{5} has just been fulfilled, and St. Peter says, 'Be baptized and you also shall receive the same gift.' The *prima facie* suggestion that this means: 'You shall receive it through baptism,' is discounted by the fact that this was not the way in which the disciples had received it, and it is significant that we are not told that those who were baptized did receive the Spirit, but merely that they were added to the Church. Thus it is possible that the meaning of the passage really is that baptism was the means of entry into the Church, to the members of which the Spirit would ultimately be given. Similarly ambiguous is Ac 19^{2-6}. Here we have the case of certain Ephesians who had become Christians, but had been baptized not with Christian baptism, but with the baptism of John. St. Paul said to them: 'Did ye receive the Holy Spirit when ye believed? And they said unto him, Nay, we did not so much as hear whether the Holy Spirit was given. And he said, Into what then were ye baptized? And they said, Into John's baptism. And Paul said, John baptized with the baptism of repentance, saying unto the people that they should believe on him which should come after him, that is, on Jesus. And when they heard this, they were baptized into the name of the Lord Jesus. And when Paul had laid his hands upon them, the Holy Spirit came on them.' The *prima facie* interpretation certainly connects the gift of the Spirit with baptism; not so much because the Spirit was actually given, as because of St. Paul's second question. It is, however, possible that his surprised question was due, not to the non-reception of the Spirit, but to their ignorance; his first question supports this view, for it seems to contemplate the possibility of Christian belief and baptism without the gift of the Spirit. If so, the writer may have intended to connect the gift of the Spirit with the laying on of hands rather than with baptism. Thus in each case the *prima facie* connexion of baptism with the gift of the Spirit is indecisive: a different interpretation is possible, and which of the two should be followed must depend on the evidence of the other series of passages.

(*b*) The passages which distinguish baptism from the gift of the Spirit are Ac $8^{12ff.}$ and $10^{47f.}$ The former is the incident of the first Samaritan converts. When Peter and John came to Samaria, they prayed for the converts 'that they might receive the Holy Spirit, for as yet he was fallen upon none of them, only they had been baptized into the name of the Lord Jesus. Then laid they their hands on them, and they received the Holy Spirit.' Here it is plain that the gift of the Spirit was separate from baptism, and there is no suggestion that the baptism was imperfect; the 'name of the Lord Jesus' is the usual formula in Acts for Christian baptism. In $10^{47f.}$ the matter is less simple. The narrative relates that, while St. Peter was speaking, the Holy Spirit fell on Cornelius and his company. 'Then answered Peter, Can any man forbid water that these should not be baptized, which have received the Holy Ghost as well as we? And he commanded them to be baptized in the name of Jesus Christ.' Obviously in this case the gift of the Spirit was not dependent on baptism, but it appears true that the case of Cornelius was regarded as an exception. The general rule was that baptism came first, and the gift of the Spirit afterwards. The implication is that the two were separate even in normal cases, but this is not definitely stated.

If an attempt be made to bring these data together, and so establish the doctrine of baptism held by the writer of the Acts, the starting-point must be Ac $8^{12ff.}$ as the most definite of all the passages. It shows that (*a*) baptism was the regular and general initiation to membership in the Church; (*b*) the Spirit was not conferred in baptism, but given after it, and was specially connected with the laying on of hands by the Apostles. This explains Ac $19^{2ff.}$, in which the situation partly resembles that in Ac $8^{12ff.}$. The Ephesians, like the Samaritans, were, at least in some sense, Christians, but had not received the Spirit. The difference between the two incidents is that the Ephesians, unlike the Samaritans, had received imperfect baptism. Therefore St. Paul did not merely 'lay hands' on the Ephesians, as the Apostles did on the Samaritans, but first had them baptized. The gift of the Spirit was, however, due to the laying on of hands, and not to the baptism. In this way the two classes of passages can be so interpreted that they all fall into place in one system of doctrine, and there is no need to postulate a variety of sources in the Acts with different views on baptism.

A difficulty, however, arises out of the relation of Acts to the Pauline Epistles. Which is the truer or earlier presentment of early Christian thought—that which closely connects baptism and the gift of the Spirit, as the Epistles do, or that which separates them, as the Acts does? The followers of van Manen would probably say that Acts represents an earlier stratum of thought, that early Christian baptism was like John's—only for the remission of sin—and that the idea of the gift of the Spirit in this connexion was a late ecclesiastical figment due to external influences, which has left traces in the Epistles. But this is probably an inadequate view. The fact is that the Acts distinguishes where the Epistles do not, and so is probably the later document. St. Paul simply connects baptism with the gift of the Spirit; he makes no fine distinctions. St. Luke, while constantly bringing the two together, is apparently anxious to maintain that the gift of the Spirit is not the direct result of baptism, but is more closely bound up with the laying on of hands by the Apostles.

(6) IN THE EPISTLE TO THE HEBREWS.—In He 6^{4-6} and in $10^{22.23}$ the references to baptism are probable but not explicit. In the latter passage the writer says:

'Let us draw near with a true heart in fulness of faith, having our hearts sprinkled from an evil conscience, and our body washed with pure water: let us hold fast the confession of our hope that it waver not.'

It is almost certain that this is an indication that the writer regarded baptism as the necessary beginning of Christian life; but, like the writer of 1 Peter, he connects the spiritual cleansing with a good conscience (though he expresses it negatively and 1 Peter positively); and in the last sentence it is probably possible to see a reference to the baptismal profession of faith represented in 1 Peter by ἐπερώτημα. In the former passage he says:

'For as touching those who were once enlightened and tasted of the heavenly gift, and were made partakers of the Holy Spirit, and tasted the good word of God, and the powers of the age to come, and fell away, it is impossible to renew them again unto repentance.'

Here the reference to baptism is rendered probable by the fact that φωτισμός afterwards became a technical term for baptism. It is, however, necessary to point out one qualification to the view that 'enlightenment' means baptism.

In the immediately preceding verses the writer says: 'Therefore let us cease to speak of the first principles of Christ, and press on unto perfection; not laying again a foundation of repentance from dead works and of faith towards God, of the teaching (*v.l.* namely, the teaching) of baptisms and laying on of hands, and of resurrection from the dead, and eternal judgment' (He $6^{1.2}$). Here he regards baptism as one of the foundations of Christian life, but he joins to it the laying on of hands. Now it seems probable that St. Luke connected the gift of the Spirit with the laying on of hands rather than with baptism itself (see § a, i. (5)), whereas St. Paul connected it with the latter. Therefore it is impossible to say precisely what the writer of Hebrews regarded as the effect of baptism, and what as the effect of the laying on of hands. It is possible that enlightenment and tasting of the heavenly gift may be intended to be especially connected with baptism, and the gift of the Spirit with the laying on of hands; but in the absence of further evidence certainty is impossible, and perhaps the writer was not concerned with this question. His interest lay rather in the question of sin after baptism; from passages such as 2^{1-4} 3^{12}–4^{11} 6^{4-12} and 10^{19-31}, it is clear that he regarded a relapse into sin as unforgivable, and it is probable that 6^{6} ought to be regarded as implying the existence of a school of thought which maintained the possibility of a second baptism in case of relapse.

(7) IN THE JOHANNINE WRITINGS.—These books give little information on the subject of baptism. In Jn 3^{22} it is stated that Jesus baptized, but the text is open to suspicion in view of Jn 4^{2} which denies that He did so: 'Jesus himself used not to baptize, but his disciples.' In any case there is no reference to the doctrine of baptism. In Jn 3^{5} in the received text there is a clear reference to baptism, which is described as regeneration by

water and the Spirit. It may, however, fairly be questioned whether the words 'water and' are really original in the text. They are without connexion with the context, and seem to have been unknown to Justin Martyr. If they be omitted, the reference to baptism is only indirect; in view of such passages as Tit 3^{5-7} it can scarcely be doubted that there is some connexion, but it would seem to be rather of the nature of a significant silence as to the material element, which amounts to a protest against the emphasis laid on it in other circles. Even if the words be retained, it remains true that the emphasis in the passage is entirely on the Spirit and not the water. This characteristic treatment of baptism is exactly parallel with that of the Eucharist, the institution of which is not mentioned, but the doctrine of which is fully expounded on the spiritual side.

In the Johannine Epistles there is no definite allusion to baptism; there are many references to the gift of the Holy Spirit, but there is no proof that the writer connected it with baptism, though in the light of the information of other documents it is extremely probable that this is the meaning in 1 Jn 2^{20-27} of the reference to an 'anointing from above'—it is the gift of the Spirit bestowed in (or at least connected with) baptism. Perhaps more important, though even less explicit, is $5^{16f.}$ 'If any man see his brother sinning a sin not unto death, he shall ask, and God will give him life for them that sin not unto death. There is sin unto death: not concerning this do I say that he should make request. All unrighteousness is sin, and there is sin not unto death.' This passage is intelligible only in light of the discussion as to the possibility of forgiveness for sin after baptism. The writer tries to solve the difficulty by introducing a distinction between mortal and venial sin.

Summary of doctrine of baptism in NT.—As a summary of these results from a study of the NT, certain lines of development of doctrine which begin to manifest themselves may be pointed out. The earliest writings, the Pauline Epistles, regard baptism as a cleansing from sin and as the means whereby Christians join the life of Christ—which in Pauline thought is almost (and probably quite) identical with the gift of the Spirit. There is, however, no attempt to explain its working except that it was 'in the name of,' and so endued with the power of, the Lord Jesus Christ, who had been raised from the dead. In later documents the development of more than one line of thought may be traced. In the Pauline Epistles of doubtful authenticity emphasis is laid on the cleansing from sin given by the water of baptism, and the idea (already implied by the other Epistles) of regeneration is formulated. This development was rather in the direction of a magical conception of baptism. Against this we find traces of protest. (*a*) The writer of the Acts would seem to represent a school of thought which associated the gift of the Spirit with the laying on of the hands of the Apostles rather than with baptism itself. (*b*) In 1 Peter and perhaps in Hebrews emphasis is laid on a confession of faith by the baptized person, probably of a moral rather than a theological nature. It is possible that this is a protest against a magical view of 'the name' in baptism. (*c*) The writer of the Fourth Gospel is anxious to emphasize the importance of the gift of the Spirit rather than that of the water; obviously this is closely related to the line of thought represented by Acts; and if 1 Peter represents a protest against a magical view of 'the name,' these documents represent a protest against a magical view of the water. (*d*) A different line of development is testified to by the Epistle to the Hebrews and 1 John. As soon as baptism was regarded as the forgiveness of sin,—that is, from the beginning,—the question of sin after baptism must have arisen. Hebrews bears witness to, and protests against, a tendency to allow a repetition of baptism. The writer regards sin after baptism as beyond forgiveness. The writer of 1 John, on the other hand, bears witness to the fact that this teaching was already found to be too severe, and begins the distinction, so important for the later Church, between mortal and venial sin.

ii. *METHOD OF BAPTISM.*—On this point we have hardly any information in the NT. The language of Ro $6^{1ff.}$ is thought to point to immersion, and it is said that this is confirmed by the descriptions in the Gospels of the baptism of Christ; but these arguments cannot be pressed. It is still less safe to argue from the etymological meaning of *βαπτίζω* as a frequentative of *βάπτω*; for the meaning of words depends ultimately on use, not on etymology, and *βαπτίζω* means by use 'to wash ceremonially' (cf. Lk 11^{38} 'he wondered that he had not washed [*ἐβαπτίσθη*] before dinner'). Here partial ablution is certainly intended; and it must remain doubtful whether immersion was ever actually practised, though St. Paul's language certainly points to the view that it was regarded as an ideal. The formula used was 'in the name of the Lord Jesus Christ' or some synonymous phrase; there is no evidence for the use of the trine name. There was no doubt from the beginning a confession of faith by the convert, but the only probable reference to this as a formal part of the act of baptism is 1 P 3^{21} [the text of Ac 8^{37} in the AV is certainly late].

There is no indication of the baptism of children, and no suggestion that baptizing was the privilege of a class; but it would seem from 1 Co 1 that St. Paul delegated the office of baptizing to some one else, and Blass argues that this is implied by Ac 10^{48} 'And he (St. Peter) commanded them to be baptized in the name of Jesus Christ.' The suggestion is that he did not actually baptize them himself.

3. **Baptism in the 1st and 2nd centuries.**—i. *IN ORTHODOX CIRCLES.*—(1) BARNABAS.—The writer of Barnabas is interested in baptism only so far as it concerns his main thesis that the promises in the OT refer to the Christians and not to the Jews. In ch. 11 he illustrates this thesis from baptism. He argues that Is $16^{1f.}$ $45^{2ff.}$ $33^{16ff.}$, Ps 1^{3-6} are all prophecies which find a fulfilment in Christian baptism. It is only incidentally in the last paragraph (§ 11) that he gives any description of baptism: *καταβαίνομεν εἰς τὸ ὕδωρ γέμοντες ἁμαρτιῶν καὶ ῥύπου, καὶ ἀναβαίνομεν καρποφοροῦντες ἐν τῇ καρδίᾳ τὸν φόβον καὶ τὴν ἐλπίδα εἰς τὸν Ἰησοῦν ἐν τῷ πνεύματι ἔχοντες.* This seems to imply immersion, but otherwise throws no light on baptismal practice. Doctrinally it shows that the writer regarded baptism as a 'real' cleansing from sin *opere operato*. It is possible that he regarded it as conferring the gift of the Spirit, and that this is the meaning of the phrase *ἐν τῷ πνεύματι*; but obviously this exegesis is open to doubt. Finally, the phrase *εἰς τὸν Ἰησοῦν* may be a reference to the baptismal formula, but the text is uncertain.

(2) I CLEMENT.—There is no reference to baptism in this document.

(3) IGNATIUS.—Nothing in the genuine epistles of Ignatius throws any light on the doctrine of baptism, but in accordance with his general emphasis on episcopal supremacy he insists that baptism may not be performed 'without the bishop'—*οὐκ ἐξὸν ἐστιν χωρὶς τοῦ ἐπισκόπου . . . βαπτίζειν* (*Smyrn.* viii. 2)—which probably means without the permission of, rather than without the presence of, the bishop.

(4) HERMAS.—The *Shepherd* of Hermas gives little information as to the practice of baptism, but manifests a considerable interest in the doctrine. The passages which are important are *Vis.* iii. 3, iii. 7, *Mand.* iv. 3, *Sim.* ix. 16. The foundation, he says, is a belief in the necessity and efficacy of baptism. In *Vis.* iii. 2 the Church is represented as a tower built over water, and in iii. 3 it is explained that this is because *ἡ ζωὴ ὑμῶν*

διὰ ὕδατος ἐσώθη καὶ σωθήσεται. This must mean that baptism is the foundation of the Christian life, and the next sentence may be a reference to the baptismal formula: *τεθεμελίωται δὲ ὁ πύργος τῷ ῥήματι τοῦ παντοκράτορος καὶ ἐνδόξου ὀνόματος.* This is rendered probable by the fact that in *Sim.* ix. the condition of entry is described as the 'name of the Son of God.' It is also clear that baptism was regarded as really effecting an essential change in Christians; and from the emphasis which is laid upon it, it would seem that this was regarded as primarily due to 'the name'; but the water is also mentioned. The most important passage is *Sim.* ix. 16. 3 f.:

πρὶν γάρ, φησί, φορέσαι τὸν ἄνθρωπον τὸ ὄνομα τοῦ υἱοῦ τοῦ θεοῦ νεκρός ἐστιν· ὅταν δὲ λάβῃ τὴν σφραγῖδα, ἀποτίθεται τὴν νέκρωσιν καὶ ἀναλαμβάνει τὴν ζωήν. ἡ σφραγὶς οὖν τὸ ὕδωρ ἐστίν· εἰς τὸ ὕδωρ οὖν καταβαίνουσι νεκροὶ καὶ ἀναβαίνουσι ζῶντες.

But this strongly defined doctrine naturally called for development on various points.

(*a*) There was the danger of a purely magical and unethical view of baptism. To counteract this, in *Sim.* ix. great emphasis is laid on the insufficiency of 'the name' if it be not accompanied by the Christian virtues. These are represented as twelve virgins, and the explanation given of them in *Sim.* ix. 13. 2 is that they are *ἅγια πνεύματα.* Without being endued with them no one can enter the kingdom of God—*ἐὰν γὰρ τὸ ὄνομα μόνον λάβῃς, τὸ δὲ ἔνδυμα παρὰ τούτων μὴ λάβῃς, οὐδὲν ὠφελήσῃ· αὗται γὰρ αἱ παρθένοι δυνάμεις εἰσὶ τοῦ υἱοῦ τοῦ θεοῦ. ἐὰν τὸ ὄνομα φορῇς, τὴν δὲ δύναμιν μὴ φορῇς αὐτοῦ, εἰς μάτην ἔσῃ τὸ ὄνομα αὐτοῦ φορῶν.*

(*b*) A natural result of the emphasis laid on the insufficiency of baptism without virtue was a proportionately increased emphasis on the question as to sin after baptism which (cf. § a i. (6)) seems to be discussed in Hebrews and to be implied in 1 John. The distinction between various sins which appears in 1 John is unknown, and the position adopted in Hebrews, though substantially confirmed, is in some degree relaxed. This question is dealt with in *Mand.* iv. 3. Hermas asks the Shepherd *ἤκουσα, φημί, κύριε, παρά τινων διδασκάλων ὅτι ἑτέρα μετάνοια οὐκ ἔστιν εἰ μὴ ἐκείνη, ὅτε εἰς ὕδωρ κατέβημεν καὶ ἐλάβομεν ἄφεσιν ἁμαρτιῶν τῶν προτέρων* (considering that Hermas is a Roman document, and that the earliest witness to Hebrews is the earlier Roman document I Clement, it is not impossible that this is a reference to Hebrews 6^{4-6}) and the answer is *καλῶς ἤκουσας, οὕτω γὰρ ἔχει, ἔδει γὰρ τὸν εἰληφότα ἄφεσιν ἁμαρτιῶν μηκέτι ἁμαρτάνειν, ἀλλ' ἐν ἁγνείᾳ κατοικεῖν.* This is simply a re-affirmation of the doctrine of Hebrews, but a relaxation is then introduced. God has instituted *μετάνοιαν*, and has appointed the Shepherd as the angel to watch over it; but this may be used only once—*μετὰ τὴν κλῆσιν ἐκείνην τὴν μεγάλην καὶ σεμνὴν ἐάν τις ἐκπειρασθεὶς ὑπὸ τοῦ διαβόλου ἁμάρτῃ μίαν μετάνοιαν ἔχει.* One of the main objects of the Shepherd seems to have been the emphasizing of *μετάνοια*, which is clearly (cf. esp. the *Similitudes*) regarded in a concrete way which approached the later ecclesiastical use, and is half-way to meaning 'penance.'

(*c*) Another result in practice of the assertion of the high standard of Christian life, and the danger of relapse after baptism, was a tendency to postpone baptism. Against this Hermas protests in *Vis.* iii. 7, where those who shrink from baptism for this reason are compared with the stones which he saw in *Vis.* iii. 2: *πίπτοντας ἐγγὺς ὑδάτων καὶ μὴ δυναμένους κυλισθῆναι καὶ ἐλθεῖν εἰς τὸ ὕδωρ.*

(*d*) In the sphere of doctrine a natural consequence of the stress laid on the necessity of baptism was inquiry into the ultimate fate of the righteous unbaptized dead. Hermas settled this inquiry by ascribing to the apostles the function of baptizing in Hades (cf. esp. *Sim.* ix. 16. 5 and 6: *οἱ ἀπόστολοι καὶ οἱ διδάσκαλοι οἱ κηρύξαντες τὸ ὄνομα τοῦ υἱοῦ τοῦ θεοῦ, κοιμηθέντες ἐν δυνάμει καὶ πίστει τοῦ υἱοῦ τοῦ θεοῦ ἐκήρυξαν καὶ τοῖς προκεκοιμημένοις, καὶ αὐτοὶ ἔδωκαν αὐτοῖς τὴν σφραγῖδα τοῦ κηρύγματος. . . . ἐν δικαιοσύνῃ γὰρ ἐκοιμήθησαν καὶ ἐν μεγάλῃ ἁγνείᾳ· μόνον δὲ τὴν σφραγῖδα ταύτην οὐκ εἶχον*).

(5) THE DIDACHE.—In this document there is no information as to the doctrine of baptism, but much concerning the practice, and it is unfortunate that there is no possibility of fixing either its date or provenance with certainty. The passage which actually deals with baptism is ch. vii., and runs thus:

Περὶ δὲ τοῦ βαπτίσματος, οὕτω βαπτίσατε· ταῦτα πάντα προειπόντες βαπτίσατε εἰς τὸ ὄνομα τοῦ πατρὸς καὶ τοῦ υἱοῦ καὶ τοῦ ἁγίου πνεύματος ἐν ὕδατι ζῶντι. ἐὰν δὲ μὴ ἔχῃς ὕδωρ ζῶν, εἰς ἄλλο ὕδωρ βάπτισον· εἰ δ' οὐ δύνασαι ἐν ψυχρῷ, ἐν θερμῷ. ἐὰν δὲ ἀμφότερα μὴ ἔχῃς, ἔκχεον εἰς τὴν κεφαλὴν τρὶς ὕδωρ εἰς ὄνομα πατρὸς καὶ υἱοῦ καὶ ἁγίου πνεύματος. πρὸ δὲ τοῦ βαπτίσματος προνηστευσάτω ὁ βαπτίζων καὶ ὁ βαπτιζόμενος καὶ εἴ τινες ἄλλοι δύνανται· κελεύεις δὲ νηστεῦσαι τὸν βαπτιζόμενον πρὸ μιᾶς ἢ δύο.

The main points in the ceremony thus described seem to be these:

(*a*) The recitation of the previous part of the *Didache* (the 'Two Ways'). This seems to imply a developed system of preparation for candidates for baptism, of a moral rather than a theological kind.

(*b*) Baptism in the trine name. But it must be noted that in the following Eucharistic section mention is made of those who are baptized 'into the name of the Lord.'

(*c*) Immersion, by preference in running (*ζῶν*) water, is the rule, but affusion is recognized as legitimate.

(*d*) Previous to the ceremony, the baptizer, the baptizand, and any other who will are to fast.

It is probable that this document belongs to the 2nd cent., perhaps to the earlier half; but the evidence is not conclusive, and one must not regard arguments based on the 'Two Ways' as valid for the dating of the *Didache* as a whole.

(6) II CLEMENT.—In II Clement vi. 9, vii. 6, and viii. 5–6 there are three indirect references to baptism, which is spoken of as the seal (*σφραγίς*). They are all concerned with emphasizing the necessity of sinless life after baptism, and so form one of the links between this document and Hermas; but they are only homiletic, and do not throw any light on the question of repentance after baptism.

The use of *σφραγίς*, which afterwards became very common, has sometimes been traced to the influence of the Mysteries; but this is probably not the case—at least directly. More than any other expression it emphasizes the eschatological hope which was never far from the early Christian mind: those who had the correct seal would pass into the Messianic Kingdom at the day of judgment. It thus helped to unite the two—logically somewhat inconsistent—ideas of sacramental and eschatological salvation. Passages of importance, besides those in II Clem., are Hermas, *Sim.* viii. 6, ix. 16; Clem. Al. *Quis Dives salv.* 39. 42, *Strom.* ii. 3, *Exc. Th.* 83. 86, *Ecl. Proph.* 25: and in later writers, *Clem. Hom.* xvi. 19; *Acta Theclæ*, 25; *Const. Apost.* 2. 14, 39, 3. 16; Hippol. *de Antichristo*, 6. 59; Ps.-Hippol. *de Consumm.* 42; *Acta Philippi*, 28; Eus. *HE* 6. 5, 6, *Vit. Const.* 4. 62. 1. See also Hatch, *Hibbert Lectures*, p. 295 ff.; Anrich, *Das antike Mysterienwesen*, p. 120 f.; and Gebhardt and Harnack, *Patres Apost.*, note on II Clem. vi. 6.

(7) JUSTIN MARTYR.—In his first *Apology* (*c.* 150) Justin gives (ch. 61 ff.) a description of Christian baptism. It may be best treated as falling under three heads: (*a*) a description of the rite, (*b*) an exposition of the doctrine concerning it, and (*c*) a justification of this doctrine.

(*a*) *Description of the rite.*—This is given in ch. 61. 65:

Ὅσοι ἂν πεισθῶσι καὶ πιστεύωσιν ἀληθῆ ταῦτα τὰ ὑφ' ἡμῶν διδασκόμενα καὶ λεγόμενα εἶναι, καὶ βιοῦν οὕτως δύνασθαι ὑπισχνῶνται, εὔχεσθαί τε καὶ αἰτεῖν νηστεύοντες παρὰ τοῦ θεοῦ τῶν προημαρτημένων ἄφεσιν διδάσκονται, ἡμῶν συνευχομένων καὶ συννηστευόντων αὐτοῖς. ἔπειτα ἄγονται ὑφ' ἡμῶν ἔνθα ὕδωρ ἐστί, καὶ τρόπον ἀναγεννήσεως, ὃν καὶ ἡμεῖς αὐτοὶ ἀναγεννήθημεν, ἀναγεννῶνται. ἐπ' ὀνόματος γὰρ τοῦ πατρὸς τῶν ὅλων καὶ τοῦ σωτῆρος ἡμῶν Ἰησοῦ Χριστοῦ καὶ πνεύματος ἁγίου τὸ ἐν τῷ ὕδατι τότε λουτρὸν ποιοῦνται . . . (c. 65) *ἡμεῖς δὲ μετὰ τὸ οὕτως λοῦσαι τὸν πεπεισμένον καὶ συγκατατεθειμένον ἐπὶ τοὺς λεγομένους ἀδελφοὺς ἄγομεν, ἔνθα συνηγμένοι εἰσί, κοινὰς εὐχὰς ποιησόμενοι ὑπέρ τε ἑαυτῶν καὶ τοῦ φωτισθέντος καὶ ἄλλων πανταχοῦ πάντων εὐτόνως, ὅπως καταξιωθῶμεν τὰ ἀληθῆ μαθόντες καὶ δι' ἔργων ἀγαθοὶ πολιτευταὶ καὶ φύλακες τῶν ἐντεταλμένων εὑρεθῆναι, ὅπως τὴν αἰώνιον σωτηρίαν σωθῶμεν. Ἀλλήλους φιλήματι ἀσπαζόμεθα παυσάμενοι τῶν εὐχῶν* . . . and then follows an account of the Eucharist, which was immediately celebrated.

The important points in this description are the definite allusion to a period of instruction preceding baptism; the trine formula; the 'moral' vow; and the obviously developed character of the service. It is also usually thought, probably rightly, that the opening words of the description imply a reference to a definite creed; if so, this may perhaps be identified with an early form of the *Symbolum Romanum*, to which some critics see allusions in *I Apol.* 13, 21, 31, 42, 46, 52, in *Dial.* 32, and in some other passages which are collected in Gebhardt and Harnack's *Patres Apost.* 1. 2, p. 128 ff. Negatively it is remarkable that there is no allusion to the laying on of hands, such as is prominent in Acts, or to any connexion of baptism with the bishops, such as is found in Ignatius. The agreement with the *Didache*, both negatively and positively, is remarkable.

(*b*) *The doctrine of baptism.*—Justin regards baptism chiefly as a new birth, and in the passage quoted above refers to it as *ἀναγέννησις*. He also regards it as a forgiveness for past sin; and he

expresses his doctrine (apparently using some older source, see below) on this point in ch. 61:

ἐπειδὴ τὴν πρώτην γένεσιν ἡμῶν ἀγνοοῦντες κατ' ἀνάγκην γεγεννήμεθα ἐξ ὑγρᾶς σπορᾶς κατὰ μίξιν τὴν τῶν γονέων πρὸς ἀλλήλους, καὶ ἐν ἔθεσι φαύλοις καὶ πονηραῖς ἀνατροφαῖς γεγόναμεν, ὅπως μὴ ἀνάγκης τέκνα μηδὲ ἀγνοίας μένωμεν, ἀλλὰ προαιρέσεως καὶ ἐπιστήμης, ἀφέσεως δὲ ἁμαρτιῶν ὑπὲρ ὧν προημάρτομεν τύχωμεν ἐν τῷ ὕδατι, ἐπονομάζεται τῷ ὕδατι τῷ ἑλομένῳ ἀναγεννηθῆναι καὶ μετανοήσαντι ἐπὶ τοῖς ἡμαρτημένοις τὸ τοῦ πατρὸς τῶν ὅλων καὶ δεσπότου θεοῦ ὄνομα, κ.τ.λ.

Thus, if one may press his words, he seems to have connected forgiveness especially with the water, and the new life with 'the name.' It was, however, the name that gave the water the power to remove sin. Justin also regarded baptism as bestowing the gift of the Spirit. In *Dial.* 29 he says: τίς ἐκείνου (*i.e.* Jewish) τοῦ βαπτίσματος χρεία ἁγίῳ πνεύματι βεβαπτισμένῳ. Also, at the conclusion of the passage just quoted from ch. 61, he describes baptism as an 'enlightenment' (καλεῖται δὲ τοῦτο τὸ λουτρὸν φωτισμός, ὡς φωτιζομένων τὴν διάνοιαν τῶν ταῦτα μανθανόντων).

(*c*) *Justification of baptism.*—The correctness of the doctrine and practice of baptism is proved by Justin by an appeal to the OT, to the words of Christ, and to Apostolic tradition. The necessity of regeneration is proved by the saying of Christ, ἂν μὴ ἀναγεννηθῆτε οὐ μὴ εἰσέλθητε εἰς τὴν βασιλείαν τῶν οὐρανῶν, which seems to be a free quotation of Jn 3[3]. That this regeneration can be effected by baptism is proved by Is 1[16-20] 'Wash you, make you clean,' etc.; and the explanation of the way in which this was effected is introduced by καὶ λόγον δὲ εἰς τοῦτο παρὰ τῶν ἀποστόλων ἐμάθομεν τοῦτον, and then follows the passage quoted above (*Apol.* 61). It is remarkable that it is to this λόγος, and not to Mt 28[19], that Justin turns for a justification of the trine formula.

Besides this direct justification, Justin uses a curious argument from heathen religion. His view was that this was the result of demonic attempts to deceive the world by producing false fulfilments of prophecy. This theory he applied to the whole of Christian and heathen systems, which represented the true and false fulfilment of OT prophecy. Thus the lustrations of the Greeks were demonic recognition of the truth of baptismal doctrine.

(8) IRENÆUS.—This writer nowhere gives an account of the practice of baptism, but his doctrine concerning it is expressed positively in the Ἀπόδειξις τοῦ ἀποστολικοῦ κηρύγματος and negatively in his *adversus Hæreses*, while from these passages it is also possible to find some reference to the practice of the Church in his time.

In the Ἀπόδειξις, ch. 3 (*TU* xxxi. 1), he says:

'The Faith . . . as the Presbyters, the disciples of the Apostles, have delivered it to us . . . above all teaches us that we have received baptism for the forgiveness of sins in the name of God the Father, and in the name of Jesus Christ, the Son of God, who was incarnate, died, and rose again, and in the Holy Spirit of God; and that this baptism is the seal of eternal life, and the regeneration to God, by which we become the children, not of mortal man, but of the eternal and everlasting God.'

In ch. 7 he explains why the trine formula was necessary:

'And therefore the baptism of our regeneration takes place through these three points, because God the Father blesses us with regeneration through the Holy Spirit by means of His Son. For those who bear the Spirit of God in themselves are led to the Word, that is, to the Son, but the Son leads them to the Father, and the Father lets them receive incorruptibility. Therefore without the Spirit it is impossible to see the Word of God, and without the Son no one can approach the Father. For the recognition of the Father is the Son, and the recognition of the Son is through the Holy Spirit, but the Son gives the Spirit, in accordance with His function, following the good pleasure of the Father, to those whom the Father will have and as the Father will.'

This positive statement is borne out by the negative statements in the *adversus Hæreses*. In III. xviii. 1 (ed. Harvey) he refers to baptism as the *potestatem regenerationis in Deum*, and identifies it with the gift of the Holy Spirit. Similarly in I. xiv., when speaking of the Marcosian heresy in relation to baptism, he implies that baptism is the ἀπολύτρωσις τοῦ Χριστοῦ κατελθόντος, which the Marcosians regarded as a separate rite, though his own phrase is again τοῦ βαπτίσματος τῆς εἰς θεὸν ἀναγεννήσεως.

The two important pieces of information concerning the practice of baptism conveyed in these passages are (1) the use of the trine formula, which for the first time is connected definitely with Mt 28[19]; and (2) the use of a Confession of Faith, as distinct from any moral or ethical vow. The allusions to this Confession in *adversus Hæreses*, I. i. 20 and I. ii. 1 identify it with an early form of the *Symbolum Romanum*; and the passage quoted above from the Ἀπόδειξις, ch. 3, suggests that Irenæus derived it from the teaching of those Presbyters of Asia Minor to whom he so often alludes. The fact mentioned above (7), that Justin also seems to show signs of a knowledge of the *Symbolum Romanum*, suggests that the λόγος of the Apostles to which he alludes in *Apol.* i. 61 may be the same writing or tradition of the Presbyters as that referred to by Irenæus.

(9) TERTULLIAN.—This writer tells us more about the practice and doctrine of baptism than any previous authority.

(*a*) *The practice.*—This is summed up in *de Corona*, 3:

'Aquam adituri ibidem sed et aliquanto prius in ecclesia sub antistitis manu contestamur nos renuntiare diabolo et pompæ et angelis ejus. Dehinc ter mergitamur amplius aliquid respondentes quam dominus in evangelio determinavit. Inde suscepti lactis et mellis concordiam prægustamus, exque ea die lavacro quotidiano per totam hebdomadem abstinemus.'

But this sketch was not intended to be complete, being given only as a proof that catholic practice outran Scripture, and must be supplemented by numerous allusions in other books. From these we can form the following scheme for the practice of baptism in the Church of Africa in the time of Tertullian.

(α) There was a preliminary period of preparation by fasting, vigils, and confession (cf. *de Bapt.* 20: 'Ingressuros baptismum orationibus crebris jejuniis et geniculationibus et pervigiliis orare oportet et cum confessione omnium retro delictorum').

(β) A public renunciation of the devil before the head of the community (*antistes*) followed (cf. *de Cor.* 3), at which sponsors or a sponsor were also present (*de Bapt.* 18). This 'renunciatio' seems to take the place of the moral vow implied by 1 Peter, Justin Martyr, and the *Didache*. As it is practically certain that Tertullian was acquainted with the *Symbolum Apostolicum*, it is probable that this also formed part of the baptismal rite; but there appears to be no definite statement to that effect in Tertullian.

(γ) The name of God was invoked on the water, in order to give it the power of sanctifying those who were baptized (*de Bapt.* 4): see passages quoted below.

(δ) Trine immersion in the trine name (cf. *de Cor.* 3 6c and *adv. Prax.* 26: 'nam nec semel sed ter ad singula nomina in personas singulas tinguimur').

(ε) Immediately after coming out of the water unction was administered (*de Bapt.* 7: 'Exinde egressi de lavacro perunguimur benedicta unctione de pristina disciplina, qua ungui oleo de cornu in sacerdotio solebant,' etc.).

(ζ) There followed the laying on of hands (*de Bapt.* 8): 'Dehinc manus imponitur per benedictionem advocans et invitans spiritum sanctum').

(η) After this there was a ceremonial tasting of milk and honey (*de Cor.* 3: 'Inde suscepti lactis et mellis concordiam prægustamus,' and *adv. Marc.* i. 14: 'sed ille quidem usque nunc nec aquam reprobavit creatoris qua suos abluit . . . nec mellis et lactis societatem qua suos infantat'), followed by abstinence from washing for the whole of the next week (*de Cor.* 3: 'exque ea die lavacro quotidiano per totam hebdomadem abstinemus'). The minister of this ceremony was usually the bishop or, with his sanction, the presbyters and deacons; but this was a 'right of order' not 'of necessity,' and every Christian man (but not woman) might baptize in case of need (*de Bapt.* 17: 'Dandi quidem habet jus summus sacerdos qui est episcopus; dehinc presbyteri et diaconi, non tamen sine episcopi auctoritate, propter ecclesiæ honorem, quo salvo salva pax est. Alioquin etiam laicis jus est. Quod enim ex æquo accipitur ex æquo dari potest . . . proinde et baptismus æque dei census ab omnibus exerceri potest'). No special time was necessary for baptism, but Easter and Whitsun were especially suitable (*de Bapt.* 19: 'Diem baptismo sollemniorem Pascha

præstat . . . exinde Pentecoste ordinandis lavacris lætissimum spatium est. . . . Ceterum omnis dies domini est, omnis hora, omne tempus habile baptismo; si de sollemnitate interest, de gratia nihil refert').

(*b*) *The doctrine of baptism.*—Tertullian's views, though in the main the same as those of earlier writers, show a development on certain points. Baptism is the source of salvation and of forgiveness of sins, a regeneration, and a gift of the Holy Spirit. But the following points are elaborated:—

(*a*) The question is raised in the *de Baptismo* 3–6 why and how sanctification was to be found in baptism. The answer given by Tertullian is too long to quote in full, but the argument is as follows:—There was from the beginning a special affinity between water and the spirit, which had hovered over it at the Creation (Gn 1^{2}), and the same spirit returns to the water if God be invoked, and so gives it the power of imparting sanctification. He argues that there is no reason for doubting this, seeing that it is generally recognised that water is frequently the means by which evil spirits entrap unwary men. Moreover the incident of the pool of Bethsaida (Bethesda) in Jn 5^{1-9} led him to think that the sanctification of the water was effected by an angel who descended for the purpose. It is not plain, nor is it for the present purpose material, how far Tertullian identified this angel with the Spirit itself (cf. Adam, 'Lehre v. d. hl. Geist in Hermas und Tertullian' in the *Theol. Quartalschrift*, Jan. 1906).

(*β*) The distinction between cleansing from sin and the gift of the Spirit, which is made in Acts, is emphasised, and a further distinction is introduced between the cleansing of the soul and of the body. The body is cleansed from sin by the water, the soul by the 'answer' of the candidate (*de Resurr. Carn.* 48 [where it is argued that baptism implies a resurrection of the flesh]: 'anima enim non lavatione sed responsione sancitur'). The gift of the Spirit in baptism is connected with the laying on of hands and not with the water (*de Bapt.* 6 and 8: 'non quod in aquis spiritum sanctum consequamur, sed in aqua emundati sub angelo spiritui sancto præparamur . . . dehinc manus imponitur. . . . Tunc ille sanctissimus spiritus super emundata et benedicta corpora libens a patre descendit . . .'). The 'benedicta' in the last phrase explains the meaning attached by Tertullian to the unction: it blessed the body (and sacramentally the soul) of the candidate just as the water cleansed it, and so prepared it for the gift of the Spirit.

(*γ*) Tertullian held strong views as to the proper recipients of baptism. These were due to his belief that sin after baptism was either unforgivable (only martyrdom could atone for some sins [cf. *de Pud.* 9]), or at least exceedingly dangerous (cf. *e.g. de Bapt.* 8: 'Itaque igni [sc. mundus] destinatur, sicut et homo qui post baptismum delicta restaurat'). The result was that he objected to child baptism as dangerous both to the child and to the sponsors (*de Bapt.* 18: 'Itaque pro cuiusque personæ condicione ac dispositione etiam ætate cunctatio baptismi utilior est, præcipue tamen circa parvulos . . .'). For the same reason he dissuaded the unmarried and widows from baptism (*de Bapt.* 18: 'non minore de causa innupti quoque procrastinandi in quibus tentatio præparata est tam virginibus per maturitatem quam viduis per vacationem, donec aut nubant aut continentiæ corroborentur'). The suggestion of his words is that he would not countenance the marriage of the baptized, a position maintained later on in Edessa by Aphraates, but was willing to baptise those who were already married—unlike Marcion, who would consent to baptise only those who were unmarried or had divorced their wives.

(*δ*) In two passages (*de Resurr. Carn.* 48, and *adv. Marcion.* 5. 10) Tertullian speaks of the reference in 1 Co 15^{29} to a baptism for the dead. In the former place he uses it as an argument for the resurrection of the flesh: 'certe illa præsumptione hoc eos instituisse contendit qua alii etiam carni ut vicarium baptisma profuturum existimarent ad spem resurrectionis, quæ nisi corporalis non alias sic baptismate corporali obligaretur.' Here there is nothing to show whether Tertullian was actually acquainted with a vicarious baptism for the dead, but the suggestion of the other passage is that he had no such knowledge. Here he uses the same argument in favour of a material resurrection, but prefaces the following obscure statement: 'quid, ait, facient qui pro mortuis baptizantur si mortui non resurgunt? Viderit institutio illa. Kalendæ si forte Februariæ respondebunt illi pro mortuis petere. Noli ergo apostolum novum statim auctorem aut confirmatorem eius denotare, ut tanto magis sisteret carnis resurrectionem, quanto illi qui vane pro mortuis baptizarentur fide resurrectionis hoc facerent.' In view of the generally affirmative sense of 'si forte' in Tertullian, it seems probable that he means that St. Paul was using an argument from the Roman custom of special sacrifices for the departed (cf. Oehler's note, *ad loc.*), and this renders it improbable that Tertullian was acquainted with any contemporary Christian custom of baptism for the dead.

(*ε*) The question of heretical baptism first appears in Tertullian. He did not recognize it as in any sense valid, and a heretic who afterwards joined the Church was re-baptized (*de Pud.* 19: 'unde et apud nos ut ethnico par immo et super ethnicum hæreticus etiam per baptisma veritatis utroque homine purgatus admittitur'; *de Bapt.* 15: 'Hæretici autem nullum habent consortium nostræ disciplinæ, quos extraneos utique testatur ipsa ademptio communicationis. Non debeo in illis cognoscere quod mihi est præceptum, quia non idem deus est nobis et illis, nec unus Christus, id est idem, ideoque nec baptismus unus quia non idem, quem cum rite non habent sine dubio non habent . . .'; cf. also *de Præscr. Hær.* 12). It should be noted that the *de Baptismo* probably belongs to the pre-Montanist period of Tertullian, while the *de Pud.* is Montanist.

(10) CLEMENT OF ALEXANDRIA.—Clement does not so frequently discuss baptism as do some of the other writers, but his standpoint seems to be similar to theirs. The chief passages in which he deals with baptism are in the *Pædagogus*. He draws a parallel between the baptism of Christ and that of Christians, and claims that each had the same effect. Christ, on the side of His human nature, was regenerated in baptism and made perfect by the regeneration; so also with Christians:

τὸ δὲ αὐτὸ συμβαίνει τοῦτο καὶ περὶ ἡμᾶς, ὧν γέγονεν ὑπογραφὴ ὁ κύριος· βαπτιζόμενοι φωτιζόμεθα, φωτιζόμενοι υἱοποιούμεθα, υἱοποιούμενοι τελειούμεθα, τελειούμενοι ἀπαθανατιζόμεθα· 'ἐγώ' φησί 'εἶπα, θεοί ἐστε καὶ υἱοὶ ὑψίστου πάντες·' καλεῖται δὲ πολλαχῶς τὸ ἔργον τοῦτο, χάρισμα καὶ φώτισμα καὶ τέλειον καὶ λουτρόν (*Pæd.* i. 6, the whole of which chapter is important for defining Clement's attitude).

But Clement's chief interest was directed to proving not so much that baptism was the beginning of the new life as that it was complete, in opposition to the Gnostics, who introduced a series of stages. Of course, Clement did not mean to exclude the idea of progress, but only to assert that baptism was the dividing line between two states essentially differing from each other. Probably the doctrine of Tertullian as to the relation between the water and the Spirit would not have been strange to Clement. He argues that there is a special reason for water in baptism, because of its power of mixing with milk, which represents the Logos, and thinks that the union of the Logos with baptism is similar to that of milk with water:

καὶ ἣν ὁ Λόγος ἔχει πρὸς τὸ βάπτισμα κοινωνίαν, ταύτην ἔχει τὸ γάλα τὴν συναλλαγὴν πρὸς τὸ ὕδωρ, δέχεται γὰρ μόνον τῶν ὑγρῶν τοῦτο καὶ τὴν πρὸς τὸ ὕδωρ μίξιν ἐπὶ κάθαρσιν παραλαμβανόμενον καθάπερ τὸ βάπτισμα ἐπὶ ἀφέσει ἁμαρτιῶν (*Pæd.* i. 6, p. 120, ed. Stählin).

Similarly in *Protrep.* 10 (p. 72, ed. Stählin) he speaks of the ὕδωρ λογικόν. Yet it must be admitted that it is not easy to say precisely what was Clement's view as to the exact relation between symbols and their signification; there is room for a good monograph on his sacramental doctrine.

Clement, like Tertullian, did not recognize the baptism of heretics as genuine. This is proved by an exegesis of Pr 9^{18a}:

εἶτα ἐπιφωνεῖ 'οὕτω γὰρ διαβήσῃ ὕδωρ ἀλλότριον' τὸ βάπτισμα αἱρετικὸν οὐκ οἰκεῖον καὶ γνήσιον ὕδωρ λογιζομένη (*Strom.* i. 19, p. 62, ed. Stählin).

On the question of repentance after baptism, Clement takes a much more lenient position than Tertullian or even Hermas. In the *Quis dives salvetur* (chs. 39–42) he devotes a long argument to proving that genuine repentance and consequent salvation is never too late, and supports it by the long and well-known story of St. John and the brigand captain.

ii. *AMONG HERETICS.*—(1) MENANDER.—Menander, who, according to Irenæus, was the successor of Simon Magus, attributed to baptism the power of conferring immortality.

Cf. Iren. i. 17: 'Resurrectionem enim per id quod est in eum baptisma accipere ejus discipulos et ultra non posse mori sed perseverare non senescentes et immortales,' and Tert. *de Anima*, 50: 'Menandri Samaritani furor conspuatur dicentis mortem ad suos non modo non pertinere, verum nec pervenire. In hoc scilicet se a superna et arcana potestate legatum, ut immortales et incorruptibiles et statim resurrectionis compotes fiant qui baptisma ejus induerint.'

It is, however, difficult to think that a view of this kind could have long endured; that baptism, in a certain sense, conveyed immortality was a generally received Christian teaching, and possibly Menander did not mean much more than this.

(2) THE VALENTINIANS.—The main authority for the doctrine of these heretics is the *Excerpta Theodoti* of Clement of Alexandria. The whole passage, *Exc. Theod.* 76–86, is most instructive, and is the most important extant passage for deter-

mining the doctrine of baptism as it existed among the Valentinians, or, indeed, any other heretics, for it differs from the evidence of almost all other writers in being extracted from heretical writings, and not from orthodox polemical books.

Baptism is an *ἀναγέννησις*. By its means we are born into the world dominated by Father, Son, and Spirit, and so become superior to all other powers. It is also a death to the previous life; but this refers to the soul (*ψυχή*), not to the body (*σῶμα*). Up to the time of baptism man is under the control of Fate (*εἱμαρμένη*), but by baptism and *γνῶσις* he is released from this control, and the verdict of astrologers (which is recognized as valid for the rest of mankind) is rendered unimportant. The baptized person is, through regeneration by Christ, taken up into the Ogdoad. It was further explained that as the water of baptism quenched *τὸ αἰσθητὸν πῦρ*, the invisible part could quench the *νοητὸν πῦρ*. So far as the rite is concerned, we are told that fasting and prayer are desirable before baptism in order to prevent the entrance of evil spirits in addition to the Holy Spirit. From ch. 22 of the *Excerpta Theodoti* it also appears that the rite of baptism contained an imposition of hands, and that the formula used ended with the phrase *εἰς λύτρωσιν ἀγγελικήν* (for a formula used by the Marcosians containing this phrase see below). The doctrine underlying this is that the angels, with whom we are in some way connected, have been baptized for us; and this explanation is given to 1 Co 15[29]—in which the 'they' refers to the angels, and 'the dead' for whom they are baptized is mankind.

(3) THE MARCOSIANS.—The authorities for these heretics are Irenæus and Hippolytus. They belonged to the Valentinian school, and, like the class of heretics who are represented later in a more developed form by the Pistis Sophia, did not merely, as Marcion, allow a repetition of baptism in case of sin, but had actually two forms differing from each other in function. Their first baptism was not a means of regeneration; it merely had the negative function of the forgiveness of sin, and is described in Iren. I. xiv. 1 as a baptism *τοῦ φαινομένου Ἰησοῦ ἀφέσεως ἁμαρτιῶν*. The second baptism was called *ἀπολύτρωσις*, and according to Hippolytus was regarded as raising those who participated in it above the power of sin, even though they committed it (. . . *εὐκόλους μὲν εἶναι διδάξας πρὸς τὸ ἁμαρτάνειν, ἀκινδύνους δὲ διὰ τὸ εἶναι τῆς τελείας δυνάμεως, καὶ μετέχειν τῆς ἀνεννοήτου ἐξουσίας, οἷς καὶ μετὰ τὸ βάπτισμα ἕτερον ἐπαγγέλλονται ὃ καλοῦσιν ἀπολύτρωσιν* . . . Hippol. *Refut.* vi. 41). The justification for this was found, as Marcion found his for a renewed baptism, in Lk 12[50] ('I have a baptism,' etc.); and the references in the Epistles to an *ἀπολύτρωσις ἐν Χριστῷ Ἰησοῦ* were explained as references to this sacrament (Iren. *l.c.*). This 'redemption' was regarded as the same as that of the Spirit which entered Jesus at His baptism, and was the power of regeneration and of entrance into the Pleroma (*λέγουσι δὲ αὐτὴν ἀναγκαίαν εἶναι τοῖς τὴν τέλειαν γνῶσιν εἰληφόσιν, ἵνα εἰς τὴν ὑπὲρ πάντα δύναμιν ὦσιν ἀναγεγεννημένοι· ἄλλως γὰρ ἀδύνατον ἐντὸς πληρώματος εἰσελθεῖν, ἐπειδὴ αὕτη ἐστὶν ἡ εἰς τὸ βάθος* [*τοῦ βύθου*] *κατάγουσα αὐτούς*, Iren. *l.c.*).

As to the rite itself there seems to have been no uniformity of practice. Irenæus distinguishes seven varieties, and leaves it quite uncertain what was the relationship subsisting between them (Iren. I. xiv. 2).

The seven varieties are as follows: (*a*) A ceremony referred to as a spiritual marriage. There is no definite statement that a water-baptism formed part of it, and perhaps the contrary is to be inferred from the general drift of Irenæus's language. (*b*) A ceremony of baptism with the formula *Εἰς ὄνομα ἀγνώστου πατρὸς τῶν ὅλων, εἰς ἀλήθειαν μητέρα πάντων, εἰς τὸν κατελθόντα εἰς Ἰησοῦν, εἰς ἕνωσιν καὶ ἀπολύτρωσιν καὶ κοινωνίαν τῶν δυνάμεων.* (*c*) In another circle a Hebrew or Syriac formula was used, of which the text is very corrupt in Irenæus, but the meaning, according to Harvey's re-construction, was 'in the name of the Wisdom of the Father, and of Light, which is called the Spirit of Holiness, for the Angelic Redemption.' It is not stated whether this formula was used in connexion with water; but it probably was. (*d*) Irenæus gives an important extract from the rites of a fourth, but his meaning is not clear, and the Syriac words are difficult to re-construct (see Harvey's note); it is therefore best to give the text: *Ἄλλοι δὲ πάλιν τὴν λύτρωσιν ἐπιλέγουσιν οὕτως· τὸ ὄνομα τὸ ἀποκεκρυμμένον ἀπὸ πάσης θεότητος, καὶ κυριότητος, καὶ ἀληθείας, ὃ ἐνεδύσατο Ἰησοῦς ὁ Ναζαρηνὸς ἐν ταῖς ζωαῖς τοῦ φωτὸς τοῦ Χριστοῦ, Χριστοῦ ζῶντος διὰ πνεύματος ἁγίου εἰς λύτρωσιν ἀγγελικήν. Ὄνομα τὸ τῆς καταστάσεως· Μεσσία οὐφαρὴγ ναμεμψαιμὰν χαλδαίαν μοσομηδαέα ἀκφαναὶ ψαούα Ἰησοῦ Ναζαρία. καὶ τούτων δὲ ἑρμηνεία ἐστὶ τοιαύτη· οὐ διαιρῶ τὸ πνεῦμα, τὴν καρδίαν καὶ τὴν ὑπερουράνιον δύναμιν τὴν οἰκτίρμονα· ὀναίμην τοῦ ὀνόματός σου, Σωτὴρ ἀληθείας. καὶ ταῦτα μὲν ἐπιλέγουσιν οἱ αὐτοὶ τελοῦντες. Ὁ δὲ τετελεσμένος ἀποκρίνεται· ἐστήριγμαι, καὶ λελύτρωμαι, καὶ λυτροῦμαι τὴν ψυχήν μου ἀπὸ τοῦ αἰῶνος τούτου, καὶ πάντων τῶν παρ' αὐτοῦ ἐν τῷ ὀνόματι τοῦ Ἰαώ, ὃς ἐλυτρώσατο τὴν ψυχὴν αὐτοῦ εἰς ἀπολύτρωσιν ἐν τῷ Χριστῷ τῷ ζῶντι. Εἶτα ἐπιλέγουσιν οἱ παρόντες· Εἰρήνη πᾶσιν, ἐφ' οὓς τὸ ὄνομα τοῦτο ἐπαναπαύεται· ἔπειτα μυρίζουσι τὸν τετελεσμένον τῷ ὀπῷ τῷ ἀπὸ βαλσάμου* [*τῷ ὀποβαλσάμῳ*]*· τὸ γὰρ μύρον τοῦτο τύπον τῆς ὑπὲρ τὰ ὅλα εὐωδίας εἶναι λέγουσιν.* Whatever the precise meaning of this extract may be, it is clear that the service bore a marked resemblance to Catholic practice. There is the use of a formula 'in the name of'; a service of question and answer alternating between the administrator and the recipient of the rite; unction; and apparently at an earlier part of the ceremony water-baptism. This last point is rendered probable by the beginning of the next section. (*e*) A fifth party rejected water, but used instead an unguent of water and oil, with a formula similar to those given above, and also using balsam. (*f*) A sixth party rejected the whole of the outward ceremony, and said that knowledge alone was the true Redemption. (*g*) Finally, there were those who in other respects seem to have agreed with those mentioned above as the fifth party, but deferred baptism until after death. Epiphanius perhaps thought that this must mean 'in articulo mortis' (Epiph. xxxvi. 2), but the text of the Latin Irenæus is clear: 'Alii sunt qui mortuos redimunt ad finem defunctionis, mittentes eorum capitibus oleum et aquam,' etc. (Iren. I. xiv. 4); for 'mortuos' can only mean dead, and Theodoret (*HE* i. 11) alludes to the same practice. The object of this was to safeguard the soul of the dead person in its journey through the realm of the spirit-world. This view may be paralleled with the Pistis Sophia, and seems to have Egyptian affinities.

(4) THE CARPOCRATIANS.—Irenæus (I. xx. 3) says of these heretics: *τούτων τινὲς καὶ καυτηριάζουσι τοὺς ἰδίους μαθητὰς ἐν τοῖς ὀπίσω μέρεσι τοῦ λοβοῦ τοῦ δεξίου ὠτός.* It seems probable that this was an attempt to provide a literal fulfilment of the promise of a baptism with the Holy Spirit and with Fire.

(5) MARCION.—The evidence for Marcion is given by Tertullian and Epiphanius. According to Tertullian (*adv. Marc.* iv. 11), Marcion 'morti aut repudio baptisma servat,' which seems to mean that he refused baptism except to those who were prepared to put away their wives, or were at the point of death. The reason for this provision was that Marcion's doctrine led him to exclude married life. Epiphanius (*adv. Hær.* I. xlii. 3) says that Marcion admitted a second and third baptism in case of sin after baptism (*ἔξεστιν ἕως τριῶν λουτρῶν, τουτέστι βαπτισμῶν, εἰς ἄφεσιν ἁμαρτιῶν δίδοσθαι*). He adds that Marcion had himself been obliged to make use of this provision, and that a Scripture basis was found in Lk 12[50] (*βαπτισθεὶς ὁ κύριος ὑπὸ τοῦ Ἰωάννου ἔλεγε τοῖς μαθηταῖς, βάπτισμα ἔχω βαπτισθῆναι . . . καὶ οὕτω τὸ διδόναι πλείω βαπτίσματα ἐδογμάτισεν*). Esnik, an Armenian writer, also attributes vicarious baptism to him.

(6) TERTULLIAN'S OPPONENTS.—From the language used by Tertullian in the *de Baptismo* it is clear that there was a party which denied the necessity of baptism. One of them he identifies (*de Bapt.* i. 1) with the Cainites, but it does not follow that this applies to them all. From his treatise we can re-construct, at least partially, their arguments.

The following can be distinguished:—(*a*) The Lord Himself did not baptize (see the reply in *de Bapt.* 11). (*b*) The Apostles were never baptized (answered in *de Bapt.* 12). (*c*) Baptism is not necessary to those who have faith, as Abraham had (answered in *de Bapt.* 13). (*d*) St. Paul says: 'Christ sent me not to baptize' (answered in *de Bapt.* 14).

(7) THE ACTS OF THOMAS.—This curious document probably represents views and practices which obtained in the neighbourhood of Edessa towards the close of the 2nd century. It is doubtful whether they come from an orthodox circle, and it is perhaps probable that they represent the views of Bardesanes.

The following accounts of baptism are to be found:—(*a*) In chs. 26–27, the baptism of King Gundaphorus and his brother Gad. Of this the text presents two recensions. The shorter (probably a 'Catholic' version) only relates the fact; it mentions the water and the trine formula. The longer (apparently Gnostic) does not mention water, but only an anointing with

oil, which is called σφραγίς. The formula which is used is: ἐλθὲ τὸ ἅγιον ὄνομα τοῦ Χριστοῦ τὸ ὑπὲρ πᾶν ὄνομα· ἐλθὲ ἡ δύναμις τοῦ ὑψίστου καὶ ἡ εὐσπλαγχνία ἡ τελεία· ἐλθὲ τὸ χάρισμα τὸ ὕψιστον· ἐλθὲ ἡ μήτηρ ἡ εὔσπλαγχνος· ἐλθὲ ἡ κοινωνία τοῦ ἄρρενος· ἐλθὲ ἡ τὰ μυστήρια ἀποκαλύπτουσα τὰ ἀπόκρυφα· ἐλθὲ ἡ μήτηρ τῶν ἑπτὰ οἴκων ἵνα ἡ ἀνάπαυσίς σου εἰς τὸν ὄγδοον οἶκον γένηται· ἐλθὲ ὁ πρεσβύτερος τῶν πέντε μελῶν, νοὸς ἐννοίας φρονήσεως ἐνθυμήσεως λογισμοῦ, κοινώνησον μετὰ τούτων τῶν νεωτέρων· ἐλθὲ τὸ ἅγιον πνεῦμα καὶ καθάρισον τοὺς νεφροὺς αὐτῶν καὶ τὴν καρδίαν, καὶ ἐπισφράγισον αὐτοὺς εἰς ὄνομα πατρὸς καὶ υἱοῦ καὶ ἁγίου πνεύματος. After this baptism the Eucharist followed immediately.

(*b*) In ch. 121 Mygdonia is baptized in the trine name, and the Eucharist follows immediately.

(*c*) In chs. 131–133 is the account of the baptism of Siphor. Here we are given a valuable statement of the doctrine of baptism: τὸ βάπτισμα τοῦτο ἁμαρτιῶν ἐστὶν ἄφεσις· τοῦτο ἀναγεννᾷ φῶς περιεκχυνόμενον· τοῦτο ἀναγεννᾷ τὸν νέον ἄνθρωπον· τοὺς ἀνθρώπους μιγνύον πνεῦμα καινοῦν ψυχήν, ἀνιστῶν τρισσῶς καινὸν ἄνθρωπον, καί ἐστι κοινωνὸν τῶν ἁμαρτιῶν ἀφέσεως. So far as the rite is concerned, it consists of unction with the formula Σοὶ δόξα ἡ τῶν σπλάγχνων ἀγάπη· σοὶ δόξα τὸ τοῦ Χριστοῦ ὄνομα· σοὶ δόξα ἡ ἐν Χριστῷ δύναμις ἱδρυμένη. After this follows baptism in water (for which purpose a basin [σκάφην] is used—so that submersion was not practised) in the trine name, and finally the Eucharist.

(*d*) In chs. 157–158 is the account of the baptism of Ouazenes, Tertia, and Mnesara. The main features are the same: first, unction with oil (over which the name of Jesus has been invoked) with the formula—Ἐν ὀνόματί σου, Ἰησοῦ Χριστέ, γενέσθω ταῖς ψυχαῖς ταύταις εἰς ἄφεσιν ἁμαρτιῶν καὶ εἰς ἀποτροπὴν τοῦ ἐναντίου καὶ εἰς σωτηρίαν τῶν ψυχῶν αὐτῶν; secondly, baptism in water in the trine name; and, thirdly, the Eucharist. It is noteworthy, in view of Tertullian's protest against the custom of baptism by women, that Mygdonia, not Judas Thomas, anoints the women.

Thus it would seem that the circle of Christians whose practice is represented by the *Acts of Thomas* used a form of baptism in which unction with an elaborate formula of consecration preceded baptism, properly so called, in the trine name, and that the Eucharist always followed immediately. The unction with oil was more important than the water-baptism—so much so that in ch. 26 the latter is not mentioned at all. It is even possible that the references to water-baptism in the other passages are interpolations. The doctrinal ideas which play the greatest part are regeneration, forgiveness of sin, a new life, and the gift of the Spirit, which seem to be communicated directly through the unction. It is also noticeable that the *Acts of Thomas* regards baptism and married life as incompatible.

Summary of 1st and 2nd centuries.—The data supplied by the preceding paragraphs give the material for making certain generalizations as to the practice and doctrine of baptism, during the 1st and 2nd centuries. It is, of course, the special object of an Encyclopædia article to give information rather than draw conclusions; but attention may be directed to the following points, which seem to be cardinal:—

(1) The information given as to the practice of baptism is, as a rule, incidental, and never quite explicit; yet the main features are fairly clear. As might have been expected, the rite gradually became more and more complicated. The earliest form, represented in the Acts, was simple immersion (not necessarily submersion) in water, the use of the name of the Lord, and the laying on of hands. To these were added, at various times and places which cannot be safely identified, (*a*) the trine name (Justin), (*b*) a moral vow (Justin and perhaps Hermas, as well as already in the NT in 1 Peter), (*c*) trine immersion (Justin), (*d*) a confession of faith (Irenæus, or perhaps Justin), (*e*) unction (Tertullian), (*f*) sponsors (Tertullian), (*g*) milk and honey (Tertullian). There was also, no doubt, an infinite variety of expansion in detail, especially among heretical sects (cf. especially the Marcosians), and there were probably fixed forms for the administration of the sacraments, of which traces may be seen even in this period (Justin, Tertullian, and especially the *Didache*), but the existing baptismal services strictly belong to the 3rd century.

(2) As to the doctrine of baptism we have more information, though here also much of it is incidental. The dominant ideas were those of forgiveness of sin, regeneration, and the gift of the Holy Spirit. To some extent these three ideas may be fairly described as three ways of regarding baptism rather than as three separate benefits conferred by it. In baptism, the Christian passes from one sphere of life to another. He is born again to another world, and, whereas in the world which he leaves he was under the control of sin, evil spirits, and fate,* in the world which he enters he is under the control of the Holy Spirit. So far is this view carried, that baptism can be spoken of as a resurrection, though, as a rule, the gift conferred in baptism was regarded eschatologically so far as its complete realization was concerned (see the use of σφραγίς in II Clem., p. 385^b above).

The change effected by baptism was attributed to the 'name' and to the water, which were regarded as actually effective and not merely symbolic. This view is strange to modern minds, especially to Protestants, but it was part of the common stock of ideas of the 2nd cent., among heathen and Christians alike. A somewhat subordinate part is usually played by the laying on of hands and by unction; but probably both of these were regarded as cardinal in some places (see especially Tertullian and the *Acts of Thomas*). The general theory which underlies these views seems to be the well-known belief that by using the correct name it was possible to exercise the power of the bearer of the name. By this means the Spirit was brought into the water (in the *Acts of Thomas* into the oil) and thus communicated to the baptized person. The clearest expression of this view is found in Tertullian, but in a more or less developed form it was no doubt universal, except among a few heretics (*e.g.* Tertullian's opponents, and some of the Marcosians).

As the rite became more complicated, there was a tendency to connect various details with various sides of the doctrine. Especially was this so with regard to the laying on of hands; this, at least sometimes, was peculiarly connected with the gift of the Spirit, and the effect of the immersion in water was limited to the forgiveness of sins (see especially Tertullian, and compare the same tendency even earlier in the Acts). But this distinction was probably never universal, or to any large extent the subject of discussion.

In its crudest form the theory of baptism was quite unethical; and there are many traces among early writers that they were aware of this difficulty. None of them, however, really succeeded in doing more than putting ethical requirements side by side with their sacramental theories, and demanding both without really co-ordinating them intelligibly (cf. Hermas and the development of the moral vow of which the first traces can probably be found in 1 Peter).

In connexion with the name (which may mean one or more names) the question of formula arises. The earliest known formula is 'in the name of the Lord Jesus,' or some similar phrase; this is found in the Acts, and was perhaps still used by Hermas, but by the time of Justin Martyr the trine formula had become general. It is possible that the older formula survived in isolated communities, but there is no decisive contemporary evidence. The tendency was all the other way, and it is probable that there were in use many formulæ of an elaborate nature (see the Marcosians and the *Acts of Thomas*). The difficulty is to distinguish between

* The question of Fate will receive a full treatment in a separate article. Justin and orthodox writers generally were inclined to deny its influence, but some Gnostics recognised its supremacy over the unbaptized (Theodotus in Clement of Alexandria).

the formula properly so called, and what we should now call the baptismal service attached to it. Probably the truth is that this distinction was somewhat foreign to the spirit of the 2nd cent.; it was only gradually that a difference began to be made between the essential formula and other words which were connected with it.

Starting from the belief that baptism was the beginning of a new life, released from sin and inspired by the Holy Spirit, men naturally were forced to ask what was the relation of the regenerate person to sin. The earliest view was that sin was excluded. Probably some even thought that sin was impossible to the baptized, but at least it is clear from the Epistle to the Hebrews that sin after baptism was in some circles regarded as irremediable. Practical experience must soon have shown that if this view were held few could hope to see salvation, and the problem which thus arose was dealt with in diverse ways. The most obvious solution was to re-baptize those who sinned. This view was adopted by the school opposed to that of the writer of the Epistle to the Hebrews, and was common to most of the Gnostic sects (see *e.g.* Marcion). In the orthodox (as they afterwards came to be) circles this view was always rejected, and the difficulty was met in two ways—by the introduction of the theory of μετάνοια, rapidly developing into Penance, and by the attempt to distinguish between deadly and venial sin (cf. especially Hermas and 1 John). Among the practical results of this difficulty was the tendency, which long survived, to postpone baptism until death was approaching (cf. especially Hermas and Tertullian; similarly the Marcosians, whose sacrament of 'Redemption' was partly a repetition of baptism, partly a new rite that seems sometimes to have postponed its reception to the time of death). It would be an interesting subject for study how far the Catholic practice of extreme unction may once have been connected with a similar view. It is, however, plain that this postponement must sometimes have been carried too far, and death anticipated baptism. Baptism for the dead seems to have been practised by the Marcosians in such cases, and there are a few traces of a parallel custom of vicarious baptism.

Besides this line of development, which recognized that sin after baptism was possible, there was another which denied that the regenerate were able to sin. They were risen from death, and any sin which their bodies might commit belonged to the realm of death: it was thus indifferent, and could not affect the risen life of the regenerate. This theory, which was obviously likely to give rise to the wildest excesses, is probably a partial explanation of the charge of immorality often brought against Christians. It appears from Hippolytus that some of the Marcosians adopted this view, and it is probable that the same is true of the Carpocratians.

The relation of baptism to marriage is a cognate question. Some sects certainly thought that marriage was of the nature of sin, and rejected it altogether (cf. especially Marcion and the *Acts of Thomas*). The Church in general never seems to have taken this view; but Tertullian, probably even in his pre-Montanist days, regarded marriage as forbidden to those who had already been baptized.

In the earliest part of this period it seems probable that baptism was regarded as a sacrament which could be administered by all Christians, though it was in practice doubtless reserved for the head of the community (cf. Justin Martyr). The line of thought, as mentioned above, represented in the Acts, which distinguished between the actual immersion in water (which gave forgiveness of sins, and could be administered by every Christian) and the laying on of hands (which gave the Spirit, and was the prerogative of the Apostles), perhaps survived only in part. Tertullian shows that the doctrinal distinction was observed in the African Church (it seems very doubtful if this was true of every Church), but the evidence is not clear that the distinction was made between the ministerial rights of clergy and laity. In any case, as it was certainly the practice for the clergy—not the laity—to baptize, the question was not likely to come to the front. But a similar problem began to appear during the 2nd century. What was the value of heretical baptism? The answer, of course, turned on that given to the implied previous question, 'What is a Christian?' The 2nd cent. writers did not really reach a more advanced point than the affirmation that only a Christian could give Christian baptism (the attempt of Ignatius to confine the administration of the rite to the bishop and those whom he licensed was really only a secondary result of quite a different question), and the Catholic Church triumphed in its attempt to exclude all the heretical sects as non-Christian. Thus the rule was more or less fixed that heretical baptism was invalid, but 'heretical' meant heretics such as the Marcosians and other Gnostics, and the question probably never became a burning one. Still the principle was established, and became extremely important in the 3rd cent., when it was applied to the quite different types of heresy which then became predominant.

LITERATURE.—There is no satisfactory book on the history of early Christian baptism before the great baptismal controversy in the 3rd century. Useful information will be found in Höfling, *Das Sacrament d. Taufe*, Erlangen, 1848; W. Heitmüller, *Im Namen Jesu*, Göttingen, 1903, and *Taufe und Abendmahl bei Paulus*, Göttingen, 1905; F. M. Rendtorff, *Die Taufe im Urchristentum*, Leipzig, 1905; W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907; H. Windisch, *Taufe und Sünde im ältesten Christentum*, Tübingen, 1908.

KIRSOPP LAKE.

BAPTISM (Later Christian).—**I. From the second to the eighth century.**—'Since the middle of the second century the notions of baptism in the Church have not essentially altered. The result of baptism was universally considered to be forgiveness of sins, and this pardon was supposed to effect an actual sinlessness which now required to be maintained' (Harnack, *Hist. of Dogma*, Eng. tr. vol. ii. p. 140). Baptism, in the words of Firmilian, was the life-giving bath (*lavacrum salutare*), the second nativity: it involved the washing away of the filth of the old man, the forgiveness of the old sins of death, the becoming sons of God through a heavenly re-birth, the being renewed unto life eternal by the sanctification of the Divine bath (see *Ep.* 75, *ap.* Cyprian). How the nature and effects of regeneration were conceived by some of the leading writers in these centuries will be discussed in a later paragraph. The net result of the development of thought and practice in this period was to define the essentials of Baptism, and to lay stress on the importance of the ritual act, as itself conferring indispensable spiritual blessings. 'In Baptism by the institution of God, the material element of water, together with the prescribed form of words, is used to confer spiritual gifts' (Stone, *Holy Baptism*, p. 214). This sentence from a modern writer adequately describes the conviction which, with increasing clearness, controlled the mind of the Church subsequently to the 2nd century.

I. *THE INTRINSIC VALUE OF THE RITUAL ACT.*—This was emphasized principally (*a*) in the dread of repetition, (*b*) in the diminished importance attaching to the administrator of the rite, (*c*) in the tendency to regard conscious faith on the part of the recipient as non-essential. The first two points are evidenced mainly by the recognition of schis-

matic and even of heretical baptism as valid, provided water was used, and the subjects were baptized in the name of the Father and of the Son and of the Holy Spirit. The third point most clearly emerges in the growing custom of infant baptism.

(*a*) The question of *heretical baptism* was raised acutely in the controversy between Cyprian and Pope Stephen. In dealing with converted heretics, different Churches followed divergent traditions. The Roman Church required only that the returning heretic be received with the laying on of hands. Pope Stephen's position is summed up in the sentence: 'Si quis ergo a quacumque hæresi venerit ad vos, nihil innovetur nisi quod traditum est, ut manus illi imponatur in pœnitentiam' (Cyp. *Ep.* 74). The practice in Alexandria appears to have been the same (Eus. vii. 2, 7). Firmilian, bp. of Cæsarea in Cappadocia, opposes the custom of Asia Minor to the custom of the Romans. There it had always been assumed that any baptism outside the Church was invalid. Returning heretics were re-baptized, or rather received true baptism for the first time. At Carthage, the Roman custom seems to have prevailed (in spite of the attitude of Tertullian [see above, p. 386 f.]), and Cyprian was making an innovation when he insisted that all heretics should be baptized on joining the Church (see Eus. *HE* vii. 3, and note Cyprian's defence of truth against custom in *Epp.* 70–76). The African bishops followed Cyprian's lead.

The divergence in the customs of Rome and Asia may be accounted for by the differing characters of the heresies with which each had to deal. Asia Minor in particular and the East in general were troubled with a variety of fantastic sects, and it appears from a letter of Dionysius, in Eus. *HE* vii. 9, that some who came over from heresy had the gravest misgivings as to the worth of the baptism they had received. The sects in the East frequently adopted such peculiarities both in creed and practice as to render the position of Firmilian natural, if not inevitable. At Rome, on the other hand, the practical issue lay in the re-admission of Novatians, who were schismatics rather than heretics. They had broken from the Church on a question of discipline. In matters of faith they were quite orthodox. Their baptism did not seriously depart from the Church's model. There was no difficulty in accepting such baptism as valid.

The central arguments advanced by Stephen and his supporters were: (1) the appeal to tradition, for which Stephen claimed Apostolic authority (cf. Anon. *de Rebaptismate*, opening); (2) the majesty of the name of Jesus, which could not but be effective wherever and however pronounced. Thus Cyp. in *Ep.* 74 states his adversaries' position as follows: 'Effectum baptismi majestati nominis tribuunt, ut qui in nomine Jesu Christi ubicumque et quomodocumque baptizantur, innovati et sanctificati judicentur' (cf. also Firmilian, *Ep.* 75, *ap.* Cyp.). It is not clear that Stephen regarded baptism 'in nomine Jesu Christi' as valid; but the anonymous author of the *de Rebaptismate* apparently accepted the use of the earlier formula as sufficient. 'The invocation of the name of Jesus ought never to seem vain to us, because of the reverence due to it and the power that resides in it.' Stephen was prepared to adopt the conclusion that, where water and the correct formula were used, the character and creed of the administrators became a matter of indifference.

The positions laid down by the author of the *de Rebapt.* are not necessarily representative of his side, but they deserve notice. He held that heretical baptism did not of itself confer the gift of the Spirit, but it created a possibility of spiritual receptiveness which made its repetition superfluous. The imposition of hands supplied all defects. He distinguished baptism with water from baptism with the Spirit; and though within the Church the two were usually connected, they are clearly separable in the NT, and may be administered distinctly at all times; so that a man may receive water-baptism among the heretics, and the baptism with the Spirit through the laying on of hands at his entrance into the Church. He also claims that sound faith in the administrator cannot be an essential to the validity of water-baptism; for the disciples baptized while the Lord was with them, and while they understood His doctrine very imperfectly. The Divine name possesses peculiar powers, even when invoked by men who do not believe. Strangers to Christ, workers of iniquity, have cast out devils in His name. Consequently the name, by whomsoever invoked in baptism, is of itself operative, and a further invocation means reiterating baptism.

This distinction between water-baptism and baptism with the Spirit really turned the flank of Cyprian's position. He maintained that heretics could not give Christian baptism, because they did not possess the Holy Spirit. To Cyprian, the Romans seemed to be involved in the contradiction of asserting that a man could be born spiritually in a community destitute of the Spirit (*Ep.* 74). A valid baptism requires the invocation of the Holy Spirit; but it is impossible for heretics who do not possess the Holy Spirit to call down His blessing on the water (*Ep.* 70). If baptism is essentially spiritual, if it means regeneration, then it is impossible outside the Church. Nor can it be contended that the heretics hold the same faith. Even mere schismatics, like the Novatians, are at bottom heretics, and do not hold the same creed. Their baptismal confession does not coincide with that of the Catholic Church; for when they question the candidate and say, 'Credis remissionem peccatorum et vitam æternam per sanctam ecclesiam?' then they lie, because they have not the Church. The heretic and the schismatic cannot bestow forgiveness of sins; that is, their baptism cannot confer any of the blessings associated with baptism. In other words, they cannot baptize. There is only one baptism, that of the Church; and so, Cyprian maintained, those who come over from heresy are not re-baptized in the Church, but baptized (*Ep.* 71).

The controversy did not immediately arrive at a definitive issue. The divergence of practice did not at once disappear. The Donatists in the 4th century practically took their stand on Cyprian's rejection of heretical baptism, and they seem at one time to have represented national feeling in Africa. But in general neither Cyprian's sweeping rejection nor Stephen's indiscriminate acceptance received the approval of the Church. The Catholic line was that laid down in the Council of Arles (314), whose eighth canon runs thus: 'De Afris quod propria lege sua utuntur ut rebaptizent, placuit ut si ad ecclesiam aliquis de hæreticis venerit, interrogant eum symbolum, et si perviderint eum in Patrem et Filium et Spiritum Sanctum esse baptizatum, manus ei tantum imponatur ut accipiat Spiritum Sanctum. Quod si interrogatus non responderit hanc trinitatem, baptizetur.' In this council the African bishops, who sided with Cæcilian against the Donatists, abandoned Cyprian's attitude towards heretical baptism. This rule eventually met with general acceptance. In the East, at any rate in Asia, it was reluctantly adopted (Cyril) and carefully applied. The title-deeds of any heretical baptism were carefully scrutinized. Any departure from orthodox custom, such as the Eunomians' substitution of one immersion for three, was eagerly noted and condemned. Basil clearly leans to the view of Firmilian and Cyprian, but grudgingly admits the canonical validity of baptism by the Cathari (see letter 1881 in 'Library of Post-Nicene Fathers'). In the West, the rule was more readily adopted and more graciously applied. The weight of Augustine's authority was thrown on this side (see *de unico bapt. c. Petil.* ch. 3, for the main principle).

The central significance of the whole controversy lay (1) in the assumption, common to both parties, that there can be only one baptism,* and that this baptism is essential to salvation; and (2) in the progress made towards establishing the objective validity of the sacrament, defined as complete in the use of the correct material and the orthodox formula.

(*b*) *The Donatist controversy* carried the insistence on the objective validity of the sacrament still further. The gist of the Donatist contention was that the sacrament was invalidated by the misbelief or misconduct of the administrator. More particularly, the denial of the faith in time of persecution rendered all the sacramental acts of such traitors worthless. The Donatists followed Cyprian in believing that the character of the administrator affected the value of the rite. To admit this would have thrown doubt on the sacramental life of the past, and would have made the efficacy of the sacraments depend upon men. The defenders of the Catholic position would never consent to this conclu-

* Ultimately this was disputed only by the obscure sect of Hemerobaptists.

sion. Optatus asserts unhesitatingly the essential efficacy of the ritual act: 'The sacraments are holy in themselves, not through men' ('sacramenta per se esse sancta, non per homines,' *de Schismate Don.* v. 4). The three essentials to baptism are the Holy Trinity, the believer, and the administrator. But, while the first two are indispensable, the last is only *quasi*-necessary. The administrator is not the lord of baptism, but the agent: *i.e.* any administrator will serve the purpose (see Harnack, *op. cit.* v. 45). Augustine took up a similar standpoint. Baptism, as defined in the 8th canon of the Council of Arles, confers an indelible stamp on the recipient, which *ipso facto* requires no renewal. To suppose that it does not is to do wrong to the sacrament, to deny the power of God in it. It is impossible to summarize here the numerous writings of Aug. against the Donatists, but the following points may be noted:—

(1) Aug. is clear that the use of water, together with the words prescribed in the Gospel, suffices to make a valid baptism. The correct episcopal benediction is not essential. Heretical prayers may even be pernicious, but they cannot destroy the efficacy of the sacrament, provided the Gospel words are employed (*de Bapt. contra Don.* vi. 25). Here Aug. distinctly denies the importance attributed by Cyprian (see above) to the cleansing of the water by a correct benediction.—(2) In accordance with his own principles, Aug. regards lay baptism as valid. He is inclined to assert that any one who has truly received baptism * can pass on the gift, though, of course, he distinguishes the *sacramentum baptismi* from the *sacramentum dandi baptismum.* But Aug. does not doubt that a layman who baptizes in the name of the Trinity has conferred a valid baptism, whether he acts under the pressure of necessity or not. If he acts in a case of urgency, his action is at least pardonable, if not praiseworthy. If he baptizes when there is no need for him to undertake another man's office, his action is wrong, and may mean damnation for baptizer and baptized alike, but none the less is the baptism valid (*contra Ep. Parm.* ii. 18). This is an emphatic statement of the comparative unimportance of the minister, and of the all-importance of the ritual act.—(3) It is difficult to see what Aug. understood by the stamp (χαρακτήρ) conveyed in baptism, but it seems to be a permanent possibility of spiritual receptiveness, such as is suggested by the author of the *de Rebaptismate.* At least, Aug. is prepared to concede this efficacy to heretical baptism, because in itself the stamp does not connote the spiritual blessings secured by baptism within the Church. Heretical baptism conveys a something which is essential to salvation,—this must be maintained, if the sacrament is not to suffer wrong,—but the heretic derives no benefit from this possession so long as he remains a heretic. He possesses baptism, but he does not possess it unto salvation. 'Aliud est non habere, aliud non utiliter habere.' In fact, the stubborn heretic or schismatic receives baptism, not to his profit, but to his eternal loss. The man who has received heretical baptism carries about with him a hidden treasure, which he can enjoy only in the bosom of the Church. In this way Aug. was able to reconcile his belief in the objective efficacy of the sacrament with his conviction that union with the Catholic Church could alone ensure a saving use of baptismal grace.

The Donatist controversy thus completed the development initiated in the dispute between Cyprian and Stephen. The two essentials of baptism, water and the Gospel formula, stand out with increasing clearness, and the minister is recognized to be of comparative unimportance.

(*c*) The insistence on the intrinsic efficacy of the ritual act is further evidenced by *the tendency to regard conscious faith on the part of the recipient as non-essential.* It is interesting to notice that this was one of the points of difference between the Manichæans and the Christians. To the former, a baptism apart from conscious faith was absurd.

There is an illuminating story in Aug.'s *Confessions*, bearing on this point. A sick friend of his was baptized while unconscious. Aug., who was at the time under the influence of Manichæan ideas, was ready to treat the matter as a joke, thinking that he would laugh at a baptism which he had received 'while utterly absent both in mind and feeling' (*mente ac sensu absentissimus*). The friend, however, took the matter more seriously, and Aug., as he tells the tale, clearly thinks that the baptism had wrought a real change *in corpore nescientis* (*Conf.* iv. 4).

But the principal evidence for the growth of the view that baptism was of worth apart from conscious faith in the recipient is to be found in the

* This is Jerome's position: 'Ut enim accipit quis, ita et dare potest' (*Dial. c. Luciferianos, ap.* Höfling, i. p. 505).

custom of infant baptism. The existence of the custom from the time of Tertullian is undeniable, and Tertullian's plea for delaying the baptism of children does not imply that the practice against which he protests was of recent growth.*

Origen is familiar with the practice of child baptism, and assumes that it comes down from Apostolic times (*Com. in Rom.* v.). Cyprian's letter to Fidus (*Ep.* 59) discusses the question whether, in the case of infants, baptism should be postponed till the eighth day or not. Fidus wished to make the rite parallel with circumcision, and suggested that the babe was unclean immediately after birth. Cyprian and his colleagues decided that a babe might be baptized at the earliest possible moment, and they repudiated Fidus's suggestion, by saying that to kiss a new-born babe is in a manner to kiss the hands of God the creator. The whole discussion implies that infant baptism had long been in vogue. In the third century, infant baptism was regarded as an Apostolic institution at least in North Africa and in the Alexandrian churches. But while the evidence for the existence of the custom in the third century is overwhelming, we are, as Harnack says, 'in complete obscurity as to the Church's adoption of the practice.' The clear 3rd cent. references to child baptism interpret it in the light of original sin, and if the adoption of the practice is due to this interpretation, it is almost certainly a late 2nd cent. development. Cyprian clearly understands infant baptism in this sense (*Ep.* 59). Origen seems to have based its necessity on the pollution acquired in birth (*Hom.* viii. and xii. *in 1 Cor.*), while in his case the idea of pre-existence also suggested that infants were burdened with the sins of a previous life which might be removed in baptism (*de Prin.* iii. 5). This deduction of the need of infant baptism from the idea of original sin, or from that of pre-existence, may safely be regarded as a theological after-thought. The first is the product of reflexion on the writings of St. Paul. It is probable that men pondered long on the conception of original sin before they drew any such conclusion. References to original sin in Clement of Rome or other writers earlier than Cyprian cannot be held to imply a knowledge of the custom of infant baptism. Moreover, the idea that infants needed to be baptized for the remission of sins is contrary to all that is known of early Christian feeling towards childhood. The teaching of Jesus about children runs counter to any such notion, and, however little His sympathy for the young was appreciated, it was not forgotten (see Burkitt, *Gospel Hist. and its Transmission*, p. 285 f.). The most natural interpretation of the much-disputed text in St. Paul, 1 Co 7^{14}, is that Christian parentage in itself somehow hallowed childhood. Tert. speaks of the innocence, the guiltlessness of children, and apparently deduced from it that baptism was unnecessary (see *de Bapt.*, ed. Lupton, p. 52, n. 1). In this he represents what seems to have been the primitive Christian feeling, if the *Apology of Aristides* interprets that feeling aright: 'And when a child is born to any one of them, they praise God; and if, again, it chance to die in its infancy, they praise God mightily, as for one who has passed through the world without sins' (Syriac Version, c. 15, ed. J. Rendel Harris, Camb. *TS*). Perpetua's vision of her little brother Dinocrates, as in heaven, alive and well, shows how people clung to the idea that children as such belong to the

* The fact that Tert. uses the term *parvulus* and not *infans* is of no particular significance. He is not thinking of new-born babes, but the reference to sponsors (and indeed his whole discussion) implies that the children concerned are incapable of a public profession of faith. The principle involved is the same, though clear evidence for the baptism of new-born babes is not forthcoming till Cyprian's letter to Fidus.

Kingdom. In such an atmosphere, a baptism of infants for the remission of sins is hardly conceivable.

But it is probable that the custom did not originate with theologians. It should be noted that even in the 3rd cent. infant baptism cannot be described as a Church-custom. That the Church allowed parents to bring their infants to be baptized is obvious: that some teachers and bishops may have encouraged them to do so is probable, though there is no reason to suppose that Tertullian's position was peculiarly his own. But infant baptism was not at this time enjoined or incorporated in the standing orders of the Church. [It was not till the middle of the 5th cent. that the Syrian Church made infant baptism obligatory (see *DCA* p. 170).] Indeed, in the 4th cent. so prominent a teacher as Gregory of Nazianzus, who was in general eager to persuade people not to postpone baptism, urged the inadvisability of baptizing children before they were three years old, 'when they are capable to hear and answer some of the holy words' (*Or. de Bapt.*, *ap.* Wall, ch. 11, § 7). Again, this does not sound like a personal idiosyncrasy of Gregory. In any case, it is probable that the custom arose from the pressure of parents and not through the direct advocacy of the Church. If this be so, the reason for the adoption of the custom may perhaps be sought outside the idea of the remission of sins. The Pelagians held that infants were baptized, not in order that their sins might be remitted, but in order that they might be sure of admission into the Kingdom of Heaven. Unbaptized infants would not be punished, but could not go to Heaven. Among other passages, they set great store by a well-known utterance of John Chrysostom, which runs thus:

'You see how many are the benefits of Baptism. And yet some think that the Heavenly grace consists only in forgiveness of sins: but I have reckoned up ten advantages of it. For this cause we baptise infants also, though they are not defiled with sin: that there may be superadded to them Holiness, Righteousness, Adoption, Inheritance, a Brotherhood with Christ, and to be made Members of him' (see Aug. *c. Julian.* I. vi. f.).

Aug., in commenting on this extract, has no difficulty in showing that Chrysostom believed in original sin; but he does not succeed in disproving the Pelagian contention that Chrysostom found a reason for baptizing infants other than the need of the remission of sins or the need of getting rid of original sin. And though at first sight the Pelagian view of the necessity of infant baptism—the view that through it alone can certain positive advantages be secured—looks as if it were hammered out in the exigencies of controversy, yet it may after all be more primitive than that which eventually came to the front through the influence of Augustine.

Undoubtedly the Pelagian position harmonizes with some seemingly primitive Christian ideas about baptism. It has been suggested that baptism was fromt he first regarded as a Messianic sign. To be baptized was to be sealed for the coming Kingdom (see Schweitzer, *Von Reimarus zu Wrede*, p. 373 f.; and note use of term σφραγίς referred to on p. 385[b], and on Hermas, p. 384 f.). Baptism had a positive eschatological importance. To enter the Kingdom at all, one must wear the seal. The thought is expressed most simply in the apocryphal *Acts of Thomas*, where one of the Apostle's converts says: 'Give us the seal: for we have heard you say that the God whom you preach recognizes His sheep by the seal.' In the narrative, an anointing with oil follows; but this not improbably represents a primitive Christian view of baptism. Now it is possible that this thought even in NT times may have led parents to wish to have their children baptized. The primitive eschatological expectations may have introduced the custom—in which case it will be very early. In any event, the influence of Jn 3[5], as Höfling points out, played an all-important part in developing the custom of infant baptism. This text laid hold of the imagination in the 2nd century. Before any explanation of the necessity of re-birth had been thought out, the mere statement that to see the Kingdom a man must be born of water would trouble the minds of some whose children had died unbaptized. To such doubt and fear the practice probably owed its origin. The influence of the OT, and especially of the rite of circumcision, must also be taken into consideration; but, in general, the idea *extra ecclesiam nulla salus* made people anxious to enrol their children as Church members as quickly as possible.

When once the custom had been introduced, the interpretation which Aug. put upon it was almost inevitable. The conviction that there could be only one baptism, and that therefore baptism means always the same thing, to wit, remission of sins (the reference to 'one baptism' in Eph. is a constant factor in all discussions in this period); the use of the term 're-birth' in Jn 3, suggesting that baptism is a necessary supplement to natural birth; the ascetic view of marriage; the Pauline doctrine that flesh and blood cannot inherit the Kingdom of God—all these elements combined to establish Aug.'s view. The Pelagians, in saying that children must be baptized, not in order to secure the remission of sins, but in order to secure the Kingdom, were introducing two baptisms—as clear a heresy as re-baptism itself. Moreover, the Pelagians could give no satisfactory account of the fate of infants who died unbaptized. They would obtain eternal life and happiness, but not the Kingdom. Aug. denies the distinction (see *ad Marc.* i. 20, and *Sermo* 294, where he says: 'hoc novum in ecclesia prius inauditum est, esse salutem æternam præter regnum Dei'). If those who die unbaptized are outside the Kingdom, they must be in eternal misery, even though their torment be *mitissima et tolerabilior* (*Enchiridion*, 93). Baptism would be needless if it did not mean remission of sin. Since then the Pelagians admit that children should be baptized, and since children are innocent, the sin remitted to them must be original sin. That they are sinful is clear from the fact that Jesus called them to Himself, and He came to call not the righteous, but sinners (*ad Marc.* i. 19). But from Aug.'s standpoint the more serious error of the Pelagians lay in their optimistic view of human nature. To Aug. original sin was the most awful and obvious fact about men. The impossibility of keeping God's law apart from God's grace is written clear in all experience. The human will in itself is hopeless. 'We cannot do justly unless we are helped of God' (*ad Marc.* ii. 5). Human nature is tainted, and grace is a necessity from the first. The taint is explained monastically. Aug. admits that there is such a thing as a *bonum conjugii*, a legitimate use of wedlock, but he claims that all men are born of incontinence, and 'hoc est malum peccati in quo nascitur omnis homo. . . . Sed nemo renascitur in Christi corpore, nisi prius nascitur in peccati corpore' (*ad Marc.* i. 29; cf. the discussion of the significance of virgin-birth, *Ench.* 34). In all this, Aug. is developing the thought already suggested in Cyprian. His position found emphatic approval in the Council of Carthage held in 418–9, which promulgated the following canon:

'Item placuit ut quicunque parvulos recentes ab uteris matrum baptizandos negat, aut dicit in remissionem quidem peccatorum eos baptizari sed nihil ex Adam trahere originalis peccati quod lavacro regenerationis expietur (unde sit consequens ut in eis forma baptismatis in remissionem peccatorum non vera sed falsa intelligatur) Anathema sit' (*ap.* Wall, *Infant Baptism*, ch. 19).

Though, as Höfling maintains, the final preva-

lence of infant baptism must not be ascribed entirely to Aug., yet his defence of the practice must have done much to commend it. The emphasis on original sin made the rite seem natural and reasonable; for if, by their first unconscious and involuntary birth, children were born into an inheritance of sin, it was just that a second birth equally involuntary and unconscious should give them at least the chance of being co-heirs with Christ.* But however they interpreted the practice, the whole development implies the concentration of attention on the intrinsic efficacy of the ritual act. Aug. commends the African Christians because they spoke of baptism as salvation (*salus*). The giving of the sacrament to those 'who could not with their own heart believe unto righteousness, nor with their own mouth make confession unto salvation' witnesses to man's conviction of its inherent power to bestow spiritual blessings.

The growth of the practice of infant baptism broke in on the natural connexion between instruction, conscious faith, and the sacrament. The customary arrangements for the ceremony and the prescribed order rested on the assumption of conscious faith in the subjects. Up to the close of the 5th cent., baptism was still administered as a rule by the bishop (though later on the presbyters became the usual ministers—the anointing with oil on the forehead and confirmation being reserved for the bishop), and special seasons were devoted to the administration of baptism. Easter and Pentecost were observed in the West, and from the close of the 4th cent. many Popes made repeated attempts to confine baptisms to those seasons (see *DCA*, p. 165). The Eastern Churches further set apart Epiphany for this purpose, and local churches developed special usages. In case of necessity, baptism was administered at any time. Arrangements of this kind were natural when baptism regularly followed the catechumenate. The special seasons disappear when infant baptism becomes universal. Similarly, the whole ritual was designed for adults. The confession of faith in particular points to this; and it must be admitted that the institution of sponsors was a somewhat clumsy device to adapt to infants a ceremony which had clearly been ordered at a time when their baptism was not thought of. The Church reckoned baptized children as being among the faithful. The awkwardness of speaking of infants as *fideles* was felt by Bp. Boniface, to whom Aug. addresses a letter on the subject (*Ep.* 23). In the 8th cent., Theodulph (*de Ordine Baptism.* 1) naively remarks: 'Infantes ergo et audientes et catechumeni fiunt, non quo in eadem ætate et instrui et doceri possint, sed ut antiquus mos servetur, quo apostoli eos quos baptizaturi erant primum docebant et instruebant.' The ritual is frankly unsuitable for infants, but it is retained because the tradition that instruction and faith precede baptism is undeniably primitive.†

It should, however, be noted in this connexion, that it was never supposed that baptism apart from faith would suffice to secure eternal life.‡ Faith was still essential; but whereas faith had as a rule preceded baptism, it was now held that baptism would be equally effective if it preceded faith. And even so, a vicarious faith was required for the valid baptism of infants. Not only the sponsors, but the whole congregation, help to forward the communication of the Holy Spirit to the baptized child (see Aug. *Ep.* 23 *ad Bonifacium*). It is also true that baptism was administered only to children who would be instructed and trained in the Christian faith. It was never thought, or at least men were never encouraged to think, that the mere isolated act of baptism ensured salvation, even though the African Christians called it *salus*.

It remains to explain the ultimate prevalence of infant baptism. The catechumenate, and with it adult baptism, continued so long as the Church was making converts from heathenism. But infant baptism was not universally adopted by believers. For not only was the example of Constantine the Great, who postponed his baptism till near death, undoubtedly fashionable, and not only did many who were within the close range of Christian influence delay the decisive step, but there is reason to suppose that many baptized Christians did not in the 4th cent. push forward the baptism of their children. Gregory of Nazianzus, whose parents were both Christians, was not baptized till he was come to years of discretion (see Wall, vol. ii. ch. 3). The same was true of Ephraim Syrus (Butler, *Lives of the Saints*), and probably of Basil the Great (see Introd. to vol. viii. in 'Library of Nicene and Post-Nicene Fathers,' p. xvi). The want of reference to infant baptism in Basil's discussions of the subject, and the general character of his treatise, suggest that many were brought up in their homes, and were not put forward as candidates for baptism until they entered the catechumenate in riper years. The postponement of Aug.'s baptism till he was thirty-three years old is usually attributed to the heathenism of his father. But the passage in the *Confessions* (bk. I. ch. xi. in Gibb and Montgomery's ed.) suggests that Monica was not anxious to have Aug. baptized, except when he was in danger of dying. During an illness, Aug. was on the point of being baptized, when he recovered. The crucial passage runs thus: 'Dilata est itaque mundatio mea, quasi necesse esset, ut adhuc sordidarer, si viverem, quia videlicet post lavacrum illud maior et periculosior in sordibus delictorum reatus foret.' The alleged reason must have weighed with his Christian mother, not with his heathen father. If this interpretation be correct, then Monica's view was characteristic of many Christians in the 4th century. 'Although,' says Harnack, 'the principle was maintained that baptism was indispensable to salvation, still people dreaded more the unworthy reception of it than the risk of ultimately failing to receive it. In the 4th cent. it was still very common to postpone it, in order not to use this sovereign remedy till the hour of death' (*op. cit.* iv. 284). Another motive of such conduct lay in the thought that a life of indulgence could be washed clean by a deferred baptism. The unbaptized man could safely enjoy himself. 'Let him alone, let him do what he will; he is not yet baptized' (Aug. *Conf.* I. xi.). This sentiment is re-echoed by the objectors to whom Basil addresses his work. Aug. and other Church teachers could not deny the main premiss here assumed. They could urge the dangers of delay, but they did not deny that baptism, so deferred, would still be efficacious if received. Aug. regards it as one of the signs that grace does much more abound that, whereas Adam's fall involves us in original sin, the grace of the Second Adam in baptism removes not only original sin but all the sins we have ourselves committed. Many were anxious that they and their children should secure this more abounding grace. Moreover, men hesitated before the *pondus baptismi*, the moral obligations of the step. In Edessa, at the time of Aphraates, baptism may have meant the adoption of celibacy and been confined to a spiritual aristocracy, 'the sons of the

* Cf. *e.g.* the sentence in Theodulph, the 8th cent. bp. of Orleans, who says (*de Ordine Baptism.* 7): 'nec immerito dignum est ut qui aliorum peccatis obnoxii sunt, aliorum etiam confessione per mysterium baptismatis remissionem originalium percipiant peccatorum.' Aug. provided just this kind of *raison d'être* for infant baptism.

† Incidentally, the evidence of the ritual is against a very early date for the practice of infant baptism.

‡ That faith and baptism are inseparable is emphasized in Basil, *de Sp. Sanc.* 12.

Covenant' (see Burkitt, *Early Eastern Christianity*, p. 255 f.; but see also Connolly, *JThSt* vi.).

In the course of the 5th cent. infant baptism became the prevailing usage. The action of the Syrian Church in enforcing on parents the duty of having their children baptized has already been noticed. Many causes contributed to this result. The Christianization of society diminished the numbers of adult converts, and so lowered the importance of the catechumenate. The influence of Aug. and other Church Fathers was cast on this side. The growth of the penitential system served to remove in part man's fear of the *pondus baptismi*, while the readiness of the Church to administer the *viaticum*, or last sacrament, to all (see *DCA*, p. 2014), and eventually the practice of Extreme Unction, combined to meet the needs which had previously sought satisfaction in deferred and clinic baptism. Also, towards the latter part of this period, the penitential system became the means of moral instruction, which had previously been provided by the catechumenate. In the Church's dealings with the Teutonic nations, the baptism of converts resembled the baptism of infants in so far as systematic instruction in the faith was postponed till after baptism. It is true, Clovis and his followers were baptized on confession of faith; but the rude German warriors did not submit, and were not expected to submit, to a course of instruction such as had been given to catechumens. The catechumenate disappeared in the West, 'because, as whole peoples were baptized at once, infant baptism was introduced as a matter of course' (K. Müller). The Church opened her doors to infant and barbarian, partly because only so could she influence them, and partly because she believed that baptism could of itself confer benefits before faith was instructed or even existent.

(*d*) Some further illustrations of the importance attached to baptism, at least in the earlier portion of this period, may be adduced here. (1) As soon as Christianity became the State religion, *baptisteries* were among the first public buildings to be erected by believers. 'Of the construction of baptisteries in the time of Constantine the Great we have abundant proof' (*DCA*, p. 174). The practice of erecting separate buildings for the celebration of baptism continued in the West at least all through this period. It served to add solemnity to the rite of initiation. (2) The *elaboration of the ritual* served the same end. On p. 386 f. the development up to the time of Tert. is briefly summarized. If we compare the account in Theodulph of Orleans with that statement, the following additions are obvious. The practice of infant baptism by the close of the 8th cent. has led to the inclusion of the rites of the catechumenate in the *Ordo Baptismi*. The infants are first made catechumens, then breathed upon by the priest to receive the breath of the new life (insufflation). This is followed by exorcism and the reception of salt. It is probable, from Aug.'s reference in *de Pecc. remiss. c. Pel.* i. 34, that those rites were associated with infant baptism as early as his day. The *scrutinium*, to which Theodulph next refers, can have been only a form in the case of infants. The nose and ears were then touched with spittle, while the priest said 'Ephphatha.' This was followed by an anointing of the breast and shoulders with oil. This seems to be a weakened form of the preparatory unction which was certainly in use in the East in the time of Cyril of Jerusalem (see *Catech. Lect.* xx. 3). After baptism, Theodulph mentions the bestowing of white robes and of a mystic veil on the candidate, in addition to the chrism referred to by Tertullian. The clothing of the baptized with white garments is quite early, well-attested in the 4th century. Theodulph does not refer to the practice of handing over candles or torches to the neophytes to be lit up towards the close of the service, but the usage is clearly evidenced in Gregory of Nazianzus and in Ambrose, and is still preserved in the Roman ritual (see Höfling, i. 543). The use of milk and honey, mentioned in Tert., does not appear in Theodulph, and the history of this usage is obscure. As late as the 9th cent. there seems to have been a custom in some Western churches of mixing milk and honey in the communion wine offered to infants (Höfling, i. 546). A Gallican sacramentary adds the washing of the feet (*lotio pedum, pedilavium*) to the other ceremonies. Perhaps the most important addition after the 2nd cent. was the elaborate renunciation of the devil, together with all his works and pomps. The ceremonial development is an elaborate repetition of the central idea of the rite in additional symbolic acts. It tended to increase the mystery element in baptism. (3) A well-known story related in Socrates (*HE* ii. 16) forms the most striking illustration of the 4th cent. belief in the objective validity of the sacrament. The story is simply that the bishop of Alexandria accepted as valid a baptism administered by Athanasius as a boy to some companions who joined him in a game of pretence in which the ceremonial was imitated. The writer in *DCA* (p. 167) remarks that, whether true or legendary, 'it serves equally to illustrate the feeling of the Church at the time the story was first told.' Though baptism declined somewhat in importance after the 5th cent., the point of view here obtained was never lost. It was held (1) that baptism is essential to salvation;* (2) that baptism is valid if water and the true formula be used; (3) that baptism so administered confers an indispensable spiritual gift. This leads on to the discussion of—

II. *THE CONCEPTION OF BAPTISMAL GRACE IN THIS PERIOD.*—The primary gift in baptism is, of course, the remission of sins. 'Baptizati sumus, et fugit a nobis solicitudo vitæ præteritæ' (Aug. *Conf.* ix. 6). In the case of children, it is the guilt of original sin which is removed. There is an interesting observation in Cyril to the effect that 'remission of sins is given equally to all, but the communication of the Holy Ghost is bestowed according to each man's faith' (*Catech. Lect.* i. 5). The grace of forgiveness was, at any rate, assured. But baptism means more than this. It is essentially regeneration, and perhaps two main ideas may be grouped under this head: (1) the loosening of Satan's hold over the soul, (2) an organic inward change. (1) It is clear that to Cyprian baptism appealed as a peculiarly strong form of exorcism. Just as the Red Sea drowned Pharaoh, so baptism drowns the devil out of a man. 'Cum tamen ad aquam salutarem, atque ad baptismi sanctificationem venitur, scire debemus et fidere, quia illic diabolus opprimitur et homo Deo dicatus divina indulgentia liberatur . . . Spiritus nequam . . . permanere ultra non possunt in hominis corpore, in quo baptizato et sanctificato incipit spiritus sanctus habitare' (*Ep.* 76). Cyprian has previously pointed out that in exorcism the devil often plays the deceiver and says he has gone out when he has not; but the life-giving water is a sure means of expulsion. Somewhat similarly, in the apocryphal *Acts of Thomas*, a woman out of whom a devil has been cast asks the Apostle to give her the seal, 'that yonder fiend may not return to me again' ('Thomasakten,' § 49; *ap.* Hennecke, *Neutest. Apoc.*). In the baptism of infants, the exorcism and the renunciation were but parts of the process which was

* The only exception contemplated was martyrdom. Thus Cyril: 'If a man receive not baptism he has not salvation, excepting only the martyrs, who even without water enter the Kingdom' (*Catech. Lect.* iii. 10; cf. BAPTISM BY BLOOD).

completed in immersion. Every one, in virtue of birth, stands within the kingdom of Satan. This, to Aug., is clear from the fact that the soul of a new-born infant suffers 'several passions and torturings of the body, and, what is more dreadful, the outrage of evil spirits' (*de Pecc.* iii. 10). Why are infants exorcised at all, if they do not belong to the household of Satan? (*de Pecc.* i. 34). Aug.'s views here rest ultimately on the grand conception of the two cities, the City of God and its rival. The transition from the latter to the former is effected in baptism.

(2) Not only, however, is the devil driven out of possession, but the soul is cleansed and reformed in the process of regeneration. At times, and in the case of some persons, even bodily tendencies are completely removed. In a wonderful letter (*Ep.* 1), Cyp. speaks of the thorough change of character wrought in baptism. He explains to Donatus that for a long time he was sceptical on the subject. He could not believe that the extravagant man could be made thrifty, the luxurious induced to return to simplicity, the licentious persuaded into chastity.

'With enticements always gripping a man fast, revelling must as usual attract, pride as usual inflate, anger inflame. Greed will not cease to disquiet, cruelty will not lose its sting. The delight of ambition, the overwhelming power of lust, will not be less. So I thought. . . . But after the taint of my past life had been washed away with the aid of the regenerating wave, after light had poured from above into my cleansed heart, now calm and pure, after the second birth had made me a new man by the draught of the heaven-born spirit, then forthwith, in a wonderful fashion, things I had doubted became certain; closed doors opened; dark places were filled with light; what had seemed difficult was now easy; what I thought impossible became possible; so that I could not but see that the "I" of my previous fleshly birth, which had lived bound to sins, had been of the earth, whereas the "I," in which the Holy Spirit now breathed, had begun to be of God' (*Ep.* i. 3).

Without attempting to analyze this beautiful passage, we may recognize that for Cyp. baptism meant the lessening of temptation. On this he is elsewhere very emphatic; for, when a correspondent is puzzled that sick persons after being baptized are still tempted of the devil, Cyprian's answer is practically to deny the fact (see *Ep.* 76). The same thought is expressed more crudely in the *Acts of Paul and Thekla*, where Thekla says, 'Give me the seal in Christ, and no temptation will invade me' (Hennecke, *op. cit.* 'Paulusakten,' § 25). The passage in the *Confessions* (i. 11), where Aug. wonders whether it would not have been better for him to have been baptized earlier, suggests that he would have sinned less in that case, not only because of the sense of responsibility attaching to baptism, but also because of the grace to live up to that responsibility which he would thereby have received. But this idea hardly needs illustration. The lessening of the power of temptation is brought about in two ways, viz. by the loosening of the hold of previously formed sinful habits, and by the gift of new life in the Spirit. The distinction is most interestingly presented in a passage from Basil:

'Hence it follows that the answer to our question why the water was associated with the Spirit is clear; the reason is because in baptism two ends are proposed: on the one hand, the destroying of the body of sin that it may never bear fruit unto death; on the other hand, our living with the Spirit and having our fruit in holiness: the water receiving the body as in a tomb figures death, while the Spirit pours in the quickening power, renewing our souls from the deadness of sin unto their original life. This then is what it is to be born again of water and of the Spirit, the being made dead being effected in the water, while our life is wrought in us through the Spirit' (*de Sp. Sanc.* 15; Oxford tr. by C. H. Johnston).

This first end—the death unto sin in baptism—is, of course, a commonplace in all discussions of the subject. The tendency was to conceive the grace of baptism as specially directed to counteract concupiscence, which formed the primary factor in original sin (see Aug. *Ench.* 64). Among the rhetorical epithets which Gregory of Nazianzus applies to baptism, not the least significant is his description of the new birth as λυτικὴ παθῶν, in contrast to carnal birth. Basil, again, explains the pillar of cloud as 'a shadow of the gift of the Spirit who cools the flame of our passions by the mortification of our members' (*de Sp. Sanc.* ch. 14).* So much, indeed, was expected of this destruction of sinward tendencies, that Hilary had to warn his readers against supposing that baptism would restore to them the innocence of childhood. Similarly Aug. is very careful not to exaggerate the benefits of baptism when he says (*de Pecc.* i. 39):

'Evacuatur [caro peccati] non ut in ipsa vivente carne concupiscentia conspersa et innata repente absumatur et non sit, sed ne obsit mortuo [parvulo] quæ inerat nato. Nam si post baptismum vixerit, . . . ibi habet cum qua pugnet, eamque adiuvante Deo superet, si non in vacuum gratiam eius susceperit. . . . Nam nec grandibus hoc præstatur in baptismo (nisi forte miraculo ineffabili omnipotentissimi creatoris) ut lex peccati quæ inest in membris repugnans legi mentis, penitus extinguatur et non sit: sed ut quicquid mali ab homine factum, dictum, cogitatum est, cum eidem concupiscentiæ subjecta mente serviret, totum aboleatur, ac velut factum non fuerit, habeatur.'

For Aug. baptism means the breaking down of sinful habit, the bestowal of a special grace of resistance, but not the entire removal of the enemy. The new life in the Holy Spirit is not altogether distinct from this loosening of sinful habit, but it is something more than this. 'Baptism purges our sins and conveys to us the gift of the Holy Spirit' (Cyril, *Catech. Lect.* xx. 6). More than once in the 4th and 5th cent. literature the thought appears that baptism makes a Divine impress (*effigies*) on the raw material (*terra*) of human nature (Aug. *Conf.* i. 11, xiii. 12). The raw material is, so to speak, cleansed for the reception of the Spirit, and then receives the stamp of the image of God. 'The water cleanses the body, the Spirit seals the soul' (Cyril, *Catech. Lect.* iii. 4). The natural powers of men did then and there receive a Divine reinforcement. Hilary claims that the doctrine of the Trinity can be understood only by the regenerate mind. 'Novis enim regenerati ingenii sensibus opus est ut unumquemque conscientia sua secundum cœlestis originis munus illuminet' (Hil. *de Trin.* i. 18). The power and presence of the Spirit were bestowed in baptism, though, according to Cyril, the gift of the Spirit was proportioned to faith (*Catech. Lect.* i. 5). Thus baptism did not simply secure the remission of sins: it tamed the fierceness of temptation; it broke 'the power of cancelled sin'; it began the new life.

Note on Confirmation and Baptism.—At the beginning of the 3rd cent., Confirmation and Baptism were universally parts of the same rite. This close connexion continued to be normal for the 3rd and 4th cents., though in the West Confirmation began to be detached from Baptism 'shortly before the middle of the 3rd century' (Harnack, *op. cit.* ii. 141, n. 3). By the close of the period, they are usually separated in the West (see Theodulph, *de Ordine Baptism.* 17); but 'it was not till the thirteenth century that the two ordinances were permanently separated, and an interval of from seven to fourteen years allowed to intervene' (*DCA*, p. 425).

The writers of this period do not hesitate to attribute the very highest spiritual blessings to baptism (see, *e.g.*, the authorities cited in Stone, *Holy Baptism*, ch. v. n. 11). But it is difficult to say how far they attributed these blessings to baptism in the narrow sense of the term, as distinct from Confirmation. A definite line of doctrine associated the cleansing with immersion, and the gift of the Holy Spirit with the imposition of the hands of the bishop. The man who was baptized and not confirmed was like a cleansed temple without a Divine tenant. This view rested on a very early tradition (see p. 382 f. on Acts and 387 on Tert.). It appears in Cyp. (*Ep.* 74, § 5), and most clearly in Cornelius's verdict on Novatian (Eus. *HE* vi. 43). Novatian had been baptized on his bed during sickness. On recovery he failed to receive the supplementary rites: more particularly he was not sealed by the bishop. Since he missed this, how could he have received the Holy Ghost? (οὐ μὴν οὐδὲ τῶν λοιπῶν ἔτυχε, διαφυγὼν τὴν νόσον, ὧν χρὴ μεταλαμβάνειν κατὰ τὸν τῆς ἐκκλησίας κανόνα, τοῦ τε σφραγισθῆναι ὑπὸ τοῦ ἐπισκόπου. Τούτου δὲ μὴ τυχών, πῶς ἂν τοῦ Ἁγίου Πνεύματος ἔτυχε;). Perhaps this passage should not be pressed, as it is the product of controversy; but it is evidence for the practice of the Church in the case of 'clinics.' If they recovered, their baptism, which would otherwise have been counted sufficient in itself, must be completed by Confirmation

* The connexion between chastity and baptism had been over-emphasized in some heretical sects. Cf. p. 388 on Marcion, and also note *Acts of Thomas* here.

if it was to be effective.* It further shows that normally baptism was not complete without the laying on of hands, and consequently this part of the ceremony was essential to the reception of the Holy Ghost.

The development of thought on the subject during this period seems to have been briefly this :—

(1) Cyprian and his supporters regarded immersion and the laying on of hands as inseparable parts of the same sacrament, which could not safely be administered apart. This latter assertion is aimed at the Roman view. See *Ep.* 73, and note the strong view of Remesianus (in *Cypriani Opera*, ed. Hartel, i. p. 639): 'Neque enim spiritus sanctus sine aqua separatim operari potest nec aqua sine spiritu. Male ergo sibi quidam interpretantur ut dicant quod per manus impositionem spiritum sanctum accipiant et sic recipiantur, cum manifestum sit utroque sacramento debere eos renasci in ecclesia catholica' (Harnack, ii. p. 141, n. 1).

(2) As we have seen earlier, the author of the *de Rebaptismate* contends that spiritual baptism is essentially bound up with the laying on of hands, and that, though water and Confirmation are necessary to a complete Christian baptism, yet the two parts of the one rite may be sundered in time. The benefits of immersion are latent until the rite is supplemented by the laying on of hands. On this view, as on Cyprian's, the laying on of hands is essential to the gift of the Holy Spirit, but the two parts of the one sacrament are separable. It may be noted here that, even after baptism began to be more frequently administered by presbyters and deacons, and the episcopal Confirmation was separated from baptism in point of time, they were not immediately regarded as distinct sacraments. Confirmation completes baptism. Thus the Council of Elvira (324 ?) ordered that in the case of those who had been baptised by a deacon, 'sine episcopo vel presbytero,' the bishop 'per benedictionem perficere debet.' In this edict, baptism by the presbyter includes the laying on of hands: but Jerome seems to confine the latter to bishops, who were to travel round their districts and lay hands on the baptized *ad invocationem Sp. Sancti* (see *DCA*, 'Confirmation,' p. 426, where *c. Lucifer*. 4 is cited). In the 8th cent. Theodulph, as noted, expressly reserves Confirmation to the bishop. However, the canon of the Council of Elvira clearly shows that Confirmation was regarded as the necessary complement to Baptism, and that the two ordinances could be received at different times (cf. also *Tracts for the Times*, 67, p. 153 n.).

(3) Jerome, in his discussion with the Luciferians, asserts that the Holy Spirit is bestowed in true baptism; and he regards the insistence on episcopal Confirmation as mainly a matter of Church order, intended rather for the honour of the priesthood than for any rule of necessity ('ad honorem potius sacerdotii quam ad legem necessitatis'). He argues that those who are baptized in outlying districts, and who fail to be confirmed, would be in a deplorable position, if the gift of the Holy Spirit can be received only through the laying on of hands. He claims that the case of the eunuch whom Philip baptized proves that the Holy Spirit is really given in baptism (*Dial. c. Lucif.*, *ap.* Höfling, i. 506). In this position, Jerome represents the development which was almost inevitable as soon as baptism and Confirmation were considered as separable within the Church, and the separation was no longer that between heretical baptism and orthodox Confirmation. In the latter case, it was natural to assert that the gift of the Holy Spirit depended on Confirmation; in the former it was equally natural to claim that there was a clear bestowal of the Holy Spirit in baptism apart from Confirmation. The ultimately predominant view in the West was expressed in a Gallician homily (author unknown) on Pentecost, from which the following sentences are taken: 'Ergo Sp. Sanctus, qui super aquas baptismi salutifero descendit illapsu, in fonte tribuit plenitudinem ad innocentiam, in confirmatione augmentum praestat ad gratiam. Quia in hoc mundo tota aetate victuris inter invisibiles hostes et pericula gradiendum est, in baptismo regeneramur ad vitam, post baptismum confirmamur ad pugnam, in b. abluimur, post b. roboramur. Ac sic continuo transituris sufficiunt regenerationis beneficia, victuris autem necessaria sunt confirmationis auxilia.' In this way Baptism and Confirmation tend to become two independent sacraments, each really bestowing the Spirit, and each endowed with a special grace.

In Augustine's discussion of heretical baptism, the conception of special graces attaching to baptism and the laying on of hands had been clearly emphasized. Baptism of itself imparted a certain stamp to the soul, and the *manus impositio* resulted in the bestowal of that highest gift of the Spirit, the bond of love which could be received only in communion with the Catholic Church (see passages collected in Höfling, i. 506 f.). This highest gift of love was necessary to the heretic if what he had received in baptism was not to work him eternal ruin; it was equally necessary to the orthodox believer, *ad confirmationem unitatis in ecclesia*—to borrow the phrase of a later writer, Haymo.

It should further be noted that all the effects of baptism were the work of the Holy Spirit. Even where there is a tendency to regard baptism as a preparatory cleansing, this cleansing is in itself the gift of the Holy Spirit, an evidence of the operation of the Holy Spirit in the soul of the baptized. The emphasis on this is universal. Take, *e.g.*, Origen's insistence on the importance of the invocation: 'The bath of regeneration . . . is no longer mere water: for it is sanctified by a mystic invocation' . . . *οὐκέτι μὲν ψιλὸν ὕδωρ· ἁγιάζεται γὰρ μυστικῇ τινι ἐπικλήσει* (*ad* Jn 3^5 fr. 36). If in Aug. the invocation is not felt to be indispensable, the reason is that all water has been consecrated, both by the baptism of Jesus and by the fact of the Holy Spirit brooding over it at creation. Water is the natural instrument of the Spirit, and it is cleansing only because the Spirit works through it. Thus in the *Ench.* Aug. points out that, though Christians are said to be born of water, they are not sons of water, but sons of the Spirit and of their mother the Church (cf. Basil, *de Sp. Sanc.* 15). All that takes place in baptism is spiritual; and even those who connect the Holy Spirit most closely with Confirmation recognize a gift of the Spirit in baptism, if they accept baptism as valid at all. Indeed it is mainly in limiting the benefits of heretical baptism that the earlier view found in Tert. is pressed. When men's thoughts were not troubled with the question presented by the separation of the two ordinances, they unhesitatingly attributed the gift of the Spirit in the fullest sense to baptism. Thus Basil (*op. cit.* 15) distinctly connects the pouring in of the Spirit and the beginning of the new life with immersion. 'The water receiving the body as in a tomb figures death, while the Spirit pours in the quickening power, renewing our souls from the deadness of sin unto their original life. . . . In three immersions, then, and with three invocations, the great mystery of baptism is performed.' Though Basil even here does not use the term 'the indwelling of the Spirit,' yet surely it is implied; and this is the unembarrassed expression of the natural Christian view of baptism. For further discussion see Mason, *Relation of Confirmation to Baptism*, and Höfling, § 94.

III. *THE BEARING OF BAPTISM ON THE CHURCH LIFE OF THIS PERIOD.*—One or two general observations must be added here.

(*a*) The whole development in the earlier centuries here under review reflects *the influence of the pagan background on the Church's life.* It is true that the institution of baptism cannot be traced to a Gentile source. But the insistence on the objective efficacy of the sacrament is largely the result of pagan presuppositions. The idea of regeneration may not be derived from the heathen world; men's preoccupation with it comes from this source (cf. Heitmüller on John, in *Die Schriften des NT*, ii. 743). It may be that no parts of the Christian ceremonial are borrowed from the Mysteries: but the tendency to add to the solemnity of initiation, which is implied in the ceremonial development, is one of the characteristics of the Mysteries. The close connexion of baptism with exorcism and with the renunciation of the devil is derived not from the NT, but from the demon environment in which the Church was actually living. If the bestowal of grace through visible objects be a primitive Christian conception, the emphasis on the material means was largely evoked by pagan feeling. The purpose of the sacramental side of the Church's life may have been designed to give that assurance of real contact with God somewhere which so many despairing pagans failed to find anywhere. It may be doubted whether the certainty about God for which men longed intensely could have been mediated on any large scale to the world at that time except through the conception of sacramental means of grace.

In this connexion the reader must be referred to the popular views mentioned on p. 394. Some of these betray a non-Christian emphasis. It is probable that the Punic Christians who spoke of baptism as *salus* implied much that Aug. would have hesitated to endorse. A perhaps more than Christian confidence seems to be displayed on sarcophagi of the 4th and 5th centuries, since the present writer understands that the description of the deceased as 'baptized' was as reassuring as phrases like *inter sanctos*.

(*b*) The rite of baptism *focused attention on some central Christian truths*. Thus, those who received it were led to reflect on the doctrine of the Trinity. In the teaching of Aug. the idea of regeneration in itself suggested and enforced the fundamental concept of grace. Baptism meant that salvation is God's work, and apart from Him it does not even begin (cf. *Tracts for the Times*, 67, pp. 91–97).

(*c*) As interpreted by the great teachers, *e.g.* Basil and Cyril of Jerusalem, *baptism became a powerful moral lever*. The ethical and the sacra-

* This consideration rather weakens the force of the argument based on Cyp. *Ep.* 76. There Cyp. argues that *clinici*, although merely sprinkled (*perfusi*) and not immersed (*loti*), are as truly baptized as any, and that in them the Holy Spirit dwells. But, as he seems to be speaking of recovered *clinici*, it cannot be assumed with Darwell Stone (*op. cit.* p. 80) that they had not been confirmed.

mental were neither separated nor opposed in the minds of the Fathers of the 4th and 5th centuries. *ἆρα πᾶς ὁ βαπτισθεὶς τὸ τοῦ εὐαγγελίου βάπτισμα ὀφειλέτης ἐστὶ κατὰ τὸ εὐαγγέλιον ζῆν*—is the conclusion of the discussion of the first question in Bk. ii. of Basil's work on Baptism. It is the motto of all his treatment of the subject. To him baptism is primarily a death, which commits us to a new life (see his *de Bapt.* i., and *de Sp. Sanc.* 15, § 35, and cf. Cyril, *Catech. Lect.*, Introd. § 4, and Lect. ii.). Clearly his view of baptism and its moral effects is derived from the conversions which must have been constantly associated with the rite. And his exposition of the life demanded from the baptized shows that it was possible only to a morally renewed character. The association of this moral change with baptism, and the emphasis on the moral obligations therein assumed, must have made it a powerful factor in raising the moral life. Moreover, the preparation for baptism and the actual ceremony marked most impressively the convert's complete break with paganism. The Christians thought of themselves as a distinct race (cf. Aristides); it is difficult to over-estimate the moral stimulus of the solemn initiation which made a man a member of that race. But the influence of baptism in this direction was certainly diminished as the catechumenate decayed. The moral power of infant baptism could never be as great.

(*d*) It must, however, be remembered that the decay of the catechumenate and the practice of infant baptism enabled the Church to Christianize the barbarian nations more rapidly than if the older system had been retained. 'At a later time, baptism brought a man under the jurisdiction of the Church. The Inquisition had no authority over a non-baptized person. To baptize a man was therefore to bring him under jurisdiction. Thus, in the case of the Saxons in Charles the Great's day, and the Danes in Alfred's, baptism was a token of submission' (note by Foakes-Jackson). With this readier admission to the Church went, no doubt, *the decay of the Puritan conception of the Church.* 'But it is clear that if the Church was to gain any hold upon the society of the old world which was to pass away, or upon the new races that were to take their place, it must receive them into its fold as they were' (A. V. G. Allen, *Christian Institutions*, p. 408). This was certainly true of the new races.

2. The Middle Ages and the Council of Trent.—Though Scholasticism devoted much attention to the sacraments, the mediæval Church added little to the doctrine of Baptism. The position arrived at in the earlier period was simply defended and defined against heresy and malpractice. Developments were few. The re-statement of the orthodox view in the Lateran Council of 1216 may be taken as the starting-point for a few observations. The definition there adopted was 'Sacramentum vero baptismi, quod ad invocationem individuæ trinitatis, videlicet, Patris et Filii et Spiritus Sancti, consecratur in aqua tam parvulis quam adultis, in forma ecclesiæ a quocumque rite collatum, proficit ad salutem' (Labbe, *Concilia*, xi. 143).

(*a*) The main point asserted here is that *baptism does produce a real effect which makes for salvation, even in infants.* Innocent III. held that, as original sin was contracted by infants *sine consensu*, so they could be freed from it, *per vim sacramenti*, before they were of an age to understand and consent. Similarly, he thought that baptism would be effective if administered to men asleep or mad, provided they had previously shown an intention of receiving the sacrament. Only a definite resistance at the time of baptism could render it inoperative (Denzinger, *Enchiridion*, 341 f.). Repentant Waldensians must approve the baptism of infants (*ib.* 370). Earlier Councils had anathematized heretics who asserted 'parvulis inutiliter baptismum conferre.' The Lateran Council of 1139 condemned those who rejected the *baptisma puerorum.* Denzinger identifies these heretics with the followers of Peter of Bruys and Arnold of Brescia. Similarly, the Council of Rheims in 1148 condemned the Henricians. The general sacramentalism of most Scholastics, early and late, emphasized the real effectiveness of baptism. To Hugo de S. Victor, Augustine's definition of a sacrament as *signum rei divinæ* seemed inadequate. He preferred to speak of a sacrament as 'corporale vel materiale elementum foris sensibiliter propositum, ex similitudine repræsentans, ex institutione significans, et ex sanctificatione continens aliquam invisibilem et spiritualem gratiam.' Similarly, the sacraments of the NT differ from those of the OT by being more effective. The latter promise, whereas the former give, salvation (see the well-known sentence in Peter Lombard *ap.* Hagenbach, *Dogmengesch.*[3] 452). Later, Thomas Aquinas holds that 'necesse est dicere sacramenta novæ legis per aliquem modum gratiam causare.' That the NT sacraments work *ex opere operato* was a not uncommon view (cf. Hagenbach, p. 453, n. 7). Consequently Thomas Aquinas regarded baptism as a *causa instrumentalis* of grace, though he held that it 'does not act by virtue of its own form, but only through the impulse it receives from the principal agent' (Harnack, vi. 206). For this reason the institution or appointment of the sacrament is all-important to Aquinas. He was the first to trace all the seven sacraments of the Schoolmen back to Christ, whose Passion made them of worth. More especially in Baptism, as in Confirmation and Ordination, a certain stamp (*character*) is irrevocably assumed by the recipient (see the definition by Eugenius IV.: 'Inter hæc sacramenta, tria sunt, Baptisma, Confirmatio, et Ordo, quæ characterem *i.e.* spirituale quoddam signum a ceteris distinctivum imprimunt in anima indelebile, unde in eadem persona non reiterantur'). From this standpoint the Lateran Council of 1216 had rebuked the Greeks for re-baptizing those whom the Latins had already baptized (Denz. 361). Some of the Schoolmen seem to have doubted whether baptism conveyed to infants anything more than the remission of the guilt of original sin. But in 1312, Clement V. lent the weight of his authority to the alternative doctrine that not only was guilt remitted, but 'virtutes ac informans gratia infunduntur quoad habitum, etsi non pro illo tempore quoad usum' (Denzinger, 411).

(*b*) *The general necessity of water-baptism to salvation was steadily maintained*, Jn 3[5] being the chief authority for the position (see Bull of Eug. IV.; cf. Denz. 591). Thomas Aquinas, however, regarded Flagellants as, equally with the martyrs, baptized in blood; and such baptism made the use of water non-essential. Also, the clear intention to be baptized might stand for the deed. Thus Innocent III. declares that an unbaptized priest (!), who died *sine unda baptismatis* but strong in faith, must be held to have reached the joy of the land celestial (see Denz. 343). But baptism *aut in voto aut in re* is necessary. This position was maintained against the Cathari, who rejected water-baptism as an empty ceremony. It would also be maintained against those who, following Joachim de Flore, regarded sacraments as a temporary expedient, doomed to disappear in the Kingdom of the Spirit. That the sacraments might ultimately be left behind was not denied; but that such a stage had been reached or was imminent, or that such a stage would ever come to the Church Militant on earth, was not to be admitted.

(*c*) *The minister of baptism was usually the priest*, and in the mission churches of Germany

the ceremony was by preference administered in the mother-church of a given group (Hauck, *Kirchengesch. Deutschlands*, iv. 23). But the Lateran Council of 1216 is careful to state that baptism is valid, by whomsoever duly administered. In cases of necessity, no restriction is observed, provided the minister keeps to the Church's form and intends to do what the Church does. Eugenius IV. states the matter thus: 'Minister huius sacramenti est sacerdos, cui ex officio competit baptizare. In causa autem necessitatis non solum sacerdos vel diaconus, sed etiam laicus vel mulier, immo etiam paganus et hæreticus baptizare potest dummodo formam servet Ecclesiæ et facere intendat quod facit Ecclesia' (Denz. 591). Innocent III. does not even emphasize the occasion of necessity, and in the earlier Middle Ages lay baptism may have been not infrequent. The Church was also careful to assert that the character of the minister did not impugn the validity of the sacrament. This view was urged against the Waldensians, on whom Innocent III. imposed the following recantation: 'Sacramenta quoque . . . licet a peccatore sacerdote ministrentur, dum Ecclesia eum recipit, in nullo reprobamus' (Denz. 370). This position needed also to be upheld in the face of popular superstition. Thus, somnambulists were popularly supposed to have been baptized by drunken priests, and in 1375 there was an uproar in a Dutch town because an epidemic of St. Vitus's dance was attributed to the incontinence of the priests who had administered baptism (see Lecky, *Hist. of Rationalism*, i. 399, note). The prevalence of such ideas would make it necessary to assert that the sacrament depended on the intention and not on the character of the minister. That, however, a minister was necessary was as steadily maintained. Innocent III. condemns the self-baptism of a dying Jew (Denz. 344).

(*d*) *The essentials of baptism remained unchanged.* The rite was duly administered if the name of the Trinity was invoked, and if water was used. Some phrase must be used to state the fact that the candidate is being baptized. It is not enough to say 'In nomine Patris et Filii et Spiritus Sancti,' and immerse. The omission of 'Ego baptizo te' is condemned by Alexander III., and the condemnation was repeated in 1690 (Denz. 331, 1184). But both the Latin formula 'Ego baptizo te in nomine . . .' and the Greek 'Baptizatus est talis in nomine . . .' are recognized as valid by the Bull of Eugenius IV. (Denz. 591).

As to the second element, the use of true natural water, hot or cold, was alone recognized in baptism (see Eug. Bull). Innocent III. declared a baptism of an infant *in extremis* with human saliva to be invalid (Denz. 345). A special sanctity attached to water. The earlier discussions as to the possibility of baptizing in wine or milk or sand were not seriously revived.

Perhaps the only important change in the form of baptism was the general substitution in the West of sprinkling for immersion. The West seems always to have been readier to alter tradition in this matter than the East. Thus, while the East retained trine immersion, Gregory the Great had permitted, in Spain, the adoption of one immersion (*Ep.* i. 43, ratified in Council of Toledo, 633). Affusion had from the earliest times been permitted, at least in cases of necessity. In the Middle Ages, from the 13th cent. onwards, *baptisma per aspersionem* became more and more common. The decree of Innocent III., cited in the previous paragraph, implies it. Thomas Aquinas compared sprinkling with immersion, and, while preferring the latter as better representing the death to sin, regarded the former as valid. Clement V. formally recognized the practice (1305), and in the 15th century Lyndwood (iii. 25) declared that 'it is sufficient that a small drop of water thrown by the baptizer touch him who is to be baptized. It is sufficient that water which has been sprinkled touch some part of the body' (cited *ap.* Stone, p. 272). It appears that England did not so readily abandon the older practice of immersion as the Continental churches. According to Floyer (*History of Cold Bathing*, p. 63, ed. 1706), Erasmus noted it as a singularity in England that infants were still immersed, and sprinkling did not become general till after the Reformation (see Wall, pt. ii. ch. 9, for full discussion).

(*e*) In Germany, at least, *an attempt was made to magnify the office of godfather.* It was expected that godfathers would instruct their godchildren in the Creed and the Lord's Prayer (Hauck, *op. cit.* iv. 38). This was a poor substitute for systematic instruction by the priest, but it was an attempt to attach a real responsibility to the office of godfather. The Council of Trent subsequently emphasized the importance of sponsors by forbidding marriage between persons who stood in the relationship of godfather and godchild. They were regarded as within the prohibited degrees (Sessio 24, ch. 2).

The moral power and general importance of baptism were diminished by the enhanced value set on the sacrament of Penance. In the decrees of the Lateran Council of 1216, the decree relative to baptism is immediately followed by a reference to penance: 'Et si post susceptionem baptismi quisquam prolapsus fuerit in peccatum, per veram pœnitentiam *semper* potest reparari.' The early Church had refused to follow the Novatians and condemn penitents to despair; but, whereas the early Church held out hope to the penitent, the mediæval Church offered them the assurance of recovery in the sacrament of Penance. This tended to minimize the horror of post-baptismal sin, or, perhaps it would be truer to say, it recognized the absence of any such distress in the mediæval believer.

The Council of Trent systematized the mediæval doctrine and practice. In the 5th session, original sin and the relation of baptism to original sin were discussed. Adam's transgression meant that he lost his original righteousness, incurred God's wrath, became liable to death, was under the power of Satan, and suffered a change for the worse in body and spirit. These effects are transmitted to all his posterity. This sin of Adam is passed on to every one, and can be removed only by the merit of Christ. His merit avails for young and old in the sacrament of baptism. Infants are to be baptized, not that sins of their own committing may be forgiven, but 'ut in eis regeneratione mundetur quod generatione contraxerunt.' The necessity of regeneration rests on Jn 3⁵. The guilt of original sin is removed in baptism, and the regenerate are no longer sinful in the eyes of God, though there remains in them a root of concupiscence which is left for them to struggle against. This concupiscence must not be called 'sin,' if by the term it is implied that there is anything in the regenerate which can properly be called sin. It is sin only in so far as it comes from sin and leads to it. During the 7th session, the Council put forth 16 anathemas on the subject of baptism. They assert the following points: the baptism of John is not the same as that of Christ; natural water is necessary to baptism; the Church of Rome has the true doctrine on this subject; heretical baptism, administered in the name of the Trinity and with the true intention of the Church, is valid; baptism is not a matter of choice, but is necessary to salvation; the baptized can lose grace, through sin, even if they retain faith; the baptized are bound not simply to believe, but also to keep the whole

law of Christ: the baptized must conform to the teaching of the Church; vows made after baptism cannot be regarded as cancelled by the baptismal confession; post-baptismal sin cannot be done away with merely by the memory of baptism; a repentant apostate does not need to be re-baptized; no one should assert that a candidate for baptism must be of the same age as our Lord at His baptism; infants must not be denied baptism because they cannot exercise conscious faith; the ratification of baptism by the baptized when of age is not optional.

The Council regarded baptism as the *causa instrumentalis* of justification, adopting the phrase of Thomas Aquinas (Sess. vi. ch. 7), and further distinguished between Baptism and Penance. In the former the priest does not act as judge. He must admit all to baptism. Baptism means a new creation, and is the free gift of grace. It cannot be repeated. Penance, on the other hand, is controlled by the priest as a judge, can be repeated, and is rightly described as a laborious baptism.

A brief analysis of the Roman ritual for administering baptism to infants may complete this section. The priest meets the company at the door of the church. After the question, What do you want of the Church? and the answer, the priest drives out the unclean spirit by exsufflation. He then makes the sign of the cross with his finger over the forehead and over the heart of the child. After two prayers, salt—the salt of wisdom—is given to the child. A further prayer is followed by exorcism. The priest now brings the child into the church and approaches the font, repeating the Creed and the Lord's Prayer as he goes. A second exorcism is pronounced, and the priest wets his finger, and with it touches the ears and nostrils of the child, saying 'Be opened.' The sponsors on behalf of the child renounce the devil with all his pomps and works, and the priest proceeds to anoint the child with holy oil, on the breast and between the shoulders, in the form of a cross. The sponsors repeat the Creed. Baptism follows by triple affusion or by immersion. Where there is a doubt whether the child has not already been baptized, the priest prefaces the formula with the words 'si non es baptizatus.' The child is now anointed with the holy chrism on the top of the head. A white cloth is placed on his head and a lighted candle is given to him or his godfather to hold. The ceremony concludes with a benediction.

The developments of the Reformation will most readily be classified by their relation to this standard of doctrine and practice.

3. The Reformation Period and after.—The mediæval development, summed up in the Tridentine decrees, had emphasized the paramount importance of the sacraments for religion. The sacraments are pre-eminently the means of grace, and by them the Divine influence is accommodated to the varying necessities of differing periods of the Christian life. With Baptism is bound up the grace of regeneration, the forgiveness of original sin, and of all actual sins committed before its reception. Without it we cannot enter on the Christian life. Other sacraments—Confirmation, Penance, and the Eucharist—are ordained of God to provide the grace demanded by the later needs of the believer. The essential efficacy of baptism was strongly asserted. It imprints even on passive recipients a Divine impress or character.* An elaborate ritual, if explained and understood, enforced the central idea of the new birth by symbolic reiteration; if unexplained and misunderstood, it still enhanced the sense of mystery surrounding the sacrament, though it tended to produce popular superstition.* For good or ill, it increased the importance of the ceremony. This standard of doctrine and practice underwent considerable modification in the Protestant Churches.

* Attention was in the main concentrated on the gift of God in the sacrament. The grace accorded in baptism was held by the Thomists to be necessarily and reasonably associated with water, while the Scotists would regard the spiritual effect as an arbitrarily predetermined synchronism with the use of the element. In either case, emphasis is thrown on the sacrament as a certain and indispensable means of grace.

It would involve needless repetition to discuss in detail the position of each Church. Instead, we shall show how the views of the sacrament were affected by some of the leading ideas of the Reformation, giving illustrations from the formularies and practices of particular Churches. The changed conception of grace which carried with it a revised conception of the means of grace; the new idea of faith, and the fresh emphasis thrown upon it; the appeal from tradition to the Bible; the humanism and rationalism of the Renaissance—all these influences in their several ways profoundly affected the doctrine and practice of baptism. These leading forces may be discussed in order, though any attempt to keep them rigidly apart must be artificial.

A. The conceptions of Grace and Faith.—The Reformers' conceptions of grace and faith are inseparably connected. It is a commonplace that the fundamental fact in the Reformation, at least as dominated by Luther, was the renewal of the Pauline experience of justification by faith. Forgiveness of sins and fellowship with God became realities to a penitent trust in the Divine Love. The assurance to which faith clung was mediated through the word or promise of God, however preached. The entry of the grace of God into the believing heart might be effected in many ways—by prayer, by the ministry of a preacher, by the reading of the Bible. Faith comes by hearing. Wherever the influence of Luther or of Calvin went, this kind of faith—a conscious penitent trust in the Gospel—was aroused, and it tended to revolutionize men's views of the sacraments.

(1) *The sacraments came to be regarded as one means of grace among others.* To Luther the sacraments are nothing but 'a peculiar form of the saving word of God (of the self-realizing promise of God)' (Harnack, vii. p. 216). The influence of the sacraments was thus assimilated to the influence of preaching. Calvin, in the first edition of the *Institutes*, discusses prayer and faith before he comes to the sacraments at all. *The sacraments have ceased to be central.* Other means of grace—prayer, the devotional study of the Scriptures, the development of preaching—have been placed alongside of and even above them. This tendency has worked itself out in Protestantism over against Roman Catholicism, in Calvinism as contrasted with Lutheranism, and in the Puritanism of Dissent in distinction from Anglicanism. To illustrate from the last only, the Puritans wanted lectures, Archbishop Laud wanted an altar; and, as Dr. Forsyth says, the sermon holds the central place in the church life of Nonconformity which the Mass holds in Roman Catholicism. In general, it followed that for the Reformers the sacraments were not absolutely indispensable; they did not communicate a grace which could not otherwise be mediated. 'Believers before and without the use of sacraments communicate with Christ' is one of the heads of agreement between Zürich and Geneva in 1554. It is not true, of course, that all Reformers or Reformed Churches would have accepted the following position of Calvin, but it represents an undeniable characteristic of Protestantism:

* See Tyndale, *Doctrinal Treatises*, p. 276 f.

'It is an error to suppose that anything more is conferred by the sacraments than is offered by the word of God, and obtained by true faith. . . . Assurance of salvation does not depend on participation in the sacraments, as if justification consisted in it. This, which is treasured up in Christ alone, we know to be communicated, not less by the preaching of the Gospel than by the seal of a sacrament, and it may be completely enjoyed without this seal' (*Inst.* IV. xiv. 14).

The Westminster Confession applies this general principle to baptism when it says that 'Grace or salvation is not so inseparably annexed unto Baptism that no person can be regenerated or saved without it.' This point of view is more clearly expressed in Calvin than in Luther. Calvin maintained that baptism is necessary, 'not to give efficacy to God's promise, but to confirm it to us,' and 'when we cannot receive the sacraments of the Church, the grace of God is not so inseparably annexed to them that we cannot obtain it by faith according to His word' (*Inst.* IV. xv. 22).

Calvin's standpoint is well illustrated (1) by his rejection of the baptism of children *in extremis* as superstitious, and (2) by his abandonment of the traditional interpretation of Jn 3^5. Under the first head, he regarded lay baptism as unnecessary, and baptism by women as a presumptuous sin. Their only justification was the absolute necessity of baptism; but this he denied. 'Unbaptized children are not therefore excluded from the kingdom of heaven.' The elect child will be saved, baptized or unbaptized. Under the second head, he claimed that the phrase 'born of water' does not refer to baptism, but 'water and spirit' in this passage are one and the same thing—the action of the Spirit is cleansing, like that of water.

The Reformed Churches differed widely in their estimates of the importance of the sacraments, ranging from the high esteem accorded to them in the Anglican and Lutheran Churches, to their complete rejection by the Quakers. But even where baptism meant most, its absolute necessity to salvation was not asserted. Thus in the Church of England the two sacraments are held to be generally necessary to salvation. This was certainly understood by some of the Elizabethans to mean generally, *i.e.* ordinarily, though not absolutely necessary (2 Whitg. 523, 537). Wilful rejection of baptism was no doubt damnable, and a probable sign of reprobation. But God's grace was not tied to it (2 Jew. 1107; 2 Whitg. 538; 2 Bec. 215). The fathers of the Church of England refused to assert with Rome the damnation of the unbaptized, though they hesitated to make any large assertion on the other side. Hooker criticizes Calvin's supposition that predestination overrides the necessity of baptism; but for him unbaptized infants are not those who are certainly lost, but those 'whose safety we are not absolutely able to warrant' (*Eccl. Pol.* v. 60, 64). Though it is quite open to an English Churchman to hold a stricter view, the Church of England at the outset seems to have leant to the larger hope, and, while emphasizing the value of baptism, hesitated to affirm its absolute necessity. So far she sided with Protestantism against the Middle Ages. Other Protestant Churches went further. Calvin's position (see above) represents the attitude of Scottish Christianity, while the view of Independents may be summed up in this article from a Baptist Confession, on which it was hoped all Protestants would unite:

'We do believe that all little children dying in their infancy, viz. before they are capable to choose either good or evil, whether born of believing parents or unbelieving parents, shall be saved by the grace of God and merit of Christ their Redeemer, and the work of the Holy Ghost, and so being made members of the invisible Church shall enjoy life everlasting. For our Lord Jesus saith, Of such belongs the kingdom of heaven. Ergo, we conclude, that that opinion is false, which saith, that those little infants dying before baptism, are damned' (Orthodox Creed, § 44, in *Confessions of Faith*, Hanserd Knollys Soc.).

If the majority of Protestants did not fall under the anathema of Trent by regarding baptism as *liberum*, free or indifferent, none gave exactly the Roman sense to *necessarium*.

(2) It followed from this that *the outward elements in the sacrament became of less importance.* The Reformers denied the doctrine that the sacraments confer grace *ex opere operato.* At least in his earlier period, Luther held that the grace of baptism is conferred 'not certainly by the water, but by the word of God, which is with and beside the water, and by the faith which trusts in such word of God in the water' (Harnack, vii. 217 n.). Calvin was more emphatic: 'Not that such graces are included and bound in the sacrament, so as to be conferred by its efficacy, but only that by this badge the Lord declares to us that He is pleased to bestow all these things upon us' (*Inst.* IV. xv. 14). In the heads of agreement between the Churches of Geneva and Zürich, drawn up in 1554, it was asserted that the spiritual effect was not necessarily annexed to the elements: 'For those who were baptized as infants, God regenerates in childhood or adolescence, occasionally even in old age' (Calvin, *Tracts*, vol. ii. p. 218). Also, the sacraments could of themselves convey no benefit to the reprobate, who, however, undoubtedly participated in them. The Tridentine position, that the right use of the elements confers grace unless its reception is opposed by mortal sin, was therefore uncompromisingly rejected (*op. cit.* p. 217). The Westminster Confession likewise asserts that 'the grace which is exhibited in or by the Sacraments rightly used is not conferred by any power in them; . . . but [it depends] upon the work of the Spirit and the word of institution which contains, together with a Precept authorizing the use thereof, a promise of Benefit to worthy receivers.'

It should, however, be noted (*a*) that Luther later emphasized 'the objectivity of the means of grace,' and threw more stress on the outward element of water, in order to gain certainty in the face of enthusiasts who made all turn on inner feeling. This meant the retention of earlier sacramental feeling in the Lutheran Church (see Harnack, vii. 250).

(*b*) The article of the Church of England (Art. 27) speaks of baptism as the sign of regeneration, 'whereby as by an instrument they that receive Baptism rightly are grafted into the Church.' The use of the phrase, 'as by an instrument,' goes beyond the obsignatory view of the sacrament which followed from the Calvinist standpoint. It suggests the earlier idea of baptism as a *causa instrumentalis* of justification. The phrase emphasizes the value of the means used in baptism, and that this is its force is clear from the passages cited in Hardwick, *Hist. of Articles*, p. 379. Perhaps a Calvinist could have taken it to mean 'an authoritative document.' The Gorham case seems to legitimise the Calvinist view in the Church of England, but her normal doctrine is that baptism in itself bestows the grace of regeneration on all who receive it. Indeed, Dodwell, one of the Non-Jurors, set an extravagantly high value on baptism as the source of immortality (see Lecky, *Hist. of Eng.* i. 80).

(*c*) It is further of importance that both the Lutheran Church and the Church of England parted company from Calvinists on the question of the private baptism of infants. The Lutheran condemnation of the Calvinist view may be found in certain Articles of Visitation cited in Hardwick, *op. cit.* p. 379 f. Archbishop Whitgift defended the validity of baptism by women (though admittedly irregular), and also the practice of private baptism, against Cartwright. He quoted Martin Bucer's praise of the form of private baptism inserted in the Prayer-Book. Bucer thought it well 'that the baptism of infants be not deferred; for thereby is a door opened unto the devil to bring in a contempt of baptism and so of our whole redemption and communion of Christ, which through the sect of Anabaptists hath too much prevailed with many' (2 Whitg. 553). To the Calvinists, baptism was a ceremony to be confined to the Church; if a child could not be baptized in church, it should not be baptized at all. It was a matter of indifference, and, according to Cartwright, even if it did prejudice the salvation of the child, the glory of God was more important than a man's salvation. But the Calvinists usually held that such baptisms *in extremis* were mere superstition. The Church of England, on the other hand, in view of the close connexion between baptism and salvation implied in Jn 3^5, deliberately provided for private baptism, lest baptism as an instrument of salvation should be undervalued.

(3) More fundamental was *the changed conception of forgiveness* in the minds of the Reformers. Both to mediæval doctor and to Protestant divine, baptism was unto remission of sins. But, according to the earlier view, baptism conveys forgiveness

for original sin and for sins committed before baptism. According to Luther, baptism is, for penitent faith, the assurance that God is a forgiving God. According to the former, baptism brings a definite grace, a limited forgiveness, to meet particular sins. According to the latter, baptism witnesses to the constant attitude of God towards a contrite heart. It follows from this, that in the Roman view post-baptismal sin requires a fresh bestowal of grace, a further sacrament; in Luther's view, it suffices to remember the assurance of forgiveness once received in baptism. So the Council of Trent aimed the 9th anathema of Session vii. at this latter doctrine, while Luther held that the Council did not understand the Gospel.

Calvin's teaching does not differ in essentials from that of Luther on this point. Baptism is first and foremost an assurance of forgiveness and of imputed righteousness. 'In baptism we perceive that we are covered and protected by the blood of Christ, lest the wrath of God, which is truly an intolerable flame, should lie upon us' (*Inst.* IV. xv. 9). Or, as Becon says, 'By it we are removed from the fierce judging-place to the court of mercy' (2 Bec. 635, Parker Society). Calvin, too, says that 'at whatsoever time we are baptized, we are washed and purified once for our whole life. Wherefore as often as we fall we must recall the remembrance of our baptism, and thus fortify our minds' (cf. 4 Bul. 356 and 3 Whitg. 17 and 141 in Parker Society). The grace given in baptism is not confined to forgiveness. According to Calvin, baptism is conducive to faith, not only by being an assurance of forgiveness, but also by giving us the grace of the Holy Spirit, to form us again to newness of life. Christ by baptism has made us partakers of His death, ingrafting us into it. This is mortification (the death of the old man) and regeneration (the birth of the new). Moreover, baptism so unites us to Christ Himself as to make us partakers of all His blessings (*Inst.* IV. xv. 6). Somewhat similar definitions of baptismal grace may be found in Article 27 of the Church of England and in the Westminster Confession.

It should be noted that, though Calvin speaks of regeneration in baptism, his master-thought is still the forgiveness of sins and the imputing of Christ's righteousness to us. For he holds that baptism means the removal of the guilt of original sin and not the destruction of original sin itself. Ro 7 is the experience of the baptized Christian. Here he would fall under the anathema pronounced in the Tridentine decree about original sin (Sessio v. § 5). For a vigorous statement of Calvin's view, compare the Westminster Confession, 'Of the Fall.'

But more important than the definition of baptismal grace is the thought that baptism is not so much the means whereby God conveys these blessings to the soul, as the sign and seal whereby He confirms and ratifies His promises to the believer. The obsignatory view of the sacrament is the essentially Calvinist view. Baptism is a kind of sealed instrument assuring us of forgiveness. It is an authoritative declaration on God's part of His willingness to fulfil the new covenant with the baptized. The phrase 'sign and seal' is the characteristic one. Depraved human nature can dispense with no props for faith. In the sacrament, God condescends to give an outward attestation of inward blessings.

The following illustrations may be adduced:—(1) Art. 27, Church of England: 'Baptism is . . . also *a sign of regeneration* or new birth, whereby, as by an instrument, they that receive Baptism rightly are grafted into the Church: *the promises of the forgiveness of sin* and of our adoption to be the sons of God by the Holy Ghost *are visibly signed and sealed: Faith is confirmed*, and Grace increased by virtue of prayer unto God.' It has already been observed that this article goes beyond the Calvinist standpoint in regarding the sacrament as something more than a sign or seal (see above, under (2)). But the blessing of the forgiveness of sin is surely understood in the broader Protestant and not in the narrower Roman sense, and the language about the signing and sealing of the promises is quite in accord with Geneva.* (2) The Westminster Confession (ch. xxviii.): 'Baptism is a sacrament of the New Testament, ordained by Jesus Christ . . . to be unto (the party baptized) *a sign and seal of the Covenant of Grace*, of his ingrafting into Christ, of regeneration, of remission of sins, and of his giving up unto God through Jesus Christ to walk in newness of life.' The Confession goes on to say that in baptism 'the grace promised is not only offered, but really exhibited and conferred by the Holy Ghost, to such (whether of age or infants) as that grace belongeth unto, according to the counsel of God's own will.' But this means little more than that baptism was a reliable sign of assurance—for the elect! The last words throw the whole into doubt. The position is simply Calvinist. A Particular Baptist (*i.e.* Calvinistic Baptist) Confession of 1688 holds almost exactly the same language (see *Confessions*, Hanserd Knollys Soc. p. 226).

It was in pursuance of this obsignatory view of the sacraments that those of the OT were placed by Calvinists alongside of those of the NT. The OT sacraments and the baptism of John were similarly signs witnessing to the Divine promises. They were as effective signs as the sacraments of the NT. Calvin maintained, against the Schoolmen, that the baptism of John was the same as Christian baptism, 'only he baptized in the name of him who was to come, the Apostles in the name of him who was already manifested.' Similarly, the Westminster Confession (ch. xxvii.) asserts that 'the Sacraments of the Old Testament in regard of the spiritual things thereby signified and exhibited were, for substance, the same with those of the New' (cf. 4 Bul. 354, Parker Soc.).

(4) As Baptism is primarily a confirmation of faith, *it presupposes conscious faith*. The effectiveness of the sacraments depends on faith. The sacraments, including baptism, are appeals to faith; they cannot act where faith is not. Of sacraments in general, Luther laid down the proposition that they are efficacious, *non dum fiunt sed dum creduntur* (Harnack, vii. 216). Leo X. condemned Luther for considering it heretical to suppose that the sacraments could confer justifying grace on all who did not make active objection (Denz. 625). In other words, Luther held that passive reception was not enough, positive faith was essential. Of Baptism in particular, the Larger Catechism asserts that 'in the absence of faith, baptism continues to be a bare and ineffectual sign' (Harnack, vii. 251). Luther also claimed that baptism represents and requires a continual penitence. 'Baptism means that the old Adam must be drowned in us day by day through daily sorrow and repentance, . . . and that there must daily come forth and arise a new man' (Harnack, vii. 217 n.). Calvin is equally clear: 'From this sacrament, as from all others, we gain nothing, unless in so far as we receive in faith' (*Inst.* IV. xv. 15). The assurance of Divine forgiveness can come only to a living faith. Moreover, baptism is also a confession of such faith. It is not only God's seal to the New Covenant; it is man's. It is 'a sign of profession' (Art. 27, Church of England). Baptism had always been a confession of faith. Almost every *Ordo Baptismi* contains a recital of the Creed. But to the Protestant, faith meant more than the recital of the Creed. It presupposed penitence, and was an undertaking to walk in newness of life. A passage in Gosse, *Father and Son* (p. 200 f.) represents an idea of faith which obtained a wide currency in Protestantism:

'As a rule, no one could possess the Spirit of Christ without a conscious and full abandonment of the soul; and this, however carefully led up to and prepared for with tears and renunciations, was not, could not be, made except at a set moment of time. *Faith in an esoteric and almost symbolic sense was*

---

* Parallels among the Elizabethans are frequent. Thus Bradford: 'It requires that we should be regenerate, and confirms and seals our regeneration.' Or Becon: 'Of itself it brings not grace, but testifies that he who is baptized has received grace' (2 Brad. 289; 2 Bec. 220). And later, Burnet's view that 'our Saviour has made baptism one of the precepts though not one of the means necessary to salvation' develops a somewhat similar, though not exactly parallel, teaching (Burnet on Art. 27).

necessary, and could not be a result of argument, but was a state of heart.'

But if baptism be the public confession of such a faith, and if it be the assurance of God's forgiveness in answer to such faith, then it is a natural corollary that baptism should be administered only to such as have passed through this experience.

'If the fundamental evangelical and Lutheran principle is valid, that grace and faith are inseparably inter-related . . . then infant baptism is in itself no Sacrament, but an ecclesiastical observance: if it is in the strict sense a Sacrament, then that principle is no longer valid' (Harnack, vii. 251).

Not many Protestants were prepared to draw the logical conclusion and abandon the practice of infant baptism. A threefold division of the Reformed Churches followed. (*a*) There were those who confined baptism to adults, or rather to conscious believers, *e.g.* the Mennonites in Holland and Germany (see separate article), the Baptists in England and America, and the Plymouth Brethren. (*b*) Some Churches retained infant baptism, and fell back on earlier ideas of baptismal regeneration. The Lutheran and Anglican Churches represent this tendency. (*c*) Yet other Churches retained the custom, but altered its significance.

(*a*) The position of the first requires little further explanation. The earliest Baptist Confession, printed at Amsterdam in 1611, is quite explicit.

Art. 13 declares that 'every Church is to receive all their members by baptism upon the confession of their faith and sins, wrought by the preaching of the gospel, according to the primitive institution and practice. And therefore Churches constituted after any other manner, or of any other persons, are not according to Christ's testament.' Art. 14: 'Baptism, or washing with water, is the outward manifestation of dying unto sin and walking in newness of life: and therefore in nowise appertaineth to infants.' Other Confessions add little to this.

The following points deserve attention: (*a*) The Baptist position involved the Puritan conception of the Church. The Church is the communion of saints. As one of the Confessions says (Hanserd Knollys Soc. i. 40), the servants of God are 'to lead their lives in a walled sheepfold, and in a watered garden.' The early Baptist Churches were apt to be strongly disciplinary. (*β*) Though in other Confessions (*op. cit.* pp. 42, 226) the benefits signified by baptism are unfolded, yet the emphasis falls on the idea of baptism as a public profession of personal faith. This is still characteristic (cf. art. ANABAPTISM, i. 410[b]). (*γ*) The essence of the Baptist doctrine was, and is, the contention that no one can or should be made a Christian without the conscious co-operation of his own will. They asserted the liberty of the individual conscience. Their opposition to 'the Bloudy Tenent of Persecution' was based on first principles, and was not simply due to their being in a minority. Similarly, it seems a natural development of their position that communion should be open. At first, most Baptists were strict Baptists, *i.e.* only baptized believers could join the Church and take part in the communion (see Art. 13 of Confession just cited). The American Churches still lean to this side. But from early days some Baptists held that the question must be left to the individual for decision, *i.e.* those who were personally convinced of the truth of believers' baptism must act up to the conviction. Those who did not share this conviction, but still professed belief in Jesus Christ, were welcomed to Church-fellowship. See app. to Confession drawn up in 1688 (*Conf. of Faith*, Hanserd Knollys Soc. p. 244): 'The known principle and state of the consciences of divers of us . . . is such that we cannot hold church communion with any other than baptized believers, and Churches constituted of such: yet some others of us have a greater liberty and freedom in our spirits that way.' The majority of Baptist Churches in England to-day are open in this sense, and the throwing open of Church membership in the face of trust-deeds led to one or two interesting lawsuits in the 19th cent. (see G. Gould, *Open Communion and the Baptists of Norwich*, 1860). The practice of open communion seems to be the natural issue of the stress laid on the individual will. (For the whole point cf. Harnack, vii. 125, on 'The Anabaptists.') (*δ*) The dangers of the Baptist position clearly lie on the side of spiritual pride and the over-development of religious self-consciousness. An exceptional, because boyish but still instructive, instance may be studied in Gosse, *Father and Son*, pp. 211–217.

(*b*) The dilemma as to infant baptism, occasioned by the new emphasis on faith, was met by Luther in another manner. 'Luther retained infant baptism rather as the sacrament of regeneration' (Harnack, vii. 251). He fell back on the Roman doctrine. He strove to retain the connexion between faith and baptism by continuing the *interrogatio de Fide* and the presence of sponsors in the rite, and by supposing that there is a kind of faith bestowed on infants. Similarly, Calvin maintained that 'infants may have infused into them a kind of faith and knowledge, though not ours.' Or, again, the faith of the parents might be taken as standing for the faith of the children. Thus Beveridge claims that the children of Christian parents are disciples. This was, in fact, the abandonment of the Protestant view of faith (see Harnack, *loc. cit.*). As already pointed out, some Calvinists were prepared to give baptism as a sign of a regeneration that should follow (see p. 401). Luther, on the other hand, distinguished between regeneration and justification. Regeneration was an inward effect, wrought in baptism. Justification, the inner experience of repentance and forgiveness, was a distinct and later stage in religious development. The Church of England retained infant baptism on somewhat similar terms. Regeneration is carefully distinguished from conversion, and the former may precede the latter.

'Conversion is the act whereby, in response to and by the power of divine grace, the soul turns to God in the desire to accept and do His will. Regeneration is the gift which God bestows on the soul by producing in its nature such a change as imparts to it the forgiveness of original sin, and makes it to be accepted by God instead of under His wrath' (Darwell Stone, *op. cit.* p. 35).

The Church of England likewise retained sponsors and the *interrogatio de Fide*, which is essentially an attempt to make faith still the introduction to baptism. Again, the Reformers' first conceptions of faith and of regeneration are abandoned, and an approximation is made to the Roman doctrine.

(*c*) The retention of infant baptism did not, however, always mean the restoration of the older interpretation of the practice. The Puritans in England objected to the institution of godfathers and godmothers, and in their Admonition of 1571 complained that 'they prophane holye baptisme, in toying folishly, for that they ask questions of an infante which cannot answere' (*Puritan Manifestoes*, p. 26). In the form of baptism adopted in Geneva there are no sponsors, and no profession of faith is made on behalf of the child. The parents or other responsible persons recite the Creed, as the faith which they hold and in which they intend to bring up the child. Thus in the order for the administration of baptism in the Presbyterian Church of England, based on the Westminster Confession, the minister says to the parents: 'Seeing it is your duty to nourish and bring up this child for God, it is fitting that you renew the confession of your faith before God and this congregation.' There is no attempt to preserve the connexion between faith and baptism by a vicarious declaration of faith and of willingness to be bap-

tized, made in the name and on behalf of the child. The Calvinist Churches thus broke with a practice that claimed to come down from Hyginus in the 2nd century. Moreover, the ritual act is not conceived as in itself conveying regeneration at the time. 'Baptism (is) the sacrament of admission into the visible Church, in which are *set forth* our union to Christ and regeneration by the Spirit, the remission of our sins and our engagement to be the Lord's' (Articles of Faith, Presbyterian Ch. of Eng. 20). And in the ritual service, the minister is directed to pray that God will grant 'that this child, *having been in God's own good time born again by the Holy Ghost*, may come to years of understanding, that he may confess the only true God, and Jesus Christ whom He has sent.' Baptism then stands not for an inner change necessarily wrought at the moment in the unconscious child, but for the recognition of the fact that the children of believers are already part of the visible Church, and should be at once admitted. It is, further, a declaration of God's goodwill towards the child, and the sign and seal that He will in His good time fulfil in the child the promises set forth therein. In baptism the parents solemnly engage themselves to bring up the child in the fear of the Lord.

The Wesleyan Church, which did not start from the Calvinist basis, but made much of conversion, retains infant baptism in a similar sense. There is no recitation of the Creed at all. After baptizing the child, the minister says: 'We receive this child into the congregation of Christ's flock, *that he may be instructed* and trained in the doctrines, privileges, and duties of the Christian religion; and *trust* that he will be Christ's faithful soldier and servant unto his life's end.' It is most significant that this declaration is followed by the four short petitions (*e.g.* 'Grant that the old Adam in this child may be buried') which in the Church of England service precede baptism. The Wesleyans pray that God will fulfil in the future the promises symbolized in the ritual act: in the Church of England, prayer is offered that these results may then and there be initiated.

To the Congregationalists infant baptism is little more than a dedication service. The Calvinist Churches generally, and some other bodies, have thus retained the practice and altered its meaning.

In the Churches which retained infant baptism, the sense of personal responsibility connected with believers' baptism was attached to a later rite of admission to the full privileges of Church membership. Confirmation in the Lutheran Church and in the Church of England, First Communion among the Presbyterians, Covenanting with God among the Wesleyans, are in practice equivalent to believers' baptism. Confirmation in the Church of England is administered to the baptized when they have come to years of discretion, 'to the end that they may themselves with their own mouth and consent ratify and confirm' the promises made for them in baptism. This view and use of Confirmation is distinctly Protestant. In the West, Baptism and Confirmation had become separated in point of time; they were still united in the East, and were administered to children in succession, being immediately followed by the Communion. The Western separation of the two Sacraments did not, however, imply that Confirmation was to be given only to those who had made a profession of conscious faith after reaching years of discretion. Confirmation was not intended to be the ratification of baptismal vows. The Council of Trent anathematized those who regarded Confirmation as nothing else than a catechetical exercise by which those on the borders of manhood professed the grounds of their faith before the Church (Sessio 7, 'De Conf.,' canon 1). The Church of England did not treat Confirmation as simply this, but, under the influence of Protestantism, she did limit it to adolescents, in order that it might serve this purpose.

[Cf. D. Stone's plea for restoring the primitive and Greek practice of confirming infants. He notes that the Church of England continued and emphasized the mediæval separation of Confirmation from Baptism. He does not sufficiently recognize that this emphasis is the result of the Reformation—a concession to the Protestant conception of faith (*Holy Baptism*, p. 186).]

The sacrament of Confirmation is in effect dependent on the previous confession of faith. This meant a recognition of the fundamental connexion between grace and faith. Instead of abandoning infant baptism, most Protestant Churches put a fresh meaning into Confirmation or its equivalent. They thus adhered to the view that the full privileges of the Christian life could not be bestowed unless consciously desired.

The reasons for the retention of infant baptism were many and complex. The Reformers were not all eager iconoclasts. Luther and the most influential Elizabethans departed only slowly from traditional doctrine and custom. Moreover, the new practice of adult baptism was connected with a party that was socially despised and politically discredited. A supporter of adult baptism might be supposed to come from Münster. All the leading Reformers ascribed Anabaptism to the devil. A cloud of suspicion and contempt hung over Baptists and Mennonites in the 17th century. They were suspected of being ignorant and revolutionary.

The Baptist historian, Thomas Crosby, is constantly twitting Neal, the learned author of the *History of the Puritans*, with an affected contempt for Baptists. Here is one passage: 'the Rev. Mr. Neal has given us an account of [Vavasor Powell], and tells us he was educated at Jesus Coll., Oxon.; and had he been an illiterate man, it's not unlikely but he would have told us also that he was a Baptist' (Crosby, *Hist. of Baptists*, iii. 6).

But there were deeper reasons than conservatism and the bad name attaching to the practice of believers' baptism through the early Anabaptists. (*a*) Wherever a lively belief in original sin and the guilt attaching thereto continued, it was natural to bestow on infants the sign of the forgiveness of sins. It is perhaps noteworthy in this connexion that the first little group of Baptists were General or *Arminian* Baptists. (*β*) The doctrine of election made some recoil from the Puritan conception of the Church. It is, they argued, presumption to anticipate God's judgment by confining church membership to those apparently saved. The very attempt tends to hypocrisy. The Church ought rather to welcome all men. Along these lines Zwingli very strongly criticizes the 'Catabaptists' and defends the practice of infant baptism. As baptism is admission to the visible Church, it is not for human judgment to attach conditions. (*γ*) But more important than these was the feeling that in religion one cannot separate parent and child. The child of believing parents has, *ipso facto*, a claim on the Church. The Church must recognize 'the spiritual unity of the family' by welcoming the child. Burnet (on Art. 27) says, 'It is legitimate that parents be allowed to bring their children under federal obligations, and, therefore, procure to them a share in federal blessings.' The idea of the covenant, and the parallel between baptism and circumcision, powerfully influenced men's minds. A covenant that binds the parent binds the child also. And if the covenant of the OT admitted children by circumcision on the eighth day, surely the terms of the new covenant are not so harsh as to exclude children altogether. The Lord's welcome to little children, and the fact that children were reckoned holy through their parentage alone (1 Co 7^{14}), were held to put any such restriction out of court. The anomalies presented

by infant baptism to the Protestant conception of faith were met by an appeal to the parallel institution of circumcision. Baptism, Calvin admits, implies repentance; but so did circumcision, as is clear from Jer 4^{4}. The rule that baptism should follow faith is not invariable: for circumcision comes after faith in Abraham and before intelligence in Isaac. It may be said that the parallel with circumcision was the chief ground for defending infant baptism as agreeable with the Scriptures, while Mk $10^{14.16}$ and 1 Co 7^{14} were the chief reasons for supposing it to be 'agreeable with the institution of Christ.' It was further urged that, since men believed in God's goodwill towards children, the sign of that goodwill should not be withheld from them. 'How sweet is it to pious minds to be assured not only by word, but even by ocular demonstration, that they are so much in favour with their heavenly Father, that He interests Himself in their posterity! . . . It is no slight stimulus to us to bring them up in the fear of God' (Calvin, *Inst.* IV. xvi. 32). (*b*) With others, especially in the Church of England, the earlier ideas of sacramental efficacy, coupled with the obvious sense of Jn 3^{5}, were the dominant influence.

(5) Before passing on to discuss the effect of the Protestant appeal to Scripture, one other development of the conceptions of faith and grace as essentially inward must be examined. *The Quakers' rejection of water-baptism* was based, no doubt, in part on principles peculiar or almost peculiar to them; but it also sprang from the renewed experience of justification by faith which they possessed in common with other Protestants. Both points require illustration.

(*a*) The doctrine of the inner light was not a universally accepted doctrine among the Reformers. Its assertion sundered the Quakers from the Calvinists. Calvin advocated the use of sacraments because carnal, depraved, human nature could grasp the spiritual only through the material, and needed every sort of aid if it was to retain faith at all. To Calvin, sin was the fundamental thing in men. But if Calvin preached sin, G. Fox preached perfection. He and his followers denied the dogma of human depravity. Deeper than sin lies the something of God in every man. Men must be turned to this inward teacher, and cease to trust in the outward and the creaturely. From this point of view sacraments are not a means of grace but a source of error, an entanglement in the lower realms of religious life.

(*b*) But, without pushing their peculiar tenets, the Quakers had a strong case in the ground they shared with Protestants in general. It was admitted that God's answer to faith was not tied to the sacraments. All Protestants agreed that the grace of God was conveyed, if not as certainly, yet as really, through preaching and through prayer as through the sacraments. To the Calvinist, baptism was the sign and seal of a spiritual reality, which it did not necessarily confer. But if this be so, if the forgiveness signified in baptism and the communion with Christ offered in the Eucharist are granted to us in other ways, why insist thus on the outward ceremonies? Our opponents, says Barclay,

> 'account not those who are surely baptized with the baptism of the Spirit, baptized, neither will they have them so denominated, unless they be also sprinkled with or dipped in water: but we, on the contrary, do always prefer the power to the form, the substance to the shadow: and where the substance and power is, we doubt not to denominate the person accordingly, though the form be wanting. And, therefore, we always seek first and plead for the substance and power, as knowing that to be indispensably necessary, though the form sometimes may be dispensed with, and the figure or type may cease, when the substance and antitype come to be enjoyed, as it doth in this case' (*Apology*, p. 300).

The essential thing in baptism is the answer of a good conscience towards God. Where that pure and spiritual baptism is present, the use of water is indifferent. The Quaker position raised the question of the nature of the New Covenant. Did not the new differ essentially from the old in this, that now God would directly and immediately commune with the individual? Barclay's attempts to explain away NT references to water-baptism are bits of unsuccessful exegesis; but the truth 'the kingdom of God is within you' (Lk 17^{21}) does not depend on the correct interpretation of ἐντός.

(*c*) The Quakers were indirectly the successors of Joachim de Flore, who thought sacraments would disappear in the realm of the Spirit. 'The baptism of John,' said Barclay, 'was a figure, commanded for a time, and not to continue for ever' (*Apol.* Prop. xii.). He, with good reason, identified water-baptism with that of John. The other Protestant Churches vehemently denied this view of baptism as a temporary institution. Thus the Westminster Confession (ch. xxviii.) asserts that 'Baptism is by Christ's own appointment to be continued until the end of the world.' With this compare the orthodox creed in the Baptist Confessions of Faith (Hanserd Knollys Soc. p. 147).

B. THE APPEAL FROM TRADITION TO THE BIBLE.—The influence of the Reformers' appeal to Scripture is more easily traced in the realm of practice than in that of doctrine. That the study of the Scriptures suggested some new doctrines is beyond doubt. Thus the beginnings of the Baptist denomination consisted of two small groups who successively detached themselves from the Independents because they were convinced, rightly or wrongly, that in the NT baptism was administered only to believers. The first group, the General or Arminian Baptists, broke off from the Independents in Amsterdam in 1611, under John Smith and Helwisse. These two had derived their views from their own study of the Scriptures. They first baptized themselves; but when John Smith discovered that the Mennonites were already teaching the doctrine of believers' baptism, he was baptized again by a Mennonite pastor. The first Particular or Calvinistic Baptist Church was formed in a similar way in England about the year 1638. Certain members of an Independent church in London became convinced that 'Baptism was not for infants, but professed believers' (see Shakespeare, *Baptist and Congregational Pioneers*, pp. 180–184). Here, too, the influence of the study of the Scriptures was the prime factor. But all Protestant Churches claimed to justify their positions from the Scriptures, and it would be tedious to explain the justification each advanced. The more general effects of the appeal to Scripture may be traced in (*a*) the Protestant simplification of ritual, and (*b*) the tendency to take a somewhat legalistic view of the obligation of baptism.

(*a*) *The simplification of ritual* was not everywhere carried out with equal thoroughness. Luther at first retained the Roman *Ordo* almost exactly as it stood, though the traditional developments were accorded a steadily diminishing importance. When the demand for a simpler ritual, based on the appeal to Scripture, made itself effectively heard, it was resisted on the ground that the Church is free to make modifications in such comparatively non-essential matters. (For the whole history, see Höfling, vol. ii. §§ 119–121.) In England, the signing with the cross and the presence of sponsors were retained, and the other ceremonies summarized in a previous section were discarded. The Church of England, like the Lutherans, showed a greater reverence for tradition: at the same time, the simplifications introduced to avoid superstition, and to promote decency and order, were really the outcome of a desire to get nearer to NT usage.

The Puritans objected to the traditional elements still remaining in the Prayer-Book Order of Baptism, as having no warrant in Scripture. The Genevan Order was still simpler. 'Chrisms, tapers, and other pompositie' were abolished, as 'they have been devised without authority from the word of God.' Baptism by immersion was re-introduced by the believers in adult baptism, as being the Scriptural and only lawful method.* In brief, all Protestant Churches held themselves at liberty to revise the baptismal office, in so far as its elements were derived from tradition and not from Scripture; while some wished to make the ritual conform to a Scripture model.

(*b*) The authority attributed to the Scriptures went some way to create *a new legalism*. Thus the Baptists insisted on the duty of accepting immersion. This was the form instituted by Christ, and it became part of religious obedience to follow it. To be immersed was to fulfil more perfectly than others a command of Christ. This tended to legalize the religion of Jesus, and to emphasize the value of obedience to a ceremonial observance—a step towards Pharisaism. From a literalism of this kind the more conservative Churches were preserved by their adherence to tradition, and Calvin escaped through his strong common sense.† The other Churches did not escape legalism in other directions. When the sacramental efficacy of Baptism and its bearing on salvation were questioned by Rationalism, the defence was apt to be: this is part of the Divine will revealed in the NT, and it must simply be accepted. Hooker's defence of the Church of England doctrine of Baptism rests largely on the plain sense of Jn 3[5], which is taken as the final ruling of the Divine Lawgiver on this subject. This kind of appeal to Scripture is simply legalistic. It may further be paralleled in the strong tendency to interpret the NT in harmony with the OT. The explanation of baptism by means of circumcision seems to belong to a new Judaistic Christianity.

C. THE HUMANISM AND RATIONALISM OF THE RENAISSANCE.—The Reformation was influenced by the growing interest in the natural as opposed to the supernatural, and the assertion of individual independence which marked the later Middle Ages. This favoured views of baptism which removed mystery, and which made it the sign, not of a man's dependence on, but of his adhesion to, the Church. Baptism then becomes a mere symbol or a confession of faith.

* *Sprinkling and immersion.*—It has already been noted that the dipping of infants continued in England after the custom had altered in Europe. Sprinkling became more general in England about 1600, and was apparently the accepted custom by 1640 (Denne, *Contention for Truth*, 1658). With regard to adults, the first Mennonites and Baptists received the rite by affusion. Mr. Shakespeare says of the former, that 'they administered baptism by affusion, until in 1620 a section called the Collegianten, at Rhynsberg, began to immerse.' A certain Mr. Blunt introduced baptism by immersion among the Particular Baptists at the beginning of 1642. The practice was widely taken up, many being baptized for the second, or for the third time, as the case might be. It was this that roused up Dr. Daniel Featley to write his book against Baptists, in which he claimed to dip the dippers head over ears in argument. Partly in reply to this work, the Baptist Churches published a Confession in 1646, which is their first public declaration in favour of immersion. 'That the way and manner of the dispensing this ordinance is dipping or plunging the body under water: it being a sign must answer the thing signified, which is the interest the saints have in the death, burial, and resurrection of Christ' (*Confessions*, p. 42). For the whole subject, see Shakespeare, *op. cit.* pp. 186–189.

The Socinians, as is clear from the Racovian catechism of 1619, and some Anabaptists had baptized by immersion before this.

† 'Whether a person is to be wholly immersed, and that whether once or thrice, or whether he is only to be sprinkled with water, is not of the least consequence: Churches should be at liberty to adopt either according to the diversity of climates, although it is evident that the term *baptize* means "to immerse," and that this was the form used by the primitive Church' (*Inst.* IV. xv. 19).

Zwingli treated baptism as a symbol, though by no means as insignificant. 'Baptismus est regenerationis symbolum . . . sed non ita ut qui baptisati sunt ob id renati sunt' (Answer to Quest. 17, in a letter on some questions raised by a Catabaptist). Some account of his views may be found in Lecky's *Hist. of Rationalism*.

Socinus emphasized the confession-side of Baptism. It is—

'the rite of initiation by which men, after obtaining knowledge of the doctrine of Christ and acquiring faith in Him, become bound to Christ and His disciples, or are enrolled in the Church, renouncing the world . . . professing, besides, that they will regard the Father, Son, and Holy Spirit as the only Guide and Master in religion, and in the whole of their life and conversation, and by their ablution and immersion and emersion, declaring and as it were exhibiting that they lay aside the defilement of sin, that they are buried with Christ, that they desire henceforth to die with Him and to rise to newness of life, and pledging themselves that they will really carry this out, receiving also at the same time at which this profession is made and this pledge taken the symbol and sign of the remission of sins and even the remission itself' (Harnack, vii. 151).

As Harnack says, the stress is laid here on the confession, and the last clause sounds like an afterthought. The tendency to emphasize the confession made in baptism was not confined to Socinianism; the Anabaptists, *e.g.*, regarded baptism mainly as a badge or mark distinguishing Christians from others (cf. art. ANABAPTISM, i. 410). This shows the influence of Rationalism in so far as it implies less interest in the sacramental side.

But the ultimate influence of Rationalism is to be discerned in the serious issues, for the doctrine of baptism, raised by Biblical criticism, by the science of comparative religion, and by the study of religious experience.

LITERATURE.—*GENERAL*: Höfling, *Das Sacrament der Taufe*, 2 vols., Erlangen, 1846–8; Harnack, *History of Dogma*, Eng. tr., 7 vols., London, 1896–9; Hagenbach, *Dogmengeschichte*[3], 1845 [useful quotations]; A. V. G. Allen, *Christian Institutions*, London, 1898; Darwell Stone, *Holy Baptism*[4], London, 1905; Marriott, art. 'Baptism,' in Smith's *DCA*; art. 'Taufe,' in *PRE*[3].

ROMAN POSITION: Wilhelm and Scannell, *Manual of Theology*, vol. ii. [1898], give a clear concise statement; Denzinger, *Enchiridion*[5], 1874, is indispensable.

CHURCH OF ENGLAND: for mediæval practice, consult Maskell, *Monumenta Ritualia*, vol. i. p. ccxl f. For Reformation settlement, see index vol. to the Parker Society's publications; Hooker, *Eccl. Pol.* bk. v. [ed. Bayne in *Every Man's Lib.* 1909]. Besides Stone, see *Tracts for the Times*, Nos. 67 and 76, and various commentators on the Articles, esp. Gibson, E.C.S. F. W. Robertson put forward a fresh and interesting view, in sermons 4 and 5 of the second series, 1889.

LUTHERAN CHURCH: see Höfling, whose book, besides being of great historic value, represents the distinctly conservative Lutheran attitude.

CALVINISM: Calvin, *Inst.* IV. chs. xiv.–xvi. in Beveridge's later tr. vol. ii. [1863]; *Westminster Confession*, any edition.

BAPTISTS: *Confessions of Faith*, Hanserd Knollys Soc. 1854; T. Crosby, *Hist. of Baptists*, 1738–40; Cramp, *Baptist History*, 1871; Shakespeare, *Baptist and Congregational Pioneers*[2], 1907.

INFANT BAPTISM: W. Wall, *Hist. of Infant Baptism*, 1705 [new ed., London, 1862].

H. G. WOOD.

BAPTISM (Indian).—In the initiatory rites which are peculiar to the great religions of India and their various sects, there is nothing which can be regarded as exactly parallel to Christian baptism, except the general fact that such rites imply admission to or public recognition of a definite religious status. In the Christian rite the use of water is based on a natural symbolism which has appealed to the human mind in all ages, and of this we have abundant examples in the purificatory ceremonies of all Indian religions. Hinduism abounds in such *baptisms* or washings as are referred to in Mk 7[4]. These are founded on the association of religious purity with water used either in bathing or in sprinkling the person or thing to be sanctified.

In the rite of initiation into the Sikh religion we have the nearest approach to the form of Christian baptism; but even in the symbolism of the rite there is, as we shall see, a fundamental difference.

The Sikh religion, which is professed by about two millions of the people of the Panjāb, is of comparatively modern origin. Nānak, its founder, who flourished in the 16th cent., was one of the many religious scholars of India in whose mind the philosophy which underlies Hinduism awakened a protest against the current idolatry. He was a follower of Kabīr, and was also influenced by the writings of the Marāṭhī poet Nāmdeva, who flourished about the year A.D. 1300. Passages from the writings of Kabīr and Nāmdeva are found incorporated in the *Granth* ('the Book'), the religious book of the Sikhs ('disciples'). While Hindu pantheism easily lends itself to the support of polytheism and idolatry, that side of it which emphasizes the oneness of the Supreme Existence has always been cropping up in the form of protests against the worship of the many. Nānak may be taken as an example of this frequently repeated tendency. From the movement which he initiated, there emerged under him as its first *guru*, and under his nine successors ending with Guru Govind Singh, a religion which, rejecting idolatry and caste, emphasizes the doctrine of the Divine unity. So far as this doctrine dissociated itself from its original pantheistic foundation and approached the deistic conception, we may recognize in its subsequent development the influence of the Muhammadan religion with which it was in constant contact.

The distinct religious community into which the followers of Nānak were ultimately organized bears the name of the *Khālsa*. Initiation into the Sikh religion takes place by admission to the Khālsa by means of a rite called the *Pahuḷ*.

The *Pahuḷ* is thus described in the *Life of Govind Singh*, the last of the gurus:

'When the guru had returned from the hills to Anandpur, he assembled the societies of the disciples and told them that he required the head of a disciple, and that he who loved his guru should make this offering. Most of them were terror-stricken, and fled; but five of them rose and offered resolutely their heads. These five he took into a room, and told them that, as he had found them true, he would give them the *pahuḷ* of the true religion. He made them bathe, and seated them side by side; he dissolved purified sugar in water and stirred it with a two-edged dagger, and, having recited over it some verses taken from his Granth in praise of the Timeless One, he made them drink some of this sherbet; some of it he poured on their heads and the rest he sprinkled on their bodies. Then, patting them with his hand, he cried with a loud voice, "Say, The Khālsa of the Vah Guru! Victory to the holy Vah Guru!" After he had given the *pahuḷ* to these five in this manner, he took it likewise from them; and in this way all the rest of his disciples were initiated, to whom he gave the name of the Khālsa, adding to the name of each the epithet Singh ('lion'). Then he gave the order that whoever desired to be his disciple must always have five things with him, the names of which begin with the letter *k*, viz., his hair (*kes*) which must not be cut, a comb (*karppa*), a knife (*kathar*), a sword (*kithpal*), and breeches reaching to the knee (*kachh*); otherwise he would not consider him a disciple.'

The rite itself is older than this mention of it in the *Life of Govind Singh*, for it is referred to in the *Life of Nānak*, written by Guru Arjun, the fifth guru, in the beginning of the 17th century. As it is not mentioned in the *Granth*, it would appear to be later in origin than the time of Nānak. It was not, however, instituted by the last guru, Govind Singh, who in the passage just quoted from his life is described as administering an old-established rite.

It is by no means clear that we ought to regard this rite as parallel to baptism except in the mere fact that it marks initiation into the membership of a religious community. The place given to bathing in the description quoted is subsidiary; the essential parts are the drinking of the sherbet and the utterance of the words 'Vah Guru!' In its oldest form the rite included nothing more than this, and its original as well as its later purpose is to express communion and fellowship through joint participation in food and drink. This, according to all Hindu standards, is the ultimate test of religious fellowship, and the Sikh *pahuḷ* appears to be only one form of expressing this fact of religious communion. It is interesting to notice that, while devotion to the guru is included in the ceremony, the stress is laid on the marks of fellowship. The Christian rite of baptism admits to the fellowship of the visible Church; but the emphasis is not laid on this side of the sacrament. The sacrament of baptism expresses in the first instance a relation of the individual to God, not to the community of His people. Even in the sacrament of the Lord's Supper, while the communion of believers with each other is an important element in the meaning of the rite, the thought of the believer's relation to his Lord is predominant in every interpretation of the sacrament. This is an illustration of a characteristic difference between Indian religions and Christianity.

In orthodox Hinduism the ceremony that approaches nearest in its specific function to baptism is the *Muñj* ceremony, called also *Upanayana* (Skr. *upa* and *ni*, 'leading up to a teacher,' 'initiation'), by which the members of the twice-born (*dvija*) castes are admitted to their respective privileges. The material element in this ceremony is the investiture with the sacred thread; and, as one part of the rite consists in investing the subject with a girdle made of *muñj* grass, in the case of Brāhmans, it is known amongst them as the *Muñj* ceremony. This investiture with the sacred thread, called *upavīta* (*upa* and *vyā*, 'to cover' or 'clothe') or *yajñopavīta* because it entitles to the privilege of offering sacrifices, must take place between the ages of 8 and 16, 11 and 22, 12 and 24, in the Brāhman, Kṣatriya, and Vaiśya castes respectively.

Bathing is not an integral part of this ceremony. The *yajñopavīta*, or sacred thread, which in the case of the Brāhman is a triple thread of cotton yarn, in the case of the Kṣatriya of hemp, and in the case of the Vaiśya of wool, is placed over the left shoulder and allowed to hang down on the right side of the wearer. At the time of investiture the youth is placed with his face turned towards the sun, and is made to walk round a fire three times. Then the guru, taking the thread in his hand, consecrates it by repeating the *Gāyatrī*, the invocation to Savitṛ, the sun, taken from *Rigveda*, iii. 62. 10—*tat savitur vareṇyaṁ bhargo devasya dhīmahi dhiyo yo naḥ prachodayāt*, 'that we may attain the glorious light of the god Savitṛ, may he further our prayer.'

After the thread is put on, the youth takes a staff in his hand (of different kinds of wood, according to caste) and goes forth to beg alms. This alms he begs of his mother, or, if she is dead, of his maternal aunt, and, failing her, of a sister. This symbolizes a covenant to support his guru and himself.

The next step is the learning of the *sandhyā*, or prayers appointed for the principal parts of the day, morning, noon, and evening.

The last act of the ceremony is the *mauñji-bandham*, or the tying on of a girdle of *muñj* grass. Before the girdle is put on, the guru teaches the boy the Savitṛ *mantra*. Bending with his right knee on the ground and saluting the guru with *namaskār*, he says, 'Repeat to me the Savitṛ *mantra*.' Then the guru, wrapping the hands of the boy with his garment, takes hold of them with both his hands and makes him repeat the *mantra*, at first line by line, and finally the whole. The young man thus initiated enters on the *Brahmachāri* ('disciple') period of his life (see ASRAMA).

Now, while all the external features of baptism are absent from this rite, there is a certain inner

resemblance between the two in the place which each occupies in the scheme of the religious life. The most striking fact in connexion with the Hindu rite is that by virtue of its performance the initiated ranks as twice-born. The idea that a certain act of religion marks the second birth presents a parallel to the Christian idea of baptism, whether regarded as 'a sensible sign' or as a sacrament carrying with it a spiritual effect, in its relation to regeneration. Looking beneath the outward surface of the rite, may we not recognize in it the expression of a deep human conviction that man as he enters this world is not fit for his spiritual kingdom, that he must be born again if he is to possess it? 'Except a man be born again, he cannot see the kingdom of God' (Jn 3^{3}).

If we look for any parallel to baptism in the Zoroastrian religion, which, although the ancient home of the faith is in more northern lands, is to-day an Indian religion, we may find it in the ceremony called *Naujot*, by which Parsi children, both boys and girls, receive religious initiation after they have attained the age of six years and three months. Indeed the modern Parsi sometimes actually speaks of it as baptism. The name *Naujot* indicates that it marks the beginning of a new religious authorization, the outward symbol of which is the investiture with the *sudra*, or sacred shirt, and the *kusti*, or sacred thread, a thread of seventy-two strands worn round the body. In this ceremony the officiating priest recites verses from the Avesta Scriptures, and with his own hands places the *sudra* on the boy or girl to be initiated, and binds the sacred thread. On each side stands a brazier from which flames arise, fed by pieces of fragrant sandal-wood; and, while the verses are being chanted, grains of rice are thrown towards the recipient of the ordinance. The *Naujot* is frequently made the occasion of a great social gathering, followed by a feast in which sometimes many hundreds of persons participate. So much does the social aspect predominate over the religious, that the chanting of the priest is sometimes drowned by the strains of a brass band discoursing the most secular and jovial airs. The sense of incongruity is felt by any one who tries to associate the ceremony with a spiritual purpose. In their origin such ceremonies had, no doubt, a religious meaning; but they have to a large extent lost it, and have become the badges of a community rather than a vehicle of spiritual instruction. An interesting fact in connexion with the *Naujot* ceremony is its administration to girls as well as to boys. The Parsi woman wears the sacred thread. No Hindu woman can wear it.

In the light of such developments the high spiritual significance of Christian baptism stands out more clearly; but even Christian baptism may lose its higher meaning if the purpose which it subserves as a mark of the Christian faith be permitted to overshadow its meaning for the individual soul.

LITERATURE.—See under INITIATION.

D. MACKICHAN.

BAPTISM (Jewish).—The fact that Judaism gained accessions from the Gentile world gave rise to an application of the practice of ceremonial ablution altogether new in Jewish religious life, viz., the baptism of proselytes. Precisely as the rite of bathing after cohabitation or nocturnal pollution was, in the period after the destruction of the Temple, regarded by the Rabbis both as a purification and as a kind of consecration for intercourse with the sacred words of the Law, so was the bathing of proselytes considered as at once a purification from heathenism and an initiation or consecration of the convert before his admission amongst the people of God. It was a ceremony not unlike Christian baptism so far as the individual who desired to become a Jew was conducted to the bath, and there immersed himself in the presence of the Rabbis, who recited to him portions of the Law. The proper term, however, is the 'immersion of proselytism' (טבילת גרות), as it is designated, *e.g.*, by Rashi.

The antiquity of proselyte baptism.—Epictetus, the Stoic philosopher, who taught in Rome till A.D. 94, and subsequently lived at Nicopolis, in Epirus, had heard of the practice, and speaks of it, indeed, as a matter of common knowledge. In his conversations, as recorded by the historian Arrian, prefect of Cappadocia, he illustrates the maxim that a man's profession of faith should be carried out in practical life, by referring to the fact that many Hellenes are called, or call themselves, Jews, Syrians, or Egyptians, simply because they have adopted the religious usages of one or other of those peoples. But, he proceeds, when a man goes only half-way in such a matter, it is usually said of him that 'he is nσ Jew, but has merely the semblance of one'; while, if he takes upon himself the arduous life of 'the baptized and the elect,' he is really what he calls himself (viz. a Jew).*

In the Rabbinical literature (*Mechilta*, on Ex 12^{48}) it is stated that a lady named Valeria, along with her female slaves, was received into Judaism by a bath of immersion. This story may possibly go back to a time at least equally remote. The Babylonian Talmud (*Yebhâmôth*, fol. 46*a*, at foot) contains the tradition that Eliezer and Joshua, who both flourished towards the end of the 1st cent. A.D., disagreed in their views regarding the conditions under which a proselyte should be received, Rabbi Eliezer asserting that circumcision without immersion, Rabbi Joshua that immersion without circumcision, was sufficient. It has been handed down as the admittedly valid finding that both immersion and circumcision, and—in theory at least—an oblation as well, were indispensable conditions of admission to the Jewish communion.

We have thus good authority for believing that proselyte baptism was practised towards the end of the 1st century. It is probable, however, that till about this time baptism was not regarded by all teachers or in all countries as a ceremony associated with the act of embracing Judaism. In view of this circumstance the silence of certain writers, in passages of their works where a reference to the practice might have been expected, loses the force which has sometimes been attributed to this particular case of *testimonium e silentio*.† In one passage of the Mishna, proselyte baptism seems to be merely a bath of ceremonial purification, which the proselyte must take as one who 'comes from the foreskin.'‡ The ceremonial of the practice likewise would be developed gradually. Making all the reservations necessary in view of the diffusion, conception, and various forms of the rite, we may safely assume that the Jewish baptism of proselytes was not of later origin than Christian baptism.

According to Talmudic testimony, the baptism of proselytes took the form of an immersion carried out in accordance with the Rabbinical regulations for ceremonial purification, and in presence of three, or at least two, witnesses. The candidate, if a male, was first of all circumcised, and when the wound had healed [this is left out of account in *Pes.* viii. 8] he was taken to the bath. While he stood in the water the Rabbis ('disciples of the wise') who happened to be among the witnesses once more recited to him some of the great and the lesser commandments. Then the convert made a complete immersion, and stepped forth as a fully privileged Israelite. A female was, for modesty's sake, taken to the water by women, the 'disciples of the wise,' as legal witnesses, standing behind the curtain that served as a door. She was then placed in water up to the neck, and, while she remained in this position, the Rabbis, without seeing her, but within hearing, gave their prelection upon the commandments. She thereafter drew her head under water, and at that moment it was necessary for the witnesses to look on; then, as she came out of the bath, the men retired with averted faces. The bap-

* *Dissert. Epictet.* ii. 9 (ed. Upton, London, 1841, i. 214 f.): ὅταν δ' ἀναλάβῃ τὸ πάθος τὸ τοῦ βεβαμμένου καὶ ᾑρημένου, τότε καὶ ἔστι τῷ ὄντι καὶ καλεῖται Ἰουδαῖος. The perfect participles are conclusive.

† This applies specially to Philo Alex., Josephus (*Ant.* XIII. ix., XX. ii.), and Juvenal (*Sat.* xiv. 96).

‡ *Pes.* viii. 8: 'A mourner may bathe and eat his *pesach* in the evening, but *not along with* the sacred meats. One who receives news of a death and one who gathers bones [a gravedigger] may bathe and eat (his *pesach*) *along with* the sacred meats. A proselyte who has become a proselyte on the evening before the *pesach* [*i.e.* the day before] (concerning him) the school of Shammai says: "He may bathe and eat his *pesach* in the evening." But the school of Hillel says: "One who comes from the foreskin is as one who comes from the grave."' Note that, according to Nu 19^{16}, one who touches a grave remains unclean for seven days.

tism of a proselyte could not legally be performed by night, or on a Sabbath or any other holy day.*

This description is to be understood as one of constitutive validity. Baptism, according to it, must be administered by orthodox Judaism whenever proselytes are to be received into its community.

The necessity of proselyte baptism was argued by the Talmudic scholars from the fact that, according to Ex $19^{10. 14. 22}$, the Israelites were commanded 'to sanctify themselves' before the deliverance of the Law at Sinai. That sanctification involved ablution, but was designed by the writer as a necessary condition of meeting with Deity. The Rabbis, however, believed that this act was ordained in view of the holy covenant which was to be completed by a sacrifice (Ex 24^{4-8}), but which was about to be instituted from the Divine side by the giving of the Law (Ex 20). They thus assumed that even at that early stage an ablution was the ordained means of gaining admission into the covenant.† We find, however, that proselyte baptism was regarded also as a bath of purification, designed to remove the uncleanness of heathenism (cf. the passage of the Mishna, *Pes.* viii. 8, already cited). Thus, in the case of a woman who was desirous of embracing Judaism, and who had taken the bath required after menstruation, this act was credited to her by a certain Rabbi Joshua as equivalent to the bath required of proselytes.‡ It is a current opinion among Christian theologians that baptism (of children) takes the place of circumcision. The incident just referred to might suggest the idea that proselyte baptism was originally sanctioned by Jewish teachers anxious to make converts, as a more agreeable rite than the other. This surmise, however, has not a shred of evidence to support it; while in the case mentioned by Josephus (*Ant.* XX. ii. 4), circumcision was simply remitted.

From the fact that the Jewish religion claimed to be a Divine revelation, and from such utterances as that of Philo (*de Pœn.* i.), 'the proselyte comes from darkness into light,' or the Rabbinical principle that 'the proselyte is like a newborn child,' it would be erroneous to infer that the baptism of proselytes was the rite of initiation into the mysteries of the Jewish religion. As a matter of fact, the baptism was always preceded by instruction in religious doctrine, and thenceforward there were no further revelations to be made. The Rabbinical principle just quoted, to judge from its discussion amongst the teachers themselves, was concerned exclusively with the *civil* relations of the proselyte: he was required, on this interpretation, to alienate himself entirely from his former interests, and even from his still heathen kindred; he must not inherit their property, he cannot commit incest with them, etc.§

Our prefatory note regarding the characteristics of proselyte baptism is thus confirmed by these early references. This testimony, at the very most, encourages the idea that the ceremony in question, with its twofold signification, was not seldom understood as merely a bath of purification.

BAPTISM (Muhammadan).—Historically considered, the Muslim rite of purificatory ablution, *wuḍū'* and *ghusl* (see MUHAMMADANISM, § 6), goes back to divergent forms of Christian baptism. Muhammad and his early followers were called by the heathen Arabs Sabæans (*q.v.*), a name applied also in the Qur'ān (ii. 59, v. 73, xxii. 17) to a sect mentioned with respect beside the Jews and the Christians. This name, evidently, is derived from the Aramaic root *ṣaba'*, or *ṣaba'*, 'to dip,' 'immerse,' and means 'dippers,' or 'baptizers,' and was used originally for different heretical Christian sects of Hemerobaptists, Elkesaites (*q.v.*), and Mandæans (*q.v.*), who practised frequent ceremonial ablution (see Wellhausen, *Reste*², p. 236 f.; in 1st ed. p. 205 ff.). Of baptism, however, in the precise sense, no trace appears in Islām, although there are many stories in European crusading legend of Muslims who accepted it; and that some distinguished Muslims were knighted by Christians, with all the necessary ceremonies, appears to be practically certain (Lane-Poole, *Saladin*, p. 387 ff.).

Baptism among Christians is regarded by Muslims as an initiatory rite of purification, parallel with circumcision. A very curious description of the rite, as viewed by them, is given by al-Bīrūnī, from Abū-l-Ḥusain al-Ahwāzī, in his *Chronology of Ancient Nations* (tr. Sachau, p. 288 ff.). He introduces it under Epiphany, in giving an account of the calendar of the Melkite Syrian Christians in Khwarizm, as Epiphany for the Oriental Church is a commemoration of the baptism of Christ. This description is either fanciful and imaginary or is of some obscure local rite. It agrees with none of the great Oriental rites. In Egypt the Copts used to observe the Eve of Epiphany (*lailat al-ghiṭās*), the 10th of Tūba (=the 17th or 18th of January), as a great river-festival, plunging into the Nile as a memorial of the baptism of Christ, and believing that on that night it could prevent and cure all illnesses. In this festival and usage the Muslims also joined, and al-Mas'ūdī, who was in Egypt in A.D. 942, describes it as a great popular ceremony presided over by the Ikhshīd himself (*Murūj adh-dhahab*, ii. 364 f. of Paris ed.). It is now observed by Copts only, and by them not to any great extent. Even the plunging into the Epiphany tank in churches has become greatly disused, and the foot-washing of Maundy Thursday has taken its place. For the religious ceremony see *The Blessing of the Waters on the Eve of the Epiphany*, by John, Marquess of Bute, London, 1901. But among Muslims there is at least one curious custom which appears to be a survival. In the mosque of ad-Dashṭūṭī, just outside of the Bāb ash-Sharīya at Cairo, there is a well and a tank (*maghṭis*), and it is the popular belief that if any one afflicted with a fever (*ḥummā*) plunges into the tank three times in three weeks he will be healed (*Al-ḫiṭaṭ al-jadīda*, iv. 112). Others make the healing power of this *maghṭis* much more general, and describe how the sick folk descend into it by the light of a candle (Michell, *Egyptian Calendar*, p. 122).

One obscure passage in the Qur'ān has generally been held by Muslims to be an allusion to baptism, and most translators of the Qur'ān have accepted that view. In Qur'ān ii. 132, after the story of Abraham, how he was a *ḥanīf* of the primitive religion as contrasted with the faiths of the Jews and Christians, there is an exclamatory outburst, 'The kind of dipping (*or* dip, *ṣibgha*) of Allāh! And who is better than Allāh as to a kind of dipping (*or* dip)? And we are worshippers of him.' The precise syntactical construction of *ṣibgha* we need not here consider. It is plain that, lexicographically, in the oldest Arabic usage (*Lisān*, x. 319 ff.) the word means either the act of dipping one thing into another, as, *e.g.*, a camel dips its lips

into water; or the thing into which something else is dipped. Thus *ṣibgha* came to be the regular word for 'dye,' and *ṣibgh* is used in Qur'ān xxiii. 20 for 'sauce.' The oldest exegetical tradition (Ṭabarī's *Tafsīr*, i. 423) sees in Qur. ii. 132 a reference to Christian baptism. It differs only as to the nature of 'the kind of dipping of Allāh,' some holding that it is the *fiṭrat Allāh*, the original nature in which Allāh constituted all creatures, and from which Jews and Christians are perverted only by their parents (see Krehl, in *SSGW*, hist.-phil. Klasse, July 1st, 1870, p. 99), and others that it is Islām, the religion (*dīn*) of Allāh.

In the great scholastic commentary *Mafātīḥ al-ghaib* of Rāzī (d. A.D. 1209) a considerable advance is made, and the idea of 'dipping' has become distinctly 'dyeing' (i. 505). The first explanation is that the 'dyeing' of Allāh is the religion of Islām, and that it is so called (*a*) because Christians dip their children in a yellow water and say that it is a purification, and that they have thereby become Christians; or (*b*) because Jews and Christians dye their children in their respective faiths, in the sense that they instil these into them (said to be a possible meaning of the Arabic); or (*c*) because the form of Islām appears evidently from the traces left by purification and prayer, as Allāh has said (Qur. xlviii. 29), 'Their signs are on their faces from the trace of prostration,' *i.e.* the mark of dust on the forehead; or (*d*) the difference between the true faith and the false is as evident as that between colours or dyes. Or it may be the original nature of man mentioned above, or circumcision; but Rāzī inclines to the first view.

It may, however, be doubted whether any idea of baptism was in Muhammad's mind. To him baptism would have suggested either *wuḍū'* or *ghusl*, which, indeed, had sprung from it. The chapter in which the word *ṣibgha* occurs is called 'Of the Heifer,' from a section (vv. 63–68) evidently derived from Nu 19, which prescribes how a red heifer should be slaughtered and burned and its ashes used for ritual purification ('Red Heifer' in Hastings' *DB* iv. 207 ff.). Further, the same root *ṣaba'*, used in Qur. ii. 132, is that used in Aramaic for the purificatory dipping connected with the ritual of the Red Heifer (Levy, *Chaldäisches Wörterbuch*, p. 312, *s.v.*). It seems, then, at least possible that Muhammad had in mind some such process, and not either baptism or dyeing. That the oldest exegetical tradition should be in error is not surprising. The earliest interpreters of the Qur'ān were evidently as far from a genuine oral tradition going back to Muhammad himself as were the translators of the LXX from a tradition going back to the Hebrew prophets.

D. B. MACDONALD.

BAPTISM (Polynesian).—A rite closely resembling baptism has been observed in some of the Polynesian Islands. The best-known custom is that of New Zealand. For five days after the birth of a child both the mother and the infant are *tabu*, and remain in a sacred house. The women of the neighbourhood then assemble and give the child its first name, meanwhile dipping a twig in water and sprinkling the infant with it. Some months later, at the feast of the giving of the (second) name, the *tohunga* (priest) dips a twig in water and sprinkles the child's head, uttering formulas in an archaic and practically unintelligible dialect, the words varying according to sex. In the northern island of New Zealand the child was not sprinkled, but was immersed. In both islands the infant was dedicated to Tu, the god of war, and the mother was forbidden to see the ceremony, although, on rare occasions, young people were allowed to be present. An additional baptism was also performed when a boy reached the age of eight, that he might become strong and manly. In the Fiji Islands the first bath of a child was celebrated with a feast, although this is hardly baptism. On the other hand, there is at least an approach to baptism in the custom observed in the island of Rotuma, by which the chief rubbed the face, gums, and lips of the newborn child with a mixture of sea-water and coconut oil; while in the island of Uvea the birth of an infant was celebrated with a feast, at which the child's head was sprinkled with water. The ceremony has been described as the removal of the *tabu* which rests upon the newborn child.

LOUIS H. GRAY.

BAPTISM (Teutonic).—The practice of sprinkling children with water shortly after birth, as found among many aboriginal races, prevailed also among the Teutons in heathen times. In the 2nd cent. A.D. the famous physician Galen had learned that it was their custom to immerse the infant directly after birth in cold river-water; and about the same period, as well as later, it is recorded by Greek writers that the inhabitants of the Rhine country, who are designated Celts, but who were unquestionably Teutons, employed the river as a test of legitimacy, immersing all their infants therein in the belief that the illegitimate would sink. Unfortunately our authorities for the southern Teutons, and, to a large extent, those for the northern, yield no evidence regarding this primitive rite, the reason being that those authorities date almost entirely from Christian times, when Christian baptism had become the general custom. On the other hand, the practice finds frequent mention in the Icelandic sagas and the Eddic poetry. It is there spoken of as *ausa vatni*, 'to sprinkle with water,' and in the sources it is clearly discriminated from *skíra*, 'to cleanse,' 'to baptize' in the Christian sense.

The writings in which the expression occurs belong in all likelihood to the Christian period, but the people spoken of as actually observing the practice were certainly pagans (cf. K. Maurer, *Wasserweihe*, 5 ff.). The custom probably took its rise in religious ceremonial. By the Teutons, as by many other races, water was thought to be the *habitat* of supernatural, and especially of beneficent, powers, and the act of suffusion therefore brought the child under the influence of these. Hence the claim of the master-magician in the *Hávamál* (v. 158): 'This I can make sure when I suffuse a man-child with water—he shall not fall when he fights in the host; no sword shall bring him low.' The rite was performed by the child's father, or by one near of kin, or by some person of standing with whom the father was socially on familiar terms.

Intimately connected with this initiation by water was the act of naming the child. Both ceremonies, in fact, were performed at the same time by one and the same person, and between the infant and the name-giver there was thus constituted a special bond of union, which was of life-long duration, and was signalized by the name-giver's bestowing a gift upon the child at the ceremony itself. In connexion with the birth of Harald Gráfeld, for instance, we are told that 'Eirikr and Gunnhild had a son whom Haraldr

Haarfager suffused with water, and to whom he gave the name, ordaining that he should be king after his father Eirik' (*Heimskringla*, ed. F. Jónsson, i. 161). In virtue of this act of naming, which counted as the first legal transaction relative to the child, the latter acquired its status, so to speak, as a human being, and was admitted into the legal union of consanguinity. Hence, while initiation by water was in the first instance a religious function, the giving of the name was a legal one; as both were performed by the same individual, however, the former soon acquired a legal significance likewise. So long as a child had not gone through the ceremony of suffusion, its life was as fully at the father's disposal as that of a child who had taken no nourishment; he might expose it, or even kill it. After suffusion, however, the child enjoyed the full legal protection involved in consanguinity. This legal provision still remained in force in the legislation of the Northern Teutons even after the introduction of Christianity, and when baptism had superseded the older rite; according to the earlier Norwegian law, indeed, the murder of an unbaptized child was much more leniently dealt with than that of one who had been baptized. This distinction was not abolished till king Magnus Erlingsson altered the law in the latter half of the 12th century. The provincial codes of Sweden and Denmark still retain traces of this ancient heathen point of view. Even when the slayer was a stranger, *i.e.* a person other than the parents, a much more moderate wergeld was exacted by Swedish law if the victim was still a heathen, *i.e.* unbaptized. Similar enactments are found in the Anglo-Saxon and the Frankish codes.

In the legislation of the Southern Teutons, no doubt, it was the ceremony of naming rather than that of baptism that gained prominence as the function which brought the child under the higher protection of the law. From this circumstance it is inferred by Maurer that the rite of initiation by water was not of Teutonic origin at all, but was adopted from the Christian peoples with whom the Northern Teutons came into contact upon the islands of the Western Sea. Bearing in mind, however, the genuinely Teutonic principle, still firmly rooted among many Teutonic peoples, that baptism invests the child with a higher legal status, and, above all, the fact that throughout practically the entire Teutonic race a child's right of inheritance first becomes operative at its baptism—regulations never found among non-Teutonic peoples—we feel that Maurer's contention is untenable. The circumstance that among the Southern Teutons the ceremony of naming, as marking the child's entrance into his higher legal rights, took the leading place, and that, further, this ceremony was fixed for the ninth day after birth, goes rather to show the influence of the Roman practice of naming the child and presenting him in the temple on the *dies lustricus*.

E. MOGK.

BAPTISM BY BLOOD.—Two uses of the expression 'baptism by blood' must be distinguished: (1) a literal use as applied to the practices of pre-Christian and ethnic religion, and (2) a metaphorical use, denoting the sufferings of Christian martyrs.

(1) *Literal use.*—Among all primitive races the blood of beasts or of men plays an important part in religious ceremonies. In the East especially it had peculiar purgative and propitiatory properties ascribed to it, as being the seat and vehicle of life. The ancient Arabs sprinkled blood to lay evil spirits (cf. Wellhausen, *Reste arab. Heidentums*[2], 127), and a similar act was observed in Vedic ritual (cf. Hillebrandt, *Vedische Opfer und Zauber*, 176, 179). Hebrew notions concerning blood were so far spiritualized that there is only one instance in the OT (1 K 22[38]) which can properly be described as indicating a merely superstitious or magical use of blood (cf. Hastings' *DB* i. 257, *s.v.* 'Bath, Bathing'). For its employment in Jewish ceremonial see separate artt. COVENANT, PURIFICATION, SACRIFICE. Hellenic ritual is not without examples of cathartic sprinkling of blood (cf. Apollonius Rhod. *Argonaut.* iv. 704 f.; Æschylus, *Eum.* 282 f.), and in the Roman Lupercalia there was a piacular use of dog's and goat's blood (cf. Warde Fowler, *Roman Festivals*, 311). But it was probably at a somewhat late date and under the influence of prevailing Eastern cults that the practice of immersion in blood, resulting in moral cleanness, was brought into the Empire. In the Taurobolium and Criobolium (Hæmobolium, cf. Orelli's *CIL*, No. 2334) the worshipper, issuing drenched with blood of bull or ram from the pit over which the beast had been slaughtered, was regarded as being cleansed from his sins and ready for eternity (cf. 'taurobolio criobolioque renatus in æternum,' *Berlin CIL* vi. 510). See separate artt. CRIOBOLIUM, GREAT MOTHER, TAUROBOLIUM. For savage rites of purification by blood-sprinkling, cf. J. G. Frazer, *Adonis Attis Osiris*, 251; and for Scandinavian and German parallels, cf. Grimm, *Deutsche Mythologie*[4], i. 45; and U. Jahn, *Opfergebräuche*, 31. Cf. also p. 372[b].

(2) *Metaphorical use.*—In the Christian Church allusion is very early made to a baptism by blood in connexion with martyrdom. Polycarp (A.D. 156), who stripped himself of his garments at the stake, may very well have wished to signify by so doing a preparation for baptism by blood and fire; and although the action seems to have been unusual enough to attract the attention of Lucian, who in his *de morte Peregrini* describes Peregrinus as making a similar preparation for death, it was probably not the first time that a Christian martyr tried to carry out in his own person the prophecy of Mk 10[39] (cf. H. F. Stewart, *Invocation of Saints*, 54, 55). The germ of the idea that death for Christ had the effect of baptism, viz., remission of sin, is found in Melito of Sardis (*c.* 170 A.D.), who in an extant fragment (ed. Otto, xii.) says that two things confer forgiveness of sins, viz., baptism and suffering for Christ. Hermas (*Pastor*, iii., *Simil.* 9, § 20) says much the same: 'Omnium eorum deleta sunt delicta, quia propter nomen Filii Dei mortem obierunt.'

But the first definite mention of baptism by blood in Christian literature is probably a passage in the *Passio S. Perpetuæ* (A.D. 202): 'a sanguine ad sanguinem ab obstetrice ad retiarium lotura post partum secundo baptismo' (*Passio S. Perpetuæ*, 118). To about the same date may be assigned the *de Baptismo* of Tertullian, who says: 'est quidem nobis etiam secundum lauacrum, unum et ipsum, sanguinis scilicet, de quo dominus, habeo, inquit, baptismo tingui, cum iam tinctus fuisset' (*de Baptismo*, 16, cf. Lupton's ed. *ad loc.*).

The distinction between the first and second baptism made by Tertullian in this passage and elsewhere is maintained by the anonymous author of *de Rebaptismo*, and by Cyprian, who says (*de Exhort. Martyr.* præf. 3) that the first baptism (by water) gives remission of sins, while the second (by blood) gives union with God and man, or the final victory of God and Christ.

Origen holds that baptism by blood excludes the possibility of sin, and ventures to assert its superiority over baptism by water (*Hom. in Jud.* vii. 473; cf. Redepenning, *Origenes*, ii. 28).

These notions, struck out under stress of persecution, were taken up in times of peace by later writers, *e.g.* Ambrose, Augustine, Cyril of Jerusalem, Gregory of Nazianzus, and Gennadius, and became the established teaching, until finally scholastic divinity definitely adopted the scheme of *baptismum sanguinis aquæ flaminis* (sc. *spiritus sancti*) (cf. Thomas Aq. *Summa*, p. iii., q. xi. xii., where baptism by blood is assigned a higher place than the other two).

It is doubtless possible to regard the expression baptism by blood, fire, tears as merely rhetorical (so *DCA* i. 169, *s.v.* 'Baptism'); but Hagenbach (*History of Christian Doctrine*[5], i. 286) points out that the parallel between the efficacy of water and blood rests upon the antithesis which the Fathers desired to maintain between man's free will and the influence of Divine Grace. In baptism by water man appears as a passive recipient; in baptism by blood he contributes something of his own.

H. F. STEWART.

BAQILĀNI.—Baqilāni († A.H. 403=A.D. 1012) was initiated into the system of orthodox theology associated with the Ash'arites—so named from the founder of the school—by his teacher Mugāhid, a pupil of Ash'arī himself († A.H. 324=A.D. 935) and Bāhili († A.H. 327=A.D. 938). The aim of this school was to safeguard the doctrines of the Qur'ān against the rationalistic tendencies of the Mu'tazilites, and at the same time to maintain a conciliatory attitude towards the claims of reason and the philosophy which contended for the rational interpretation of the Qur'ān and the exclusion of all its irrational elements. Baqilāni, in his endeavour to hold the balance even between the two conflicting parties, was regarded by some as simply a Mu'tazilite, *i.e.* a rationalist and an infidel, but the majority saw in him the champion of orthodoxy among the Ash'arites. His whole active life was given to his polemic against the liberalism of the Mu'tazilites. That he had a potent influence upon Muslim theology may be inferred from the fact that his opinions are cited in conjunction with those of al-Ghazālī († A.H. 505=A.D. 1111), the greatest theologian of Islām, and his teacher Juwaini († A.H. 478 =A.D. 1085), by ibn Taimīya († A.H. 728=A.D. 1327) in his Letters (Cairo, 1323), p. 62, by Qushgi († A.H. 879=A.D. 1474) in his Commentary on Tūsī's († A.H. 672=A.D. 1273) 'System of Doctrine,' (*Tagrid*), Treatise ii., 'Inquiry concerning the will,' and by many others. Baqilāni's system is practically that of Ash'arī (see AL-ASH'ARĪ, p. 111), although he certainly grafted several philosophical doctrines upon the orthodox theology, such as the doctrine of atoms, the doctrine of empty space, the idea that the will (especially in God) abhors the contrary of the thing willed, and that one accident cannot become the substratum of a second. The extant dicta of Baqilāni, however, are too meagre to substantiate any further differences of note.

All we know of his external life is that he was born in humble circumstances, his father being a greengrocer in Baṣra, and that he held the office of a judge in the same city. From the latter fact comes the title by which he is best known, viz., Ḳāḍī Abū Bakr, but his full name was Abū Bakr Aḥmed ibn Ali ibn at-Taiyib al-Baqilāni.

BARDS.

BARDS (Breton).—Though the Breton tongue is closely related to Welsh, the history of Breton poetry is far more meagre than that of Wales. The reason for this is that in Brittany the ruling classes and those sections of the community that had literary interests turned, even in the early Middle Ages, to the French tongue for the satisfaction of their literary wants. The result was that in mediæval times there appears to have been in Brittany no powerful and clearly established literary tradition, carried on by professional or semi-professional bards, as there was in Wales; while, in later times, there was no popular demand for native poetry except when it was of a purely popular kind (such as the ballads called *Gwerziou* and *Soniou*), or took the form of religious drama. Count Hersart de la Villemarqué, in his zeal for his native land, imagined that in mediæval Brittany a body of heroic poetry had flourished; but there are, unfortunately, nowhere to be found any traces of such poetry. Nor have we in the case of Breton, as we have in the case of Welsh, marked evidences of that linguistic conservatism which tends to keep the literary tongue distinct from the spoken language of a people. Breton has far more of the characteristics of a colloquial language than Welsh, and it approaches nearer in many respects to some of the Southern Welsh dialects than to the Welsh literary tongue. One of the great obstacles to the view that Chrétien de Troyes derived his Arthurian material and nomenclature from Brittany is that, apart from popular folklore, there is no evidence of any Arthurian literary cycle in mediæval Brittany at all; and the other British heroes, who are associated with Arthur, do not appear even to have been known in Brittany; while in Wales, on the other hand, they were the leading heroes both of prose and of verse narrative. In Wales the centres of the bardic system were the courts of the princes, but in Brittany there is no evidence whatsoever of any systematic princely patronage given to Breton poetry. As M. Loth of Rennes says, there is no continuous Breton text of any kind before the end of the 15th century. The language certainly was written before then, since we have Breton glosses and Breton proper names in writing; so that it is all the more strange, if Brittany had a flourishing literature in Breton, that there should be in existence no single fragment of it. In his *Chrestomathie bretonne* M. Loth says:

'After having invaded all the coasts of the Armorican peninsula from the Couesnon to the Loire, after having had the upper hand in the old dioceses of Dol, Saint-Malo, Saint-Brieuc, Tréguier, Léon, Cornouailles, and Vannes on the Nantes coast, and in the interior having commenced to cross, from the 8th to the 9th cent., even the Vilaine to the neighbourhood of Redon, Breton is found, after the 11-12th cent., suddenly thrust back

towards the West, and from this period it occupies almost the same area as it does to-day. The alliances of Breton chiefs with French families, whether of French Brittany or of France itself, or of the Anglo-Norman zone, were not slow to make French the language of the aristocracy and the instrument of intellectual culture, even in the Breton-speaking zone. The most ancient texts in mediæval Breton bear witness to this: they are almost all translations or imitations from the French; they are entirely penetrated with French words.'

M. Loth shows how Breton was, even in mediæval times, relegated to a lower place. Yet, as he points out, we should not be justified in thinking that there had never been in Brittany such a thing as Breton culture or Breton literature. He argues quite justly that the very existence up to the 16th cent. of the complicated Breton system of versification implies a literary period during which that system was evolved; such a system, which, he says, has features in common with the versification of Wales and Cornwall, implies the existence at one time of a school of bards or wandering Breton poets (*trouvères bretons*). It is significant, however, that the Breton metres bear far fewer traces of professional elaboration than do those of Wales. In this case M. Loth is inclined to explain the complete disappearance of the older body of poetry by the very limited circle to which it appealed or the oral character of its transmission. The significant fact for all students of Celtic influences on French mediæval literature is that not a line of Breton mediæval literature exists before the 15th century. How meagre the remnants of Breton poetry are, as compared with those of Wales, will be seen from the following list of the fragments and portions of Middle Breton poetry from the 15th and subsequent centuries that have come down to us:

(1) A Breton fragment in the farce of M. Pathelin (Loth, *RCel* iv. 451, v. 225). (2) A score of quite mutilated verses, probably in the Vannes dialect and of the end of the 15th cent. (published by Loth, *ib.* viii. 161). (3) A metrical life of St. Nonn, the mother of St. David, in the form of a Mystery play (published in 1837 by the Abbé Sionnet, with a translation by the Breton grammarian and lexicographer, Le Gonidec, and by M. Ernault, *ib.* viii. 230 ff.). The only source of this mystery is a MS in the Bibliothèque Nationale of the 15th century. The story is that of the Latin *Life of St. David* dramatized. The scene is laid mainly in Wales, but an attempt is made to localize some features of the story in Brittany, such as the burial of St. Nonn at Dirinon.

From the 16th cent. onwards the chief compositions written in Breton have been Mystery plays, which show unmistakably the influence of French models.

In 1530 there was published *Le Grand Mystère de Jésus*, of which a copy exists in the Bibliothèque Nationale. From the evidence of language, M. Loth believes that this Mystery was written about the date of its publication. A second edition was published at Morlaix in 1622 by Georges Allienne. M. Loth points out that the edition followed by the Breton translator is that of Arnoul Greban, or rather that of Jean Michel, played at Angers in 1486, and soon afterwards printed by Vérard. The same book also contains a Breton version of the *Transitus Beatæ Mariæ* (*Tremenvan an ytron guerches Maria*), the *Fifteen Joys of Mary* (*Pemzec leuenez Maria*), and the *Life of Man* (*Buhez Mabden*). For the two latter there are no known French originals. Another Breton Mystery, which was published in the 16th cent. and afterwards in the 17th, was *Le Mystère de Sainte Barbe*. The first edition was published in 1557, and the second in 1647. The former was printed at Paris for Bernard de Leau, printer of Morlaix (see 'Bibliographie des traditions et de la littérature populaire de la Bretagne' [pp. 315–316], by H. Gaidoz and Paul Sébillot, published at Paris [1882] as an extract from the *RCel*). This Mystery has been reprinted after the 1557 edition, with the variant readings of the 1647 edition, by a distinguished Breton scholar, M. E. Ernault, professor at the Faculty of Letters of Poitiers (Nantes, Société des bibliophiles bretons, 1885). This drama is substantially the same as the printed French drama of the same name, but M. Loth shows that there are differences between the two plays sufficiently marked to justify the supposition that the Breton drama is an adaptation of a French version parallel to that which has been printed. Another Breton Mystery is *The Mirror of Death*, composed in 1519 and printed in 1575, at the Convent of St. Francis of Cuburien. This Mystery is in private hands, and M. Loth states that he was able to obtain a copy of a portion of it only through the good offices of the Abbé Corre of Lesneven, who transcribed it.

In the 17th cent. we find also some Breton hymns published by Tanguy Gueguen in 1650, but there has been no development of hymnology in Breton comparable for a moment with that of Wales. In the 18th cent. the work of adapting and copying Mystery plays was carried on vigorously, and we have the following among other compositions of this type:

(1) *Robert le Diable*, a Mystery in six acts and two days. This bears the date 30th November 1741. M. Loth shows it to be of French origin, but states that it is very different from the play of 'Robert le Diable' in the *Miracles de Notre-Dame*, t. vi. (Société des anciens textes français), and also from the *Mystère du xive siècle*, published at Rouen in 1836. (2) *The Creation of the World*. The oldest known MS of this play was written in 1760, and is, like the Cornish *Gworeans an bys* ('The Creation of the World'), an imitation of the French. (3) *The Tragedy of St. Alexis*. This was represented in 1799, and is a translation into Breton from French, though its precise French source is not known. M. Loth points out that it is very different from the Miracle play of 'St. Alexis' in the *Miracles de Notre-Dame*, t. iii. p. 282 (Société des anciens textes français).

The leading Breton poet of the 19th cent. is Luzel (François-Marie), who was born on 6th June 1821 at Plouaret, Côtes-du-Nord, on the boundary of Lannion and Guingamp. Breton literature and the revival of Breton life in the 19th cent. owe probably more to the work of Luzel than to that of any other man. The Vicomte Hersart de la Villemarqué (1st half of 19th cent.) undoubtedly did much to call attention to the history and literature of Brittany, but his uncritical attitude towards popular Breton poetry, which he imagined to be of remote antiquity, and his readiness even to alter, in accordance with his preconceived ideas, the text of the popular poems which he published, led to a reaction. Luzel, on the other hand, possessed the true scientific as well as the poetic spirit of his age, and was alive to the importance of basing theory on ascertained concrete fact. It is to his zeal that we owe the collection of numerous copies of Mystery plays that were scattered over Brittany. Nor did he confine his researches to plays; he also gathered together a considerable body of popular Breton ballad poetry, the *Gwerziou Breiz-Izel* and the *Soniou Breiz-Izel*. It is in these simple popular poems that we see the true reflexion of the poetic spirit of Brittany. Wales has, indeed, in her *Penillion telyn* a certain body of popular poetry, but it consists for the most part of isolated verses; and, by the side of the earlier and later traditions of that poetry which is the fruit of conscious personal skill, the popular poetry of Wales has perhaps not been adequately prized. In Wales, too, there is a considerable ballad literature, which has characteristics that are very similar to those of the popular poems of Brittany.

Breton popular poetry has a simple and artless character, but its very simplicity gives it a charm of its own. It is fond of those narrative and dramatic incidents which often occur even in the humbler life of man. It has various moods, but the graver and sadder strain of a life of toil predominates. This poetry is especially interesting as the expression of a racial psychology that has been in close touch with Nature through hard toil on land and sea, and which has had, moreover, a life far away from that of the great centres of the wider world. In spite of the close kinship of the Welsh and Breton tongues, the Welsh and Breton types of mind are at the present day in many respects very different. The Breton mind is conservative, the Welsh mind is progressive; Brittany is the great Roman Catholic stronghold of France, Wales is the great Nonconformist stronghold of Southern Britain. The individualistic as well as the collective movements of the 19th cent. have met with a hearty response in Wales; and the industrial problems of the age are nowhere more keenly felt than in some of the populous centres of Wales. The spirit of competition has pervaded even her literary sphere. Yet it is pleasing to see the growth at the present day of a certain *rapprochement* between Wales and Brittany, which is proving a stimulus to Breton literature and to Breton institutions. One feature of this *rapproche-*

ment has been the exchange of visits at the National Eisteddfod of Wales and the Celtic festivals of Brittany by delegates from the two countries. In these visits the Marquis de l'Estourbeillon, M. Fustec, M. le Goffic, and M. Jaffrennou, one of the ablest living poets of Brittany, have taken an active part. To M. le Goffic Brittany owes a deep debt of gratitude for the active part which he has taken in the publication of Breton ballads, and the stimulus which these have been to the further composition of those simple poems in which the Breton mind delights.

LITERATURE.—J. Loth, *Chrestomathie Bretonne*, 1re partie, 'Breton-Armoricain,' Paris, 1890; Luzel, *Gwerziou Breiz-Izel*, i., Paris, 1868, ii. 1874, also *Soniou Breiz-Izel* (*Poésies Lyriques*), Paris, 1890, and *Bepred Breizad* (*Toujours Breton*), with a French tr. by J. Haslé, Paris, 1865; Count Hersart de la Villemarqué, *Poèmes Bretons du Moyen Âge*, Paris (n.d.), also his *Barzaz-Breiz*, Paris, 1839, 2 1845, 3 1867; P. Sébillot and Henri Gaidoz, *Bibliographie des traditions et de la littérature populaire de la Bretagne*, Paris, 1882, pp. 277–338 [this bibliography is invaluable for the study of all phases of Breton life]; Loth, *Emigration bretonne en Armorique du ve au viie Siècle de notre ère*, Rennes, 1883; Anatole le Braz, *Le Théâtre Celtique*, Paris (n.d., but probably 1905) [this work has a most valuable résumé of the characteristics of Breton literature]; Victor Tourneur, 'Esquisse d'une histoire des études celtiques' (*Bibl. de la Faculté de Philos. et Lettres de l'Université de Liège*, fasc. xv.), Liège, 1905; Keller and E. v. Seckendorff, *Volkslieder aus der Bretagne*, Tübingen, 1841; Souvestre, *Les derniers Bretons*, 1836, new ed. Paris, 1875; Hartmann and L. Pfau, *Bretonische Volkslieder*, Cologne, 1859; Tom Taylor, *Ballads and Songs of Brittany*, London, 1865; Ernault, 'Poèmes bretons, Merlin, Lez-Breiz, traduits du breton du Barzaz-Breiz en vers français (*Mémoires de la Société d'Émulation des Côtes-du-Nord*, t. xix. [1881]); Luzel, *De l'Authenticité des chants du Barzaz-Breiz*, Saint-Brieuc and Paris, 1872; Liebrecht, art. on the authenticity of *Barzaz-Breiz*, in *GGA*, 7th April 1869.

E. ANWYL.

BARDS (Irish).—The earliest poems of the Irish bards are lost; but although it is not easy to re-construct for ourselves, with any degree of fullness, the functions and surroundings of the pre-Christian poets, we are by no means without data to attempt such re-construction. We know, in the first place, that the poet was regarded as possessed of powers sufficiently supernatural to make even princes tremble; for with a well-aimed satire he could raise boils and disfiguring blotches upon the countenance of his opponents, or even do them to death by it. This belief continued until the later Middle Ages; and, even down to the days of Dean Swift, the Irish poet was credited with the power of being able to rhyme at least rats and vermin to death. Again, the early Irish poet was, by virtue of his office, a judge in all cases of tribal disputes and in other matters. He was also, if not a Druid himself, probably closely allied with the Druidic order; and when Christianity superseded Druidism in the 5th cent., the mantle of Druidic learning seems to have fallen upon his shoulders; and amid Christian times he seems to a large extent to have continued the Druidic traditions. His verses prior to the 6th or 7th cent. were not rhymed, but seem to have depended for their effect upon diction—a sort of rhythm, and perhaps to some extent alliteration.

The Irish memory, always very tenacious, has handed down to us in some of our oldest MSS several verses said to be the first ever made in Ireland. These are ascribed to no less a person than Amergin, brother of Eber, Ir, and Eremon, the three early Milesian conquerors, sons of Milesius himself, to whom (or to whose uncle Ith) every free Celtic family in Ireland traces itself back to this day, just as the Teutonic races of Germany traced themselves to one of the three main stems that sprang from the sons of Mannus, whose father was the god Tuisco. These verses of Amergin, like all other very early Irish poems that have come down to us, are composed in a kind of rhetoric or unrhymed outburst, called *rosg* by the Irish; and there can be little doubt that they were handed down from grandfather to father and from father to son, perhaps for hundreds of years before the Irish Celts became acquainted with the art of writing, which they probably did in the 3rd cent., when, having become acquainted with letters through the Romanized Britons, they invented for themselves their curious Ogam alphabet. As it has always been the belief of the Gaels that these verses of Amergin's were the earliest ever composed in Ireland, it may very well be that they actually do represent the oldest surviving lines in the vernacular of any country in Europe except Greece alone:

'I am the wind which breathes upon the sea,
I am the wave of the ocean,
I am the murmur of the billows,
I am the ox of seven combats,
I am the vulture upon the rock,
I am a beam of the sun,
I am the fairest of plants,
I am a wild boar in valour,
I am a salmon in the water,
I am a lake in the plain,
I am a word of science,
I am a point of the lance of battle,
I am the man who creates in the head (*i.e.* of man) the fire (*i.e.* the thought).
Who is it that throws light upon the meeting on the mountain (if not I)?
Who announces the ages of the moon (if not I)?
Who teaches the place where couches the sea (if not I)?'

It is only natural that D'Arbois de Jubainville, whose translation of these very difficult verses is here given, should discern in them a strong vein of Pantheism, which appears to run through the poem. It may, however, have no such pregnant signification, and may be merely a panegyric, couched in metaphor, upon the prowess of the singer himself. Another poem ascribed to the same Amergin appears to be an invocation of Ireland, of which he and his brothers took possession for the Milesians. It is unrhymed, has a tendency towards alliteration, and shows a strongly marked leaning towards dissyllabic diction, as—

'I invoke thee, Erin,
Brilliant, brilliant sea,
Fertile, fertile hill,
Wavy, wavy wood,
Flowing, flowing stream,
Fishy, fishy lake,' etc.

The Irish annalists themselves have never been agreed as to the time when Amergin is supposed to have sung these verses, some dating it as far back as 1700 B.C., and others placing it as late as 800 B.C.. All that we can say with certainty is that they are very old. In like manner we find preserved the earliest satire said to have ever been pronounced in Ireland, and other pieces of the same nature, all undoubtedly of great antiquity and almost unintelligible, despite the heavy glosses added to them by the Irish of the Middle Ages.

After the general establishment of Christianity in Ireland, which was largely owing to Saint Patrick, who commenced his missionary labours about the year 432—though there were Christians in the South of Ireland before his time—we find the poets still occupying a very high position. In the preface to the old law-book the *Seanchus Mór*, some of whose tracts in their present form cannot, says Jubainville, be later than the close of the 6th cent., we read that the Old Law had been reduced to form by the Irish poets long before St. Patrick's time. 'Whoever the poet was,' says the text, 'who connected it by a thread of poetry before Patrick, it lived until it was exhibited to Patrick. The preserving shrine is the poetry, and the Seanchus, or Law, is what is preserved therein.' The tract itself begins thus:

'The Seanchus of the men of Erin—what has preserved it? The joint memory of two seniors, the tradition from one to another, *the composition of poets*.'

Here it is that we probably come upon the real secret of the early poet's importance, which, as we know, placed him next to the prince and rendered

his person sacrosanct. This importance arose from the fact that, in an age when writing was not known or used, he, and he alone, possessed the power of throwing law, history, and, above all, genealogy, into such forms as could be stereotyped upon the only material then available—the human memory. We know from Cæsar (*de Bell. Gall.* VI. xiv. 4) that the Gaulish Druids who could write, and who used Greek letters for ordinary purposes, nevertheless refused to commit to writing any of the considerable number of verses which they were obliged to learn. Cæsar seems to think that they did this partly to keep their lore a secret known only to themselves, and partly to strengthen the memory of their disciples. It is very probable, however, that the Druids' verses, in which, as in the verses of the early Irish poets, laws, genealogies, rights, and prohibitions were enshrined, had had their origin, in Gaul as in Ireland, long before the art of writing had been diffused, and the priestly class, always conservative by nature, had continued to hold fast to tradition, not only in the matter of their learning, but also in their manner of transmitting it. There is no indication, however, that the Irish ever imitated them in this respect, or showed any repugnance to committing to writing their own traditional lore, so soon as letters had once become common amongst them.

The schools of the Irish poets subsisted for generations, side by side with the colleges of the clergy, in Ireland, but they were perhaps less firmly localized, and showed a tendency to attach themselves to the personalities of their master-poets and teachers rather than to particular localities. It is also probable that there may have been a certain amount of confusion when the ancient Druidic schools began to break up and disintegrate, or rather before the 'sons of learning,' as the Irish called the students who attended them, began to specialize; and it is nearly certain that the offices of historian, judge, poet, and genealogist were not sharply distinguished from one another for many generations. This will be the more readily understood if we remember that one of the principal tasks of the historian in early times was to preserve the tribal genealogies upon which the holding of land, and indeed the entire tribal system, depended. But both his history and genealogy were preserved in a shrine of poetry, and whoever was master of the contents of this poetry became, naturally and inevitably, the judge, who alone was able, from his own knowledge, to settle the disputes of the tribe and the suits of its individual members. Indeed, the office of poet did once legally carry with it the office of judge as well, according to Irish accounts, until the reign of Conor Mac Messa, shortly before the birth of Christ. He it was who first made a law that the office of poet should not of necessity carry with it the office of judge also; for, says the old text, 'poets alone had the power of judicature from the time that Amergin Whiteknee [the son of Milesius mentioned above as being the first Irish poet] delivered the first judgment in Erin.'

The profession of poet was so popular in early Ireland, that at one time, it is said, one third of the patrician families followed this calling. They expected to be supported by the general public, and terrorized the wealthy with the threat of their satire. They constituted an intolerable burden upon the productive working part of the nation, and three distinct attempts were made to get rid of them altogether, the last at the Synod of Drumceat in A.D. 590, where their numbers were greatly cut down and their prerogatives restricted, though, to counterbalance this, certain endowments of land were apportioned to provide for their schools. These institutions actually continued, with scarcely a break, until the 17th cent., when those few who escaped the spear of Elizabeth fell beneath the sword of Cromwell. In these schools, which were the lineal descendants of the old pre-Christian Druidic foundations, there gradually arose a complete system of specialization in learning. There still exist fragments of the metrical text-books used in these schools, preserved in the *Book of Leinster* (*c.* 1150) and other MSS, and that they date, partially at least, from pre-Christian times seems certain from their prescribing, amongst other items of the poet's course, a knowledge of the magical incantations called *Tenmlaida, Imbas forosnai*, and *Dichetal do chennaibh na tuaithe*. The poet was also obliged to learn an incantation called *Cétnad*, of which the text says:

'It is used for finding out a theft: one sings it, that is to say, through the right fist on the track of the stolen beast [observe the antique assumption that the only kind of wealth to be stolen is cattle], or on the track of the thief in case the beast is dead, and one sings it three times on the one track or the other. If, however, one does not find the track, one sings it through the right fist and goes to sleep upon it, and in one's sleep the man who has brought it away is clearly shown and made known,' etc.

Another *Cétnad* to be learned is one which desires length of life, and is addressed to 'the Seven Daughters of the Sea, who shape the thread of the long-lived children.' Another curious operation with which the poet had to make himself familiar was the *glam dichinn*, intended to punish any king or prince who should refuse to a poet the reward of his poem. The poet, says the text,

'was to fast upon the lands of the king for whom the poem was to be made; and the consent of thirty laymen, thirty bishops [a Christian touch added in later times to make the passage pass muster], and thirty poets should be had to compose the satire.'

The proceedings were weird and terrifying. There were seven grades of poets, of which the *ollamh* [*ollav*] was the highest, and the whole seven were to go,

'at the rising of the sun, to a hill which should be situated at the boundary of seven lands, and each of them was to turn his face to a different land, and the *ollamh's* face was to be turned to the land of the king who was to be satirized, and their backs should be turned to a hawthorn which should be growing on the top of a hill; and the wind should be blowing from the north; and each man was to hold a perforated stone and a thorn of the hawthorn bush in his hand; and each man was to sing a verse of his composition for the king, the chief poet to take the lead with his own verse, and the others in concert after him with theirs; and each of them should place his stone and his thorn under the stem of the hawthorn tree; and, if it was they who were in the wrong in the case, the ground of the hill would swallow them; and, if it was the king who was in the wrong, the ground would swallow him, and his wife, and his son, and his steed, and his robes, and his hound,' etc.

It is evident that these magic incantations and terrifying ceremonies found amongst the remnants of the poets' books are really remnants of the pre-Christian teaching of the Druidic schools, which had embodied themselves in the text-books of later times. They show at once the superstitious reverence with which the poets must have been regarded, and the extreme antiquity of their schools and text-books; for it can scarcely be contended that such pieces of obvious Paganism had their origin after Ireland had been Christianized.

The Irish poet was not called a 'bard' but a *file* (*filla*). The bard was, in comparison with him, only a rhymester; and, though both existed side by side, there was the greatest disparity of status. Where the *file* received his three cows for a poem, the bard bore away only a calf. The distinction between the *file* and the bard seems to have come to an end during the long-continued wars with the Norsemen, when much of Ireland's internal policy was thrown into the melting-pot. There were seven orders of *file*, and the highest had something like a twelve years' course before he attained his degree. The bards were divided into 'free' and 'un-free' bards. There were eight classes of each, and each class was allotted by law the metres which it was allowed to make use of. A lower class could not use the metres belonging to a higher

class. Whether the Celts invented rhyme seems open to doubt. Zeuss, the father of Celtic learning, asserts that they did. One thing is certain: we find the Irish as early as the 7th century—that is, long before any other people in Europe made use of it—bringing rhymed poetry to a high pitch of perfection. It is no exaggeration to say that by no people on the globe, at any period of the world's history, was poetry so cultivated and so remunerated as it was in Ireland during the Middle Ages, and even down to the 17th century. In the 16th and following centuries the poets fell under the ban of the English State, because, as Spenser puts it, their poems were 'tending for the most parte to the hurte of the English or [the] mayntenaunce of theyre owne lewde libertye, they being most desirous thereof.' The severest Acts were passed against them, and numbers of them were hanged. The present writer cannot recall a single poet who took the side either of the English invaders or of the Reformation. So thoroughly was all indigenous Irish civilization stamped out under the Penal Laws, that, by the close of the 18th cent., there was probably not a single person living who could compose in any of the 400 metres practised by the ancient schools. A new school of poetry arose among the unlearned, and accentual metres took the place of syllabic poetry, and so it continues to this day.

Outside of its marvellous development of metric, the most interesting feature of Irish poetry is perhaps its appreciation of nature in all its moods, its love of the sea, the forest, and wild scenery, which it seems to have developed long before other European literatures.

LITERATURE.—O'Curry, *Manners and Customs of the Ancient Irish*, 3 vols., London, 1873, and the same author's *Lectures on the MS Materials of Ancient Irish History*, Dublin, 1878; Hardiman, *Irish Minstrelsy, or Bardic Remains of Ireland*, London, 1831; Thurneysen, 'Mittelirische Verslehren,' *Irische Texte*, 3rd ser. i., Leipzig, 1891; *Transactions of the Ossianic Society*, vol. v., 'The Proceedings of the great Bardic Institution,' Dublin, 1860; O'Donovan, *Book of Rights*, Dublin, 1847; Sigerson, *Bards of the Gael and Gall*[2], London, 1907; Keating, *History of Ireland* (Irish Texts Society's ed. 1908), iii. 93 ff.; Atkinson, *On Irish Metric*, Dublin, 1884; Hyde, *Literary History of Ireland*, London, 1899.

DOUGLAS HYDE.

BARDS (Welsh).—1. Definition and scope of the term.—In Welsh the modern form of the term for a poet is *bardd* [*dd*=English soft *th*], but, at an earlier stage in the history of the language, the form was *bard*. In one of the old Welsh glosses (8th or 9th cent.) on Martianus Capella the word 'epica' is glossed as *bardaul* [=mod. Welsh *barddol*]. In the Cornish Vocabulary (Zeuss-Ebel, p. 1070), 'tubicen' is explained as *barth* [*th*=W. *dd*] *hirgorn* ('the bard of the long horn'), while in Breton the corresponding form *barz* is given in the Catholicon as *menestrier* ('a mime'). In Welsh, as in Irish, the term 'bard' preserved the meaning which it had in Gaulish. Posidonius, quoted by Athenæus (vi. 49, p. 246^{c-d}), refers to the poets of the Celts as βάρδοι (*bardoi*), and says that these are poets who utter praises with song. The same writer, quoted by Strabo (iv. 4. 4, p. 197), speaks of βάρδοι, οὐάτεις (*vates*), and δρυίδαι (*druidai*) as 'three tribes' (τρία φῦλα) among the Celts, the bards being 'composers of hymns and poets' (ὑμνηταὶ καὶ ποιηταί). Diodorus, also (v. 31. 2), speaks of the bards of the Gauls as 'composers of songs' (ποιηταὶ μελῶν), while he further states that they sang, accompanied by instruments like lyres, praising some and reviling others. One of these instruments in use among the Britons, as we learn from Venantius Fortunatus, was called *crotta* (Welsh, *crwth*). It will be seen from these references that the bards appear to have had a recognized place in Celtic social life, and one of the most characteristic features of the development of poetry in Wales has been the close association of the bards and their productions with the satisfaction of certain social needs of a literary character.

The existence of the term 'bard' in the same form in both the Goidelic and the Brythonic branches of the Celtic family shows that it was in use before the separation of these two branches. At the same time it can hardly have been used as a professional term in the period of Italo-Celtic unity (to which philological considerations point), since there is no trace of it in the Italic languages, while the term corresponding to οὐάτεις (Lat. *vates*, Irish *fáith*, Welsh *gwawd*, 'song') appears to have been common to Italic and Celtic in that period. It was probably as the official spokesman in song of the feelings of his tribe on important occasions that the Celtic bard gained his name. He would be the recognized composer for his community of elegies and eulogies and, if need were, of satires. His elegies and eulogies may well have included in their scope not only the recently dead, but also the famous heroes of the tribe or family with which he was associated, while hymns in praise of the gods were no doubt from time to time composed by these official interpreters of tribal feeling. Cæsar (*de Bell. Gall.* VI. xiv. 4) tells us that it was the practice of the Druids to teach their disciples a large body of oral poetry, which they were not allowed to commit to writing, lest thereby their memory should be impaired.

Much of the interest of the evolution of Welsh poetry consists in a study of its correlation with the varying social needs of the Welsh community, and also the gradual growth of a body of poetry which, as in modern countries generally, is an individual rather than a social product. It is of interest, too, to note how the poetry of Wales has been the expression, not only of various literary wants of a social character, but also of the thoughts generated by the beauty of Nature and by the vicissitudes of human life. It contains many poems and lines of true insight and real æsthetic beauty, and shows that the minds of many Welsh poets have been attuned to the signal grandeur and charm of the scenery of Wales.

2. The bards in the Welsh laws.—In the Welsh laws of Howel Dda (10th cent.), the bards have a recognized place in the social order, and have official representatives in the royal household. The three bardic grades appear to have been (1) *Pencerdd* ('chief of song'), or *Bardd Cadeiriog* ('the throned bard'); (2) *Bardd teulu* ('the bard of the house-host or retinue'); and (3) bards of the lowest grade, who were called sometimes *Clerwyr*, sometimes *Oferfeirdd* ('superfluous bards'), and sometimes *Beirdd Yspydeit* ('bards receiving entertainment'). The throned bard sat next below the judge of the court in the upper portion of the hall, while the bard of the household sat on one hand of the chief of the household in the lower portion, the chief of the household being a son of the king, or his nephew, or some other member of the blood-royal. One of the duties of the chief of the household, we are told, was to place the harp in the hands of the bard of the household at the three principal feasts (Easter, Whitsuntide, and Christmas). One of his privileges, too, was that he could have a song from the bard of the household whenever he might desire it. One section of the Welsh laws enumerates the duties and privileges of 'the bard of the household,' and among them the following:—

'He is to have his land free, and his horse in attendance, and his linen clothing from the queen, and his woollen clothing from the king. He is to have the clothes of the steward at the three principal festivals. When a song is desired, the chaired bard is to begin, the first song of God and the second of the king who shall own the palace, or, if there be none, let him

sing of another king. After the chaired bard, the bard of the household, is to sing three songs on various subjects. If the queen desire a song, let the bard of the household go to sing to her without limitation, in a low voice, so that the hall may not be disturbed by him. He is to have a cow, or an ox, from the booty obtained by the household from a border-country, after a third has gone to the king; and he is, when they share the spoil, to sing the "Monarchy of Britain" to them. When he shall go with other bards he is to have the share of two.'

The throned bard, or chief of song, who stood in the highest position of all, has his functions and privileges also described.

'He is to have his land free. He is to begin with a song of the Deity, and next of the king who shall own the palace, or of another. The chief of song only is to solicit, and of the common gains of himself and companions he is to have two shares. He is to have twenty-four pence from every minstrel, when he may have finished his instruction. He is to have twenty-four pence from every woman on marriage, if he have not received it from her before. He is to have the *amobyr* ("marriage-fee") of the daughters of the minstrels. He is to lodge with the *edling* ("heir-apparent").'

For a bard of unusual skill the term *prydydd* was sometimes employed, and the chieftainship of song was obtained by a bardic contest (*ymrysson*) in the form of a dispute between the two candidates. An *ymrysson* of this kind (probably incomplete) is still extant (see *Myvyrian Archaiology*[2], p. 154*a*). Other terms used in the mediæval period were *Culfardd* (found in the *ymrysson* in question), and *Posfardd*, the earliest instance of which is in the Book of Taliessin (14th cent.), poem i., l. 13, but the precise force of these terms is uncertain.

It is clear from these indications that the professions of the poet and the minstrel were closely linked together, and practised, not infrequently at any rate, by the same person. The chief of song appears to have exercised magisterial functions over those of lower rank, and also to have been the umpire in bardic disputes. Another function which the Welsh bards (even the *pencerdd*) exercised was that of the story-teller (*cyfarwydd*), and the term *Mabinogi*, representing the oldest stratum of Welsh mediæval narrative, appears to be derived from *mabinog*, a term found in some of the triads for an apprentice or disciple bard, possibly because this body of narrative was committed to memory by the bardic beginner. The men who composed the mediæval vaticinations (*daroganau*), such as we find in the Black Book of Carmarthen and the Book of Taliessin, were called *derwyddon*. In the *Collatio Canonum* (Paris, *Bibl. nat.*), 3182 (prior to end of 11th cent.), *dorguid* (or *darguid=derwydd*) is a gloss on 'pithonicus,' and means 'a seer.'

3. The oldest remains of Welsh poetry.—The oldest remains of Welsh poetry now extant are contained in the following documents: (1) *A MS of the paraphrase of the Gospels into Latin hexameters, made by C. Vettius Aquilinus Iuvencus*, in the University Library at Cambridge, transcribed in the 9th century.

This MS contains two Welsh poems written in the pre-Norman Welsh script and orthography, which are from all indications contemporary with the Welsh glosses of the 9th century. The first poem is a hymn, not unlike some of those contained in the Black Book of Carmarthen (see below), and the second a personal poem expressive of loneliness and sadness, of the same *genre* as the 'Llywarch Hen' poetry of the Black Book of Carmarthen and the Red Book of Hergest. The subjective strain of this fragment is characteristic of this type of early poetry.

(2) *An 11th cent. MS of St. Augustine's 'de Trinitate,'* now in the Library of Corpus Christi College, Cambridge.

In the opinion of the late Mr. Henry Bradshaw, three lines and a word of Welsh verse have been written by Johannes, son of Sulien, Bishop of St. David's (1071–1089). These lines are of interest, because they are undoubtedly taken from a poem of which we have some fragments in the Book of Aneirin (see below).

(3) *The Black Book of Carmarthen* (12th and early 13th cent.).

This MS contains some poems by Cynddelw Brydydd Mawr, which are undoubtedly of the 12th cent.; also certain vaticinations put into the mouth of Myrddin (Merlin), which clearly refer to historical events of the 12th century. These vaticinations are expansions of the legend of Myrddin and the story of the battle of Arderydd (see MERLIN). The first poem in this MS deals with the same topic in the form of a short dialogue between Myrddin and Taliessin. One of the features of the poetry of the Black Book of Carmarthen is the fondness which it shows for the dialogue form. The fragments of old Welsh poetry which it contains consist, in addition to the preceding poems, of hymns, a dialogue between the soul and the body, a series of stanzas commemoratory of Welsh heroes, called 'The Stanzas of the Graves,' a group of poems which are related to the Arthurian legend, and a few other poems referring to legendary characters and episodes. Part of the interest of these poems consists in the indications which they give of the existence of a body of Welsh poetry forming a heroic cycle, parallel to the prose narratives of the Mabinogion and Geoffrey of Monmouth, and to the allusions and summaries of the Triads. The poems of this cycle were not, as a rule, long, and consisted sometimes only of a few *englynion* ('stanzas'). Occasionally, as in the poems attributed to Llywarch Hen, we find a note of genuine poetry, as in the graphic description of the scenes of winter. Some of this poetry doubtless goes back at least to the 9th cent., since it is similar in style to the second Welsh poem of the Codex Juvenci. It is not improbable that subjective soliloquies of this kind were evolved out of more objective heroic poems descriptive of battle and adventure.

(4) *The Book of Aneirin* (early 13th cent.).

This MS contains the poem called 'Y Gododin,' a long poem of 938 lines, together with shorter poems called 'Gorchan Tutvulch,' 'Gorchan Adebon,' 'Gorchan Cynvelyn,' and 'Gorchan Maelderw,' the last-mentioned poem being attributed in the MS to Taliessin. Part of it is written in an orthography akin to that of the glosses, and a close analysis of it shows that it consists in parts of fragments of poems identical with portions of 'the Gododin.' 'The Gododin,' too, when analyzed, reveals signs of being of a composite character; it contains some repetition of stanzas, and series of stanzas have been broken up by intervening matter. 'The Gododin' is best regarded as a corpus of short poems relating mainly to the battle of Catraeth, fought between the Britons of the North and the men of Deira and Bernicia. The family which holds the leading place in this body of verse is that of Cynvarch, to which Cynon ab Clydno Eiddin and Urien Rheged belonged. It is of interest to notice that, in one line of 'Gorchan Maelderw,' Arthur is mentioned in words which imply that he was a leading figure in this cycle.

(5) *The Book of Taliessin* (14th cent.).

This MS contains a collection of poetry that has clear links of connexion with the earlier heroic cycle. Just as in the vaticinations the personality of Myrddin is brought into the foreground and made the mouthpiece of prophecy, so in the Book of Taliessin the legend of Taliessin is taken as a basis, and he is made the mouthpiece of verses narrating events legendary and historical in the past, at which in the course of his transformations he had been present. The poetry that is attributed to him is interspersed with allusions to the monastic studies of the Middle Ages, which suggest that it was composed by a monk (or monks) rather than a professional bard. Much of the interest of this poetry, which is very difficult and obscure, is that it has preserved for us many verse parallels to narratives contained in the Mabinogion and the Triads, and, among them, some very interesting fragments of Welsh Arthurian legend. We here find, too, references to certain of the characters of the Four Branches of the Mabinogi, which enable us to supplement the account given of them in prose. Some of the poems in the book bear evidence of being poems of the heroic type, cognate with 'the Gododin' and the oldest parts of the Black Book of Carmarthen, and it is worthy of note that the interest appears to centre round Urien Rheged.

(6) *The Red Book of Hergest* (14th and 15th cents.).

This MS, which belongs to Jesus College, Oxford, and which is deposited for greater safety in the Bodleian Library, contains a considerable body of poetry belonging to the same strata as the MSS already mentioned. It is especially rich in poetry of the type attributed to Llywarch Hen, as, for instance, the elegies on Cynddylan and Urien Rheged. Doubtless much of this poetry has grown by accretion round an older nucleus, and the topography suggests that Powys (Mid-Wales) was the chief region where it was developed. It is in this body of poetry that much of the charm of early Welsh verse consists, though much that was once thought to be pre-Norman was doubtless composed in the Norman period; and some of the poetry may even owe its origin to the Abbey of Strata Marcella (in Welsh *Ystrad Marchell*), near Welshpool, in Montgomeryshire, where it is probable that the Red Book of Hergest was copied.

(7) In the White Book of Rhydderch and the Red Book of Hergest texts of the Mabinogion there are a few *englynion* embedded in the narrative, as, for example, in Branwen, daughter of Llyr, Math ab Mathonwy, and Kulhwch and Olwen. Possibly these *englynion* may be older than the prose narrative, and may be as old as any portion that is extant of Welsh poetry.

There can be little doubt that the struggle with the English gave rise to a series of poems commemorative of the chief battles and their heroes, but it is difficult to say whether any of these poems

are now extant. The existing body of pre-Norman Welsh poetry shows signs of evolution, due to the emphasizing of the personality of the poets who were connected with the chief heroic figures, and the attribution to them of sentiments and poetry that seemed appropriate to them. For example, Aneirin is made to relate his own visit to the warriors at Catraeth, his imprisonment, and his escape; Taliessin is made to give the story of his transformations and his relations with Maelgwn Gwynedd and Elphin; Llywarch Hen is made to utter lamentations over the past, and Myrddin prophecies as to the future. Behind these developments, however, there lies in each case the older and simpler objective type of Welsh poetry.

4. **The historical poetry of the 'Gogynfeirdd.'**—This body of poetry is contained in the *Myvyrian Archaiology*, and is undoubtedly contemporaneous with the persons and the events which it describes. It was written by the leading Welsh poets of their day, who were in close touch with the princes whose elegies and eulogies they for the most part sing. It is not improbable that much other poetry was composed in Wales at the time, but it is the work of the court-poets alone that has come down to us. This poetry shows all the traces of professional skill and technique: the language is singularly terse, the vocabulary and grammar are largely archaic and traditional, and there are not a few reminiscences of the older poetry. Bravery and generosity are the qualities most extolled in the princes. Allusions to battles and similar historical events are frequent. War is the dominant theme, though there are occasional glimpses of an interest in nature and even of the poetry of love. The spirit of this historical poetry is clearly akin to that of the earlier heroic poetry, to the characters of which it is full of allusions. There is not a trace within it of colloquialism, or of an effort after the simplicity of prose. Here and there we find lines of signal strength and beauty; but the poet, as a rule, aims far more at vigour and force than at æsthetic charm. The following are the chief representatives of this type of Welsh poetry in the 12th and 13th centuries:—

Meilir (1120–1160), the bard of Gruffydd ab Cynan, prince of Gwynedd. Gwalchmai, son of Meilir (1150–1190), the bard of Gruffydd ab Cynan's son, Owain Gwynedd. This poet, as his poem 'Gwalchmai's Delight' shows, had a genuine appreciation of nature. Cynddelw Brydydd Mawr (1150–1200), the bard of Madog ab Meredydd, prince of Powys (Mid-Wales). His verse is distinguished by strength and terseness rather than beauty, but he too, in a poem addressed to Eva, daughter of Madog, shows something of that delicate sense of beauty which characterized his contemporary Gwalchmai. Owain Cyveiliog (1150–1197), a prince, whose elegy on his dead warriors shows traces of the study of 'The Gododin' and of genuine poetic feeling. In Hywel ab Owain Gwynedd (1140–1172) we have a princely bard, whose love-poems have the true ring of Welsh amatory poetry, and show unmistakably that the poetic appreciation of Nature had its representatives in Wales even amid the stress of war. Llywarch ab Llywelyn (1160–1220) wrote for the most part in honour of the line of Gwynedd and of Llywelyn ab Iorwerth, perhaps the greatest prince of that line. The same tradition was carried on by Dafydd Benvras (1190–1240), Einiawn ab Gwalchmai (1170–1220), Einiawn Wann (1200–1250), Elidyr Sais, Llywelyn Fardd, Bleddyn Fardd, and others. Einiawn ab Gwalchmai composed a very striking elegy on Nest, daughter of Hywel. During this period poetry, too, was composed in honour of the Lord Rhys of Deheubarth (S. Wales) and his descendants, by Cynddelw Brydydd Mawr, Phylip Brydydd (1200–1250), and by Prydydd Bychan (1210–1260). In this body of poetry we find, too, several religious poems, which show that there was no definite cleavage between the ecclesiastical and the secular poetry of Wales. The spirit of this epoch of Welsh poetry may be regarded as culminating in the elegy written by Gruffydd ab Yr Ynad Coch (1260–1300) on Llywelyn ab Gruffydd, the last prince of Gwynedd, who was killed in 1282. This elegy is one of the finest in the Welsh language.

5. **Welsh poetry from the death of Llywelyn to the Reformation.**—It is a striking testimony to the vitality of Welsh poetry that the fall of Llywelyn appears to have made no appreciable difference to its progress. In Gwynedd, as had already been the case in other parts of Wales, some of the leading families became successors to the princes in their support of the poets. Among these families, none was more prominent than that of Tudur ab Goronwy of Penmynydd, Anglesey, the ancestor of Henry VII. In various parts of Wales new zones of poetry grew up, grouped round centres of lay and ecclesiastical patronage; for the great abbeys of Basingwerk, Valle Crucis, Aberconwy, Cymmer, Strata Marcella, Strata Florida, Whitland, Neath, Talley, Margam, and Tintern, together with the priories of Beddgelert, Cardigan, Carmarthen, and Monmouth, were important factors in the encouragement of Welsh literature. Side by side with the composition of original works had gone the translation of secular and religious legends from French, and the works of the poets bear abundant evidence of acquaintance with the names and the atmosphere of romance, both native and foreign. The fall of Llywelyn would appear to have turned the current of the Welsh Muse towards those gentler themes which were never alien to her. The language became simpler and more intelligible, though in formal eulogies and elegies the older style still maintained itself.

Of the newer poetry the chief representatives were Gruffudd ab Maredydd, Gruffydd ab Dafydd ab Tudur, Hywel ab Einion Lygliw, Llywelyn Goch ab Meurig Hen, and Dafydd ab Gwilym. Of these, Hywel ab Einion Lygliw is best known as the author of a poem on Myfanwy of Dinas Bran, Llywelyn Goch as the author of a remarkably fine elegy on Lleucu Llwyd of Pennal, while Dafydd ab Gwilym is the author of about three hundred poems characterized in many instances by vivid observation of nature, fertility of imagination, a most catholic sympathy, and genuine poetic insight. His exact date cannot be determined with certainty, but he flourished approximately in the first half of the 14th century. It is clear from his poetry that he was in touch with all the leading zones of Welsh poetry in his time, those of Anglesey, North Cardiganshire, Emlyn, Morgannwg, and Gwent. In Anglesey he would appear to have been in his youth associated in some capacity with a monastic institution, but his poetry is animated by a deliberate anti-ascetic tendency and an intense passion for nature. Much of Dafydd ab Gwilym's skill consists in his power of describing the essentials of an object or a scene in a few telling lines. His spirit is that of a refined humanism, and his verse bears the impress of elegant and cultured surroundings. His poems abound in allusions to native and other legends and romances, and the various series, which certain of his poems form, are, as it were, so many romances in verse. His favourite metre is the *Cywydd*, a metre invented either by himself or by one of his contemporaries, by stringing together a series of couplets consisting of the last two lines of an *englyn*; or else this metre, if not then invented, was one which had been kept in the background of the poetry of the earlier period, since no instance of it before the time of Dafydd ab Gwilym appears to be extant. In all his poems, except his formal eulogies and elegies, Dafydd ab Gwilym eschews archaisms, and aims at a simple and lucid, yet original and artistic, style. The singular richness of his genius created a new epoch in Welsh poetry, and he is succeeded by a number of imitators, especially in his love-poetry. It would be a mistake, however, to suppose that his was the sole influence current in Welsh poetry at this time. We find in Sion Cent (about 1350), for instance, emphasis laid on the ethical rather than the ritual or ascetic side of religion, and a note of poetic realism in a poem expressing sympathy with the toiler.

One of the most characteristic features of Welsh poetry at all periods has been its fidelity to the facts of human life in Wales, a life mainly of toil by land and sea; to the prominence in consciousness of the essential facts of the common lot of man, those of birth, of death, of the uncertainty of life, of disappointment, of failure, of poverty and struggle, relieved by love, by the beauty of Nature, by occasional success, by the kindness and generosity of friends, and by the charm of the muse. Until the accession of Henry VII. we find at intervals the continuance of the older tradition of the poetry of war and political interest, as in the poems of Iolo Goch (late 14th and early 15th cent.), the friend of Owen Glyndwr (Glendower), Gutto'r Glyn (1430–1468), and Lewis Glyn Cothi (1440–1490). The political interests of these periods are reflected also in the *Brudiau*, or 'Vaticinia,' to which they gave rise. In some of its aspects Welsh poetry was closely associated with the highly developed social life of the time, and requests for favours and thanks for favours granted

were not complete without being embodied in verse. This led to the practice of minute descriptions of various objects, animate and inanimate, and at times there is a tendency to have recourse to over-ingenious and far-fetched comparisons.

The chief imitators of Dafydd ab Gwilym are Dafydd Nanmor (1330–1390), Bedo Aerddren (c. 1480) and Bedo Brwynllys (c. 1450), Bedo Phylip Bach (c. 1480), Ieuan Deulwyn (1460–1490), and Dafydd ab Edmwnt (1440–1480).

The intimate connexion of the Welsh poets of this period with the life of their country, and their often high sense of literary art, make their works invaluable for a study of the Welsh mind and of its social and other ideals at this time. Here, again, certain zones of poetry, often flourishing around the home of some powerful patron, rise into prominence, such as the North-East zone, where we have the 'three brothers of Marchwiail' (c. 1350), and also Iolo Goch, Meredydd ab Rhys, Gutto'r Glyn, Dafydd ab Edmwnt, and Guttyn Owain (1450–1480); the South-East zone, where Bedo Brwynllys, Hywel Dafi (c. 1450), Lewis Glyn Cothi, Iorwerth Fynglwyd, Ieuan Deulwyn, and others flourished; while there were other important zones around Tywyn in South-West Cardiganshire, and Machynlleth in Montgomeryshire. A large portion of the poetry of this period is still extant in MS, and, under the encouragement of the University of Wales, its serious and thorough study is now commencing. As the poets of the period were in close touch with the leading families of Wales, they reflect very faithfully the dominant ideas of the circles wherein they moved, especially during the Wars of the Roses. In these poems, too, we see the contrast between Welsh rural life, which was in harmony with the Welsh tradition, and that of the boroughs, which were practically English garrisons established in Wales.

In some cases the bardic profession was continued from father to son, as in the case of Howel Swrdwal (1370–1420) and Ieuan ap Howel Swrdwal, Tudur Penllyn and Ieuan ap Tudur Penllyn, Dafydd Nanmor the elder, Rhys Nanmor, and Dafydd Nanmor the younger. The poets who most reflect political movements during this period are Iolo Goch, Dafydd Nanmor, Lewis Glyn Cothi, and Gutto'r Glyn. The joy felt by Wales in the accession of Henry VII. is reflected in a poem by Dafydd Llwyd addressed to 'Henry VII. after he had won the kingdom, and to Arthur his son when he was born.' Several of the Welsh bards appear to have regarded the accession of Henry VII. as in some degree a restoration of the prestige of Wales.

One of the most striking features of this period is the interest taken in the language and metre of Welsh poetry, and even in the Red Book of Hergest there is a grammar of the Welsh language and an account of Welsh versification, which appears to have been widely copied and studied. During this period, too, the bardic profession became so popular that its maintenance threatened to become a burden on the country, and means had to be devised to distinguish between the competent and the incompetent. Whatever gatherings of their own the Welsh bards may have had when they met from time to time at the courts of the princes and the houses of their patrons, it is certain that the Carmarthen Eisteddfod of 1451 had a very definite aim and purpose, namely, to serve as a bardic assize for the repression of the wanderings of uncertified bards and minstrels. The leading spirits at this Eisteddfod were Gruffudd ab Nicolas, a prominent Carmarthenshire gentleman; Llawdden, a bard from South Wales; and Dafydd ab Edmwnt, from the zone of North-East Wales. These emphasized the importance of skill in the twenty-four alliterative metres of Welsh poetry, and devised a regular system of bardic graduation. The Glamorganshire bards rebelled against the stringency of this system, and set up a system of their own. There are indications that, coincident with the introduction of English music into Wales, English metres, easier in character than those of the Welsh tradition, came in also. The consequence was that a new impetus was given to poetic composition, and the number of professional bards steadily grew. In 1524 and 1568, Eisteddfodau, or Bardic Assizes, had again to be held to seek once more to classify the bards. It is significant that these two Eisteddfodau were held at Caerwys, in Flintshire, within the North-East zone, where Welsh poetry was at this time most flourishing. The leading bard of the first Caerwys Eisteddfod was Tudur Aled, from Llansannan, in Denbighshire, a nephew and pupil of Dafydd ab Edmwnt. This brilliant poet is distinguished by his skill in description and in the composition of striking couplets. His pupil, Gruffudd Hiraethog, was the teacher of some of the leading bards of the Second Caerwys Eisteddfod, such as Simwnt Fychan, William Cynwal, Sion Tudur, and William Llŷn. In North Wales poetry flourished at this time chiefly in the North-East zone, but there was also an important zone in South Carnarvonshire and West Merionethshire and another in Montgomeryshire, with which Dr. John Davies of Mallwyd, a prominent Welsh grammarian and lexicographer of the reigns of Elizabeth and James I., was in contact. The Mostyn family at Gloddaeth, near Llandudno, and Mostyn, in Flintshire, and the family of Salisbury of Rug, near Corwen, were great patrons of Welsh poetry at this time. Some of the most beautiful poetry of the Tudor period is that attributed to Rhys Goch ab Rhiccert (see Iolo MSS). It is characterized by intense feeling for Nature and a genuine æsthetic sense. The older social poetry, too, contains, especially in William Llŷn, some very striking and graphic lines. The period of the Reformation was one of great activity in the poetic zones, especially of N. Wales.

6. Welsh poetry from the Reformation to the present day.—During the period of the Commonwealth, Welsh poetry received little support or encouragement, owing to the decay of several of the older Welsh families, which were strongly Royalist in sympathy. Moreover, the Welsh gentry had ceased by this time, apart from exceptional cases, to cultivate the Welsh tongue, so that the older social poetry fell into the background. Nevertheless, it was in the period of the Commonwealth that Huw Morus of Pontymeibion in East Denbighshire, a strong Royalist and a brilliant composer of love poems, continued the tradition of the 'Rhys Goch ab Rhiccert' poetry, which was largely the outcome of the newer musical needs of Wales. The brothers Gruffudd, William, and Rhisiart Phylip of Ardudwy carried on the literary tradition of their father, Sion Phylip, and there is extant a poem on the death of Charles I. written by William Phylip. After the Restoration we find this tradition carried on in Merionethshire by Sion Dafydd Laes, who wrote an elegy on Charles II., and in South Carnarvonshire from about 1692–1714 by Owen Griffith of Llanystumdwy. The newer and freer type of poetry was also represented by the hymns, carols, ballads, etc., which began to emerge into prominence and show that Welsh poetry was beginning to appeal to a new Welsh-speaking public. In the middle of the 18th cent. an able family of Welshmen, of whom Lewis Morris (the great-grandfather of the late Sir Lewis Morris) is the best known representative, gave a great impetus to the revival of Welsh poetry by collecting MSS and by encouraging young Welshmen of scholarship and genius to compose and publish poetry of a high order in the Welsh tongue. The antiquarian

movement, chiefly inaugurated by Edward Llwyd (Lhuyd), keeper of the Ashmolean Museum at Oxford, also quickened an interest in the Welsh language in young Welshmen of ability and education; and it is significant that some of the leading Welsh poets of the new movement were Oxford graduates, such as Goronwy Owen, Evan Evans (Ieuan Brydydd Hir), and William Wynn. At the same time the great religious awakening of the 18th cent. bore fruit in Wales in the publication of a large number of hymns by writers of real poetic power, such as William Williams of Pantycelyn in Carmarthenshire (author of the English hymns 'Guide me, O thou great Jehovah,' and 'O'er those gloomy hills of darkness'), Dafydd Jones of Caio, and others. The new Welsh-reading public of the middle and poorer classes, whose vernacular was still Welsh, read the new poetry, both secular and sacred, with avidity, and literary societies for the cultivation of Welsh literature sprang up in the Welsh community of London and in many parts of Wales. Many members of the Welsh aristocracy, too, gave their patronage to the new movement by contributing prizes to successful competitors in the revived Eisteddfodau, the most prominent result of the new interest taken in Welsh poetry being the revival of the Eisteddfod, mainly through the exertions of Owain Jones (Owain Myfyr), Dr. Owen Pughe, and Iolo Morgannwg. The competitions connected with the Eisteddfod and the facilities which the Welsh press now afforded to the publication of poetry led to renewed activity in various poetic zones, as, for instance, that of Carnarvonshire, where **Dafydd Ddu Eryri, Robert ab Gwilym Ddu, Dewi Wyn o Eifion,** and others rose into prominence, and that of Denbighshire, associated with the names of **Robert Davies** of Nantglyn and **Twm o'r Nant,** the latter of whom, by his 'Interludes,' sought to supply the rudiments of a Welsh drama, which had been only meagrely represented in the past by some portions of Biblical plays. The national Eisteddfod was followed by the institution of provincial and local competitions, which have stimulated the composition of a great deal of Welsh poetry in addition to what is spontaneously composed as in other countries. Much of the Welsh poetry of the 19th cent. is of high literary merit, and is a very true and worthy interpretation of the life and aspirations of Wales, both on the religious and on the secular side. Many of the best Welsh poets of the 19th cent. have been ministers of religion, and, with rare exceptions, the poetry of Wales in this important period, which may be truly called the Golden Age of Welsh poetry, has a high and serious purpose, and is not marred by meanness or frivolity. The Welsh language has had for centuries a literary tradition, which is distinct from the spoken dialects, and the literary tongue is the speech of public speaking and of Welsh literature.

The chief poets of the 19th cent., in addition to those already named, have been **Eben Fardd** (1802–1863), **Islwyn** (1832–1878), **Emrys** (1813–1873), **Hiraethog** (1802–1883), **Ceiriog** (1832–1887), and **Hwfa Mon.** Of recent years lyric poetry has been especially cultivated, and the younger generation of poets show in their works clear traces of the study of current English, and in some cases of Continental, poetry. The æsthetic spirit and a conscious striving after beauty of form are very conspicuous in current Welsh poetry, but, apart from certain brilliant exceptions, there is often a lack of naturalness and spontaneous grace. At the same time, Welsh poetry is very living at the present day, and poetic expression is in no sense behind the remarkable evolution of Welsh social life in education, politics, etc. It is no mere antiquarian resuscitation of past ideals, but a living exponent of the mind of the Welsh people.

BARLAAM AND JOSAPHAT.—See BUDDHA.

BARNABITES.—The Congregation of the Regular Clergy of S. Paul Decollato (commonly called 'Barnabites' from their ancient house of S. Barnabas in Milan, which was opened in 1547) goes back to the beginning of the 16th century. Its founder was Antonio Maria Zaccaria, a nobleman of Cremona, recently canonized by the Church of Rome (May 27, 1897). About the year 1530 Zaccaria united himself with Bartolomeo Ferrari and Giacomo Antonio Morigia (Milanese gentlemen, who after their death gained through their reputation for holiness the title of 'venerable'), for the purpose of founding a Congregation of priests who should employ themselves in arousing the somnolent faith, in removing abuses, in reforming the manners of the clergy and of the people, and in bringing them back to the practice of true Christian piety.

By his Brief dated Bologna, Feb. 18, 1533, which commences, *Vota per quæ in humilitatis spiritu*, Clement VII. granted to Zaccaria and to Ferrari authority to set up the new religious Order. Paul III. by two other Briefs, *Dudum felicis recordationis Clementi*, etc. (July 25, 1535), and *Pastoralis*

officii cura, etc. (Dec. 1, 1543), placed the Order in direct dependence on the Holy See, granting it likewise many rights and privileges; and finally, Julius III. confirmed the Order by his Brief of Feb. 22, 1550, *Rationi congruit et convenit honestati*, etc. (cf. *Litteræ et Constitutiones SS. PP. pro Congregat. Clerr. Regg. S. Pauli Apostoli*, Rome, 1853, p. 3 ff.). In the meantime Zaccaria died prematurely in 1539 at the age of 37, after having set on foot in Milan various pious works, viz. spiritual conferences for ecclesiastics; a pious society of married people; and, in conjunction with the Countess Ludovica Torelli, an Order called the 'Angelicals of S. Paul,' for which he had also obtained the approval of Paul III. in 1535.

But the work of Zaccaria was continued by his two companions who outlived him, Ferrari († Nov. 25, 1544) and Morigia († Oct. 23, 1545), and by their successors. Towards the middle of the 16th cent. we find them scattered in Brescia, Verona, Padua, Vicenza, Venice, Cremona, and Ferrara, intent on preaching with zeal to the people, instituting confraternities of lay persons, and reforming monasteries, regardless of the hatred which they began to excite and of the persecutions which were directed against them. A fierce persecution arose against them where one would least have expected it, viz. in the territory of the free Venetian Republic. They were accused before the Republic of being political revolutionaries, emissaries of the Spaniards to the injury of the Venetian seigniory, and as being infected with heresy; and they were compelled to quit the territory of the Republic within the space of ten days. Nor did the matter end here, for, when Father Gianpietro Besozzi and Father Paolo Melso went to Rome, whither the same accusations had been carried, they were immediately thrown into prison, where they remained until, by the assistance of Ignatius Loyola and others, they were able to make their position clear and to unmask the conspiracy formed against the Congregation (cf. Arist. Sala, *Biografia di S. Carlo Barromeo*, Milan, 1858, Dissert. ii. p. 251).

1. Colleges.—Shortly after this time the Barnabites began to establish themselves definitely outside Milan; but, as we need not trace minutely their later vicissitudes, we give here some dates which will serve to afford an idea of their subsequent diffusion and increase in Italy and beyond.

In Italy the first college, or house, of the Barnabites outside Milan was founded at Pavia in 1558, for the purpose of educating their young adherents in literature and sacred learning. Next in chronological order come: in Cremona, the college or house of S. Vincenzo, founded in 1570 and suppressed in 1810, and the house of S. Luca, founded in 1881; in Monza, S. Maria di Carrobiolo, consecrated by the help of S. Carlo Borromeo, opened in 1571, suppressed in 1810, and re-established in 1825; Casale in 1573; Vercelli in 1574; in Rome, S. Biagio in 1575, afterwards S. Carlo ai Catinari in 1611, suppressed in 1810 and re-established in 1814, by the Bull of Alexander VII. the residence of the General Superior of the Congregation from 1660 onwards; in Milan, S. Alessandro, founded in 1589, suppressed in 1810, and re-established in 1825; Zagarolo in 1592; Pisa in 1594; in Bologna, S. Andrea in 1598, the Seminary of S. Peter in 1743, further, the college of S. Luigi in 1774, renewed, after its suppression, in 1816; Novara in 1539; Sanseverino in 1601; in Lodi, S. Giovanni delle Vigne founded in 1605, suppressed in 1810, and re-established at S. Francesco in Lodi in 1833; in Asti (in Piedmont), S. Martino, founded in 1606, suppressed in 1802, and re-established in 1822; in Perugia, S. Ercolano, founded in 1607, suppressed in 1775, and then passing to the House of Jesus, which was likewise suppressed in 1804 and re-established in 1837; Acqui in the same year 1607; in Naples in 1608, S. Caterina della Corona di Spine, in 1610, S. Maria di Portanova, which was suppressed in 1809, S. Giuseppe-in-Pontecorvo after 1818, S. Maria di Caravaggio in 1821, the college Bianchi at Monte Santo from 1860; in Turin, S. Dalmazzo, a parish which was entrusted to the Barnabites in 1609 and taken from them only from 1810 to 1826; in Genoa, S. Paolo il Vecchio in 1609, then in 1650 S. Bartolomeo degli Armeni, in 1895 the Institute Vittorino da Feltre; Aquila, 1610; Foligno, 1612; Tortona, 1618; Chieti and Pescia, 1664; in Florence, S. Carlo from 1627 to 1783, the Institute della Querce from 1867; in Leghorn, S. Sebastiano, founded in 1629, suppressed in 1810, and re-established in 1814; Piacenza, 1632; Reggio, 1664; Alessandria, 1659; Crema, 1664; Parma, 1668; Udine, 1680; Finale Marina and Bergamo, 1711; Porto Maurizio, 1736; Aosta, 1748; in Moncalieri (in Piedmont), the Royal College Carlo Alberto, founded in 1836; S. Felice-a-Cancello (Terra di Lavoro), founded in 1854.

2. Missions.—The first mission of the Barnabites outside of Italy was in the island of Malta, whither they went in 1582 at the urgent solicitation of the principal heads of the Order of Malta, Father Paolo Maletta of Milan and Father Antonio Marchesi of Bergamo, and where they remained two years with profit to the inhabitants and to the Order of Malta itself. Later, in 1610, as we gather from a Brief of Paul V., King Henry IV. of France obtained some Barnabites to labour in Béarn in the work of destroying the heresy of Calvin, viz. Fathers Fortuné Colome, Remigio Polidori, Hilaire Martin, etc. Almost at the same time S. Francis de Sales introduced them into Savoy to direct the college of Annecy. The Barnabites were thus able to penetrate from Béarn and Savoy into France. We may cite among the houses of Savoy and of France those of Annecy, Thonon, Montargis, Lescar, Paris, Estampes, Dax, Bonneville, Mont-de-Marsan, Bourg-Saint-Andéol, Loches, Bazas, Guéret, Oléron, Condamines-sur-Arve, and, after the Revolution, the college of Gien (Loiret), opened in 1856 under the auspices of Dupanloup, and the house in Paris, re-opened in 1857, owing to the influence and goodwill of the celebrated Russian count, Gregory Schouvaloff, who had passed from the Orthodox to the Catholic faith, and then had entered the Order of Barnabites. In 1820 the Holy Congregation of the Propaganda sent Fathers Mario Malagnino, Alfonso Caccia, and Cornelio Porzio into Valtellina; but this mission, notwithstanding its fruitfulness, did not lead to the establishment of the Barnabites in that region infested by heretics. In 1625 some Barnabites were sent into Austria by Urban VIII. in consequence of a request made to him by Ferdinand II. for some 'religious' fitted to labour in the conversion of heretics and unbelievers; and these Barnabites were placed in possession of the parish of S. Michael in Vienna, which was the parish of the Imperial court. They afterwards occupied other parishes, as, for instance, that of Mittelbach from 1661, and that of S. Margaret in Uligine from 1774. In 1719 the Barnabites took part in the missions in Asia. Among the first were Fathers Filippo M. Cesati and Sigismondo Calchi (both of Milan), and Onorato Ferrari (of Vercelli), who, as members of an embassage of Clement XI. to the Emperor of China, went to Pekin. The result of the embassage did not correspond to the hopes entertained of it; and, in fact, an Imperial edict forbade the preaching of the gospel. Notwithstanding, it came about that Father Ferrari was able to stay some time in China, where in a few years he converted many adults to the faith, and baptized very many abandoned and dying

children. Father Cesati with a companion repaired to Cochin-China with the title of 'vicar apostolic,' and Father Calchi with some others went into the Indian kingdoms of Ava and Pegu, where they all afterwards concentrated themselves. The mission in these two kingdoms was entirely entrusted to the Barnabites by Benedict XIV. in 1740, and there they maintained missionaries (of whom more than one suffered martyrdom) until the suppression of the religious orders (Sala, *op. cit.* p. 284).

The history of this mission is recorded in the *Description of the Burmese Empire* by the Barnabite missionary Sangermano, who laboured in Burma in 1783–1808 (d. 1819). After Calchi went to Syriam (then the chief port of Pegu) in 1721, a number of other missionaries came about 1728, meeting with such success that Benedict XIV. appointed a vicar apostolic. Many churches were built—at Syriam were a house and church, a college for 40 students, and an orphanage for girls; at Ava a church; at Pegu a church and house; at Monla a church, presbytery, and college, with 6 churches in the environs of the city and 2 churches in Subaroa; at Chiam-sua-rocca 6 churches; at Rangoon a church, a house, an orphan-school, and a convent. In 1745 the Vicar Apostolic Galizia and two priests were treacherously murdered, and the mission languished until 1749, when Fr. Nerini, who had been forced by the disturbances to leave Burma, returned. A second severe blow befell the mission at the capture of Syriam in 1756, when Nerini was killed. The mission soon recovered, however, and continued its activity until 1832, when the religious orders were suppressed by Napoleon III. Among the Barnabite scholars attached to this mission special mention is due Fr. Percoto (d. at Ava, Dec. 12, 1776), who is recorded to have translated some Buddhist works from Burmese into Italian, and also to have made Burmese versions of Genesis, Tobit, Matthew, the Gospels, the Mass, and prayers and catechisms.

At that ill-omened epoch the Congregation counted not a few conspicuous members; and, not to mention Cardinal Gerdil of Savoy (1718–1802), a distinguished philosopher, Fathers Quadrupani (ascetic writer), Paolo Frisi and Francesco de Regi (eminent scientists), and others, who had been dead but a few years, it numbered among its members Father Francesco Fontana (1750–1822), General Superior of the Congregation, companion of Pius VII. in his imprisonment, and afterwards Cardinal; Father Luigi Lambruschini (1776–1854), who was afterwards archbishop of Genoa, Cardinal and Secretary of State; Francesco Saverio Bianchi, who has recently been beatified; Father Antonio Maria Cadolini, afterwards bishop of Ancona and cardinal († 1851); Fathers Stanislao Tomba († 1847) and Carlo Giuseppe Peda († 1843), who were made bishops, the former of Forlì, the latter of Assisi; and Fathers Felice and Gaetano De Vecchi (ascetics), Ermenegildo Pini and Mariano Fontana (scientists), Antonio Grandi (orator and poet), Giuseppe Racagni and Bartolomeo Ferrari (scientists), and others. In the preceding centuries the Congregation had already given to the Church: Alessandro Sauli, bishop of Aleria in Corsica, and afterwards of Pavia, who has recently been canonized († 1592); Carlo Bascapè, bishop of Novara († 1615); Juste Guérin, prince and bishop of Genoa; Francesco Gattinara, bishop of Turin; Giacomo Morigia, archbishop of Florence and afterwards Cardinal; Cristoforo Giarda, bishop of Castro; Giovanni Maria Percoto, bishop of Mosul and vicar apostolic of Ava and Pegu; Pio Manzador, bishop of Segna and Modruss in Croatia; and, in the various branches of learning, Agostino Tornielli (annalist); Redento Baranzano (1590–1622; scientist); the Venerable Bartolomeo Canale (ascetic writer); Bartolomeo Gavanti (writer on ritual); Dominique De la Motte, Maurice Arpaud, Jean Niceron (historians); Remi Montmeslier, Gabriele Valenzuela, Cosme De Champigny, Tommaso Rovere (Rotarius), Salvatore Corticelli (grammarians); Isidore Mirasson, Father Colome, etc.

Commencing with the year 1865, missions were established in Sweden and Norway by Father Paul Stub († 1892 at Bergen), who was afterwards joined by other Fathers (Moro, Tondini, Almerici). In Belgium the Barnabites opened a house in 1886 at Mouscron, and another in Brussels in 1895; while, on the expulsion of all 'religious' from France in 1905, the majority of the Barnabites sought refuge in Great Britain. In 1903 the Order undertook some missions in Brazil. At present the Barnabites, who number almost 300, have about 20 monasteries in Italy, 5 in Austria, and some in Spain, besides those already noted in Belgium.

3. **Constitutions.**—The Constitutions, or Statutes, of the Barnabites, of which the first nucleus is traceable back to the founder Zaccaria, and of which a first body was already formulated and published in 1552, were not definitive until 1579 (*Constitutiones Clerr. Regg. S. Pauli Decollati libris quattuor distinctæ*, Milan, 1579; other editions, Milan, 1617; Naples, 1829; Milan, 1902), when, after the examination made of them by S. Carlo Borromeo and their approval by the General Chapter, they finally had the sanction of Pope Gregory XIII. by his Brief of Nov. 7.

The greater part of these Constitutions have reference either to personal sanctification, of which they urge the attainment by suggesting suitable exercises as an aid to the observance of the three vows of obedience, chastity, and poverty; or they refer to the sanctification of others, to be attained through the ministry of preaching, of confession, of the school, etc. Others have reference to the reception of new members into the Order, mode of dress, etc.; and, finally, others concern the administration of the Order.

With regard to this last the following are some of the rules:—The General Superior of the Congregation is elected by suffrage. His office lasts three years, but he may be re-elected, though not more than once. All the members of the Order owe him obedience, but at the same time every member may have recourse to him, since he is their common Father. His ordinary Council is composed of four Assistants, who are nominated by the General Chapter every time it meets. His usual residence was changed from Milan to Rome during the pontificate of Alexander VIII. (1690). The habit of the members is a coarse black soutane, closely resembling that of the regular clergy. Unlike the Jesuits and Theatines, they recite Office in choir; and their other distinguishing characteristics are thus summed up by Currier (*History of Religious Orders*, p. 363):

'Besides the fast-days of the Church, these Religious fast on every Friday of the year, the two last days of Carnival, and from the first Sunday of Advent until Christmas. They abstain every Wednesday and observe a rigorous silence from the evening examination until after Matins the following day. In the beginning, like the Theatines, they practised extreme poverty, neither possessing revenues nor begging, but at a later period they accepted real estate and revenues. Besides the three vows, they bind themselves by a fourth, never to seek after dignities within or without the Order, and not to accept them outside of the Order without the permission of the Pope. Their lay-brothers are not admitted to the habit until after a trial of five years.'

The Congregation of the Barnabites, like all the other religious Orders, is divided into provinces, which until a few years ago were six, namely, the province of Lombardy; that of Piedmont, which included Liguria; the Roman province, which embraced Lazio, Umbria, and Emilia; and the Neapolitan, the German, and Franco-Belgian-Brazilian provinces. In each province a Father is nominated as Superior of the houses which the province contains. Every house has its own Superior, who, like the General and Provincial Superiors, has a Council which he must consult on the affairs of his own particular administration. All Superiors are nominated for three years only at the most. The local Superiors may be changed at the end of every year, or may be re-elected after the termination of the three years. The General Chapter meets every three years in Rome. Several

of the members who compose it are elected by the local and provincial chapters. The General Chapter examines the affairs of the Order, nominates or confirms the Superiors, and provides for the general well-being by means of monitions and decrees. The Barnabites, like all the great religious Orders, are in immediate subjection to the Supreme Pontiff.

BARODA.—1. Name and history.—The original form of the name Baroda is said to be Skr. *Vaṭodara* (*vaṭa*, 'banyan-tree,' *udara*, 'cavity') 'in the heart of a banyan grove'; according to others, it is based on the shape of the city, supposed to resemble a banyan leaf; a local legend (*BG* vii. 829) suggests a cult of this sacred tree. The name is given to an important native State and its capital, situated in the provinces of Gujarāt and Kāṭhiāwāṛ in W. India. Other early names were Chandāvatī, 'city of sandalwood' or 'of the Jain king Chandan'; Vīrāvatī or Vīrakshetra, 'land or field of heroes.' The State consists of various fragments of territory enclosed within the British dominions, this condition being due to the troublous times which followed the Marāthā occupation from A.D. 1705 onwards, and successive annexations and re-distributions in contests with the Marāthā Peshwā and the British Government. The dominions of the Gāikwār ('cowherd'; cf. the ritual tendance of cattle in Central India, *NINQ* i. 154 f.) occupy an area of 8099 square miles. They formed in ancient times part of the kingdom of Anhilvāda, the capital of which is now represented by the ruins of Pāṭan at the extreme N. boundary. This kingdom, weakened by the raids of Maḥmūd of Ghaznī, who sacked the temple of Dwārka (wh. see) in 1206, finally succumbed to the attack of Alā-ud-dīn Khiljī in 1298. The present Marāthā dynasty was founded by Pilājī Gāikwār (1721–32).

2. Statistics of religion.—The total population amounted in 1901 to 1,952,692, including 1,546,992 Hindus (79·22 per cent.); 165,014 Muhammadans (8·54 per cent.); 176,250 Animists (9·02 per cent.); the balance (3·31 per cent.) being made up of Jains, Parsis, Christians, Sikhs, and Jews. Of the Hindus, who form the vast majority of the population, about two-thirds are Vaishṇavas, or followers of Viṣṇu, and the remainder are nearly equally divided between Śaivas, or worshippers of Śiva, and Śāktas, or worshippers of the Mother-goddesses. Among the two last classes there are few sub-sects, the divisions among the Śaivas representing the Orders of ascetics, whose differences are based more upon external observances than upon doctrine; and the Śāktas, as usual, fall into the two classes of 'right-hand' (*Dakshiṇa-mārgī*) and 'left-hand' (*Vāma-mārgī*), the former worshipping their deities in public, the latter following the foul secret Tantrik cultus. The Vaishṇavas have been more fertile in forming sub-sects, of which eleven were recorded at the last enumeration. Of these, five worship Krishṇa (Kṛṣṇa) in one or other of his manifestations; four the demi-god Rāma; the Kabīrpanthīs are followers of Kabīr, the saintly founder of the sub-sect (A.D. 1485–1512); and the Gaṇeśapanthi are worshippers of Gaṇeśa or Gaṇpati, god of luck and remover of obstacles. This enumeration, however, tends to exaggerate the sectarian character of the local Hinduism. According to the latest authority:

'Though thus there are three principal sects in the Hindu religion prevalent in this State, the followers of neither are exclusive; they pay homage to all the deities, but are bound more to the special deity of their cult. It is only the bigoted of any one sect who despise the worshippers of deities other than their own. But only few such are found amongst the extremists' (*Census Report*, 1901, i. 187).

The Marāthā ruling dynasty have brought with them from the Deccan as their family god Khaṇḍobā, 'sword father,' the chief guardian deity of the Kunbī caste, from which the Marāthās have mainly sprung (*BG* xviii. pt. i. 290). Regarding this and similar gods Sir A. Lyall (*Asiatic Studies*[2], i. 30) writes:

'These are now grand incarnations of the Supreme Triad; yet, by examining the legends of their embodiment and appearance upon earth, we obtain fair ground for surmising that all of them must have been notable living men not so very long ago.'

3. Hinduism.—In its public and private worship (*pūjā*) the local form of Hinduism differs little from the standard type. The public service carefully provides for the exclusion of all castes regarded as unclean; and even those of lower rank than the 'twice-born' (*dvija*) are kept at a distance and are not allowed to touch the temple images. Each household, again, has its private deities, and the animistic basis of the faith is shown in the general cult of Śītalā, the goddess of smallpox; the sun and planets; cows, bulls, serpents, and the mongoose (*Herpestes mungo*), the destroyer of noxious snakes; of trees, such as the banyan, *pīpal* (*Ficus religiosa*), and the acacia; of stones representing Śiva, Viṣṇu, and Gaṇeśa, and the conch-shell; of jewellery and books of account; and of arms carried by the military classes (*Census Rep.* 1901, i. 122 ff.).

Among other observances the chief are fasts; vows (most of which are special to women); pilgrimages; and the domestic rules of ritual (*saṁskāra*) prescribed for each stage of life—conception, birth, marriage, death. The chief holy places within the State are Dwārkā (wh. see), Sidhpur, the place where obsequial rites for the repose of the soul of a mother can most properly be performed, as those for a father are done at Gayā (wh. see) in Bengal; Bechrājī, where a married woman of the Chāran or herald caste has been deified as an incarnation of the Mātā, or Divine Mother, and is worshipped in the form of the *yoni*, or symbol of the female sex (*BG* vii. 609 ff.); and Karnālī on the banks of the sacred river, the Narbadā.

4. Jains.—The Jains, though numerically weak, are important on account of their wealth and their lavish expenditure on temples, many of which are of recent construction and examples of exquisite workmanship and decoration (*Census Rep.* 1901, i. 149).

5. Animists.—The animistic tribes, found in the forest tracts, belong chiefly to the Gāmit, Bhīl (wh. see), Dublā, and Chodhrā tribes. Each of these has its special tribal deity, which is worshipped either in a public service conducted by the *bhagat*, or medicine-man, or in less important cases by the votary himself. One of these, Kavādio Dev, has no image or temple; but he is supposed to live in a gloomy ravine; another, one of the Mother-goddesses, is represented by a huge boulder. Besides these, the tiger, alligator, and various Mothers who repel disease are worshipped, the

ritual being like that common to the other N. Dravidian (wh. see) tribes (*ib.* i. 155 ff.).

6. **Parsis.**—One of the chief sacred places of the Parsis is Navsāri, which they occupied in A.D. 1142, after leaving their first settlement at Sanjan. Here they have erected numerous fire-temples, and towers of silence for the exposure of the dead. Here burns the sacred fire, which they claim to have brought with them from Persia (*BG* vii. 566 ff.; Dosabhai Framji Karaka, *Hist. of the Parsis*, 1884, i. 37; Modi, *A Few Events in the Early History of the Parsis*, Bombay, 1905).

7. **Christians.**—The increase in the number of Christians, due to missionary work among the forest tribes and to the establishment of orphanages during the recent famines and plague epidemics, is noteworthy. The community which in 1872 numbered 313 had in 1901 increased to 7691.

Bayley, *Local Muhammadan Dynasties of Gujarat*, 1886; J. Grant Duff, *History of the Mahrattas*[3], 1873.

W. CROOKE.

BARSOM (Av. *baresman*).—'Barsom' is the name given at the present day to a collection of small metal-wire rods (*tāī*)—used in the chief ceremonies of the Parsis—representing the cut stems of a plant which can no longer be identified. The number of the rods varies, according to the ritual in which they are used; the lowest permissible number seems to have been three, while the numbers five, seven, and nine are also mentioned. The number now varies between five and thirty-three. These small rods, as used to-day, are bound together with a girdle formed of a date leaf or leaves. For the particular ceremonial recitals in which they are used see Haug's *Essays*, p. 396 ff., and Darmesteter, *Le Zend-Avesta*, i. p. lxxiii. f.; see also there the description of the detailed operations with which their use is accompanied. It may be mentioned that the *barsom* is frequently sprinkled with the holy water (*zaoθra*, *zōr*), and with the consecrated milk in the *yasna*, or chief ceremony.

The number *thirty-three* shows that the rods represent, even yet, most sacred objects and personified ideas, for that number is especially mentioned in *Yasna* i. 10, iii. 12, as applying to the *ratus* of the *yasna* ceremony. What these special ideas originally were is no longer clearly defined. But, reasoning from the origin of their application, we may readily arrive at their significance. Few doubt that we have in the *barsom* (*baresman*) a form of *barezis*, Vedic Skr. *barhis*, the 'straw cushion' upon which the gods of the Veda were supposed to sit, as they descended in response to the sacrifice, and upon which also offerings to them were spread—and this at a time when the ancestors of the present Indian deva-worshippers and of the *Ahura*- (*Asura*-) worshippers were one and the same people, and when 'Veda' and 'Avesta' were blended in some now lost name for the one common holy lore. Several points are in favour of this, apart from the etymology: chiefly the word 'spread,' which is used of the *barsom* as of the Vedic *barhis*. The rod-twigs, indeed, are hardly 'spread' now, except upon the *māh-rū* (a sort of rack with two crescents for supports), the moon-faced stand upon which they, for the most part, rest. But the *barhis* was and is 'spread' as 'straw'; compare the passage in Herodotus (i. 132), where he describes, if somewhat loosely, the offering of a Persian Mazda-worshipper: 'He "spreads" [the verb used is ὑποπάσσειν] the softest grass he can get, and places the pieces of flesh upon it.' (This item, by the way, is one of many which show how widely this form of worship was diffused in Persia, and how long it had been implanted there, seeing that the Greeks could speak of it so familiarly as belonging to Persia in general, and not merely to a province of it. See also the Inscriptions of Darius at Behistūn, etc., where *Auramazda* is regularly mentioned as the God of all the Empire 'who made this earth and yon heaven.' *)

The *barsom* is, and was then, a sacred object frequently used in the holiest sacrificial ceremonies, especially in the celebration of the main Sacrificial Service, in the course of which the Gāthas were sung without curtailment. It must therefore be understood by all serious Parsi worshippers to represent something of the most sacred character; and on closer examination it may recall at times the entire throng of personified ideas which we might, with some reason, describe as 'godlets,' whose worship, however, when sincere, did not in any conceivable sense approach idolatry, but was a mere sacrificial reverence. Further, all the symbolic rods were united by the sacred 'girdle,' as if to express the thought of oneness. And when we press our inquiries a little further, we see that the *barsom* with its uses is but the persistence of an original idea which was dear to the Indo-Iranian peoples while as yet they were undivided.

Avesta and Pahlavi literatures add a number of details concerning the barsom, for which some similar plant might be substituted (*Yas.* xxii. 3). In conjunction with the 'libation' (*zaoθra*), it is used in calling Ahura Mazda and all other sacred beings, to whom it, with other holy objects, is duly consecrated (*Yas.* iv.; *Visp.* xi. 2), to the sacrifice (*Yas.* ii., which bears the special name of *Barsam Yašt*; cf. *Yas.* xxii.; *Visp.* ii.); an important part of the worship of Ahura Mazda is that 'one should offer barsom an *aēša* long, a *yava* (grain?) broad' (*Vend.* xix. 19); and it is also used in the *Srōš Darūn*, which grants to the soul of the dead the protection of Sraosha on its passage to the future life (*Yas.* iii.). Sraosha was, indeed, 'the first who spread forth the barsom, both of three twigs, and of five twigs, and of seven twigs, and of nine twigs [the Pahlavi commentary on *Nirangistān* xc. raising the number of twigs to 551], (reaching) both to the knee and to the mid-leg, for both the worship and the prayer and the propitiation and the glorification of the Amesha Spentas' (*Yas.* lvii. 6), and the offering of barsom to the sacred fire is one of the acts which bring the blessing of that element (*Yas.* lxii. 9). The barsom is numbered among the sacred beings and objects to which sacrifice is offered (*Yas.* lxxi. 23) and which are invoked to be present at the sacrifice (*Visp.* x. 2), besides having obedience to them solemnly inculcated (*Visp.* xii. 3). The barsom is among the offerings to be made by the 'Aryan lands' to Tishtrya (*Yt.* viii. 58); with it Haoma offered sacrifice to Mithra (*Yt.* x. 88), who, if a pious priest sacrifices with barsom, bestows blessings on him who employs the sacerdotal

* [The barsom is also alluded to at least thrice by other Greek writers: Strabo, p. 733, τὰς δ' ἐπῳδὰς ποιοῦνται [sc. οἱ Μάγοι] πολὺν χρόνον ῥάβδων μυρικίνων λεπτῶν δέσμην κατέχοντες; Dinon, as quoted by the scholiast on Nicander's *Theriaca*, 613, καὶ τοὺς μάντεις φησὶ Μήδους ῥάβδοις μαντεύεσθαι; and the *Acts of St. Sira, Rom.*, May, iv. 17. 6 (written in the reign of Chosroës II., d. 628), τὰ ξύλα δι' ὧν ἐμάγευσεν κατὰ τὴν τοῦ Ζωροάστρου δαιμονιώδη παράδοσιν. It is likewise mentioned by Armenian and Syriac writers (as by Eznik, *Against the Sects*, tr. Schmid, Vienna, 1900, pp. 92, 97; Hoffmann, *Auszüge aus syr. Akten pers. Märtyrer*, Leipzig, 1880, pp. 94, 111). It should furthermore be noted that many scholars (*e.g.* Pinches, *DB* iv. 629) see in the words of Ezk 8^{17}, 'and, lo, they put the branch to their nose,' an allusion to the barsom. Herein they are probably right (for an opposing view see Toy, *EBi* ii. 1463), and it may also be suggested, at least tentatively, that the [זְמֹרַת זָר], 'twigs of a strange one (*i.e.* of a foreign god),' of Is 17^{10} may likewise refer to the barsom.—L. H. G.]

mediator (*Yt.* x. 137-139); and, in turn, barsom is among the offerings to be made to Haoma (*Yas.* xxv. 3). Even Ahura Mazda, who did sacrifice with it to Vāyu, the Wind (*Yt.* xv. 2), and to Ashi, Righteousness (*Yt.* xvii. 61), comes swiftly to one whose offering includes the barsom (*Yt.* xii. 2-3), and with it the Fravashis (*q.v.*) must be invoked (*Yt.* xiii. 27). In like manner it is used in sacrifice to the sun (*Nyāyiš* i. 16), the fire (*Yas.* lxii. 1), Mithra and Rāma Hvāstra (*Vend.* iii. 1), and Anāhita (*Yt.* v. 98, 126-127), as well as at the Rapithwina, or midday sacrifice (*Āfringān* iv. 5-7). So great, indeed, is the virtue of a single offering of barsom, as of a single offering of wood for the sacred fire, that by it the just is exalted and the Druj (the demon of evil) is weakened, Asha (Righteousness) is increased, and all the just are borne to Paradise (*Fragments of Tahmuras*, xxiv.).

Turning to the Avesta ritual concerning the barsom, we observe that the corrupt passage *Yašt* xv. 55 seems to imply that it should be gathered after dawn but before full daylight. He who has carried a corpse alone must remain thirty paces from the barsom (*Vend.* iii. 15-17; cf. *Šāyast lā-Šāyast* ii. 18), and a menstruous woman or one suffering from leucorrhea must keep half that distance (*Vend.* xvi. 4; cf. *Šāyast lā-Šāyast* iii. 10-11, 20, 32-33; *Sad Dar* lxviii. 14), while cuttings of the hair and nails must be buried the latter space away (*Vend.* xvii. 4). The barsom must be removed from a house in which either a human being or a dog (a sacred animal in Zoroastrianism) has died (*Vend.* v. 39-40), though in the purification of a house, after the expiration of the proper period of mourning, which varies according to the degree of kinship, the barsom plays an important rôle (*Vend.* xii. 1 ff.). Barsom may not be carried along a road over which the corpse of a human being or a dog has been borne until the path has been duly purified (*Vend.* xviii. 14-22), and milk drawn from a cow that has eaten of such a corpse may not be used in connexion with the barsom within a year after such an act (*Vend.* vii. 77). Prosperity shuns the place where a heretic (*ašemaoγa*) dwells, until he is slain and sacrifice is offered to Sraosha for three days and three nights with barsom, fire, and *haoma* (*Vend.* ix. 56-57). Among the penalties for killing an otter (*udra*) are the binding of 10,000 bundles of barsom and the presentation of barsom to 'holy men,' *i.e.* priests (*Vend.* xiv. 4, 8), while 1000 bundles must be tied up by him who has had intercourse with a menstruous woman or one suffering from leucorrhea (*Vend.* xviii. 72). If a libation be poured into the barsom or the sacred fire, it becomes operative 'for the victory of the non-Aryan lands' (*Nirangistān* lxviii.), and the binding of the barsom is one of the most important parts of the sacrifice (*Nīrang.* lx.). For a variety of ritual prescriptions relating to the barsom, reference may be made to *Nīrang.* (ed. Darmesteter, *Le Zend-Avesta* iii., and Darab Dastur Peshotan Sanjana, Bombay, 1894) lxix.-lxx., lxxiv., lxxix., xcvii. ff. (although the greater part of the text of the last passage is so corrupt in its present form as to defy translation); *Šāyast lā-Šāyast* viii. 18; *Dādistān-ī Dīnīk* xliii. 4-5, xlviii. 17; *Epistles of Mānūščīhar* iii. 13; Darmesteter, *Le Zend-Avesta* i. 398, 407.

According to Pahlavi literature, the evils of the last times will be such that the barsom may be arranged in the very house of the dead (*Bahrām Yt.* ii. 36), although the righteous man will still strew it, even if he cannot do it 'as in the reign of King Vištāsp' (*Bahrām Yt.* ii. 58; for other eschatological data connected with the barsom see *Bahrām Yt.* iii. 29, 37). The barsom might be consecrated by women (*Šāyast lā-Šāyast* x. 35). Faulty consecration was, however, possible if the barsom had too many twigs, or was cut from an improper plant, or was held toward the north, the region of the demons (*Šāyast lā-Šāyast* xiv. 2), an intentional substitution of such improper barsom being a very serious sin (*Dīnkarṭ* VIII. xliv. 65). The barsom was a powerful agent against all demons, fiends, wizards, and witches (*Dīnā-ī-Māīnōg ī-Khraṭ* lvii. 28); it played a part 'on the day of battle and evil deeds of war' (*Dīnkarṭ* VIII. xxvi. 24); and it is particularly interesting to note that a distinct barsom-ordeal (*baresmōk-varih*) was known (*Dīnkarṭ* VIII. xix. 38, xx. 12, 66), although no details are given concerning it.

The barsom is also mentioned in the Persian *Šāh-Nāmah*, which records that King Bahrām Gūr and his bride were met by a Zoroastrian priest bearing barsom in his hand, and also that Yazdigird, the last Sasanian king, asked the miller who gave him shelter in flight for a bundle of barsom that he might say grace before eating (Pizzi, *Il Libro dei re*, Turin, 1886-88, vi. 465, viii. 442), a custom to which allusion is also made elsewhere (Rehatsek, *JRASBo* xiii. 88). It is possible that the five-twigged barsom is represented on a coin of Bahrām II. (276-293), which shows two figures on opposite sides of a fire altar, one of the men holding the 'ring of sovereignty' and the other the object in question (Dorn, *Collection de monnaies sassanides de feu le lieutenant-général J. de Bartholomaei*, i., St. Petersburg, 1873, pl. iv. No. 13). In modern times, as has already been noted, the barsom in India is ritually represented by small wire rods; but in Kirman, Anquetil du Perron (*Zend-Avesta*, Paris, 1771, ii. 532) records the use of twigs of the pomegranate, tamarind, or date-tree; and at the present time 'in Yezd the tamarisk bush is used to form this bundle, and it is bound with a slender strip of bark from the mulberry tree, probably in exactly the same manner as it was in Zoroaster's day,' brass rods being substituted only in winter or at other times when it is impossible to obtain living branches (Jackson, *Persia Past and Present*, New York, 1906, p. 369 f. and plate). See also YASNA.

L. H. MILLS and LOUIS H. GRAY.

BARTER.—Barter is the name given to the simple and elementary form of traffic in which goods are directly offered in exchange for goods. An article upon barter is from one point of view an essay on the functions of money and the inconvenience of its absence, since barter is that form of exchange in which money is not employed as the intermediary of trading. Barter was the primitive mode of doing business before a measure of value or a common medium of exchange was devised. In such a set of conditions there are manifest difficulties; without a common denominator it is not easy to compare the values of the articles exchanged or to arrive at an economic principle of bargaining. In any particular exchange the two parties must adjust their contract by their respective wants for each other's commodity and the desire of each to part with his own superfluities. Thus the fisherman would need to measure his fish against the potatoes of the gardener at one moment and the bread of the baker at another, and so on round the whole circle of his purchases. It is obvious that a system of exchange so elementary and so casual must belong to a primitive period of society. A very slight advance in the methods of production, in separation of employments, and in traffic would inevitably lead to the use of a medium of exchange which would serve at once as a standard measure and as an accepted go-between;

some substance would be adopted for the double purpose, which all would willingly receive in exchange for their own commodities, and which could in turn be parted with easily for others. The thing selected to serve these utilities in any community would be in the first place something much in common demand for its service or its attractiveness, and such a substance would have certain qualities of durability and approximate stability which would recommend it. The article adopted would vary with the locality. The various stages in this early employment of a primitive money need not be here pursued; by degrees the more essential qualities of good money would emerge, and thus the currency of modern times would be gradually evolved. See art. MONEY.

The term *barter* or *truck* is more usually applied to the exchange of articles for use; the term *purchase* suggests the employment of money and buying for future sale or commerce. The Old Testament supplies a good example of a transaction by payment in kind or barter. In 1 K $5^{10f.}$ we read that Hiram king of Tyre 'gave Solomon cedar trees and fir trees according to all his desire,' and that 'Solomon gave Hiram 20,000 measures of wheat for food to his household and 20 measures of pure oil.'

Many forms of barter still exist in highly civilized communities; the domestic servant barters her services for food, housing, and a sum of money; the farm labourer is often paid partly in *kind*, by the use of a cottage, a garden, supply of milk, butter, etc., and partly by money wages. If we consider *real* wages, *i.e.* what money wages will buy, we see that in reality labour is exchanged for a supply of necessaries and comforts. In modern times we find some publications such as *The Exchange and Mart*, which revive the old form of barter by advertising certain articles for sale and stating the articles desired in exchange for them. Private individuals, like schoolboys, often practise barter; and bits of furniture, old garments, and even plots of land are exchanged for other desirable things.

In uncivilized countries barter is widely prevalent. Stanley in his journeys through Africa took quantities of cloth, brass rods, etc., with which to purchase food; similarly cargoes of old rifles, knives, bottles, powder, etc., have been sent to some places to be exchanged for the natural products of the country.

Under a system of barter there is a difficulty in securing mutuality of wants, or what Jevons called 'the double coincidence of exchange,' viz., that each party shall desire that which the other offers. Again, barter requires each article to be measured in terms of every other article of traffic, necessitating a separate bargain for each, and consequently a large and varied list of the ratios of exchange. A further drawback is the impossibility in some cases of dividing the article or of fractional payments; the pig or the rifle must be exchanged for something which is deemed an exact equivalent.

Competition (*q.v.*) has little play under barter. The mode of exchange is not such as can supply a market and give a market value. It is usually a case of a single exchange in which the values are determined by the individual wants and capacities of the two parties to the exchange.

The evolution of trade was from barter to money purchases. Modern trade tends to revert to a refined form of barter by the employment of paper substitutes for money currency; promises, credit documents, and what is called 'representative money' take the place of coin. The highly organized systems of Banking and the Clearing House have provided a mechanism which in effect reduces much of trade and commerce to barter, while preserving a measure of value and a reserve of the standard for reference and for use in emergency.

And if home trade has been reduced mainly to barter again, much more has foreign commerce. Imports pay for exports; goods and services are the only ultimate means of buying goods and services from other countries. Their values are expressed in terms of money, but the actual exchange is effected almost without the passage of a coin. The foreign trade of Great Britain, amounting to more than £1,000,000,000 a year (or nearly £25 per head of her population), is transacted with the transmission of a very trivial sum in gold.

Imports and exports are balanced against each other by means of bills, and the mechanism of the money market enables the exchange of these instruments of credit representing debts to accomplish the equalization of the debts. The operations become a vast series of barter transactions, reduced to simplicity by the ingenious arrangements of a highly organized commercial system.

Under this refined system of trading no particular parcel of goods is exchanged for any other particular parcel of goods, but each is represented by a bill. These bills are exchanged, *i.e.* bought and sold freely, by the persons doing business in the different countries, so that the equation is ultimately secured. The settlements need not be, nor are they, direct. Each country need not balance its accounts for goods with each of its customer countries so as to equalize their actual imports and exports to one another. But country A may pay its debts to country B by a bill upon C, just as is done by merchants at home. By this system of foreign exchanges bills become an article of commerce; and, following the law of supply and demand, they rise and fall in value, and are a means of regulating commerce and equalizing sales and purchases all over the world.

Thus trade which started with simple exchange by barter has come, under a highly complex civilization and a world-wide commerce, to be once more only barter of a very refined kind, after passing through many stages and degrees of money purchase. Much the greater part of the business of nations is accomplished without the actual employment of money at all, except as a unit of measurement and a reserve force hidden away in the strong rooms of banks.

BASIL.—See CAPPADOCIAN THEOLOGY.

BASILIDES, BASILIDIANS.—I. Sources.—Basilides was one of the most famous Gnostic teachers in the 2nd century. We are told by Epiphanius (*Hær.* xxiii. 1) that he was a fellow-pupil of Saturnilus in the school of Menander, at Antioch. This statement has been largely accepted, though it is by no means certain that Epiphanius had any trustworthy information on the subject. It is quite as likely to be simply an inference of his own from the fact that Saturnilus and Basilides are coupled by Irenæus (I. xxiv. 1), who, however, says that Saturnilus put forward his system in Syria, but Basilides in Alexandria. Apart from the reference in the *Acts of Archelaus* (c. 55 in Routh, *Rel. Sac.* v. 196) to his preaching among the Persians, to be discussed later, we have no evidence for any activity outside Egypt. Possibly Epiphanius, who visited Egypt, had some warrant for his account of the places outside Alexandria where Basilides worked. The same uncertainty surrounds the date of his activity, but we shall probably be safe in accepting the usual view (cf. Clem. *Strom.* vii. 106) that his work fell mainly

within the reign of Hadrian (A.D. 117–138).* He claimed to have received his doctrine from the Apostle Peter through Glaucias (Clem. *l.c.*). His chief disciple was his son Isidore. According to Hippolytus (*Philos.* vii. 20), they asserted that Matthias communicated to them a doctrine which he had received from Christ. They also appealed apparently to Zoroastrian authorities. Basilides wrote a work entitled *Exegetica*, that is, 'Expositions,' in 24 books (*Strom.* iv. 88; Euseb. *HE* iv. 7. 7). This was apparently an exposition of the Gospels. We learn from Origen (*Hom. 1 in Luc.*) that he wrote a Gospel. It is extremely unlikely that Origen with his facilities for information should be mistaken upon this point. From the fragments which are preserved to us, we may infer that Basilides probably commented on the First, Third, and Fourth Evangelists, possibly also on Mark; and it is by no means unlikely that he based his commentary on his own compilation from the Gospels. He is also said to have written incantations and odes; but these are entirely lost. His son Isidore wrote several works—first, a treatise on Ethics, which, perhaps, is identical with the *Parænetics* mentioned by Epiphanius (xxxii. 3); secondly, a treatise on the Parasitic Soul (*Strom.* ii. 113); and, thirdly, *Expositions of the Prophet Parchor*, which must have contained at least two books, since we have a quotation from the second (*Strom.* vi. 53).

The problems which are presented to us by this school of Gnostics are of an exceptionally perplexing and baffling kind. The accounts given of Basilides' system are hopelessly irreconcilable, and the new evidence which has come to light has made the problem still more difficult. Before the publication of the *Philosophumena* of Hippolytus in 1851, the main sources of information were the account of the system in Irenæus' great work against heresies, and the related accounts in later heresiologists; information given by Eusebius concerning a refutation of Basilides by Agrippa Castor; and some extracts from the works of Basilides and his son Isidore, given by Clement of Alexandria, Origen, and the author of the *Acts of Archelaus*. Even these authorities were so difficult to reconcile, that Neander (followed by Gieseler) treated the account of Irenæus as referring to a later development of the sect, and said that, were it not for the fact that Clement of Alexandria referred to the misconduct of later Basilidians in language similar to that employed by Irenæus, we should be tempted to suspect that the Basilidians whom the latter describes had no connexion whatever with the founder. The discovery of the long lost *Philosophumena* or *Refutation of all Heresies*, now unanimously assigned to Hippolytus, introduced a new complication. Hippolytus gives an account of Basilides' system which differs fundamentally from that of Irenæus. The majority of scholars, including Jacobi, Uhlhorn, Baur, Möller, and Hort, accepted the new evidence. The attack on Hippolytus' account was led by Hilgenfeld (see Literature at end of present art.), who received the very influential support of Lipsius, and at a later time of Harnack and other scholars. At present the tendency seems to be to regard the account of Hippolytus as valueless (except in isolated details) for the re-construction of Basilides' own system. But the theory that Hippolytus was duped by a forgery seems to be losing ground, and the opinion prevails that the document he employed was a genuine Gnostic treatise circulated among the later Basilidians. Finally, a new manuscript of the *Acts of Archelaus*, containing the complete Latin translation, was discovered by Traube a few years ago, and made accessible by C. H. Beeson in 1906 ('Hegemonius, Acta Archelai,' in *Die gr. christl. Schriftsteller in den ersten drei Jahrhunderten*). The text we previously possessed broke off in the middle of an important extract from Basilides. The newly found manuscript completes the quotation. It should be added that the task of the scholar is rendered more difficult by the fact that the texts are often corrupt, and, even where this is not the case, frequently not very intelligible.

The view that the account of Hippolytus rested on a forgery was first suggested in 1885 by George Salmon in an article in *Hermathena*, entitled 'The Cross References in the Philosophumena.' In reading the work of Hippolytus he had often been struck by the coincidences between the various systems. These had, in fact, drawn the attention of earlier scholars; but Salmon thought them suspicious, and formulated a theory to account for them. This was that Hippolytus became known as a zealous purchaser of Gnostic documents, the demand created a supply, the unscrupulous dealer forged a certain number of treatises purporting to be documents of Gnostic schools, and these were eagerly purchased by the credulous bishop, who in this way included in his work accounts of systems which had never really existed. Attention was drawn to Salmon's article by Harnack (*ThLZ* x. [1885] 506 f.), and in his *Gesch. des NT Canons* (1889, i. 765 f.) Zahn signified his adhesion. Salmon's theory was taken up by Stähelin in a special investigation, 'Die gnost. Quellen Hippolyts,' *TU*, 1890. Salmon had said comparatively little about Basilides, but Stähelin sought to show that the theory applied to this part of Hippolytus' account as well as to that of the minor sects. For a time the theory found several supporters, including C. Schmidt (*Gnost. Schriften in kopt. Sprache*, 1892, p. 557) and G. Krüger (*PRE*[3], *s.v.*). It has, however, been rejected not only by those who, like J. Drummond (*Character and Authorship of the Fourth Gospel*, 1903, pp. 316–331), assert the originality of Hippolytus' account, but by Anz (*Zur Frage nach dem Ursprung des Gnostizismus*, 1897, p. 9) and Bousset (*Hauptprobleme der Gnosis*, 1907, p. 128). Bardenhewer in his *Patrology* also judges that 'this hypothesis offers too violent a solution of the problem.' Even Harnack, who in his *Gesch. der altchristl. Literatur* (1893, vol. i. p. 157) spoke of Hippolytus' sources as probably a forgery, expresses himself with greater reserve in his *Chronol. der altchristl. Literatur* (1904, vol. ii. p. 231). The present writer can only repeat the unfavourable judgment he expressed in a notice of Stähelin's work in the *Classical Review*, 1892. In the first place, the coincidences may readily be accounted for by the fact, which Stähelin himself admits, that Gnostic documents circulated freely from one school to another. Secondly, since they were thus in a measure public property, it is difficult to understand how the forger could command prices high enough to reward him for his trouble. Thirdly, it is still more difficult to explain the very striking difference in the level of speculative power which is displayed in the different systems. Few, it may be imagined, would assent to Stähelin's view that the author, in the words he quotes from Basilides on the non-existent God, was trying to turn the whole Gnostic scheme into ridicule, which would surely have been a dangerous game to play if he had wished to palm off his forgeries as genuine. Rather they will recognize in the system a speculative power not inferior to that displayed in Valentinianism,

* E. Schwartz argues that we must take Basilides and Saturnilus at least to the time of Trajan, probably earlier (*Ueber den Tod der Söhne Zebedaei*, 1904, p. 20 f.). He thinks that, while we need not accept the Gnostic claims to possess a tradition from the Apostles, we may well distrust the 'tendency' chronology of their opponents.

and account for the strange language which the author employs by his effort to explain the inexplicable—all the more that his language has parallels in that of other deep thinkers. Moreover, Stähelin assumes rather than proves that Clement is on the side of Irenæus, whereas several scholars who have no preference for Hippolytus' account have recognized that it is very difficult to harmonize Irenæus with the quotations given by Clement. For these reasons we may justifiably reject this theory, which postulates a writer of incredible versatility combined with such strange limitations, and assume that, whether Hippolytus presents us with the genuine system of Basilides or not, he at any rate communicates a system which was really professed in the Basilidian school.

The account of Basilides given by Hegemonius in the *Acts of Archelaus* has also created suspicion. Gieseler argued that the Basilides there mentioned was to be distinguished from the heresiarch of Alexandria, inasmuch as he is said in the *Acts* to have been a preacher among the Persians. Hort considered that his denial had some show of reason, but on the whole regarded the arguments in favour of the identification as preponderating (Smith-Wace, *DCB* i. 277ᵃ). He should therefore not have been quoted by G. Krüger (*PRE*³ ii. 431) as agreeing with Gieseler. Usually the assertion that he was a preacher among the Persians is regarded as incredible. Thus Lipsius declares that, if the Disputation of Archelaus makes Basilides a Persian, 'the remark is hardly necessary that this false statement is simply a deduction from the dualism of the Basilidian system' (*Gnosticismus*, 1860, col. 109). It is also rejected by Zahn and Harnack; while Krüger thinks that, although we cannot control the statement, it is not so improbable as Zahn considers it; and Hilgenfeld says that Basilides may quite well have been in Persia and learnt Persian dualism at first hand. The statement should probably be set aside and accounted for as by Lipsius. It is quite another question, however, whether we should reject the author's account of Basilides' beliefs, and, in particular, the extract which he gives from his work. This is said to be taken from the thirteenth book of his treatises, and, inasmuch as it contains an exposition of the parable of the Rich Man and Lazarus, the work should probably be identified with Basilides' twenty-four books on the Gospels which bore the title *Exegetica*. The real objection felt by those who accept the genuineness of Hippolytus' account is that, while this is monistic in character, the account of Hegemonius seems to pledge Basilides to dualism. There can be no question that the author of the *Acts* understood him to be a dualist, but that, of course, does not settle the question. He may have misunderstood Basilides, especially since his preoccupation with Manichæism made such an interpretation of the Gnostic not unnatural for him. Accordingly we cannot attach decisive weight to his impression, in spite of the fact that he had the complete work before him. If, however, the extract given is genuine, it must rank with those preserved by Clement of Alexandria, and it seems to the present writer that we have no good ground for disputing its authenticity.

2. System of doctrine.—We may now proceed to an exposition of the various systems which have come down to us. Unfortunately it is not possible to re-construct the somewhat desultory references in Clement of Alexandria, treating of ethics rather than metaphysics, into a complete system. It will accordingly be best to begin with the accounts which profess to give us the original system.

(*a*) We take first that of *Irenæus* (I. xxiv. 3–7), which presents points of contact especially with the description he gives of the views of Saturnilus.

According to Irenæus, Basilides began with the unborn Father, and represented Nous as His firstborn. Nous gave birth to Logos, Logos to Phronesis, Phronesis to Sophia and Dynamis. From the last two came the first series of principalities, powers, and angels, who created the first heaven. From these emanated the second angelic series, who created the second heaven; and so on till 365 heavens came into existence. The angels in the lowest heaven created the world, and divided it among themselves. Their chief was the God of the Jews, who aroused hostility by His favouritism to His own people. Thus all other nations were stirred up to be at enmity with the Jews. Hereupon the supreme God interfered to save the world from destruction, and sent His firstborn Nous, *i.e.* Christ, to deliver those that believe in Him from the world-angels. He appeared in human form and taught, but at the crucifixion changed forms with Simon of Cyrene, so that the latter was crucified in the form of Jesus, while Christ Himself stood by and mocked at His enemies in the form of Simon; for, since He was incorporeal, He was essentially invisible, and so He returned to the Father. Hence no one who really knows the truth will confess the Crucified, for, if he does so, he is a slave to the world-angels; but, if he understands what really happened at the crucifixion, he is freed from them. The Basilidians denied the salvation of the body, asserting that it was subject to corruption, and that the soul alone is saved. They had no hesitation in eating meats offered to idols, and regarded every form of immorality as a matter of complete indifference. They also practised all kinds of magical arts, and sought to enumerate the names of the angels in the 365 heavens. The name given to Christ, in which He ascended and descended, was *Caulacau*; and just as Caulacau passed through the various heavens in His descent from the Father and returned to Him and remained invisible and unknown to all, so those who have learnt the doctrines of the system and known the names of the angels may themselves know all, but be known of none. Their mysteries they kept secret, and said that only one out of a thousand, or two out of ten thousand, were capable of knowing them. They had no hesitation in denying their faith under stress of persecution. They adopted the theories of mathematicians, and thus made out the positions of the 365 heavens. The chief of these they asserted to be Abraxas, and on that account the numerical sum of the letters in this word was 365.

It is unnecessary to supplement the account of Irenæus by reference to the other heresiologists who give us an essentially identical system; but there are some features which call for notice at this point. Even those scholars who most warmly vindicate the superiority of Irenæus' exposition generally recognize that he is quite unjustified in the charge of immorality which he brings against Basilides. Clement of Alexandria (*Strom.* iii. 508 ff.) rebukes the misconduct of the later members of the sect by reference to the teaching of the founder and his son. The docetic character of the Christology and the denial of the real humanity of Jesus must also be decidedly rejected, in view of Clement's explicit testimony to the effect that from a certain taint of sinfulness Basilides held Jesus, in virtue of His humanity, not to be exempt. The story that Basilides taught the crucifixion of Simon of Cyrene is generally rejected, though Pfleiderer (*Urchristentum*², ii. 384) considers that the statement in the Fourth Gospel that Jesus went out bearing the cross for Himself (Jn 19¹⁷), was intended to repudiate the Synoptic statement that Simon of Cyrene helped Jesus to carry His cross, and was elicited by the turn given to the story by Basilides. It is further noteworthy that in this account only five Æons are interpolated between the supreme God and the angels of the first heaven. Those who re-construct the original system by a fusion of this account with that of Clement of Alexandria, make the five into seven by borrowing two from Clement of Alexandria, and thus attribute to Basilides the usual Heptad. It is very questionable, however, whether they are correct in doing so. In any case nothing can be built on a combination of this kind. Moreover, Bousset has pointed out parallels to the scheme as given by Irenæus. The name *Caulacau* occurs in an unfortunately corrupt sentence,* but it is

* 'Quemadmodum et mundus nomen esse in quo dicunt descendisse et ascendisse saluatorem, esse Caulacau' (Iren. *adv. Hær.* i. 24). The general sense must be that given above, but the text is unintelligible in its present form. Hilgenfeld

sufficiently clear that it is intended to be the mystic name of Christ. It occurs in other Gnostic systems, and was probably derived from Is 28^{10}. The statement in Tertullian (*de Præscr. Hær.* 4) that Abraxas was the name given by Basilides to the supreme God is quite incorrect, and is not in harmony even with Irenæus. The fact that a considerable number of gems bear the word *Abrasax*, or more rarely *Abraxas*, on them has caused them to be regarded as Gnostic gems, many of them produced by the Basilidians. An enormous literature has been devoted to them, but it is now generally agreed that if any connexion existed it was of the slightest kind, most of the gems being of pagan origin. Harnack says: 'Not everywhere where Abraxas is mentioned are we to think exclusively of the Basilidians. It is doubtful whether even a single Abraxas gem is Basilidian' (*Altchrist. Lit.* i. 161). Numerous suggestions have been put forward as to the origin and meaning of the term. None of them can be regarded as in any way satisfactory. The word is more probably an artificial formation, which may have originated in some form of speaking with tongues, and been brought into prominence by the fact that, like Μειθράς and Νεῖλος, it was the numerical equivalent of 365.

(*b*) The account given by *Hippolytus*.

This account starts with a very transcendental doctrine of God. A definition is quoted from Basilides, in which language is strained to raise God above all the limitations involved in affirmations about Him. Even to predicate existence would be to limit Him, and thus to negative His absoluteness. Accordingly Basilides starts with the time when there was Nothing—using the term in a sense similar to that in which John Scotus Erigena spoke of God as Pure Nothing. That the author does not intend his words to be taken as a negation of all existence is clear from what follows. If we speak of God as Ineffable, we fall into self-contradiction, for the epithet is in itself a description; but God is not even Ineffable, since He is infinitely above every name that can be named. This non-existent Deity willed to create a world, though we are warned that the term 'willed' is a necessary accommodation to the imperfections of human language. In pursuance of this purpose He deposited a seed, also non-existent, but containing within it the promise and potency of all life. In opposition to the usual Gnostic doctrines, Basilides firmly rejected the conception of emanation from God, who was no spider spinning the world out of Himself. The seed was rather the creative word of which we read in Genesis. Thus, against the gross and material conception of emanation he sets the doctrine of Creation out of Nothing. Just as the seed contains within itself the tree, or the peacock's egg contains the bird with all its rich diversity of colour, so the world-seed holds within itself all that is subsequently to be developed into the manifold forms of being which the universe embraces.

Within this seed there was a threefold Sonship, one part pure and subtle, the second gross, the third needing purification. As soon as the seed was deposited, the pure Sonship burst forth, and by its unaided power rose with the swiftness of thought to the non-existent God. The gross Sonship strove to follow, but was unable to do so since his substance was not light in texture like that of the first. But he escaped from his detention within the seed by providing himself with a wing, identified by Basilides with the Holy Spirit. So helped in his infirmity by the Spirit and giving help to the Spirit in turn, he followed the First Sonship in his flight to the non-existent. But here the Holy Spirit was compelled to leave the Second Sonship; so he dwelt between the supra-cosmic space and the world, and became the firmament, since he had nothing in common with the non-existent God. Yet, as the perfume of an ointment still clings about a vessel even after the ointment has been taken from it, so the Holy Spirit was filled with the fragrance of the Second Sonship.* The Third Sonship, however, still remained in the confused mass of germs within the seed, giving and receiving kindness. Then there burst forth from the seed the Great Archon, better in every way than all beings in the world save the Third Sonship. His upward flight, however, was stayed when he reached the firmament, for this he thought to be the limit of space. And since he was ignorant of what lay beyond the firmament and knew of no power higher than himself, he imagined himself to be the supreme God. Then he formed from the seed a son far wiser than himself, and, wondering at his loveliness, bade him sit at his right hand in the Ogdoad. This son inspired the Archon to create the whole ethereal creation, downwards to the moon. A similar process was repeated with a second Archon, far inferior to the first, who rose to the region below the Ogdoad and dwelt in the Hebdomad. He, too, formed a son far wiser than himself, who inspired his father to form the creation below the Ogdoad. But as to what takes place in the world itself, that is determined by the nature implanted within it at the outset by the non-existent God. But still there remained the Third Sonship, whose true place was with the First and Second Sonships near the non-existent God. To him St. Paul's words refer, where he spoke of the creation groaning and travailing in pain together until now, waiting for the manifestation of the sons of God (Ro $8^{19ff.}$). And the sons of God are the spiritual, whose task it is to train the souls which are destined to abide within the world. The redemptive process began with the great Archon.

Basilides repudiated the common conception of a descent of a heavenly being from the highest region. He would not admit that the Pure Sonship left his place and came down through the heavens to the regions below. This would have been to contradict his fundamental principle that ascent and not descent is the law of the universe. Accordingly, he represented the son of the great Archon as catching illumination from the pure Sonship. He illustrated this by a reference to naphtha, which takes fire though the flame that kindles it is some distance from it. So the thoughts of the Archon's son aspired till they reached the Sonship, and then the intuition of the truth flashed upon him. Having thus learnt the truth, the great Archon's son revealed it to his father, who, when he learned that he was not, as he had imagined, the supreme God, was converted and filled with fear, as it is written, 'The fear of the Lord is the beginning of wisdom.' The truth was then revealed to all the creatures in the Ogdoad. Similarly, the son of the second Archon learnt the truth from the son of the great Archon, and communicated it to his father. Similarly, the 365 heavens in the Hebdomad, with their ruler Abrasax, learnt the truth.† Thus the Gospel had come down through the Ogdoad and Hebdomad, and now it was fitting that it should reach the seed. And so it came upon Jesus the Son of Mary, and through Him redemption was effected. For within the seed all grades of existence were tangled together in confusion, so that it was necessary not only that the truth should be revealed, but that the various orders of being should be sorted into their proper classes. This was effected by the death of Jesus. The accounts of Jesus in the Gospels were received by Basilides as historical, and he was far from believing that the body of Christ was unreal. So far from that, it was an essential condition of the redemption He achieved that all the grades of existence which had to be sorted should be combined in Him, and then, by their separation in His experience, a similar separation should be effected throughout the seed. Thus, by His death the material element was removed and reverted to formlessness. After His resurrection He ascended through the Hebdomad, leaving His psychical part there; then through the Ogdoad and the Holy Spirit, leaving with each those parts which belonged to them; and finally rose to the region where the blessed Sonship dwells. The Third Sonship followed Jesus and passed through a similar process of purification, and then, refined like the First Sonship, ascended to the non-existent God. The same experience is repeated in the case of spiritual men who ascend to the Father.

When the three Sonships have been thus re-united, and all the spiritual have achieved their task in the world and followed Jesus and the Sonships to the non-existent God, then God will be merciful to creation and bring on all the realms from the Ogdoad downwards the Great Ignorance, so that no rank of being shall know of any rank superior to itself. For it is the nature of all creatures to long for that which is above them, and be tormented because they cannot attain it. But they do not know that the satisfaction of their desire would be fatal to

(*Ketzergeschichte*, p. 197) proposes to strike out *mundus* as a marginal gloss on *Caulacau*, and to read *ejus* for *esse* after *nomen*. This gives a smooth text. Harvey in his note re-translates the Latin as follows: ὃν τρόπον καὶ τὸν Κόσμον ὄνομα εἶναι, ἐν ᾧ, κ.τ.λ. This he then emends: ὃν τρόπον καὶ τὸ ἄκοσμον ὄνομα, ἐν ᾧ, κ.τ.λ., 'as also that the barbarous name in which the Saviour, as they say, descended and ascended, is Caulacau.' Whether we accept this very ingenious suggestion or that of Hilgenfeld makes no difference to the main point, which is that the Saviour in His descent and ascent bore the name *Caulacau*; Irenæus cannot have meant that the world bore this name, since in the following sentence it is clear that the name was that of the Saviour. The term was not confined to the Basilidians, but is said to have been found among the Ophites and Nicolaitans. Epiphanius derives it from קַו־לָקָו, 'line upon line,' in Is 28^{10}. This is corroborated by a statement of Hippolytus, in which the names *Saulasau* and *Zeesar* are added. These obviously go back to the Hebrew words in the same passage, meaning 'precept upon precept' and 'here a little.' Bousset hesitates between this, which is the usual explanation, and the view that the term may have been a Gnostic loan-word to which the explanation was subsequently attached.

* The Sethians spoke of the pure Spirit which was between light and darkness as not like a wind, but like an odour of ointment or an incense. It is a mistake to lay any stress on this parallel, as Stähelin does. The point of the metaphor in the two cases is entirely different (see Drummond, *Character and Authorship of the Fourth Gospel*, p. 317); and Bousset points out (*Hauptprobleme*, p. 120) that it is quite a common Persian idea that the heavenly worlds are sweet-smelling, but the world of Ahriman is malodorous.

† It has been suggested that this section on 365 heavens, with their ruler Abrasax, does not properly belong to the system (see Uhlhorn, *Das basilid. System*, p. 65 f., and Hort, art. 'Abrasax' in *DCB*).

them, for they can live only in the conditions in which they are placed, and could not breathe the rarer atmospheres of the higher spheres. If, then, they remain content in their place, they will have eternal existence; but if they escape from it, they become corruptible. And thus, with this allocation of all orders of existence to the place fitted for them, and the ignorance of any superior order, and universal contentment, there will come the restitution of all things.

The fundamental difference between this system and that of some other Gnostic leaders, notably Valentinus, lies in its emphatic rejection of the principle of emanation. For this rejection there were two reasons. One was that the theory of emanation is gross and repulsive in its conception of God. The other was that the natural tendency of all being is upwards, not downwards. Since, then, the world at present displays a scene of terrible confusion, we must assume that its development started from a condition of things even worse than that which now prevails; hence the doctrine of the seed, in which everything is huddled together, from the pure Sonship down to the grossest matter, the goal of history being the establishment of all things in their proper rank. Valentinus, on the contrary, starts with the principle that evolution is degeneration. Each pair of Æons is inferior to its parent. The process continues till the catastrophe is possible, and the plunge over the precipice follows. Spirit sinks to psychical forms of existence, thence to the material, and lastly the limit is found in the diabolical. The evolutionary process has then to become revolutionary; but, though the spiritual may return to the pleroma, the psychical and material must remain outside. Thus Basilides leaps the gulf between the infinite and the finite, whereas Valentinus bridges it. It is quite clear that there was a polemical element in Basilides' scheme, and that it was elaborated in conscious antithesis to the popular theory of emanation. It is quite possible, as some consider, that Basilides had the system of Valentinus in mind, since they were probably both teaching at the same time in Alexandria. It is not at all necessary, however, to take this view, since, although Valentinus was probably the junior, he was the more conservative of the two, and was not the first to put forward the theory of emanation.

The doctrine of the triple Sonship is difficult, and we could have wished for fuller information as to its significance. In spite of the fact that the First Sonship is regarded as refined and the Second as gross, they do not stand for different orders of being, for both of them pass to the highest realm of all, and are therefore essentially spiritual in character. And the same is true of the Third Sonship, the parts which he leaves behind him being accretions foreign to his essential nature. Probably Basilides has been influenced by the fondness for triplicity, which is so characteristic of such schemes. He has also been influenced by the first chapter of Genesis. The connexion between the Second Sonship and the Holy Spirit, who is identified with the firmament, reminds one of 'the waters above the firmament' in the story of Creation, in which case we may perhaps identify the First Sonship with the light, which was the first to be created, and in comparison with the fineness of which the waters would seem coarse. But how in plain language the author would have interpreted the waters above the firmament we do not know. The Third Sonship is apparently the spiritual principle which is at present combined with the material universe.

The Ogdoad and Hebdomad, which are astronomical in their origin, are conceptions familiar in other Gnostic schemes. The duplication of the Archons is interesting. It corresponds in a measure to the position of Achamoth and Demiourgos in the system of Valentinus, though there are marked differences in detail. Historically considered, they represent two stages in the world's history. The great Archon reigned from Adam till Moses, the second Archon from the time of Moses onwards, and it was he who revealed himself to Moses and inspired the Hebrew prophets. The kindly and compassionate spirit which pervades the system is very noteworthy. This comes out especially in the doctrine of the Great Ignorance, which is intended to save the creature from fatal aspirations towards a sphere which lies above it. But there are other illustrations of it. The Second Sonship and the Holy Spirit give and receive mutual kindness. The Third Sonship remains within the seed, giving and receiving benefit. The ascent of the spiritual to their true home is delayed by their duty of training those who have to remain within the seed. No evil principle is recognized. There is no hostility on the part of the Archons to the supreme God. They reverently acquiesce in the revelation of their inferiority.

(c) If we now inquire as to the relative originality of the system as presented by Irenæus and that given by Hippolytus, the advantage seems to lie on the side of the latter. In the first place, Hippolytus, who often follows Irenæus, and had almost certainly done so in his earlier work on heresies, which is no longer extant, here deliberately abandons Irenæus' account and gives one entirely different. He must have thought that in doing so he had access to better information, and it is hazardous to suppose that he took no precautions to ensure that the new information was superior. Basilides was a famous teacher, his works were extant at the time, and it would have been quite easy to satisfy oneself as to which account should have the preference by going to the fountainhead. In the next place, Irenæus shows himself badly informed in several particulars. Hilgenfeld himself admits this, and infers from the vagueness of Irenæus' language that he knew nothing of the sect or its founder at first hand, and depended simply on his source, which he believes (in harmony with Lipsius' earlier but not his later view) to have been Justin's lost *Syntagma*. Some of the mistakes of Irenæus have already been pointed out, and they must damage the credit of his whole account. Again, the system as presented by Irenæus goes on very conventional lines. It is quite a commonplace presentation of ordinary Gnostic beliefs, and it is not easy to understand why Basilides gained his immense reputation if he was capable of nothing better than this. On the other hand, the system as set forth by Hippolytus is characterized by extraordinary speculative power, to which we must not be blinded by the fantastic elements in the detailed working out. With the account of Hippolytus before us, we can understand the impression Basilides made on the Church, and the vitality of the sect in spite of the fact that, apart from his son Isidore, he seems to have had no distinguished followers, such as adorned the school of Valentinus. We have no right to condemn the system on the ground that it does not follow the ordinary lines. When, for example, C. Schmidt says that the emanation theory is the characteristic mark of all Gnostic systems, the cardinal dogma of all Gnostic teaching, and that the evolutionary theory is incompatible with the nature of Gnosticism, and that on this account the presentation in Hippolytus is utterly untenable (*Gnost. Schriften in kopt. Sprache*, 1892, p. 423), this is simply an illegitimate assumption. There is no reason in the nature of things why Basilides could not have followed the line which Hippolytus ascribes to him. If to do so is to forfeit one's title to be a Gnostic, that is, after all, a matter of

terminology. Questions of this kind cannot be settled by *a priori* considerations.*

(*d*) The evidence supplied by Clement of Alexandria has naturally been claimed both by those who favour the representation in Irenæus and by those who accept that of Hippolytus. Owing to the limitation of the evidence of the *Stromata* to the ethical parts of the system, the metaphysical doctrines of the school are but slightly touched upon, so that Clement is not engaged with the same side of the system as Hippolytus or the speculative portions of Irenæus' account. It must be urged, however, against the latter, that in several points Irenæus is convicted of misstatement by Clement's evidence, whereas there is no actual conflict between Clement and Hippolytus, though it is not easy to unite their representations into a single coherent scheme. There is, however, a very striking parallel in Clement's reference to the Archon's amazement when the glad tidings were announced to him. This amazement was called 'fear,' and Clement tells us that Basilides interpreted it of the passage, 'The fear of the Lord is the beginning of wisdom.' It is very noteworthy that precisely the same interpretation is given by Hippolytus with reference to the great Archon's reception of the Gospel. Clement also attests the view that things must be discriminated into their classes and the various intervals or stages which are to be found in the universe. His description of an original disorder and confusion forcibly reminds us of the doctrine of the seed, though τάραχος is not perhaps the expression we should have thought most appropriate to Hippolytus' description. The points of contact with Irenæus are slight and general, and they are also points of contact with Hippolytus, for both speak of an Ogdoad and of an Archon. Even if Hippolytus were left out of account altogether, it would be very difficult to reconcile Irenæus with Clement. And several modern writers who entirely reject the account of Hippolytus hold that Irenæus does not present us with the pure Basilidian doctrine. We are therefore probably justified in any case in treating Irenæus as a secondary authority who employed a source which described a degenerate development of the school, far removed alike in speculative power and ethical elevation from the founder.

(*e*) We should be warranted in accepting the account of Hippolytus without further hesitation if it were not for the difficulty of harmonizing it with the quotation in the *Acts of Archelaus*. Probably we should not be justified in denying that the quotation is really a genuine extract from Basilides' work. We cannot confidently attach much weight to the author's view of Basilides' doctrine, since the quotation, so far as we have it in the complete work of Hegemonius, does not commit Basilides himself to the dualism it describes. Basilides turns from vain inquiries, apparently into Western opinions, to the views entertained by the barbarians, *i.e.* presumably the Persians. Then he quotes the opinion of some of them to the effect that there were two original self-existent first principles—light and darkness—leading their own life in ignorance of each other. When, however, they came to mutual knowledge, the darkness was seized by desire for the light and sought to mingle with it. The light, however, received nothing from the darkness nor desired it, but was simply affected with the wish to behold it, and did so as in a mirror. All then that the darkness received was not the true light, but a reflexion and semblance of the light. Unfortunately, the text at this point is corrupt, but possibly the meaning may be that the light tried to recover what had been taken by the darkness. In any case, this intermingling accounts for the fact that there is no perfect good in the world, since the good that was received at the beginning was so slight. Nevertheless, in virtue of this slender appearance of light, the creatures have been able to form the creation which we see. It is regrettable that the author considered it unnecessary to quote any further, for we should perhaps have been in a better position to discover how far his accusation of dualism was borne out by Basilides' own expression of opinion on the views which he reports. It is quite possible that the approximately Manichæan theory which is here put forward was quoted by Basilides because it had points of contact with his own system. It would be no easy task to harmonize this dualistic doctrine with the monistic system of the *Philosophumena*. But possibly Basilides may have felt that it illustrated his own view of the original confusion of all things in the seed and the process of disentanglement that was consequently necessary. In spite of the monism that characterizes the system as described by Hippolytus, there is a dualistic strain within it, and Basilides may have recognized an affinity with Persian dualism, even though he constructed his own system along other lines. It is significant, as testifying to such affinity with Persia, that Isidore wrote an exposition of the prophet Parchor, and Basilides is said to have named as his prophets Barcabbas and Barcoph. It is generally agreed that Barcoph is the same as Parchor. Isidore is also said to have accused Pherecydes of borrowing from the prophecy of Ham, *i.e.* probably Zoroaster. The question is difficult to decide, but, in view of the uncertainty which hangs over the passage of Hegemonius, we may perhaps still accept the account of Hippolytus as substantially accurate, though we must allow for misunderstanding and unskilful abridgment where Hippolytus explained the system, not by quotations, but in his own words.

(*f*) It remains to touch upon some of the points that are referred to by *Clement of Alexandria* and *Origen*. Clement tells us that Basilides taught that, in virtue of the original disorder and confusion, the rational soul received as appendages certain passions which are really spirits, and then other natures became attached to these, including animal properties, as well as qualities of plants, and even inanimate objects. Thus man's actions may be to some extent traced to the foreign elements which have adhered to the rational soul, the passions of irrational animals accounting for his lusts, and such a quality as hardness being derived from steel. This doctrine of the parasitic elements which have attached themselves to the soul reminds one to a certain extent of the modern conception of multiple personality, though, of course, there are obvious differences between the two. Clement illustrates this conception of man by the Trojan horse which embraced in one body so considerable a host. Isidore wrote a separate treatise on the parasitic soul. In this treatise he found it necessary to repudiate the inference that a man could rightly lay the blame for his ill deeds upon these foreign appendages. He does not retract the doctrine itself, but asserts that the

* Bousset considers that the *Philosophumena* presents us with a monistic transformation of the original system of Basilides. Accordingly, his remarks on the general thesis that the doctrine of emanation is a specific characteristic of Gnosticism are, quite apart from their intrinsic importance, very pertinent here, since they are not inspired by any prejudice in favour of Hippolytus' version: 'One is usually inclined to regard this thought of emanation as specifically characteristic of the Gnosis. I cannot discover that this is correct. It is found only in a few systems, and in none so pure as in the Basilidian. Everywhere else the stress lies, not on the thought of a gradual emanation and deterioration of the Æons, but on the sudden fall of one of these Æons (Barbelo Gnosis, Valentinianism). Accordingly, the question as to the origin of the idea of emanation is fairly irrelevant for the comprehension of the Gnosis' (*Hauptprobleme*, p. 329).

rational soul ought to be supreme and govern the inferior creation within, and that a man should not excuse his misdeeds by the plea that he was at the mercy of these foreign passions. This doctrine was probably connected with Basilides' theory of transmigration which is attested by Origen. In his *Com. on Romans* (bk. v.), Origen tells us that Basilides explained Ro 7[9], 'I was alive apart from the law once,' to mean that before St. Paul came into the body in which he then lived he had inhabited a form of body which was not under the law, *i.e.* the body of a beast or a bird. We must assume then that, at the first, inferior spirits clustered about the rational soul, but that in the course of transmigration it brought with it elements from the various types of creation in which its successive incarnations had been realized.

Basilides also considered, as we learn from Clement, that suffering invariably presupposes sin, since to affirm the suffering of the righteous would be to indict the morality of God. Even in the case of the martyrs he believed that this held good. They were really suffering for sins which they had committed either in an earlier state or in their present life. But by the mercy of God their punishment was allowed to take the form of martyrdom, so that it might seem to be honourable rather than disgraceful. Even infants suffered on account of the sinfulness of their nature, for sin does not lie in the act so much as in the disposition which prompts it, inasmuch as frequently the difference between one who has committed a sin and one who has not committed it lies simply in the fact that the latter has had no opportunity. Naturally, from the orthodox side the criticism was made that the suffering of Christ would, on Basilides' theory, imply His sinfulness. Such a conclusion Basilides would not evade, though it was obviously distasteful to him. He will say: 'He has not sinned, but was like a child suffering'; but if he were pressed further, he would reply: 'The man you name is man, but God is righteous, for no one is pure from pollution.' To Clement the doctrine that martyrdom was punishment for sin was so repugnant, that he accuses Basilides of deifying the devil. It is a mistake to interpret this in a dualistic sense. He simply means that Basilides attributes to God the torments of the martyrs which were really inflicted by the devil. In any case, one must admire the principle which animated Basilides' whole treatment of this subject, expressed in his great saying, 'I will assert anything rather than call Providence evil.' It may be added that Basilides affirmed that only involuntary sins and sins in ignorance could be forgiven. Clement also criticizes the necessitarian character of Basilides' ethics. A man's destiny was determined by election, according to which each creature was assigned to his proper rank in the scale of being. The election, strictly so called, was regarded as a stranger in this world, since it was hypercosmic by nature. In other words, that portion of mankind which is chosen to rise to the highest sphere cannot properly belong to the world from which it is destined to escape. Faith was held in high esteem by the Basilidians; and in this they were distinguished from the Valentinians, who exalted knowledge in comparison with it. They did not regard it, however, as a grace to be exercised by a man's free will, but as one which he possesses by nature. It was interpreted as the faculty of spiritual insight which penetrates behind the phenomenal and gives assent to the unseen.

3. Formative influences.—The uncertainty which hangs over the system of Basilides in general extends also to its sources. Those who accept the account of the *Philosophumena* generally recognize a marked influence from *Greek Philosophy*, but they do not follow Hippolytus in treating the system as substantially Aristotelian. They are divided, nevertheless, on the question whether this influence was derived from Stoicism or Platonism. It is, however, only what we should expect, that at the present day the Oriental affinities of the system should be emphasized. The greatest stress is naturally laid on *Zoroastrianism*, but a few scholars are convinced that *Indian influence* must also be invoked. Pfleiderer, for example, considers that the Basilidian doctrine of the restitution of all things has such surprising resemblances to the Indian doctrine of redemption that we can hardly avoid thinking of direct influence from it. Similar is the case with the doctrine of transmigration; while the doctrine of the parasitic passions finds a parallel in Buddhist psychology. Moreover, the exposition of the so-called will of God, quoted by Clement (*Strom.* iv. 12), that one should love all since all have relation to the whole, that man should desire nothing and that he should hate nothing, what is this, Pfleiderer asks, but the quintessence of Buddhist ethics? Accordingly, he thinks that the later form of Basilides' doctrine, which we learn from Hippolytus, Clement, and Origen, is to be traced back still more to Indian than to Greek influence. He explicitly sets aside the derivation from Stoicism which has found favour with several modern writers. The question of Indian influence can, of course, hardly be settled apart from the wider problem of the diffusion of Indian thought in the nearer East, and on this subject it is safest at present to keep the judgment in suspense.* Perhaps it will be best to recognize that many sources contributed to the philosophy. Basilides was indebted to earlier Gnostic systems, not necessarily to Valentinianism (which would have a dubious claim to priority), but to theories which were subsequently incorporated in it. These stimulated him in the way of antagonism even more than of acceptance. He had been influenced by the NT, though his treatment of it was vitiated by the allegorical method. He appears to have compiled a Gospel which contained portions of Matthew, Luke, and John, and possibly of Mark. He had also been influenced by the Epistle to the Romans. He was naturally indebted to Alexandrian eclecticism. It is by no means improbable that he was influenced by Platonism, though Stoicism seems to have contributed even more important elements. Finally, it is practically certain, for reasons already given, that, whether he had ever been in Persia or not, he owed a good deal to Zoroastrianism.

Apart from his son Isidore, Basilides had no disciples of distinction. His abstruse speculations as to the non-existent God, the universal seed, and the threefold sonship, were too exalted for many of his followers; and the system quickly experienced a moral and speculative degradation, probably under the influence of Valentinianism. We have no evidence for the existence of the sect beyond Egypt, where Epiphanius (xxiv. 1) found it flourishing towards the close of the 4th century. The statement made by Jerome (*Ep.* 75. 3; *ad Vigilant.* 6), that there were Basilidians in Spain in his time, is incorrect. They were Manichæans with Gnostic elements in their doctrine (see C. Schmidt, *Gnost. Schriften*, 562).

LITERATURE.—Much of the literature has already been mentioned. Reference is made to the system of Basilides in the various Church Histories and Histories of Doctrine. It is naturally much more thoroughly discussed in works on Gnosticism and Heresy generally. Of the older literature, special praise is due to Beausobre's discussion in his *Histoire de Manichée et du*

* Cf. what Harnack says as to the blending of religions: 'It is still a moot point of controversy whether India had any share in this, and, if so, to what extent; some connexion with India, however, does seem probable' (*Mission and Expansion*[2], Eng. tr. vol. i. p. 28). The whole subject is discussed by Clemen in his *Religionsgesch. Erklärung*, 1909.

Manichéisme, 1734–39, ii. 1–68. Lardner's discussion in his *History of Heretics*, 1780, rests a good deal on Beausobre.

Of the later literature the following may be mentioned: Neander, *Genet. Entwickl. der vornehmst. gnost. Systeme*, 1818, and *Church History*, Eng. tr. 1850–58; Gieseler, in *Hall. Allg. Ltztg.* 1824, p. 825 ff., and *SK*, 1830, p. 395 ff.; Baur, *Christl. Gnosis*, 1835, *History*, Eng. tr. 1879; Lipsius, *Gnosticismus*, 1860; Möller, *Gesch. der Kosmologie*, 1860; Mansel, *The Gnostic Heresies*, 1875; Hilgenfeld, *Ketzergesch. des Urchristentums*, 1884; King, *The Gnostics and their Remains*, 1887; Mead, *Fragments of a Faith Forgotten*, 1900; de Faye, *Introd. à l'étude du Gnosticisme*, Eng. tr. 1903; Bousset, *Hauptprobleme der Gnosis*, 1907. The following special monographs have been devoted to the subject: Jacobi, *Basilidis Philosophi gnostici Sententias*, 1852; Uhlhorn, *Das Basilid. System*, 1855.

The controversy as to the trustworthiness of Hippolytus' account called forth a considerable number of publications, Hilgenfeld being specially active. We may mention among his discussions that in *Theol. Jahrbücher* (1856), his *Jüd. Apocalyptik* (1857), and articles in his *Ztschr. d. wissenschaftl. Theol.* for 1862 and 1878. His results are summed up in his *Ketzergeschichte*. On the other side may be mentioned Baur's discussion in the *Theol. Jahrbücher* for 1856, and the article by Jacobi, 'Das ursprüngl. Basilid. System,' in *Ztschr. f. Kirchengesch.*, 1877. Jacobi also contributed an article to *PRE*[2]. The article in *PRE*[3] by G. Krüger rules out the *Philosophumena*, and bases the account of the original system on Clement of Alexandria and the *Acts of Archelaus*, Irenæus being treated as secondary. Bousset takes the *Acts of Archelaus* as his main authority, and weaves in the fragmentary information we get from Clement of Alexandria. Pfleiderer's *Urchristentum*[2] (1902) recognizes two distinct stages in Basilides' theological development: the former, his Syrian stage, represented by Irenæus and Epiphanius; the latter, his Alexandrian stage, represented by Hippolytus, Clement, and Origen. This re-construction is extremely dubious, but it is at least interesting as showing that in Pfleiderer's judgment Clement of Alexandria supports the account of Hippolytus. The question of Indian origin is discussed by F. Kennedy in an article entitled 'Buddhist Gnosticisms: the System of Basilides' (*JRAS*, 1902). It should finally be added that English readers are fortunate in possessing the very valuable article by Hort in Smith-Wace's *DCB*, with which should be taken his articles on 'Abrasax' and 'Barcabbas and Barcoph' (*ib.*), and the chapter in J. Drummond's *Character and Authorship of the Fourth Gospel*, 1903. Works on the History of Philosophy usually contain some account of Basilides. A very interesting recent discussion may be seen in J. Watson's *Philosophical Basis of Religion*, 1907.

A. S. PEAKE.

BASKET.—Two kinds of baskets must be considered as belonging to the service of the gods: the *κανοῦν* (*κάνεον*, *κάναστρον*, *κάνιστρον*, *κανίσκιον*, Lat. *canistrum*) and the *κάλαθος*. The *κανοῦν* is a flat broad basket, originally made of rush or cane (Aristoph. fr. 160 [Kock]; Pollux, vii. 176), and therefore to be derived from *κάνα* or *κάννα* (Lat. *canna*, cf. Koraïs in Heliod. *Æthiopica*, p. 114). At an early date the shape was imitated in metal: in bronze (Hom. *Il.* xi. 630) and in gold (Hom. *Od.* x. 355). The plaiting was clearly indicated in the metal (Athen. vi. 229[d]). Wooden *κάνεα* are recorded for his own time by Eustath. (*Od.* i. 141). This basket was used as a receptacle for bread and food to be served at meals (cf. Hom. *ll. cc.*). In the same vessel the meals were served to the gods; hence it was used for sacrifice. As an important passage describing a rite of archaic simplicity, compare Hom. *Od.* iv. 761, where Penelope pours *οὐλοχύται*, 'sacrificial barley' (cf. Ziehen, *Hermes*, xxxvii. 391 ff.; Stengel, *ib.* xxxviii. 38 ff.), into the basket for Athene before making a vow. A less important part is played by the *κανοῦν* with the *οὐλαί* in the sacrifice of a victim (Hom. *Od.* iii. 441 f.). On this occasion the sacrificial knife was placed for convenience (not as Ziehen supposes, *op. cit.* 398 f.) in the basket (Eur. *El.* 810 f., 1142; Aristoph. *Peace*, 948 + schol.). As the basket was a flat one, the expression 'to place the knife *on* the basket' was likewise used (Philostr. *Vita Apoll.*, *init.*, cf. Stengel, *Herm.* xliii. 465, 1). The basket was adorned with sacred fillets (*στέμματα*, Aristoph. *l.c.*), and wreathed with sacred twigs (cf. Ov. *Met.* ii. 713, and, for the Attic Thargelia, Proclus on Hes. *Works and Days*, 767 [p. 419, Gaisford]; see also Dieterich, *ARW* viii. Usenerheft, p. 100, 1). Fillets and twigs are often visible on vase-paintings (cf. Hock, *Griech. Weihegebräuche*, p. 94). In Delphi, the sacrificial basket contained cake and incense (Æl. *Var. Hist.* xi. 5; Heliodor. *Æth.* iii. 2). The ritual of sacrifice was begun by the basket and the water for ablution, which closely belonged to it (Demosth. xxii. 78), being carried round the altar from left to right (Aristoph. *Peace*, 956 f.; Eur. *Her. Fur.* 926 f., cf. also Ziehen's opinion, *op. cit.* p. 400, 1). To get the sacrificial basket ready for the sacred action is expressed by *ἐνάρχεσθαι κανοῦν* (Eur. *El.* 1142, *Iph. Aul.* 1470; Æschin. *in Ctes.* 120; Menand. *Perik.* 346 f., *Sam.* 7; Poll. viii. 83). Stengel (*Herm.* xliii. 465) has misinterpreted the meaning of the expression by using the term 'to consecrate,' which does not suit here; the correct explanation is found in Abresch, *Animad. ad Æschyl.* i. 505 ff. (cf. also schol. Æschin. *l.c.*). That *ἐνάρχεσθαι* is not a sacred action is clearly shown in Menand. *Sam.* 7, where it is mentioned with house-cleaning and cake-baking, as preparation for the wedding. The use of more than one sacrificial basket is attested (Eur. *El.* 800). As a chief requisite at sacrifice (Aristoph. *Birds*, 43 + schol., 863; Pherecrates, fr. 137 [Kock]; Dittenberger, *Syll.*[2] 628, 23, from Eleusis), the *κανοῦν* is often found in temple-inventories. Cf. for the Parthenon, Michaelis, *Parthenon*, p. 259; and, *e.g.*, *IGA* i. p. 73, *a* 6, 10, etc. (two in gilt wood), ii. 668, 3 f. (in gilt bronze), 5 f. (*ib.*); 676, 45 f. (in bronze); 678, B 7 (1 large one, 20 'old' ones); 724, B 3 f. (in silver, dedicated to Asklepios) 5 ff. (silver, dedicated to Athene), ii. 5, 653, 15 (with wooden frame: *ὑπόξυλον*); 685, 2; 700*b*, B 32 (in bronze); *κανᾶ χαλκᾶ πομπικά* in the inventory of the Chalkotheke (Michaelis, *op. cit.* p. 307, 29; cf. *IGA* ii. 162, *ab.* 16). A basket dedicated to Demeter and Kore in Eleusis is mentioned in the statement of accounts of the *ἐπιστάται* *Ἐλευσινόθεν* of the year 329–8 (Dittenberger, *Syll.*[2] 587, 116; cf. *IGA* ii. 5, 767, *b* 62). A basket is spoken of in an inventory from Oropos (Amphiaraos) (*IGA* vii. 303, 55), from Thebes (*ib.* 2424, 13), from Ægina (Mnia and Auzesia), *IGA* iv. 1588, 5 f. (in bronze), 16 (9 rush-baskets, see above), 33 (small bronze basket), from Delos (Dittenberger, *Syll.*[2] 588, 93 (Apollo), 185 (in silver with silver handles dedicated to the Delian Apollo), 186 (a gilt one of upright shape [?]: *ὀρθόν*, with same dedication), 205 (the three latter out of the temple of Artemis), from Mitylene, *IGA* xii. 2, 13, 1 (*κανήια χρ[ύσια]*, golden baskets: 'inscriptionum templi Dianæ Thermiæ longe antiquissima'), from Didyma (Apollo) (*CIG*, 2855, 20). The shape of the sacrificial basket can be well observed in the very numerous sacrificial scenes; this, however, requires a special study. A handsome specimen is *Röm. Mitt.* v. 324; more examples are enumerated on p. 326, also in Michaelis, *Parthenon*, p. 259. It must be remarked here that the shape frequently designated as three-pointed is in fact four-pointed. In the present writer's opinion, Gisela Richter wrongly interprets the object held by a woman on a red-figured skyphos as being a sacrificial basket (*Amer. Journ. of Archæol.* xi. 423 ff.; *ib.* six similar examples); more probably the object depicted in *Arch. Zeit.* xxix., pl. 45 (cf. *Röm. Mitt. l.c.* p. 326, 1) belongs to this class. An affinity seems to exist between the sacrificial basket and the object occurring on Mycenæan monuments, and known as 'horns of consecration' (cf. *e.g.* Evans, *Mycenæan Tree and Pillar Cult*, p. 3 (101), fig. 1; p. 44 (142), fig. 25; see Hub. Schmidt, *Berl. philol. Wochenschr.* 1898, p. 945; Hock, *Griech. Weihegebr.* p. 94, 3). A small Mycenæan clay basket with four rows of double axes (therefore sacred) has recently been found on the small island of Pseira near Crete (Pernier, *Ausonia*, i. 110; *Arch. Anz.* 1907, p. 109, cf. Bulle, 'Orchomenos,' *ABAW*, philos.-philol. Kl. xxiv. 2, p. 81, pl. xxviii. 15). The use of the basket during sacrifice led to its being

classed as a sacred thing. Hesych. (*s.v.* ἰστριαυλίδες) records that the Athenians covered their 'sacred baskets' (cf. *IGA* ii. 420, 10 f.). Perhaps Leacock (*de Pompis Græcis*, Harvard Stud. xi. 23) rightly connects the garment lying on the basket (*IGA* ii. 754, 29 f.) with this custom. As a sacred object the basket is touched by the Geraræ when they swear an oath to the Basilissa in front of the altar ([Demosth.] lix. 78, entirely misinterpreted by Gerhard, *Rhein. Mus.* xiii. 474* ff.).

If a solemn procession preceded the sacrifice, the basket was carried in it by a girl (κανηφόρος). Leacock's opinion (*loc. cit.* p. 12), that in private procession boys also carried the basket, finds no sufficient support in Aristoph. *Birds*, 850, 864. The *canephoros*, who was of good family (Philochorus *ap.* Harpocr. *s.v.*) and of virtuous demeanour (Aristoph. *Ach.* 253 f.; *CIG* 3602 f.; Ov. *Met.* ii. 711; Porphyr. *ad Hor. Serm.* i. 3, 10 f.), was rubbed over with flour (Aristoph. *Ekkl.* 732; Hermipp. fr. 26 [Kock]; Pfuhl, *de Athen. pompis sacris*, 22, 141) and richly adorned (Aristoph. *Ach.* 258, *Lys.* 1188 ff.; [Plut.] *X. Orat. vit.* p. 852ᵇ + *IGA* ii. 162, *c* 10, with Kohler's remarks, cf. ii. 2, p. 98 ff.); behind her follows a *diphrophoros*, 'girl carrying a settle' (Aristoph. *Birds*, 1552, schol. 1551, *Ekkl.* 732 f.; Hesych. *s.v.*). Some of these reports may bear special reference to the Panathenæa (cf., for all, Pfuhl, *op. cit.* 20 ff.; Leacock, *loc. cit.* 9 ff.). As a preparation for the *pompe*, the *canephoros* took a cleansing bath in flowing water ([Plut.] *Amat. narr.* p. 771 f.). According to Menander's *Epitrep.* 221 ff., married women also participated as *canephoroi*, probably of Demeter (τῆς θεοῦ), after having abstained from cohabitation for three days (from Menander is derived Diogenianus, ii. 46; cf. Headlam, *Restorations of Menand.* p. 7). The simplest form of a procession with basket-bearing is shown by the Attic 'Dionysia in the Country' (Aristoph. *Ach.* 241 ff.). First comes the *canephoros*, then the *phallos*, and the rear is formed by Dicæopolis, at the same time the priest and the representative of the congregation (cf. *IGA* ii. 844, 15 ff.), while symbols of the gods seem to follow the basket (see Petersen, *Burgtempel d. Athenaia*, p. 81; there is a *canephoros* at the head of the procession on the black-figure vase-painting in Stengel, *Kultusalt.*² pl. i. 4). Basket and *phallos* are found in the same order in the primitive form of the procession in the Great Dionysia, which were formed on the model of the Lesser Dionysia. In front of the basket were borne a jar of wine and a vine-twig, and a he-goat was led ([Plut.] *de Cupid. div.* p. 527ᵈ, cf. Dioscorides, *Anth. Pal.* vii. 410, 3 f.)—the specifically Dionysian addition to the ancient phallic foundation. In the basket, which is carried by a man, there are figs; therefore, the present writer classes among references to the Great Dionysia the passage Aristoph. *Lys.* 646 f., where the basket-bearer wears a chain made of figs. This *canephoros* was more than ten years of age (*ib.* 643 ff.). Golden baskets with ἀπαρχαὶ ἁπάντων are recorded in schol. ad Aristoph. *Ach.* 242 = Suid. *s.v.* κανοῦν. The basket-bearers of the Great Dionysia were elected by the Archon Eponymos (*RA* xxv. 1873, 178; *IGA* ii. 420; for other basket-bearers of Dionysos, see *IGA* ii. 1388*b*, Add. p. 349; ii. 5, 318*b*, 32). At the Panathenæan festival a great number of basket-bearers participated. The orator Lycurgus procured amongst other things golden ornaments for 100 girls (*X. orat. v.* p. 852ᵇ, cf. his speech περὶ κανηφόρων, Harpocrat. *s.v.*). On the frieze of the Parthenon numerous girls with and without implements are represented, who have rightly been recognized as basket-bearers (Pfuhl, *op. cit.* p. 20, 133); but it is not probable that the girls would carry the objects in their hands instead of in baskets on their heads for purely artistic reasons (Pfuhl, *op. cit.* p. 21, 137); we must give preference to Leacock's opinion (*loc. cit.* p. 14) that most of these girls were only basket-bearers *honoris causa*. The κανοῦν is held by the *hieropoios* (49, Michaelis), who has taken it over from the girl standing before him (the object seems to the present writer to be wrongly interpreted as a sacred chest by Frickenhaus, *Ath. Mitt.* xxxiii. 31, 1); the visible boring-holes seem to point to fillets (Michaelis, *op. cit.* p. 259); it is inadmissible to suppose the presence of other baskets (Robert, *GGA* clxi. 533 f.). Other references are the election of the basket-bearers by the Agonothetes (*IGA* ii. 5, 421*c d*, 51 f. [soon after B.C. 308]), and the inscription in honour of a Panathenaic *canephoros* (*IGA* ii. 1388). For the minor Panathenæa a number of basket-bearers is likewise recorded, who participated in the portions of sacrificial meat (Dittenberger, *Syll.*² 634, 14 f.), and there are eleven statuettes of *canephoroi* (κόραι ἀπὸ τῶν κανῶν) in the inventory of the Parthenon (*IGA* ii. 678, B 45 f.). Moreover, basket-bearers are recorded in Athens for the following cults: three permanent *canephoroi* at the Palladion, inscribed on a seat of the Dionysos-theatre (*IGA* iii. 338); *canephoros* of Athene Soteira (?) (*IGA* ii. 1387); of the Pythian Apollo (*IGA* ii. 1388 [catalogues of basket-bearers, who participated in greater number in the Pythian State-embassy, on inscriptions, Colin, *Le Culte d'Apollon Pythien à Athènes*, Paris, 1905, p. 46, 87]); of the Eleusinia (*IGA* iii. 916 [a sunshade for this *pompe* is recorded, schol. Aristoph. *Birds*, 1508 = Suid. *s.v.* σκιάδειον]); of Asklepios (*IGA* iii. 921; cf. the *canephoros* of the Epidauria, *IGA* iii. 916); of Asklepios and Hygieia, used for dating, therefore annual (*IGA* ii. 1204); of the mother of the gods (*IGA* ii. 1388*b*, Add. p. 249); of Serapis (*Ephem. arch.* 1895, 102); of Isis (*IGA* ii. 1355); of Serapis and Isis (*IGA* iii. 923; cf. Rusch, *de Serapide et Iside in Græcia cultis*, p. 16). Basket-bearers of uncertain cults are found in *IGA* iii. 920, 922, 924; 920*a* (Add. p. 508). Basket-bearing of brides to Artemis is recorded in Theocrit. ii. 66 f. + schol., and a *canephoros* in the *pompe* of the Epaulia the day after the wedding, in *Arch. Jahrb.* xv. 151; cf. the κανᾶ ν[υμφικά], *IGA* ii. 678 B, 9, ii. 5, 700*b* B, 25. There were basket-bearers in Bœotia (Lebadeia) of Zeus Basileus ([Plut.] *Amat. narr.* p. 771ᵇ); at Delphi (Heliod. *Æth.* iii. 2); on Delos (cf. Schoeffer, 'de Deli insulæ rebus,' *Berliner Stud.* ix. 1, 240 f.) of Delia and Apollonia (cf. Nilsson, *Griech. Feste*, 145 f.; *BCH* iii. 379), of Apollo (Artemis and Leto) (*ib.* 380 f.), of Artemis (*BCH* xi. 262, 22), of Dionysos (*BCH* vi. 338, 41, 4, xxix. 239), of Serapis (Isis, Anubis, and Harpocrates) (*BCH* vii. 368, 18, 6), a basket-bearer of Isis used for dating (therefore annual, cf. Rusch, *op. cit.* p. 52) (*CIG* 2298), of the Egyptian gods (Rusch, *op. cit.* p. 51 n., 35, 2. 3, and the stones from the sanctuaries of these gods in Dittenberger, *Orientis Gr. Inscr.* 170, 8; *BCH* vi. 348, 74, 8), of the Syrian Aphrodite (and Apollo) (*BCH* vii. 368, 17 [the quotation, *BCH* vi. 346 added by Schoeffer, *op. cit.* p. 241, is not to be found]), of the same goddess used for dating ('Αθηναῖον, iv. 462, 16); in the Troad of the Ilian Athene (*CIG* 3602 f.); in Pisidia (Termessos) of Artemis (*CIG* 4362); in Karia (Kasossos) of Zeus (*SWAW*, phil.-hist. Kl. cxxxii. 24, 4). Ptolemaios Philadelphos transferred the institution of the *canephoros* to the cult of Arsinoë Philadelphos (cf. Walter Otto, *Priester und Tempel im hellenistischen Aegypten*, ii. 266 f.). This *canephoros* is the oldest Alexandrian eponymous Ptolemaïc priestess, first recorded B.C. 267–6 (Otto, *op. cit.* i. 157, 3; a list of these basket-bearers, *ib.* 185 ff., ii. 324 f.). The same *canephoros* in Ptolemaïs is first recorded B.C. 183–2 (*ib.* i. 161 f., list, *ib.* 195, ii. 325 f.). Comedies entitled 'the cane

phoros' were written by Anaxandrides (Kock, ii. 143) and Menander (iii. 73). Two bronze statues of basket-bearers were made by Polykletos (Cic. *Verr.* iv. 5); a basket-bearer by Skopas (Plin. *HN* xxxvi. 25). Two basket-bearers are depicted on each side of a *thymiaterion* on a terra-cotta relief of the Collection Campana (Daremberg-Saglio, *s.v.* p. 877, fig. 1101, cf. Reinach, *Rép. de la stat.* i. 217, ii. 425 f.).

The *canistrum* (mostly of willow) was also plaited (cf. Isid. *Or.* xx. 9, 8; *Thesaur. l. l.* iii. 259), was broad and flat (Ov. *Fast.* ii. 650, *Met.* viii. 665), and was used as a receptacle for bread, food, fruit, flowers and liquids (specimens in silver, Serv. *Æn.* i. 706; Symm. *Ep.* ii. 81). The basket is rarely mentioned in Roman cult: at the Terminalia (Ov. *Fast.* ii. 650 [with fruit]), in private worship (Tibullus, i. 10, 27 [wreathed with myrtle-twigs, see above, p. 433ᵃ])—both poetic passages perhaps under Greek influence. In scenes of sacrifice a kind of basket occasionally appears (Mau, *Pompeji*, p. 100). *Canistrariæ*, corresponding to *canephoroi*, are recorded only in Africa (*CIL* viii. 9321 [Cæsarea: of Ceres Aug. apparently] 9337, [*ib.*] 12919 [Carthage]); the *canistrariæ* of the *dea Cælestis* in Rome likewise point to Africa (Dessau, *Inscr. Lat. Sel.* 4438). There are nine *canistrarii* of the same goddess (Cælestis Aug.) at Timgad (*Rev. arch.* x. 1907, 25). No connexion exists between the *canistrarii* and the *cannophori* (=*cannarum gestatores*) of the Great Mother in Milan, Ostia, Locri (cf. the *col(legium) canoforo(rum)* at Sæpinum, *CIL* ix. 2480); see Mommsen, *CIL* viii. p. 974 to n. 9337.

The κάλαθος (καλαθίσκοι) originally served practical purposes as did the κανοῦν; it was used in the women's apartment (Aristoph. *Lys.* 579; Poll. x. 125) and as a receptacle for flowers and fruit (cf. *e.g.* Heliod. *Æth.* iii. 2; Eustath. *Od.* iv. 131; Reinach, *Répert. de la stat.* i. 76; Stephani, *Compt. rend. de S. Petersb.* 1865, 24, 1). Its form is that of a lily (Plin. *HN* xxi. 23). As a symbol of plenty the *calathos* is given as an attribute to Demeter and other goddesses in art (cf. Stephani, *l.c.* 25 f.; Daremberg-Saglio, *s.v.* p. 814). In the same capacity it figures in the cults of Demeter and Artemis. A *calathos* on a cart drawn by four white horses occurs in the Alexandrian Eleusis; the women taking part in the festival submitted to special regulations. It was forbidden to look inside the *calathos* (Callim. *h. Cer.* 1 ff., 120 ff.). This *calathos* is depicted on a bronze coin of Trajan (Daremberg-Saglio, i. p. 1071, fig. 1312). Usener (*Rhein. Mus.* l. 146) explained the procession, perhaps correctly, as a spring-festival, referring to Callim. *op. cit.* v. 121 ff., 136. The sheaf visible on the bronze coin is not necessarily a counter instance (Pringsheim, *Archæol. Beitr. zur Gesch. d. Eleusin. Kults*, p. 13 footnote). According to the schol. *ad loc.*, Ptolemaios Philadelphos took over the *pompe* from Attica. This is probably the case, for a *calathos*-festival of Demeter doubtless forms the basis of the confusion in schol. to Æsch. *in Ctes.* 120. That the *calathos* played a mystic part in the Eleusinian liturgy is shown in the formula cleverly interpreted by Dieterich (*Mithrasliturgie*, p. 125 f.). On the other hand, the basket of Kore must be regarded as a flower basket only (Rohde, *Kl. Schr.* ii. 361 f.). It is inadmissible to consider the seat of the Eleusinian image of Demeter as being a *calathos* in its origin (Nilsson, *Griech. Feste*, p. 350); we do not sit on open baskets. Nor is there any foundation for the derivation of the chest out of the *calathos* (*ib.*). A *calathos*-procession in honour of Demeter in Asia Minor is recorded on an inscription from the valley of the Kayster (*Ath. Mitt.* xx. 242), according to which a priest of Demeter presented a plaited *calathos*, and attended to the ἀναφορά of the *calathos*, which took place every year and was participated in by men chosen by lot. Eustath. (*Od.* ix. 247) records dancing *calathoi* for some festival of Demeter. This leads us to Artemis, for whose sanctuary on the Gygæan lake (not far from Sardis) the same record exists (Strabo, xiii. 626). The present writer considers Nilsson's supposition (*Gr. Feste*, p. 253) correct, that there were men inside the dancing *calathoi*, who thus imitated dæmonic *calathoi*. If really Helena was originally nothing but the mystic rush-basket of the Helenephoria (Poll. x. 191; Gruppe, *Griech. Mythol.* p. 163; his connecting the festival with the Brauronic cult [p. 56] is founded on a reading rejected by Kaibel, *Athen.* vi. 223ᵃ), then here, too, we have a dæmonic basket. Possibly the sacred dance of the *calathoi* bears a distant affinity to the *calathiscos*-dance (Athen. xi. 267 f.; Poll. iv. 105; Hes. *s.v.*). Under the appellation *calathos* of Artemis (Bendis) a Bithynian spring-festival (Usener, *op. cit.* p. 145 f.) is recorded by Callinicus (*Vita Hypatii*, p. 96, ed. Bonn). For fifty days, while this festival lasted, no journey was undertaken. We must, therefore, suppose a procession of long duration, as in the cult of Liber of Lavinium (Augustine, *de Civ. Dei*, vii. 21). The Bithynian metrical inscription of the 1st cent. before or after Christ (*Ath. Mitt.* xxiv. p. 413, 13) is certainly closely connected with this procession. Here women are invited to follow the *calathos* in a special attire. The regulations for attire, whose existence this inscription indicates, point to an affinity to the cult of Demeter, but do not imply a dependence upon it (Nilsson, *op. cit.* p. 352); such regulations were common property (cf. Koerte, *Ath. Mitt. l.c.* 414 f.). The *calathos*-worship of Bithynia and Lydia is probably justly traced back by Nilsson (*op. cit.* p. 254 f.) to the Thraco-Phrygo-Bithynian cult of Bendis. About the Helena basket, which is related to the *calathos* of Artemis, see above. A basket in the worship of Dionysos must also be supposed to have had mystical significance (cf. Stat. *Theb.* iv. 378 and also the Pompeian painting in Daremberg-Saglio, i. 891, fig. 1124, where the basket is almost entirely covered, cf. above, p. 434ᵃ). The *liknon* does not belong here (Gruppe, *Griech. Mythol.* p. 1172, footnote, erroneous, in the present writer's opinion). The figures bearing real *calathoi* on their heads are very difficult to class (cf. Stephani, *l.c.*, 1865, 27, 1). Significance in worship has thus far not been demonstrated (cf. Stephani, *l.c.* 26 f.). The connexion of the head-gear designated as *calathos* (first by Macrobius, i. 20, 13, and *passim*) with the real basket is equally uncertain. Primary forms can already be observed in the Mycenæan age (Thiersch, *Aegina*, p. 372). Demeter above all receives it as a symbol (also her servants; cf. Stephani, *l.c.* 21 ff., pl. i. 1, iii. 2. 3); then it is transferred to the chthonic deities, especially Serapis, and thence under Severus to the 'great god' of Odessos and the Thracian riding-god (Pick, *Arch. Jahrb.* xiii. 156, 165).

L. DEUBNER.

BASQUES.—The Basques, *Eskualdunac*,* are confined to the Provincias Vascongadas of Spain, part of Navarre, and a smaller section of the French Département des Basses Pyrénées. They number about 450,000 in Spain, and 150,000 in France—600,000 in all—*i.e.* less than the population of a second-rate capital. Thus we have only the fragment of a race, the *débris* of a language.

1. Language.—Of the vocabulary of the spoken Basque 70 per cent. is borrowed. The grammatical forms are so worn down that scarcely two grammarians agree in the analysis of them. The toponymy of ancient Spain shows that this race

* Leiçarraga (Pref. to NT, 1571) calls them *Heuscaldunac*, and their language *Heuscara*. Their name means 'Holders of Heuscara.'—[E. S. Dodgson.]

once covered the whole of the Peninsula as well as the Pyrenean slopes of Southern France.* This we consider proved, in spite of the objections of Prof. Vinson. Throughout this region we find inscriptions in characters still partly undeciphered, the so-called Celtiberian, or 'letras desconocidas' of Spain. They exhibit a difference of alphabet in different parts of Spain,† but are probably only dialects of one language spoken on both sides of the Pyrenees.‡ That this language is an earlier form of Basque is not yet thoroughly established, and would be denied by the above-mentioned writer.

2. Religion.—There is a like difficulty with regard to the religion of the ancient inhabitants of Spain. It is almost impossible to distinguish what belongs to each people or tribe. Strabo tells us that the morning star was worshipped under the strange title of 'lucem dubiam.'§ The Basque shepherds still call Venus at a certain time of the year *Art-izarra*,‖ 'the between star,' the star between night and day. Strabo also tells of dances in honour of an anonymous deity during the night of the full moon,¶ and of the immolation of goats, of captives, and of horses to Ares.** Silius Italicus speaks of a hatred of cremation, of corpses being left unburied in order to be eaten by birds and thus carried up to heaven, implying a belief in immortality of some kind.†† Iberian deities were assimilated and adopted into the Roman pantheon, like those of other peoples; the names of strange deities abound in the Latin inscriptions.‡‡ Some are certainly Celtic. The only ones that seem undoubtedly Basque are 'Deo Baicorix,' and 'Heraus-corrtsehe.'§§ Worship of nymphs, fountains, and trees appears to have been common in Basque-speaking countries. Classical anthors mention the skill of the Iberians in augury.

† Puyol y Campo, in *Boletin de la R. A. de la Historia*, vol. xvi. p. 321 (Madrid, 1890); Strabo, lib. iii. (cap. i. vol. i. p. 223, ed. Tauchnitz, 1829).

‡ *Monumenta Linguae Ibericae*, ed. Aemilius Hübner, p. cxli (Berlin, 1893).

§ Lib. iii. cap. ii. p. 225 (ἣν καλοῦσι Λουκεμδουβίαν).

‖ *Art-izarra* means the 'morning-star' at any time of the year. It is translated by *lucero, estrella del Norte*, i.e. 'morning-star,' 'day-star,' 'star of the North' in the *Dictionary* of Don Pedro Novia de Salcedo (Tolosa, 1902); and by 'belle étoile qui paraît à l'horizon, à l'est, annonçant l'aurore' in that of M. Salaberry (Bayonne, 1857). The syllable *art* here has (probably) nothing to do with *arte* meaning 'middle,' 'between,' but would be derived from *argitu*, 'enlightened,' like *arthatse* (Ac 5²¹) in Leiçarraga's New Testament of 1571, republished, with alterations, by the Trinitarian Bible Society of London in 1903 and 1908. Here *hatse* means 'beginning' and *art* is a contraction of *argitu*, 'brightened,' 'lighted,' or, just possibly, of *argi*, 'light,' with a euphonic *t* interpolated, as in other composite words. Thus the word means 'dawn' or 'beginning-of-light.'—[E.S.D.]

In the inscription in the chapel of S. Mary Magdalene on the summit of a hill near Atheratze (Tardets), in La Soule, the name occurs thus

HERAVS
CORR†SE
HE.

The † rises above the other letters. Can it be a double T? Hübner thought it was for IT. *Herauscor* might mean 'inclined to talk ravingly, to trouble, to break, or to pulverize.' *Sehe* may stand for modern Basque *sehi*, 'servant,' possibly a Moorish word, as in *Seises* at Seville. *Corri*, now *gorri*, when used without a prefix as a compound, means 'naked,' 'bare,' 'stripped,' and, in a secondary sense, 'red,' like the flesh of an animal which has been skinned. The whole inscription is

FANO
HERAUS
CORR†SE
HE-SACRVM
C VAL.VALE
RIANVS.

[E.S.D.]

3. Pre-historic remains.—The pre-historic remains and megalithic monuments of Spain and Southern France do not differ materially from those common to Western Europe. The exceptions are the so-called *Toros*, 'bulls,' of Guisando; though they are more often boars, sometimes calves, or horses. Some 3500 of them have been noted from fifty different localities. (There is only one of these in Basqueland, namely the pig at Durango, noted by Mr. Dodgson.) Several bear Latin sepulchral inscriptions of the Augustan age.* The synthesis of Oriental and Western religions began early in Spain. At Astorga we find the figure of an open hand, above, and on the palm Εἰς Ζευς Σεραπις Ιαω,† another in Portugal 'Serapi Pantheo.' The remains of the Cerro de los Santos in Murcia have a like character. Celtiberian, Greek, and Latin inscriptions are associated with coins of Constantine and Theodosius.‡

4. Name of God.—The name of God in modern Basque is *Jaungoiko, Jainko, Jeinko, Jinko.* The last three are considered to be dialectic contractions of the first. The meaning would be literally *Jaun*, 'the Lord *or* Master,' *goiko* 'of the Height.' *Jaun* is used in Basque like *Señor* in Spanish—applied to men as well as to God. But in the dialect of la Soule and Roncal *Gaiko* means 'the moon.' Here Basque scholars are again divided. Prince L. L. Bonaparte maintains that *Jaungoiko* is a contraction for *Jaungoikokoa*, 'the Lord of the Moon.'§ Vinson holds that the 'Lord Moon' makes as good sense in mythology as 'the Lord of the Moon.' Both appeal to Strabo, the one to the phrases ἀνωνύμῳ τινὶ θεῷ, and Ἔνιοι δὲ τοὺς Καλλαϊκοὺς ἀθέους φασί, the other to ταῖς πανσελήνοις νύκτωρ.‖ The writings of the early Christian missionaries and Fathers and the *Acta Sanctorum* give us no help; they speak in a vague way of idolatry, but do not tell us what the idols were. Neither folklore, nor the popular drama, the Pastorales, nor the poetry helps us. The tales are all found elsewhere. The only peculiarity of the poetry is a fondness for allegory, which perhaps arises from thinking in a language which has few native abstract or collective terms, but expresses nearly everything in the concrete. We mentioned above the skill of the Iberians in augury. In the 16th and 17th centuries we have full accounts of a strange moral epidemic of witchcraft among the Basques; victims went to the stake confessing perfectly impossible crimes.¶

5. Religious dances and other customs.—Still the attitude of the Basques in ecclesiastical matters is very different from that of ordinary mediæval Christianity. Alone of Western Europeans they have preserved a whole series of manly dances from the time when dancing was an act of the highest ceremonial importance. We can notice only two of the series, the animal dances and the religious dances. The animal dances still preserved are: in la Soule, the *Hartz*, or bear dance, in which the

‖ Lib. iii. cap. iv. p. 263. But both are wrong. *Gaiko* is the Southern Basque equivalent of *gauko*, 'of the night.' The moon is considered in that part of Basqueland as 'the night-light.'—[E.S.D.]

¶ Pierre de Lancre, *Tableaux de l'inconstance des mauvais anges et démons* (Paris, 1612); D. J. A. Lorente, *Hist. Crit. de la Inquisición de España*, cap. xv. (Madrid, 1822); *Litteræ Societatis Jesu, Annorum duorum*, 1613, 1614, reprinted by Prof. Vinson in *Revue de Linguistique*, xxxiii. 209 (Paris, 1900).

lambs (*achouriac*) also appear; the *Zamalzain*, or horse dance, and the *Acheri*, or fox dance, in Guipúzcoa. These may suggest some early form of totem custom or worship.* The dance of the *seizes* at Seville is well known; but the habit of religious dancing was much more widely spread. In Aragon it survived till the end of the 19th century. It is still practised at Jaca, and existed till 1830 at Iholdy in the French Pays Basque.† Religious dances formed a prominent feature in the festivals which took place at Azpeitia on the canonization of Ignatius Loyola in 1622. They were objected to by some, but are warmly defended by the great Basque scholar and preacher, Manuel de Larramendi, who quotes largely from the OT and the Fathers in commendation of the practice.

Another custom which points back to some kind of offerings to or for the dead long survived among the Basques. Travellers in the 15th cent. were struck by the lighted tapers, and prayers said before tombs adorned with flowers.‡ Offerings to the priest at funerals formed the greater part of his income, and were almost incredible in amount. These were made at the tomb, after being offered to the priest in church. Wealthy people gave a pair of oxen, others one, or lambs and fowls. The oxen and sheep were led to the church porch, and there ransomed. The bread and the tapers were taken from the tomb and offered in the church at the reading of the Gospel. At length the civil authorities passed sumptuary laws to restrict these offerings, and they are gradually ceasing, although the Basques still carry candles to church and fix them in elaborate, and often very ancient, carved wooden taper-holders over the tombs of their parents who lie beneath the pavement of the church; the candles are lighted during mass.§ The lavishness of the Basques in offerings was noted by the Pilgrim of the 12th cent., who was otherwise most hostile to them:

'In decimis dandis legitimi, in oblationibus altarium assueti approbantur per unumquemque enim diem, dum ad ecclesiam Navarrus vadit, aut panis aut vini aut tritici aut alicujus substantiæ oblationem Deo facit.' ‖

6. Civil laws.—In striking contrast with this generosity to the clergy in religious matters is the conduct of the Basques towards them in merely civil matters. The Basques are the most religious people in Spain.¶ The Englishman who knows their language best says: 'The Basques are fanatically Catholic, almost disagreeably religious, and detest Calvin as much as all loyal monarchists hate Oliver Cromwell, but with less cause.'** A writer not at all suspected of anti-clericalism remarks on this 'double caractère éminemment religieux et démocratique.'†† Bascle de Lagrèze, a decidedly clerical writer, points out that for a long time marriage was a purely civil act among the Basques: 'le For (*i.e.* el Fuero) n'exige aucune intervention du prêtre dans la célébration du mariage, qu'il considère comme un contrat civil.' Gradually the stipulation began to be made that the marriage should be solemnized 'segun el Fuero de la Iglesia' or 'segun la ley de Roma'; finally, marriage before the priest was alone valid.* It was the same with the administration of oaths, of judicial combats, and of ordeals.† The election of the clergy by the parishioners continued in some places down to the beginning of the 19th cent.‡ The rest of Church patronage was in the hands of the king, the nobles, and the municipalities. No bishop had a right to any part of the tithes in Guipúzcoa.§ But the peculiar attitude of the Basques towards the clergy is best seen in the elections to the *Juntas*, or local parliaments. No ecclesiastic could be a deputy, nor could he intervene in any civil or criminal case under any pretext whatever;‖ no priest, except those belonging to the place, might enter into the town where the *Junta* was sitting; in Tolosa any deputy seen talking to a priest before a session lost his vote for that day.¶ When, in 1477, Ferdinand the Catholic made a progress through Biscay, and tried to take with him the Bishop of Pamplona, he was obliged to send him back, and the Basques burnt the soil whereon the bishop had stood, and threw the ashes into the sea.** Later, in 1757, when Ferdinand VI., under the advice of the bishops, sent an order to the Cortes of Navarre to forbid the acting of plays, he was compelled to rescind it; the Cortes refused to obey the mandate of any bishops.†† This attitude towards the clergy in civil matters was persistently maintained down to the Revolution. The position of women was high among the Basques. Along with some other Pyrenean populations, they followed the rule of absolute primogeniture: the firstborn, whether male or female, inherited the ancestral property.‡‡ The marriage of the clergy lingered longer among the Basques than in other parts of Spain.§§ They alone have preserved the ancient order of deaconesses, the *Serorac*, with functions in some respects like those of elders in the Presbyterian Kirk of Scotland.‖‖ Yet, with all this jealousy of the ecclesiastical power in civil matters, it is from the Basques that Jesuitism, the most devoted militia of the Papal power, has sprung. Ignatius de Loyola and Francisco Xavier,¶¶ were typical Basques, the one a Guipúzcoan, the other a Navarrese; both retained some of their Basque habits and customs to the end of their lives, and the influence of these and Basque modes of thought can be traced in their writings. In this way this little people has influenced the course of religious history in the greater part of Europe since the 16th century.

¶¶ Echeverri = 'house new' = Newhouse, viz. Echaverri, Chaverri, Chaver, Xavier. These variations, and several more, are found in Navarre.

BAṬESAR.—A town situated on the right bank of the river Jumnā, in the United Provinces of Agra and Oudh, in Northern India, lat. 26° 56′ 6″ N.; long. 78° 35′ 7″ E. It is important as the scene of a popular bathing and trading fair held on the last day of the month Kārttik (October–November). The place takes its name from the worship of Śiva in his form as Vaṭeśvaranātha, 'lord of the sacred banyan tree (*vaṭa*).' The present temple was built by one of the Rājās of Bhadāvar in A.D. 1646. In earlier times the place was known as Sūryapura, 'city of the sun'; the ruins of the old town are still visible near the present site.

BATH, BATHING.—See PURIFICATION.

BĀWARIYA (probably derived from Hindī *baṅvar*, Skr. *bhramara*, 'a creeper,' in the sense of a noose made originally from some vegetable fibre, and used in snaring and trapping animals).—A criminal and hunting tribe of Dravidian origin, found in Northern India to the number of 30,321, of whom the great majority inhabit the Panjāb. Here they worship the Mother-goddess under the title of Kālī-Bhavānī, and the local saint Gūgā under the name of Zāhir Dīvān (Crooke, *Popular Religion and Folk-lore*, i. 211 f.). Farther west they specially worship Dūlhā Deo, the bridegroom-god who is invoked at marriages (*ib.* i. 119 f.). A burnt-offering is made with butter, and water is poured on the floor of the house in his honour. They also worship a deified ascetic named Siṁha Bābā, a member of the Nānakshāhī Sikh sect of Faqīrs. It is possible that they may be a branch of the important Bauri caste, which, to the number of 735,937, is found chiefly in Bengal (Risley, *Tribes and Castes of Bengal*, i. 78 ff.). The connexion of this tribe with Hinduism is of the slightest kind. Their chief objects of worship are Manasā, the snake-goddess, Mānsingh, a local village-god, and Baṛ Pahāṛī, the mountain-deity, which is only another form of Marang Buru, the hill-god of the Santāls and other Dravidian tribes.

'Pigs, fowls, rice, sugar, and ghee are offered to Kudrasinī, on Saturdays and Sundays at the Ākhrā or dancing-place of the village, through a Bauri priest, who abstains from flesh or fish on the day preceding the sacrifice. The priest gets as his fee the fowls that are offered and the head or leg of the pig; the worshippers eat the rest.' They do not employ Brāhmans, their religious duties being performed by a member of the tribe or by the headman. In some places they bury the dead face downwards, the object 'being to prevent the spirit from getting out and giving trouble to the living' (Risley, *ib.* i. 80 f.).

LITERATURE.—For the true Bāwariyas, J. Wilson, *Settlement Report of the Sirsa District*, 1886, p. 123; Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 228 ff.

W. CROOKE.

BAXTER.—

1. **Life.**—Richard Baxter was born on 12th November 1615. His father was Richard Baxter of Eaton-Constantine, in Shropshire; and his mother, Beatrice Adeney of Rowton, in the same county. The elder Baxter had been addicted to gambling, but by the time his son was born he had become a changed man, and it was to his father's instruction and example that Baxter was mainly indebted for his earliest religious impressions. His mother died in 1634, and his father married again.

Baxter's early education was entrusted to worthless and incompetent tutors. At length he was placed under the tuition of Mr. John Owen, master of the Free School of Wroxeter, who instructed him in classics and prepared him for the University. To the University, however, he was never sent. He was placed instead under a clergyman at Ludlow, from whom he profited little in learning, but with whom he had the run of a great library, and became a passionate reader of books. He came early under religious impressions. Other books touched his conscience, and awakened in him the sense of Divine things; but *The Bruised Reed*, by Dr. Richard Sibbes, seems first to have shown him, when a lad of fifteen, the greatness of the love of God and the freeness of the redemption of Christ. From his youth in his father's house he was deeply read in the Scriptures. It was within the Church of England that Baxter was baptized, confirmed, and ordained to the ministry. Though he was ejected with two thousand more in 1662, and cast in his lot with the Presbyterians, to the end he regarded his orders as derived from her, and to the very close of his life, like other moderate Presbyterians, he followed the practice of occasional Communion in her churches. What would have been for other men an insuperable barrier to either bodily or mental activity and to a career of usefulness in any calling, was the lack of physical stamina and even of ordinary health all through life. 'Never,' says Sir James Stephen, 'was the alliance of soul and body formed on terms of greater inequality than in Baxter's person. . . . The mournful list of his chronic diseases renders almost miraculous the mental vigour which bore him through exertions resembling those of a disembodied spirit' (*Essays in Ecclesiastical Biography*, p. 361). He nevertheless lived to the age of seventy-six, and his labours as a preacher, a pastor, and an author were herculean.

In 1638 Baxter was offered the headmastership of the Endowed School at Dudley, and took orders to qualify him to hold the appointment. In 1640 he was called to Kidderminster to occupy the place of an incompetent vicar, and with Kidderminster his name was henceforward to be associated as Samuel Rutherford's with Anwoth, or Thomas Boston's with Ettrick. His ministry, however, was seriously interrupted by the Civil Wars, in which he took the side of the Parliament, though he had no sympathy with those who proceeded to put the King to death and to overturn the throne. He laboured incessantly for the good of the soldiers of Cromwell's army, and had interviews and discussions on religious and political questions with the Lord General himself. His labours, however, proved too much for his strength, and it was when suffering from one of his dangerous illnesses about this time that he conceived *The Saints' Everlasting Rest*. Before he had completed this, his first work, he was back to his pastorate in Kidderminster, where he remained till 1660.

His ministry here fell mostly within the period of the Commonwealth, when a state of anarchy prevailed in the Church of England. Cromwell's religious establishment did not deserve the name of a Church; it repudiated Prelacy without enforcing Presbyterianism or recognizing Congregationalism. One object of his government was the purification of the ministry. For this end he set up an Ecclesiastical Commission, called the Committee of Triers, including Presbyterians, Congregationalists, and Baptists, who examined presentees and sanctioned appointments to parishes. Baxter had no love for this body any more than he had for Cromwell, but he rejoiced in the growing spirituality of the ministry and the marked spread of vital religion amongst the people in the days of the Commonwealth.

On the death of Cromwell, Baxter joined with the Presbyterians on both sides of the Border in working for the overthrow of the Commonwealth and the restoration of the Monarchy. He had now taken farewell of Kidderminster, and was appointed one of the King's chaplains. The King even offered him through Clarendon, the Lord Chancellor, the See of Hereford, but he declined the honour. He would have been content to return to Kidderminster as a humble curate, but this was denied him, and when the Act of Uniformity, on 24th August (St. Bartholomew's Day) 1662, silenced over two thousand of the most earnest ministers, and deprived them of their livings, Baxter's formal ministry within the Church of England came to an end. He signalized the event by entering into the married state; and his wife, Margaret Charlton, proved a real helpmeet to him.

Meanwhile penal legislation against the Nonconformists became more exacting and severe. It became a crime to attend a dissenting place of worship. Those ministers who would not take the test were prohibited from coming within five miles of any town which was represented in Parliament, or any town where they had resided as ministers. Baxter got into trouble on both counts; and neither the favour of the King nor the friendship of Sir Matthew Hale, Lord Chief Justice, availed to save him from fine and imprisonment.

In 1681 Baxter lost by death both his wife and his stepmother, who had lived to the age of ninety-six, and troubles thickened around the desolate man. But, as he says, he 'never wanted less what man can give than when men had taken all away,' and so, preaching as often as he found liberty and opportunity, and producing theological treatises one after another without intermission, he survived to experience the dark days of James II. and the brighter days of the Revolution Settlement under William and Mary. In the former reign, when weighed down with age and infirmities, he was brought before the infamous Chief Justice Jeffreys, and under sentence by him would have lain in prison till death had not the King remitted his fine. In the Revolution of 1688 he was too feeble to take any part. At length death, with whose approaches he had been long familiar, came upon him in stern reality, and on 8th December 1691 he passed to the saints' everlasting rest.

2. **Works and influence.**—Baxter was a most prolific author, perhaps the most voluminous theological writer in the English language. From the time when he first discovered his powers and wrote *The Saints' Everlasting Rest*, scarcely a year passed without several works from his pen. Even at Kidderminster, with its many claims, he regarded his labours in the pulpit and congregation as a recreation, and threw his strength into his writings. The reading displayed in them, the

correspondence to which they frequently led, and the diversity of subjects which they embrace, illustrate the extraordinary versatility of the man and the indefatigable diligence with which he toiled. It has been suggested that he never recast a sentence, and never bestowed a thought on its rhythm and the balance of its parts; and his extraordinary productiveness as a writer as well as his own statements make it certain he did not. No fewer than one hundred and sixty-eight treatises came from his hand, many of them filling volumes. Most of them are now forgotten, but some of them are classics of evangelical religion which his countrymen would not willingly let die. When Boswell asked Dr. Samuel Johnson what works of Richard Baxter he should read, he received for answer, 'Read any of them, for they are all good.'

Mr. Orme, the editor of the standard edition of Baxter's works, classifies them under the following heads:—Works on the Evidences of Religion; on the Doctrines of Religion; on Conversion; on Christian Experience; on Christian Ethics; on Catholic Communion; on Nonconformity; on Popery; on Anti-Romanism; on the Baptist, Quaker, and Millenarian Controversies; Historical and Political Works; Devotional, Expository, and Poetical Works. The cast of Baxter's mind was eminently speculative and inquiring, and any question of the Schools which met him in the course of an argument had for him an irresistible fascination, and received instant and perhaps prolonged attention. But such was his satisfaction in the great truths of revealed religion and his conviction of their absolute certitude—won through experience as well as ratiocination—that he shirks no difficulty, shrinks from no combat, and grudges no pains, if only he can place his readers—even though it be through divisions and subdivisions of argument and proof—upon the same rock of assured conviction as himself. Of his numerous works there are at least three which are still in demand, and, after two centuries and a half, seem destined to live on. These are *The Saints' Everlasting Rest*, *The Call to the Unconverted*, and *The Reformed Pastor*.

The first of these, the first considerable work which he produced, is the masterpiece with which his name is associated. It was published in 1650, having been conceived and for the most part written towards the close of the Civil War. The title-page of the original edition bears that it was 'written by the author for his own use, in the time of his languishing, when God took him off from all public employment.' He was at the time the guest of Sir Thomas Rouse in Worcestershire, and away from his books. 'The marginal citations,' he explains, 'I put in after I came home to my books, but almost all the book itself was written when I had no book but a Bible and a Concordance; and I found that the transcript of the heart hath the greatest force on the hearts of others.' It is a work almost of inspiration, certainly of spontaneous birth, like *The Pilgrim's Progress*, or *The Imitation of Christ*; and though the two volumes, comprising in Orme's edition more than a thousand pages, are beyond the powers or the patience of most readers, the popular abridgments leave out much that gives reality and pathos in the complete work. In a volume of St. James's Lectures (1875, Lect. iv.) on *Companions of the Devout Life*, the late Archbishop Trench, a master both in literary taste and in theology, has given a remarkable appreciation of 'Baxter and The Saints' Rest.'

'There reigns in Baxter's writings, and not least in "The Saints' Rest," a robust and masculine eloquence; nor do these want from time to time rare and unsought felicities of language, which once heard can scarcely be forgotten. In regard, indeed, to the choice of words, the book might have been written yesterday. There is hardly one which has become obsolete; hardly one which has drifted away from the meaning which it has in his writings. This may not be a great matter; but it argues a rare insight, conscious or unconscious, into all that was truest, into all which was furthest removed from affectation and untruthfulness in the language that after more than two hundred years so it should be; and we may recognize here an element not to be overlooked, of the abiding popularity of the book' (*Companions of the Devout Life*, p. 88 f.).

In the work itself Baxter first dwells upon the excellence of the 'Rest,' and then characteristically sets himself to prove the infallibility and Divine origin of the Holy Scripture in which it is promised, thus contributing an able treatise on Christian evidences. The ground having been firmly established, he develops the uses of the Doctrine of Rest, and concludes with a directory for the getting and keeping of the heart in heaven. The work abounds in fervent appeals and felicitous phrases and striking similitudes.

The Call to the Unconverted appears to be the substance of a sermon which Baxter had preached from the well-known text in Ezk 33^{11} 'Turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?' Next to the *Saints' Rest* it was the most successful and most greatly used of all his publications. In his lifetime it had the distinction of being translated by John Eliot into the language of the Massachusetts Indians (1664), and it has passed through editions well-nigh innumerable, and been translated into most of the European languages. It has been compared in its character and influence with Law's *Serious Call* and Joseph Alleine's *Alarm*; but it is simpler in its teaching than the one, and more tender and kindly in spirit than the other. It breathes a spirit of intense earnestness, and, though its language would not now be used in its entirety in pulpit address, the fervour and force of its reasoned appeal to the understanding and the heart are as powerful as ever.

Gildas Salvianus: The Reformed Pastor is one of the classics of pastoral theology. Dr. Shedd, in his *Homiletics and Pastoral Theology*, recommends ministers to read it through once a year; and Principal Oswald Dykes (*The Christian Minister*, p. 49) describes it as one of the most searching and widely helpful books in English literature on its subject. The second chapter, and especially the pages devoted to pastoral oversight (vol. xiv. pp. 96–114), are replete with maxims and counsels of sanctified wisdom and practical good sense, the outcome of long and intimate acquaintance with the duties of the pastor's office. Both in its original and in its abridged forms *The Reformed Pastor* has had a very wide circulation.

No one can read Baxter's writings without perceiving that he has in him the soul of true poetry. His occasional quotations and references to George Herbert reveal sympathies in this direction. But he was too intensely in earnest and too absorbed in his various labours to master the technique of the poet's art, or to take pains with niceties and refinements of versification. A small volume of 'Poetical Fragments' is, however, included among his works, and at least one of his pieces, 'Lord, it belongs not to my care,' has found its way into hymnals for congregational praise.

The influence of Richard Baxter exerted from the pulpit, as well as by his works during his lifetime, must have been great. His power and fervour in the pulpit were unique in an age of great preachers, and he exemplified his own lines in a most literal sense, for

'He preached, as never sure to preach again,
And as a dying man to dying men.'

In a time of ecclesiastical anxiety and strife, he strove to be a peacemaker. Schemes of a comprehensive union of all who truly loved the Lord and held fast by the essentials of Christian truth and experience, like those of John Durie and

Archbishop Ussher, had in him, in season and out of season, a steadfast supporter. If his combative turn of mind and his fondness for precise definition did not allow him to see much success in his unflagging efforts for union among Christians, he laboured long and patiently to earn the blessing of the peacemakers. In one important sphere, not recognized in that age of theological controversy as it is now, he was a pioneer. He was firmly convinced of the Christian obligation to evangelize the world. He was a warm supporter of John Eliot, the Apostle of the Indians, and it is to Baxter more than any other that the Society for the Propagation of the Gospel owes its charter. If we cannot trace the great Evangelical Revival at the close of the 18th cent. directly to Baxter, we know that his works influenced some of the most prominent members of the Clapham sect, and helped to sustain the fervour of many of the leaders of that movement.

LITERATURE.—There is an excellent edition of Baxter's practical works by William Orme in 23 vols., London, 1830, upon which Sir James Stephen's famous essay is based. There is an edition of the 'Poetical Fragments' by Pickering, London, 1829. In the notice in the *Dictionary of National Biography*, and in a volume of *Representative Nonconformists*, A. B. Grosart has dealt fully with Baxter's life and works. In the early chapters of Macaulay's *History of England* there are appreciative notices of Baxter, and also in J. Stoughton's *Religion in England*, 1878, ii. 180–186; see also F. J. Powicke, 'Baxter as a Catholic Christian,' in *Prim. Meth. Quart. Rev.*, April 1909. See also end of § 3.

THOMAS NICOL.

3. Distinctive doctrine.—In Baxter's *Confession of Faith* he sets forth three parallel columns; on one side 'Antinomianism,' on the other the doctrine of 'Papists and others in the Contrary Extream,' and in the centre 'Truth,' 'that which I take to be both the Truth and the Doctrine of the Reformed Churches.' This table is significant. The key to Baxter's doctrinal position is to be found in the fact that he always endeavoured to avoid the falsehood of extremes, and to find truth and harmony in the golden mean. He wished to be a son of peace in theology no less than in ecclesiastical affairs. His *Catholic Theology* is entitled 'Plain, Pure, Peaceable, for Pacification of the Dogmatical Word Warriors,' and consists of three books: 'Pacifying Principles,' 'Dialogues,' and 'Disputations.' He waged war to restore peace. *Ex bello pax* was his motto; and even when he attacked opponents with the polemical acrimony of the time, in keen words for which he afterwards expressed regret, it was always with the aim of maintaining some central position which he firmly believed would reconcile the hostile parties. The immediate result was that he was fiercely assailed from both sides, and became 'a butt for every man to shoot at.' The Arminians rejected him as a Calvinist, while the Calvinists denounced him as an Arminian; he was called in turn a Papist, a Quaker, and even a Socinian. But he appealed to posterity for vindication 'when sad experience hath taught men to hate Theological Logical Wars, and to love, and seek, and call for Peace'; and the broader vision of the present age, which has learnt his love of unity and concord, will appreciate his anxiety to do justice to both sides. Dean Stanley ranked Baxter with Anselm as a great Christian thinker, and Dr. Benjamin Jowett in Westminster Abbey called him 'one of the greatest of Englishmen not only of his own time but of any time.' He always sought to draw forth the measure of truth which lay at the heart of an extreme or erroneous doctrine. He tried to harmonize Divine destiny with moral freedom; he granted that the Romanist was right in insisting on the necessity of good works, and the Quaker in maintaining the reality of the Inner Light, and the Socinian in upholding the claims of reason. His own general position was certainly that of a moderate and liberal Calvinist, for he gave unstinted praise to the Shorter Catechism ('the best catechism I ever saw yet'), and he assented to the decisions of the Synod of Dort, but his exact views on controverted questions are often difficult to define. His subtle intellect revelled in fine-spun distinctions; he modified, explained, and made concessions for the sake of conciliation; and his views expanded and mellowed with the advance of time. The following are, however, some of his most characteristic doctrines.

(*a*) On *the Atonement* he held in the main the modern Evangelical view:

'It is not God but man that lost his goodness; nor is it necessary to our reparation that a change be made on Him but on us. Christ came not into the world to make God better, but to make us better. Nor did He die to make God more disposed to do good, but to dispose us to receive it. . . . (Christ's) purpose was not actually to change the mind of God nor to incline Him to have mercy who before was disinclined, but to make the pardon of man's sin a thing convenient for the Righteous and Holy Governor to bestow, without any impeachment of the honour of His wisdom, holiness, and justice, yea, to the more eminent glorifying of them all.' 'Christ came not to possess God with any false opinion of us, nor is He such a physician as to perform but a supposed cure; He came not to persuade His Father to judge us well, because He is well. We must bear His own image and be holy as He is holy, before He can approve us or love us in complacency. This is the work of our blessed Redeemer to make man fit for God's approbation and delight.' 'Christ could not possibly take upon Himself the numerical guilt which lay on us, nor yet a guilt of the same sort' (*Confession of Faith*, Preface).

(*b*) *Extent of Redemption.*—'Christ died for all, but not for all alike or equally: this is, He intended good for all, but not an equal good' (*End of Controversies*). The sacrifice was for the sins of all in the sense that all should have a conditional promise or gift of life by the merits of it.

(*c*) *Justification.*—'Justifying faith is not the reception of the knowledge or sense of our former justification, but it is the true belief of the Gospel and the sincere acceptance of Christ' (*Conf. of Faith*). Baxter held that faith is what is imputed for righteousness, because faith contains the germ of sincere obedience to Christ. He seems to place regeneration in time before justification. 'He regenerates that He may pardon.' He lays the greatest stress on the necessity of repentance for justification, and, indeed, seems to aim at combining the Roman and Reformed doctrines.

(*d*) *Grace.*—Baxter believed in a common grace bestowed on all mankind, which, if improved, would lead on to sufficient and effectual grace, but even sufficient grace might be resisted and rendered ineffectual (Pref. to *Conf. of Faith*).

(*e*) *Election.*—He accepted election, but not reprobation, for God is the cause of grace but not of sin.

(*f*) *Immanence of God.*—Baxter's doctrine is profound and discriminating:

'As all being is originally from God, so there is continual Divine causation of creatures without which they would all cease, or be annihilated, which some call a continued creation, and some an emanation.' 'The beams do not more depend on the sun, or light or heat or motion on the sun; or the branches, fruit and leaves more depend on the tree, than the creation on God. But yet these are not parts of God as the fruit and leaves are of the tree, but they are creatures because God's emanation or causation is creation, causing the whole being of the effect.'

(*g*) *The Trinity.*—In his *Methodus Theologiæ*—his only Latin work—Baxter attempts to find a rational basis by showing the threefold nature of man and all things. Coleridge and others have followed somewhat similar lines, and though Baxter's reasoning is often fantastical, his philosophic power was highly estimated by Mansel.

(*h*) *Inspiration of Scripture.*—There is a passage in the *Saints' Rest*, omitted from some editions because it gave offence, which anticipates the attitude of many modern Christian scholars.

'They that take the Scriptures to be but the writings of godly, honest men, and so to be only a means of making known Christ, having a gradual precedency to the writings of other godly men, and do believe in Christ upon those strong grounds which

are drawn from the doctrine and miracles rather than upon the testimony of the writing as being purely infallible and Divine, may have saving faith. More much those that believe the whole writing to be of Divine inspiration when it handleth the substance, but doubt whether God infallibly guided in every circumstance.'

On this, as on many other questions, his views were far in advance of those of most of his contemporaries, and they often foreshadowed modern positions only slowly reached after two centuries.

In his last large work, *Reliquiæ Baxterianæ* (1696), Baxter wrote down 'the changes God had wrought since the unriper times of youth,' and one of them is that he now sees a gradation of certainty in truths:

'My certainty that I am a man is before my certainty that there is a God: my certainty that there is a God is greater than my certainty that He requireth love and holiness: my certainty of this is greater than my certainty of the life of reward and punishment hereafter: my certainty of the Deity is greater than my certainty of the Christian faith: my certainty of the Christian faith is greater than my certainty of the perfection and infallibility of Holy Scripture: my certainty of this is greater than of the canonicalness of some books.'

Baxter expressed warm admiration for the missionary efforts of John Eliot, the Apostle of the Indians, and yet he is 'not so much inclined to pass a peremptory sentence of damnation upon all who never heard of Christ, having some more reason than I knew of before to think that God's dealings with such are much unknown to us.'

Those who shared Baxter's spirit of broad catholicity were called, often in reproach, 'Baxterians.' They never formed a sect or even a school, but were men of independent minds who struck out paths for themselves, and in accordance with his principles distinguished between the essentials and non-essentials. 'In things necessary, unity; in things doubtful, liberty; in all things, charity.'

LITERATURE.—Baxter's principal doctrinal works are: *Aphorisms of Justification*, 1649; *Confession of Faith*, 1655; *Catholic Theology*, 1675; *Methodus Theologiæ Christianæ*, 1681; *An End of Doctrinal Controversies*, 1691; *Reliquiæ Baxterianæ*, 1696; cf. also Dean Boyle, *Richard Baxter*, 1883, chs. viii.-x.; J. Stalker, Lecture on 'Baxter' in *The Evangelical Succession*, 2nd series, 1883, p. 209 ff.; B. Jowett's *Biographical Sermons*, 1899; M'Adam Muir, *Religious Writers of England*, 1901. See also the Literature above, at end of § 2.

MARTIN LEWIS.

BEADLE, BEDELLUS.—The word 'beadle' was in Old English, *bydel*, *büdel*, *bidell*, from O.E. *beodan* (from which our word 'bid' is derived), 'to offer, announce, command'; in mediæval Latin, *bidellus* or *bedellus*; Old French, *bedel*, whence the Middle English *bedel*.

The primary meaning of the word appears to be 'herald,' 'one who announces or proclaims something.' So Ælfric (A.D. 1000), translating Ex 32[5]; Ormulum 632 (A.D. 1200), where John the Baptist is 'Cristess bidell'; and Coverdale (A.D. 1535), when translating Dn 3[4]. The secondary meaning is 'an executive officer who represents, and acts under, a higher authority.'

Apart from the metaphorical use of the term (*e.g.* in describing a bishop as 'Godes budel,' R. Morris, *O.E. Hom.* i. 117, A.D. 1175), it is applied to:

(1) The officer of a Court, in particular, of a Forest Court, who administers citations, etc. (Manwood, *Lawes of the Forest*, xxi., A.D. 1598).

(2) The agent of the Lord of a Manor (Coke, *Comm. upon Littleton*, 234, A.D. 1628).

(3) An official in Universities, to whom various duties, ceremonial and executive, pertain. In Oxford there is a bedel for each of the Faculties of Divinity, Law, Medicine, and Arts. The bedels, each bearing a mace, walk before the Chancellor or Vice-Chancellor in processions. The Arts bedel is in constant attendance on the Vice-Chancellor. In Cambridge there are two 'Esquire bedells,' Masters of Arts, who supervise academic ceremonials, and attend on the highest official present. In the University of Glasgow there is a 'bedellus' who is mace-bearer and also janitor. In the Laws of Yale College (1837) provision is made for a 'beadle who shall direct the procession and preserve order.'

(4) The officer of a Trades Gild, who acts as messenger of the Corporation (see *English Gilds*, pp. 35, 121, Early English Texts Society).

(5) A parish officer, whose duty is to attend meetings of the Vestry, to give notice of these meetings, and to execute its orders (Stephen, *Laws of England*, ii. 701). In the ancient Statutes of Scottish Burghs, 112 (quoted in Du Cange, *Glossarium*, *s.v.* 'Bedelli'), it is declared that 'any citation made without the bedellus is not valid.' Formerly the functions of the parish bedell or beadle included punishment of petty offences (cf. Shakespeare, *2 Henry VI.*, II. i. 140 ff., where the Mayor is represented as bidding an attendant 'fetch the beadle,' who, when he comes, whips the impostor).

(6) A church-officer, chiefly, although not exclusively, in Scotland. Du Cange quotes, from the *Concilia Hispan.* iv. 667, a reference to the bedellus as an official who in ecclesiastical processions precedes the Sacrist and the Acolytus; and in England the parish beadle has sometimes a certain status in the parish church. In Scotland, the church-beadle (Scoticé, *bederal*, *bedral*, *beddal*, *betheral*) has charge (under kirk-session and heritors) of the fabric of the church, and is responsible for its due preparation for Divine service. He is the minister's attendant in the church, and also, more or less, in the parish. He carries the Bible, Psalter, and Hymn-book up to the pulpit; and he is the messenger of the minister in parochial work. He acts, also, as the officer of the kirk-session at meetings, in citations, etc. With the office of beadle are often, but not necessarily, conjoined, especially in the country, the functions of gravedigger, bell-ringer, manse gardener, etc.

The Scottish beadle has always been regarded, and has regarded himself, as an important official. 'I'm half a minister mysel', now that I am bedel,' said the beadle in the *Bride of Lammermoor*. The present writer has heard a church-officer of long standing speak of the various ministers who had been '*with him*.' The pride of a beadle in his own kirk is notorious. A country official, whose church was of plain architecture, was taken to see and admire Glasgow Cathedral. 'It's sair fashed wi' thae pillars,' was his depreciatory comment. Sense of official responsibility, and in many cases long experience, render the beadle a keen and often a' rewd critic of services and sermons. 'Gude coorse (coarse) country wark' was a city church-officer's estimate of a rural minister's pulpit performance: and young licentiates, on entering the vestry after service, have been known to quail before an old beadle's terse criticism or significant and 'dour' silence. 'I allus (always) liked that sermon' was the caustic response received by a minister who had preached an old sermon, and wishing to know if it had been recognised had given his church-officer the opportunity of 'remarking.' The old practice of the beadle being employed to carry some intimation to the entire body of parishioners, along with the notion, which within living memory prevailed widely, that to allow a caller to go on his way without 'tasting' was a breach of hospitality, led to the character of beadles as a class for sobriety being impugned. At the present day, however, when the special temptation just referred to has been removed, the temperance of the order is at least equal to that of other classes of society.

(from which the majority of the references in this article to old writers have been taken); Du Cange, *Glossarium*, *s.v.* 'Bedelli'; Hunter, *Encyclopædic Dict.* vol. ii.; Wright, *English Dialect Dict.* vol. i.; Whitney, *Century Dict.*; Ramsay, *Reminiscences of Scottish Life and Character*[7], Edinburgh, 1860; R. Ford, *Thistledown*, 1891; art. on 'Church Officers' in *Scottish Review*, Sept. 3, 1908.

HENRY COWAN.

BEARD.—The permanence of the structure and colour of the hair makes it an important key to race-classification. As a characteristic of the face, it appears long and flowing as a beard chiefly among the Caucasian group; the Mongolians, Negroes, and American aborigines are usually beardless, exceptions occurring among the Australian natives and the Melanesians. So rare was the beardless face in an age when a race knew little of mankind outside its own borders, that

Herodotus (i. 105) explains how the Scythians 'who had plundered the temple of Aphrodite Urania at Ascalon, and their descendants for ever, were smitten by the divinity with a disease which made them women instead of men,' for women the ancient Greeks assumed them to be. The more rationalistic Hippocrates offers a different explanation. 'For my own part, I think these ailments are from God, and all the other ailments too; and no one of them more divine than another, or more human either, but all alike from God. Each of such things has a process of growth, and nothing comes into being without a process of growth' (J. L. Myres, in *Anthropology and the Classics*, p. 139 f., Oxford, 1908).

It is probably as a distinguishing sign of manhood that importance has been attached to the beard, there following from this many customs and superstitions, reference to which falls within the province of this article. It is still a mark of honour in the East; the well-bearded man is one 'who has never hungered' (Doughty, *Arabia Deserta*, i. 250). To pull it is to inflict an indignity; to have it forcibly cut off, or only mutilated, is a symbol of disgrace; to remove it voluntarily is a sign of mourning; to stroke it is the preface to uttering seeming words of weight. 'Let me stroake my beard thrice like a Germin, before I speak a wise word,' says an old writer Pappe W. Hatchet, 1589 (cf. *Oxford Dict. s.v.*), bearded age lending impressiveness to the thing uttered.

It is among Orientals, notably those of Semitic race, or under Semitic influence, that the beard has acquired sanctity. Its place in the old Hebrew ritual is shown in the command not to 'mar the corners of thy beard' (Lv 19^{27}); the degradation or contempt indicated by its mutilation is exemplified in the cutting off one half of the beards of David's servants by the Ammonites (2 S 10^{4}), and its neglect or removal as a symbol of mourning is referred to in Job 1^{20}, 2 S 19^{24}, Ezr 9^{3}, Is 15^{2}, Jer 41^{5}. The vagaries and vanities of custom marking its history find illustration in Herod. ii. 36: 'The priests of the gods in other lands wear long hair, but in Egypt they shave their heads; among other men the custom is that in mourning those whom the matter concerns most nearly have their hair cut short, but the Egyptians, when death occurs, let their hair grow long, both that on the head and that on the chin.' While the lower classes among the Egyptians appear as bearded [Joseph shaves himself before he enters the presence of Pharaoh, Gn 41^{14}], the priests and court officials kept the barbers busy. Sometimes artificial beards were worn as symbols of dignity at solemn festivals, the king's being cut square at the bottom. The beards on the statues of the gods were curled at the end. Among the Assyrians and Babylonians the lower castes were shaven, while kings and others, probably as members of the sacerdotal or military caste, wore beards, frizzled and anointed (cf. Lv 8^{12}). The example of Muhammad in keeping his beard unshorn was followed by the faithful, and it is by the beard of the Prophet and their own that they swear, as in the presence of Allāh. In Muslim custom, perhaps gradually becoming obsolete, there is zealous care of the hairs that fall from the beard, these being preserved by their owner for burial with him, or sometimes deposited in the grave during his lifetime. Tradition says that they were broken 'as a sort of stipulation with some angel who was supposed to be on the watch, and who would look to the safe passage of the consigners of the treasure to paradise' (*EBr*[9], *s. v.*). Such a practice is in keeping with the blurred conception of the barbaric mind as to the 'me' and 'not me,' wherein all that pertains to the individual, from the several parts of his body even to his name, is assumed to be integrally bound up with him, and to be media whereby sorcery may be worked upon him. The story goes that Selim I. (1512–20) was the first Khalif to appear beardless, and when the Shaikh ul-Islām remonstrated, the monarch replied, 'I have cut off my beard, that the Vizier may have nothing to lead me by.' A more veracious history records that Alexander the Great commanded his soldiers to cut off their beards, so that the enemy could not lay hold of them. The presence or absence of the beard is one of the distinctive marks between the priests of the Greek and Latin Churches, although the bearded images on the coins of Popes of the 16th and 17th centuries prove that the clean-shaven face has not the antiquity of the tonsure. The Franciscans are at variance as to whether the founder of their order wore a beard, and on this ground are divided into the 'bearded' and the 'shaven.'

It is amusing to notice that James Ward (1769–1859), a painter of some renown, published a *Defence of the Beard* on Scriptural grounds, 'giving eighteen reasons why man was bound to grow a beard, unless he was indifferent as to offending the Creator and good taste,' while in 1860 one Theologos published a book entitled *Shaving a breach of the Sabbath and a hindrance to the spread of the Gospel*, arguing that the beard was a Divinely provided chest-protector, and adding, 'were it in any other position, its benefit and purpose might be doubted.' A more ancient contribution was made by the Emperor Julian in his *Misopogon*, or *Enemy of the Beard*, a satire on the effeminate manners of the citizens of Antioch, who had laughed at him for allowing his 'shaggy and populous beard' (the phrase is Gibbon's) to grow after the fashion of the Greek philosophers. Samuel Butler, in his *Characters and Passages* (ed. A. R. Waller, Cambridge, 1908), thus humorously describes the sage: 'Heretofore his Beard was the Badge of his Profession, and Length of that in all his Polemics was ever accounted the Length of his Weapon; but when the Trade fell, that fell too.' Monumental and other evidence shows that the Greeks wore beards until the time of Alexander the Great [readers of Herodotus will remember his reference to the great beard of the priestess of Athene (i. 175; viii. 104)], about which period the Romans submitted their chins to barbers from Sicily.

How the treatment of a natural feature of the human male was from time to time made a matter of dispute, even to the shedding of blood, finds illustration in the war between Persians and Tartars because the former would not cut off their beards, while the retention or removal of these became the symbol of the dominant or subject races. Among the West Goths and Burgundians the lower classes were beardless, in contrast to their rulers, and under Norman rule some of the English chose to exile themselves rather than lose their beards. But not long after the Conquest the Normans ceased to shave. The part that fashion and sycophancy have played in the history of the beard is not wholly removed from the domain of Ethics, in the changing standards of which 'custom,' as Pindar says (Herod. iii. 38), 'is king of all.' The Spaniards shaved off their beards because Philip V. could not grow one; and the French did the same because Louis XIII. was beardless; while the latter people, a century earlier, wore beards in imitation of Francis I., who grew one to hide the scar of a wound on his chin. It is said that 'three hairs from a French king's beard under the waxen seal stamped on the royal letter or charter

were supposed to add greater security for the fulfilment of all promises made in the document itself' (*EBr*[9], *s. v.*).

Turning to England, we find that, in the reign of Henry VIII., 'the authorities of Lincoln's Inn prohibited wearers of beards from sitting at the great table unless they paid double commons.' Then came (*temp.* Elizabeth) taxation of beards, assessed according to their age or to the social position of their wearers, beards of above a fortnight's growth being subject to a yearly tax of 3s. 4d. But the impost (which Peter the Great copied, under barbarous conditions, in Russia) failed in its object, perhaps finding a substitute in the duty on hair-powder, which was abolished in 1869. In his *Survey of London*, Stow records that in 1563 'Sir Thomas Lodge, being Mayor of London, wore a beard. He was the first that ever ventured thus to deforme his office, and hardly did the city support the shock.' The well-known Vandyke portraits of Charles I. and of the Cavaliers show what mode of trimming the beard was then in vogue, but by the time that Charles II. came to the throne all Europe shaved, only the moustache being worn. It is within the memory of the middle-aged that the wearing of beards rendered the individual liable to assault and insult, and that it met with opposition and prohibition from employers of labour and persons in authority, until such interference with individual liberty on so unimportant a matter was found to be as futile as has been proved in the case of all sumptuary laws.

EDWARD CLODD.

BEAST (Apocalyptic).—See ANTICHRIST.

BEATIFICATION.—1. Definition.—Beatification at the present day in the Church of Rome is a formal act by which the Church permits, under Papal authority, that a person who has died in the Catholic faith shall be honoured with a public veneration, and be formally styled *Beatus* or *Beata* ('blessed'). The cult, however, is limited. Veneration is not required or authorized throughout the whole Church; it is permitted in a particular diocese or country, or by a particular religious order or other associated body. Only with this restriction are the picture or relics of the person who has received beatification allowed to be exhibited, or is the recitation of his particular office or mass permitted. Beatification is thus a preparatory act, preliminary to the definitive *canonization* (*q.v.*) by which a servant of God is formally ranked among the saints of the Universal Church.

2. History.—The present custom dates from a Bull of Urban VIII. in 1634 (*Cœlestis Hierusalem cives*, July 5, 1634). It is fully described in the classic authority on the subject, the work of Pope Benedict XIV. (Lambertini), *de Servorum Dei Beatificatione et Beatorum Canonizatione.* It marks the conclusion of a long historical process, which must here be very briefly sketched. The distinction between beatification and canonization arose very gradually, and, even when the distinction was recognized as existing, the dividing line was not exactly drawn; *e.g.* it was long disputed whether the Emperor Charles the Great (Charlemagne) was to be regarded as canonized or only beatified (*de Servorum Dei*, etc., tom. i. cap. ix.). It is thus impossible to trace the history of the one process, from its origin, apart from that of the other.

Local veneration may be traced back to the earliest Christian ages, and, as in the case of Polycarp (Eusebius, *Hist. Eccl.* iv. 15), often grew into a wider recognition in the Church. At certain periods an association can be traced with the pagan custom of apotheosis, from which, however, it differs essentially in the fact that the Christian saints were never in any way ranked as Divine or semi-Divine, but merely as those whose virtues had been specially rewarded by God (cf. G. Boissier, 'Apothéose' in Daremberg-Saglio, *Dictionnaire des antiquités grecques et romaines*, t. i. pp. 323-327). But none the less many rites and symbols common to the Christian and pagan cults have been traced, and there was in the Christian hagiology occasional indebtedness to pagan sources as well as inevitable analogy and surviving superstition (cf. Hippolyte Delehaye, *Les Légendes hagiographiques*[2], Brussels, 1906). Bellarmine, on the other hand, traces the Christian custom to the Old Testament and the veneration of the Jewish Church for Enoch, Noah, Abraham, Isaac, etc. (*Controv.*, Paris, 1613, t. ii. col. 700). In the Christian Church it originated in the veneration of martyrs (*q.v.*), whose relics were regarded with reverence, and on whose tombs altars were set up (cf. Duchesne, *Origines du culte chrétien*, 1889, Eng. ed. 1904, pp. 283-284, etc.). But no public veneration was allowed except by authority of the bishop. Registers of those who were thus honoured were kept, and their names were recited at the Eucharist. 'From these diptychs came the kalendars, and from the kalendars in later days the martyrologies' (W. H. Hutton, *The Influence of Christianity upon National Character, illustrated by the Lives and Legends of the English Saints*, Bampton Lectures, 1903, London, 1903, p. 21). But veneration was not long restricted to the martyrs; it was extended to 'confessors,' *i.e.* those in whom a peaceful death followed a life of heroic or conspicuous virtue; and it soon spread still more widely. In the recognition of saintliness different usages grew up and were developed, as at Rome (cf. Duchesne, *Liber Pontificalis*, tom. i. pp. c.-ci.) and in Africa (Optatus, *Hist. Donat.* in *PL* t. xi. col. 916-917). The rights of the episcopate to authorize the veneration of departed saints continued at least till the second half of the 12th century. In their own dioceses, and after a formal and semi-judicial process, the bishops exercised their power as part of their authority to regulate all that related to Divine service. There has been a tendency among Roman Catholics in recent years to distinguish thus between beatification and canonization, and to consider that the former alone lay within the power of the episcopate, the latter never having been declared except by the Roman Pontiff (so T. Ortolan, in *Dictionnaire de Théologie Catholique*, Paris, 1905, fasc. xv. col. 1632); but the late survival of the claim on behalf of local bishops, and its exercise (as still in the Eastern Church) by Councils, would seem to conflict with this view. [Thus the Council of Cloveshoo (747) fixed the veneration in England of St. Gregory and St. Augustine of Canterbury; and cf. vindication by St. Martin of Tours of his right in the matter of veneration, in his *Vita*, by Sulpicius Severus, c. xi.] A survival of the rights of the episcopate is still found in the preliminaries which now precede beatification. The bishop of a diocese in which a special reverence is felt for some departed Christian collects evidence by what is known as the 'Informative Process,' and transmits this to Rome. If it is regarded as sufficient, the Pope issues a decree by which the cause of 'the venerable servant of God' is introduced to the Congregation of Sacred Rites. From this moment the title of 'Venerable' is given, and the first step towards beatification is taken.

3. Method. — Beatification is of two kinds—formal and equipollent (or equivalent). The latter is due not to a positive declaration of the Church, but to a tacit acceptance. Veneration of a particular person has begun, and spread, without formal approbation, till an ancient cult and the testimony of historians are accepted as grounds for a general permission. To this class belong the cases of St. Romwald, St. Norbert, St. Margaret of Scotland, Pope Gregory VII., all eventually canonized saints (for comparatively modern evidence of how this grew up, cf. the case of St. Osmund, Malden, *Canonization of S. Osmund*, Wilts Records Society, 1901, pp. 108–110). Formal beatification is regarded by Benedict XIV. as far more weighty than equipollent beatification (*op. cit.* lib. i. cap. lii. n. 10), since the former is the result of a long and careful process of minute examination, whereas the latter originates in popular sympathy, which the Church has come to accept without any such definite testing. Though there has been dispute on the point (see CANONIZATION), it appears that the brief of Alexander IV., *De reliquiis et veneratione sanctorum*, 1170 (in *Corpus juris Canonici*, l. iii. tit. 45), was the first definite reservation of cases of beatification for the decision of the Roman See. From this time the power of beatification was withdrawn from prelates of whatever dignity, and from Councils, and it is now considered not to be within the rights even of General Councils during a vacancy in the Papal See.

For formal beatification, testimony not only of holiness of life but of miracles (which need not necessarily have been wrought during life) is required (cf. L. Ferrari, *Prompta Bibliotheca*, Rome, 1766, tom. vii. f. 276: 'duo copulative requiruntur, scilicet excellentia virtutum in gradu heroico, et miracula, ita ut nec excellentia virtutum sine miraculis nec miracula sine virtutibus sufficiant'). From the time of Alexander VII. the process of beatification has taken place at the Vatican (Benedict XIV., *op. cit.* lib. i. cap. xxiv.). The writings (if there are any), virtues, and miracles are strictly examined by the Sacred Congregation of Rites. 'Postulators' are appointed to plead in favour of the claim: a 'Promoter of the Faith' (popularly known as *Advocatus Diaboli*) has the duty of seeking for flaws in the case. If the claim is regarded as proved, a decree of Beatification is solemnly proclaimed in St. Peter's (a modern process, in the case of the 'English Martyrs,' is described in Camm, *Lives of the English Martyrs*, London, 1904, vol. i. p. 14 ff.). But the decision, though given by the Pope, is not regarded as infallible, because the ultimate decision of the Church is not reached until the process is completed by canonization (cf. Benedict XIV., *op. cit.* lib. i. cap. xlii. n. 10). Before this stage is reached a further examination is held, which may result in the name being struck off the list of *Beati*. The Pope is therefore not considered as infallible in pronouncing a decree of beatification. It is, however, regarded as extremely rash to dispute or criticize such a decree.

Beatification authorizes a cult limited to particular districts and to particular acts, which are defined in the terms of the particular decree or indult. If no special terms are laid down the cult is regulated by a general decree of the Congregation of Rites of September 27, 1659 (Gardellini, *Decreta Authentica*, Rome, 1898, t. i. pp. 231–232), which orders that (1) the name of the *Beatus* shall not be inscribed in Martyrologies, local calendars, or those of religious orders; (2) images, pictures, or statues of him may not be publicly exposed in churches without permission of the Holy See; (3) his relics are not to be carried in procession; (4) he may not be chosen as patron saint of a church; (5) the cult may not be extended from the place allowed to another without indult.

For the customs which regulate beatification in the Orthodox Eastern Church, where it is not distinguished from canonization, see article CANONIZATION.

LITERATURE.—Benedict XIV., *de Servorum Dei Beatificatione et Beatorum Canonizatione*, 1st ed., 4 vols., Bologna, 1734–1738, completed in *Benedicti XIV. Pont. Opt. Max. Opera Omnia*, Venice, 1767 (the edition used for the purpose of this article is that in 15 vols., Rome, 1787–1792); Ferrari, *Prompta Bibliotheca Canonica*, Rome, 1766, and Paris, 1884; Gardellini *Decreta Authentica Congregationis Sacrorum Rituum*, Rome, 1898–1901; Vacant and Mangenot, *Dictionnaire de Théologie Catholique*, fasc. xi., Paris, 1903; Beccari, in *Catholic Encyclopædia*, ii. 364–369, New York, 1908.

BEATING AND STRIKING.—See STRIKING.

BEATITUDE.—See BLESSEDNESS.

BEAUTY.—It is impossible within the limits of this article to discuss all the theories that have been advanced on the conception of Beauty. No conception, indeed, has received more attention from philosophers. We shall select out of the general history of ideas the most outstanding theories of the Beautiful, with the special aim of tracing their relationship. The subject will be dealt with under the following heads: (i.) in Greek philosophy, (ii.) in the philosophy of the Church Fathers, (iii.) in the philosophy of the Middle Ages, (iv.) in modern philosophy, (v.) in contemporary philosophy, (vi.) conclusion, in which the author will endeavour to point out the principles that arise from this discussion, and the course which, according to him, should be pursued in order to arrive at a true conception of Beauty.

i. *IN GREEK PHILOSOPHY.*—The Greek is a born artist, and his education affords him plenty of scope for all the manifestations of the Beautiful. Nevertheless, the appearance of æsthetic theories comes very late in Greece. It is not until the time of Socrates. The reason is that nothing comes of the study of Beauty except in an integrally constituted philosophy, and before the age of Pericles Greek thought was unable to attain to true systematization.

One common feature, we believe, characterizes all the æsthetic theories of the Greeks: Beauty is considered as an *attribute of things*. If they think at all of the impression that it makes on one, they do so only in a secondary way, and not in order to see in the impression an *essential* element of Beauty. The result is that Greek speculations on Beauty are closely allied to metaphysics.

There are two principal theories which have successively held favour in the schools: (1) the Platonic-Aristotelian theory, and (2) the Plotinian or Neo-Platonic theory.

1. Platonic-Aristotelian theory. — We do not possess a special treatise on Beauty either from Plato or from Aristotle, their ideas on the subject being scattered throughout their different works. Plato's chief references to Beauty are in his *Symposium*, *First Hippias*, *Gorgias*, and a few books of the *Republic*. Aristotle informs us, at the end of his *Metaphysics*, that he will deal more fully with Beauty in a special treatise, which, if it was ever written, has not come down to us. In his *Poetics* some general principles are found, although tragedy alone is specially dealt with.

The intellectual relationship between Aristotle and Plato in æsthetics is so close that their doctrines may be summarized together, as follows:

(*a*) *Beauty resides in order*, and in the metaphysical elements included in order, namely, unity and multiplicity (harmony, symmetry, proportion). It is well known that the study of unity and

multiplicity forms one of the favourite problems of Greek speculation; the study of order is the æsthetic aspect of this problem. And Greek art, chiefly the architecture and sculpture of the time of Pericles, provides an eloquent and perfect commentary on the Platonic-Aristotelian formula. The masterpieces of Greek sculpture symbolize in stone and marble the theory of numbers and their attributes.

Measure and proportion, says Plato, are the elements of beauty and of perfection. 'I do not mean by beauty of form such beauty as that of animals or pictures, which the many would suppose to be my meaning; but . . . understand me to mean straight lines and circles, and the plane and solid figures which are formed out of them; . . . for these I affirm to be not only relatively beautiful, like other things, but they are eternally and absolutely beautiful' (*Philebus*, 51; Jowett's *Dialogues of Plato*[3], 1892, iv. 625). Aristotle likewise writes τὸ γὰρ καλὸν ἐν μεγέθει καὶ τάξει, 'Beauty consists of order united to magnitude' (*Poetics*, vii. 4). And Plato applies his theory to the elements of the universe—air, water, earth, fire. These he reduces to geometrical figures, which he thinks perfectly beautiful—in the same way as Aristotle applies his theory to the State.

In the case of a body, popular sentiment added to the element of order the charm of colour (*suavitas coloris*), as characteristic of the beautiful. Xenophon, the Stoics, Cicero, and others are upholders of this conception, and we shall see that Plotinus mentions it as a common way of representing beauty among his contemporaries and immediate predecessors.

(*b*) *The beautiful is the good.*—This identity applies chiefly to moral good, or virtue. (Conversely, vice is the deformity of the soul.) It is the philosophical translation of the word καλοκἀγαθός. Is not Thersites, in Homer, both ill-favoured in body and evil in heart? 'Beautiful, too, as are both truth and knowledge, you will be right in esteeming this other nature [the idea of good] as more beautiful than either' (Plato, *Republic*, vi. 508; Jowett, *op. cit.* iii. 210). And when we remember that the central idea of Plato's metaphysics is the Good and not the True, we understand how defective is the saying, erroneously attributed to him, 'The Beautiful is the brightness of the True.' Aristotle tried to establish certain distinctions between the Beautiful and the Good, but these are superficial, and we conclude with Bénard: 'Quand on signale ici un grand progrès dans la science du beau, on se trompe' ('L'Esthétique d'Aristote,' in *Acad. Sc. mor. et polit.* 1887, p. 683).

This short account of the Platonic-Aristotelian doctrine requires a few further remarks. (1) Naturally the theories which have just been expounded are influenced by the differences of doctrine in metaphysics that separate these two great Greek minds. For Plato, reality (and, consequently, beauty, order, and harmony) is enthroned in a supra-sensual world, of which things perceived by our senses are only a fleeting shadow; for Aristotle, reality dwells on the earth, and the beautiful is immanent in well-ordered beings, where our intelligence perceives it, through the channel of the senses and its power of imagination. (2) Aristotle agrees with Plato in separating the beautiful from art, the latter having its whole *raison d'être* in the imitation (μίμησις) of nature, as such, without taking into account the æsthetic value of this imitation. And, inasmuch as it is an imitation of the actual, art is somewhat depreciated, the only value recognized in it being the help it gives to the production and diffusion of morality. (3) Plato and Aristotle (especially the latter) imply in certain texts that the beautiful *should make an impression*, and that it gives us pleasure; but neither of them analyzes the nature of this pleasure or the psychical activities that produce it. The *objective* and ontological point of view dominates their æsthetics.

2. Plotinian or Neo-Platonic theory.—In the 3rd cent. of the Christian era there arose in Alexandria, the centre then of civilization and culture, a new æsthetic formula, which was not long in spreading to other Greek centres. **Plotinus** (A.D. 204–270), the most brilliant representative of Neo-Platonism, explained these new ideas in a noble book, full of inspiration and mystical exaltation, the *Enneads*. The first chapter of Book VI. is devoted to 'Beauty.' There are in his doctrines two distinct parts.

(*a*) First, there is a *critical* part, or a prosecuting speech against the Platonic-Aristotelian argument. 'Is it, as everybody holds, the relative proportion of each part to the other and to the whole, with the additional charm of colour, that constitutes beauty, when it addresses itself to sight? In this case, since the beauty of bodies in general consists of the symmetry and just proportion of their parts, it cannot be found in anything *simple*, it can appear only in composites. The whole alone is beautiful; the parts cannot of themselves possess any beauty. They are beautiful only in their relation to the whole. If, however, the whole is beautiful, it seems necessary that the parts also should be beautiful; beauty cannot result from a collection of ugly things' (*Enneads*, i. 6).

(*b*) Secondly, there is a *constructive* part. The new argument may be given thus: Beauty is a transcendental idea, that is, everything is beautiful in the measure of its own reality. 'Everything is beautiful in its own essential being' (*Enneads*, v. 8). It is well known that in the emanative philosophy of Plotinus the universe springs from the unalterable generating power of a primary being, called the One or the Good (Platonic influence), from whom, by a method of loss, is derived a series of principles, produced the one from the other, each less perfect than its predecessor: the intelligence, the soul of the world, and, lastly, matter and the sensible world. Like this descending scale of Being and the Good, there is a descending scale of Beauty, and, in order to make it clearly understood, Plotinus had recourse to a comparison with light and its spatial diffusion—an image borrowed from Plato's *Republic* (bk. vi.). Further, light becomes synonymous with Being, with Goodness, and with Beauty. 'Everything shines in the world of intelligence. . . . In the world of sense the most beautiful thing is fire' (*Enneads*, v. 8, § 10; cf. i. 6, § 3, and *passim*). It is of great importance to notice that the glory of light (ἄγλαια) has, according to Plotinus, a metaphysical value, and is correlative with the conception of being, and that it is not a question of the impression produced, or of a relation between the splendour of the thing and the capacity of the subject who contemplates it.

Another innovation of Plotinus is that art is not excluded from the domain of the Beautiful, his logical argument being as follows:—The artist realizes the Beautiful in the proportion in which his work is *real*. And that is why the artist should not slavishly copy Nature; but, with his eye fixed on the λόγοι, or archetypal ideas, he should endeavour to reach the very source from which all life springs, and in accordance with it correct the imperfections of sensible things.

ii. *IN THE PHILOSOPHY OF THE CHURCH FATHERS.*—Indebted to Neo-Platonism for a great number of their philosophical doctrines, the Church Fathers assumed and even accentuated its æsthetic optimism. They exalted Nature, they sang its beauty, and many (*e.g.* St. John Chrysostom) depreciated art, the work of man, in order to make the beauty of the world, the work of God, more glorious. There is nothing in the Church Fathers' conception of beauty that is not directly due to the Greeks. **St. Augustine**, the most representative, who, in his youth, wrote a treatise *de Pulchro*, inclines somewhat towards the Platonic-Aristotelian theories. 'Omnis corporis pulcritudo est

partium congruentia cum quadam coloris suavitate' (*de Civitate Dei*, xxii. 19). He has bequeathed to us a famous definition of the conception of *order*: 'Ordo est parium dispariumque rerum sua loca tribuens dispositio' (*ib.* xix. 3). On the other hand, **St. Basil** and **pseudo-Dionysius** the Areopagite adopt the Neo-Platonic theories. The latter exercised great influence on the æsthetics of the Middle Ages by means of his treatise *On Divine Names*, for it was the commentary on this treatise that drew forth all the dissertations of Scholasticism on the Beautiful.

iii. *IN THE PHILOSOPHY OF THE MIDDLE AGES*.—It was principally Scholastic philosophy that developed the ideas of Beauty in the Middle Ages. But these ideas did not appear in a systematic form until the 13th century. And even then no treatises or discussions were written on Beauty as at the beginning of the 18th century. We know only one short work, *de Pulcro*, belonging to this period. It is attributed to **Thomas Aquinas**, but probably belongs to one of his immediate disciples. Among the great Scholastics, ideas on æsthetics appear in an incidental way, intermingled with other subjects and nearly always in the form of commentaries on the text of pseudo-Dionysius. They form a systematic whole, however, if one takes the trouble to connect the texts; and a new thought is evident in them. The Beautiful no longer appears under purely objective aspects, as in the Greek schools, but as a complex notion, which belongs partly to the things and partly to the psychic subject who receives the impression of them: the Beautiful is the result of a close connexion between the two. We shall now sum up the fundamental doctrines of Thomas Aquinas, the prince of Scholastic philosophers.

(1) *Subjective aspect of the Beautiful.*—Æsthetic activity is an activity of perception: 'Pulcrum respicit vim cognoscitivam' (*Summa Theol.* i. quæst. 5, art. 4), or, more precisely, it is a disinterested contemplation by the eye, the ear, and the intelligence. This contemplation begets a specific enjoyment, the pleasure of the Beautiful: 'Unde pulcra dicuntur quæ visa placent' (*ib.*). (Here 'visa' refers not only to sight, but to other perceptive faculties of an æsthetic kind.) And now from this psychological point of view there appears a profound difference between the pleasure of the Beautiful and the pleasure of the Good: we enjoy the Good by taking possession of the object itself, and we enjoy the Beautiful by the simple perception of it. 'Et sic patet quod pulcrum addit supra bonum quemdam ordinem ad vim cognoscitivam; ita quod bonum dicatur id quod simpliciter complacet appetitui, pulcrum autem dicatur id cujus apprehensio placet' (*ib.* 1ª 2ªᵉ, quæst. 27, art. 1).

(2) *Objective aspect of the Beautiful.*—It is quite wrong to refer the Scholastic doctrines concerning what constitutes beauty in things to the influence of Neo-Platonism. The theory that was unanimously accepted was the Platonic-Aristotelian, broadened and brought into harmony with other metaphysical theories of Beauty. Order and its elements constitute the Beautiful; *ordo, magnitudo, integritas, debita proportio, æqualitas numerosa, commensuratio partium elegans*, etc. 'Unde pulcrum,' says St. Thomas, 'in debita proportione consistit' (*ib.* i. quæst. 5, art. 4). And æsthetic order is closely connected, on the one hand, with the form of beings (*forma*), that is to say, with the principles of their constitution and of their perfection ('pulcrum congregat omnia et hoc habet ex parte formæ'), and, on the other, with the finality of beings, which dominates the constitution of Scholastic metaphysics: 'Dispositio naturæ conveniens est pulcritudo' (*ib.* 1ª 2ªᵉ, quæst. 54, art. 1).

(3) *Relation of the object to the subject*, or the *claritas pulcri*.—The order of the Beautiful is not any order whatever, but such an order as is capable of giving to the subject that perceives it the natural and entire satisfaction which engenders æsthetic pleasure. Order must be bright, it must be luminous to the eyes. The more *form* strikes the spectator (and form is the principle of unity in a work of art or of nature), the more resplendent it is ('resplendentia,' 'supersplendens claritas'), and the more æsthetic will be the value that the impression experienced possesses. Although the Scholastics make use of the theories of pseudo-Dionysius regarding the *light* of the Beautiful, their doctrine rises above his formula, and, therefore, above Neo-Platonism, with which pseudo-Dionysius was inspired. While for Plotinus the theory of *light* has a metaphysical bearing, for Thomas Aquinas and the other great Scholastics it is a pyschological phenomenon, for it has to do with the mysterious connexion between the object and the subject which forms the basis of the complex phenomenon of Beauty. And from the historical point of view this is a noteworthy conquest on the part of the philosophy of the Middle Ages.

iv. *IN MODERN PHILOSOPHY*.—From the beginning of the 17th cent., which is usually regarded as the commencement of modern philosophy, the study of Beauty has steadily gained in importance and extent; and from the day on which **Baumgarten**, a disciple of Leibniz, detached it from the domain of philosophy and made it a separate branch of knowledge, the number of treatises devoted *ex professo* to æsthetics has continued to multiply. The great burst of artistic criticism after the Renaissance has often been assigned as the cause of this development. And indeed it is a factor whose incontestable influence we are bound to recognize. Artistic culture, greatly aided by archæological excavations and the analysis of statuary and ancient drama, had prepared the way for the discussion of the great problems of Beauty. But there seems to be a second reason: the progress of psychological research, which is one of the salient characteristics of modern philosophy, naturally stimulated the study of æsthetic phenomena; and this influence is clearly seen when it is remembered that in modern and contemporary philosophy Beauty is usually studied only under its *cognitive* and *emotive* aspect, *i.e.* as a *psychic fact*.

As the development of modern æsthetics has a course parallel to that of philosophy, we shall follow the great historical divisions generally agreed upon: (1) philosophy from Descartes to Kant (17th and 18th cents.), (2) Kantian philosophy (18th cent.), and (3) post-Kantian philosophy (19th cent.).

1. From Descartes to Kant.—Just as there are two lines of psychological systems, empiricism and rationalism, originating from Francis Bacon and Descartes respectively, so there are two lines of æsthetic systems.

(1) *Empiricism.*—The Empiricists, reducing all our conscient states to sensation, understand by Beauty an *agreeable sensation*. For **Hume**, the Beautiful exists only in us, not in things, and obeys the general laws of association. This principle was adopted and developed in England by **Hutcheson** (1694–1747), **Home** (1696–1782), and **Burke** (1730–1797); in France by **Batteux** (1713–1780) and **Diderot** (1713–1784); and in Holland by **Hemsterhuys** (1720–1790). Home gives the best expression of the leading ideas of the school in his *Elements of Criticism*, and Burke carries the

sensualistic idea that inspires him to its extreme limits in a work entitled *Inquiry into the Origin of the Sublime and the Beautiful*. Nearly all these philosophers admitted the existence of a special sense, the sense of artistic taste, which was afterwards called the sixth sense, and the object of which was enjoyment of things beautiful.

(2) *Rationalism.*—Among the intellectualists or rationalists (*ratio*, 'reason'), who establish a fundamental distinction between sensation, or the perception of sensible qualities, and the idea, or the general representation, it is in **Leibniz** and his immediate successors that we find the most noteworthy treatments of the Beautiful. It has been truly said that Leibniz is the father of modern æsthetics. It seems as if the intellectualists, inspired by Descartes, had reserved the character of Beauty for the most exalted psychic activities, *i.e.* for *clear and distinct ideas*, which play such a prominent part in the Cartesian doctrine. For some men, indeed, like **Crousaz** (*Traité du Beau*, 1715), the Beautiful is something that may be approved of just like a theory, and **Boileau** expresses this intellectualism when he writes in his *Art Poétique*: 'Mais nous que la raison à ses règles engage.' But Leibniz introduces into æsthetics a tendency contrary to this spirit. And while he relegates the clear perceptions of our psychic life to the domain of *science*, he consigns æsthetic knowledge of things to the dull and less conscient regions of the soul. The æsthetic phenomenon, he says, is a *confused perception* of the order and the harmony of things, and by this doctrine he thought he was explaining that mysterious and indecomposable characteristic which constitutes the charm of Beauty.

In order to understand the whole meaning of this statement, we should have to give a full account of the philosophy of Leibniz, which cannot be undertaken here. It will be sufficient to recall the law of continuity and hierarchy, which arranges all the monads and the monadic activities in a grand order.

Each monad differs in perfection from that which precedes it, and from that immediately following, by infinitely small differences; the activities or the representations of each monad—and, therefore, of the monad that we are—differ in degree by infinitely small differences, so that between our least conscient representations ('obscure ideas') and our most conscient ('distinct ideas') there is room for an indefinite number of stages corresponding to all the degrees of clearness. Now, Beauty is one of those activities which are inferior in quality to the clear and scientific knowledge of things; it is the *confused*, therefore indefinite, perception of all that constitutes order. Whereupon Lotze says that German æsthetics is brought into being by belittling its object.

Baumgarten, who arranges Leibniz's theories, and is the author of the first treatise on Beauty (*Æsthetica et Æstheticorum altera pars*), associates the sentiment of Beauty with obscurity of representation. In the Wolffian classification of the sciences, æsthetics becomes a kind of inferior logic. The same ideas are found in **Eschenburg** (1743–1820), **Sulzer** (1720–1779), and **Mendelssohn** (1729–1786). 'Beauty,' says Mendelssohn, 'vanishes away as soon as we try to analyze it.' And **Meier**, another disciple of Baumgarten (in § 23 of his *Anfangsgründe der schönen Wissenschaften*, 1748–1750) thus expresses himself: 'The cheeks of a beautiful woman are beautiful as long as they are seen with the naked eye. Look at them with a magnifying glass and their beauty departs.'

2. In Kantian philosophy.—The disciples of Leibniz and Baumgarten had considerably furthered the problem of the Beautiful, but all were eclipsed by the gigantic figure of **Kant**. Kant's æsthetics made as profound an impression as his theory of science and his ethics; and just as, in the *Kritik der reinen theoretischen Vernunft*, and the *Kritik der reinen praktischen Vernunft*, he had established human knowledge and human duty in the very *constitution* of our theoretical and practical reason, so he explains opinions on the Beautiful and the Sublime by calling for the *construction* of a third faculty, the source of contemplation and sentiment. This is the subject of a chapter of his third critique, *Kritik der Urtheilskraft*. The subjectivity of the Beautiful is no longer merely a *fact* (Hume), but a *law*. Beauty is an attribute, not of things, but of our representative states. It is the predicate of an æsthetic judgment which unites all men by reason of their nature (synthetic judgment *a priori*) to a subject when that subject calls disinterested contemplation into free play. The object of representation is intended to please me —subjective finality; but at the moment of enjoying it I am unconscious of this finality; to be conscious of it would be to break the charm. 'Schönheit ist Form der Zweckmässigkeit eines Gegenstandes, sofern sie ohne Vorstellung eines Zwecks an ihr wahrgenommen wird' (*Kritik d. Urtheilskraft*, I. i. bk. 1, § 15). Similarly the *sublime* is the result of our subjective powerlessness to grasp an object, mingled with a definite feeling of the superiority of our supra-sensible being. 'Erhaben ist was uns erhebt.'

3. In post-Kantian philosophy.—The chief currents of modern philosophy and æsthetics after Kant are:—

(1) *Post-Kantian criticism in Germany* (first half of 19th cent.).—Powerful in itself, the new theory proposed by Kant (assisted by the brilliant flight of Romanticism in Germany and the æsthetics of the philosophy of Königsberg, and accepted by such men as Schiller and Schelling—philosophers as well as *littérateurs*) dominates all modern criticism. It is true that a characteristic innovation was introduced into German criticism by those who are called idealistic critics as well as by the realistic critics: the Beautiful remains a creation of our mind (Kant), but this 'mind' becomes a monistic principle, the 'ego absolute' of Fichte, the 'absolute' of Schelling, the 'mind' of Hegel, the 'will' of Schopenhauer. **Schiller** (1759–1805) returns to the theory of *play*. To 'play' is to contemplate phenomena with an utter indifference as to their representative value. And just on this account does æsthetic activity become human activity *par excellence*: 'Man is truly man only when he plays.' It is intimacy with the Beautiful that produces the restfulness of life, that balance of all the faculties which Kantism tries to secure by the exercise of freewill ('Vom Erhabenen,' *Briefe über die æsthetische Erziehung des Menschengeschlechtes*, 1795). In 1800 and 1801, **Schelling**, in the second form of his philosophy, æsthetic idealism, revived this governing idea, and made æsthetic activity and 'play' the fundamental function of the mind, that which reconciles its opposite tendencies. The work of art is the only perfect production of the Ego. Thus Jena, where Schelling was a professor along with Fichte and then with Hegel, became the centre of the closely allied philosophic criticism and literary romanticism. **Novalis** identified the imagination of the poet with the productive imagination of the Ego; and **von Schlegel**, whose name is connected with the movement called *Ironism*, claimed for the poet the right of not troubling himself either about the contents of his work, or about its representative value, or about the public who make the unjust claim to judge it.

Then **Hegel** appeared (1770–1831), and ruled the German schools for half a century. For Hegel, art is placed at the highest point of the development of the mind. Art is the last step in the dialectic procession of the Logos. When the mind has traversed the numerous stages of its development sketched in the *Phänomenologie des Geistes* (1807), and when, in conformity with the threefold procession (thesis, antithesis, synthesis) that governs it, it becomes conscious of itself, this auto-contemplation is realized by Art, Religion, and Philosophy. Art,

and the Beautiful in which it is realized, are the 'perfect identity of the ideal and the real.'

Schopenhauer (1788–1860), who may be considered the last of this line of pantheists belonging to the first generation of Kantians, reserves for Art and for Beauty this high position in the cycle of psychic activity (*Die Welt als Wille und Vorstellung*, 1819). Although the thing exists in itself, science is doomed to recognize only its representation ('Vorstellung'). But besides this knowledge of the phenomenal world, which is directed by the *a priori* constitution of our mind, we may have 'the immediate intuition' of the cosmic Ideas, or of the thing-in-itself, and this pure contemplation is the æsthetic contemplation. As such, it is freed from desire and withdrawn from the sufferings that accompany every voluntary action; and this is the secret of the penetrating charm of Beauty. By art, man makes the idea the ruling power—a symbol which nature never realizes in its absolute purity. Art becomes an intoxicating drink, causing the woes of existence to be momentarily forgotten.

(2) *The conflict between Hegelians and Herbartians in Germany* (middle of 19th cent.).—The pantheistic Germans whom we have just mentioned all agreed in making the Beautiful an impersonal manifestation of Being. The Hegelian theory, in spite of the ascendancy in official spheres enjoyed by its promoter, was not long in bringing on a reaction: there was a desire to remove Beauty from the sphere of metaphysical reverie to the ground of psychological observation. In the name of observation, **Herbart** made Beauty consist of the mere perception of *relations* and forms. The æsthetics of content ('Gehaltsästhetik') of the Hegelian school was now opposed by the æsthetics of form ('Formaästhetik'), and the conflict between the two tendencies lasted in Germany until the end of the 19th century. Hegelianism includes among its most zealous defenders **Fr. Th. Vischer**, who published some important works on the Beautiful (e.g. *Aesthetik oder Wissenschaft des Schönen*, 3 vols. 1846–57), while **Zimmermann** carried the reactionary doctrine to an extreme (*Allgemeine Aesthetik als Formwissenschaft*, 1865). The Hegelian party was not defeated in this strife, but we see several of their partisans departing from the rigour of their principles and giving a place to beauty of form. Among these moderates we may mention **Moriz Carrière** (*Aesthetik*, 1859), as well as **Schasler** and **Ed. von Hartmann**, both of whom are authors of works on the history of Æsthetics.

German idealism enjoyed some fame in Italy through **Gioberti**, who favoured Schelling, **de Sanctis** (Professor in the University of Naples after 1870), and **Antonio Tari** (Professor in the University of Naples from 1861 to 1884), who were all affected by the preponderating influence of Hegel.

(3) *Eclectic spiritualism.*—In France, during the first half of the 19th cent., **Cousin** (1792–1867), by his lectures in the Sorbonne, and then through his influential official positions, both academic and political, exercised a dictatorship similar to that enjoyed by Hegel in Germany. He popularized a philosophy, somewhat deficient in originality, which he himself called Eclecticism; and in a well-known book, *Du vrai, du beau et du bien* (1818), gave prominence to an æsthetic made up of fine phrases and pompous homage to the Ideal, which he identified with the Infinite or the perfection of God. While exalted in their aspiration, these thoughts on Beauty have the fault of being remote from reality. They are, moreover, derived from recollections of Hegel and the Scottish school of Reid. The same tendencies are to be seen in **de Lamennais**, although he followed another direction of thought-traditionalism (*De l'Art et du beau*, 1843). On the other hand, **Th. Jouffroy** (1796–1842), the most noteworthy of Cousin's disciples, wrote a *Cours d'esthétique* (1843), in which he insisted on the rights of the psychological method in the study of the Beautiful. And to the same metaphysical tendencies may be traced *La Science du beau* (1861), by **Charles Lévêque**, who returns to Plato in his treatment of the characteristics of Beauty. By the middle of the century only faint traces of Cousin's eclecticism were left in France.

(4) *The æsthetics of Positivism.*—Sensualism, represented at the beginning of the 19th cent. by **Condillac** in France and the Associationists in England, does not leave much room for æsthetic phenomena. But when it reappears with renewed vigour under the form of Positivism, which may be called a sensualism suited to contemporary minds, there is room for new conceptions of Beauty and of Art. These, however, did not appear either in **Comte**, the founder of the new doctrine, or in **Stuart Mill**, its most brilliant logician; but after the system seemed perfectly balanced, and systematized in all its parts, **Herbert Spencer** devoted a chapter of his *Principles of Psychology* to a study of the genesis of æsthetic phenomena, in conformity, however, with the governing ideas of his cosmic evolutionism. The sentiment of Beauty has its origin in 'play,' *i.e.* in the exercise of an excess of activity independent of any function useful to the being. Useful activity becomes beautiful as soon as it ceases to be useful. And as humanity evolves unceasingly 'from the unstable homogeneous to the stable heterogeneous,' art increases with the progress: the more perfect society becomes, the more time will its members have for 'play.'

Hippolyte Taine (1828–1893), in his noteworthy work, *Philosophie de l'art* (1865), studies art as a social fact, and he tries to reduce it, like all other social facts—such as literature and politics—to factors or primordial facts, which are three in number: race, circumstances, time. From this point of view, æsthetics becomes, in the author's words, 'a kind of botany, applied, not to plants, but to human works.' **M. J. Guyau** emphasizes, while exaggerating, the social side of art, and recognizes in it no function except that of developing sympathy and social life (*L'Art au point de vue sociologique*, 1889; *Problèmes de l'esthétique contemporaine*, 1884).

(5) *Psycho-æsthetics.*—The increasing progress of physiological sciences and of the application of psycho-physiology to the study of æsthetic states furnished a new element of research during the latter part of the 19th century. **Helmholtz** in Germany, and **Grant Allen** in England, tried to determine the physiological concomitants of certain phenomena of the Beautiful. **Fechner** (*Vorschule der Aesthetik*, 1876) carried on numerous experiments in the same direction.

v. *CONTEMPORARY TENDENCIES.*—During the last ten years the number of works treating of æsthetic questions has been multiplied in all countries. There is not one of our numerous periodical publications that does not devote some attention to them. Moreover, there has been appearing at Stuttgart since 1906 a *Zeitschrift für Aesthetik und allgemeine Kuntswissenschaft*, under the direction of Max Dessoir, which allows large space to philosophical problems of the Beautiful. Now all these writings, with a few exceptions, show this common characteristic: Beauty is considered only under its subjective aspect as a psychological phenomenon. The salient features of modern æsthetics reappear, exaggerated, in the æsthetics of our own time.

In the first place, Kantism, in this as in other

subjects, is again received into favour—not the idealistic and pantheistic criticism which had been established by the triumvirs of the University of Jena, but psychological Kantism in its primitive form. **Jonas Cohn** (*Allgemeine Aesthetik*, Leipzig, 1901) transfers the results obtained to transcendental ground ('ins Transcendentale umschreiben'). **Stephan Witasek** (*Grundzüge der allgemeinen Aesthetik*, Leipzig, 1904) shows the same tendencies; and a German critic, **A. Tumarkin**, in a criticism of a group of German works on æsthetics, is able to write: 'Jede wissenschaftlich begründete Aesthetik, von welchen Voraussetzungen sie auch ausgehen mag, führt immer auf Kant zurück' (*Archiv für Geschichte der Philosophie*, 1905, p. 360). On the other hand, psycho-æsthetic researches are being actively pursued in the psycho-physiological laboratories; pupils of **Wundt**, **Ebbinghaus**, and others have turned their attention to this side of the subject. Some also apply to æsthetics the historical and inductive method which has produced such excellent results in other departments. **E. Grosse** publishes a work on the origin of art (*Die Anfänge der Kunst*, Freiburg i. Breisgau, 1894); **J. Volkelt** (*System der Aesthetik*, Munich, 1903) makes æsthetics 'normative and experimental'; while, in another line of observation, we trace the development of the artistic sense in the child, especially in his first attempts at drawing.

The most noteworthy representative of the pure psychological tendency is **Theodore Lipps** (*Aesthetik*, Leipzig, 1903), whose opinion is that the only *raison d'être* of æsthetics is to analyze the sentiment of Beauty, and this in the final analysis rests on the *Einfühlung* ('innate feeling'). **Karl Groos** (*Der ästhetische Genuss*, Giessen, 1902), a disciple of the school of Lipps, follows the same tendency of dealing with the Beautiful only by internal analysis. The same may be said of **Véron's** treatise (*L'Esthétique*, Paris, 1878), and of the discriminating analyses of **Léchalas** (*Études esthétiques*, 1902). Even if these authors do not deny the objectivity of the Beautiful, they neglect it, and regard the phenomena of consciousness as the only object of their investigations. The Italian professor, **Benedetto Croce**, whose treatise on æsthetics (*Estetica come scienza dell' Espressione e Linguistica generale*, Milan, 1902) is translated into several languages, is true to this contemporary attitude of mind when he writes: 'Beauty does not belong to things; it is not a psychic fact, it belongs to man's activity, to spiritual energy'; and he holds that æsthetic activity is the imaginative and concrete intuition, as opposed to the logical and general conception. **Ruskin**, whose ideas are known in France through Robert de la Sizeranne (*Ruskin et la religion de la beauté*), occupies a place apart. It is impossible to assign this great and passionate admirer of Nature to any contemporary system of philosophy.

vi. *CONCLUSION.*—From this rapid survey of the evolution of æsthetical doctrines, we may gather a few principles.

By studying in the Beautiful the psychological impression and all that belongs to it, our contemporaries have established æsthetics on firm and fertile soil—that of observation. Let us observe the origin of art in the child, in primitive societies, as well as in the centres of advanced civilization; let us analyze the works to which we ascribe the character of beautiful, that we may understand the secrets of the enjoyment of art which they produce; let us study the physiological phenomena that accompany this delicious thrill of our conscient being when it perceives the Beautiful; let us, above all, determine by examination of our consciousness the psychical aspects of the Beautiful. Nothing more is required. Beauty resides in the *disinterested contemplation of a representative content* of consciousness, followed by an *enjoyment* or a pleasure which can be compared with no other in the scale of emotions.

But is it sufficient to regard merely the impression produced? Are we in the study of the Beautiful to lose all interest in the æsthetical factors springing from the object? Surely not. Contemporary philosophy is wrong in ostracizing metaphysics and adorning psychology with its spoils. On the question whether the Beautiful possesses an objective reality, we agree with the Greeks: Beauty is an attribute of things. But we complete the Greek point of view by adding the modern: Beauty is not an *absolute*, but a *relative*, conception. It exists neither as a physical fact nor as a psychic fact; it is the result of a close connexion between an object and a subject, for the attributes of the one form the appropriate origin of the perceptive enjoyment of the other. The objective attributes were demonstrated by Plato and Aristotle: Beauty resides in order, but, we add, in *expressed* order. That is to say, if the order realized in a work of nature or of art is to be æsthetic, it must *be manifest, evident* to the senses and the intelligence. The more evident and attractive an artist can make the dominant character or principle of the chosen order, the more complete and more penetrating will be the contemplation of the percipient mind: consequently the more beautiful will the work be.

LITERATURE.—C. Bénard, *L'Esthétique d'Aristote et de ses successeurs*, Paris, 1887; E. Vacherot, *Histoire critique de l'école d'Alexandrie*, Paris, 1846–51; M. de Wulf, *Études historiques sur l'esthétique de saint Thomas d'Aquin*, Louvain, 1896. Works on the modern period are very numerous. Only a few general histories of æsthetics can be mentioned: H. Lotze, *Geschichte der Aesthetik in Deutschland*, Munich, 1868; E. von Hartmann, *Die deutsche Aesthetik seit Kant*, Berlin, 1886; Max Schasler, *Kritische Geschichte der Aesthetik*, Berlin, 1872; Bernard Bosanquet, *History of Æsthetic*, Lond. and N.Y. 1892; B. Croce, *Estetica come scienza dell' Espressione e Linguistica generale*, Milan, 1902; W. Knight, *Philosophy of the Beautiful*, 2 vols., London, 1891–93.

MAURICE DE WULF.

BEḌIYĀ, BEṚIYĀ.—A generic name for a number of vagrant, gipsy-like groups, who at the Census of 1901 numbered 57,489, most of whom are found in Bengal and in the United Provinces. In Bengal they practise various disreputable occupations. Some are pedlars and mountebanks, who pretend to be Muhammadans, but exhibit pictures of Hindu gods; others tatu girls, sell simples and quack remedies, and pretend to extract worms from carious teeth; others, again, are acrobats, bird-snarers, or snake-charmers. The Beṛiyās of the United Provinces are pilferers and petty thieves, and make their living by various kinds of rascality. Their appearance indicates that they are members of the pure Indian gipsy race, allied to Ḍoms (wh. see) and other vagrants of the same kind. Risley makes no reference to their religious beliefs in Bengal; but Rājendralāla Mitra states that the Beḍiyā is a Hindu or a Musalmān according to the prevailing beliefs of the people among whom he dwells. Some are Deists, some Kabīr panthīs or Sikhs, while some are Pachpiriyas. It is extremely unlikely that people in this stage of culture can have really adopted the faith of Nānak or of Kabīr; but it is quite possible that they may sometimes adopt the Pachpiriyā (wh. see) cult. In the United Provinces, where they are in a much more degraded condition than in Bengal, they worship as their tribal deity the Mother-goddess in the form of Devī, Kālī, or Juālamukhī. Many of them worship a deity called Sayyid, who is probably a Muhammadan saint like him of Amroha, but is identified by the Beṛiyās with the Prophet Muhammad. They seem, however, to depend more upon the cultus of ancestors than on any other

form of belief, and rarely employ Brāhmans, and those only of the very lowest grade, for their domestic rites.

LITERATURE.—Rājendralāla Mitra, *Memoirs Anthropological Society*, iii. 122 ff.; Risley, *Tribes and Castes of Bengal*, 1891, i. 83; Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 242 ff.

BEELZEBOUL.—See BAALZEBUB.

BEGGARS, BEGGING.—See CHARITY.

BEHISTŪN.—**1. Locality and name.**—Behistūn is a mountainous elevation which rises somewhat abruptly from the surrounding country—presenting from one point of view a double aspect—about sixty miles from Hamadan, on the main caravan route between Baghdad and Teheran (the present capital of Persia). At its highest point it reaches about 3800 feet, but it is really the continuation of an otherwise low range of hills rather than an isolated eminence.

The name at present made use of by the neighbouring inhabitants is *Bisitūn* or *Bisutūn*, which is supposed to have been derived from that of a small village in the immediate vicinity. One is, however, tempted to reverse the relation, as the termination *-sitūn* suggests 'columns' (*sitūn*=Skr. *sthūṇā*), and the opening part may be *bazah* or the like (=Skr. *bahú*). Thus the name would mean 'high columns,' referring to the lofty, and often hewn, face of the rock. The name at present most in use among Westerns is *Behistūn*, or *Bahistūn*. This was handed down to us from the Arabic historian Yāqūt, by Sir H. Rawlinson. Diodorus Siculus (A.D. 1st cent.) seems to have made the earliest mention of the more ancient title as τὸ Βαγίστανον ὄρος.

2. Inscriptions.—The Inscriptions, which chiefly concern us here, render Behistūn famous, as they are perhaps the most important of their kind which have survived to us. They are chiselled upon its hewn surface at about 500 feet above the level of the plain, or about 200 feet above the base of the particular cliff. They occupy, all included, a space of about 60 feet in breadth and 20 in height.

3. The language in general.—The Inscriptions are written *in three languages*—Old Persian, Susian, and Babylonian—in letters a little over an inch in height, it having been found necessary to economize the space. The last two are more naturally to be regarded as translations of the first; but this is not strictly the fact, as there are several sections in the Persian whose equivalents are wanting in the Susian; while, on the other hand, the Babylonian contains some particulars omitted from the Persian. The Persian Inscription consists of five columns, about 12 feet in height and 6 feet broad, flanked on the left, as one views them, by the three columns of the Susian version. A ledge of narrow dimensions—about 2 feet—runs along the foot of them.

4. The sculptured figures and the position of the Inscriptions.—The sculptured figures of Darius and his captives appear immediately above. The nine figures are roped together in a row at the neck. The tenth, that of Gaumata, pseudo-Smerdes (-Smerdis), or Bardiya, is prostrate under the left foot of Darius, who stands 5 ft. 8 ins. in height, with two attendants behind, who are each 4 ft. 10 ins. tall. The height of each of the nine prisoners is only 3 ft. 10 ins., while Auramazda, under the shadow of whose wings the transactions transpire, flutters above, but 3 ft. 9 ins. by 4 ft. 2 ins. in dimensions. The ninth captive has an enormously tall Scythian cap, and occupies space taken from one of the supplementary texts. Under the first prostrate figure is written his name with his crime: 'This Gaumata, the Magian, lied, saying, "I am Smerdes (-dis), the son of Cyrus."' Similar inscriptions in the three languages appear over the other eight.

The Babylonian version stands over the Susian, on the left of the figures, as the observer regards them, on the right-hand side of the forms themselves. Supplementary, but now obliterated, texts appear also above the Persian, but more to the left of the sculptures, as they face us. The three languages were evidently made use of in order to render the Inscription intelligible to the inhabitants of the main divisions of the Empire. That they were copied in multiplied replicas hardly needed the proof which has actually come to light: for what appear to be really fragments from such a reproduction have been found by Koldewey (see *Bab. Miscellen*, pl. 9, p. 24 ff., quoted by King and Thompson, p. 179).

5. The Old Persian language.—The language in which the Inscriptions were written is, like the Avesta, quite Aryan in all its grammatical forms, though it is rather a younger sister than a direct daughter of the Avesta speech; and it is the direct mother of New Persian so far as it survives in its Aryan elements.*

We have recurring examples of a dialect common to the Avesta and the Daric. The pronoun *dīm*, *dīm*, e.g., is Daric and Avestan, but not Vedic; the word *yānā*, 'a boon,' has no such application in the Veda, but it is familiar in this sense in both Avesta and inscription; such an expression as 'the right path' in its unmistakably figurative sense is very Gāthic; the proper name *Fravarti* also is Av. *Fravashi*, with no immediate Indian correspondent; and so with the pronoun *ava*, 'yon.' 'This earth and yon heaven' occurs in the Avesta as in the Inscription, while it only remotely lingers in the Sanskrit. So the Daric-inscriptional preserves some of the Avesta-Vedic peculiarities of Avesta, as against those of the *later* Sanskrit. Among the more striking of these is the termination of the nom. plu. masc. of the *a* declension in *-āha*, Av. *-āoṅhō* (cf. the Vedic *-āsas*, as against the later Indian *-ās*; see also some of the infinitives). It would be an exaggeration to say that the inscriptional was at all at the same stage of 'preservation' or 'deterioration' as the language of the Avesta. Its distance, as a spoken dialect, from the Gāthic speech must have been about two hundred years. It can be easily restored in Avestan or in Sanskrit.

6. Religion of the inscriptions.—The personifications are best considered in their analogy with, and their differences from, those of the Avesta.

(*a*) *Auramazda* is, of course, Ahura Mazda, Vedic *Ásura* (*su-*)*Medhās* (or *Asura Mahādhās*). Notice the fall of the *h* in the inscriptional *Aura* for *Ahura*. Was not this owing here to the strong accent upon *á* in *áura* (cf. Vedic *Ásura*)?† The presence of a God-unity in the Inscriptions must not be denied because of the supremacy ascribed to Ahura in the words 'the greatest of the gods.' There can be but One 'greatest of the gods'—equivalent to the concept of a 'Supreme Being.' The 'other gods' referred to were inferior, ranking with our archangels. This is confirmed conclusively by the fact that the next chiefest of the gods were said to have been created by Ahura—this in the Avesta (these 'other gods' do not therefore negative the idea of One-God-ism)—whereas the *Amesha-spentas* were originally His *attributes*.

As Ahura was one of the most distinctive expressional manifestations of God-unity which the world had till then, or has since then, possessed, so the *name* is most effective; it is the 'Life-Spirit-Lord,' the 'Great-Creator,' or the 'Great-Wise-One'—infinitely more impressive than our English word 'God,' a term possibly of heathen origin.

(*b*) *Other so-called gods.*—Besides Áura there are *Mithra* and *Anāhita*, two of the noblest subdeities of Aryan literature, who seem to have stepped bodily out of the Avesta into the Inscriptions; but with them we appear to have reached our limit as regards analogies between personifications in the Avesta and the Inscriptions. For where are the *Amesha-spentas* upon the Inscrip-

* Take even a few words like *dauštar*, with which cf. the forms from Av. *zuš*, *zaoša*, Indian *juṣ*; see also *dast*, with which cf. Av. *zast*, Indian *hásta*, etc.

† We do not forget the normal disappearance of the expressed *h* throughout the Inscriptions, for the 'rough breathing' may have been left to be understood; and we may recall how very slight a mark expresses it in Greek.

tions (as has often been, perhaps, too thoughtlessly asked), and, above all, where is *Angra Mainyu*?

(*c*) The absence of the *Amesha-spentas* certainly shows that these personified attributes regarded as archangels were not at all prominent in the author's mind when he composed the sentences for the chisellers. Full references to them had long existed in the earlier Gāthas, or perhaps in the pre-Gāthic and other literature of North Iran. But any argument *e silentio* here verges close upon the fatuous, for there are whole masses of Avesta text itself without a trace of any one of them. That the personified attributes were not known in Middle Persia, and at the seat of Government, is out of the question. Ragha with its surrounding province was a very hot-bed of that form of Mazda-worship which revelled in the great names, and every post brought down despatches from the interesting place. Yet the *Amesha-spentas* appear upon the Inscriptions as attributes only, in expressive qualifying words, and in proper names (cf. *Arta-khshatra*, which may be *A(r)sha + khshathra*; *Vahuka*, which recalls *Vohu* of *Vohu-manah*; and possibly the mutilated name of *Haurvatāt* appears bodily in that of the province *Harauvati*). The truth appears to be that Darius was lukewarm in the matter of recognizing those superbly personified ideas. Yet, among many sections of the Persians, the *Amesha-spentas* were, and had never ceased to be, grand abstract characteristics, for they actually retained their significance as reported to the Greeks (see the extraordinary citations by Plutarch from Theopompus [the latter only about two centuries after Darius], where the 'six gods' of the Persians retain all their meaning as ideas, so that Windischmann justly pronounces the passage 'unschätzbar'). Darius knew—as he must have known, when he cared to reflect upon it—that the so-called archangels had in reality much to do with those glorious principles of Truth which he was so continuously signalizing upon the tablets, as well as with Benevolence, Sovereign Authority, Energizing Power, Weal and Deathlessness. It is but a tribute to the greatness of his mind that he overlooked their status as mere archangels. Moreover, he may have been influenced by prejudice—a diseased passion which is also universal elsewhere. For it must not be forgotten that Darius was, above all, an anti-Magian,* and that the *Maga* (*Magha*) was probably originally a purely Gāthic concept closely interwoven with the conception of the archangels. Here, then, is an 'omission,' at once most easily accounted for.

(*d*) But how as regards *Angra Mainyu*? Surely, if ever there was occasion for the mention of such a Being, this was the proper place. But let us pause. That Angra Mainyu was a name only too well known in every sub-kingdom of the Empire may be assumed as extremely probable, for evil concepts readily become familiar. As a matter of fact, the main and central activity attributed to Angra Mainyu is constantly the subject of severe denunciation in the Inscriptions. 'He lied' occurs throughout; the *Draugha* is the Avesta *Draogha*, a variant of the *Druj*, 'she-Devil of the Lie,' first child of Angra Mainyu, though the latter is not actually named. Here we have another signal instance of the essential conception being present in the Inscriptions, although the language invests it only in plain words. Do the facts compel us here again to attribute to Darius such a depth and refinement of ideas as would lead him to overlook even the concept of a chief personal Evil Being? In view of the shrewdness and sagacity manifested by him throughout, it is hard, indeed, to resist this simple solution, although we should seldom relax our vigilance against 'seeing too much meaning' anywhere. Darius had beyond doubt heard the Great Devil's name, but he attached little importance to him, being occupied with more serious considerations.

(*e*) *Devá*.—Let us not fail to notice here another marked feature of a negative character pointing to the Daric Mazda-worship as a separate strain from that of Ragha. Strange to say—and, we might almost add, fortunately—the most sacred name *Devá* is not here perverted, as it was in Avestan Ragha, and as it unfortunately became at last universally in Iran. In Ragha it became permanently the designation of the evil Spiritual Hosts. *Baga* (*Bagha*) was the word made use of upon the Inscriptions for the Deity, and this with no evil connotation as regards the character of the being or beings believed in—in fact, 'goodness' is fully implied in the word. It is a strange historical fact that a glorious name should have been dethroned within one vast territory alone, while it has remained undisturbed over all India, Europe, and the European West—as *Devá, Deus, Zio, Dia, Dêws*. Yet, while the name became so sadly degraded before and after Darius, in (nearly) all the territory included within his Empire and even in that bordering upon his central province, it nowhere appears for good or ill upon his Inscriptions or upon those of his line. It would be daring to risk once more the hypothesis of 'intention' in such an omission. This would be to attribute to Darius too close a mental analysis as to the subjects involved, momentous though they were. It is more likely that the omission was purely accidental. The very form of Mazda-worship which prevailed at the Persian capital was more Vedic, and, shall we say, more original—judging from this negative respect for the Vedic word—than that which was developing with such strides in the northern province, and which was destined to become universal throughout Iran. This fact obtrudes itself, but it is very difficult to explain how an otherwise universal, nay, almost a supreme expression, came to be omitted, and that for either good or evil. The word soon differentiated the two branches of the Asiatic Aryan race as a chief name for 'God.' The highest word in the oldest half-world becomes the lowest in the new. This is a plain and most convincing proof that a Mazda-worship of a *quasi*-pre-Vedic type prevailed not only in Persia proper, but everywhere in Central Asia, at a very early period before any *other* form of worship now known there had appeared, and indeed before future *Rishis* ever invaded the southern peninsula.*

(*f*) *Dualism*.—Close upon this follows the still more vital question as to how far Darius, with his teachers, accepted *dualism*. That this relatively profound doctrine was brought into greater prominence through the animosities of that conflict which induced Zarathushtra, or his predecessors, to turn one of the very names for 'god' into their name for 'demon' seems probable. The fury of the reform movement must at times have become acute; and this all the more decided Zarathushtra to pronounce the one formula of all time for such a doctrine.† He saw, as most people—if dimly—

* As the Avesta has it, a *Moghutbish*, 'Magian-hater'; the *o* in *Moghu* taking the place of *a* in *Magha*. This is simply due to epenthesis, anticipating the final *u*, whereby $a + u = o$; while the final *u* in place of *a* is a mere shifting of the suffix. A great many roots exhibit a similar variety of forms. Some might dispute the validity of this comparison with the Gāthic *Maga*, but they will not question that with Av. *Moghu*.

* Attention should be called to the expression recorded of Cyrus in 2 Ch 36[23], as in Ezr 1[2], where he is cited as speaking of the Almighty as 'the God of heaven.' Was not this *Devá*, 'Heaven-god,' pure and simple? The expression seems undoubtedly exilic.

† See *Yasna* xxx.

saw and see, that the two forces in the Universe tending towards good and evil were the more distinctly severed, since the masses whom he most accused of infamy sang aloud their hymns to *devás* (beings called their gods). But did Darius share this view?

All the elements of antagonism are more in evidence upon the Inscriptions than in most Iranian writings. Everywhere there is denunciation side by side with adoration (see above); and the question whether Darius had actually accepted the clearly defined formulas of Zarathushtra and his predecessors or not is hardly to be considered of secondary importance. It is simply a question—though a somewhat fine one—of fact. One able writer* speaks broadly and familiarly even of the excessive 'dualism' of the NT with its Satanic and demoniac manifestations, though a definite theoretical dualism is alone in question wherever the discussion reaches to ultimate, or rather primordial, origins. Whether, viewed in this light, some of the Jews of the OT were not actually dualists is also a serious question, which demands a word of attention here in view of the close connexion between it and the case of Darius.

A comparison between Jahweh Elohim and the gods of the nations is often instituted in the OT, and this involves the *recognition of the existence* of those supposed supernatural beings. It remains for us simply to ask whether the Jews—leaders or laymen—ever really believed that the Supreme *Jahweh* was the responsible creator of those diabolical personal accretions or not. Can we suppose for a moment that they held to such a view, or even believed that these fell creatures unfolded themselves, through a degeneration, under the eye and hand of an Almighty Providence. It is quite clear that they never thought of such a problem; but if they held these evil beings to be of separate origin, this involves at once a theoretical dualism. They may not have held distinctly to the doctrine that there were Two First Spirits, but some of them must have come pretty near it. So also must the religious section of the countrymen of Darius, the priests of Old Persia proper; but where is the trace of a *definitely co-ordinated statement* of it in the Inscriptions?

(*g*) *Eschatology.*—Where, amid all their contents and allusions, is there a trace of any theological eschatology in the Inscriptions? The Avesta is one mass of eschatology, but we are startlingly reminded of pre-exilic Israel when we find upon the Inscriptions rewards held out *for this life only.* Where, as has so often been asked, is the doctrine of immortality to be found in the OT prior to the Exile, although the Avesta and post-exilic Pharisaism are quite full of it? Where is it in the Behistūn Inscriptions? Where is the Avestan and the exilic final judgment in our own pre-exilic theology? The latter conception is equally absent from these Persian panels, which, we should say, were the very place for it. Where is the Heaven of the Avesta, with its golden thrones, upon which sit Justice, Love, and Order, as archangels?† The notion of future reward in Heaven is as foreign to the Behistūn Inscriptions as it is to Moses. And where is there a trace of a *millennium*?

(*h*) *Soteriology.*—We should naturally expect also to find in the Inscriptions some allusion to a coming Restorer, like the one expected in the Avesta and in exilic Israel, all the more so because the texts in question breathe hope as they denounce offences—both on an almost unprecedented scale; but there is no trace of such a concept there any more than there is in the pre-exilic books of the OT. The composer's mind seems wholly possessed with the conviction that a supreme, all-powerful, and good God was watching over every circumstance within His immense dominions. Darius seems to have risen each day with the burden of a new civil war within some twenty-three nationalities, each with its kinglet. His faith, at times somewhat like a fixed idea, at times perhaps affected, convinced him that God's activity extended to a minute administration of compensatory justice, which was, however, to have its effect *now*, and *now only*, in this present life. Perhaps he felt that only a supernatural power could have made his past position possible for so long a time. He prays to Auramazda in terms largely stereotyped by his successors, although in the most striking of these prayers recorded he is not so closely imitated (see the passage cited below). But, fervent as are the prayers of Darius, and signal as is his testimony to the unity of God, and His creative energy and providential omnipotence, the eschatology of the Inscriptions is a blank. The writer seems to have been so full of God—or so engrossed with business—that he could not think of anything further that was supernatural. We may compare the OT book of Ecclesiastes, which urges in touching terms the 'remembrance of the Creator' (12^1, if the passage belong to the original and the tr. be correct), but cares little for objective futurity. Ḳoheleth is not disturbed by the failure of retributive justice in this world; he sees little difference between the treatment of the evil and the good; yet he has no dream of a future judgment, or even of any life at all beyond the grave. The same appears to be the case with Darius. What is true of Behistūn holds also for Persepolis, Naksh-i-Rustam, and the other Inscriptions; for, as was said above, the expressions later become stereotyped. Hence they, too, must have had predecessors of a fixed type, all of which goes to prove that Darius was not the spokesman of an innovating creed. Though he was the first prominent prophet of his theology, that theology was thoroughly Old Persian and *sui generis*. It was in the *North* that detailed eschatology flourished. There it was a concentration of the original elements of the primeval doctrine, and was destined, as said above, to spread over all Iran; whereas in Persia proper (the present *Fārsistān*), which was more specifically Darius's home, the primeval lore of Veda and Avesta had, if anything, rather stagnated. Such are our conclusions from the obvious facts. The Behistūn columns are almost *the* document of the Divine unity, creative energy, and providential omnipotence, as they are also the exemplar of intense spiritual fervour, in view of these doctrines; but they are absolutely silent about the other life, whereas, at the very moment when they were being composed, the Avesta and some of the exilic and post-exilic books of the OT contained the standard records of those doctrines of futurity—a sort of *Christianity before Christ.**

As a valuable specimen of the intense religious fervour of the chief composer of the Inscriptions, we may cite a few lines from the sister inscription of Naksh-i-Rustam at the tomb of Darius, near Persepolis: 'A great God is Auramazda, who made this earth and yon heaven,† who made man and amenity (civilization) for men, who made Darius king—the one king of many, the one commander of many.‡ I am Darius, the great king, the King of Kings,§ the king of the lands of all tribes, the king of

* Erik Stave, *Über den Einfluss des Parsismus*, Haarlem, 1898.

† Cf. the twelve thrones of Mt 19^{28} ; Lk 22^{30} (cf. Rev 20^4).

* Common to the Avesta and post-exilic Pharisaism are, in addition to the three doctrines specified above, the doctrines of immortality, resurrection, final personal judgment, millennium, Heaven and Hell, while the Avesta has the prior claim to be termed the document of these views, owing to their long native growth in Iran, centuries before they became the elements of post-exilic Pharisaism.

† This expression occurs about a dozen times within the short Inscriptions; 'yon Heaven' is also very Avestan in its ring.

‡ His authority was effective.

§ Notice that this expression was Aryan, for Darius must have

this great earth for afar,* the son of Vishtāspa, the Achæmenid, a Persian, son of a Persian, an Aryan of Aryan race. Through the grace of Auramazda these are the lands which I captured beyond Persia. . . . I conquered them—beyond Persia. I brought them under my authority. They brought me tribute.† What I said to them that they did.† The law which was promulgated by me, which was mine, was maintained.† [Here follows a list of the provinces or sub-kingdoms]. . . . (Thus) saith Darius, As Auramazda saw this earth . . . in war . . . (?) he delivered it over to me: ‡ he made me (its) king: I am king. Through the gracious will of Auramazda have I settled this earth through my throne § [or 'through my government,' or 'under my throne'; others render 'in place,' 'to rights': but see the same word 'throne' just under]. What I said, that was fulfilled as was my wish.† If thou thus thinkest "How manifold are the lands which Darius the King governed," then look upon this sculpture which bears my throne, that thou mayest know. Then it will be known to thee that the lance of the Persian hero has reached afar; then wilt thou know that the Persian hero has fought battles far from Persia. (Thus) saith Darius, the king, What I have done, I have done all through the gracious will of Auramazda. Auramazda gave me aid ‖ till I had completed this work. May Auramazda protect me, and my clan, and this province against . . . hosts (?). For this I pray ¶ Auramazda—this may Auramazda afford me. O man, may what is the command of Auramazda be to thee acceptable, let that not be obsolete (or repulsive) to thee. Leave not the right way.** Sin not.' ††

(i) *Darius as a restorer of temples.*—As bearing upon 2 Ch 36^{23} and Ezr $1^{1ff.}$ and the marvellous assertions of Is 44 f., we have the valuable statement that Darius restored the *āyadana*, 'places of sacrifice'; so the Susian and Babylonian translations render the word. An activity in the construction, or re-construction, of temples in general is also perhaps later shown in regard to the *apadāna* in the inscription of Artaxerxes Mnemon found at Susa upon one of the ruined columns of an ancient hall. He seems to have re(?)-placed the images of the Dario-Avestan Anāhita and Mithra in the *apadāna*, which, if not actually and exclusively a temple, was obviously an edifice fitted for the reception of figures of those two most prominent Avestan sub-deities. If, then, Darius at once restored the places of worship [note that the *āyadana*, at least, were not necessarily actually 'temples'],‡‡ this recalls the restoration of the gods of Sumer and Akkad to their own homes by Cyrus immediately after his first conquest of Babylon, and shows all the more clearly the general policy of the Achæmenians as regards such acts of courtesy towards the religious feelings of their newly conquered subjects. This makes the decree of Cyrus for the restoration of the Jewish temple all the more credible.

7. Political and military history.—As to the importance of Daric Behistūn, with its companions and successors, for military and political history, little needs to be added here. As is known, Iranian history without the Achæmenian Inscriptions was for a long period a blank, and until they were deciphered by our own eminent Rawlinson, these now leading sources were ridiculously misunderstood and curiously misleading.* We are now assured of those vast political and military movements which took place in Central Asia, upon which the history of the Asiatic, and, indeed, of the whole world, so largely depended. But to us chief among them are those events under whose influence Israel became Persian for two centuries or more, and which determined what we must regard —even if we view them from an anti-Christian standpoint—as stupendous religious circumstances, which, however trivial they may have seemed to the Persian Government, and however relatively insignificant they may really have been in comparison with the other great facts which were then transpiring in province after province of the Achæmenian Empire, must yet force themselves upon us as crucial for all time. Had not Zion become Persian, she would have remained Babylonian, and might never have 'reared her head'; and the dawn of that day might have been hindered when Jesus, the Christ, was to preach within the porches of her temple, and expiate on Calvary the sins of both Jews and Gentiles.

8. The Parthian Inscription at the foot of Behistūn.—This bas-relief contains two distinct compositions. In one of them were sculptured colossal bearded figures, from 8 to 9 ft. in height. Only three of these, however, are still approximately complete. This relatively valuable relief has unfortunately suffered from the vanity and folly of a 'Persian overlord,' one Shaikh 'Alī Khān Zanganah, who, about a hundred years ago, had a large panel cut in the middle of the monument, in the hope of immortalizing (in Arabic) the memory of his own beneficence in building a caravanserai at Bīsitūn and supporting it from the tribute of two villages. This vandalizing abomination extends to 12 ft. in width, and rises to the top of the panel. In the other part of the composition, the figures are in lower relief and on a smaller scale; and, though they are much mutilated, it is possible to make out some details. In the centre is a horseman, and above his head is a winged figure about to crown him with a wreath. He is unhorsing a second horseman. From the mutilated inscription † we learn that the victorious cavalier represents the Parthian king Gotarzes (A.D. 46–50) overcoming his opponent Meherdates, who was also a Parthian. Behind Gotarzes are the remains of another figure with lance in rest.

9. The extensive hewn panel-surface.—Near the middle of the base of the rock and almost opposite the village, a huge bare space attracts the eye. It measures nearly five hundred feet in breadth and over a hundred feet in height.‡ The tool-marks of the stone-cutters are in curved lines, and above the cutting the natural rock in some places projects several feet. In front of it is a terrace or platform, made of earth and rocks heaped up and extending forward for a distance of nearly 300 feet. At the end of this appear the remains of a massive wall. Some writers hold this space to have been prepared for the reception of

adopted it from remotely distant predecessors. A similar form seems to have been adopted in the Scriptures, where, however, it is seldom applied to a human monarch. Its original use in Iran doubtless preceded its occurrence in Esk 26^7.

* This expression 'for afar' seems thrown in to modify his 'universal' statement. Notice that the terms were doubtless inherited from his ancestors, as was the original of the Scriptural terms cited at the end of 2 Ch. and at the beginning of Ezra as originating from Cyrus: 'All the kingdoms of the earth hath the Lord, the God of heaven (Deva?), delivered over unto me.'

† Notice these emphatic assertions as regards the colossal successes; they are by no means wasted words.

‡ He checked all interior conflicts, and established approximately complete 'guarantees of peace' between some twenty-three otherwise conflicting nationalities. See the note above on p. 451b, referring to the passage from 2 Chronicles and from Ezra.

§ This is the present writer's suggestion; see the word *gāthum* just below.

‖ This expression, with the most incisive evidence of *some kind of* personal faith in God, recurs about thirty times within the inscriptions, showing perhaps the highest intensity of such a fervour ever recorded, in view of the necessarily limited extent of the inscription when regarded as mere literature. It indicates a fervour surpassed only, if at all, by what we read in the Psalms.

¶ Note his actual prayer in the first person singular present.

** Note the absolute necessity of recognizing this exhortation in the moral sense; and cf. the Gāthic passages where the same expression is used ('the straight paths in which Ahura lives . . . in the paths of the Good Mind [the good man] . . ., the straight paths of welfare . . .,' etc. [*Yasna* 33, 5; 34, 12; 53, 2]).

†† *Naksh-i-Rustam*, 1–22, 31–60.

‡‡ Recall Herodotus' remark (i. 131) that the 'Persians have no temples.'

* Recall among interpretations the truly quaint opinion of Ker Porter, that the nine (?) captive kings, whose names we now read so easily, were the representatives of the ten (?) lost tribes of Israel.

† For the discussion of the text, which, but for the name 'Gotarzes,' has now all but disappeared, see Justi, *GIrP* ii. 504 f.

‡ See A. V. Williams Jackson (*Persia Past and Present*, p. 188), who says he made a special study of the rock-surface and 'paced off' its breadth.

an inscription, in spite of its enormous dimensions (so de Morgan, cited by Jackson). Others, judging from the large platform, suppose that it was meant to be the back-wall of a palace (so King and Thompson). Nothing is written upon it.

10. **The site of an ancient building.**—From the foot of the cliff the site of an ancient building is to be recognized, with the outlines of its walls. It is called by the natives *Gāh-i Kai Khosru*, 'the seat of Kai Khosru,' the Sasanian king (A.D. 531–578)—possibly with some reason, though there is nothing further to indicate the accuracy of such a tradition.

11. **The monolith.**—At a quarter of a mile from the mountain or rock, there lies a sort of huge boulder, about 20 ft. in circumference and 10 in height. It is carved on three sides with life-sized figures in low relief. The central figure is described as bearded, with moustache, and wearing a round cap, and a necklace at the throat, some rings of the necklace being still distinctly visible. It has a close-fitting, undecorated upper garment, girdled; the right hand is extended over a low column, which may be a fire-altar, and the left holds some object, possibly a cup. The legs are very thick, and apart as if in walking, while their lower parts are covered with leggings which look like 'those of a cricketer.' Jackson suggests a Magian priest. King and Thompson speak of a king; and a king might be a priest. The second figure is on the right-hand side of the boulder. It is smooth-faced—the effect suggesting the head of a woman or of a boy. There is a necklace about the throat, and a bracelet on the left arm. The third figure on the left side of the boulder is again bearded; the pose is life-like. Jackson thought the figures were Achæmenian, from the absence of flowing trousers and balloon-shaped hats; King and Thompson regard them as Sasanian, mentioning the 'streamers' on the central figure. No writing is recorded as having been discovered upon this monolith.*

BEING.—The term 'Being' indicates the subject-matter of Metaphysics in general, although it is usually discussed under the particular head of Ontology. As a problem, Being is discussed with the aim of discovering a criterion of reality which shall interpret the phenomena of nature and consciousness, whose objective and subjective data respectively are elaborated in the forms of Cosmology and Psychology.

1. **History of the term.**—The terminology of the fundamental metaphysical principle shows how Western thought is indebted to the Greeks and the Germans; from the one we receive the expression *ὄν*, from the other the term *Ding*. With the early Greek philosophers are found *κόσμος* (Parmenides, 92; Heraclitus, 20) and *φύσις* (Parm. 133; Herac. 2). Parmenides, who usually speaks of Being as *ἔστιν εἶναι*, also uses the more suggestive term *ἐόν* (59, 91); and, according to some authorities, Melissus uses *περὶ ὄντος* as the title to his work (Erdmann, *Hist. Philos.* § 38. 1). Plato selects *οὐσία* to indicate the subject of Being, and looks upon this as *ἰδέα* (*Rep.* vii. 533–534); at the same time, when he speaks of the reality of the Idea, he indicates it by *ὄντως* (*ib.* ix. 585). Aristotle popularizes *οὐσία* by placing it first among the categories (*Met.* vi. 1), and reduces Eleatic Being to *τὸ ὄν*. The weight of Greek philosophy was turned in favour of *οὐσία* as a concept, and of *ὄν* as a term.

From Latin writers come the terms *essentia* and *substantia*. Seneca uses *substantia* in *Ep.* 113. 4, but seems more inclined towards *essentia* (*Ep.* 58). Quintilian uses *substantia* (viii. 3. 33). Mediæval writers vacillate between these classic terms, but theological motives incline them to *essentia* as a more appropriate characterization of the Divine Being. Among these Augustine was the earliest and most influential, and it is significant that, as a Christian, he unites the idea of God with the antique *οὐσία* and *essentia*. 'Essentiam dico, quæ *οὐσία* Græce dicitur, quam usitatius substantiam vocamus' (*de Trin.* v. 9). When Anselm seeks the most general predicate of things, he follows Augustinian terminology and thus prefers *essentia* to *substantia* (Erdmann, § 156. 3). Aquinas employs both *essentia* and *substantia*. In the strife between Nominalist and Realist, there comes about a change in terminology when *realia* is put as the predicate of *universalia*. The defender of the orthodox, or Realistic, view was called a *realis* (Erdmann, § 158). Abelard introduces *realiter* into the discussion of the problem (Eucken, *Gesch. d. philos. Terminol.* p. 65), while, at a later period, Duns Scotus adds *realitas* (*ib.* p. 68). English thought, as in Locke, was inclined to adopt 'substance' and 'essence' as expressions of Being, while the Germans use the Greek *ὄν* and the Latin *res*. Meister Eckhart uses *Dink* (*Meister Eckhart u. s. Jünger*, ed. Jostes, pp. 66, 89, 90, etc.), as also *Ding* (*ib.* pp. 1, 80, etc.). Eckhart further employs *würklich* (*ib.* p. 86, etc.). Clauberg the Cartesian originated 'ontosophy' (*Metaphysica de ente quæ rectius Ontosophia*, 1660). Kant's preference for *Ding* is well known; Herbart uses *real*.

2. **History of the subject.**—The 7th cent. B.C. marks the beginning of ontological study. In China, Lao-tse, the founder of Taoism, advanced a metaphysical conception of Being under the head of *Tao*, or 'Nature.' Lao-tse gives the *Tao* a purely negative significance, and from it follows a nihilistic morality of 'doing nothing.' Like the emptiness of a clay vessel, the hollow of an axle, the open space of a door, the *Tao* consists of nothing (*Tao Teh King*, i. 11); yet from it were all things produced (*ib.* ii. 42). Among the ancient Hindus, the development of the philosophic Veda resulted in a more intellectualistic conception of Being. The Upaniṣads advance the idea of world-unity, and in their spiritual monism identify Nature with the Ego. As the juices of plants unite in honey, as rivers mingle in the sea, as salt pervades the ocean, so one element is found in all things. Thus teaches the Veda, whose philosophic formula is found in the following expression: 'That which is that subtle essence—in it all that exists has its self. It is the true. It is the self, and thou art it—*tat tvam asi*' (*Chhāndogya Upan.* vi. 8 ff.). This lofty conception of Being was unknown to the Greeks, for it did not receive recognition in Europe until 1801–1802, when Anquetil du Perron translated the Upaniṣads, whence it was taken up by Schopenhauer in 1819 and related to German philosophy.

Among the Greeks, the preparation for a genuine conception of Being was made by the primitive Ionian philosophers, or physicists, who sought to explain Nature in terms of such physical phenomena as water, air, ether. In a more worthy fashion,

* For other descriptions of this monolith see Oskar Mann, *Globus*, vol. lxxxiii. No. 21, June 1903, p. 328; Williams Jackson *Persia Past and Present*, New York, 1906, p. 210 ff.

Parmenides develops a static monism which is directed against the ideas of both not-Being and Becoming; at the same time, it is sufficiently intellectualistic to identify Thought and Thing. In this spirit, he declares that Thinking and Being are the same—τὸ γὰρ αὐτὸ νοεῖν ἐστίν τε καὶ εἶναι (40). It is Being that is truly existent and not not-Being —ἔστι γὰρ εἶναι, μηδὲν δ' οὐκ εἶναι (43–44). This rather pointless utterance seems to indicate that, while Being exists as something permanent in thought, not-Being is an appearance which exists only in perception—δόξα. In opposition to this static view, Heraclitus urges that Becoming is the highest principle, and points out that, since all things change—πάντα ῥεῖ—there is no principle of permanence to be found (see 90–91). Plato's speculative philosophy tends to reconcile the opposed views of Parmenides, who taught him to seek the unchanging as the real, and Heraclitus, from whom he learned that substance could not be found in ever-changing phenomena. Plato's own conception of Being reposes in his theory of Ideas, which latter represent realities in the midst of changing phenomena. The Idea, or Concept, not only includes various things under it, but exercises a certain ontological function among them, giving them of its own reality. On the practical side, the Idea is the perfect type, of which the individual thing is an inferior imitation. This plastic conception of Ideas leads Plato to ascribe objective reality to them. The ground of this profound view seems to be found in the principle of permanence. The Idea possesses Being because it is permanent, while the individual thing is unreal because it constantly changes. In the myth of the *Phædrus* (247), the Idea is looked upon as the 'colourless, formless, and intangible essence,' which becomes visible to the mind as the latter rises to the celestial regions. In the *Parmenides* dialogue, the unity and permanence of the objective Idea are pointed out. In contrast to Plato, Aristotle emphasizes the *dynamic* phase of reality, and develops a view which, with appropriate intellectualistic qualifications, is energistic. In the Aristotelian metaphysics, the principle of Form takes the place of the Platonic Idea. This Form is contrasted with Matter, and both are regarded as causes, in addition to which are two others—Efficient and Final. These four principles constitute the foundation of Aristotle's notion of Being (*Met.* i. 3). Aristotle thus inclines towards a causal conception of Being, where Plato had introduced a substantial one. In general, the results of Greek philosophy were idealistic and static; they inculcated a spirit which was plastic and formal.

While Christianity, which had its root in practical Semitic traditions, had no systematic philosophy to offer, it furnished subsequent speculation with ideas of the soul, the world-whole, and God. At the same time, there resulted a new metaphysics which was marked by the methods of *inwardness* and *transcendentalism*. With Plotinus, the classic conception of Reality was superseded by 'that nature which is beyond Being' (*Enneads*, xiv.). And that which is *ultra esse* is also *ultra percipi*, so that it is known only by means of ecstatic contemplation. Augustine is less mystical in his deduction of *sensus interior*, for it is in a more psychological manner that he seeks to prove the existence of the self. His method, which a thousand years later was made famous by Descartes, is the sceptical one, in accordance with which the *dubito* implies a *cogito* (*Beata Vita*, § 7; *Solil.* ii. § 1; *de Trin.* x. § 14). According to the same method, the Being of God is deduced (*Confess.* x. 40). In Scholastic philosophy, the doctrine of Being connects itself with the idea of God and the nature of the Catholic Church. Anselm, following Augustine, endeavours to deduce the Being of God from the idea which we have of Him: for the Being of God which is both *in intellectu et in re* is more perfect as an idea than that which is *in intellectu solo* (*Proslog.* ii.). There is a second way in which the idealism of Plato was united in Scholastic fashion with the Christian religion; that is, in the opposition between Nominalism and Realism, which led to the conflicting metaphysical mottoes 'universalia sunt nomina,' 'universalia sunt realia.' The resulting conception of Being was something more than the plastic one of Plato; it was both internal and universal. For modern thinking, the way was still further prepared by the conflict over the supremacy of intellect (Thomas Aquinas) and will (Duns Scotus). Intellectualistic Thomism re-appeared in Cudworth's *Intellectual System* and Clarke's *Demonstration of the Being and Attributes of God.* The voluntarism of Scotus ('Quaestiones in secundum librum sententiarum,' Distinc. xlii. [Op. xiii. p. 443]) was unconsciously imitated by Kant and Schopenhauer, and by them related to the modern psychology of the will.

Modernism (which is not quite independent of a mediævalism which, in the instance of Cassiodorus, used the term *modernus* in the 6th cent.) witnessed a continuation of Christian views of Being in Descartes's scepticism. Like Augustine, Descartes connects *cogito* with *dubito*, and to the *cogito* adds *ergo sum.* Doubting is thinking, and thinking is existing. In this fashion, the Cartesian '*Cogito, ergo sum*' (*Medit.* ii.) evinces the *inness* of the Christian conception of Being, while his Anselmic ontology rehabilitates the ideal of *transcendence.* Descartes, whose psychology lacks sufficient content, states the modern problem of Being, and prepares the way for Spinoza, whose mediæval forerunner was Averroës. Spinoza revises Descartes's view of mind and matter by regarding them, not as *res cogitans* and *res extensa*, but as the attributes —*cogitatio* and *extensio*—of the one substance. The result of his teaching is a rationalistic monism which identifies Being with Nature, and sets up a parallelism between mind and body. Leibniz, who makes possible the transition to Kant, takes a pluralistic view of Being, and regards the world as made up of an indefinite number of monads, which still admit of unity in the world-whole, since they, being reflexions of the same world, represent reality in different grades of perception (*Monadology*, § 14) and participate in the one world-plan by means of 'pre-established harmony' (*New System*, 1695).

From dogmatism, Kant led modern metaphysics into criticism. Not only does he oppose his modern forerunners, but he defies the whole Indo-Germanic tendency which in Vedānta, Platonism, and Spinozism had united Being with Thinking. In a certain sense, it was a sort of Semitism which led Kant to affirm the supremacy of practical reason, and to put ethics in the place of logic. Kant creates a dualism between Reason and Reality, between Thinking and Being, and thus declares that we cannot know things-in-themselves. First in order, in the *Critique of Pure Reason*, which leads to this conception, is the idealization of Time and Space ('Trans. Æsthetic'), both of which Kant regards, not as objective things, but as purely subjective and yet permanent forms of sense. Kant's motive for making Space and Time intuitive does not appear in the 'Æsthetic,' but is confessed later on in the discussion of the 'Antinomies of Cosmology.' Here, in commenting upon the inevitable contradictions of reason, in connexion with which one may with equal cogency argue for the finitude or the infinitude of the world in time and space, Kant points out that these forms of sense are purely subjective, so that our attempt

to find the beginning of the world in time and its limits in space is a regressus of representations, but not ontological progress (*Kritik*, pp. 505–507). Therefore, God as the creator of the world, the soul as eternal, the world as a whole—can never be known by the human mind. The categories of Quantity and Quality, Causality and Substance are deduced transcendentally from the understanding itself (*ib.* p. 77 ff.), but the application of these is determined by the conditions of a possible experience (*ib.* p. 115), and thus relates to the world of phenomena, not to that of noumena (*ib.* p. 236). Mathematics and physics are made possible by a transcendental method which forbids all metaphysical and theological reasoning. Kant's constructive theory of Being appears in the *Critique of Practical Reason* and the *Metaphysic of Morals*, where he seeks to show how God, Freedom, and Immortality, which are not premisses of the speculative understanding, are still involved as 'postulates' of practical reason.

Romantic philosophy in Germany accepted Kant's transcendental *method* of deducing knowledge from the understanding itself, but did not find it necessary to adopt the restrictive *results* of his investigation. Fichte found Being to consist in the self-positing '*Ich*, whose fate it is to oppose itself to the *nicht-Ich* for the sake of achieving moral destiny' (*Wissenschaftslehre*). Schelling's notion of Being recalls the monism of Spinoza; yet, when Schelling seeks in his *Identitätsphilosophie* to reconcile Being and Thinking as opposites, he employs an *æsthetical* method. Hegel accomplishes this same reconciliation by means of the *logical* evolution of Being, through stages of *Sein, Dasein, Fürsichsein*, which correspond to the familiar metaphysical divisions of Ontology, Cosmology, and Psychology. Realistic philosophy in Germany found expression, first of all, in Herbart, who notes Kant's distinction between phenomena and noumena, and yet believes that appearance is a sure indication of reality—*Wie viel Schein so viel Hindeutung auf Sein* (*Allgemeine Met.* § 307). With this assumption of modern Realism before him, Herbart constructs a static pluralism which seems to unite Parmenides with Leibniz; at the same time, and, after the manner of Aquinas and Descartes, he elaborates an intellectualistic view of the soul as the function of representation. Schopenhauer accepts Kant's doctrine of Time, Space, and Causality, and relates these to the 'world as idea' (*Vorstellung*). Reality is found in the will, which is the true thing-in-itself, known immediately to the mind (*Welt als Wille und Vorstellung*, § 1). To be is thus to will, and the various kinds of Being—mineral, vegetable, animal, human—are so many grades of objectification of the will-to-live (*ib.* §§ 21, 23). As another realist, Lotze heeds Kant's warning against the empty thing-in-itself and seeks Being in connexion with its qualities. The origin of Being he puts down as unknowable (*Met.* 5), and turns away from the idea of 'pure Being' as something fictitious (*ib.* §§ 8, 9). Lotze follows Herbart in making Being consist of relation, and formulates the expression, 'A thing is the realized individual law of its behaviour' (*ib.* § 36).

3. **The philosophy of Being.**—The history thus presents some general principles, and indicates certain points by way of thought and terminology which speculation may fitly use. In contrast with the ancient setting of the problem, which consisted in a conflict between Being and not-Being, modern metaphysics involves the more decisive antithesis between the real and the phenomenal, between thing and appearance. The modern conception is further enriched by a psychological content which enables the thinker to re-cast formal distinctions concerning Being in general upon the basis of consciousness.

From the standpoint of methodology, two considerations seem to guide all metaphysical speculations: on the one side, thought is based upon the principle of *Substance*, on the other it is swayed by that of *Causality*. Behind this distinction between the substantial and the causal categories lies the difference between the laws of the mind—*principium identitatis, principium rationis sufficientis*. The Principle of Identity, which asserts that everything is what it is, persuades speculation to premise an immutable Being which ever maintains its identity in the midst of change. In another way, the Principle of Sufficient Reason, which affirms that everything that happens has a cause, makes possible a second method of speculation which is as anxious to account for *change* as the first one was to elucidate Being. As a result, philosophy has witnessed the development of a *static* conception of Being, which, with Parmenides, Plato, and Spinoza, has exalted Substance to the highest station. Parallel to this, a *dynamic* conception of the problem led to a more active formulation of the world-course, and, with Heraclitus, Aristotle, and Leibniz, it tended to raise Causality to a similar eminence. In keeping with this broad and far-reaching distinction, modern philosophy has re-cast this difference between the substantial and the causal so that it assumes the contrast of *intellect* and *will*. The static Principle of Identity led metaphysics to postulate a Substance as the true expression of Being, and it was urged accordingly that a thing cannot *possess* qualities unless it exist as something superior to them; while the dynamic principle felt itself confronted by a series of changes for which a Sufficient Cause must be furnished. Substantial *intellectualism*, as defended by Aquinas, Descartes, Herbart, and Lotze, sought to show how a thing must exist before it can act; while, in opposition to this dogmatic view, the causal *voluntarism* of Scotus, Kant, Schopenhauer, and Wundt found the Being of things to consist in the active principle which ruled their several states of change. Where the substantial view prevailed, it was 'No causality without substance'; the causalist retorted, '*Keine Substantialität ohne Causalität*' (Wundt, *Syst. d. Philos.* p. 312). Of these two schools, the static, substantial, intellectual one is the more orthodox; the dynamic, causal, voluntaristic one is more advanced and critical. The perpetual conflict between the two may be seen in Aristotle's criticism of Plato; Scotus's opposition to Aquinas; and Kant's critique of Leibniz's dogmatism. On the purely formal side only two views of Being would thus seem possible.

On behalf of the *substantial view*, it is pointed out that Being has a certain affinity for Substance, and is equally inclined towards the idea of permanence. For this reason the advocate of the substantial view has not found it necessary to defend a notion which consisted in the mere assertion of what seemed obvious. If anything *is*, it must be substantial, and that which is in a state of constant change cannot be real. The inherent weakness of this view of Being became manifest when the metaphysics of substantialism endeavoured to relate the world of concepts to the world of percepts. Plato's all-sufficient idealism is at variance with the notion of creation developed in the *Timæus*. Mediævalism, with its idea of Being as *essentia*, could hardly advance beyond a negative view of reality. Spinoza regards Substance as self-conceived and self-dependent, but cannot justify the attributes which, with the modifications, represent the actual world of minds and

bodies. Kant, who saw the emptiness of the thing as Substance, placed reality beyond the realm of knowledge. The substantial view has the weakness that its 'Being' never reveals its own properties, and is incapable of explaining the existence of things in human experience. On the psychological side, the substantial view looks upon the mind as something intellectual. Since the path to the mind was originally through *cogito*, as with Augustine and Descartes, it was to be expected that the soul should be looked upon as something intellectual—*res cogitans*. Moreover, consciousness seems ever to have a cognitive form, while mentality itself seems hardly separable from thought. With regard to the conscious content, the richness and manifoldness of the cognitive process seem calculated to express the range of mentality, while there appears to be no recess of the mind which is not accessible to self-conscious thinking. This Cartesian confidence has led philosophy to believe that every act of mind is an operation of thought. Where, as a second process, feeling enters in, its determining feature, as Herbart pointed out, is something which by way of arrest happens to the idea; so that feeling is a consciousness, or a cognition, of our mental state. In the same way, volition is explained away as a *cogitatio volitionis* (Descartes), while the whole mind is surveyed in the light of the supremacy or sufficiency of the intellect.

The *causal view* of Being is critical where the substantial one is constructive and dogmatic. Accordingly, it is claimed that the mere existence of Being explains nothing, inasmuch as it does not account for action which takes place in the world. Where the Law of Identity seems to satisfy the mind that a thing is what it is, as 'Gold is gold,' the Law of Sufficient Reason must further enter in to show how a thing relates to its own qualities, as gold and its colour, its fusibility, its solubility, its value, etc. Hence, in Logic, it is said, 'Gold is yellow in the light, fusible in the fire, soluble in *aqua regia*, valuable in the market,' etc. The Principle of Causality is as efficient in relating a thing to its qualities as the notion of Substance is in adjusting it to itself, and metaphysics since Kant has tried to find not so much the thing-in-itself as the thing in its qualities. Iron does not exist apart from hardness, ductility, and other metallic properties; colour is nothing in independence of qualities, from red to violet; mind does not exist except as thinking, feeling, willing. That which unites these several states in so many distinct groups is the Thing, and in the inviolable connexion among metallic, chromatic, and conscious states is found the Being of metal, of colour, of mind. The causal view of Being relates a thing immanently to its qualities and not transcendentally to its self, and thus it is in a position to explain the manifest fact of change which to substantialism is a paradox. Since Being does not consist in one substance which can never abandon its ontological place, but is the causal principle which relates the various states of Being to one another, it is conceivable that, within the circle of its own qualities, a thing may change from one state to another, just as colour may be red or blue, consciousness may be thought or volition, man may be child or adult. In this spirit Lotze, who departs from the substantial view without accepting the causal one, declares that it is the Thing that changes, not its qualities (*Met.* §§ 21, 24). The causal view, which pays attention to a thing's qualities and its changing states, hopes to find the real as the result of causality.

On the psychological side, the causal view of Being is furthered by voluntarism. This school involves a larger view of mind than that of self-conscious thought, just as it extends its borders beyond the human to the animal mind. The origin of mind seems more intelligible when interpreted voluntaristically, for life begins in action rather than in thought (cf. Paulsen, *Introd. to Philos.* bk. i. ch. i.) Further, the goal of life appears to be set by practical interests rather than by speculative ideals, and life is realized in action rather than in thought. Like Fichte, Faust describes the root of life in the will, and begins his translation of St. John by saying, '*Im Anfang war die That.*' In addition to these popular considerations, voluntarism is entitled to some ontological respect when it is observed how simple and self-evident volition really is. Schopenhauer, who has advanced this view most vigorously, affirmed, 'The will is groundless' (*Welt als Wille und Vorstellung*, § 20), for which reason he reduced all reality to it. In this way, the simplicity of the will seems to satisfy the philosophical demand for unity as the essence of reality and mentality. On the psychological side, Höffding has declared, 'As Eros was made one of the oldest and at the same time one of the youngest of the gods (as also the child of poverty and wealth), so the will may, according to the point of view, be represented as the most primitive or as the most complex and derivative of mental products' (*Psych.* ch. vii. § 1). Such considerations seem to indicate that the will, while not so characteristic as cognition, is possessed of as much ontological significance. The substantial view is a survival of an antiquity which reposed in the ideas of the plastic and intellectual; causal voluntarism is the typical modern view of those who are Kantians rather than Platonists. The causal view has the advantage of explaining the world of phenomena as seen in modern science, just as it is in harmony with the modern life-ideal of energism.

A more restricted view of Being is discussed in connexion with *monism* and *dualism* (*qq.v.*). These theories are one remove from the central problem of the real, for they concern themselves with the idea of Being in its forms of the mental and material; nevertheless, modern philosophy has laid upon them a certain amount of metaphysical responsibility. In the larger sense, classic speculation was monistic, while Christianity, with its distinction between the natural and the spiritual, emphasized dualism. But in connexion with philosophy, the issue was not raised until the dawn of modernism, when Descartes separated *mens* from *corpus*, and distinguished *res cogitans* from *res extensa*. At a later date, Wolff distinguished 'monist' from 'dualist,' although at an earlier period Thomas Hyde had employed 'dualism' to describe the religion of Zoroaster. These two theories do not attempt to solve the problem of Being, but confine their attention to the relation existing between its two phases, mind and matter. Of the two, dualism has the advantage on the side of *statement*, when it declares that we are confronted by a twofold series of things, between which there is a causal connexion. But, from the standpoint of *solution*, monism seems to be in the ascendancy, inasmuch as it is better calculated to avoid certain metaphysical pitfalls. The devices of dualism appear at once when Descartes, unable to justify the causal connexion between mind and matter, attributes the interaction to the intervention of the Deity. This precipitated Occasionalism, which looked upon the *motive* which arouses bodily motion, as well as on the *stimulus* which produces sensation, as occasional, but not efficient, causes of the interaction. Man is innocent of it, as we know from the lack of causal consciousness, argues

Geulincx; for, just as Descartes had evinced Being by his *Cogito, ergo sum*, so the want of causal efficiency appears in a *Nescio, ergo non facio* (K. Fischer, *Descartes and his School*, tr. Gordy, p. 532 note). Malebranche accounted for the connexion between stimulus and sensation by declaring, 'Nous voyons toutes choses en Dieu' (*Recherches de la vérité*, p. 378). Leibniz sought to explain apparent interaction by means of a pre-established harmony, in accordance with which the phases of mind and body corresponded, like the dials of two mutually adjusted, but disconnected, clocks (*New System*, 1695)—an analogy which Geulincx before him had employed (*Ethica*, p. 124 note). That which stands in the way of dualistic interaction between the mental and corporeal phases of Being is, first, *causality* which, as a category, seems to be limited to the physical world. At the same time, the scepticism of Hume, the criticism of Kant, and the realism of Lotze tend to make all interaction between things impossible, just as they leave the way open to a view of *causa immanens*, as a result of which all things, material and mental alike, interact by virtue of their participation in the one real Being who is the World-Ground. A second difficulty appears in the form of the *conservation of energy* which, as a physical theory, can suffer no addition to or subtraction from the given amount of energy in nature. Certain curious devices to surmount this difficulty are summed up by Naville (*La Liberté et le déterminisme*, 1890).

Monism, which advances a theory of psychophysical parallelism between the mental and material phases of Being, tends to do away with the sharp difference between mind and body. Spinoza, who founded monism, makes interaction unnecessary by assuming, 'ordo et connexio rerum idem est atque ordo et connexio idearum' (*Ethica*, lib. ii. prop. vii.). The whole problem, which lapsed for a century between Leibniz and the new psychology, is taken up in a Spinozistic fashion by Höffding, who declares that 'both the parallelism and the proportionality between the activity of consciousness and cerebral activity point to an identity at bottom. The difference which remains in spite of points of agreement compels us to suppose that one and the same principle has found expression in a double form' (*Psych.* ii. 8). But the monist of to-day, who hesitates to characterize this tertiary principle which embraces mind and body, lapses from the pantheism of Spinoza into an agnosticism of his own. The statement of monism is unsatisfactory in still other ways. On the *logical* side, the Law of Identity prevents our saying 'Mens est corpus,' and it is towards such an identification that the monist constantly tends. Secondly, monism is confronted by an *empirical* challenge, when it seeks to treat mind and body as though they were not dissimilar. Both monism and dualism are shortsighted in regarding mind and body as though they were parallel phases of Being which meet upon the same plane; a more satisfactory view escapes the dilemmas of the problem by relegating the body to a place lower than the ontological position of the mind, as is done by Hegel and Schopenhauer.

The result of this survey of Being as an ontological problem has been to show how a static, substantial, and monistic conception of Being was elaborated by the intellectualism of antiquity; while a dynamic, causal, and dualistic notion was the product of voluntaristic modernity. In general, it appears that Being, which does not consist of any particular thing, is best understood in connexion with the idea of *order*, which with the ancients was κόσμος, with moderns *natura*. *To be* thus means to have position in the one world-order, so that a thing receives reality, not by partaking of a certain imaginary world-stuff, but by participating in the world-order. A critical doctrine of Being will not find it necessary to assume a negative attitude towards phenomena which were prized by the ancients because of their æsthetic fitness, by moderns on account of their scientific significance. At the same time, it is unwise to repose all faith in noumena, as though the world were one of mere things and contained no persons. In the totality of the world of Being, phenomena, noumena, and pneumata have their place, and a theory of reality is compelled to examine the phenomena of inner as well as of outer experience. A total view of Being thus includes humanity and nature, just as it is made up of the world of persons and the world of things.

CHARLES GRAY SHAW.

BEL.—See BAAL.

BELIAL, BELIAR.—These two names, as will be shown below, are but different forms of the same word. Belial is the older; Beliar is a modification of it.

1. **Belial.** — In the AV Belial was usually rendered as a proper name, as, *e.g.*, 'daughter of Belial' (1 S 1^{16}); but RV usually translates such phrases as though Belial were an adjective. Thus 'daughter of Belial' becomes in RVm 'wicked woman.'

Belial occurs in the earliest strata of the narratives of Judges and Samuel, in writing that is coeval with the J document, if not a part of it. From this time on, the word is used in prose narratives and late poetry as a genitive descriptive of certain classes of people. Thus we find 'man (or men) of Belial' (1 S 25^{25} 30^{22}, 2 S 16^{7} 20^{1}, Pr 6^{12}); 'son (or sons) of Belial' (Dt 13^{13}, Jg 19^{22} 20^{13}, 1 S 2^{12} 10^{27} 25^{17}, 2 S 23^{6}, 1 K $21^{10.13}$, 2 Ch 13^{7}); 'daughter of Belial' (1 S 1^{16}); 'person of Belial' (Pr 6^{12}); 'witness of Belial' (Pr 19^{28}); 'counsellor of Belial' (Nah 1^{11} [AV, 'a wicked counsellor']); 'thing of Belial' (Dt 15^{9} [RV 'base thought'], Ps $41^{9\,(8)}$ [RV 'an evil disease'] 101^{3} [RV, 'base thing']). In but two instances in the OT is it used differently: in Ps $18^{5.6\,(4.5)}$ (=2 S 22^{5}) the 'wadys of Belial' (נחלי בליעל) are made synonymous with the 'cords of death,' 'cords of Sheol,' and 'snares of death,' as though Belial, like Sheol, were a proper name for the under world. Again, in Nah 2^{1} (1^{15}) Belial is used as a name for a great evil power. RV translates it here 'the wicked one.'

There are, then, three uses of the word in the OT: (1) as a genitive, designating a worthless, wicked, or disagreeable person or thing; (2) the under world; and (3) a great wicked power.* Of these uses, the first is by far the most common, there being but one example each of the second and third.

The etymology of Belial has long puzzled interpreters. It is explained in the Talmud (*Sanhedrin*, 111*b*) as from בלי (='without') and עול (='yoke')—an explanation which Rashi echoes (see Rashi on Dt 13^{14}). Cheyne (*loc. cit.*) regards it as from בלי יעלה (='one may not ascend'). He compares the Babylonian *matu la tarat*, the 'land without return,' and believes the word to designate 'the depth which lets no man return,' and so 'the watery abyss.' These two are not quite synonymous in Semitic thought. The 'land without return'

* Cheyne, *Expositor*, 1895, 435–439, held the three uses to mean: (1) 'subterranean waters'; (2) 'hopeless ruin'; and (3) 'worthless scoundrel'; but this classification does not seem so accurate.

would suit the meaning in Ps 18^{5} (=2 S 22^{5}) only. Garvie (Hastings' *DB*, *s.v.*) thinks בל may be for בעל, and יעל philologically changed from יער, the whole meaning 'lord of the forest'—an etymology which, so far as the present writer can see, has nothing to commend it. Hommel (*ExpT* viii. 472) regards it as a transliteration of the Babylonian Belili, with which Cheyne had previously compared it—a deity worshipped in early times who afterwards made a journey to the lower world (cf. Jastrow, *Rel. of Bab. and Ass.* pp. 417, 575, 588, 589, and 593). Baudissin (*ExpT* ix. 40 ff.) and *Oxford Heb. Lexicon* (p. 116*a*) hold to the etymology בלי יעל = 'without worth.' יעל is a good Hebrew root used only in the Hiph. in the sense of 'avail' 'profit.' This etymology suits the great majority of OT passages. Baudissin regards the meaning 'wickedness' as late. Moore remarks ('Judges' [19^{08}] in *Inter. Crit. Com.*) that the etymology is dubious.

This must be said of the comparison of Belial with Belili: Belial is clearly a designation of Sheol in Ps 18^{5}, while at the end of the Babylonian poem called 'Ishtar's Descent,' Belili is a sister of Tammuz, whose lover Ishtar rescued him from the under world. If Ps 18 contains an early substratum, or if we may look to poetry, even when late, to preserve archaic usage, we might regard Belial as originally a name for Sheol. Since the shades were unsubstantial beings, Belial as a qualitative genitive might easily come to signify 'worthless,' 'disagreeable,' then 'wicked.' Its application to the arch-enemy in Nahum would also be natural. Briggs ('Psalms,' in *ICC.* i. 142, 152) regards 'worthless' as the original meaning, and the application to Sheol as the derived significance. Its real origin is, however, still obscure.

2. Beliar.—Beliar is a later form of Belial, the final liquid *l* having been changed into its kindred liquid *r* in accordance with a phonetic law common to many languages. The earliest occurrence of this form of the name is in the *Sibylline Oracles*, ii. 167 and iii. 63 and 72.* In the former of these passages Beliar is the great evil power of the world, or Antichrist; in the latter, he is represented as an emissary proceeding from Rome. In the *Ascension of Isaiah*, Beliar † is mentioned in the following passages: 1$^{8.9}$ 2^{4} 3$^{11.13}$ 4$^{2.4.16.18}$ 5$^{1.4.15}$. He is invariably regarded as the Antichrist, or great king of this world who has ruled it since it came into being. In this character he practically takes the place of Satan; king Manasseh is, for example, said (2^{4}) to have 'turned in his heart to serve Beliar.' In the *Testament of the Twelve Patriarchs* considerable light is shed on the conceptions of Beliar then current. He is the source of impurity; he sends evil spirits against men; but he cannot overcome a chaste man (Reuben, 2, 4, and 6). His works are to God's law as darkness to light, but the Messiah will bind him (Levi, 18 and 19). He is the source of lying, but he flees from the man who avoids wrath and lies, and the Messiah will wrest from him his captives (Daniel, 5).

The conception of Beliar in this apocryphal literature is identical with that of 2 Co 6^{15}, where, according to the best attested reading, Paul asks: 'What concord hath Christ with Beliar?'—Beliar being evidently equivalent to Satan, or Antichrist.

The character of Beliar as Antichrist is a natural outgrowth of the personification of Belial in Nah 1^{15} (2^{1}).

GEORGE A. BARTON.

BELIEF.—1. **Definition.**—'Belief' is the mental state of assurance or conviction, the attitude of a mind towards its own experiences in which it accepts and endorses them as referring to reality, as having real significance or value. In taking over the term from popular terminology, Psychology has had to encounter the difficulties usually involved in such transference. The vagueness and consequent ambiguity of a term as popularly employed tend to cling to it when it passes into the hands of the scientist, and it is only after considerable controversy that its connotation settles down into the definite and stable form necessary for scientific purposes. This has been the case with the term 'belief.' By certain writers, *e.g.* Sir W. Hamilton, 'belief' has been employed to denote a state of mind specifically differing from that to which the name 'knowledge' is given, namely, that state in which we accept as true a proposition for which rational grounds are not forthcoming. According to Hamilton, we *believe* first principles or axioms, we *know* whatever is logically deduced from such. James Mill, on the other hand, assigns the name to every species of assurance and conviction, the assurance of what is before our eyes as of that which we only remember or expect; of what we know by direct perception, as well as of what we accept on the evidence of testimony or of reasoning. To this Bain and others have objected that, in the case of a present reality, belief has no place; it can be introduced only by a fiction or figure. The believing state relates to representative not to presentative experiences. The judgment 'I see the sun' is full fruition, the judgment 'I can see the sun by going out of doors' affords scope for belief or disbelief. All these differing views could no doubt be supported and illustrated by reference to popular usage. But, as J. S. Mill properly pointed out, the strife between philosophers 'is not likely to terminate until they perceive that the real question is, not what the distinction is, but what it shall be; what one among several differences already known and recognized the word shall be employed to denote' (*Examination of Sir William Hamilton's Philosophy*, 1872, p. 78 n.). The contribution of Brentano has assisted materially towards this desired end. By his analysis of judgment (*Urtheil*) he has been largely instrumental in giving to the concept of belief definiteness and fixity of meaning—logical connotation in short. 'Judgment,' as regarded by Brentano (*Psychologie*, p. 266 ff.), is the attitude of mind assumed towards suggested fact, either by affirmation or denial. It is to be distinguished from the mere thinking of, the simple awareness of, the suggestion; inasmuch as in the act of judgment there goes with the presented suggestion acceptance or rejection on the part of the subject. Stout calls this state 'the Yes-No consciousness,' and proposes to use the two terms 'judgment' and 'belief' as equivalent. There are methodological objections to this, but the suggestion is nevertheless significant. It is more accurate to say, as Baldwin does, that belief is the subjective side of judgment. This statement represents what may be called the prevalent view among present-day psychologists. In the act of belief, then, the individual conscious subject orientates himself towards reality in one of two ways. Either he accepts the suggestion as applying to, as qualifying, reality; or he refuses it, puts it away from him. This latter aspect of the act it is customary to call 'disbelief.' But, as is now generally recognized, disbelief is a kind of belief which, with reference to the particular suggestion, takes a negative form. It, as much as the affirmative form, entails a given attitude on the part of the subject towards the real. The opposite of belief is not disbelief but doubt.

(1) *Psychological character.*—When we directly inspect or introspect this state of consciousness, we find that it possesses a character akin to that

* The variant Belias arose from the naturalizing of the word as a Greek noun.

† The Ethiopic form, Berial, is a corruption.

of an emotional experience. There is a pleasurable sense or feeling of repose, of inward stability, such as comes from the resolution of difficulties, the demolition of obstacles, the harmonizing of conflicting elements. Bagehot has called belief the emotion of conviction. From this point of view, belief may be regarded as a primary psychical experience, a state which cannot be reduced to factors more fundamental than itself. It is contributed to and determined by various psychical factors, but in itself it is distinctive, unique, and unmistakable. It is easily distinguishable from doubt, which, in itself and apart from supporting beliefs, is a disagreeable experience, involving a sense of suspense and strain, of instability and bafflement—a state which the subject normally strives to transcend.

(2) *Belief and the feeling of reality.*—Belief ought to be, but is not always, distinguished from another modification of consciousness, namely, the feeling of reality, or 'reality feeling,' as it is termed by Baldwin, to whom the distinction is due. This is also a primitive and unanalyzable mode of conscious experience. It accompanies simple sense-presentations—a colour, a tone, a smell, etc.; these are 'just there,' coming to us with a vividness and indubitability which put all considerations of accepting or rejecting out of the question. There is no thought of competing or conflicting alternatives; each experience exists, so to speak, absolutely in its own moment and in its own right. To give this state the name of primitive credulity, as Bain does, is to identify different experiences. The 'reality feeling' state, no doubt, furnishes the stuff out of which judgments are formed, but as such it has not arrived at that stage. Judgment involves selection, the definite choice of 'this' from 'other' irrelevant or conflicting so-called facts; and belief, in this regard as the subjective side of judgment, may be called a state of resolved doubt. Now, in the 'reality feeling' state doubt cannot appear.

(3) *Belief and apprehension.*—It is worth while also to insist further on the distinction mentioned above between belief and the mere presence of an idea or complex of ideas, or, as Brentano would say, between 'judgment' and 'apprehension.' The distinction is between thinking of something and accepting that thought as applying to reality. It is possible to entertain an idea, to give it for a time mental hospitality, without coming to the point of definitely assenting to it or definitely refusing to assent to it. We may think, *e.g.*, of Macbeth or Bluebeard, without necessarily involving ourselves, at the time of thinking, in the affirmation or denial of the existence of these personages. The non-scientific person may receive statements as to the speed of light or the distance of the moon from the earth, and feel no obligation to pass a judgment on their truth or falsity. It is no doubt true, as Stout has pointed out, that 'the existence of an object means for us that . . . it forms a determination or qualification of reality in general. Unless the thought of this reality, however vague it may be, is at the same time an affirmation of it, no specific thought of a specific object is possible' (*Analytic Psychology*, i. 112). But this remark affects the case only in the event of the distinction between mere apprehension and belief being drawn so that the latter falls out of cognitive consciousness entirely. It is a relative distinction, in the sense that both members of it must be regarded as aspects of the cognitive act. But, as Stout himself allows, it is ultimate from the point of view of analysis, and is a distinction well worthy of being borne in mind.

(4) *Belief and knowledge.*—It is customary to distinguish 'belief' from 'knowledge,' and some philosophical writers, as we have seen, have drawn a sharp line of demarcation between them. There is, on epistemological grounds, undoubtedly warrant for the distinction. But this must not lead to the conclusion that knowledge is intrinsically different from belief when these two are considered psychologically. From this point of view we may rather say that knowledge is belief at its highest power.

'To know' is to have the completest assurance, to recognize that which is 'known' as definitely and firmly fixed within a system of fact. We can assign the ground for it, *i.e.*, we can show how it is related to and consists with the other elements of the system. We hold it fast. The high degree of assurance here leads to wrong distinctions as in 'I do not believe, I know.' The correct, if pedantic, statement in such a case would be, 'I know and therefore I believe.' 'Knowledge' refers to the objective grounds on which the subjective assurance (belief) rests. It is clear, however, at the same time that the two states are not conterminous. While it is impossible to refer to a knowledge-state which is not also a belief-state, it is, of course, manifest that not every case of belief is a case of knowledge. Thus, truly enough, knowledge is sometimes referred to as a species of the genus belief. Beliefs are judged to be either true or false. This in itself indicates the wider denotation of the term as compared with 'knowledge.' Here it may not be unprofitable to remark that the passing of such judgments involves reference to criteria which are beyond the purview of psychology. Beliefs, 'false' as well as 'true,' are facts of mental experience, and from the psychologist's point of view both are of equal interest and worth. The question for him is not how they come to be valued as true or false, but how they come to be beliefs—this special kind of mental existent. The justification or condemnation of a belief is a logical or epistemological task. The explanation of this belief is another matter. Belief does not inevitably wait upon knowledge; it is not always ratification of a clear insight into the truth of things. On the contrary, belief as a rule is antecedent to knowledge; proof is an afterthought. It is not, therefore, sufficient to refer to the rational grounds of a belief, in the attempt to explain it; the causes which bring it about, the sources from which it derives its vitality, are to be sought not merely in the region of the logical understanding.

2. Factors in Belief.—(1) *The cognitive factor.*—Undoubtedly belief must be in relation to some mode of cognitive consciousness: a sense-percept, a memory-image, an idea or train or complex of ideas. These furnish the immediate points of reference for any belief. The question remains as to how far they may be regarded as the effective causes, the important and central determining factors, in any given case of belief. To put it otherwise, are we to consider the development of belief to be governed by purely cognitive or intellectual conditions?

James Mill, following Hume, may be taken as an example of those who have a bias towards an affirmative answer to this question. H. Spencer and Bain (in the amended version of his view on this subject) follow suit. Hume, who speaks (*Inquiry concerning Human Understanding*, § v. pt. ii. 1) of belief as a more vivid, lively, forcible, firm, steady conception of an object than that which the imagination alone is ever likely to attain, seeks to show that the superiority of belief in these regards arises from a customary conjunction of the object with something present to the memory or sense. James Mill devotes his elaborate and suggestive chapter on 'Belief' in his *Analysis of the Phenomena*

of the Human Mind to the working out of Hume's hint and to attempting to trace all forms of belief to the 'grand comprehensive law of association.' No instance can be adduced, he boldly says (*op. cit.* p. 367), in which anything besides an indissoluble association can be shown in belief. Thus, for example, the belief that we see extension and figure as well as colour, is referred to the almost invariable and constant conjunction of our visual, tactile, and muscular sensations. So that, when we have the sensation of colour, we cannot avoid having the ideas of extension and figure along with it. There is a certain inner incoherence in this doctrine, as has, indeed, been pointed out by J. S. Mill. The elder Mill, in introducing the illustrations here quoted, states that in these cases it is generally admitted that we receive no sensation but that of modification of light. This at once brings the doctrine of indissoluble association into question, because we have here a case (one of many) in which such an association does not lead to belief. For, those who are interested in these matters, and who follow in Mill's track, do not believe that they see extension and figure, or they declare that they entertain this belief only at times when they are off their guard. There are thus two conflicting attitudes possible with regard to the same fact, and there clearly must be in at least one of the two cases a determining factor other than association. Association cannot be made the key-word with regard to belief any more than it can with regard to knowledge. It should, nevertheless, be recognized here that the operation of association has undoubtedly an influence on many beliefs. It appears, however, that association is effective not so much as a factor in setting up the belief as in conserving and supporting it once it is set up. This is hinted at by Hume (*op. cit.* § v. pt. ii.). When H. Spencer tries to show that association is the central principle, the ultimate mental uniformity here, he is not successful. It is true, as he says, that if certain states of consciousness absolutely cohere in certain ways, we are obliged to think them in those ways. But this proves nothing; it would be equally true and equally unedifying to state that, if we are obliged to think certain facts in certain ways, then they must absolutely cohere in consciousness in these ways. We cannot solve the problem of belief by the mechanical formula 'indissoluble connexion.' To complain, as J. S. Mill has done, that it leaves no distinction between the belief of the wise and the belief of fools, is beside the mark, because it introduces an epistemological point. But the complaint indicates a point worthy of note in this connexion, namely, that a belief rooted in and supported by an association and widely held may be refused and contradicted by a few who have 'thought more' about the facts in question. And, as more and more people are induced to think with or after the pioneers, the new belief begins to overtop the old and finally almost, if not altogether, obscures it. The familiar case of the belief that the sun moves round the earth illustrates this point. To say that the new belief that the earth moves round the sun is due to a counter-association is to play with words. It is due to the fact that this relation has come to be seen as a necessary part of a whole system of ideas with reference to the physical universe. And it is here that we come upon the most important condition of belief so far as cognitive factors are concerned. The perception of a given element of experience as fitting into and harmonizing with the rest of experience, in so far as this has been thought by us, gives it an irresistible claim upon our acceptance. The requirement of system, of ordered connexion, is the profoundest need of the intellect, and according as this need is met will belief be induced. Belief determined on such grounds is equivalent to knowledge, and the further discussion of the conditions here would lead us into the heart of the problems of the theory of knowledge. See EPISTEMOLOGY.

(2) *The emotional factor.*—It is manifest, however, that, as has already been pointed out, human beliefs do not always rest upon such grounds. It is not unusual to find belief determined by other considerations than reference to systematic connexion. It has been widely recognized that emotional elements appear as factors in the incitement and sustenance of beliefs. It has been noted that the state of belief has in itself a certain emotional colouring. Thus Hume says that 'the difference between fiction and belief lies in some sentiment or feeling which is annexed to the latter, not to the former' (*op. cit.* § v. pt. ii.). But it is not as an aspect of the resultant that feeling is here to be considered, but rather as a determinant of the process leading to that result. The prevailing emotional disposition, the mood of an hour or of an epoch in life, will materially influence the beliefs of the individual. Such influences act mediately. Religious fervour, social enthusiasm, love, anger, *e.g.*, predispose the subject to select and to accept those ideas which harmonize with and nourish the disposition or mood. In the most general aspect of this consideration it is to be noted that in the sanguine, youthful period of life, when vitality is high, belief as a rule flourishes more abundantly than in the colder and more discriminating period of advanced years. Again, as James has pointed out, theories of a pessimistic type, which tend to darken and chill the life of feeling, are not readily or widely believed, even though they may appear satisfactory to the understanding. They meet with an inarticulate, but none the less stubborn, opposition in the region of the emotions. They run counter to the average mood of humanity. On the one hand, the harmony of a particular belief with the emotional mood intensifies and enriches the feeling with which the idea is suffused; on the other hand, with the decay of a particular mood, related beliefs suffer proportionally. With the dwindling of religious enthusiasm, when 'love grows cold,' belief in the objects round which these feelings cluster becomes more feeble, a tendency to criticism, undreamt of in the intenser emotional hours, makes its appearance, and the beliefs readily disintegrate. Bain, in suggesting that the saying of Jeremy Taylor, 'Believe and you shall love,' should more fitly read, 'Love and you shall believe,' has, at any rate, recognized the efficiency of the emotional factor in belief. We believe with the heart as well as with the head. The search for truth itself is supported by its emotional coefficient—love of truth—which, as has been wittily said, is often utilized in order to prove that that which we love is true.

(3) *The conative factor.*—In the volitional or active aspect of conscious experience we find an even more important determinant of belief. This is not correctly separable from the foregoing. The various factors will be found together, in varying measure, in any act of belief; but, for purposes of clear exposition, the conative factor can be treated as though it were separate. At first sight volition seems to have little, if anything, to do with belief. It has been widely recognized since Hume that there is a certain coerciveness in belief; it 'depends,' he says, 'not on the will, nor can be commanded at pleasure' (*op. cit.* § v. pt. ii.). The experience of being 'compelled to assent' to a proposition is familiar to most people. It is certain that belief cannot be commanded at pleasure, that it cannot be brought forth by a simple fiat of will, in that abstract sense of will. It is nevertheless

true that will plays a leading rôle in the constitution of our belief. So impressed by this was Bain, that in his main treatment of this phenomenon (*Emotions and Will*[3], p. 371 ff.) he maintains that belief is a growth or development of the will—a phase of our active nature. He does not rule out the cognitive factor, he recognizes it in what he terms the intellectual Association of our Experiences; nor does he deny the influence of feeling, but he argues that these are subsidiary to the volitional or conative factor, and maintains that belief is most vitally related to activity or the will. He bases this judgment principally upon the fact that what we believe we act upon. Action is the test of belief. Thus, if a politician declares Free Trade to be good and yet will not allow it to be acted on (there being no extraneous barriers in the way), people say he does not believe his own assertion. To maintain his thesis, Bain is sometimes driven to somewhat extreme measures. He recognizes that there are cases where the connexion between belief and activity is not obvious, and alludes to them as 'apparent exceptions' where, though not obviously, the connexion still exists. 'Many men that will never cross the Sahara desert believe what is told of its surface, of its burning days and chilling nights.' But the connexion with activity here is, he holds, present, for their attitude may be expressed by saying that, *if* they went to Africa, they would do certain things in consequence of this information. This, as has been suggested (Stout, *Analytic Psychology*, ii. 257), is beside the mark; for where we believe without actual reference to practice, the mental attitude of believing must be actually distinct from the practical attitude. Bain does not show that action is a condition of belief; he only shows that action is an empirical test of belief, and even so he weakens and embroils his position by unnecessarily limiting activity to forms of bodily movement. Granting all that Bain puts forward, we have still to ask with Brentano (*Psychologie*, p. 268) why it is that one idea has an influence upon action and another has not. In short, he shows that action depends upon belief, and not that belief depends upon action. Bain afterwards (*op. cit.*, Appendix, p. 100) briefly recanted this view in favour of a more intellectualistic treatment of belief on associationist lines. In so far as his first position involved the doctrine that belief is wholly volitional in its nature, the recantation was justified. At the same time Bain's discussion did excellent service to the psychology of this subject, in drawing attention to a vital constituent of belief; and his contribution from that point of view has permanent value. It leads us close to the centre of the matter. A brief inspection of the facts of the case brings us to perceive that without beliefs of some kind man cannot maintain himself in the universe at all, and that the fullness of life and the fullness of belief are in a direct ratio. This does not contradict the truth that beliefs are shed as experience advances. They are replaced by deeper and more comprehensive beliefs. We discover certain needs, and in the measure of our satisfaction of them is the measure of our life. This satisfaction is obtained through the establishment of some *rapport* between the subject and the objective world or worlds in which it seeks to maintain itself. Those things which are found to satisfy the need, to fulfil desire, are accepted and clung to. They are, in fact, believed in. Without such belief one would be endeavouring to operate in a vacuum. This is vigorously and rightly insisted upon by the Pragmatists. The question of the organization within a scheme of values of these needs, vitally important though it be, is not one which concerns us here. It may be said in a parenthesis, however, that it is one to which Pragmatists have not as yet in their metaphysical and epistemological discussions devoted sufficient attention. It is enough to point out in this place that there are needs of various kinds—physical, logical, æsthetic, and religious—and that in the experience of finding satisfaction for them we find belief. The belief emerges at that point where the desire which is the expression of the need finds the means of its adequate fulfilment. This applies, *e.g.*, in the sphere of science, where we seek for a continuous and coherent system of objective fact, as in the sphere of religion, where we seek for an adequate support for our moral and spiritual needs (cf. Royce, *Religious Aspect of Philosophy*, p. 330 f.). We orientate ourselves in this direction or in that, according to the pressure of the need, by means of the power of attention (*q.v.*), which involves selection, self-determination. In brief, and in a somewhat misunderstood phrase, we 'will to believe.' This, of course, does not involve unchartered freedom or the introduction of sheer caprice. Our needs are not created by whims. They are the expressions of a nature striving to realize itself, and we but recognize their appearance. It is true that they may be regarded as the needs of a particular subject, and that the ends which they adumbrate are posited by that subject. But that does not necessarily involve us in indeterminism. Here, however, we are breaking ground upon the problem of Freedom. Keeping to our proper theme, we have further to observe that, though the end is posited by the subject and without prejudice to what is thereby implied, there is a certain objective limitation in the media through which it is to be realized. The nature of the process by which the end is attained is, so to speak, fixed independently of the subject. The subject finds it and accepts it as leading up to his end. The urgency of the need will no doubt often lead to the over-hasty and uncritical acceptance of means as real which further tests condemn, but the central element in these tests is just the need referred to; that which has been proved fictitious did not really meet the need. What is here said connects itself with the statement regarding the emotional factor, for the emotions are intimately connected with the furtherance or the obstruction of our conative tendences.

(4) *Belief and personality.*—The stream of belief then is fed from various springs. We cannot truly say that it is a cognitive, an emotional, or a conative state, in the sense that it depends solely on any one of these forms of the conscious life. We believe with the whole, many-sided self. Belief expresses the definite attitude of the personality towards its experience. In Baldwin's definition of belief as the 'consciousness of the personal endorsement of reality' the adjective bears unusual fullness of meaning. 'Nulle manifestation de notre personnalité n'exprime plus adéquatement celle-ci que la croyance,' says Jules Payot (*La Croyance*, p. 173), and we may sum up this portion of our statement with his emphatic pronouncement: 'Nous croyons avec tout ce que nous sommes' (*ib.* p. 174).

(5) *The social factor.*—This reference to belief and personality introduces the mention of a factor in the constitution of belief which is of a different order from the above-mentioned, but which deserves special notice because of its import. This may be called the social factor. One of the most vital parts of that environment to which a man must make adjustments, in order to maintain and realize himself, is what we call the social environment, the *milieu* of personalities and their products in which we all find ourselves planted. Our equation to that is one of our great life-tasks. An important part of that environment is the body of

beliefs—including what are called superstitions, traditions, and prejudices—in which the communal life expresses itself. These we acquire for the most part unconsciously, as a portion of inherited experience, through our necessary participation in this life in its various forms—the family, the school, the Church—and in the common interchange of social talk. If and when we arrive at the self-conscious and reflective stage, these may be criticized and modified or abandoned. Their abandonment, even when a substitution is made, is as a rule achieved only after considerable effort. For on the abandonment follows a sense of the loss of something of that solidarity, of participation in the life of our society which is so necessary and precious to us. A barrier is placed between the 'unbeliever' or the 'doubter' and his fellows. Only the very strong or the very headstrong man will dare to erect it. And he will do so only on the assumption that the barrier is a temporary one. The fervour with which a novel idea or doctrine is promulgated is due largely to a desire to regain that sense of social support which for the time being has been lost through departing from generally accepted belief. Even so, the heretics and reformers must be a small minority in any society; to the great majority of its members the social sanction of a belief is so strong as to be practically invincible. The social need is imperative, and orthodoxy appears to them to be a necessary means to its satisfaction. The unfriendly attitude of the community or society towards the heterodox is in this regard intelligible. The insurgence of a small part against the whole threatens, or appears to threaten, the integrity of the whole; and this is, so far rightly, something to be thwarted and put down. In certain extreme cases the community places the heterodox and insurgents under constraint, by committing them to a prison or a lunatic asylum. Society, in any form, is then a great conservator of beliefs; and the social factor is one which cannot be neglected in tracing out the causes of belief.

(6) *Religious belief.*—The detailed discussion of various forms and stages of belief—the beliefs of primitive peoples, the superstitions of civilized man, belief in an objective world, in Nature as uniform and under law, belief in the objects and ideals of æsthetics, morals, and religion—would be a long and an arduous undertaking, and it would add nothing but illustrative material to the general discussion. One of these forms, however, calls for special remark for a special reason. Religious belief has sometimes, particularly, though not exclusively, by Catholic theologians, had a claim to uniqueness put forward on its behalf. It is suggested that it is not determined or built up in the same way as other modes of belief. Thus we find Newman, quoting Dmouski and others in support (*Grammar of Assent*, pp. 186–7), laying it down that there is a marked distinction between human or natural faith and Divine or supernatural faith—the latter being defined by him as 'the assent which follows on a Divine announcement, and is vivified by Divine grace.' This form of belief, it is maintained, differs from 'human' belief not merely in degree but in kind, being intrinsically superior to it. This superiority, it is further somewhat obscurely stated, is not a matter of experience, but is above experience. The distinction is one which depends on a metaphysical theory as to the ultimate source of belief. Dealing with the phenomena by the psychological method, we cannot say that religious belief reveals differences of such a kind as to compel us to isolate it completely from other forms. It undoubtedly differs in content, and this again no doubt affects the intensity or quantitative character of the state, but in a psychological regard there is no deep-lying or fundamental qualitative distinction revealed. In this form of belief the reality referred to and endorsed is of a wider and more comprehensive character than that elsewhere dealt with. The issues involved are of a more tremendous and far-reaching kind. Life, in the light of religious belief, is no more the brief drama of an isolated self acted out against the shifting background of the world of time and space; it becomes part of an all-comprising reality, subsumed in the life of God. The narrow limits of the self are transcended; the personality is enriched and dignified by the sense of this; it acquires a fuller and more permanent value. It is intelligible how with the emergence of belief of this kind there comes the sense that salvation has been found. It is also intelligible how it should come about that such a belief is regarded as given to the subject, not formed by him. For the subject is not always clearly aware of all that is here set forth as contained in it. It does not, as a rule, come as the result of a clearly reasoned process, it usually arises out of a more or less inarticulate sense of great need, and in the measure of the need is the measure of the emotion accompanying the satisfaction of it; it is so powerful that it comes with a certain invasive character, it rushes in upon the subject. The believer has an overwhelming feeling of the reality of his experience. The investigation of the grounds of the belief is a matter for later reflexion; it is the business of the theologian and philosopher, who come in after the act of belief. Indeed, the individual believer may feel averse from any such reflexion or examination, on the ground that it tends to trouble and obscure the purity of the emotional state. Without prejudice to the question as to the rationality of religious belief, and dealing with it simply as it presents itself as a psychological phenomenon, we may say that here the emotional and volitional factors are markedly present, the intellectual factor playing apparently a minor rôle. The volitional factor has already been hinted at. The believer arrives at his belief by seeking, by turning himself in a certain direction, putting himself in a certain mental attitude. This, it may be, does not take place through the formation of a deliberately conceived and clearly conscious resolve, but it is nevertheless volitional. The believer finds because he seeks. There is nothing more constantly urged in the literature of religious belief than this, that the subject must act, he must turn his face in the right direction for the light to fall upon it. There is marked insistence also on the point that it is not by appealing to the reason directly, but in acting upon the will and the emotions, that religious belief is implanted and fostered. This is corroborated by psychological knowledge. It does not follow that this means an appeal to the irrational rather than to the rational in man. And when James speaks (*Varieties of Religious Experience*, p. 73) of 'the inferiority of the rationalistic level in founding belief,' he is presumably referring to the articulately rational. As to the specific forms which religious belief may take, this obviously depends largely on the social factor, on the influence of the institutions, the forms of instruction, and the like, through which the society in which one lives expresses its religious consciousness, and realizes and satisfies its religious need. See also FAITH.

A. MAIR.

BELIEF (logical).—Belief, as the mere subjective correlate to reality in general, does not give rise to problems of logical method, though it may not be a 'sapless abstraction' within a system of epistemology, as Hegel considered it to be. Other contexts, however, raise questions as to the validity and tests of belief as compared with knowledge. Our cognitions are to some extent beyond test or challenge, being inevitable under the laws of sense intuition and understanding, or through the conscious sequences of experience; to some extent they can be tested in detail by appeal in each case to the unchallenged part of the cognitive system itself; and to some extent by appeal only to aspects of our complete nature which are over and above cognition itself. It would be convenient in logical discussion to use the term 'belief,' as distinguished from 'knowledge,' only for those cognitions which can be tested by the latter method. In this sense it would follow in general a distinction traceable from Kant, through Beneke, Ulrici, Adamson, James, Ormond (*Foundations of Knowledge*, pt. 3, ch. 1) and others, between objective and subjective 'grounds' of cognition. Belief so defined shares with knowledge the function of 'presenting to us realities, and thus influencing the passions and imagination'; and it may present them as primary or as inferences, and as certain or probable, whether sensible or super-sensible.

Laws of thought regarded as structural forms in the system of our cognitions are absolutely primal. It is only when thought includes expectation as to concrete matters of fact that any challenge is possible. Kant offered as a basis for expectation certain 'Principles of the Understanding'—the permanence of substance, the universality of law, and the inter-connexion of the world. If these Principles could be shown from the structural forms of cognition, they also would be beyond question. But subsequent developments of the Kantian epistemology admit that they cannot.

'We might have the right to say that the laws of space . . . must of necessity hold good of all objects of our experience, for nothing will ever make its way into experience without having been already moulded in that form of space through which alone it becomes an object for us at all. But we cannot attempt to prove in the same way that, unless there was a connection according to law in the real world, the experience which we possess would be impossible' (Lotze, *Logic*, § 349).

Empirical epistemology has come to the same final issue. Mill's attempt to justify logically the principle of the Uniformity of Nature, by appeal to accepted inductions of lower grade, has been repudiated by recent Empirical Logic (Mill, *Logic*, Bk. iii.; Venn, *Emp. Logic*, ch. 5). Expectation, therefore, is grounded in our complete nature, and its most general postulates are primary beliefs.

'A reign of law embracing all reality . . . is only an assumption with which every enlargement of experience is accompanied . . . an immediate confidence or faith . . . as is also the universal tendency of thought to turn the observed facts of co-existence into coherent connection' (Lotze, *Logic*, § 349).

Super-sensible realities also, so far as the plan of our complete nature requires that they shall 'be made present to us . . . and influence the passions and imagination,' are certified in belief. How far they are primary in relation to other contents of belief, how far they can be logically elaborated, and how far corroborated by the independent process of strict knowledge, must be considered in their own special literature. As primary, they are in line with the postulates of scientific expectation.

'We assume, on the one hand, that our perceptions submit to the claims of thought in so far as to allow of their being arranged in a conceptual system and in orderly connection; on the other hand, that all our actions can be subordinated to a single end. These assumptions are postulates, and our acceptance rests in the last instance upon our will' (Sigwart, *Logic*, § 62).

'If we require that the conception of the Universe be that of a whole and an essentially complete unit, and at the same time that it should comprehend all individuals, we follow in this and other requirements . . . the inspiration of a *reason appreciative of worth*' (Lotze, *Microcosmus*, ii. 5, § 2).

'If no better ground for accepting as fact a material world more or less in correspondence with our ordinary judgments of sense perceptions can be alleged than the practical need for doing so, there is nothing irrational in postulating a like harmony between the Universe and other Elements in our nature of a later, a more uncertain, but no ignobler growth' (Balfour, *Foundations of Belief*[8], p. 391 f.).

'That there is no ultimate test of truth besides the testimony borne to the truth by the mind itself . . . is a normal but inevitable characteristic of the mental constitution of a being like man on a stage like the world' (Newman, *Grammar of Assent*, ch. ix. § 1).

Such quotations as these are not intended to appeal to an obtrusive 'wish' that becomes 'father to the thought,' or to a purposeful 'ignorance' that may be chosen as 'bliss,' but to a final trend of our spiritual development and to methodical analysis of the complete structure and function implied in it. Historic instances of such analysis are Butler's, for the purpose of 'showing moral obligation,' and Kant's, for establishing, through the primacy of Practical Reason, our judgments as to Freedom, God, and Immortality.

The topic 'belief' comes to be a doctrine of uncertainties, as in Locke, Beneke, Fechner, Ulrici, and James, when, instead of presenting a primary postulate or reality, it supplements knowledge in dealing with some detailed problem of science or life. Sometimes our complete nature guides the interest or interprets the final outcome of scientific inquiry; as in such conceptions as force, organic function, creation (Ulrici), or such principles as indestructibility of matter and conservation of energy (Jevons, *Principles of Science*, ch. 31). Sometimes it sustains scientific methods that are of themselves inconclusive; as in the analogy which attributes consciousness to other organisms than our own, or even to larger systems of Nature (Fechner). Sometimes it decides an option between alternative judgments which otherwise might remain always in problematic form, as between fatalism and personal responsibility (James, *The Will to Believe*). Sometimes it introduces inference to an otherwise alien region of fact, by supplying some mediating principle; as when history and prediction become possible through the postulate of the persistence of natural collocations and the recurrence of causes (Hughes, *Theory of Inference*, chs. 8-11; Sigwart, § 99). Sometimes it

opens empirical facts to explanation by reference to super-sensible realities; as in historical Free-choice or Miracles or Incarnation (Lotze, *Logic*, § 349, *Philos. of Rel.* § 62; Balfour, pt. 4, ch. 3).

Belief, like knowledge, may vary in certainty and influence and take special titles accordingly, without ceasing to be valid for human nature as such.

'In the empirical branches of knowledge,' Kant remarks, 'physics, psychology, and the like . . . we may have "Opinion," an assent which is consciously held as neither objectively nor subjectively adequate' . . . while 'of many cognitions we are conscious only in such a manner as not to be able to judge whether the grounds of our assent are objective or subjective . . . and this is "Persuasion." Both fall short of Conviction, whether logical Conviction, that is, Knowledge, or practical, that is, Belief; because they are not "necessary"' (*Introduction to Logic*).

But belief, unlike knowledge, may be valid for rational nature as such, without being valid for all persons. The individual mind realizes its development under conditions much more special than those for the racial or collective mind, and admits details not admitted into the cognitive system common to all. Among the examples are the following: (1) Our common cognition assumes that objects of thought are not altered by the mere event of their being thought of (Venn, *Empirical Logic*, ch. 2); yet for the individual mind this postulate may be suspended in favour of maxims of expectation that lead to their own fulfilment. Such are the mutual confidence of social co-operation, self-reliance in personal enterprise, hope during illness (James); and, on a higher level, our assumption of moral sufficiency for an occasion, or of personal acceptance with the Divine Being. (2) The option of uncertainties must often be closed for the individual, though remaining still open for science or for common belief. Inferences that are 'informal,' and under the sanction of an 'illative sense' like the insight or 'tact' of an expert, must be substituted for explicit thought. In practical discretion, taste, conscientious scruple, and personal faith we must thus interpret our own personal nature (Newman, chs. 8 and 9; Germar, *Glauben oder Wissen*, 1856). (3) External authority must be accepted in default of personal inference; the spirit of our time, the dogmas of specialists in science, testimony for historical events, moral conventions, creeds of the Churches (Balfour).

As possible principles for constructing a scale of certainty in belief, have been suggested: (*a*) the narrowness of the void in our scheme of reality which is left by strict knowledge; (*b*) the finality, in value for development, of the subjective need which attempts to fill it; (*c*) the intrinsic inaccessibility of the void to knowledge itself (Beneke).

BELLS.—See GONGS AND BELLS.

BENARES.—**1. Name and history.**—Benares (Banāras), the largest city in the United Provinces of Agra and Oudh except Lucknow, is situated in the Benares District (lat. 25° 18′ N., long. 83° 3′ E.), on the left bank of the Ganges, which flows past the city for a distance of nearly 3½ miles. The river bends to the N.E., so that the city stands for the most part on the N.W. bank, which is in places 100 feet high. A census taken in 1803, which gave the population as 582,000, was vitiated by the assumption that twenty persons should be assigned to each house. The true population (1901) is returned as 209,331, comprising: Hindus, 153,821; Musalmāns, 53,566; Christians, about 1200, chiefly in the cantonment, civil station, and mission grounds; with a few adherents of other religions.

At the present day Hindus speak of the city, which is acknowledged to be the religious capital of Hinduism ('the general school of the Gentiles, the Athens of India,' to use Bernier's words), indifferently as either *Kāśī* or *Banāras*, but the latter name, anglicized as *Benares*, is that commonly used by people of other nationalities and in literature.

The name *Kāśi* (*Kāśī*, in Pāli *Kāsī*) was originally the name of a tribe or nation inhabiting the country between the Ganges and Ghāghrā (Gogra), and at times apparently extending its authority over territory to the north of the Ghāghrā and the south of the Ganges. Legends of Kāśi Rājā are current in the Gorakhpur District, north of the Ghāghrā, and the small town of Rūdarpur in that district is said to bear the alternative name of Kāśī (Martin, *Eastern India*, ii. 338). To the south of the Ganges, the Karamnāśā river, now forming part of the boundary between the Mirzāpur and Shāhābād Districts, was recognized traditionally as the frontier between the kingdom of the Kāśis (Benares) and that of the Magadhas (S. Bihār). The waters of that river are regarded by high-caste Hindus from other regions as impure and polluting. We shall presently quote another legend in proof of the aversion felt by orthodox Hindus towards the non-Aryan, Buddhist kingdom of Māgadha. The Rāmāyaṇa (*Uttarakāṇḍa*, lix. 18, 19) describes the 'excellent town' of Pratiṣṭhāna, that is to say Jhūsi opposite Allahābād, as being situated in the 'Kāśi kingdom.' Putting all indications together, we may conclude that the realm of the Kāśis was equivalent to the modern Districts of Benares, Ghāzīpur, Balliā, Azamgaṛh, and Jaunpur, together with portions of the Mirzāpur, Gorakhpur, Allāhābād, Partābgaṛh, Sultānpur, and Fyzābād Districts, all of which are now included in the United Provinces of Agra and Oudh. The Kāśi people are mentioned by Pāṇini and other authors in both Sanskrit and Pāli prior to the Christian era. Gradually the name was transferred from the people to their capital city, and the transition is marked in the *Bṛhat Saṁhitā*, an early work, which applies the name *Kāśi* to both people and city. The Kāśis lost their independence at an early date, their kingdom being absorbed by Northern Kosala (Oudh) before the time of Buddha. An ancient Kosalan king, named Kaṁsa, of uncertain date, is described as 'the conqueror of Kāśi.' Nevertheless, the older Buddhist books include Kāsī in the list of the sixteen principal States of India, although it was never independent in historical times. Gradually the name *Kāśi* or *Kāśī* (Pāli *Kāsī*) was transferred from the tribe to the city. The form *Kāśikā* also occurs.

The alternative name *Varāṇasī* (also *Vārāṇasī*, *Varaṇasī*) appears to be more ancient than *Kāśi* as the designation of the city, and to be really its proper name. The Buddhist Jātakas and early Sanskrit books describe the city of Varāṇasī as being situated in the Kāśi country. Fa-hien, the Chinese pilgrim (A.D. 400), writes the name as *Po-lo-nai*, which seems to correspond with a spoken form *Bārānas*. Hiuen Tsiang (Yuan Chwang, A.D. 637) writes *Po-lo-na-se* (= *Vārānasī* or *Bārānasī*). Popular etymology derives the name *Banāras* (by metathesis of *Barānas*), either from an imaginary Rājā *Banār* or from a combination of the names of the rivers *Varaṇā* (*Barnā*) and *Asi* or *Asī*, but neither derivation can be accepted. In the Purāṇas the name *Avimukta* is given to the city, which is mentioned in the Buddhist Jātakas under various fanciful names, *Sudassana*, *Pupphavatī*, etc.

Local tradition restricts the name of *Banāras* to the northern and apparently most ancient part of the city, the central block, also ancient, being

called *Kāśi*, and the south-western section, the most recent, being known as *Kedār*. The attempt made by Muhammad Shāh, Emperor of Delhi (1719–48), to give his own name to the city, which he called *Muhammadābād*, failed so far as general usage is concerned, but on his coins the name frequently occurs as that of a mint, and sometimes is written as *Muhammadābād-Banāras*.

Hindu legend associates the foundation of the city with Rājā Divodāsa, who is the subject of wild mythological stories, and the Buddhist tales constantly mention Rājā Brahmadatta as having been king of Benares 'once upon a time,' but it is impossible to discover any basis of fact for either the names or the stories. Benares, with its surrounding territory, was absorbed, as already stated, by the greater kingdom of Kosala, about B.C. 600, or earlier, and when Kosala in its turn was forced to bow to the growing power of Magadha (wh. see), Benares passed under the rule of the Saiśunāga lords of that province about B.C. 500. It was included in succession in the dominions of the Maurya, Sunga, and Gupta dynasties. In the 7th cent. the city passed under the rule of Harsha-vardhana, the powerful Vaiśya king of Kanauj, and in the 9th cent. it was included in the dominions of the Parihār kings of Kanauj. In the 12th cent. it was held by the Gaharwārs of Kanauj, of whom the last, Rājā Jaychand (Jayachchand), was killed in A.D. 1193 (A.H. 589) in battle with Muhammad of Ghor (Shihāb-ud-dīn, Muhammad ibn Sām). From that time Benares remained under Musalmān domination until 1775, when it was ceded to the government of Warren Hastings by the Nawāb Vazīr of Oudh. Since that date it has been British territory.

Abū-l-Fazl (*Āīn-i-Akbari*, ii. 28 [Gladwin's tr.]) seems to have been misinformed in stating that Benares was visited twice by Sultan Maḥmūd of Ghaznī in A.H. 410 (A.D. 1019–20) and A.H. 413 (A.D. 1022–23). The contemporary author of the *Tārīkh-i-Sabuktigin* expressly states that no Musalmān army had ever visited Benares until Aḥmad Niāltigīn made a hurried raid on the city for a few hours one day in A.D. 1033 (424–25 A.H.). The raiders were not in force sufficient to enable them to do more than plunder the richer shops. Muhammadan influence was not felt seriously by Benares until the city was taken by Muḥammad of Ghor in A.D. 1193. The considerable effect of the long Muhammadan occupation for six centuries is shown by the fact that at the last census in 1901 Musalmāns formed 28 per cent. of the population of this intensely Hindu city. The Madanpura quarter is almost exclusively occupied by Muhammadans, who are largely engaged in weaving the rich brocades (*kīnkhwāb*, vulgo 'kincob') for which the city is famous.

Benares suffered severely from the persecuting policy of Aurangzīb, who went so far as to order 'the governors of provinces to destroy with a willing hand the schools and temples of the infidels; and they were strictly enjoined to put an entire stop to the teaching and practising of idolatrous forms of worship' (W. Hunter, *Aurangzīb*, 1896, p. 135). Complete general execution of such orders was impossible, but in Benares much was done, and multitudes of temples were destroyed. Very few of the existing buildings are earlier than the time of Aurangzīb. The temple beside which stood the Aśoka pillar seen by Hiuen Tsiang was converted into a mosque, although the massive pillar was allowed to remain until 1809, when it was broken to pieces by a furious Muhammadan mob in the course of a fierce riot between the adherents of the rival religions. This riot was still fresh in men's minds when Bishop Heber visited the city in 1824. The pillar, the stump of which is known as *Lāṭ Bhairo*, and considered to be an object of great sanctity, is correctly described by the Chinese pilgrim in A.D. 637 as standing to the N.E. of the city and west of the Barnā river, whose course is due north and south for about a mile. Bernier mentions that the chief of the Benares pundits had been granted by Shahjahān a pension of two thousand rupees, which was withdrawn by Aurangzīb immediately after his accession.

The most conspicuous evidence of Aurangzīb's bigotry is the mosque above Panchgangā Ghāṭ, the minarets of which (147 ft. 2 in. high) are by far the most imposing edifices in Benares. The mosque occupies the site of a large ancient temple dedicated to Siva under the name of Bisheshar (Viśveśvara), and is largely composed of the materials of the Hindu shrine. The modern temple of Bisheshar, generally called the 'Golden Temple,' close by is small, but notable for its dome and tower covered with plates of gilt copper, the gift of Mahārājā Ranjit Singh, the 'Lion of the Panjāb.' It is the most holy temple in Benares, Bisheshar being regarded as the actual ruler of the city.

2. Sacred places.—During the predominance of the Marāthās in the 18th cent., and still more after the establishment of the British power, temple-building, which had been either forbidden or discouraged by the Muhammadan rulers, received a great impetus, and hundreds of new shrines have been constructed. Sherring estimates that out of 600 temples along the Panch-kosī, or pilgrims' road, round the city, no fewer than 500 date from the British period, and very few are 250 years old. This vigorous modern development of temple-building is the outward and visible sign of the marked revival of Hinduism under British protection, which is still in progress and daily growing in strength. Most of the unrest at present (1909) agitating India is closely connected with the Hindu revival. Forty years ago the number of Hindu temples in Benares, excluding petty niches and shrines, was estimated as 1454, and now it must be considerably greater.

But, as already observed, Musalmāns form 28 per cent. of the population, and they were credited by Sherring with 272 mosques. Notwithstanding the considerable success of the Muslim propaganda indicated by these figures, Benares has always continued to be the most Hindu of cities, and few visitors find occasion to take note of the large Muhammadan population. The mosques, although numerous, are not remarkable for architectural merit, and even the mosque of Aurangzīb offers little worthy of notice beyond the noble minarets which tower above the city.

The most striking feature of Benares, best viewed from the river, is the long series of *ghāṭs*, or stairs leading to the water, which line the bank of the Ganges. They number about forty, and vary much in sanctity and popularity. The five principal ones, visited by all pilgrims, are, as reckoned from the south, Asi Saṅgam (the junction of the Asi rivulet with the Ganges), Daśāśamedh (Daśāśvamedha), Maṇikarṇikā, Panchgangā, and Barnā Saṅgam (the junction of the Barnā river with the Ganges). Hindus always regard the junctions of streams with peculiar reverence. A visit to the five *ghāṭs* named above is in itself a complete course of pilgrimage, and the merit of bathing at Daśāśamedh Ghāṭ is equal to that of a pilgrimage to Prayāg (Allāhābād), where the Jumna unites its waters with those of the Ganges. The legends invented to explain the sanctity of the Daśāśamedh and Maṇikarṇikā Ghāṭs are too long for quotation, but we may note that five rivers, four being invisible to mortal eyes, are

supposed to meet at Panchgangā ('five-river') Ghāṭ. Their names are given as Dhūtapāpā, Sarasvatī, Kiranā, Jarṇa (*alias* Yamunā = Jumna), and Gangā (Ganges). The belief in invisible subterranean streams is common among Hindus in many localities.

A considerable area round Benares shares in the sanctity of the city and rivers, and is circumambulated by pilgrims travelling along the Panchkosī Road, which does not seem to be ancient in its existing form.

'The Panch-kosī is regarded as an exceedingly sacred road. While even a foot or an inch beyond its precincts is devoid of any special virtue, every inch of soil within the boundary is, in the Hindu's imagination, hallowed. It would seem, too, that every object, animate and inanimate, existing within the enclosed space, participates in the general and all-pervading sanctity. The entire area is called Benares; and the religious privileges of the city are extended to every part of it. Whoever dies in any spot of this enclosure is, the natives think, sure of happiness after death; and so wide is the application of this privilege, that it embraces, they say, even Europeans and Muhammadans, even Pariahs and other outcasts, even liars, murderers, and thieves. That no soul can perish in Benares is thus the charitable superstition of the Hindus' (Sherring, *The Sacred City of the Hindus*).

The road is designed to describe the arc of a radius of five *kōs*, or ten miles, with the Maṇikarṇikā well as a centre, and is therefore called the 'five-kōs road.'

The votary starts from the Maṇikarṇikā Ghāṭ to Asi Saṅgam, and thence to the village of Kandhawa, where he stays for the night. The second day he marches ten miles to Dhūpchandī; on the third day he has a long walk of fourteen miles to Rāmeśvar; on the fourth day he goes to Sheopur (Śivapur); and on the fifth day he advances to Kapildhārā; the sixth and last stage being from Kapildhārā to Barnā Saṅgam, and so back to the starting-place at Maṇikarṇikā Ghāṭ. The whole journey is nearly fifty miles in length, and at each stage worship has to be performed and Brāhmans must be paid. Liberal payments to Brāhmans are an indispensable element in the programme of a Hindu pilgrimage, and the Benares Brāhmans know how to use their opportunities. The Gangaputras ('sons of the Ganges'), who attend on pilgrims at the *ghāṭs*, have a sinister reputation for unscrupulous greed.

It is impossible within the limits of an article to give a detailed account of even the principal temples at Benares and of the fantastic mythology associated with them by exuberant Hindu imagination, but some slight notice of a few of the most favoured holy places and their legends is indispensable. We shall take Sherring as our guide.

The *Trilochan temple and ghāṭ* dedicated to 'three-eyed' Śiva have the special merit of securing everlasting happiness to the worshipper there if he should die elsewhere. If a devotee spends a whole day and night in the month of Baisākh (April–May), without sleeping, and uninterruptedly engaged in religious exercises at this temple, he is promised final liberation (*mokṣa*) from the miseries of existence. Kāśī-devī, the tutelary goddess of the city, is housed in a temple in Mahalla (ward) Kāśīpura, which is believed to be the centre of the city.

A shrine close by, called *Vyāseśvar*, is dedicated to Vyāsa, the reputed compiler of the Vedas, who is also honoured at a temple in the palace of the Mahārāja at Rāmnagar on the other side of the river, which is associated with a quaint myth. People who die on the Rāmnagar side are believed to incur imminent danger of being re-born as asses —an unpleasant fate which may be averted by a pilgrimage to the shrine of Vyāsa (*Veda Vyās*) there during the month of Māgh (Jan.–Feb.). Multitudes of people from Benares as well as from Rāmnagar make their pilgrimage during that month, and so doubly assure immunity from rebirth as a despised ass. The Hindus of Patna share the fears of the Rāmnagar people, and for the same reason are cremated on the northern side of the river. The explanation given is that Magadha or S. Bihār, a non-Aryan and Buddhist land, is considered so unholy that if a man die and is burnt within its limits he is sure to be reborn as an ass (*NINQ*, vol. v. [1896], par. 533).

A visit to the very holy tank called *Piśāchmochan*, or 'deliverance from devils,' situated on the western side of the city, is compulsory on all pilgrims, who find its waters a valuable prophylactic against evil spirits and bad dreams. Pilgrims to Gayā are required to certify that they have bathed in Piśāch-mochan, but if for any reason the essential ceremony has been omitted, the fault may be repaired by ablution in a duplicate tank at Gayā. Sun-worship is practised at the *Sūraj-kuṇḍ*, or 'sun-pool,' in the south-western quarter, and a temple in the same region is devoted to *Dhruveśvar*, the personified Pole-star. Another temple is dedicated to the moon-god. *Chaukī Ghāṭ* and *Nāg Kuā* are devoted to serpent-worship. The existence of such shrines illustrates the immense variety of the elements constituting popular Hinduism. Hindu interest in astronomy and its sister lore of astrology is testified by the *Mān-mandir*, the famous observatory with gigantic instruments of masonry constructed by Rājā Jay Singh of Amber or Jaipur in A.D. 1693.

The *Daśāśamedh* (*Daśāśvamedha*) *Ghāṭ*, the reputed scene of the celebration of ten horse-sacrifices (*aśvamedha*) by the god Brahmā, is one of the five principal places of pilgrimage on the bank of the Ganges. The large colony of Bengālīs, including many pensioners who retire to end their days in the holy city, occupies a separate ward, and is perhaps even more devoted to its gods than are the less educated sections of the population. The principal Bengālī temple is dedicated to Śiva as Kedāreśvar, 'the lord of Kedār,' a renowned shrine in the Himālayas.

The holy wells occupy prominent places in the pilgrim's circular tour. One of the most noted is the *Gyān Kūp*, or 'well of knowledge,' situated between the temple of Bisheshar and Aurangzīb's mosque. The god Śiva, who supports Benares on the point of his trident, is believed to reside in this well. The most sacred of all the wells is *Maṇikarṇikā*, supposed to be filled with the sweat of Viṣṇu. No pilgrim fails to smear his head and body with the stinking water.

The *temple of Annpūrṇā*, the goddess who is credited with the responsibility of feeding the citizens under the orders of Bisheshar, the divine lord of the city, is much frequented, and is the scene of indiscriminate almsgiving to crowds of beggars. It is known to Europeans as the 'cow temple,' and is the dirtiest in the city. It was built by the Peshwā, Bājī Rao, about 1721. At a little distance stands a temple dedicated to the minor deity, *Gaṇeśa* or *Vināyakapāla*, under the title of Sakhī, 'the witness.' 'Pilgrims, on completing their journey of the Panchkosī Road, must pay a visit to this shrine in order that the fact of their pilgrimage may be verified. Should they neglect to do this, all their pilgrimage would be without merit or profit' (Sherring, *op. cit.*).

Bisheshar, or Śiva, with the title of Viśveśvara, 'Lord of all,' is held to be, as already observed, the divine ruler of Benares, charged with the duty of controlling all the other innumerable gods and goddesses and keeping the city free from demons. The sacred boundary of the Panch-kosī Road is guarded by the deities of six hundred shrines, and the only demon allowed within the holy precinct is the one who dwells in the Piśāch-mochan tank. Bisheshar's vicegerent, the divine Kotwāl, or

chief of police, is Bhaironāth, whose shrine is situated more than a mile to the north of that of his sovereign, under whose orders he exercises authority over both gods and men. He is bound to keep the city free from all malignant spirits and evil persons, and, should he find any such within its precincts, to expel them forthwith. Bhaironāth is supposed to exercise his authority by means of a huge stone truncheon, *Daṇḍpāṇ*, which has a temple to itself. The stone, about 4 feet in height, is sometimes capped by a silver mask, and is specially worshipped on Sunday and Tuesday. Bhaironāth is believed to ride on a dog, a figure of that animal being painted beside the entrance to his temple, which dogs are permitted to enter. This is but one of many traces of dog-worship—one of the innumerable incongruous factors combined in popular Hinduism. The existing temple is modern. (For dog-worship see Crooke, *PR* ii. 218–221).

So much may suffice to give the reader some notion of the multitude of temples which crowd the narrow streets of Benares. Almost all the holy places which were open to Sherring forty years ago are now closed to Europeans, and it is not now possible for a European writer to give exact descriptions of the Benares shrines from personal knowledge. Every visitor is struck by the swarms of sacred bulls blocking the lanes, and the bands of mischievous monkeys which have licence to pilfer eatables and damage tiled roofs to their hearts' content. These animals are specially numerous around the shrine of Durgā, known to European visitors as the 'monkey temple.'

3. Various religious elements.—No man can tell how the notion of the supreme sanctity of Benares originated, but there is no doubt that the city dates from remote antiquity, and that as far back as tradition can reach the site was always the holy of holies. The fact that about B.C. 500 Buddha selected the neighbourhood of Benares as the scene of his earliest public preaching, the place where he first turned the 'wheel of the Law,' and set it rolling over the world, is good evidence that in his days the city already enjoyed a reputation for pre-eminent sanctity, and was the most suitable place in which to proclaim a new creed.

Buddhism was still a strong force at Sārnāth (wh. see) at the time of Hiuen Tsiang's visit in A.D. 637, and no doubt continued to enjoy a large share of favour under the Pāla kings of Bengal, whose dominions certainly included Benares, at times, at all events. The religion of Gautama probably held its own until the Muhammadan conquest of 1193, when the multitude of images crowding the Buddhist shrines must have excited the fury of the warriors of Islām, as happened in other places. The buildings at Sārnāth bear clear traces of destruction by fire, which may be safely attributed to the date mentioned.

But even while Buddhism enjoyed the patronage of kings, the religion of the Brāhman was always predominant, and Benares proper would seem to have been throughout the ages a Hindu Brāhmanical city rather than a Buddhist one. In Hiuen Tsiang's days the followers of Śiva, the great local deity, far outnumbered the adherents of Buddha, and Śiva, in many forms and under many names, is still the deity whose worship characterizes Benares. Of course other deities have their votaries there, but all are regarded as subordinate to Śiva, the 'Lord of all.' Some Hindus believe that the fifth, or dwarf, incarnation of Viṣṇu was born at Benares (*IA* xxxv. 243), and one of the many *melās*, or religious fairs, is held in honour of that incarnation at Barnā Saṅgam in the month of Bhādon (Aug.–Sept.).

Benares is sacred to the Jains as the reputed birthplace of Supārśvanāth, the seventh Tīrthaṅkara, but at the present day the Jain cult is not very prominent in the city. Bishop Heber (*Narrative*, ch. xii.) gives an interesting account of his visit to a Jain temple which few Europeans have been permitted to see. Several Jain temples stand along the bank of the river between Bachraj Ghāṭ and the Asi confluence, and from regard to Jain feeling the shooting of birds and the capture of fish are forbidden in this section of the stream. The Jains under the name of Nirgranthas are noticed by Hiuen Tsiang. All lists of the Hindu sacred cities, which slightly vary, include Benares. The traditional enumeration quoted by Sherring specifies seven such cities, namely, (1) Kāśī, (2) Kāntī, (3) Māyā (=Hardwār), (4) Ayodhyā, (5) Dvāravatī (=Dvārakā), (6) Mathurā, and (7) Avantikā (=Ujjain).

A 12th cent. grant places Kāśi at the head of a list of four famous places for bathing pilgrimages, the others being Kuśika (prob. = Kanauj), Uttarakosalā (=Ayodhyā), and Indrapura (prob. = Indraprastha near Delhi) (*IA* xviii. 13).

A minor religion largely favoured by the lower classes of Hindus in Benares is the cult of the Pānch (Panj) Pīr, or Five Saints, who are variously enumerated in different lists, but always headed by Ghāzī Miyān, the deified son of the sister of Sultan Maḥmūd of Ghaznī. The cult is a degraded adaptation of the Shī'ah Muhammadans' reverence for the five great saints of Islām, namely, the prophet Muhammad, his son-in-law 'Alī, his daughter Fatima, and Ḥasan and Ḥusain, the sons of 'Alī and Fatima. The subject was investigated exhaustively by R. Greeven, who collected the legends and popular songs of the cult. The ceremonies are invariably performed by Musalmān drummers (*dafālī*), and the Muhammadan origin of the worship is fully recognized by its Hindu votaries. Most probably it originated in the inveterate Hindu habit of venerating any manifestation of power. Ghāzī Miyān, the 'prince of martyrs,' was a specially fierce fanatic, and so made his mark upon the popular imagination. Many examples might be cited of the indiscriminate mixture of the rites of Islām and Hinduism by the common people in various parts of India.

4. A seat of learning.—From time immemorial Benares has been a seat of Hindu learning as well as of worship, and has been the resort of the most famous teachers. The city still holds the highest rank as the centre of the intellectual life of India, and its pundits succeed, although not without difficulty, in keeping alight the torch of the wisdom of their ancestors.

Bernier, writing in 1667, accurately described the Indian method of study. 'The town,' he writes, 'contains no colleges or regular classes, as in our universities, but rather resembles the schools of the ancients, the masters being dispersed over different parts of the town in private houses, and principally in the gardens of the suburbs, which the rich merchants permit them to occupy. Some of these masters have four disciples, others six or seven, and the most eminent may have twelve or fifteen; but this is the largest number. It is usual for the pupils to remain ten or twelve years under their respective preceptors, during which the work of instruction proceeds but slowly,' etc. (*Travels in the Mogul Empire*, ed. Constable, p. 334).

In 1817, the year in which the Marāthā power was broken, Ward obtained the names of the men who taught the *śāstras*, or Hindu scriptures, in Benares. Forty-eight teachers then instructed 893 pupils in the Vedas only, while seventeen initiated 218 disciples in the mysteries of Pāṇini's grammar. The other sections of the scriptures, including law, were little favoured. The Benares school of law —one of the five recognized schools—follows in its main lines the system of Vijñāneśvara, the author

of the *Mitākṣarā*, who lived at Kalyāna in the Deccan in the 12th century.

At the present day the competition of European learning must have reduced the attendance at the Sanskrit schools, and the number of pupils must be far less than it was a century ago, when Marāthā patronage was available. It is an established rule that a teacher of the scriptures should not be paid wages for his work, and must be content to trust to the voluntary benevolence of his patrons. This rule caused the failure of the Sanskrit College established in 1791, which could not easily secure the services of the local savants. The building erected for that college is now the mission house of the Baptists. The Queen's College, dating from 1853, which has been worked on other lines under the direction of eminent European principals and professors, has done much to promote the scientific study of Sanskrit. The Central Hindu College, founded by Mrs. Besant in 1898, with the object of bringing up young men on the best Hindu principles, while giving them free access to European learning, is an interesting experiment, which may or may not survive its founder.

5. **Religious teachers, etc.**—A full account of all the distinguished religious reformers who have dwelt or sojourned in Benares from the time of Buddha, twenty-four centuries ago, to the present day would almost amount to a history of Indian religions, and particularly of Hinduism (wh. see). The connexion of *Buddha* with Benares will be dealt with in the art. SĀRNĀTH, and it will be sufficient here merely to give the names of some of the leaders of Indian thought who have been more or less closely associated with the sacred city; they will be dealt with in separate articles.

The earliest of such leaders about whom we know anything definite is the renowned *Śaṅkarāchārya*, the Brāhman of Malabar, who lived for a considerable time at Benares, surrounded by a large circle of disciples. The weaver-poet *Kabīr*, founder of the Kabīr Panthī sect, a disciple of Rāmānand, was a native of Benares, and lived there from about 1380 to 1420. *Chaitanya*, the revered Vaiṣṇava apostle of Bengal (1485–1533), resided at Benares for some years. *Vallabhāchārya* (1478–1530), who established the Rādhāballabhī sect, died in the holy city. No name sheds more glory upon Benares than that of *Tulsī Dās* (1532–1624), author of the *Rām-charit-mānas*, the Hindī equivalent of the Rāmāyaṇa, the favourite book and justly loved treasure of the people of Northern India. He spent the greater part of his long life at Benares, and a manuscript of his chief work, written about twenty-four years after his death, is in the possession of the Mahārājā, who is the owner of a fine library and an interesting collection of old Indian paintings. The monastery (*maṭh*) where the poet lived and the ruinous *ghāṭ* called after his name are near the Asi confluence. During the 18th and 19th centuries many Hindu authors of more or less note, whose names have been laboriously collected by Grierson, resided at Benares, the most notable, perhaps, being *Gokul Nāth*, whose Hindī version of the *Mahābhārata* was published at Calcutta in 1829, and *Harischandra* (1850–85), the poet, critic, and journalist. Ward notices the remarkable case of Hatī Vidyālaṅkarā, a learned Bengālī lady, who taught the *śāstras* at Benares a few years prior to 1817. The Sanskrit College issues a periodical called *The Pandit*, which deals with Sanskrit texts.

The pundits of the sacred city probably are still the most learned in India, but they are so intensely conservative that most of them will have nothing to do with modern notions, and so are losing influence over the young men of these days, who cannot shut their eyes and ears to the signs of the times. Mrs. Besant's College, already mentioned, has been organized to teach a modernized Hinduism of a broad and liberal kind. In connexion with it there is a Girls' School attended by about 120 high-caste girls.

6. **Missions.**—The long-continued labours of the European missionaries settled at Benares for nearly a century deserve notice. The Church of England Mission was established in 1817, and in the same year the Baptists of Serampore formed a branch of their organization under charge of an Eurasian agent. The work of the London Missionary Society began four years later. The Wesleyans established a mission about 1880. The chief missionary institutions are in the suburb of Sigra. The college founded in the 17th cent. by Rājā Jay Singh, who established the observatory, has passed into the hands of the Church Missionary Society. The missionaries have done much good service in the cause of secular education, especially during the years prior to the foundation of universities in 1857. Since that date their institutions have been overshadowed by those immediately under the Department of Public Instruction. The direct outcome of missionary effort in the way of conversions of adults appears to be very small, and it is obvious that Benares must always present special difficulties to the preacher of Christian doctrines.

VINCENT A. SMITH.

BENE-ISRAEL (more correctly *B'nei-Israel* = בני־ישראל, *i.e.* 'Children of Israel').—By this name is designated a body of Jews inhabiting the Bombay Presidency of India. The community is important in its numbers, amounting to some ten thousand souls, and remarkable in its character. A number of peculiar religious usages among them reward careful attention.

1. **Origin and history.**—No historical records of their past are possessed by the Bene-Israel. The legend preserved by them as to their arrival in India is to the effect that in long bygone times seven men and seven women were cast by a shipwreck on the Indian coast at a point some thirty miles south of the island of Bombay. Many of the less fortunate of their company were drowned in the disaster, and their bodies when washed ashore were buried by their comrades in two *tumuli*—those of the men in one, and those of the women in the other. These mounds the Bene-Israel still show in the village of Naugaon (or 'New Village'), near the Collectorate town of Alībāg. The fourteen survivors, as they increased in numbers, are said to have spread themselves throughout the villages of the Konkan, in the neighbourhood of their first Indian home. In these places they practised chiefly the trade of

oil-pressing; and this avocation, coupled with their habit of observing Saturday and giving their oxen rest from the oil-mills on that day, gained for them among their Hindu neighbours the name of *Shanvār Teli*, or 'Saturday Oil-men,' whereby they distinguished them from their own Hindu oil-men, who rested their bullocks on Mondays, and were therefore called *Somvār Teli*. This name is in use to the present day.

It is worthy of note that, in the immediate neighbourhood of the spot which the Bene-Israel claim as the place of their first landing in India, there used to exist an important seaport and emporium of trade, which was frequented by the ancient navigation hailing from the Egyptian, Arabian, Persian, and other ports. It was known by the name of 'Chemul' * (pronounced 'Tsemvul'), and was almost certainly the 'Simulla' or 'Timoula' of Ptolemy the geographer (A.D. 150) and others.† In Buddhist inscriptions it appears in the form 'Chemula.' Chinese travellers have called it 'Tchi-Mo-Lo'; Arabic writers, 'Ṣaimur' and 'Jaimur.' It is represented by the present insignificant village and port of Revadanda, dating from the time of the Portuguese, and situated some two miles from the older site, the sea having receded owing to the silting up of the creek. The caprices of local misrule at one period closed this ancient port to foreign trade, and this perhaps may have been the means of cutting off the Bene-Israel from further opportunities of contact with their people elsewhere; for they present the appearance of a community who, having up to a certain point preserved intercourse with the main body of their nation, were at some stage in their history separated from the same, and left to develop in their own independent way. They differ greatly even from the better known Indian remnant of their people inhabiting the Malabar coast. For example, the latter, owing doubtless to their having preserved the means of communication with their brethren in other parts of the world, have retained their knowledge of Hebrew, whereas the Bene-Israel had, till lately, lost all knowledge of their ancient tongue.

Though ranking among the fairest of the people of the country, the Bene-Israel, as to complexion, share the colour of the inhabitants of India. In most of their habits and modes of life and dress they have also accommodated themselves to the ways of the land they live in, and they speak the Marāthī vernacular. Till lately they have wholly rejected the name of 'Jew,' even to the degree of regarding the title as a stigma if applied to them, and have insisted instead on the appellation 'Bene-Israel.' Some would account for this by supposing that at some time or other the adoption of the latter title may have served to screen them from persecution by Muhammadans; but it is, on the whole, more probable that the origin of the name is to be sought in some more positive source. One's eyes naturally turn to the lands which first received the deportations of the Israelites of both captivities, and which continued for many centuries to be the centre of the life of Israelites both of the ten tribes and of the two tribes last taken captive. J. Brühl ‡ relates that in Persia he found the Jews almost invariably calling themselves 'Israel' instead of 'Yahūdī,' and he believes it very probable that many of the Jews of Persia and of Kurdistan (which is partly under Persian and partly under Turkish rule), as well as numbers of the Nestorian Christians, § are descendants of the ten tribes. There are several cogent reasons for connecting the early Jews of India with those of Persia as to origin. Early navigation made the transit between Persia and India easy. Again, in South India the Jews of Malabar are found located side by side with an historic body of Christians, no less unique in character than themselves, known as the Christians of St. Thomé, and these, if not actually derived originally from Persia, as some would have us believe,* were at any rate in their early history most intimately associated with that country, as is witnessed by the discovery of three ancient Persian stone crosses,† and also by the well-known fact that this community long drew its presiding bishops direct from Persia itself.‡ There is therefore no difficulty in believing that Persia, the depositing ground of the Israelites of both exiles, and the place in which they were long massed together in the greatest numbers, and where, also, in later times they were not infrequently subjected to severe persecutions,§ may have been the country which furnished Indian shores with many a contingent of Israelite immigrants. These would probably have been, after all, but the successors of many earlier Hebrew pioneers who had passed to and fro along the well-known trade routes to India, for purposes of merchandise. It is, however, at the same time right to mention that some have believed the Bene-Israel to be an offshoot of the Jews of Yemen (Arabia Felix).‖ Against this not impossible, or, indeed, altogether unlikely view, may be set the fact that no marks of intimacy or tradition of any common origin survive to the present day; nor is there traceable much that is common to the Yemenite Jews and the Bene-Israel in their distinctive observances.¶ To the unbiased observer the Bene-Israel suggest themselves as the descendants of Hebrews who at their first introduction into India must have made somewhat free alliances with the women of the land (as, according to ancient pre-Talmudic Hebrew practice, there was hardly a bar to their doing **), and thus an infiltration of Indian blood into their community would have taken place at an early stage of their sojourn in India. This was doubtless soon succeeded by a rigid practice of allowing marriage only with members of their own body—a rule which the example and influence of the Hindu caste system around them would have tended to encourage, and to which they have doubtless ever since most strictly adhered.

At the present time no Hindu caste could be more exclusive in regard to this custom of allowing racial intermixture than the Bene-Israel. They outban and stigmatize at once as *Kālā Israel*, or 'Black Israel,' all offspring of mixed unions. Such are not allowed at communal feasts to sit in close proximity to the rest of the community, or to

* See Yule-Burnett, *Hobson-Jobson*, Lond. 1903, 210 f.

† The author of the *Periplus Maris Erythræi* (A.D. 247) refers to it as 'Semulla.'

‡ The Jews of China, whose early connexions were with Persia, entered China by sea, *via* India, if tradition be correct.

§ As in the year A.D. 468, under Firuz (or Peroz), 'The Wicked.'

‖ Wilson, *The Bene-Israel of Bombay: an Appeal*, also *Lands of the Bible*, ii. 668. Rabbi J. Saphir, like Dr. Wilson, considers that the physiognomy of the Bene-Israel resembles that of the Jews of Arabia (see *Eben Saphir*, p. 43).

¶ The Bene-Israel possess a tradition that they came to India from 'the northern provinces.' This, Mr. Haeem S. Kehimkar would interpret of the Galilæan northern parts of Palestine, and he thinks that the Bene-Israel may have come direct to India by way of Ezion-geber and the Red Sea, for Jews settled in Galilee just before the Christian era. See Wyse, *History of the Hebrews' Second Commonwealth*.

** See Dt 21^{10-14}; also Smith's *DB*, *s.v.* 'Marriage.' From Dt 23^{3-8} may be inferred what might be done in regard to foreigners *other* than the Ammonite or Moabite.

intermarry with any except their own class. An analogy would seem to exist between the Bene-Israel and some other more or less unique Jewish communities, such as the Falashas of Abyssinia, the Jews of K'ai-feng-fu in China, the Jews of Yemen, and some among the so-called 'Black Jews' of Malabar, all of whom, while they manifest unmistakably the presence of the Hebrew stamina, reveal no less clearly traces of some intermixture with the people among whom they have sojourned. In the case of the Bene-Israel there is a characteristic type pervading the whole community which bespeaks the genuine Hebrew stock from which they have undoubtedly sprung.*

2. **Religious customs.**—It would be expected beforehand that a people with the antecedents we have described would exhibit much that was peculiar and interesting in their religious customs, when they again came into notice; and this is certainly the case with the Bene-Israel.

Three characteristic Hebrew observances which never died out among them first claim notice. These are (1) the practice of circumcision, (2) the keeping of the Sabbath, and (3) the retention in memory of at least part of the great Jewish formula, the *Shema' Yisrael* (commencing, 'Hear, O Israel, the Lord our God is One Lord!'). For want of a liturgy they were accustomed to use, in their ignorance, the words of the latter formula on every occasion of their religious gatherings, repeating the sentence several times over. We have noted their acquirement of the title *Shanvār Teli* ('Saturday Oil-men'), on account of their unyoking their oxen on Saturdays in observance of the Jewish Sabbath. A further distinctive habit which has clung to them, though some are dropping it now, is the custom of wearing side-locks of their hair (פֵּאוֹת), in reference to Lv 19^{27} 21^{5}. To this custom the fashion commonly adopted of shaving most or all of the rest of the head is wont to give a peculiarly exaggerated appearance.

(*a*) *Fasts and festivals.*—A regular sequence of religious seasons, fasts, and festivals has been in vogue among the Bene-Israel, and these when examined are found to coincide remarkably with the usual festivals and fasts of the Jews. They were preserved, however, wholly under Indian names, the latter being often connected with some special kind of food partaken of, or abstained from, on the occasion of, or being given on account of the festivity or fast bearing some resemblance to, or coinciding in point of time with, some Hindu or Muhammadan observance. Thus, the Feast of Tabernacles (kept, however, a fortnight out of time) was known as the 'Feast of partaking of Khir,'† a kind of confection made of new rice, sugar, scraped coco-nut, and spices. The Day of Atonement was termed 'Fast of Door-closing,'‡ because on this day all rigidly shut themselves up in their houses, wearing white clothing even to their very caps, and avoiding converse or contact with others. Purim was called 'Feast of Holi,'§ because the time of keeping it coincided with a Hindu festival of the same name (one of rowdy and debased character), observed at the same time. Passover was known as the 'Festival of Jar-closing,'‖ the jar being one containing a sour mixture or sauce, to which conceivably a suspicion of fermentation or leaven may have been held to attach.* The Fast of Ab (for the destruction of the first Temple) was characterized as 'Fast of [partaking of] Birdya,'† the latter being a sort of pulse put into the curry on this day, a vegetable diet having been adhered to during the eight days previous. The Feast of Weeks had somehow dropped out of use.‡

The festivals and fasts so far mentioned appear to form a class of their own among the Bene-Israel. They are all alike designated by the word *saṇ* (pronounced to rhyme with 'turn'), which is a Marāthī word of Sanskritic origin (a word which can denote both 'fast' and 'festival'). It will be observed that the seasons of observance already described relate uniformly to the chief and oldest Jewish festivals and fasts. There is a further set of festivals and fasts, also in vogue among the Bene-Israel, which have every appearance of being a class by themselves, and which have probably been superinduced in later times upon their older observances, presumably at the instigation of comparatively recent Jewish visitors and reformers from without.§ The festivals and fasts now alluded to, while relating almost entirely to Jewish holidays of later institution, are known among the Bene-Israel by names derived from the Hindustani language only, such as *roza*, of Persian origin, and *'urs*, of Arabic origin. To the latter class belong the ten days of expiation observed by Jews preceding the Day of Atonement, on which special penitential prayers called *seliḥoth* are used, and which, because of their bearing some resemblance to the long fast of the Muhammadans, were called by the Bene-Israel *Ramzan*.‖ A day after the keeping of *Navyāchā Saṇ*, or 'New Year's Festival,' occurs the *Navyāchā Rozā*, or 'Fast of the New [Year].' It corresponds probably to the Fast of Gedaliah, kept by Jews on the 23rd of Tishri; but if so, precedes it by twenty days. Two fasts occurring at two different seasons of the year are observed under the one name of *Sabābi Rozā*, the one fast apparently corresponding to the Fast of the 10th of Tebeth, commemorating the beginning of the siege of Jerusalem, and the other to the Fast of the 17th of Tammuz, kept in remembrance of the breach made in the wall of Jerusalem. The meaning of the word *Sabābi* is obscure. According to its Hindustani meaning of 'meritorious,' it might denote that the keeping of these additional fasts was considered a work of special merit; or, if referred to the Hebrew root סָבַב (=to surround), an allusion to the investment of the city would be obvious.¶

* A thoroughly good idea of the appearance of the Bene-Israel may be gained from the excellent portraits from photographs given in the *JE* under heading 'Beni-Israel.' Two out of the three synagogues shown there, however, do not belong to the Bene-Israel.

† *Khiricha Saṇ*.

‡ *Dārfalnicha Saṇ*. Rabbi J. Saphir (*Eben Saphir*, p. 45) says that he was puzzled to account for this name till he bethought himself of a prayer entitled תפלת נעילת שערים ('prayer of the shutting of the gates'), forming part of the concluding section of the Service of the Day of Atonement in the Modern Jewish Prayer Book.

§ *Holicha Saṇ*.

‖ *Anasi Dākhāchā Saṇ*.

* The rice-bread almost exclusively used by the Bene-Israel is at all times an unleavened bread.

† *Birdyāchā Saṇ*.

‡ The modern Jewish habit of doubling the first and last days of many festivals was not known to the Bene-Israel.

§ Such a reformer may have been David Rahabi, who is said by the Bene-Israel to have visited them long ago, and to have instituted this reform. He may have come from Cochin, where the surname 'Rahabi' (signifying 'Egyptian') still exists in the form of 'Roby.' Such an one would have doubtless communicated with the Bene-Israel through the medium of the Hindustani dialect, only in that case he must have visited them subsequently to about A.D. 1400, before which date Hindustani (or Urdu) was not a spoken language—not, as the Bene-Israel think, 900 years ago.

‖ The Bene-Israel add to these days a special fast during the preceding month of Elul (cf. Leo Modena [Rabbi of Venice, 1637], *History of the Rites, Customs, and Manner of Life of the Present Jews throughout the World* [tr. London, 1650]: 'There fore do they begin on the first day of Elul, which is the moneth immediately going before, to think of Acts of *Penance*; and in some places, they rise before day, and say Prayers, make Confession of their sins, and rehearse the *Penetentiall Psalms*. And there are many amongst them, that Indict themselves *Fasts*, do *Penance*, and give alms to the Poor, continuing on this course, till the Day of Pardon comes; that is to say, for the space of Fourty daies').

¶ These are the explanations suggested as possible by Mr. Haeem S. Kehimkar. The writer of this article would take the

A very extraordinary festival, and one now hardly observed, was that known as *Eliyah hana-bichā 'urs*, or 'the Fair of Elijah the Prophet.' To keep it the Bene-Israel resorted annually to a village-spot in the Konkan, named Khandalla, where, according to a legend, Elijah the prophet had once appeared to them, and thence had ascended to heaven. In date this festival corresponds to a Jewish one known as the 'New Year of the Trees' (ראש השנה לאלנות), in reference to Lv 19^{23-25}. The observance of such a festival as this seems indicative of a very prolonged sojourn of the Bene-Israel in India; for such a mixture of knowledge and ignorance in regard to the prophet Elijah, and its incrustation into such a practice as that mentioned, can hardly have sprung up and taken fixed form in a short time.* Hindus are accustomed to keep *melas*, or 'religious fairs,' in honour of their temples, and the Indian Muhammadans have also similar fairs, called by them *'urs*, in honour of the tombs of their *pirs*, or departed saints; and the Bene-Israel, in the strange custom that we have mentioned, must have been adopting the habits of the country.

(*b*) *Nazirite vow.*—Besides these rites and holidays of Judaism in general, the Bene-Israel have several interesting customs not so generally in use among Jews elsewhere, one of which is an apparent survival of the Nazirite vow. A boy in infancy is made the subject of a vow on the part of his parents.† The cause may perhaps be that for long they had no male offspring, or that former children had died. From the time when the vow is made till the time of its redemption no razor is permitted to pass over the head of the child. In consequence, a lad comparatively grown up may often be seen with long hair tressed up behind his head after the manner of a woman. When the time arrives that his parents feel able to redeem their vow, the hair is shaved off and weighed in the scales against gold or silver, or whatever else the parents may have before decided to give, and the equivalent so obtained is devoted to religious purposes. The shaved-off hair, instead of being burnt (Nu 6^{18}), is thrown into some tank or river, probably in keeping with the customs of Hindus and Indian Muhammadans, who are much given to letting their religious ceremonies culminate in the immersing of something in the water, the custom probably having its roots in Hindu veneration for the river Ganges, which is commonly credited with the power of re-appearing in all sorts of impossible places.

(*c*) *Burning of frankincense.*—A custom hardly less interesting than the foregoing, and one which prevailed till quite lately among the Bene-Israel, was the burning of frankincense on a number of religious occasions. Quite recently they have been dissuaded from its use by their Jewish co-religionists of other lands, who have represented to them that the practice was a superstitious one, copied from surrounding idolatry. It is by no means certain, however, that this custom had not its own ancient and independent Hebrew origin. It is significant that the Jews in China had a provision for burning incense in their synagogue at K'ai-feng-fu, it being a mark of Imperial favour that the incense for the purpose was provided free of cost by the Emperor himself. As already mentioned, the tradition was that the Jews had entered China by sea, *via* India, in the first instance.*

opportunity of stating here his very great indebtedness to this gentleman's writings for much information embodied in this article. Mr. Haeem's unpretending pamphlet, *A Sketch of the History of the Bene-Israel*, has thrown a flood of light on many an unknown custom among his people. Especially is what is here written as to festivals and fasts largely due to his pamphlet.

* See in *JE*, *s.v.* 'China' the arguments advanced for a very early date of the Jewish settlement in China. It is significant that the tradition was that the earliest introduction of the Jews into China was from the West, by crossing the sea, from India. It is no less worthy of notice that the MSS of the Jews of China show a connexion with the Jews of Persia.

† Or the vow may have been made before birth, contingent upon a son being given. The rite is not confined to lads. The writer was himself present when the subject of it was a girl, whose hair was shaved off as described above. If this be held to show that the vow-ceremony among the Bene-Israel is derived from Hindus (among whom such a practice does exist), it surely only removes the question of the origin of such vows in Eastern lands a stage further back.

An indispensable concomitant in a number of the religious ceremonies of the Bene-Israel is a sweet-smelling herb named *sabzā*. Botanically it is the *Ocymum pilosum vel basilicum*, and somewhat resembles mint. It is much used, also, in religious rites by the Indian Muhammadans. A smaller species of the same herb is the *Ocymum sanctum*, or 'holy basil,' the well-known sacred plant of the Hindus, called by them the *tulsī*. The important place which the *sabzā* twig occupies in numerous ceremonies of the Bene-Israel suggests the possible idea of its being used as a substitute for the hyssop of Mosaic ordinances.

(*d*) *Offerings.*—Certain religious offerings are made by the Bene-Israel which invite careful attention. A singular feature in them is the offering of goats' liver or of the gizzards of fowls (whichever animals may have been slain on the occasion). These portions, after being cooked, are brought and offered to the ministrant of a religious ceremony, the rest of the flesh of the animals slain being eaten by the host and guests assembled. It should be observed here that the Bene-Israel rarely, if ever, partake of any other flesh than that of goats (including occasionally sheep) and fowls. Again, a certain confection known as *malīdā* (a Persian word), a kind of cake or pudding, is used ceremonially by them. The impression irresistibly conveyed to the observer by all this is that these are survivals in this community of the ancient meat-offerings of Mosaic times, if not also vestiges of ancient sacrifices themselves. As a typical example of the way in which the various articles mentioned above, including frankincense, *sabzā*, and *malīdā*, were employed by the Bene-Israel in various ceremonies connected with festivals, vows, marriage, burial, etc., we may quote the following description of the ceremony performed at the fulfilment of a vow, as given by Haeem S. Kehimkar, in his *Sketch of the History of the Bene-Israel*:—

'A feast was given in the evening in the following manner:—After the invited party came in, a clean white towel or clean white sheet was spread on the floor, whereon a dish containing *malīdā*, five pieces of unleavened bread made of rice-flour besmeared with sweets, twigs of *sabzā*, and five pieces of the cooked liver of a goat, was placed. Another dish containing cakes of wheaten flour fried in oil, and wafers of unleavened bread also fried in oil, and livers and gizzards of as many fowls as may have been killed on the occasion, was also placed there. The dish also contained a glass of wine or other liquor as a drink-offering; and several other plates filled with all sorts of fruits were placed upon the sheet, over which they said the *Kiriyath Shema* about a dozen times. . . . After the ceremony was over, a handful of *malīdā*, together with a twig of *sabzā* and a piece of each of the articles placed in the dish and in the plates, were taken by the man who officiated as priest in his own hands, and before presenting these to the lady who had made the vow, he asked her what had caused her to make the vow. On her giving the reason, she was told that she was free from her vow, and the *malīdā* was given to her. The articles in the dish and plates were distributed among the party, except the pieces of liver and gizzard, as well as the five pieces of cakes and wafers, which were kept by the officiating priest for himself, while the guests were served with the feast.'

(*e*) *Dietary rules.*—With regard to dietary rules, it was customary with the Bene-Israel either to remove the sinew in the leg, in accordance with Gn 32^{32}, or, if skill sufficient for this somewhat intricate operation did not exist, to reject as food

* See *JE*, *s.v.* 'China.' Note also what is said there as to certain customs in use among Chinese Jews pointing to a pre-Talmudic origin.

the hindquarters of the animal altogether.* Blood, fat, animals strangled or maimed by beasts of prey, the Bene-Israel shunned altogether as food. In regard to fish, they would eat only those which had both fins and scales.

(*f*) *Kiss of peace.*—In common with the Jews of Cochin, the Bene-Israel preserve the custom of parting at their religious gatherings with the Kiss of Peace. The custom likewise prevails among the Christians of St. Thomé in Malabar, and is found, again, amongst the East Syrian Christians of Kurdistan.† This may be taken as one more indication of the probable link of connexion between the Jews of India and those of Persia in ancient times, especially when it is remembered, as we have already mentioned (see above, p. 470), that the Nestorian Christians of Kurdistan have a tradition of having been originally converts from Judaism. In performing the salutation among the Bene-Israel, the chief minister first bestows it on the most important persons present near to him, by receiving the fingers of the outstretched hand (the palms held vertically) between his own hands, after which the hands of both are simultaneously released, and the tips of the fingers of each person passed to his own lips and kissed. Those already saluted turn to bestow the salutation on others, the younger usually seeking it from the older, and inferiors from their superiors, till all have saluted each other. The procedure continues for some two or three minutes, during which an audible sound of the lips is heard throughout the synagogue.

(*g*) *Cup of blessing.*—At the close of some services in their newly-revived synagogues a ceremony takes place which has been termed by Christians who have observed it, 'the Cup of Blessing.'‡ A cup, containing a juice pressed from raisins for the purpose, is put into the hands of the minister, who, after first pronouncing a blessing over it, partakes of a portion of it. The remainder is then poured by the attendants into a large vessel containing much more of the same mixture. The *shamāsh*, or sexton, then passing round the assembly, with one or more assistants, distributes the contents of the vessel to each member of the assembly by means of pairs of little silver cups, one of which is being filled while the other is being emptied. As to the antiquity of this custom it is difficult to pronounce. In the opinion of some it is merely the performance of the usual Jewish ceremony of the *Habdālāh* (הבדלה) § in the synagogue instead of in the home; and if so, it may be of comparatively recent introduction among the Bene-Israel.

3. **Use of Hebrew names.**—The Bene-Israel have mostly retained the use of Biblical names, but the latter have commonly assumed an Indianized form, as *Banaji* for Benjamin, *'Abaji* for Abraham, and the like.‖ Similarly the names of the women receive the Indian affix *bai* (corresponding to our Mrs. and Miss) appended to them, as, for example, *Sarahbai*, *Miriambai*, and the like. Where the names of men and women of the Bene-Israel are purely Indian, they do not appear to be in any case compounded with the name of any Hindu deity, as is largely the case among Hindus. Surnames (which the Bene-Israel are gradually discarding) were formed by the addition of the syllable *kar* (pronounced to rhyme with 'stir,' and equivalent in meaning to 'inhabitant of') to the name of the village with which a man's family had become identified in the earlier days of Israelite settlement, such as *Kihimkar* = 'resident in [the village of] Kihim.' Dr. Wilson has remarked that at the time when he made his investigations the name 'Reuben' was the most common amongst men, and that the favourite Jewish names of *Jehudah* and *Esther* were not found. Both names have come into use among the Bene-Israel now.

4. **Hindu customs.**—Though preserving their characteristics and religion remarkably in the midst of an unfavourable environment, the Bene-Israel have not survived their long isolation altogether uninfected by the surrounding idolatry. Certain domestic customs and usages, too numerous and intricate to detail at any length, still linger among them, more particularly in rural parts, and specially among the women of the community. These owe their origin purely to Hinduism, though not all of them are of an idolatrous or superstitious character. Such customs are found plentifully connected with marriage ceremonies; also with occasions of birth, puberty, betrothal, sickness, and death.* On an occurrence of small-pox, or even during a performance of vaccination, the goddess of small-pox, *Shitalvādī* by name, is sought to be propitiated by some, and the furtive keeping of Hindu idols has not been unknown. As to the use of charms, and superstitious usages at childbirth, many parallels of a no less debased kind could be drawn from Kabbalistic practices under the sanction of modern rabbinical Judaism (see BIRTH [Jewish]). Rabbi Solomon in his *Travels* mentions that in the year 1846 he saw at Belgaum (a town in the south of the Bombay Presidency) the wives of [Israelite] men in the army stretching forth the fingers of their hands to the fire and kissing them as they lit the lamps.† It is right to say that a great effort has been made in recent years by the Bene-Israel as a body to throw off all this, and that a great change has taken place already.

5. **Organization.**—As to communal organization, the Bene-Israel, under the older order of things, recognized the authority of a headman, called a *muqaddam*, over each village community where sufficient in numbers, whose powers were considerable. He would assemble the community when necessary, preside over their deliberations, and act as their executive in matters relating to caste-discipline or organization generally. Besides this officer, there was another (not, however, found in every village) named the *qāsī*, meaning properly 'judge.' To him pertained the religious duties of ministrations at religious ceremonies, the performance of circumcision, marriage, rites of burial, and frequently the slaughtering of animals. With the *muqaddam* and *qāsī* were associated certain

* In regard to China, it is observable that this practice, even more than the keeping of Saturday as the Sabbath, attracted the notice of the Chinese, so that the Jews were accorded the title of *Tiao Kiu-Kiao*, 'the sect which extracts the sinew.' The writer of the article on 'China' in *JE* iv. 33 deduces from this appellation a further argument for the great antiquity of the arrival of the Jews in China, for he says, 'Rabbinical Judaism would have suggested more distinctive peculiarities of the Jews to the Chinese.' If so in China, how much more may we suppose great antiquity for the arrival of Israelites in India?

† Note the following from Maclean and Browne, *The Catholicos of the East and His People* (S.P.C.K., London, 1892), p. 256: 'One [deacon] goes to the Bema and says a litany; another gives the Kiss of Peace to the people, somewhat as at the daily services, except that the celebrant first kisses the altar and the deacon takes his hands between his own and kisses them, and then goes to the sanctuary door and gives the peace to the person of highest rank, and then to the next, and so on.'

‡ Wilson, *Lands of the Bible*, ii. 672.

§ A ceremony for placing a distinction or line of demarcation between times secular and sacred, as, for example, between week-day and Sabbath.

‖ A good example is the name of the retired commandant who built the first synagogue of the Bene-Israel in Bombay in 1796. His name was *Samaji* (= Samuel) *Hassaji* (= Haskel, *i.e.* Ezekiel) *Divekar* (= resident of the village of Dive).

* Many of these practices will be found described in *BG* (Bombay, 1885) XVIII. i. 515–535.

† *Travels of Solomon* (מסעות שלמה), p. 100: בעיני ראיתי בשנת 1846 כאשר הייתי בעיר בלגים את נשות אנשי הצבא אשר שם כאשר הדליקו את הנרות שלחו את אצבעות ידיהן אל האש ותנשקנה אותם.

chaugale, or 'elders' (properly four in number) who assisted them as counsellors. At communal meetings all adult members had a voice.*

6. Modern conditions.—It is only in quite recent times that the Bene-Israel have emerged into the light of history. It is through the observations and researches of Christians that they have become known, and in fact have been raised to some degree of education and advancement, and provided with their Scriptures and fresh beginnings of a knowledge of Hebrew.

(*a*) *State of transition.*—The long centuries during which they had previously remained hidden from notice can, it may safely be surmised, never have their story told. We now see the Bene-Israel at the parting of the ways, just as they are reaching out towards modern modes of life and culture. Their present tendency and aim is to forsake the ancient landmarks of the past, which it has been the object of this article to try to search out and describe. Their present effort is to conform themselves in all respects to the ways of modern Judaism, choosing as their standard the easier and more liberal principles of the Reformed School of Judaism rather than the more rigid ones of strict Talmudic Judaism, which, indeed, their present ignorance of Hebrew would ill fit them to follow. While they are in this transition state, it is now and then difficult to determine what has been of ancient usage among them and what has been of late, or of comparatively late, introduction. The study is further complicated by the probable occasional engrafting that has taken place, upon their original observances, of some of later date by occasional visitors and reformers at long intervals, in the way we have described. Previously the home of the Bene-Israel was exclusively among the villages of the mainland, extending over a tract running parallel with, and southwards for some fifty miles of, the island of Bombay. But since the establishment of British rule in India the Bene-Israel have commenced to migrate largely into the city of Bombay, where over four thousand of them now reside.

(*b*) *Occupations.*—Formerly, besides following their hereditary occupation of oil-pressing, many became also owners of land, cartmen, carpenters, stone-cutters, and cultivators. Now, in addition to these and similar occupations, they are pressing forward into positions as office-clerks and mechanics, and into the services of government, railways, and the municipalities; and some into the learned professions also. In ancient times they displayed great prowess as soldiers, and under the East India Company rarely failed to rise to the position of non-commissioned and commissioned officers. They proved loyal to a man to the British at the time of the Mutiny. The new system of 'promotion by caste returns,' by which the numerical strength of a particular caste is required, as well as intrinsic merit, to secure advancement, has served greatly to deter a minority like the Bene-Israel from now entering to any large extent on a military profession. Not many are possessed of wealth at present, and it is a regrettable fact that some who at one time were well off have squandered their patrimony and become poor.

(*c*) *Synagogues and worship.*—Originally the Bene-Israel had no synagogues or houses of prayer. The oldest of their synagogues in Bombay (which is also the oldest Jewish synagogue in Western India) bears the date A.D. 1796. In Bombay they have erected, mostly within the last hundred years, four or five synagogues of their own, two of which are of a permanent character, specially built as synagogues, and outside of Bombay eight or nine in different townships. In all of these worship is conducted in the modern Jewish manner,* and they possess the usual staff of synagogue officers, namely, the *ḥazzān*, or reader, the *gubbai*, or treasurer, the *shamāsh*, or sexton, etc.; and use the modern Jewish Prayer-Book of the *Sephardim*. They have now procured rolls of the Law, and read from them in the usual way. They have, however, no *kohanim* (supposed Levitical priests); and therefore the few functions assigned to such in the usual Jewish ritual have to go unperformed. They hardly now maintain their old character for the keeping of the Sabbath, for in Bombay and other centres of trade they attend offices, factories, and workshops in large numbers on that day. Though domiciled for a long course of centuries in India, they have done nothing to convert their Indian neighbours to the faith of the God of Abraham. In this respect their influence appears to have been *nil*.

(*d*) *Chief characteristics.*—The Bene-Israel are as yet but a feeble folk. Nevertheless they possess many sterling qualities, which might readily place them in advance of many around them. Though too ready to be quarrelsome, and displaying too great a fondness for liquor on festive occasions, especially on the part of the rising generation living amongst the temptations of large cities, they have always borne a good character for morality; and for courtesy and hospitality they are unsurpassed. Their women show considerable aptitude as teachers and nurses, when properly trained. In regard to religious inquiry, great indolence and want of earnestness prevail. Keenness as to material progress—and indifference to almost everything else—seems at present a ruling characteristic. A great future in India may be in store for such a people as this, if they will live fully up to their opportunities.

J. HENRY LORD.

BENEVOLENCE.—I. *AS A QUALITY OF HUMAN CHARACTER.*—1. **The New Testament usage.**—The NT writers are concerned mainly with practical morality. They make no attempt to frame a system of ethics. In studying one of the NT virtues, accordingly, we need hardly try to reach a scientific definition of it. We ought rather to note the working in it of the ultimate principle of NT morality, viz. love, and to trace

* The most modern religious revival amongst the Bene-Israel is connected with the names of a group of Jews from Cochin in the early part of the last century. Prominent amongst these stands out the name of Hacham Shellomo (Solomon) Salem Shurabbi, who died in 1856, after twenty years spent in endeavours for the religious resuscitation of the Bene-Israel (see Haeem S. Kehimkar, *Sketch*, p. 22).

* Their services are in Hebrew, a language which many can now read, but hardly any can understand. Some creditable efforts have been made of late years to provide service-books having the Hebrew interleaved with Marāthi. The daily service-book thus treated is a handsome volume, produced at some expense.

the phases of character and conduct in which its presence is marked.

In considering the operation of the supreme principle of love, we find one broad distinction. The object of love is man in his twofold aspect as a possessor of sacred rights and as a creature of manifold needs. On the one hand, accordingly, love requires the fulfilment of justice. A man must be protected in all the rights of his humanity, inasmuch as he is no mere thing or chattel, but a being made in the Divine image, and meant for the Divine fellowship. On the other hand, with equal emphasis the NT declares the obligation of benevolence. Our fellow-men are sacred not merely in their rights, but in their needs; and we are bound by the principle of love not merely to defend the former, but to meet and relieve the latter. The needs of men are meant to evoke the virtue which we designate by the term 'benevolence,' and by the other cognate words which in various aspects develop its meaning.

In the NT the following aspects of benevolence are the most clearly marked :—

(1) *χρηστότης*. — This beautiful term may be rendered by our word 'benevolence,' giving us the idea of a disposition in which there is nothing harsh or bitter, because the love of self has been swallowed up in a love larger and more compelling. In such a disposition there is a fountain of goodwill which flows forth freely and spontaneously in emotions of loving-kindness and deeds of helpfulness. Closely parallel is the term 'benignity,' by which, indeed, *χρηστότης* is rendered in the Rheims version of Gal 5[22]. It suggests a character large in charity, tolerant in judgment, gentle in speech, of ripe wisdom in the affairs of the soul, finding its delight and its reward in the comfort with which it relieves distress. Our familiar word 'kindness,' however, brings us nearest the heart of this very lovely phase of character. It is the very hall-mark of love (1 Co 13[4]). It has close affinities with forbearance and long-suffering (Ro 2[4], 2 Co 6[6]). It is its very nature to be patient and hopeful, and not to be turned aside by the frowardness and thanklessness of those whom it would help. Its conspicuous contrast is 'severity' (Ro 11[22]). Not, indeed, as though severity were reprehensible; but only that under the limitations of human insight, kindness ought to prevail, while severity must be kept within the restraints of love. Kindness in thought, word, and deed is the homely yet hard requirement of the NT law of love.

(2) *ἀγαθωσύνη*.—This may best be rendered 'goodness' (Ro 15[14], Gal 5[22], Eph 5[9], 2 Th 1[11]), in the sense of active goodness or 'beneficence' (*bonitas*). It emphasizes conduct, while *χρηστότης* emphasizes disposition. '*χρηστότης* is potential *ἀγαθωσύνη*; *ἀγαθωσύνη* is energizing *χρηστότης*' (Lightfoot on Gal 5[22]). Kindness issues in goodness, and is a characteristic of it. It has often been remarked that *ἀγαθωσύνη* does not occur in classical Greek, and that the virtue it expresses is not to be found in the Greek ideal of character. It has no place, for instance, in Aristotle's famous account of the 'high-minded' man. The *μεγαλόψυχος* will, indeed, confer benefits. He will do so, however, not from the love of man as such, but from a sense of what is suited to the artistic completeness of his character. In the NT, man is looked at under the light of the Divine love, and duty is construed from the point of view of the Divine purpose. The Godlike man, accordingly, is the good man, in whom love manifests itself as a ceaseless beneficence, which is a finite reproduction of the infinite goodness of God. The good man, unlike the *μεγαλόψυχος*, thinks not of himself in his beneficence, save as the recipient and the steward of the Divine bountifulness.

(3) *εὐδοκία* and *εὔνοια*.—The former describes the gracious will, which is the source of the benevolent deed (Eph 1[5.9], Ro 10[1], Ph 1[15] 2[13]). The latter is applied to the inner spring of conduct, which, viewed from without, might seem mechanical or compulsory. Even slaves may redeem their enforced labour from the taint of servility by performing it with goodwill to their masters as part of a Divine service (Eph 6[7]).

(4) *φιλανθρωπία*.—Benevolence has for its object every sentient creature, and thus includes kindness to animals. Its proper object is, however, man, whose greatness, as a being made in the image of God, is combined with the frailties of the 'fleshly' side of his nature; and in this connexion it is described as 'philanthropy.' With singular felicity the NT speaks of the 'philanthropy of God' (Tit 3[4]). Ordinarily, the term is applied to the love which man owes to his fellows (Ac 27[3] 28[2]). These references show that philanthropy has a less distinctively Christian note than goodness. It is exhibited by those who have not known the love of God in Christ. In this virtue Christianity has not made an absolutely new discovery. It has rather recovered and reinforced a native energy of human nature, which, amid terrible defacement of the Divine image, has not lost all trace of its original and prototype.

(5) *ἁπλότης*. — 'It is not exactly liberality . . . it is the quality of a mind which has no *arrière-pensée* in what it does; when it gives, it does so because it sees and feels the need, and for no other reason; this is the sort of mind which *is* liberal, and God assigns a man the function of *μεταδιδόναι* when He bestows this mind on him by His Spirit' (Denney in *Expos. Gr. Test.* on Ro 12[8]). Liberality describes benevolence in its absorption in the need which it relieves. It has a finer quality than the corresponding virtue described by Aristotle (*Nic. Eth.* bk. iv. ch. i.). A parallel to our Lord's word, 'It is more blessed to give than to receive,' may, indeed, be found in Aristotle's sentence, 'It is more distinctive of virtue to do good to others than to have good done to you.' Yet there is a significant difference. In the one, liberality is a product of a Divine grace, and awakens a Divine gladness. In the other, it is an artistic achievement, and awakens an æsthetic delight. In Aristotle's whole account we do not find 'a word about benevolence, or love to others, as prompting acts of liberality. We find no other motive but the splendour (*καλόν*) of the acts themselves' (Sir A. Grant, *Aristotle's Ethics*, ii. 60).

In the teaching of Jesus benevolence is not discussed, but it is depicted with consummate skill in His parable of the Good Samaritan, in whose action kindness and goodness, goodwill, philanthropy, and liberality are exquisitely blended. In the character of Jesus no aspect of benevolence is wanting. *χρηστότης* is seen in His bearing towards those who were excluded from the respect of men. *ἀγαθωσύνη* is illustrated in the whole ministry of Him who 'went about doing good.' *εὐδοκία* characterizes His attitude towards all men, even those who rejected Him. His *φιλανθρωπία* breaks through all barriers of race or creed or artificial conventionality. His *ἁπλότης* pours forth endless benefits, physical and spiritual; He bestows not merely life, but abundance. This virtue, which Jesus thus portrayed and exemplified, He laid upon His disciples as a sacred obligation. There must be no limit to their liberality (Mt 10[8]). Only by ceaseless beneficence can they realize the privilege of sonship toward God, for He is 'kind unto the unthankful and to the evil' (Mt 5[45.48], Lk 6[35]).

2. Its place in the history of ethics.—Benevolence is not an isolated ethical unit. It is an element in the organism of virtue, and gives tone and quality

to the complex of virtues which constitute the character as a whole. The value of an ethical system, like that of an individual character, may be estimated by the place which benevolence occupies in it. To trace the varying recognition of this virtue in the history of ethics would be to write the moral history of man. A few steps in the great development may here be indicated.

(1) *Greek ethic.*—We have seen that benevolence does not appear in those systems which reflect the life of citizenship in the independent and intensely aristocratic free cities of the Hellenic world. The reason is that man as man has not yet arisen on the view of the Greek moralist. He is thinking of life within the limits of a Greek city. The intellectual and æsthetic interests prevail. There is room for patriotism. Self-interest must yield to the claims of the State. But goodwill to man, the obligation of helpfulness to all the children of need, and the 'enthusiasm of humanity,' have scarcely dawned on the Greek mind in its quest for ethical completeness. When the independent city falls, and the barrier of its walls is levelled, men are able to look abroad, and to discern more clearly the bonds that connect them with their fellows. The age of the great individualistic philosophies marks the entrance of benevolence into the circle of the virtues. Epicureanism (*q.v.*), indeed, might seem to be selfish and destitute of sympathy. It may be urged, however, that its primary impulse was humanitarian, and that its true purpose was to deliver men from the spiritual bondage in which their souls were sunk. Its gospel of ἀταραξία was proclaimed to a despairing world by men who, like Epicurus and Lucretius, were full of sympathy for their fellow-sufferers (see Masson, *Lucretius*, 307, 321). Yet it is in Stoicism (*q.v.*) that we find the first explicit recognition of benevolence. The high ethical rank of Stoicism has been universally recognized. Its description of humanity as an organism,—often in Seneca and Epictetus with striking verbal resemblance to the language of St. Paul,—its ample assertion of the value of man as man, its emphasis on the duty of boundless helpfulness, its beneficent influence on social reform and Roman jurisprudence, indicate a great advance in the moral history of man.

At the same time, the failure of Stoicism is as evident as its triumph. (*a*) Its ideal is empty and unrealizable. Stoic cosmopolitanism is no more than a formal unity of men as beings possessed of reason.

'What is meant by a φιλανθρωπία that is not fertile in special affections to individual human beings, affections which adapt themselves to their special character and the special relations into which they are brought? And what is meant by an organic unity of mankind in a πολιτεία τοῦ κόσμου, if the reason that is to bind them together be taken merely as a common element in the nature of each, which connects them in spite of their differences in other respects?' (Caird, *Evolution of Theology in the Greek Philosophers*, ii. 126).

(*b*) It failed to exemplify in the details of life the very virtue which it was the first to introduce into the ethical ideal. It proclaims a universal bond and a world-wide sympathy. It too often exhibits a revolting hardness and inhumanity.

'The framework or theory of benevolence might be there, but the animating spirit was absent. Men who taught that the husband or the father should look with perfect indifference on the death of his wife or his child, and that the philosopher, though he may shed tears of pretended sympathy in order to console his suffering friend, must suffer no real emotion to penetrate his breast, could never found a true or lasting religion of benevolence' (Lecky, *European Morals*, i. 191 f.).

(2) *Christian ethic.*—The requirement of a 'religion of benevolence' is satisfied in Christianity. (*a*) Christianity was the fulfilment of the OT religion, which was marked by an intensely social spirit. No doubt, the limits of this social impulse were fixed by the Jewish nationality. At the same time, the great prophetic ideas of the righteousness and grace of God, and of the supreme worth of morality as compared with ritual, were seed sown in the soil of humanity which could not fail of fruit. They found their glorious harvest in the 'new commandment' of love, set forth by Jesus as the law of the Christian fellowship. (*b*) Christianity is fundamentally the life of Christ. His character made one deep and ineffaceable impression upon His followers. They felt that He loved men. They worshipped Him; and they believed that they could truly honour Him only when they poured forth on others the love of which they had been the recipients. Benevolence in the Christian religion is more than the precept of a teacher, more even than a lovely example. It is the very Spirit of Jesus, breathing upon those who adore Him, and quickening them to a life like His. (*c*) Christianity is the consciousness of redemption. God is in Christ reconciling the world to Himself. The Christian is a citizen in the Israel of God, which includes Gentile as well as Jew. He is a member of the household of which God is Father, and which therefore has room for all the children of men. To accept Jesus as Saviour and Lord is to recognize all men as the objects of the Divine benevolence, and to be pledged to its service in the interests of humanity. The NT abounds in exhortations to benevolence (1 Co 13, Eph 5^{2}, Col 3^{14}, Gal 5^{14} 6^{2}, 1 Jn 3^{11} 4^{7-9}). The everyday life of the Christian lies within the concentric circles of φιλαδελφία and φιλανθρωπία. The Christian character presents a new type of virtue; and in it benevolence shines resplendent. The failure of Stoic cosmopolitanism is met by the triumph of Christian benevolence. Instead of being abstract and unreal, Christianity is practical and concrete. Instead of being cold and hard, Christianity has sanctified the emotional side of human nature, and has made love (ἀγάπη not ἔρως) a virtue, nay, the sum of virtue, and the dynamic of all the virtues.

Christianity proved more effective than Stoicism in suppressing or mitigating great social evils, *e.g.* the exposure of infants, the gladiatorial combats, slavery. Above all, Christianity has established the paramount claims of love. In spite of many sins committed by Christians against the spirit of love, the religion of Jesus has succeeded in binding the obligation of benevolence upon the conscience of the race.

After Christianity lost the fervour and freshness of the Apostolic age, it was invaded by the parallel influences of Stoicism and Judaism, and became dominated by a legal spirit. With the entrance of legalism, the virtues tended to lose their character as elements in a living, spiritual whole, and were subjected to a process of definition and classification. Love ceases to be the sum of virtue. It takes its place as one of the three theological virtues; and to these are added the four virtues of the old Greek lists, revised with more or less success by theologians like Origen, Ambrose, and Augustine.

These lists were elaborated throughout the mediæval period not without real ethical insight, and in them benevolence was amply recognized. From the emblazoned ceilings and walls of churches, from the carved pillars and porticoes of palaces and market-places, from the pages of poets like Dante and divines like Aquinas, the appeal for practical goodness went forth. These exhortations were far from ineffective. 'Nothing shows how the Church of the 13th and 14th centuries had instilled the mind of Jesus into the peoples of Europe like the zeal with which they tried to do their duty by the poor, the sick, and the helpless' (Lindsay, *History of the Reformation*, i. 141). It was a grave defect, however, to substitute lists of duties and virtues for the organization of virtue through one controlling principle. There was also the danger of

over-emphasizing one isolated virtue, till it should become a curse rather than a blessing.

In this way benevolence drew to itself an exaggerated devotion, which had the effect of filling Europe with mendicants and sturdy idlers.

The Reformation was a reaction from legalism. It was a return to primitive Christianity, which was not an ecclesiastical system, but a life in fellowship with Christ. Christianity made a new beginning in its Divine task of educating and regenerating humanity. It is not, however, in one crisis that mankind is brought to its goal. The principle of the Reformation—the spiritual fellowship of man with God—had to be applied in all the fields of man's moral activity; and this implied a process of centuries. The recognition of the fact that virtue, as a spiritual reality, cannot be dismembered and articulated into a code makes its practice far harder than under a legal system. This is specially true of such a virtue as benevolence, when it is no longer defined and limited by a series of outward actions, but has regained its place as an organic outcome of love, boundless in scope and infinitely varied in exercise.

The very success of the Reformation, moreover, in breaking the formal unity of mediæval Catholicism and emphasizing the narrower unities of family and society, as well as the sacredness of the individual, made the problem of benevolence the harder. To maintain it against the perennial selfishness of man, and to apply it amid the increasing complexities of modern civilization, remain the tasks of the moralist and the social reformer.

(3) *The ethic of the 18th century*.—It was inevitable that the abandonment of the principle of outward authority should raise in the most acute form the question as to the sanctions of morality. If moral precepts do not rest on the authority of the Church, from what do they derive their obligatory character? Why, in particular, should men be required to surrender their individual preference to further the advantage of others? The moral problem, accordingly, for a hundred years of post-Reformation thought, during which individualism held the field in psychology and ethics, turned mainly upon the question of benevolence. Is it a radical instinct of human nature? If not, how has it come to occupy the place which common opinion assigns it? The controversy was waged, mainly, in England. *Hobbes* states the question. He finds man's primary condition to be that of appetite and desire. All man's natural tendencies are 'self-regarding.' The *jus naturale* 'is the liberty each man hath to use his own power as he will himself for the preservation of his own nature' (*Leviathan*, ed. 1839, ch. xiv.). A vivid picture is drawn of the evils to which the exercise of this natural right would expose humanity; and a strong appeal is made for the surrender of individual independence to the rule of the sovereign.

Such a cynical estimate of human nature could not but provoke reply. *Shaftesbury* distinguishes two classes of natural tendency, some being directed to the good of others, and some to that of self. Virtue lies in the due proportion of these two sets of natural instincts, a proportion discerned by the special faculty of the moral sense. *Hutcheson* even more forcibly vindicates the reality of benevolence, and resolves all virtue into it. *Butler*, in like manner, argues for the disinterested character of benevolence, and regards it as 'the sum of virtue.' All these thinkers are under the control of individualism; and, from the point of view of 18th cent. individualism, the only possible question was: 'Is benevolence one among the tendencies and impulses which are found in the individual human being?' To this question, the answer could only be a simple 'yes' or 'no.' When, however, individualism began to give way, and an organic view of society to take its place, a fresh study of human nature, and of the 'good' corresponding to it, had to be made. The psychology which enumerates faculties, instincts, etc., has been abandoned. Man is no longer viewed as a mass of tendencies, among which benevolence may be enumerated. He is a living being, a true organism, or 'unity in differences.' His moral nature has been formed by a long process of education and discipline. This historic development has disclosed the deepest fact regarding man's moral nature, viz., that, when man is most 'self-regarding,' he is least himself; that he reaches his true being only when he abandons the point of view of the isolated individual, and goes out to his fellows in self-forgetfulness, and so enriches his own personality through sharing their experience.

Benevolence, therefore, is not an instinct about which it may be disputed whether we do or do not possess it. It is the very energy of the soul, according to its highest excellence, in a perfect life. We come back, accordingly, by another path to the dictum of Hutcheson and Butler that benevolence is 'the sum of virtue,' or rather to the position of the NT that 'love is the fulfilling of the law.' The 20th cent. has begun by accepting the organic principle, and has addressed itself with deep seriousness to the task of its practical application. Amid schemes of social amelioration, however, we need constantly to remember that benevolence cannot be made to order. It is begotten of the sense of membership in a society, which cannot be constructed by any sociological machinery, however ingenious. The message of Christianity is that this society exists. It has descended out of heaven from God. It consists in the fellowship of those who have surrendered themselves to the Divine love in Christ, and are impelled and quickened by a debt whose magnitude grows the more loyally they discharge it. Benevolence, as a social energy, cannot live unless it be revived at the springs of the Divine philanthropy. As the inspiration of the individual life, it must be derived from, indeed it consists in, the constraint of the love of Christ.

II. *As a Divine attribute*.—1. **Its place in the character of God.**—Consideration of the moral attributes of God can be fruitful only if two principles are borne in mind. (*a*) The attributes are not 'things' or 'forces.' It is a profound mistake first to isolate them, and then to endeavour to relate them to one another logically or mechanically. They exist in the unity of the Divine character, and are partial manifestations of its inexhaustible wealth. (*b*) They are not to be viewed as given, in their truth and fullness, in man, and then applied to the Divine character as copies or reflexions of what they are in human nature. The moral attributes of God are to be learned, primarily, from the revelation which Christ has given, in His own person, of the Being whom He, alone among men, perfectly knew. The God whom we know in Christ is love. This is the absolute truth of His nature, in the light of which every aspect of his character is to be viewed. His love is scarcely to be classed among His attributes. It is rather the central principle in which they all meet, the spiritual power from which each derives efficiency.

'Wisdom is its intelligence; might its productivity; the entire natural creation and the entire revelation of righteousness in history are the means by which it attains its teleological aims (Martensen, *Dogmatics*, 99).

In pursuing its teleological aim, which may be defined as the Kingdom of God, the Divine love follows two great lines of action. In the first place, it requires the vindication of righteousness. The

'rights' of every creature must be maintained; that is to say, every creature must be preserved in the fulfilment of its special vocation, and guarded in its realization of its own proper nature. These rights are sacred. The violation of them must be marked, in the administration of the universe, by definite retribution. The harmonious development of the vast and delicate order of the universe, by the subjection of every part to the living Will which animates the whole, is an essential interest of the Divine love. In the second place, the love of God manifests itself as goodness, or benevolence. It is pledged to the task of furthering the good of every creature. God has brought the universe into being as the means of His self-revelation; and it is only by His revelation of Himself to it that it reaches its perfection. His love takes shape in ceaseless goodness, pouring forth benefits in proportion to need; and, in this constant communication, its own glory and blessedness are eternally increased. 'It is the nature of goodness to possess its own fullness only in communication, to have only as it gives' (Martensen, *op. cit.* 98). It is important thus to connect the Divine benevolence with the aim of the Divine love. The Divine benevolence is part of the operation of the Divine love, which, from the beginning of creation, has been preparing a world in and to which God could fully reveal Himself. It signifies His goodwill toward all the creatures of His power, His determination to bless them according to their utmost capacity, and to bring them to the highest perfection of their nature. His love is not altered by the fact that man, the head of the lower creation, has rebelled against Him. Rather it has become stronger and deeper, in view of the unspeakable tragedy of human sin. The goodness, which is marked in all creation and providence, has become the mercy whose crowning manifestation is the Cross of Christ.

The Biblical usage confirms this view of the relation between the benevolence of God and the highest aim of His love. The OT believers are profoundly convinced of the goodness of Jahweh. But they do not mean by the Divine goodness such a sentiment as a pantheistic æstheticism might attribute to God. By goodness they mean a quality of the Divine character which comes into operation as God pursues His great aim of redeeming and blessing His people. Even when physical nature is summoned as evidence of the Divine goodness, it is viewed as the sphere wherein God carries on His redemptive work; and the goodness of God manifest therein is an argument for confiding in His faithfulness to His saving purpose and in His ability to carry it to completion. More commonly, the goodness of God is manifest in the lives of those whom He is preparing for Himself. Often the Divine goodness has high spiritual qualities, and is expressly referred to as an element in redeeming grace (*e.g.* Ps 23[6] 25[7] 65[4]). Verbal references to the goodness of God are much less frequent in the NT. Its main theme is the love manifest in Christ. The goodness of God is an aspect of that gracious working whereby He leads men to the knowledge of His Son (Ro 2[4] 11[22]).

2. Its operation in creation and providence.—Christian apologetic is not bound to construct a complete theodicy. It must make the love of God, proved in Christ, its presupposition and its starting-point. Thence it must review the life of nature and of man, and seek to exhibit the evidence it finds therein of God's wise and benevolent working. If it can show that, in creation and providence, God's goodness has been operative, preparing the way for the triumph of His love, its task is sufficiently performed, even though it cannot produce an intellectual solution of every mystery in the Divine dealing with men. The evidences of the Divine goodness are such as these:—

(1) *The adaptation of the physical universe to the development of man.*—By its resistance to human effort, quite as much as by its fertility, it furthers the physical, intellectual, and moral well-being of man. By its beauty and its wonder, as well as by its pathos and decay, it quickens man's sense of the unseen, deepens his capacity for worship, and gives him intimations of his immortality.

(2) *The competence of human nature for a Divine vocation.*—The powers which man possesses fit him for the service of God, and the blessedness of fellowship with Him. While being, in one aspect, himself a part of physical nature, man is able to live above natural conditions, to penetrate to the significance of the world, and make it the home and the instrument of his spirit. His dependence upon his fellows prepares him for a social good, wider and richer than could be attained by any merely individual achievement. There are traces, growing ever clearer with the progress of humanity, that man is capable of a higher fellowship and a nobler blessedness than that which can be obtained in the most cultured human society.

(3) *The organization of human life for ideal needs.*—The history of the growth of the various forms of organized human life exhibits the powers and destiny of man. In the Family, he learns to be human, and finds in love, trust, reverence, and self-denial the very glory of humanity. In the State, he is called and enabled to serve his fellow-men, and to save his life by losing it. In the Church, he breathes the atmosphere of the love of God, and enters upon the blessedness of a Divine Sonship.

(4) *The direction of human history towards the goal of the Kingdom of God.*—The goodness of God is seen in His education of the race by the long teaching of experience, and by the moral discipline of ages. The slowness of the process may not be wholly explicable; but, at least, it is not inconsistent with the goodness of God, who is not slack, as some men count slackness. The cosmic movement of the great Divine design must, in any case, be slow.

(5) *The training of individual character.*—The necessity of connecting the idea of the Divine benevolence with that of the saving purpose of the Divine love is specially urgent here. The benevolence of God is seen not in a promiscuous bestowal of good things, but in the steadfast pursuit of His gracious purpose, which seeks, by common beneficences of every day, and by significant dealings in judgment and mercy, to bring men into the Kingdom.

Christian experience has learned, in communion with Christ, that God is love. Under the illumination of this thought, it surveys the whole field of nature and of human history, and discovers therein unfailing tokens of the presence and operation of the Divine goodness.

3. Its vindication in view of objections.—Three great facts traverse the argument for the goodness of God: pain and death and sin. Many who do not doubt the Being of God are brought by these terrible realities into grave perplexity and profound spiritual distress. It ought to be admitted that a complete intellectual solution of the problems thus raised is impossible under the conditions of our present experience. In view of them, we ought to occupy the true ground of Christian theology, as that is given in Christian experience. Deeper than the deepest analysis of pessimism, Christianity pierces to the need of man, and finds that need met in Christ. God is love because, in Christ, He saves and perfects men. Here is a fact of experience, which outweighs the facts that seem to impugn the goodness of God. Living in this experience, the mind is able to maintain its con

fidence in God, even under the strain of ignorance and doubt. Pain and death and sin come within the scope of the Divine purpose, and we have warrant to believe, though no human calculus can adjust every detail, that they subserve the Divine end.

Pain is a terrible reality. It has, however, such noble uses that we can well understand how a good God might include it in the scope of His working. When, moreover, it is not merely borne as an infliction, but taken up as a ministry, the last shadow of inconsistency with the Divine goodwill is removed. 'It not only passes into the category of good things, but it becomes emphatically *the good*' (Hinton, *The Mystery of Pain*, 11 f.).

Death fills the world with sorrow. Yet two facts counterbalance its desolation. In the first place, the ultimate source of its terror, viz. the separation from God, of which, to the sinner, it is the sign and seal, has been removed. For those who have accepted the reconciliation the terror of death no longer exists. In the second place, death, like pain, becomes no longer in any sense an evil, when it is accepted as a service. Interpreted by the death of Christ, death becomes the crowning service of the living, for the deepening and expansion of the life of others. The principle of vicarious suffering runs through the whole universe, and reaches its highest application in the life of man.

Such considerations are not available to heal entirely the hurt of the human heart. Enough of mystery remains to foster a deep humility and a tender and catholic sympathy. In thus binding human beings in the bonds of mutual compassion, Death fulfils one of its most precious functions.

Sin is the most awful fact, the most terrible mystery of the world. To the question, how a benevolent Supreme Being could permit the entrance of Sin into His world, there can be given no complete answer. The fact of sin can be met only by the fact of redemption. Christianity does not solve the speculative question, but it meets the spiritual need with the message that God was in Christ, reconciling the world to Himself. To enter into the experience of reconciliation is not to be put in possession of a theoretic proof of the consistency of the existence of sin with the Divine benevolence. It is, however, to be enabled to wrest from sin, which seemed utterly incompatible with the existence of goodness in God, the profoundest testimony to the presence and supremacy of love in the Divine character. Without sin, we could not have known the depth of our need, and the uttermost of our dependence upon God. Without sin, we could not have known the exceeding greatness of His love, and the uttermost of His capacity for sacrifice. Without sin, as a fact in the experience of men, we could not come so close to them in sympathy, and could not become partakers of Christ's sufferings.

From all survey of the operations of the Divine goodness, we return to the experience of redemption. The Being who spared not His own Son, but delivered Him up for us all, is good, of unerring wisdom and untainted holiness. From the character of God, as it is known in Christ, we pass to a judgment upon the whole universe, and declare, with unclouded assurance, that it confirms the conviction of faith that God is good.

T. B. KILPATRICK.

BENGAL.—1. General description.—The Province of Bengal, or, as it is sometimes designated, Lower Bengal, is that portion of the Indian Empire comprising the lower valleys of the Ganges and the Brahmaputra. In its original form the Province occupied the region lying between 19° 18′ and 28° 15′ north latitude, and between 82° and 97° east longitude. Since the British occupation the boundaries have been several times re-arranged. In 1874 Assam (wh. see) was constituted a separate administration; in 1905 the boundaries of Bengal, Assam, and the Central Provinces were re-constructed, the eastern portion of the old province of Bengal, containing the Dacca and Chittagong divisions with the Districts of Rājshāhī, Dinājpur, Jalpaigurī, Rangpur, Bogrā, Pābnā, and Māldā being, with Assam, constituted a new province under the name of Eastern Bengal. The present province of Bengal proper is bounded on the north by Nepāl and Sikkim; on the west by the United and Central Provinces; on the south by the Bay of Bengal and portions of the Madras Presidency; on the east by the new Eastern Bengal-Assam province, from which it is divided by the rivers Ganges and Madhumatī; on the east by Burma and hilly country occupied by independent tribes; on the south by the Bay of Bengal.

The following table shows the area and population of the new provinces as at present constituted:—

Name of Province.	Area in Square Miles.	Population.	Religions.		
			Hindus.	Muhammadans.	Others.
Bengal Proper	110,054	50,722,318	39,267,301	9,037,069	2,418,948
Eastern Bengal with Assam	101,147	30,788,134	11,519,574	17,828,129	1,445,431

This rearrangement of boundaries came into effect after the completion of the Census of 1901; and as it is now impossible to rearrange the details of the religious statistics to correspond with the present position, it is more convenient to treat the province as it was constituted prior to the partition in 1905. The physical conditions of the region are much diversified. It consists of the alluvial plains forming the valleys of the two great rivers; of the crystalline plateau of Chotā Nāgpur, and the hills extending from the south-east towards the Ganges at Rājmahāl; the narrow strip of alluvium forming the commissionership of Orissa; and, lastly, a portion of sub-Himālayan region including the sanatorium of Dārjīling, and the rough hilly country on the Burma frontier.

2. Name and historical geography.—The name of Bengal, derived from the Skr. *Vaṅga*, does not appear in Muhammadan or Western literature before the latter part of the 13th cent., when it took the place of the earlier title, Lakhnāotī (Yule, *Anglo-Indian Gloss.* s.v.). The name Vaṅga was in early times strictly applied to the country stretching south-east from Bhāgalpur to the sea, in other words, to the Delta formed by the lower reaches of the Ganges and the Brahmaputra. The Province is usually divided into four sub-provinces—(*a*) Bihār to the west, including the ancient kingdom of Magadha, which is now represented by the Districts of Patna, Gayā, and Shāhābād, with its capital at Rājagriha, some thirty miles north-east of the present city of Gayā. North of the Ganges was Videha or Mithilā, now included in the Districts of Darbhanga, Sāran, Champāran, and North Muzaffarpur. The south portion of the last-named District constituted the small kingdom of Vaiśālī. To the east lay Aṅga, including the modern Districts of Monghyr, Bhāgalpur, and Puraniya (Purnea). From the religious point of view Bihār is important as the place of origin of both the Buddhist and the Jaina faith. (*b*) Bengal Proper, which occupies the deltaic region. In the time of the *Mahābhārata*, North and East Bengal, with Assam, formed the kingdom of Prāgjyotisha, or, as it was called later, Kāmarūpa. East of Bengal Proper lay Vaṅga, which gave its name to the province, its population living principally in boats, and represented by the modern Chaṇḍāls. (*c*)

Orissa, the old name of which was Kaliṅga, stretching from the mouth of the Ganges to that of the Krishna. In later times the name Kaliṅga was applied only to the Delta of the Godāvari, while that of the Mahānadī became known as Utkala or Odra, whence the modern name of the sub-province was derived. (*d*) Chotā Nāgpur and the Tributary States of Orissa, a region of hill jungle inhabited by tribes of non-Aryan origin, parts of which were known to Muhammadan writers as Jhārkhand, 'the jungle region,' which the lords of Northern India never attempted to occupy.

3. **Modern geography.**—The Province may be described generally as consisting for the most part of the lower valleys of the great rivers, the Ganges which enters it on the west frontier and passes through it diagonally, and the Brahmaputra which, after forcing its way through a break in the Himālayan chain, flows through Assam and the eastern portion of the Province. These alluvial tracts are flanked by a series of highlands—to the north the outlying lower range of the Himālaya; to the south-west the hilly region of Chotā Nāgpur and Orissa; to the east the hilly tract of Tippera, which is the boundary between the Province and Burma.

4. **The plain country.**—The Province thus displays great diversities of aspect and climate, which have affected the ethnology, social character, and beliefs of the people. Beginning from the west, where the Province marches with the United Provinces of Agra and Oudh, we have the sub-province of Bihār, divided into two portions by the Ganges. To the extreme north is the submontane strip, part of which constitutes the Tarāī, or region of fen and forest beneath the lower slopes of the Himālaya; south of this is the Gangetic zone, a country with an ancient civilization, large towns, and a well-developed system of agriculture. This is the finest and most healthy part of the Province, a country producing wheat, sugar, and the other staples characteristic of the upper valley of the Ganges, and supporting a number of indigo factories managed by Europeans, whose industry has in recent years suffered grievously through competition with the artificial dye prepared in Germany. The people here are a fine, manly, sturdy race, many of whom used to enlist in the old sepoy army, but now find occupation as porters and messengers in Calcutta. Bihār south of the Ganges is a less fertile country, which, except in the neighbourhood of Gayā, has only recently come within the influence of Aryan civilization. The physical appearance and beliefs of the people indicate intermixture with the non-Aryan races occupying the adjoining plateau of Chotā Nāgpur. Passing eastward along the valley of the Ganges, we gradually reach the dank steamy Delta, the product of the great rivers which here enter the sea. The compact mud villages of Bihār here give place to little thatched hamlets, each hidden within a plantain clump or grove of shady trees. Rice is the staple crop and the universal food, instead of the wheat, barley, and millet which support the peasant of Bihār. The people, though their intelligence is sharper, have little of the manly vigour and independence of the Bihārīs. They belong, in fact, to different race-types (see below, § 6). Where the Delta advances into the Bay of Bengal is the great forest swamp of the Sundarbans, a network of rivers and estuaries enclosing numerous islands, which are often half swamp. This region has hardly any permanent population save a few fishermen, hunters, and woodcutters, who brave the malaria and wild beasts which its jungles contain. The Orissa Delta farther south is the work of three rivers, the Mahānadī, Brāhmanī, and Baitaranī (which see). These rivers, as they approach the sea, deposit masses of silt which raise their beds above the level of the surrounding country, with the result that it becomes a water-logged swamp, a network of creeks and muddy channels, forming a district pregnant with malaria.

5. **The hill tracts.**—To the student of ethnology and primitive religion the most interesting portions of the Province are the plateau of Chotā Nāgpur, the hill tracts which rise above the Orissa Delta, and the tangled region of hills which separates the Province from Burma. Chotā or Chūtia Nāgpur consists of a confused mass of hills, plateaux, and ravines interspersed with jungle, which forms the most easterly extension of the hill country of Central India and of the Central Provinces abutting on the Gangetic valley near Bhāgalpur. This and the hill tracts of Orissa to the south-west form the last refuge of the Dravidian and Muṇḍā races, and are occupied by non-Aryan tribes like the Santāls, Hos, Orāons, and Kandhs, who still preserve their original languages and beliefs comparatively unaffected by the Aryan immigrants from the west who colonized the plain country beneath them. Similarly, the Chittagong hill tracts on the eastern frontier are inhabited by Maghs, Chakmās, Tipārās, and Kūkīs, races of Mongoloid stock, who 'build their houses on bamboo platforms raised ten feet from the ground, and cultivate on the *jhūm* system; that is to say, they make clearances in the jungle, and, when the trees and undergrowth which they have cut down become sufficiently dry, they burn them; then, after the ground has been softened by rain, they dibble in seeds of rice, cotton, maize, melons, and yams, all mixed together' (Gait, *Census Rep.* 1901, i. 81). In the Tarāī at the base of the lower Himālaya we find a malarious tract occupied by primitive tribes like the Thārus (wh. see), or immigrants from Nepāl or the hill country.

6. **Ethnological character of the people and their languages.**—The races inhabiting the Delta of the Ganges and its tributaries from the confines of Bihār to the Bay of Bengal have been included by Risley in the Mongolo-Dravidian or Bengālī division, one of the most distinctive types in India, characterized as regards its Mongoloid element by a high cephalic index, in other words, included within the brachycephalic class, while the breadth of the nose suggests an infusion of Dravidian blood. In Western Bengal the Dravidian element, as might be expected from the fact of this part of the Province abutting on the Dravidian stronghold on the Chotā Nāgpur plateau, is predominant; while to the east the form is modified owing to closer contact with the Mongolian race which probably entered Bengal down the valley of the Brahmaputra. To the west, again, in Bihār, the type assimilates to that of the Aryo-Dravidian prevailing in the upper Gangetic valley. This is characterized by a longer form of head and a narrower and finer moulded nose. In the hill tracts to the south the Dravidian type is predominant, that of a race distinguished by short stature, long form of head, plentiful hair, with the nose very broad and depressed at the root. From the point of view of ethnology, therefore, the population is of very mixed origin. The Dravidian type, which was probably that of the earliest inhabitants of the country, has been overlaid and modified in various degrees by the Aryan type, which worked its way from the west down the valley of the Ganges, and by the Mongoloid races who advanced down that of the Brahmaputra. There is no ethnical frontier, such as impassable rivers or mountain ranges, serving to control the movement of the population

from one end of the Province to another. The Ganges, and in a lesser degree the Karatoyā, the old sacred river which divided Bihār from the rest of Bengal, did in some degree effect this purpose (O'Donnell, *Census Report*, 1891, i. 38); but the divisions thus formed did not remain permanently distinct. The same may be said of the languages, one dialect merging gradually and almost imperceptibly into the next. The vast majority of the people (94 per cent.) now speak one or other of the tongues of the Aryan family, of which the most important are Bengālī to the east, Hindī to the west, and the Oriyā of Orissa to the south. The second group of tongues is that known as the Mundā, spoken by the Santāls, Hos, and cognate tribes. These represent only 3·54 of the total population. Still less numerically important are the languages of the Dravidian group, of which the most numerous speakers belong to the Orāons (wh. see) and allied tribes; and the small Tibeto-Burman element used by tribes on the northern frontier towards Nepāl or eastward in the direction of Burma.

7. **Statistics of religion.**—The diverse ethnical characteristics of the people are reflected in the variety of the religions which they follow. The population recorded at the last Census is distributed among the chief religious denominations as follows:—

Hindus . .	49,687,362,	being	63·3	% of total.
Muhammadans	25,495,416	,,	32·48	,,
Christians .	278,366	,,	·36	,,
Animists .	2,780,468	,,	3·54	,,
Buddhists .	237,893	,,	·30	,,
Others . .	13,905	,,	·02	,,

8. **Animism.**—It will be convenient to deal first with Animism, the most primitive form of the religion of Bengal, and the basis of the beliefs which are held by the majority of the people. But, as it appears in the Census returns, the term is used in a sense different from that usually accepted by writers on primitive religion. This form of belief is founded on the conception adopted by primitive man, 'that every object which had activity enough to affect him in any way was animated by a life and will like his own.' It was, however, found impossible to obtain correct returns of an indefinite, amorphous religion like this, for which those who hold it have no special name, and which merges so directly into Hinduism and into Islām in its most debased form that the line dividing it from either of these faiths is uncertain. Hence, in the returns of those who are represented as professing Animism only those persons were included who followed a tribal religion, or worshipped tribal gods quite distinct from those of the orthodox Hindu pantheon. On the other hand, the great majority of the lower classes, whose religion is to a great extent of an animistic type, and even those members of the purely animistic tribes who lived at a distance from their tribal headquarters, were recorded as Hindus. Hence the Animists of the Census really represent only the well-organized non-Aryan or Dravidian or Mongoloid tribes, such as Santāls, Mundās, or Orāons who inhabit the hilly tracts to the south-east or east of the Province; and the lower castes of the plain country, whose beliefs are of an analogous type, appear in the Census returns as Hindus. The returns show Animists, as thus defined, to be most numerous in the Districts of Rānchī and Singhbhūm, where they represent nearly half the total population, and in a smaller proportion in the Santāl Parganas and the other hilly tracts of Chotā Nāgpur and Orissa.

The characteristics of Animism in Bengal, which does not differ to any important extent from that found in other parts of Northern India (see DRAVIDIANS), have been thus summarized by Gait (*Census Report*, 1901, i. 152):

'There is a vague but very general belief in some one omnipotent being, who is well-disposed towards men, and whom, therefore, it is unnecessary to propitiate. Then come a number of evil spirits, who are ill-disposed towards human beings, and to whose malevolent influence are ascribed all the woes which afflict mankind. To them, therefore, sacrifices must be offered. These malevolent spirits are sylvan deities, spirits of the trees, the rocks, and the streams, and sometimes also of the tribal ancestors. There is no regular priesthood, but some persons are supposed to be better endowed with the powers of divination than others. When a calamity occurs, one of these diviners, *shamans*, or soothsayers, is called on to ascertain the particular demon who is offended and who requires to be pacified by a sacrifice. This is done, either by devil-dancing, when the diviner works himself into a paroxysm of drunkenness and excitement, and then holds converse with the unseen spirits around him, or by the examination of omens—eggs, grains of rice, or the entrails of a fowl. There is a profound belief in omens of all sorts; no journey is undertaken unless it is ascertained that the fates are propitious, while persons who have started on a journey will turn back should adverse omens be met with on the way.'

It would perhaps be impossible to find in Bengal a single tribe which is in the purely animistic stage. Most of the people have come more or less under the influence of Hindu missionaries, who have introduced among them the nominal worship and some of the ritual of the orthodox gods, while at the same time the basis of their beliefs is some form of Animism. Thus, in the case of the Tipārās (Gait, *op. cit.* i. 186 f.) we have an instance of a secluded jungle tribe, some of whose deities are of a distinctively primitive type—the *numina* of the forest, which would naturally be regarded as objects of dread by people exposed to the myriad accidents and diseases which accompany the work of clearing the jungle. Thus, Burāsā is their forest-god, who is old, carries a mace, and has his home in the woods. But even here we see some signs of Hindu influence when we find that his son, the god of death, is coming to be identified with the Hindu Yama. Again, among the same tribe we find Maimungmā, the goddess of paddy fields, who, like many of these agricultural deities, has a male consort, Thunāī, and Khulungmā, the goddess of cotton. Deities like these represent a much higher stage of culture, when the community has cleared the forest and settled down to a life of agriculture. In another class of animistic deities these Tipārās worship the *numina* of the powers of Nature—Tuimā, a river-goddess, who is now coming to be identified with the Gangā, or Ganges, of the dwellers in the plains; and Lāmprā or Khabdī, who rules sky and ocean; and Sāngrama, the deity who presides over the Himālaya. Again, by a natural course of evolution, the agricultural goddesses, who are primarily regarded as beneficent, develop on their chthonic or malignant side into seven goddesses who preside over witchcraft.

But this assignment of special functions to a number of distinct deities is not the most primitive form of belief. The earlier conception is rather the belief in a host of ill-defined spirits, mostly malevolent, to whom no departments in the control of human affairs have been assigned. Such is practically the religion of the Mundās and Orāons (wh. see). The Gulguliās, a wandering non-Aryan tribe, worship 'a host of spiritual powers, whose attributes are ill-defined, and who are not conceived as wearing any bodily form. This at least may be inferred from the fact that they make no images, and that Baktāwar, the tutelary deity of the Patnā Gulguliās, is represented by a small mound of hardened clay set up in an earthen plate' (Risley, *Tribes and Castes*, i. 302). The Bhuiyās, again, worship a number of communal ghosts with 'ill-defined functions and general capacity for mischief and malevolence'; and 'the vague shapes of ghosts or demons who haunt the jungle and the rock are the real powers

to whom the average Kurmī looks for the ordering of his moral and physical welfare' (*ib.* i. 115, 534).

9. Worship of forest-spirits and tree-spirits.—Beginning, then, from what is probably the earliest stage, the worship by a tribe of colonists of the vague spirits which people the jungle, we find among the Juāngs, a very primitive tribe, who have only quite recently abandoned the wearing of a dress of leaves, that Barām, a forest-deity, stands at the head of their system and is regarded with great veneration, while, just as might have been expected, in subordination to him are Thānpatī, the patron of the village, and Basumatī, Mother Earth, whose worship marks the adoption of a settled village and agricultural life. At this stage we also naturally find the worship of trees, or rather of the spirits immanent in them, which prevails widely among the non-Aryan tribes, and is well established in the lower grades of Hinduism. Thus, the Cheros and Kharwārs sacrifice every three years a buffalo and other animals in the Sarnā, or sacred grove; each village of the Kisāns has two or more Sā, or sacred groves; the Bhuiyās preserve Deotā Sarā, or sacred groves, which are dedicated to four deities; in the sacred grove of the Muṇḍās, 'if a tree be destroyed, the gods evince their displeasure by withholding seasonable rain'; and 'every village has in its vicinity a grove reputed to be the remains of the primitive forest left intact for the local gods when the clearing was made' (Dalton, *Descriptive Ethnology*, 129, 132, 141, 186, 188). Besides the fear that the total destruction of the jungle may rouse the anger of the tree-gods in case a suitable asylum is not provided for them, there is the general belief that all tree-cutting is offensive to them. Of the Maghs of Eastern Bengal we learn that

'nothing but positive orders and the presence of Europeans would induce them to trespass on many of the hilltops, which were inhabited, they said, by these demons. With the Europeans, however, they would advance fearlessly, and did not hesitate to fell the trees, the blame of such sacrilege being laid upon their visitors. On felling any very large tree one of the party at work upon it was always ready prepared with a green twig, which he ran and placed in the centre of the stump the instant the tree fell, as a propitiation to the spirit which had been displaced so roughly, pleading at the same time the orders of the strangers for the work. In clearing one spot an orderly had to take the *dāh* (felling-knife) and fell the first tree himself before a Magh would make a stroke, and was considered to bear all the odium of the work with the dispossessed spirits, till the arrival of the Europeans relieved him of his burden' (*Calcutta Review*, xxvi. 512).

We may compare with this superstition the early Brāhmanical rule, based on primitive animistic belief, according to which, when the priest cuts a tree for the preparation of the sacrificial post, he places a blade of the sacred *darbha* grass between the axe and the tree, and says, 'O plant, shield it! O axe, hurt it not!' (*Śatapatha Brāhmaṇa*, tr. Eggeling, *SBE* xxvi. 164). The woodcutters in the Sundarbans never enter the jungle without sending their *faqīr* in advance, who takes upon himself the wrath of the woodland spirits (Wise, *Notes*, 13). The same writer remarks (*ib.* 137) that 'it is a curious fact that one of the latest outgrowths of the corrupt Vaishṇavism is the veneration of trees. The Dervish *faqīr* will not permit a leaf or twig to be plucked from the trees growing within the *akhārās* ("convents"), although flowers are the ordinary offering at the tomb of a *mahant* ("abbot").'

The non-Aryan tribes have special tree-feasts of their own. Such is the Sarhūl feast of the Orāons (wh. see), when flowers of the Sāl (*shorea robusta*) are collected by the *pahān*, or local priest, from a remnant of the old forest, which is the home of Sarnā Būṛhī, 'the old woman of the grove,' who corresponds to the Jāhir Erā and Desaulī of the Muṇḍās (Dalton, *op. cit.* 261). The Orāons have a similar feast, the Karamā, in which a branch of this sacred tree is cut, and planted in the village assembly-ground, and the youth of both sexes dance round it (*ib.* 259). The same dance and feast in connexion with this tree prevail among the Kharwārs, Mānjhīs, and other allied non-Aryan tribes of the western Vindhyan and Kaimūr ranges (Crooke, *PR* ii. 94 ff.).

Besides this there is the cult of special trees, which marks an advance in the development of popular belief. In some cases it is associated with totemism, the tree being specially worshipped by the tribe or giving a name to some of its sections. The Pīpal (*Ficus religiosa*) is held particularly sacred. Its trunk is the habitation of Brahmā, its twigs of Vishṇu, its leaves of the other gods. The tree is deified under the name of Vasudeva, and water is poured on its roots by pious people after the morning bath, especially in the month of Baisākh (April–May), and when people are in trouble; the Bel (*Ægle marmelos*) is sacred to Śiva, its leaves are used in his worship and in that of the Śaktis, or female powers, and as it is the abode of Śiva none except Brāhmans may use its wood for fuel; but pious Hindus of the Vaishṇava sect will not so much as mention its name. The Tulasī (*Ocymum sanctum*) stands in the same relation to Vishṇu as the Bel does to Śiva, and the plant is grown in the courtyards of all who specially make him their object of worship.

'It is watered after the daily bath, and in Baisākh a pot filled with water, which drips through a hole in the bottom, is suspended over the plant. In the evening a lamp is lit at its foot. Hari [Vishṇu] is believed to be present in it. Its leaves are essential for the proper worship of Vishṇu. They are believed to have a certain medicinal effect in the case of malarial affections, and are much used by native practitioners' (Gait, *op. cit.* i. 191).

The non-Aryan emigrants to Bogra pay similar veneration to the plantain tree after reaping the rice crop. Goats and pigs are sacrificed to it; it is worshipped before weddings, and after the ceremony the bridal garland is thrown into a bamboo clump. The practice of marrying brides to trees before the regular service is performed is common. It appears to be done either with the intention of transferring to the tree any possible dangers which may result from the marriage; or it is a form of sympathetic, mimetic, or homœopathic magic by which the fertilizing powers of the spirit which animates the tree and revives it after its winter rest are communicated to the girl (*PR* ii. 115 ff.).

10. Mountain-worship.—The worship of the mountain springs from conceptions analogous to those which suggest the cult of trees. The hill, with its thick jungle, its mysterious caves which seem to be entrances to the lower world, the danger of accident from a fall from a precipice, an avalanche or a falling boulder, the risk of attack from wild animals which shelter themselves in its recesses—all promote the idea that it is infested by malignant spirits. Again, as we might expect, hills are favourite sites for the worship of the sun or other heavenly objects. This was the case in Greece, where many of the old hill-shrines of the sun have now been taken over by his successor, St. Elias (Frazer, *Pausanias*, iii. 364). Mountain-worship is naturally uncommon in the plains, except in those places from which a view of the mighty chain of the Himālayas can be obtained. But it prevails widely among the non-Aryan hill tribes, like the Muṇḍās, Santāls, and other races occupying the plateau of Chotā Nāgpur, who worship a mountain-god known as Marang Burū or Baṛ Pahāṛ, 'the great mountain,' to whom the tribal priest offers a sacrifice of buffaloes or other animals (Dalton, *op. cit.* 135, 187 f., 199, 210, 214, 220 f., 257, 321). In the same way the Kisāns recognize various sacred heights (*pāṭ*) as devoted to their gods (*ib.* 132). Of the same type is Sārū Pennū, the mountain-god of the Kandhs.

'He is a jealous god, and does not like people to trespass on his domain, and the chief object of the worship which is performed in his honour in April and May is to induce him to protect from the attacks of wild animals people whose business takes them among the forest-clad hills of the Kandhmals, and also to secure a full yield of the jungle products which the Kandhs, like most similar tribes, use so largely for food. The priests of Sārū Pennū are called *dehuri*, and the appropriate offerings are a goat and a fowl with rice and strong drink' (Risley, *op. cit.* i. 405).

11. **Worship of water-spirits.**—The agency which causes water to flow is regarded as that of an indwelling spirit. Hence comes the worship of rivers, rapids, cataracts, wells, and streams. Chief of all, among the people of the plains, is Gangā Mā, or Mother Ganges, who is a beneficent deity. Though in origin an animistic goddess, she is now recognized by many Hindus as the wife of Śiva.

'Low caste Hindus,' writes Gait (*op. cit.* i. 190), 'throw offerings of fruits and sweets into the river when bathing, and its water is believed to be so sacred that to touch it will purify any one. It has special virtue on the occurrence of certain *yogas*, or auspicious conjunctions of the planets, when large crowds assemble on its banks in order to wash and be clean. Goats are sacrificed on these occasions, and in some parts they are thrown alive into the water, whence they are taken and eaten by the Mallāhs. Other offerings are the perquisite of a special class of degraded Brāhmans known as Gangāputra. Sometimes the goddess is represented by a simple earthen jug filled with water and surmounted by a mango twig, and sometimes as a female figure with four hands, riding on a *makar*, or fabulous marine monster like a shark. In this form she is worshipped by the fishing castes of Bengal Proper, who sacrifice white goats to her before starting on a fishing expedition, and also on some special occasion, the date of which varies. Pilgrims at Gayā offer their first *piṇḍa* (rice-cake) to her in the name of their deceased ancestors. In the Sonthāl Parganas a woman worships her on the sixth and twelfth days after giving birth to a child. She goes to a river or pond and pours oil on a slab of stone, on which she then draws five perpendicular lines, and prays for entire restoration to health. Certain ascetics perform a special penance in her honour called *jalsāin*, which consists in spending every night in the month of Māgh [January-February] seated stark naked on a small platform erected over the river, engaged in such prayer and meditation as their sufferings from the cold will allow. The town of Tribeni in Hooghly is held to be specially holy because three sacred streams,—the Ganges, the Jamunā, and the Saraswati,—which meet at Allahābād, here once more separate from each other.'

In Eastern Bengal the observances are of a similar character (Wise, *op. cit.* 138 f.). The Brahmaputra, 'son of Brahmā,' is less sacred, having only a single feast-day on which people assemble to bathe on its banks.

This form of worship seems to have been independently adopted by the non-Aryan tribes, who have sacred rivers of their own, the cult of which is not derived from Hindu influence. Thus the Kharriās of Singhbhūm venerate the river Koil, and the Santāl depends on the piety of his descendants that his ashes will be finally committed to the sacred river, the Damudā, 'to be borne on its swift current into the bosom of the mighty ocean, whence the race first had its being, and where, returning, it fittingly seeks its final rest' (Dalton, *op. cit.* 159; Bradley-Birt, *Story of an Indian Upland*, 285). In these cases the river is little more than a vague personality; but in many cases this spirit is personified, and we thus arrive at the host of water-gods who are specially revered among the large fishing and boating population of the Delta. Thus the deity of the river Tīstā is supposed to be an old woman, Būṛhī Ṭhakurānī ('the Old Lady'), and 'is one of the common objects of worship (*Grāmdevatā*) among the simple pagans of the vicinity' (Buchanan, in Martin, *Eastern India*, iii. 361).

'Not satisfied,' writes Wise (*op. cit.* 139), 'with attributing a divine character to the rivers of their native land, the Hindus have peopled the waters themselves with animistic beings, who protect or destroy the unguarded boatmen.'

Such is Zindah Ghāzī, 'the living destroyer of the infidel,' now a Muhammadan saint, but evidently a promoted animistic spirit (*ib.* 13 f.). Like him is Pīr Bhadr, whose home is at Chittagong. According to one legend, he is a deified Portuguese sailor who long ago reached the shore by clinging to a fragment of a wreck. His *dargāh*, or cenotaph, is regarded as the palladium of the city; here lamps are lighted at night, and pilgrims from all parts of Bengal resort to his shrine in obedience to a vow, or to obtain the favour and intercession of the saint; while Hindu fishermen regard him with as much awe as do the Muhammadans (*ib.* 14 f.). The Mallāh boatmen worship a water-god, Koilā Bābā, 'Father Charcoal,' described as an old grey-bearded personage, who as the 'navvy of the Ganges' (*Gangājī kā Beldār*) saps and swallows up whatever opposes the sacred stream.

'Before casting a new net, or starting on a commercial venture, offerings of molasses and seven kinds of grain kneaded into balls, are offered to him; and at the end of the ceremony one of the balls is placed on the edge of the water, another on the bow of the boat' (*ib.* 347).

The Paṭnī boatmen never enter on the work of a ferry without sacrificing a white goat to the river-goddess, Gangājī (*ib.* 358). Another water-goddess is Khālā Kumārī, 'the Creek Maiden,' to whom fishermen offer the first-fruits of their labour (*ib.* 393). The most mysterious of these water-deities of Bengal is Khwājah Khizr, who by one legend is identified with Zu'l-qarnain, 'he of the two horns,' or Alexander the Great, as described in the Qur'ān, *Sūra* xviii. Others connect him with the prophet Elias or Elijah. Whatever may be the real origin of his cultus, Khwājah Khizr is supposed to reside in the Indian rivers and seas, protecting mariners from shipwreck, and visible only to those who perform a forty days' vigil on the river bank. In his honour a raft (*berā*) made of paper, ornamented with tinsel, the prow resembling a female face, with the crest and breast of a peacock, is set afloat at sunset on a support made of plantain stems, when its flickering lights give a picturesque aspect to the dark, flooded stream. The person launching the raft deposits on the bank some ginger, rice, and plantains, which are usually appropriated by some wretched beggar (*ib.* 12 f.). The basis of the rite, of which Frazer (*GB*² iii. 87) has collected numerous examples, is possibly the expulsion of the spirits of evil by launching a raft or boat in a river or in the sea.

12. **Worship of the powers of nature.**—The personification and adoration of the powers of nature are probably later in origin than the animistic beliefs which have up to this point been considered. The most primitive objects of worship seem to be in Bengal purely local—the spirits of hill or rock, of the animals which attack the wood-cutter, of spring and stream, of all connected with man's immediate wants or occupation. It is only at a later stage that he seems to be able to generalize and direct his attention to more distant powers and energies like those of the planetary bodies.

(*a*) *Sun-worship.*—Among the orthodox Hindus the sun (Sūrya or Grāharājā, 'King of the planets') has fallen from the high estate which he secured in Vedic times, and has now become a mere godling or minor god. He is, however, still worshipped, especially in Bihār and among the non-Aryan tribes of the southern hills. Temples have been erected in his honour, the most important of which are those at Kanārak, near Puri in Orissa, and at Gayā.

'The Gāyatrī, or sacred verse, which each Brāhman must recite daily, is dedicated to him. Sunday is sacred to him, and on that day many abstain from eating fish or flesh; in some districts salt also is abstained from. The Sundays in the month of Kārttik [October-November] are specially set aside for his worship in Bihār and parts of Bengal. The great festival in his honour, known as the Chhaṭ Pūjā, is held on the 6th day of the light half of Kārttik, when the people gather at a river or pool and offer libations to the setting sun, and repeat the ceremony on the following morning. They also make offerings of white flowers, sandal paste, betel-nut, rice, milk, plantains, etc. Brāhman priests are not employed, but an elderly member of the family, usually a female, conducts the worship' (Gait, *op. cit.* i. 188). Even Muhammadans join in these ceremonies.

Sun-worship prevails widely among the non-

Aryan tribes. The Orāons (wh. see) identify him with Dharmesh, their supreme deity, as do the Mundās, Bhūmij, and Hos, who worship him with offerings of fowls and spirits, and swear by his name. The Hāris of Bīrbhūm sacrifice a goat to him on some Sunday in spring, and, strictly in accordance with the animistic conception, he is, in Rājshāhī, provided with a female consort, Chhatmātā, 'the mother of the sixth day rite'; that is to say, his festal day, when women make offerings at his shrine.

(*b*) *Moon-worship*.—Though all Hindu ceremonies are regulated by the rising or setting, the waxing or waning of the moon, its worship is much less general than that of the sun. Soma in Bengal is represented by a figure of a white man sitting on a water-lily and drawn by ten horses. With his right hand he gives a blessing, and in the other he holds a club (Ward, *Hindoos*, ii. 72). His cult is common among the non-Aryan tribes. For instance, the Kharriās offer to him a black cock under the name of Jyolo Dubo; the Binjhiās worship him as Nind Bongā; the Mundās as Chando Omal. The Mundā legend tells how on one occasion the moon deceived the sun, her husband, and in his anger he cut her in two; but he afterwards repented of his wrath, and allows her at times to shine forth in full beauty amidst her daughters, the stars (Risley, *op. cit.* i. 468, 136; Dalton, *op. cit.* 186). The curious rite of expulsion of evil by flinging brickbats at the house of the person afflicted by it is in Bihār connected with moon-worship. But it is probable that this is merely a suggestion of periodicity in the observance, and it is rather to be compared with the numerous cases in India and elsewhere, when railing at women, stone-throwing, and mock fights, especially in connexion with spring customs, are regarded as modes of promoting the fertility of the crops by the expulsion of the influences which cause injury to them (Frazer, *Pausanias*, iii. 266 f.). As in many other places, the moon is regarded as the deity who presides over crops, heals wounds, and cures diseases, especially those of the eye (Gait, *op. cit.* i. 189; Frazer, *GB*[2] ii. 154 ff.). It is a favourite object of worship with women, but in Bengal no fixed dates are appointed for these observances.

(*c*) *Planet-worship*.—Of the planets the most regarded is Śani, or Saturn.

'He is much dreaded and is carefully propitiated, either on Saturdays or on particular occasions when astrological calculations indicate that a visitation from him is to be specially feared. He has no image, but is represented by an earthen pot filled with water. A seat is placed in front of it, and on it are laid five fruits and five flowers. A Brāhman priest officiates at the ceremony, and the *praśād*, or offering, which consists of a sort of pudding made of flour, plantains, sugar, and milk, must be eaten on the spot by the devotees, who must wash their mouths carefully before leaving. If any casual visitor should arrive while the ceremony is in progress, he must wait till it is concluded, and eat a share of the *praśād*, otherwise he will incur the godling's displeasure' (Gait, *op. cit.* i. 189 f.).

The rule that the sacrifice is to be consumed at once in the presence, as it were, of the deity, is probably based on the fear that the sacred food might be profaned if it were carried outside the sanctuary (W. R. Smith, 282; Frazer, *Pausanias*, iii. 240). Every one present is required to share in consuming the offering. In other words, he must seek communion with the deity by eating part of the sacred meal.

Rāhu, 'the looser,' or 'the seizer,' is the demon who causes eclipses by devouring the moon for a time. He must be scared by music or noise, or by bathing at a holy place during the eclipse. Rāhu has now become the special deity of two menial tribes, the Dosādhs and the Ḍhāngars, who worship him by walking through a pit filled with hot cinders. One of the tribal priests, becoming possessed by the god walks through the fire, and, it is said, escapes injury. Connected with this is another function, in which a ladder is made of wood, the rungs shaped in the form of a sword-blade, up which the priest has to climb, and decapitate a white cock tied to the summit of the ladder. A fowl of this colour is the appropriate offering to the sun-god. The object of the rite appears to be, by a form of symbolic or sympathetic magic, to propitiate the deities who control the rain and the harvests (*PR* i. 19 f.).

13. **Earth-worship.**—(*a*) *The benign mother*.—The earth-deity, impersonated as a goddess, has a twofold aspect—on the one hand benignant, on the other malignant. On her benevolent side she is regarded as the mother of all living things and the giver of food. In this province she is known as Bhūdevī, 'earth-goddess'; Dhartī Māī, 'Mother Earth'; or Basundharā, 'wealth-bearer'; Ambabāchī, and Basumatī Ṭhakurāṇī. Pious Hindus say a prayer to her on waking in the early morning; the dying man and the mother in parturition are laid upon her breast; when a calf is born the herdsman lets the first drop of milk from the cow's udder fall on the ground.

'On the first day of the month Āsāṛh (June-July) she is supposed to menstruate, and there is an entire cessation of all ploughing, sowing, and other agricultural operations, and widows refrain from eating cooked rice. On the fourth day the bathing ceremony is performed, in accordance with the Hindu idea that a woman who menstruates is unclean until she bathes on the fourth day. A stone, taken to represent the goddess, is placed erect on the ground, and the top of it is painted with vermilion. The housewife bathes it with turmeric water, and a betel-nut is placed on a piece of wood close by. The stone is then bedecked with flowers, and offerings of milk, plantains, etc., are made' (Gait, *op. cit.* i. 189). The smearing of the stone with vermilion indicates a reminiscence of an older rite of blood-sacrifice.

As will be shown in connexion with the Dravidian religion, the popular idea regarding the Earth is that her fertility periodically diminishes, and must be restored by various methods, the most common of which is blood-sacrifice. Among the Kandhs (wh. see) the victim was a human being, and fragments of the flesh of the victim were scattered or buried in the fields to renew the strength of the earth-spirit. In other places it is supposed that the same result will be attained by the annual symbolic marriage of the earth-goddess, and she is accordingly provided with a male consort, who is often the head of the *grāma-devatā*, or guardian gods of the village. In Western Bengal this god is usually known as Khetrpāl, 'earth-guardian,' or Bhūmiya, 'earth-deity' (see DRAVIDIANS).

(*b*) *The earth-goddess in her malignant form*.—But though the earth-goddess is usually regarded as benevolent, she has a chthonic or malignant side to her character. While she is regarded as the village guardian, and protects the folk and their cattle from disease, yet, with the curious inconsistency which characterizes cults of this amorphous kind, she is believed to be the causer of epidemics, especially those of a sudden, unexpected, or unaccountable kind, such as cholera or smallpox. In this malignant manifestation the universal earth-mother is the prototype, and probably the primitive form of the destructive goddess in her manifold forms—Kālī, Devī, Durgā, and numberless others of the same kind. Her functions, again, as the causer and at the same time the averter of disease, have become divided into departments, and special maladies have been placed in charge of one or other of her various manifestations. We thus reach the beginnings of a pantheon, when each department of human activity is superintended by a special deity. This result may have been reached in Bengal by one of two ways: either the local earth-goddess of a particular locality gains a reputation by remarkable cures being worked at her shrine, and she is accordingly en-

trusted with the healing of a special class of maladies; or it may mark the aggregation of several septs to form a tribe, when, for the sake of convenience, the functions of the deities, once separate but now revered in common, are discriminated.

(c) *The small-pox goddess.*—The small-pox deity, Śītalā, 'she that loves coolness,' so called euphemistically in relation to the fever which accompanies the malady, is also known as Basantī Būṛhī ('the old lady of spring'), or Basantī Chaṇḍī ('the cruel spring-goddess'), probably because epidemics are most usual at this season. She, by a further differentiation of function, is now one of seven sisters, the enumeration of whom differs in various parts of the Province. Of those usually named, Kankar Mātā is the most dreaded, but happily her attacks are rare; Phūlmātā and Pānsāhī Mātā attack children under the age of seven, Badī Mātā those between seven and fifteen, Gulsaliā Mātā those of any age. Śītalā and her six sisters are often represented by seven balls of clay placed in a line in a shed erected outside the village site, where sweetmeats and flowers are offered. In times of emergency the higher castes sacrifice goats or pigeons, and the menials pigs.* In cases of severe epidemics even the higher castes offer swine to the seven sisters; but the worshippers, who are usually women, employ men of some low caste to perform the actual sacrifice.

The collective worship of the sisters is usually subordinated to that of Śītalā, their leader, who is often represented as a naked woman, painted red and mounted on an ass, with a bundle of broomsticks in one hand with which she sweeps away the disease, an earthen pot under her left arm, and a winnowing fan upon her head. But her image sometimes assumes more grotesque forms.

'Sometimes the image is a piece of wood or stone with a human face carved on it, besmeared with oil and vermilion and studded with spots or nails of gold, silver, or brass, in imitation of the pustules of the disease. In Jessore and Noākhāli she takes the form assigned to her in the *Purāṇas* of a white figure in a state of perfect nudity, while in Orissa and Champāran she is represented by an earthen pot. In Khulnā she is regarded by the Pods, not merely as the goddess of small-pox, but as their main deity; and if a person is carried off by a tiger, or his crops are destroyed by wild animals, it is thought it is because he has incurred the displeasure of the goddess' (Gait, *op. cit.* i. 192).

This appears to show that the limitation of the goddess to superintend disease is a later conception. Elsewhere she is worshipped only when epidemics of small-pox, measles, or cholera break out, or when children are inoculated or vaccinated. Sometimes the image is kept in a temple; sometimes it is in charge of priests drawn from the lowest castes. But when the higher castes worship her they perform the service with the aid of a Brāhman (Gait, *op. cit.* i. 192). Her priest is very often selected from the Mālī, or gardener caste, and his treatment of the disease, which consists in fanning the patient with a branch of the sacred *nīm* tree (*azadirachta indica*), bathing the image of the goddess to alleviate the fever, and mumbling spells of various kinds, has been fully described by Wise (*op. cit.* 343 f.).

(d) *The cholera-goddess.*—Akin to Śītalā is the goddess of cholera, Olā Bībī, 'lady of the flux,' or Olā Chaṇḍī, 'the cruel one.' She is, according to Gait (*op. cit.* i. 193), sometimes represented as wearing a gown and mounted on a horse, but usually her emblem is an earthen pot placed under a *nīm* tree. Her priest is generally drawn from the lower castes, and her favourite offering is a goat.

(e) *Other deities of disease.*—Besides the deities of disease already enumerated, there are many others, which illustrate the development of Indian polytheism from an animistic substratum. Like the earth-goddess, they are sometimes provided with a male consort. Śītalā herself is attended by her male counterpart, Ghaṇṭākaraṇā, 'he who has ears as broad as a bell,' or 'he who wears bells in his ears.' In the Himālayas he is supposed to possess great personal attractions, is worshipped under the emblem of a water-jar as the healer of cutaneous disease, and is a gatekeeper, or, in other words, a minor god on his promotion to a seat in the orthodox pantheon (*PR* i. 131). Fever is provided with a special godling, Jwārā Nārāyan, and the cholera-goddess, Olā-Bībī, has kindred deities of the same kind, the Joginī of Orissa, and Dīdī Ṭhakurāṇī of Bardwān. The Rājbansī caste have in Chitan Ṭhakrūn a special deity who removes barrenness in women. Kālī, again, 'the destroyer,' develops in her benignant aspect into Rakshyā Kālī, 'the protectrix,' who, while she brings disease, also repels it.

14. **Animal-worship.**—It is difficult to determine how far animal-worship in Bengal is connected with totemism, of which there is some evidence (see below, § 28), and how far it is merely a development of Animism. Here it is practically identical with the cult as it prevails throughout Northern India.

(a) *Worship of the cow.*—In Eastern Bengal the cow receives divine honours at least twice a year, on the first day of Baisākh (April–May), and on the second day of the moon in Jyeshṭhā (May–June). The custom is similar to that of the Baisākh Bihū, or cattle-feast of Assam, in which on the first day the cattle are rubbed with oil and turmeric, and bathed in rivers and tanks; on the second day the owners prepare a feast, invite their neighbours and friends, and wear new clothes. The remaining five days of the festival, which since the Vaishṇava reformation has become associated with the cult of Kṛṣṇa, are spent by men and women in dancing, beating of drums, and the singing of amorous and wanton songs (*Calcutta Review*, xxi. 413). The animal, of course, is everywhere protected by a most efficient tabu; and serious penance, such as marching up one bank of the Ganges from the ocean as far as Hardwār, where the river leaves the hills, and returning eastward along the opposite bank, is imposed on any one who slays the sacred beast even by misadventure. But this respect for cows does not prevent neglect, starvation, and wanton cruelty. Among Aryans the regard for the cow is comparatively modern. In the Vedas we find instances of cow-sacrifice and beef-eating (Rājendralāla Mitra, *Indo-Aryans*, i. 354 ff.). It does not extend to the non-Aryan tribes, and it seems to have arisen at a stage of culture higher than that to which most of them have attained, when permanent cultivation finally takes the place of the rude methods of periodically burning down patches of jungle, and sowing the seeds, which is the habit still pursued by the less advanced tribes. Among the half-Hinduized Gonds the sacrifice of a cow is part of the funeral rites, being probably connected with the death-feast which the departed soul is believed to share with the survivors. After the cremation of the corpse the ashes are buried and covered with a large slab of stone, and the tail of the victim is attached to this as a sign that the obsequies of the deceased have been decently performed. The prejudice against the use of milk, which is regarded as a foul secretion, is characteristic of the Indo-Chinese races; but it is also found among the Kols and the Kandhs of Ganjām (Dalton, *op. cit.* 283; Maltby-Leman, *Manual of Ganjam*, 69).

(b) *Other sacred animals.*—The monkey is a

* With this pig-sacrifice may be compared the pig of purification at the Greek Thesmophoria (Frazer, *Pausanias*, iii. 296; J. E. Harrison, *Prolegomena to Greek Rel.* 152 f.). Women in Greece and elsewhere were often specially selected to offer sacrifice (Frazer, *op. cit.* iii. 598, iv. 187).

sacred beast, particularly that variety known as the Langūr (*Semnopithecus entellus*), which is identified with the monkey-god, Hanumān. The common Hindu theory that the beast is worshipped as the representative of the demigod or hero who assisted Rāma in his wars with Rāvaṇa to recover his ravished wife, Sītā, is obviously a late invention. The worship of the human-like animal was more primitive than the legend by which it is now explained, and may have been independently adopted by the Aryan as well as by the non-Aryan races. Among the latter the aboriginal Savaras of Shāhābād make images of him which differ from the orthodox Hindu type; and the Bhuiyās of Keonjhar revere him under the title of Bīr, that is, Vīra or Mahāvīra, 'great hero' (Buchanan, *op. cit.* i. 467; Dalton, *op. cit.* 140, 147). In Western Bengal the first duty of the founder of a hamlet is to erect an image of Hanumān, which is kept duly decorated with daubs of vermilion. He is regarded as typifying the virile element, and thus, as the protector of crops and cattle, is conceived to stand to the Earth-Mother in the relation of consort. Even the *Macacus*, the common monkey, is protected though he is exceedingly mischievous. It is believed that no one can live where a monkey has met his death, and his bones are so unlucky that a special class of exorcists in Bihār find their occupation in ascertaining that such bones do not pollute the ground on which a new house is about to be erected (Buchanan, *op. cit.* ii. 141 f.). According to one tradition, the monkey is known as *Pavan kā pūt*, 'son of the wind,' a belief accepted by the Bhuiyās of Singhbhūm, who revere him and call themselves Pavanbans, 'the wind children,' to the present day. The same belief prevails among the fisher castes of Eastern Bengal, who invoke him in a calm, instead of whistling as the British tar does (Wise, *op. cit.* 137).

The tiger among the forest tribes is naturally supposed to represent the evil spirit of the woods, and the fear which he causes leads to reverence and propitiation. As Banrājā, 'lord of the jungle,' he is the chief object of worship among the Kisāns and Santāls. The former will not kill him, and believe that in return for their devotion he will spare a tribesman (Dalton, *op. cit.* 132). The Santāls, especially those who have suffered loss from his attacks, adore him. When a Santāl is carried off by the beast, the head of the family deems it necessary to propitiate the Bāgh Bhūt, or 'tiger devil.' Samuells gives a curious account of a shamanistic rite among the Goṇds, in which two men possessed of the spirit of Bāghīśvar, 'the tiger lord,' fell ravenously upon a bleating kid, and tore it with their teeth till it expired (Dalton, *op. cit.* 280). The *baghaut*, or shrine erected on the spot where a tiger has killed a man, is regarded as a place where offerings of propitiation should be made. Every passer-by adds a stone to the cairn, and wood-cutters light a lamp or make an oblation to appease the angry *bhūt*, or spirit of the man who was slain.

15. **The patron deities of the village.**—The deities who have been enumerated are those connected with the clearing of the forest and the beginnings of an agricultural life. When the village has been founded and farming becomes well established, another form of worship to a large extent replaces beliefs of this kind. This is the cult of the Grāma-devatā or Grāmya-devatā, the tutelary deities of the village, who preside over the welfare of the community. These deities differ from the jungle godlings inasmuch as, for the most part, they are purely local and attached to a single village. Those whose range is wider than the village boundaries seem usually to be akin to the jungle spirits. Thus, one of this class, Dholāī Chand, inhabits a sacred grove where rags are tied to the branches to secure the birth of children, and people make obeisance whenever they pass her abode. Another, Banā Durgā, in Mymensingh, is worshipped on behalf of children; sacrifices of pigeons or goats are made to her, and the flesh is eaten by people of low caste (Gait, *op. cit.* i. 200). Again, it sometimes happens that one of these village-deities acquires a reputation for curing disease or procuring other benefits for its worshippers. It thus becomes known beyond its own special area; a cult is started; a temple is built; and, finally, the place becomes the resort of pilgrims. This was probably the origin of famous shrines, like that of Kālī at Kālighāṭ, near Calcutta,—the Kalkattēwālī Kālī, as she is called,—a well-known deity throughout Northern India; or, again, the village may develop into a town or city, and the Grāma-devatā becomes its guardian, as has been the case with Patanadevī or Patanīśvarī, the protecting goddess of the city of Patna. The Brāhmans who have taken up her cult no longer recognize her as a Grāma-devatā, and assert that she is one form of the spouse of Śiva (Buchanan, *op. cit.* i. 191).

16. **The village shrine.**—The shrine of these village-gods is rarely of more pretensions than a pile of stones set up under the village tree, which is often one of the species regarded as sacred. Sometimes there is no visible representation of the deity beyond a stone or mound. Occasionally a bell is provided which the worshipper rings to announce his presence to the god, who may be sleeping or on a journey. In Hooghly an earthen pot filled with water, with a mango twig placed on the top, the whole covered with a piece of white cloth, represents the deity. In some cases the common worship on behalf of the village is done by the headman; sometimes the priest is drawn from one of the lowest castes; and, even in those villages in which persons of high caste reside, the business of controlling and propitiating the local spirits is left in charge of a hedge priest, because he, being regarded as one of the aboriginal inhabitants, is supposed to understand the ways of the village-gods better than any newcomer. For the same reason, the uncanny duty of watching the fields at night is entrusted to the menial castes, who are supposed to understand how to control the spirits which walk in the darkness. The offerings at the village shrine consist usually of the fruits of the earth, milk or spirituous liquor, food cooked or uncooked; but in cases of special emergency, goats or pigeons or pigs are sacrificed. The offerings are generally taken and consumed by the worshipper and his family, except the head, which was probably the god's share, and is appropriated by the officiant after he has let a few drops of blood from it fall upon the altar.

17. **Titles of the Grāma-devatā.**—Among the jungle tribes, where the cult is in its most primitive phase, the term *Grāma-devatā* has, as we might expect, an uncertain connotation. It is not limited to the actual village-deities, but is extended to the tribal gods of forest or mountain, like Marang Burū of the Santāls, Thānpatī of the Savarās, Juāngs, Baurīs, and Bāgdīs, Sarnā Būṛhī of the Orāons, and Duār Pahār or Durā of the Cheros (Gait, *op. cit.* i. 200). As settled life progresses, these deities gradually merge in the village pantheon. In the plain country the titles of the Grāma-devatā are legion. Buchanan (*op. cit.* ii. 131) gives a long list of those worshipped in the District of Bhāgalpur; but he illustrates the uncertain character of the cult by classing Śiva and Kālī as Grāma-devatās. This, no doubt, was the primitive conception; but these have now become national gods, of much higher rank than the

local village-godlings. In Bhāgalpur, Buchanan states, one of the most common of these deities is Bishaharī, who controls snakes; Siddheśvarī, Chaṇḍī, and Mahāmāyā are not very common, while he saw no shrine in honour of Sītalā. He mentions also that a very common village-god was Dūbēbhayharan, the ghost of a Brāhman who, to revenge a wrong which he had sustained, committed suicide (see below, § 25). Wise (*op. cit.* 133 ff.), among the most popular of the Grāma-devatā worshipped in Eastern Bengal, names Būṛhā-Būṛhī, the androgynous form of the Earth-deity; Panchanandā, who preserves children from sickness; Araṇyā or Jamāī Sashṭhī, the favourite goddess of Bengali women, who ensures the health of children, and cures barrenness; Siddheśvarī and Vriddheśvarī, who are now regarded by Brāhmans as 'parts' (*aṁśa*) of Durgā; in other words, these have now taken their place among the greater gods.

18. Promotion of the Grāma-devatā to higher rank.—The mode by which these deities are promoted will be considered in connexion with the Dravidians (wh. see). But a few instances of the fact may be given from Bengal. Ṭhakurānī Māī, whom Dalton (*op. cit.* 147, 149) calls 'the blood-thirsty goddess' of the Bhuiyās, has now become a form of Durgā or Kālī, and in Singhbhūm and Lohārdagā is served by a Bhuiyā priest with sacrifices of goats and sheep, the flesh of which he shares with the worshippers. The Birhors now call the piece of wood which they worship Mahāmāyā, who is supposed to be the daughter of the Hindu Devī; and a trident painted red is worshipped as the monkey-god, Hanumān, who is believed to be an officer of Devī (*ib.* 220). The Kādars of Bhāgalpur and the Santāl Parganas worship animistic gods, but,

'if questioned about their religion, will reply that they are Hindus, and will talk vaguely about Parameśwar, Mahādeo, and Vishṇu, as if they lived in the very odour of orthodoxy instead of being, as in fact they are, wholly outside of the Brāhmanical system. To talk about the Hindu gods is usually the first step towards that insensible adoption of the externals of Hinduism which takes the place of the formal and open conversion which sterner and less adaptive creeds demand. The next thing is to set up Brāhmans whose influence, furthered by a variety of social forces, gradually deposes the tribal gods, transforms them into orthodox shapes, and gives them places in the regular Pantheon as local manifestations of this or that well-known principle, or relegates them to a decent and inoffensive obscurity as household or village deities. Last of all, if the tribe is an influential one, and its leading men hold land, they give themselves brevet rank as Rājputs' (Risley, *op. cit.* i. 369)

19. Development of Animism into Hinduism.—In Bengal, perhaps more clearly than in any other part of Northern India, it is possible to trace the stages by which people in the animistic stage of belief are promoted, if this phrase accurately expresses the fact, into Hinduism. It is very difficult, as we have seen, to find a purely animistic tribe in the plains. The degraded Śūdras of Orissa seem to recognize none of the regular Hindu gods. They worship an animistic goddess of their own, Pañcha-khaṇḍā, 'she of the five swords,' with offerings of he-goats, fowls, and rice, which are consumed by the performers of the sacrifice. The headman officiates at all acts of public worship; they have no Brāhmans, and perform no *śrāddha*, or mind-rite, for the dead (Risley, *op. cit.* ii. 267 f.). But even the Ḍoms (wh. see), the lowest menials of the plains, worship, at least in name, the regular Hindu deities, such as Rādhā, Kṛṣṇa, Kālī, and Nārāyan (*ib.* i. 246), the explanation being that they have been for ages helots in the service of Hindu masters, whose religion they naturally imitate. Sometimes, again, it is found that, while one part of a tribe has to some indefinite extent adopted the Hindu religion, another division remains animistic. Among the Bhūmij, while the well-to-do tenants employ Brāhmans as their family priests and worship the Mother-goddess under the forms of Kālī or Mahāmāyā, the mass of the tribe reveres the Sun as Sing-bongā or Dharamā, and worships a host of minor gods of the animistic class (Risley, *op. cit.* i. 124). The same is the case with the Binjhiās, Birhors, and Cheros (*ib.* i. 136, 138, 202). The Koirī and Kurmī tribes furnish examples of people whose religion obviously depends upon their environment. That portion of these tribes which still occupies the animistic area of Chotā Nāgpur continues the worship of the non-Aryan deities, while those who have migrated to the plains in Bihār have come almost completely under Hindu influence (*ib.* i. 503, 534).

20. Development of the tribal priesthood.—This process of evolution is clearly shown by the character of the priesthood. The Korwās, according to Dalton (*op. cit.* 229), have no priests, because, as he asserts, they have no gods, their worship being entirely confined to that of the *manes* of their ancestors—a rite which must necessarily be performed by the head of the family. Elsewhere, however, they employ *baigās*, or tribal priests. The same is the case with the Māl Pahāṛias, among whom the head of the household performs all religious and ceremonial observances. These people are, however, on the road to promotion, because they hold Brāhmans in some degree of honour, and presents are given to them on festal occasions (Risley, *op. cit.* ii. 71). The Baurīs of Western Bengal appoint as their priests men of their own caste, termed *lavā* or *degharīā*, some of whom hold patches of land rent-free or at a nominal rent as remuneration for their services; but the tribe in Eastern Bengal employs a low class of Brāhmans (*ib.* i. 81). One section of the Ḍoms appoints the son of the dead man's sister or of his female cousin to perform the obsequial rites, and to recite the appropriate sacred verses (*mantra*) at the funeral. For these services he receives a fee when the inheritance comes to be divided. This has been supposed to be a survival of the primitive rule by which kinship is traced through the female. No other indications of an extinct custom of female kinship are now traceable among these people, and the fact that in Western Bengal the eldest son on the division of the inheritance gets an extra share seems to show that kinship through males must have been in force for a long period (*ib.* i. 245). This custom, however, seems to have been at one time widely spread among many of the North Indian tribes. The Khāsīs and Gāros of Assam still trace succession through the female; so do the Hāris, Pāsīs, and Tāntīs of Bihār; forest tribes in the United Provinces, like the Bhuiyārs and the Kols, and even, according to Wise, the Mithilā and Sarvariā groups of Brāhmans, who recognize the sister's son as family priest (Risley, *Census of India Rep.* 1901, i. 448; Wise, *op. cit.* 127; Crooke, *Tribes and Castes*, ii. 95, iii. 309; Dalton, *op. cit.* 63).

The next stage is reached among those tribes which employ Brāhmans only for special functions, and perform their ordinary religious rites through the agency of their own kinsmen. The Bhandārī, or barber caste of Orissa, perform the service of the orthodox gods through Brāhmans, who are received on equal terms by other members of the sacred order; but the worship of the village goddess, Grām-devatī, is done by the head of the household (Risley, *Tribes*, i. 93 f.). In the same way the Binds and Cheros of Bihār, who have copied with more or less accuracy the external observances of Brāhmanism, employ Brāhmans in the worship of the higher gods, while the household worship of the local deities is done by the men of the family, or by a *baigā*, or hedge priest,

drawn from one of the non-Aryan tribes (*ib.* i. 132, 202). Even a caste like the Kāndūs, or grain-parchers of Bihār and Bengal, who pretend to a high standard of orthodoxy, worship the godling Goraiyā in a fashion which is hardly in keeping with their high social position.

'A lump of clay is set up outside the house to represent the deity, a Dosādh (wh. see) officiates as priest, and the victim is a pig which is bought for a price from the Dosādh, slain by him at the instance of the Kāndū worshippers, and then eaten by the family of the priest' (*ib.* i. 416).

Finally, some tribes who do employ Brāhmans for all religious services and family ceremonies are unable to secure the services of the highest groups of the priestly order, and are forced to content themselves with those of lower rank. Sometimes, as in the case of the Bhakat Orāons,—a branch of the great non-Aryan tribe which is now gradually adopting the Hindu religion and its rites,—Brāhmans deign to offer their services as *gurus*, or spiritual guides, but refuse to officiate as their priests. The sacrifice is accordingly done by any influential member of the tribe who happens to be acquainted with the ritual. In their marriages they try to imitate the Hindu ceremony; the priest, however, is not a Brāhman, but a tribesman (*ib.* i. 91). The Koirīs, a cultivating tribe of Bihār and Chotā Nāgpur, profess to be orthodox Hindus; but their orthodoxy, as we have already seen (above, § 19), seems to vary with locality, and may be estimated by the degree of consideration accorded to their Brāhmans and by the nature of their local gods. In Chotā Nāgpur those Brāhmans who serve them as priests are not received on equal terms by other Brāhmans; and among their minor gods we find non-Aryan deities, like Marang Burū and Baṛ Pahāṛī, side by side with Hindu gods, or rather perhaps aboriginal gods invested with Hindu titles, like Parameśvarī and Hanumān. Mounds of dried clay representing these are found in every house; and there is often a larger mound under a sacred tree which is dedicated to the entire group of deities (Dalton, *op. cit.* 321; Risley, *op. cit.* i. 503).

21. Bhūta-worship.—Another form of worship which illustrates the transition from Animism to Brāhmanism is that of Bhūtas, which prevails more or less among all classes of the population of Bengal, from the non-Aryan tribes up to those who have accepted the beliefs of Hinduism. The term *bhūt*, or *bhūta*, meaning in Sanskrit 'formed' or 'created,' is in the earlier sacred literature applied to the powers of Nature, and even to deities. Śiva himself is called Bhūtiśvara, or 'Lord of spirits.' But the name is now popularly applied to a malignant evil spirit, properly the ghost of a man who has died a violent death, either by accident, suicide, or capital punishment. The malignancy of such a spirit is increased if he has been denied proper funeral rites. In Bengal, according to Wise (*op. cit.* 131 f.), such spirits are most numerous in forest tracts where lofty trees afford shade and silence, or in the sombre valleys of hilly districts, where the original clearers of the jungle were exposed to many forms of violent death. Some, again, dwell in ancient trees, others in cities, in ruined temples, graveyards, cremation grounds, or dry wells.

'They are met with on the arid treeless plain, the flooded river, and the lonely forest glade. The timid recognize their cry in the hooting of the owl, the howling of the jackal, the yelp of the village cur, and the whistle of the plover. One kind of demon, sedentary in its habits, attaches itself to a village, another to a household; some inflict plagues, others blight the opening bud, or convulse the newborn babe. The Bengālī sees in every accident the work of evil spirits, and his longing desire is to obtain some means of counteracting their influence. The women are naturally the chief adherents of this superstition, and while engaged in the most commonplace work are ever watchful against the entrance of a devil' (Wise, *op. cit.* 131).
